

FOR OFFICIAL USE

MINISTRY OF LABOUR

A DICTIONARY OF OCCUPATIONAL TERMS

Based on the Classification of Occupations
used in the Census of Population, 1921.

LONDON :

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1927.

Price £1 1s. 6d. net.

PREFATORY NOTE.

The Dictionary of Occupational Terms had its origin in one of the Resolutions adopted by the British Empire Statistical Conference, which met in London from 20th January to 26th February, 1920.* The relevant part of the Resolution is as follows:—"That a complete descriptive glossary of occupations, with an alphabetical index in addition, should be prepared as soon as opportunity permits." This Resolution was considered in the same year by an Inter-Departmental Committee which had been set up to make preparations for the forthcoming Census of Population. The Committee recorded their opinion "that the preparation and use of any classification would be greatly simplified if a descriptive glossary, describing occupations in detail, could be prepared." Account was taken of the fact that the need for such a Dictionary had been experienced in other connections, particularly during the Great War, and after due consideration, authority was issued for the compilation of the Dictionary by the Ministry of Labour.

The Dictionary has thus been compiled primarily to serve administrative purposes. It is thought, however, that the information, thus collected, may be useful for other than official purposes, and it has therefore been decided to place the Dictionary on sale.

In the compilation of the Dictionary, the Ministry of Labour has worked in close collaboration with the General Register Office, the Home Office, the Mines Department, the Ministry of Agriculture and Fisheries, the Post Office, and other Government Departments, and has received much valuable help from those Departments. Information has also been obtained from Joint Industrial Councils and Trade Boards, from Railway Companies and the Railway Staff Conference and from a large number of individual employers and trade unions. To all those who have thus helped the Ministry in their task, often at considerable sacrifice of time and convenience, most grateful acknowledgment is hereby given.

The plan adopted has been to take the Classification of Occupations issued in connection with the Census(†), and to append a concise definition to each of the occupations named therein. Many additional terms which came to light during the compilation, have been included in the present volume. The total number of terms appearing in the volume is 29,106, but since many of these are synonyms, the number of occupations defined is appreciably less, and amounts in all to 16,837. No occupations of persons engaged in public administration and defence or professional occupations (Census Code Nos. 800-879 inclusive) have been included.

The definitions have been compiled in the light of the best information obtainable, and much care has been taken to achieve accuracy. It should however be understood that they have no claim to be regarded as "standard" or "authoritative" definitions carrying legal or official sanctions.

Many industries are passing through a period of transition, so that the same occupational term may still be applied, for example, to handicraft workers, carrying through an entire series of manual operations, and to factory hands tending a machine and working under conditions of high specialisation. In such cases, of course, a single rigid and clear-cut definition is impossible. Even where this is not the case, and a whole industry is, broadly speaking, working under uniform conditions of equipment and organisation (as, for example, in the cotton trade), there exist many variations of practice as between one factory and another. No definition, therefore, could be framed which would absolutely and precisely fit every possible case, unless the definition were expanded and subjected to qualifications and exceptions to an impossible extent. Hence, all that is usually attempted, is to give, in non-technical language, and in broad outline, a description of the work generally performed by the person to whom the name is applied; in a number of cases, however, alternative definitions are given which take account of such variations in practice as are known to exist. Subject to these inevitable limits, the definitions have been made as clear, full and self-explanatory as possible.

There is one further point of some importance. The classification of workers into specified "skilled," "other skilled," and "other workers" is strictly in accordance with the Census Classification.(‡) Such a classification is

* The Report of this Conference, and the text of the Resolutions adopted thereat, have been published (Cmd. 648, H.M. Stationery Office; price 6d. net).

† Census, 1921, Classification of Occupations, H.M. Stationery Office: price 7s. 6d. net.

necessarily influenced by historical, statistical and other considerations arising out of the use to which the classification is to be put; its adoption in the present volume is based simply on convenience and is not to be regarded as in any sense constituting an official pronouncement as to the degree of skill required for any particular occupation, whether classified as skilled or not.

It only remains to add that the Ministry will welcome any corrections and additions that employers, trade unions and others may be good enough to suggest. It is recognised that in a pioneer attempt of this kind many of the definitions are inevitably unsatisfactory and the co-operation of the public in improving the Dictionary will, therefore, be much appreciated. Communications on this point should be addressed to the Director of Statistics, Ministry of Labour, Queen Anne's Chambers, Broadway, London, S.W.1.

KEY TO ARRANGEMENT AND ABBREVIATIONS.

(1) In accordance with the Census, 1921, classification, the occupational terms will be found grouped in Orders and Sub-Orders under code numbers from 000 to 959. Orders XXIV and XXV, Persons Employed in Public Administration and Defence and Professional Occupations (code numbers 800 to 879), have been omitted. The occupational arrangement is such that similar and related occupations are grouped together on the basis of the material worked in, the process performed or the service rendered. Within each Order the code numbers follow the sequence of operations in the actual processes of manufacture, etc. Hence in a large number of cases the occupational arrangement approximates to an industrial classification. For example, Order XII (code numbers 350 to 399) covers the whole of the workers in the textile industry (with the exception of the maintenance staff, clerks, transport workers, warehousemen and packers) in the natural order of the various processes.

(2) For anyone unfamiliar with the Census classification the easiest way to find a required definition is to consult the alphabetical Index at the end of the volume, where the code number under which the term appears will be found. Under each code number the occupations are listed alphabetically.

(3) Occupational terms more or less synonyms have been linked together in one common definition. The most usual or most important term in such a group is placed first in heavy or Clarendon type, while the less important synonyms and local variants are printed in italics.

(4) Particular designations of an occupational term will be found appended to the definition of the principal occupation in cases where the duties involved do not warrant separate definitions.

(5) When a term is localised in its usage, or when the duties to be defined differ by locality, the name or names of the localities are indicated in italics.

(6) The distinction between the use of the terms "*see . . .*" and "*as for . . .*" may be explained by an illustration.

The entry "*fitter, loom, see loom builder*" denotes that "*loom fitter*" is a synonym of "*loom builder*" of less common occurrence and that the definition will be found against "*loom builder*." On the other hand "*steam cultivator attendant, as for steam plough attendant*" indicates that, while the two terms are not synonymous, the duties involved are similar *mutatis mutandis*.

(7) In order to avoid unnecessary repetition in the definitions, and also as a means of linking one related occupation with another, a definition will often read as follows:—"*riffler, rifflermaker*; a file forger *q.v.* who makes special concave forgings for files, called rifflers." Here the abbreviation *q.v.* (which see) refers the reader to the definition of "*file forger*" for the complete definition of "*riffler*."

When it is important to distinguish between two occupations often denoted by the same occupational term, or when one definition is an interesting commentary on the other, the abbreviation, *cf.* (compare) is used instead of *q.v.*

(8) When a term is defined in two or more ways, either because of differences in processes or because there are two or more operations to be performed each as a full-time occupation, the separate definitions are enumerated in one general definition thus:—(i), (ii), (iii)

(9) As a result of the enquiries which have gone to the defining of the occupational terms in this Dictionary it has been discovered that a number of the terms appearing in the 1921 Census Classification of Occupations, would have been more appropriately classified under other code numbers. A number of the alterations thus discovered to be desirable have been incorporated in the classification of Occupations published by the Census Authorities in 1924; other proposed alterations which have emerged since that date and which could not be embodied in that volume are set out in an appendix to this volume. Adjustments will probably be made at the next Census in the occupational grouping of workers covered by such terms, which are indicated in the Dictionary thus: (†).

MINISTRY OF LABOUR.

July, 1927.

ORDER I.—FISHERMEN.

Sub-Order I.—Fishermen.

000.—FISHERMEN.

apprentice; made *apprentice* of skipper, mate and third hand, receives instruction in all duties on board fishing vessel, with view to qualifying as skipper or mate at expiration of apprenticeship; assists in handling gear, cooks for men, *ko*; *as far* boy.

bender; *see line fishermen*; sets small shore traps with ordinary pin or black-thorn hooks on snags for flat fish.

butler; *see fisherman, cook*.

boy, *catch* boy; *fish* boy; acts as cook in trawlers and drifters, and makes himself generally useful; calls *warp*, *mends* nets, attends to lights, assists deck hand (*v.*) in handling gear, *rowing* *men*, *ko*; is sometimes an apprentice (*v.*).

explain; *see* *skipper*.

cut-off, *cut-off*; *snice* and *hank* on short rope lengths (*snice*) attached to net when nets are being hauled in; *snice* then into net after hauling; *cut-off* of *snice* when nets are being shot.

cookie gatherer, *cookie*; gathers cookies from landbanks, *sinking* *ko*, or *jumbo*, to bring them to surface; *or*, picks them from sand and rocks, by hand.

crabber; *see fisherman, crab*.

deck hand, *deckie*; *fish* *boat* *hand*, *nerver* (*fisherman*) *arrows*; (*if*) (*larger vessels*), *sole* *men* (*drifters*); assists in handling of ship, gear, or fish, as directed by skipper, mate, or third hand (*v.*); assists in shooting and pulling-in gear and in particular, acts as *snice* (*v.*).

(*if*) (*smaller vessels*), *see* third hand.

drifter hand, *see fisherman, drifter*.

eel catcher, *see fisherman, eel*.

fisher boy, *see boy or apprentice*.

fisherman, *cod*; *butler*, *long liner*; fishes for cod and other big fish with long lines, from any type of vessel; *or*, catches from trawlers, using trawl net.

fisherman, crab; *crabber*; catches crabs and usually also lobsters, crayfish, *ko*, in baited crab, *ko*, *po*; strikes pots, with weight attached, on submerged rocks, *ko*, near to shore, cork buoy attached marking spot; periodically visits by boat, removes catch, re-baits pots with fish offal, *ko*, and keeps catch alive; *cf.* fisherman, lobster; wellman.

fisherman, deep sea; works in deep sea fishing smacks or steam trawlers of a larger type than those used for inshore fishing; usually at sea several days or weeks; assists in management of net and in handling nets, *fish*, *ko*; in general term overboard skipper, second hand, third hand, and/or deck hand, and boy (*v.*).

fisherman, drifter; drift net fisherman; drifter hand; general terms for men employed in fishing operations in drift net, *i.e.*, boats using nets which drift with the tide and wherein fish are caught by their gills in meshes.

fisherman, eel; *eel catcher*; catches eels with net or baited baskets; *or* by spearing, using spear (grape) fastened to line; in turn attached to a pole; *or* by bobbing and waiting, *i.e.* line fishing using instead of hooks, worms threaded on wadded and wound into ball; *or* by hook and line fishing, hook being gagged, *i.e.* tied with a winding of wire over knot, to mortals to prevent eel biting from line.

fisherman, haaf net; fishes for salmon or for sea trout in estuaries with special nets called haaf or haave nets, a double net strung over his shoulders and supported by his outstretched arms; wades out sometimes breast high.

fisherman, herring; catches herrings in sound or, more usually, in snail drift net, *fisherman, drifter*.

fisherman, inshore (longshore); usually fishes within a few miles of harbor in small vessel (sometimes petrol-driven); uses crab pots, lines, drift nets, trawls, net nets, prawn nets, *ko*; returns home each day; *cf.* deep sea fisherman.

fisherman, kittle net (*South Coast*); catches *arrows* or *trout* in trap fish, usually mackerel, in kittle, kiddle or kiddle net; erects nets at beginning of season; (staked net), drives poles in sea bed and arranges wall of net on them to make a passage leading into circular enclosure (*trik*) similarly erected, placed at low water

mark; (floating net) pegs bottom of net to soil and attaches net to set headline; collects fish thus trapped at low tide; *fisherman, lobster*; catches lobsters and usually also crabs, crayfish, *ko*, in baited lobster, *ko*, pots or in hoop nets, *ko*, for fisherman, crab.

fisherman, North Sea; a deep sea fisherman (*v.*) fishing in North Sea; *fisherman, oyster*; *oyster gatherer*; (*if*) *see* oyster dredger; (*if*) handpicks oysters at low water (especially during spring tides).

fisherman, prawn; *skasher*; gets prawns with hand net among rocks at low water or with prawn nets or trawl nets from boats.

fisherman, river; general term for any person fishing in river from bank, by wading, or in boats for minnows, cockles, founders, shrimps, salmon, trout and freshwater fish.

fisherman, salmon; fishes for salmon with nets or lines or by spearing.

fisherman, seine; catches shoal fish, *i.e.*, mackerel, herring, pilchard, sprat, using seine net; (*if*) fishes from the shore using seine net which is paid out from a boat a suitable distance from the shore and pulled in by ropes; (*if*) fishes between two boats, when seine net is paid out in circular fashion, both ends being hauled in together after enclosing a circular space of water, precise method adopted varying with strength of current; assists in paying-out and gathering net and in clearing it of fish.

fisherman, smelt; *smelt catcher*; catches smelt in seine nets or cast nets in or near estuaries.

fisherman, sprat; catches sprats in slow nets or in drift nets from fishing boats; *cf.* fisherman, drifter, or in seine nets, *cf.* fisherman, seine, or (more rarely) with spear trawls from smacks.

fisherman, top line, *see* *lander*.

fisherman, whammoth, *see* *whammoth*.

fisherman, whitetail; catches whitetail in slow nets or seine nets.

fishing boat hand, *see* deck hand; *see* also second hand and third hand.

hawseman (larger vessels), *see* third hand, long liner, *see* fisherman, cod.

mariner (fisherman), *see* deck hand.

master, *see* skipper.

mate; is second in command on drifters, trawlers, and, responsible for "sailings", *i.e.*, rope connecting net with warp; when boat is engaged in line fishing is responsible for storage and stowing of fish; *see* second hand.

manse (cultivist); transplants minnows from crowded areas to more favourable to their growth.

minnow gatherer, *minnow*, *minnow* layman; gathers minnows either by dredge or rake (in deep water); *or* by rake or by hand (between tide marks); sometimes also "lays" minnows, *i.e.*, places ordered-sized minnows on mussel bags to grow.

net ropeman (drifters); ropeman; hauls in rope attached to drift net; part of duties of deck hand (*v.*).

net stower; stows nets in net room, first laying flat and then folding them into convenient sized bungs in regular order for stowage, assisted by boy (*v.*); normally part of duties of deck hand (*v.*), but may be done by any member of crew, *cf.* third hand, second hand.

owner (of fishing boats), drifter owner, trawler owner; owns fishing boats and receives fixed proportion of takings; sometimes acts as skipper or superintendent of produce; owns crew, *e.g.*, mate, third hand, deck hand, boy (skipper if necessary) (*v.*) to run vessels; occasionally agrees to take apprenticeship (*v.*).

oyster culturist; cultivates oysters by laying them in suitable localities, clearing ground, providing (e.g., broken oyster shells, rock, *ko*) to which oyster (*v.*) naturally part of duties of deck hand (*v.*), but may be done by any member of crew, *cf.* third hand, second hand.

owner (of fishing boats), drifter owner, trawler owner; owns fishing boats and receives fixed proportion of takings; sometimes acts as skipper or superintendent of produce; owns crew, *e.g.*, mate, third hand, deck hand, boy (skipper if necessary) (*v.*) to run vessels; occasionally agrees to take apprenticeship (*v.*).

oyster dredger; *oyster fisherman*; goes out in boat (rowing, sailing or motor) and dredges up oysters from water from three feet to twenty fathoms in depth; replaces oysters below size to mature; removes from net for use large oysters; also removes star-fish, whelks, *ko*, *cf.* oyster culturist.

oyster gatherer, *see fisherman, oyster*.

gutter; *North West Coast*; a shrimper (*v.*) who catches shrimps with push net in shallow water.

ropeman, *see* net ropeman.

seaman, *see* deck hand.

second hand; *mate*; assists skipper in navigating fishing vessel in and out of harbor; is responsible for upkeep of gear and stores, and for stowing, icing and landing of fish; *see* mate (term second hand is more usual on sailing boats; *mate*, on steam trawlers).

shanker; *North-West Coast of England*; *see* fisherman, prawn.

shrimper, *shrimp catcher*; uses shrimp trawl from boat (rowing, sailing or motor) or pulled by horse and cart; *or* uses push net in shallow water, or fixed net.

skipper; *captain, master*; navigates vessel in and out of harbour, selects fishing grounds, shoots gear, directs handling operations, and is generally responsible to owner.

smackman; general term for man or boy employed on "smack", *i.e.*, large fishing trawler.

smelt catcher, *see fisherman, smelt*.

spear hand (trawler); is an additional hand carried to help in dealing with large catches on long voyages; also assists as fireman.

third hand; (*if*) (*larger vessels*) *seaman*; acts as leading deck hand under skipper and mate (*v.*); is responsible for heaves (winches) and for shooting and pulling in fishing gear, assisted by deck hand (*v.*); acts as watchman; (*if*) (*smaller vessels*) deck hand; gives general assistance on deck and in shooting, pulling in nets, stowing and mending nets, *ko*, as directed by second hand (*v.*) on vessels not carrying deck hand or fireman from third hand.

trawler; general term for man or boy employed on trawler.

trotter; *Wash district* (a shrimper) (*v.*) who catches shrimps with trawl dropped from boat or pulled by horse and cart.

wale man (drifters), *see* deck hand.

wellman; is employed on fishing vessel continuously in which fish are kept alive; replenishes water in well and, when return to shore is delayed, *cf.* North Sea fishing, feeds fish with fish offal; *cf.* deck hand; fisherman, crab.

whammoth; *Whammoth fisherman*; fishes for salmon or for sea trout in estuaries, with special drift net which catches fish by gills; net is shot and hauled in from open boat.

whaler; lays and collects whelk pots in suitable rough ground; *or* (at certain ports) lays off-shore lines having snails or mussels in net which is attached; *or* pegs down on shore similar lines (shore-trails) or dredges as for oyster dredger.

winkle gatherer, *winkle picker*; gathers periwinkles left on sand or rocks when tide has gone out.

youngster; term used, particularly at Great Yarmouth, for boy (*v.*) or for young man between the stages of boy and of deck hand (*v.*).

ORDER II.—AGRICULTURAL OCCUPATIONS.

Sub-Order I.—Agricultural Occupations.

000.—LAND AND ESTATE AGENTS, AND MANAGERS (not Auctioneers and Estate Agents).

agricultural agent, *see* estate bailiff, estate bailiff, estate steward; *agricultural agent, estate factor* (*Scotland*), *land bailiff or steward*; acts as representative of estate owner in letting farms and in dealing with tenants' complaints or requests; arranges for repairs and general upkeep of property; is responsible for the collection of rents; controls office where all accounts of estate are dealt with; pays or is responsible for the payment of all expenses incurred by the estate, and is responsible for the satisfactory working of home farms worked directly by a farm bailiff (*015*) (*v.*).

estate bailiff (*Scotland*), *land bailiff*, *land steward*, *see* estate bailiff.

011.—FARMERS.

agriculturist, *general term for any person engaged in, or skilled in, agriculture, either in theory or practice; term seldom applied to manual workers.*

bowyer, *Scottish term; rents dairy stock of farms, with pasture and fodder, paying rent out of its produce; or gives labour as his share and divides profits with proprietor of stock.*

breeder, *horse, or farmer, stud.*

brooder, *phasant, or farmer, game.*

brooder, *pig; a hired man puts pigs on a farm or small holding; usually works himself and directs one or more labourers in grinding cereals, pulping roots and otherwise preparing foodstuffs, cleaning pig sties, putting pigs out to grass, leading sows in farrow; attends market for buying or selling of foodstuffs and stock; may cultivate on farm roots and cereals for foodstuffs.*

cheese-maker, *a dairy farmer (q.v.) who keeps cows for the production of cheese; supervises cheese-makers in dairy (022).*

cottager (*own account*); *a skilled independent agricultural worker, who takes work by contract.*

crofter, *Scottish Highlands and Islands; "tenant of a holding, being whole or pasture land, from year to year, who resides on his holding, the annual rent of which does not exceed £30 in money, and which is situated in a crofting parish" (rds Crofters' Holding Act); in many coastal districts and on some islands is partly dependent upon fishing.*

farmer, *cultivates cereal and other crops and/or raises animals or birds for food on a tract of land, owned or leased for the purpose; usually, according to climate, produces annual crops of wheat, oats and other cereals, turnips, leek and other roots, clover, grasses and other green cattle foods, hard and soft fruits; also raises herds of cattle, flocks of sheep, etc., on grazing land, and breeds and maintains horses for work on the farm; breeds poultry of various kinds for eggs and table birds; directs workmen engaged on various farming operations e.g. ploughing, harrowing, sowing, planting, manuring, hoeing, weeding, reaping, sorting, stacking, threshing, lifting and storing of root crops, preparing and marketing of fruit trees, feeding and care of cattle, sheep, poultry; attends at various markets for purchase or sale of produce, animals, seed and equipment; frequently assisted by farm bailiff or foreman (015) (q.v.); often specialises in certain branches according to branch of agriculture, e.g. cattle farmer, chicken farmer, dairy farmer, fruit farmer, poultry farmer, sheep farmer, stock farmer, farmer, dairy (a farmer (q.v.) who keeps cows for production of milk for market; may also make butter and cheese).*

farmer, *game; pheasant breeder; breeds pheasants and other game birds for sporting purposes; sells eggs and young chicks to estate owners; is interested in improvement of strains and production of new types; shows birds at poultry exhibitions.*

farmer, *horse, or farmer, stud.*

farmer, *poultry; poultry breeder, poultry rearer; rears and keeps poultry, i.e. chickens, ducks, geese, turkeys, etc.; sells eggs and birds to dealers; may also kill birds before selling and pluck and dress the bodies.*

farmer, *stud; horse breeder, horse farmer; a farmer (q.v.) who breeds thoroughbreds or hackneys in conjunction with carrying on ordinary farm work; usually grows and stocks hay and oats for consumption on farm.*

grass-cutter, *puts cattle to grass on pasture land; but does not breed nor (as a rule) feeds them.*

hay grower, *a farmer (q.v.) who specialises in growing hays; directs work of top ground labourers (014) (q.v.) and superintends drying of hays in east house.*

little holder, *or small holder.*

potato grower, *a farmer (q.v.) who specialises in growing potatoes for market.*

poultry breeder, *poultry rearer, or farmer, poultry; sometimes specialises in breeding, e.g. duck breeder, turkey breeder.*

shepherd, *or stock breeder.*

seed grower, *cultivates plants, cereals, etc., on a farm; collects seed and sells to seed dealers; ploughs burrows, rolls, drills and hoes; e.g. seed grower (013).*

small holder, *little holder; a farmer (q.v.) who farms a holding or small piece of land not exceeding an annual rental value of £50, and usually not exceeding fifty acres in extent.*

statesman, *holder; Cumberland and part of Northumberland, see yeoman; abundant.*

stock breeder, *stock raiser; rearer; a cattle farmer (q.v.) engaged wholly or mainly in raising cattle.*

strawberry grower, *a farmer (q.v.) who grows strawberries for market; propagates plants by layering runners; lays straw cuttings over plants before fruiting to protect berries.*

takeholder, *a grazer (q.v.) who takes cattle or sheep in agreement, i.e. receives cattle and sheep for grazing in return for fee.*

teazle grower, *a small farmer (q.v.) who cultivates teasels, the prickly flower heads of which are used to raise nap on cloth; sown seeds in spring, transplanting seedlings when large enough; when flower heads of two-year old mature plants are ready, cut off the stalks bearing teasels to a length of 9 inches; use them roughly into bundles, i.e. rough plumbags, and pack them on poles to dry in the fields or open sheds, until seeds fall readily from heads; supervises drying of teasels by teazle maker-up (010) (q.v.).*

yeoman, *holder, statesman (Cumberland and part of Northumberland); a farmer (q.v.) who owns and cultivates small farm.*

013.—GARDENERS, NURSERYMEN, SEEDSMEN, FLORISTS.

allotment holder, *cultivates allotment, usually rented from local authority, and sells produce; as for market garden; usually spare time, and rarely prepared to grow crops.*

asparagus grower, *a market gardener (q.v.) who specialises in growing asparagus for market.*

bowling green layer, *constructs, levels, drains and lays out bowling greens with spirit level, usually received from Cumberland.*

bulb farmer, bulb grower, *cultivates bulbous plants, e.g. tulips, daffodils, lilies, and increases the number of bulbs by means of off-set bulbs and roots seed obtained from the flowers; sells all blooms and surplus bulbs.*

cropper, *a market gardener (q.v.) who specialises in intensive cultivation of plants out of season, e.g. beans, peas, generally under glass; frequently employs French system of garden cultivation, i.e. glass cloches or bells.*

firm hand (*fruit growing*); *does skilled work on fruit farm, including grafting, planting, pruning, spraying.*

flower dealer, flower dealer grower, *cultivates flowers in nursery gardens or flower farm in open ground or under glass; sends out blooms and flowering plants to market, or sells them direct to private customer; as for gardener; e.g. florist (770).*

flower grower, flower grower, or florist.

flower picker, *a casual worker who picks or cuts by hand, flowers from flower beds at nursery or flower farm; sometimes also carries the flowers to packing sheds and packs them into boxes ready for dispatch.*

flower tier, *(i) stakes plants and ties up flowers on flower farm; is frequently employed in both houses; (ii) ties up potted flowers in bunches (dozens or half-dozen) ready for packing and despatch to market.*

fruit grower (*under glass*); *grows fruit, e.g. apples, peaches, strawberries, grapes, in glass houses for market; usually combines fruit growing with cultivation of cucumbers, tomatoes, etc.*

garden architect, or gardener, landscape gardener, *general term for cultivator of flowers, fruit and vegetables; main duties consist in digging and manuring soil, planting seeds, bulbs and young plants, watering plants during dry season, weeding ground, tying up plants to make, removing dead plants, pruning and spraying from trees, picking fruit, etc., for the house, mowing lawns and attending to paths; frequently also has charge of glasshouses and frames; where work is sub-divided in sometimes specially designated, e.g. cemetery gardener, day gardener, domestic gardener (wholesale or resident at private house), jobbing gardener (paid by the day or job), kitchen gardener (q.v.) (growing*

vegetables and soft fruit), orchard gardener, exotist; a gardener (q.v.) who specialises in raising tropical and sub-tropical plants in hot house, or in favourable open air situations.

gardener, *landscaper; a gardener (q.v.) who specialises in laying out or attention of garden; drains, lays out according to design and plants gardens by contract, as gardener; builds pergolas, rockeries, ornamental ponds; lays down turf and constructs paths.*

gardeners' market, *a small farmer (011) (q.v.) who cultivates vegetables, flowers and fruit for market; determines rotation of crops with a view to planting against the markets; supervises loading of vans or lorries; attends at markets for sale of produce when neither salesman nor commission agent is employed.*

grafter, fruit grafter, *(i) grafts new stocks on worn-out trees by inserting shoots or scions; (ii) grafts cultivated tree cuttings on better stocks.*

grass layer, *or farmer; has care and general supervision of cultivation of fruit trees on farm; superintends digging, manuring, planting, grafting, pruning, picking, etc.*

herb grower, *a gardener (q.v.) who specialises in the cultivation for sale of herbaceous plants containing properties for medicinal or culinary purposes.*

horticulturist, *general term for any person engaged or skilled in horticulture, either in theory or practice.*

motor lawn mower driver, *drives motor used in mowing lawns, orchard grounds, etc.; sets, adjusts, and sharpens blades of cutters; adjusts or tunes engine and generally keeps machine clean and in good running order.*

mushroom grower, *a market gardener (q.v.) who specialises in growing mushrooms from spores for market; prepares mushroom beds in specially constructed dark covering sheds and (as a rule) in mushroom spore manufacturer; prepares and sells mushroom "bricks" for propagation; may also grow mushrooms.*

nurseryman, *a gardener (q.v.) who grows, either under glass or outside, flowers, shrubs, young trees, etc., for purpose of decoration or for stocking gardens.*

orchid grower, *a cactus gardener (q.v.) who specialises in growing orchids for sale.*

ornamental rock builder, ornamental rock worker, *builds rockeries or stone-work for rock gardens; under direction of landscape gardener (q.v.); plants rock plants.*

propagator, *a gardener (q.v.) employed in propagating house of nursery, raising plants from seeds and cuttings; keeps temperature of houses at most best in winter, and "growing" atmosphere, pruner; (i) a maker (q.v.) on a fruit farm who prunes trees with pruning knife and saw; (ii) in public parks, avenues, etc., one who does this any kind of tree with knife and saw.*

rhubarb rearer, *a rhubarb raiser (q.v.) who grows rhubarb for early market order in hot houses or outside protected by straw and wooden boxes or barrels.*

rhubarb raiser, *a market gardener (q.v.) who specialises in raising rhubarb for market.*

seed grower, *cultivates bush, standard or standard rose from cuttings or by grafting on briars, or grafter; manures ground, prunes, stakes and labels trees; contracts to buy out rose seedlings; dispatches rose trees or blooms to customers or market.*

seed grower, *cultivates seeds sent to him by the seedman, in bulk; allows plants to run to seed and extracts seeds by threshing; after further seeds have been produced, dispatches them to the seedman (770) (q.v.) for sale to the public.*

seed picker, *assists seed grower (q.v.) by using fork or picking plants after they have been allowed to run to seed and separates the seed from the plant by threshing; feeds plants into small power-driven threshing machine or lays plants on a cloth and beats them by hand with a stick; removes plants and rubbish by hand and finally passes seed through a sieve.*

squire keeper, *a gardener (q.v.) who keeps in order garden occupying centre of residential squares in towns; cuts grass, builds paths and keeps flower beds*

supplied with plants; usually also raises plants.
tomato grower; a market gardener (q.v.) who grows tomatoes for market, usually under glass.

014.—AGRICULTURAL AND FORESTRY PUPILS (not in Colleges).

farm pupil, farmer's apprentice; *improver*; a learner who receives instruction in all branches of practical farming carried on by farmer, including buying and selling of farm produce and equipment.
forestry student, forestry apprentice; a learner who is in course of training in the theory and practice of forestry by working under instruction of forester (016) (q.v.) on a private estate or at a forest school.
improver, *see* farm pupil.

015.—FARM BAILIFFS AND FOREMEN.

bailiff, farm bailiff, farm manager, farm steward; *groom*; a manager or head worker on farm or farms, who is mainly engaged in supervision and allocation of duties; superintends work of agricultural labourers, e.g. carters, cowmen; is often placed in charge of subsidiary farms under the direct supervision of the employer and manages farms in absence of farmer (011) (q.v.); may buy and sell produce and equipment in market on owner's behalf.
foreman; headman; (1) has charge of a number of labourers, under direction of farmer (011) or farm bailiff (q.v.); allocates duties and supervises work; usually a working foreman; (2) *East Riding of Yorkshire*; has charge of a farm, or part of a farm, where employee is resident.
groom master; supervisor or is master of gang of usual farm hands hired by farmer; keeps record of time worked or amount of work done, e.g. quantity of fruit or vegetables picked, by each worker.

grieve; *Scotland, Northumberland, Cumbria and Yorkshire*; *see* farm bailiff.
ground keeper; a farm bailiff or foreman (q.v.) residing on farm where farmer is non-resident.

hayward of the manor; looks after hedges and fences, prevents damage by cattle; impounds strays; supervises work of hedgers and ditchers (014) (q.v.) and sometimes of estate carpenter (014) (q.v.).
headman, *see* foreman.

health keeper; keeps clear all drainage ditches on husbandry with spade and rake; prevents unauthorized persons from stoking or pushing carts or vehicles; gives warning of and attempts to stop bath fire; prevents refuse being dumped on the land.

hind; a farm servant, often living in his employer's house; (1) (North of England) takes charge of pair of horses, which he works, feeds and looks after; (2) (*some parts of North*) milks the ploughman-steward (016) or headman (q.v.); (3) (*East Riding of Yorkshire*) man in charge of farm where employer is not resident; (4) a general utility man.

husbandman; (*Welsh term*); a farm worker experienced in all branches of farm work and able to plough, sow, reap, milk, land sheep and cattle, thresh, repair ditches, etc.; usually acts as headman or foreman (q.v.).
manager of stud farm; manages farm where pedigree horses are bred and reared; gives instructions and superintends work of stud groom (023) (q.v.); is responsible for expenditure and for work done on the farm; keeps records of stock; work usually done by head groom.

marsh bailiff; overlooks cattle daily at grass on marshes for farmer, who has leased the ground; protects sheep through marsh, makes periodical examination of fences, ditches, drains, etc., and reports any damage or necessary repairs.

016.—FORESTERS AND WOODMEN.

skoman, *see* timber feller.
coppice keeper; *as for* forester, having general care of coppice; fells woodlands at short intervals to prevent their becoming high forest.
forester; wood keeper, woodland caretaker; superintends forest workers (q.v.) and has

local charge of forestry operations, of standing timber and of young plantations; directs felling and hauling of trees, examining and lepping standing timber, raising seedlings and transplanting young trees, etc.; keeps records and arranges small sales.

foremost foreman; a sub-forester (*see* forester) in charge of a beat, i.e. part of a forest area.

forest ganger; has charge of gang of forest workers (q.v.); sometimes also takes part in the work.

forest guard; patrols and protects forest land against fire, trespass, etc., under supervision of forest ranger.

forest keeper, *see* forest ranger.

forest planter, *see* forest worker.

forest ranger; forest keeper, wood ranger; patrols woodlands as protection against fire, trespass, etc.; supervises under-keepers and forest guards (q.v.).

forest worker, forest workman; forest planter, tree planter, wood grower; prepares ground for planting by clearing and burning, draining, fencing, setting, ploughing; sets tree seed or transplants seedling trees from nursery ground into notches or pits; weeds, binds up, etc., replaces losses, protects from fire and damage by mammals, birds and insects; thins crops and later fells trees, *see* timber feller.

tenant of forest holding; a forest worker (q.v.) with holding of less extent than a small holding; works in forest during planting season and on holding during summer, during which period he acts as fire guard, the forest holdings being in or adjoining the forest area.

timber feller, timber faller, timber hewer; *ananas, tree feller, wood cutter, wood feller*; fells necessitous timber trees in forest or wood, by first felling a tree on one side, then the second to which the tree is to fall, then saws from opposite side (two workers) using a double-handled saw, and inserting wedges after the saw to ease it and guide the felling direction.

timberman (on estate), *as for* wood bailiff the commoner in the Royal Forest; unusual.
tree planter, *see* forest worker.

verdoner; is appointed under special statutes to protect the interests of the commoners in the Royal Forest; has judicial powers in connection with encroachment and trespass.

wood bailiff, wood steward, wood warden; *woodward, woodreeve, woodreeve*; a forester (q.v.) in charge of forestry operations on estate; *cf.* forest fawn.

wood cutter, wood feller, *see* timber feller.

wood grower, *see* forest worker.

wood keeper, woodland caretaker, *see* forester.

woodman; *as for* forest worker, employed in woodlands in protecting the crop, felling and clearing; may be a forest foreman (q.v.) wood ranger, *see* forest ranger.

woodreeve, woodreeve, woodward, *see* wood bailiff.

018.—DRAINAGE SUPERINTENDENT, FOREMAN, ETC.

drainage agent; plans schemes of drainage or is in charge of such schemes or underground channels, inspects the work being carried out by drainage labourers (026) (q.v.) or gives directions to drainage superintendant; usually a civil engineer or surveyor.

drainage assistant; assists drainage agent (q.v.) by surveying fields and drawing up plans of drainage schemes, or in superintending and inspecting the work done; duties usually performed by assistant engineer or surveyor.

drainage bailiff; drainage superintendent; *also* reeve, *also* and superintends work done by drainage labourers (026) (q.v.) and instructs them as to the working and laying out of the plots made out by drainage agent (q.v.) or engineer; supervises estate keepers (045) (q.v.).

dyke reeve, *see* drainage bailiff.

020.—SHEPHERDS.

looker (in charge of sheep), marsh looker; a smallholder on Romney Marsh who receives sheep sent down to graze in summer by upland farmers or graziers.

riddleman; a shepherd (q.v.) who marks sheep to distinguish flocks or ownership by heaving a small stone, or dipping it in red ochre and placing it on the sheep's back.

sheep dipper; prepares bath, for prevention of disease among sheep and for exterminating parasites, by dissolving chemicals in water; dips sheep in bath and sees that they are properly immersed before they are allowed to emerge from bath.

sheep cheater, sheep clipper; a farm worker who specializes in removing wool from the sheep by clipping with hand-shears or mechanically-operated clippers, usually in spring or late summer.

shepherd; a farm worker in charge of flock of sheep; selects suitable grazing land and, with assistance of boy and dog, keeps sheep within bounds; where necessary, fixes hurdles to form sheep fold; removes flock to fresh pastures when herbage is exhausted; protects ewes in lambing season.

shepherd boy; shepherd's page (*East Angles*); helps shepherd (q.v.) with sheep; romps up sheep that have strayed and helps to remove flock to new pastures.

021.—AGRICULTURAL MACHINE, TRACTOR—DRIVERS, ATTENDANTS.

agricultural steam engine attendant, agricultural traction engine attendant, *see* traction engine driver.

corn threshing, *see* threshing machine attendant.

engine driver (threshing machine), *see* traction engine driver.

engine man (on farm); (1) *see* traction engine driver; (2) attends to any engine on farm; *cf.* engine man (059).

hay bailer attendant; *hay presser, driver* *grass cutters*; one of a gang engaged in turning loose hay into hay baling machine which gradually compresses it into a compact and regular shaped bale; secures ends of wire round compressed bale; releases pressure, removes bale and resets wire for next compression.

hay presser, *see* hay bailer attendant.

motor plough driver; steers and controls motor plough, from a seat on the plough, over fields that are being ploughed up; *as for* motor tractor driver.

motor tractor driver; tractor driver; steers and controls engine of motor tractor from a seat on the tractor, behind which is fixed a plough or other agricultural instrument; tractor may also be used for haulage when driver fixes steel tyres over wheel flanges; tractor acts as large engine in good running order; may do minor repairs and adjustments.

reaping machine attendant; a carter (023) (q.v.) who drives horses (or motor) attached to a self binding or a reaping machine and brings out and secures as required by means of a lever; if machine is a self binder, operates at regular intervals, levers controlling the automatic binding of sheaves and the cutting of the twine.

steam cultivator attendant, *as for* steam plough attendant.

steam plough attendant; stands at end of field in course of being ploughed, turns plough on to fresh furrows and adjusts cables by which plough is drawn by and to source of power, changing cable from back to back of plough or vice versa according to direction in which plough is to proceed.

straw press attendant, *see* hay bailer attendant.

threshing machine attendant; corn thrasher; (1) feeds threshing machine with grain in the ear from stack or rick; (2) places sacks to chute, through which grain is fed automatically by machine, and removes sacks to store when full; is usually one of a gang which comprises a threshing outfit from farm to farm.

traction engine driver (threshing machine); agricultural steam engine attendant, agricultural traction engine attendant, engine driver (threshing machine), engine man (*on farm*); drives and looks after traction engine attached to threshing machine; sees that driving band is properly coiled and regulates speed of drive.

tractor driver, *see* motor tractor driver.

does odd jobs not falling strictly within duties of shepherd, ploughman, etc.; may do sheathing, look after farm machinery, will take place of ploughman (013), cattle-man (025), etc. (q.v.) who may be absent for any reason.

outworker: a casual female worker on a farm, thinning turnips, planting potatoes, herringing, etc.; usually a relative of ploughman, living in immediate neighbourhood.

pig man, pig attendant, pig feeder, piggery man; *swine feeder, swine herd, swine herdsman*: a farm labourer (q.v.) who feeds pigs, with special care in preparing food for young pigs; cleans out sty and lays down litter.

potato granger, *see potato riddler*.
potato picker: a casual labourer who collects potatoes in sacks or baskets after they have been turned out of ground by potato raising machine and conveys them to "pit".

potato riddler; *potato granger*; separates "wares" (selectable) potatoes from seed potatoes, and from "clats" (small and worthless, usually fed to pigs), or "riddle," i.e., a machine consisting of an inclined mesh perforated with holes of various sizes through which potatoes fall; turns wheel of machine which causes holes to open and close.

potato sifter: (1) carries seed potatoes in basket and places same, *see*, seed potatoes, at regular intervals in furrow ploughed by ploughman (013) (q.v.); (2) a sifter (014) (q.v.) who plants potatoes by means of a mechanical potato sower.

potato splitter: a farm labourer (q.v.) who cuts seed potatoes with a knife into "sets," each having an eye attached capable of forming an independent plant.

rick crowder, *see thatcher*.

rock boy, *see hard scarer*.

servant man (*Walter*), *see farm servant*.

shinger: *Carved turn*; a casual labourer employed for short periods on different farms; rarely works regularly on one farm.

spade hand, *see spademan*.

spade labourer: a farm labourer (q.v.) employed in digging, as concealed with men who stand to cattle.

spade man; *spade hand*: Northumberland term; a skilled worker, capable of farming, looking after machinery, etc.

stand-to man; *Devonshire term* for farm labourer (q.v.).

stone picker: a casual worker engaged in cleaning arable land by collecting stones which are used for road making.

strapper: (1) *Devonshire* a sifter (*adjunct* *overseer*) a casual labourer, employed to do odd work in fields or about the farm.

straw binder, straw trusser, *see hay binder*.

straw cutter, *see hay cutter*.

swine feeder, *swine herd*, *swine herdsman*, *see pig man*.

thatcher, thatch thatcher; *rick crowder*; constructs thatch roof coverings for ricks or stacks; combs trusses of straw to make smooth and fastens combed straw securely to rick with wire rope; trims edges of straw with special knife; may also thatch cottages or other farm buildings; cf. *thatcher* (583).

wreder: a casual labourer who hoes out, by hand, the weeds growing round crops in a field, working on a time or piece-work basis.

wire worker (*harp*): stretches wire from post to post in a hop field to form frame work upon which lines are trained; repairs broken wires or tightens slackened wires; work usually done by hop ground labourer (q.v.).

025.—GARDENERS' LABOURERS.

fruit man: a labourer (q.v.) on a fruit farm.

fruit sprayer: a labourer (q.v.) on a fruit farm who sprays fruit trees and plants with solution containing chemicals as a protection against disease; usually also true machine tinker with fruit growing; gardener's boy; *see* *garden* (015).

In unskilled work, e.g., weeding, watering, sweeping lawns and paths, burning rubbish.

labourer: does unskilled work about a garden, nursery, orchard, etc., e.g., digging, planting, manuring, hoeing, picking and

spraying fruit trees, lifting and drying bulbs (on bulb farm); sometimes specially designated, e.g., bulb farm labourer, fruit farm labourer, fruit plantation labourer, nursery labourer, orchard labourer.

labourer, cottage: a cottager (031) (q.v.) who works as labourer in nursery, market garden, etc.

labourer, landscape; dig and drains labourer, shrubs, etc., *see* market paths under supervision of landscape gardener (013) (q.v.); does any other unskilled work in connection with laying out of new garden.

labourer, policy; *Swatow term*; a gardener who picks peas by hand and keeps the policies or grounds surrounding the home on a large estate.

lawn mower; cuts grass lawn usually by pushing a machine or driving horse or pony drawn machine; cf. motor lawn mower driver (015).

lawnmower; a casual worker who ties up rubbish in bundles with wires or bands for despatch to market.

spade hand; dig and does other unskilled work in nursery, market garden, etc.

026.—LAND DRAINERS, DRAINAGE LABOURERS.

bank repainer (land drainage); a drainage labourer (q.v.) who repairs broken ditches or other water courses with earth and clay usually dug from bed of ditch with spade; may cart clay from other districts for the purpose.

drainage labourer; a ditcher (024) or drainage labourer (q.v.) working on his own account, who repairs existing systems of field drainage, or lays simple system of drainage in accordance with instructions of farmer (011) (q.v.).

drainage labourer; cleans silt and weeds from watercourses with rake and spade, repairs the banks thereof in stony land, plastering them with clay laid on with spade; may also help to lead and calld barge in which clay is taken from one district to another; sometimes specially designated, e.g., flat drainage labourer.

drain labourer: a drainage labourer (q.v.) who cleans ditches of rubbish and silt with spade and rake; may cut weeds from banks with scythe and sickle.

drainer; *sewerer*: a drainage labourer (q.v.) who digs trenches, lays drainage pipes, and fills up the trench with loam and a dig out watercourses and ditches or ditches sometimes specially designated, e.g., estate drainer, field drainer, land drainer, land pipe drainer, land side drainer.

dyker: a drainage labourer (q.v.) who digs out new watercourses, ditches, or ditches, or repairs old ones, by clearing away weeds and redigging channel.

marsh labourer, marsh man: a drainage labourer (q.v.) working on marsh land.

penstock keeper, *see sluice keeper* (land drainage).

sewerman (land drainage), *see* drainer.

sluice keeper (land drainage); *penstock keeper*; controls flow of water in land drainage systems of fens, marshes, etc., by opening or closing sluices by hand; keeps sluice clear of weeds and silt; also keeping parts.

027.—LABOURERS IN WOODS AND FORESTS.

cone collector; climbs trees to collect cones; picks them for despatch to seed extracting kilns.

coppice labourer, coppice worker, *see* *conifer labourer*.

coppice outtier: (1) cuts or thins undergrowth of coppice or belt with an axe; (2) cuts saplings for conversion into wooden houses, often also cuts wood for hurdles, pea sticks, etc.

conifer labourer; a labourer employed on conifer work, generally woods.

couter (*stick making*); cuts sticks in rough state from hedger, or from bushes or trees in woods, for manufacture into walking sticks, etc.

plantation labourer; *coppice labourer*, *coppice worker*, *wood labourer*; does unskilled work in tree plantation, thinning undergrowth, cleaning ground, protecting

saplings, watching for forest fires in summer, etc.

root grabber, stump extractor, *see* wood grubber.

timber haulier; drags trucks of felled timber trees from woodlands to roadside by means of horses and wire ropes lashed to the trucks; dumps the timber or assists wagoner (025) to load on to timber wagon.

wood grubber; *root grabber*, *stump extractor*; extracts stumps of trees from the ground by means of jacks or explosives when woodland is to be used for agricultural purposes.

wood labourer, *see* plantation labourer.

028.—ESTATE LABOURERS.

estate labourer; does unskilled work in maintenance or repairs on estates, setting undergrowth in woods, repairing hedges, fences and gates, cleaning ditches, etc.

029.—PEA AND FRUIT PICKERS.

fruit picker: a casual worker on a fruit farm picking any fruit, e.g., strawberries, plums, during short season when fruit is ripe; places fruit in baskets for despatch.

pea picker: a casual worker in a market garden who picks peas by hand and places them in sacks ready for despatch to other pickers or gathers other vegetables at other seasons.

030.—OTHER AGRICULTURAL OCCUPATIONS.

agglarman, agglar, *see beekeeper*.

beekeeper; *agglarman, agglar*; keeps an apiary; hives and feeds bees, and removes honey from hives by hand or small comb; extracts honey from large comb with machine extractor, a machine resembling a milk separator, which extracts honey by centrifugal force, and draws off honey into bottles through tap at bottom of extractor; returns combs to hive for further use in honey-making.

beekeeper; a casual worker who is trained or in small comb; may breed bees and queens of special strains; may also give advice to amateur beekeepers or look after bees, e.g., swarming, extraction of honey, or their health.

beekeeper's expert; visits bee-keeping members of British Beekeeper's Association and gives general technical advice on bees, particularly with regard to disease; may also be judge of honey, bees, and bee-keeping appliances at agricultural and horticultural shows; must have passed the final examination of the British Beekeeper's Association; may also be a beekeeper (q.v.).

chicken fatteners; fatten poultry for market, generally by cramming process; selects and confines birds to pens; makes food to suit the requirements of the birds.

chicken plucker; removes feathers and prepares poultry for market.

drum feeder (*seed cleaner*); feeds seeds from a measure into rotary cylinder or drum of seed cleaning machine; fits machine with fine or coarse wire sieve according to class of seeds to be cleaned; operates machine which causes seeds to fall from drum on to sieve, the dirt being blown off by a series of fans.

fern or bracken collector, outtier, *see* gatherer; cuts with scythe or sickle and pushes fern, bracken or heather for stable bedding, litter, etc.; forks into cart; usually done by farm labourer (024) (q.v.).

furze outtier; keeps heath and common land clear by cutting furze (gorse) with bill hook and cutting in hags to burn; usually done by farm labourer or labourer for rural council.

ganderess, goose girl, gossway; looks after geese on common land, and prevents them straying; feeds and waters them and carries them back to the farmyard at night; *shepherd*.

grass keeper; is responsible for keeping grass plots trim and tidy in certain public streets and squares; mows, weeds, rolls, and sweeps lawns; trims edges; waters lawns from hose in dry seasons; may also maintain gravelled paths in good order.

hop net dealer; grows small hop plants to sell to hop growers.

looly collector, cutter, or gatherer; answers collector, cutter, or gatherer; collects seaweed on seaboard, making it into heaps above high water mark; may gather from water in boats with help of grappling irons and long-handled sickles; when dry, turns heaps to ads for sale to chemical factories for recovery of iodine; work usually done by coaster (011) (q.v.).

labourer in rod host; a labourer on willow or other bed who does any general labouring work, under direction of other grower (q.v.); work sometimes done by other grower.

moose catcher; traps or digs out moose; works on his own account, or contracts to clear land of moose; sometimes regularly employed by Dringage Society or by one farmer or landowner to sell skins.

moose collector, cutter or gatherer; cuts or tears up and collects sphagnum moss for surgical uses or for use by doctors on haemorrhoids, etc.; sticks to dry; ties up in bales with straw twine.

moose man; an independent worker, supplying moss under contract.

moose man; works on a "moose," or piece of reclaimed land, on agricultural work or land drainage.

moose peeler; Scottish term; contracts with farmers to cut peat fuel and supply moss litter; removes, by spade, top layer of moss or peat which covers peat, and prepares for peat digger (q.v.); dries moss for sale as litter; may also dry and cut peat.

moose peeler; sometimes other, willow, or withy rods in large tank of boiling water for several hours to "soft" them, extract peat, allows them to drain, rolls them and dries them on sun and air; sometimes also does work of other peeler (q.v.).

moose grower; willow rod grower, withy grower; (1) prepares other beds by double digging to depth of 18 inches; plants seeds, i.e., the heads of large oar rods, in prepared trenches to depth of 10 inches; weeds and hoes the ground of other beds; sorts grown and cut other rods into various sizes; bolls and peels oar rods; other peeler, once peeler; sells oar rods, willow, or withy rods when peeled and dried to basket makers; (2) supervises work of labourers engaged in various operations of other growing, including labourer in rod host, oar peeler, once peeler (q.v.), and sells rods to basket makers.

moose peeler, oar trimmer; willow rod trimmer, withy trimmer; stands out willow rods (see willow cutter) upright in shallow pits of water until sap rises and growth begins; strips or peels bark from rod with bridle, a scower's like tool, with or without previous soaking; work sometimes done by oar peeler or by other grower (q.v.).

moose cutter, peat digger; digs and cuts peat with special peat cutting spade; lifts out pieces of peat and sends to dry; usually done by coaster (011) (q.v.).

moose litter worker; cuts moss away from peat and spreads to dry; handles and ties up in bales for sale as litter.

poultry boy; sends poultry man (q.v.) in feeding and watering poultry, or in cleaning out house and spreading and collecting eggs; takes eggs to station; acts as messenger generally.

poultry feeder, poultry man, poultry attendant; feeds and waters poultry on poultry farms, cleans out houses and lays litter in them; collects eggs, kills fowls, and separates broody hens in pens.

poultry manager; supervises work of poultry men and boys (q.v.) for farmers; attends at markets or sales of poultry; superintends hatching and brooding; checks records received from poultry men; buys poultry food; works generally under direction of employer.

rabbit catcher, rabbit trapper; sets snares or traps for rabbits; sometimes designs rabbit from burrow with stick; ferrets; may sometimes shoot; sells as food.

rat catcher; vermin destroyer; exterminates rats by trapping, poisoning, with ferrets and dogs, or by other method.

reed collector, cutter or gatherer; widge collector, cutter or gatherer; cuts and gathers reeds with scythes and sickles, for use in thatching or as litter; works sometimes to dry; generally works on own account; sometimes an employed person, cf. river weed cutter.

reeds (green, rhine, ripe) labourer; cleans sick, weeds, and reeds with spade and rakes from reeds, i.e., shallow waterways, soles as boundaries between patches in Somerset and Dorset; works on reeds; also drains and repairs tributary ditches; cf. drainage labourer (020) (q.v.).

river weed cutter; undertakes contracts to clear certain parts of a river of any weeds, etc.; drags and through the water from the banks of the river, or cuts weeds by hand with scythe, from bank; may use a punt and drag or cut weeds as he proceeds.

seaweed collector, cutter or gatherer, see reed collector.

sedge collector, cutter or gatherer, see reed collector.

swan feeder; feeds swans and other birds, e.g., ducks, water hens, kept in public parks; provides cover from inclement weather, especially during breeding time; feeds birds and gives out bits or shreds; may be done by park labourer (800) (q.v.).

tea-bale maker-up; roughly sorts tea-bales into fine and dry (cf. tea-bale grower (311)) and ties them in glassing, i.e., bundles of twenty-five; does twenty glassings horizontally into a split rod, or store, and ties rod together as top, ready for sale to tea-bale merchant (770) (q.v.); sometimes under direction of tea-bale grower (011) (q.v.).

turf cutter, turf getter, turf labourer, turf splitter, turf worker; cuts turves under direction of turf dealer (q.v.) using a moor, i.e. a special long-handled knife one piece of turf 12 inches wide and about 30 inches long, extending to depth of 2 inches; cuts underneath with a silver tool; lifts and rolls turf and stacks in house for despatch.

turf dealer, turf contractor; undertakes contracts to supply turf for tennis lawns, bowling greens, etc., and superintends turf cutters (q.v.); sometimes also does work of turf cutter.

vermin destroyer, see rat catcher.

watercress (own account); breeds rabbits in a warren; feeds them in winter; stores or traps rabbits periodically for sale; prevents trespass or damage to warren.

watercress cultivator or grower; grows watercress in slowly running water with gravel bed; superintends work of watercress labourers, and watercress cutters (q.v.); dispatches or conveys bunches of gathered watercress to market or sells to itinerant dealers.

watercress cutter, watercress gatherer; a watercress labourer (q.v.) who cuts or gathers watercress by hand, using a knife, from a watercress bed; ties up watercress with oar or hose and packs bunches in baskets or hampers ready for sale or despatch to market.

watercress labourer; general term for any worker who cleans watercress beds, removes weeds and rubbish, sees that water (running stream) is kept clear, regulates supply of water by building dams of gravel, etc., prepares beds (gravel) for watercress growing and sometimes cuts and bunches watercress ready for market; cf. watercress cutter.

willow cutter, willow garth labourer; a labourer in rod host (q.v.) who cuts willow or oar rods with head knife, in clearing, when laid flat; usually also trims or peels them.

willow land man; hoes and digs willow land, and plants sets for oar growth; cf. oar grower.

willow rod grower, withy grower, see oar grower.

willow rod trimmer, withy trimmer, see oar peeler.

ORDER III.—MINING AND QUARRYING OCCUPATIONS.

Sub-Order I.—In Coal and Shale Mines.

040.—OWNERS, AGENTS, MANAGERS.

agent, colliery agent, mining agent; captain, chief miner, resident manager, steward, clerks; in complete control of

technical and commercial affairs of colliery or shale mine and is responsible to directors alone; appoints subordinate superintending staff (cf. See Mines Act, 1911); deals with all important matters; at some mines, surface duties are delegated to surface agent (q.v.) and underground duties to underground agent (q.v.).

captain, see agent.

chief viewer, see agent.

coal manager; see agent; cf. master (011).

diplomer, see surveyor.

engineer, mine engineer; (1) is Durham and Northumberland, has charge of all boilers and machinery on surface and below ground; keeps watch book showing shafts worked by north and wages due to them; superintends work of engine-wrights (041) (q.v.); (2) is Scotland, see surveyor.

general manager; an agent (q.v.) who is manager of profit of colliery and often with several certificated managers under him.

lender; see surveyor.

lessee; and master, owner, coal owner; holds lease of colliery from coal owner (q.v.); may sometimes perform managerial work as managing director.

lessee; see surveyor.

lieutenant, see surveyor.

manager, colliery manager, colliery manager, superintendent; has entire management of colliery or shale mine, and is responsible for observance of Coal Mines Act, 1911, and of general regulations thereunder; must hold first class certificate of competency under the Mines Department, and be not less than 25 years of age; must make daily personal supervision of mine and acquire practical experience of all work done; sometimes acts as commercial manager.

owner, coal owner, see lessee.

owner, coal owner, see agent.

royalty agent; a mining engineer who acts on behalf of royalty owners; goes down pits and measures, by means of various instruments, etc., coal worked in order to determine royalty payable to owners.

royalty master, or owner; lessee; an owner of minerals who receives "royalty" (of as much as 60%) from lessee for all disposable coal won.

steward; (1) see agent; (2) is Yorkshire a manager (q.v.) of small pit.

superintendent, see manager.

surface agent, surface manager; has charge of surface work at colliery under chief agent; appoints subordinate staff; interviews all pit surface, e.g., bank foreman (041); gives all important decisions on surface work.

surveyor, colliery surveyor; dipler, engineer; superintends underground drainage; takes bearings in mine by means of dipler or compass; books all bearings and length of bearing as measured by oar man (041) (q.v.); plots survey and prepares plans of mine workings from surveys made as required by Coal Mines Act, 1911; sees that roads are driven according to plan; establishes specifically designated, e.g. underground surveyor.

underground agent; an agent (q.v.) who has all responsibility for operations of underground agent; appoints all subordinate underground officials; co-operates with manager (q.v.).

under-manager, certified under-manager, colliery under-manager; under-manager; is responsible, under the manager, for management of mine and for all persons employed under him; must be qualified as required by Section 6 (2) of Coal Mines Act, 1911; in absence of manager, is usually responsible for working of mine; is often assisted by assistant under-manager (041) (q.v.) and by one or more over-men (041) (q.v.).

under-viewer, see under-manager.

viewer, see agent.

041.—SUBORDINATE SUPERINTENDING STAFF (including Inspectors, Contractors and Foremen).

aerial ropeway foreman; in charge of aerial ropeways used for conveying dirt from pit bank or roadway to dirt heap or small coal in roadway and there to coke screen, etc.; examines ropes periodically and reports to engine-wright or engineer (040) (q.v.); sees that sheaves, pulleys, etc., are greased and in good order,

supervises repairs; work done in some areas by engine-wright.
 air road inspector; *examines roadways, windroad inspector*; examines ends and roof of airways necessary for ventilation, and is responsible for their maintenance and repair; work usually done in *Lancashire* and *S. Wales* by fireman (q.v.).
 ambulance superintendent; is responsible for efficiency of ambulance appliances; sees that ambulance bays are kept fully equipped; orders fresh supplies; gives first aid to any injured worker.
 assistant deputy, *superintendent, examiner, assistant fireman*; *deputy fireman*; assists deputy, examiner or fireman in his manual duties as distinguished from his statutory duties under Coal Mines Act, e.g., helps to lay rails and get tubs on rails, set up timber and arrange brattice cables and to fix doors and frames; examines coal got to see that it is free from dirt and rubbish; may hold certificate to fire shots, assistants looker; *deputy looker*; assists looker (q.v.) in some of his duties, e.g., inspecting coal on belt and conveyor, overseeing weighing, keeping time books.
 assistant traffic manager, *see* traffic manager's assistant.
 assistant under-manager, assistant under-viewer, *assessor, under-manager* (1945) (q.v.) and sits in his absence; has charge of a definite area of mine and is responsible for safety, output; in some districts work is done by back overman or fore overman (q.v.).
 back-bits deputy; makes daily examinations of workings in "back-bits," i.e., between shaft and working face but not at actual coal face, under direction of back overman (q.v.); does necessary timbering in small areas, otherwise directs timberers (1945) (q.v.).
 back overman, back shift overman; *middle shift overman*; represents under-manager (1945) (q.v.) and carries out supervisory duties during second shift; visits daily (as far as practicable) parts of mine not visited by fore overman (q.v.); confers with overman, master stibler and deputies (q.v.) on state of mine; makes daily report; is in control of fireman in his shift; in some districts work is done by back overman under-manager (q.v.).
 bailiff; (1) *see* overman; (2) in *West Yorkshire* is manager of small pits; cf. *overman* (1945).
 bank foreman, bank overman, bank superintendent; *bank inspector*, *pithead foreman*, *pithead inspector*, *pit top foreman*, *surface foreman*, *top bow*; is in charge of workmen above ground working at head-stead; in coal mines as distinct from chalk and other mines, is also in charge of men at surface; is responsible for proper cleaning and securing of coal, where there is no screen foreman or looker (q.v.).
 bargain man, bargain taker (not a lawyer), *see* contractor.
 bangle driver (*Durham*), *see* haulage foreman.
 belt inspector, *see* screen foreman.
 boiler inspector; makes statutory inspection of steam boilers and reports on their condition; looks after repairs by blacksmith; usually done by blacksmith (1905) (q.v.); work usually done by engine-wright (q.v.).
 brow major; *lead bankman*; in charge of loading and unloading cages at surface; gives signals for winding operation.
 bumber (slag), *see* bawling foreman.
 butty, buttyman (not a brewer), *see* contractor.
 chain inspector; inspects chains in use in and about mine, especially those used in engine-chain hauling system; reports defects to engine-wright or fireman by blacksmith; usually done by blacksmith (1905) (q.v.).
 chargeman; in *Northumberland* and *Durham* a deputy (q.v.) on repairing or night shift, in its absence *chargeman* (1945) repairs, shafts (1944) and distalies (1945) generally; sometimes specifically designated, e.g., night chargeman.
 charter master, *see* contractor.
 coal inspector; (1) inspects coal at pit bank after it has been cleaned and before it is passed for sale; in *S. Wales* (S. York), *cropper*; examines coal sent up by collier (1943) (q.v.), and, if necessary, screens coal at special screen; determines, in

collaboration with weigher and check-weigher (1945) (q.v.), whether further sale will be paid for or not by collier for dirty coal.
 coal wharf manager; in full charge of coal wharf from which coal can be shipped in barges, etc.; supervises one or more clerks, keeping records of coal received and shipped; cf. *harbour manager* (170).
 colliery estate agent, *see* house inspector.
 contractor (not a lawyer), colliery contractor; bargain taker, bargain taker, butty, buttyman, charter master; (1) contracts for getting of coal in specified sections at agreed rate per ton, employs and pays his own workers (hewers, etc.); carries out all necessary timbering and repair of stall; stores and packs stone; responsible for safety of his workers; (2) contracts to keep in repair certain lengths of underground roads; (3) contracts to clear coal at machine cut face at fixed price per ton; sometimes specifically designated, e.g., coal mining contractor, shaft mining contractor.
 contractor, *see* make-up system; a contractor (q.v.), who contracts at a price, on the understanding that the colliery will guarantee the minimum rate of wage to his workers.
 corporal; in *Midlands*, superintends head-senders, under-keepers and stands pipe drivers; *see* for haulage foreman.
 cotcher (S. York), *see* coal inspector.
 cropper, *see* coal inspector.
 day deputy, day examiner, day fireman, day shift fireman, day shift inspector; a deputy examiner or fireman (q.v.) on day shift.
 deputy; *deputy fireman* (*Durham*), *examiner, inspector* (*Southland*); is in charge of district or section of seam; is responsible for ventilation; makes reports as to gas, state of roof and sides and general safety; takes temperature and barometer readings in some cases also sets timber, lays rails, fixes brattices, and, if holding fireman's certificate, fires shot for men; sometimes specifically designated, e.g., night deputy.
 deputy fireman, *see* assistant deputy.
 deputy looker, *see* assistant looker.
 deputy overman (*Durham*), *see* deputy.
 deputy overman; a deputy (q.v.) who is responsible directly to the under-manager (1945) and not to the overman (q.v.).
 dog's head doggy; (1) *see* haulage foreman; (2) slang name for various small offside to foreman.
 drainage inspector, *see* mine drainage inspector.
 engine road corporal; a corporal (q.v.) in charge of mechanical haulage on underground system.
 engine-wright; *machinery inspector*; has charge of whole or part of machinery on surface and below ground, according to use of colliery; examines and tests portable engines, chains, pumps, winding gear, air compressors, engines, etc.; is assisted by foremen and inspectors, e.g., chain inspector, boiler inspector, aerial ropeway foreman, pump inspector (q.v.); reports to engineer (1945) (q.v.).
 engine-wright, *see* deputy; sometimes specifically designated, e.g., night engine-wright.
 examiner of tubs and cages; does minor repairs; sends other faulty tubs to repair shop; reports to engine-wright (q.v.).
 farm manager, *see* shaft examiner.
 fireman; legal title of a deputy holding a certificate to fire shots as required by Coal Mines Act, 1911; the fireman, however, does not usually set timber, as is sometimes done by deputy; sometimes specifically designated, e.g., night fireman.
 fireman (stoppage exam); examines fire stoppings, built to isolate fire in colliery workings.
 foreman; *master*; superintends work of set of workmen either above or below ground; sometimes specifically designated, e.g., foreman hewer.
 foreman handier, *see* haulage foreman.
 foreman pigman, *see* shaft examiner.
 foreman wanner, *see* washing master.
 fore overman; is in charge of workers on coal drawing "face" shift, i.e., morning shift; is subordinate to under-manager, has superior to fireman, examiners or deputies on same shift; responsible under management for safety of all men, which he visits daily; registers all time worked, yard work, etc., done by hewers (1943), putters (1945) and diall workers (1945)

(q.v.); in some districts, work is done by assistant under-manager (q.v.).
 gaffer, *see* overman, sometimes specifically designated, e.g., night shift gaffer.
 haulage contractor; takes contract on transport lorry for whole or part of haulage operation; engages and pays his own assistants.
 haulage foreman, haulage overman; *baggy driver* (*Durham*), *bumber* (*slang*), *doggy*, *road doggy* (*slang*), *foreman hauler*, *master haulier*; in charge of haulage haulage, *see* putter, *see* putter, *putters* (1943); was that loaded tubs are going to proper roads and that empty tubs are going to proper districts; responsible for harness and sees that it is kept in good repair; cf. *colliery-wright* (1945).
 haulage rope inspector; inspects ropes (wire or hemp) in haulage work and reports defects to engine-wright (q.v.).
 head bankman, *see* brow major.
 heap inspector, *see* bank foreman.
 heap keeper, *see* screen foreman.
 horse inspector; inspects horses and ponies used in and about mine and certifies that in proper condition for working; sometimes also does work of farrier or barn smith (1905) (q.v.).
 house inspector; *colliery estate agent, inspector of colliery property*; inspects miners' houses, where these belong to colliery owners, to see that they are kept in repair; work often done by foreman joiner or wanner.
 inspector; a general term covering a number of subordinate officials or foremen under the manager or engine-wright, e.g., boiler inspector, heap inspector; (2) (*Swindon*) *see* deputy; sometimes specifically designated, e.g., night inspector.
 inspector of colliery property, *see* house inspector.
 inspector of refuse station; is responsible for upkeep of refuse station and for efficiency of refuse belande; orders supplies of refuse bins (cages, haulage, etc.).
 looker (*Durham* and *Northumberland*), *see* screen foreman.
 keeper, keeper instructor (colliery refuse station), *see* refuse station superintendent.
 lamp inspector; conducts periodic examination of safety lamps and reports to management.
 loading inspector; (1) supervises the tipping of coal at loading shoots on surface as to prevent damage to coal; usually done by screen foreman assistant looker (*Durham*) (q.v.); (2) supervises loading of cages or tubs below ground to prevent loading of undue amount of impurities; often done by deputy, examiner or fireman (q.v.); cf. *coal inspector*.
 machinery inspector, *see* engine-wright.
 master, *see* foreman.
 master handier, *see* haulage foreman.
 master shifter; in charge of repair and construction work underground on the repairing or night shift, takes instructions from overman; responsible for getting pit lams through winding order for working shift next day; oversees timbering of roofs, etc., and general safety of pit; supervises gang of repairs, shafts (1944) and stone-men (1945).
 master of works; in charge of stone-men in district of stone-men; in charge of stone-men (1945) (q.v.); supervises work of drilling and boring, tipping of roofs for making height, driving made through headings, etc.; receives instructions from overman or manager (1945) (q.v.).
 master of works (*Durham* and *Northumberland*), *see* air road inspector.
 metal contractor, *see* stone contractor.
 middle shift overman, *see* back overman.
 mine drainage inspector (*Staffs. term*); *drainage inspector*; is responsible for proper working of pumps, syphons, pipe columns, ledgers, and adits in connection with mine drainage system; mine person, *see* stone contractor, and does all repairs; reports to engine-wright (q.v.), who in other districts is responsible for night boss (slag), night chargeman; (1) an overman (q.v.) working on night shift; (2) in *Northumberland* and *Durham* carries out duties of deputy (q.v.) on repairing or night shift.
 overlocker, *see* overman.
 overman; *king, overkeeper, gaffer, under-looker* (*Midlands* and *Lancashire*); supervises working of mine under direction of manager or under-manager (1945) (q.v.),

makes daily report in prescribed form; is superior to deputy, examiner or foreman (q.v.) working on same shift; usually holds second class certificate under Coal Mines Act; for duties, see *beek overman*, *overman*; sometimes specifically designated, e.g. night overman, night shift overman.

overman, sectional; an overman (q.v.) in charge of part of mine.

overman; an amputee appointed in some coalfields to decide disputed points on which previously appointed arbitrators (an employer's and a workman's representatives) have failed to arrive at agreement, pit foreman; general term, seldom used, to cover miscellaneous officials exercising general supervision of work done in pit, e.g. overman, deputy.

pithead foreman, pithead inspector, pit top foreman, see beek foreman.

pit hammer, see traffic man.

pump inspector; is responsible for efficiency of pumping apparatus; makes periodic examination of valves, glands, etc.; supervises pumpmen; executes minor repairs; reports to engineer-in-charge (q.v.).

rescue station superintendent, superintendent of rescue station; keeper, keeper, *rescue station* (colliery rescue station); has charge of central rescue station, and is responsible for testing of iron forming rescue brigades.

rope and chain inspector; shackle inspector; examines duties of rope inspector and chain inspector (q.v.).

rope inspector; *see rope superintendent*; is responsible for good condition of ropes used in and about mine; makes periodic examination and carries out minor repairs, splicing, etc.; reports to engineer-in-charge (q.v.).

screen foreman, screen inspector, screen keeper, screen inspector; belt inspector, *keep holder, keeper* (Durham and Northumberland); supervises work of workmen on screens and belts at surface, sorting coal by size, screening dust and picking stone, dirt and other impurities;

operates with beek foreman to maintain even supply of coal to take; responsible for screening machinery to engine-in-charge (q.v.); if necessary carries out minor repairs; duties performed in some districts by beek foreman (q.v.).

shackle inspector, see rope and chain inspector.

shaft examiner; *see pump manager, foreman*; *see* *shaft*; goes down shafts daily on top of cage and examines, visually and by tapping, sides of shafts, shackles, guides, ladders, ropes, etc.; makes report in prescribed form to engineer-in-charge (q.v.); when repairs are necessary, carries out minor repairs or supervises work of pitmen or shaft repairers (047).

stone contractor, stone work contractor, metal contractor; contracts to do work in mine, such as driving stone drifts or ripping roadways; engages and pays workers under him.

surface foreman, see beek foreman.

timber contractor, timberman contractor; makes and repairs or repairs timber roadways and workings in mine or any part thereof by contract.

timber inspector; examines shoring timber and pit props to see that there are no flaws, previous to their being used in mine; measures up and checks quantities for recording purposes.

token inspector; examines patterns and heaver's tokens, i.e. pieces of metal, tin or leather having stamped on them some mark by which they may be known, so that, for wages purposes, patterns and heaver's may be properly credited with amount of coal got.

top beek, see beek foreman.

traffic foreman; takes charge of and supervises delivery and dispatch of wagons about a colliery; in charge of enginemen and shunters; directs shunting operations; sometimes also looks after pit prop timber and its transport.

traffic man; *see hauler*; (i) directs shunting operations in sidings and branch railways underground; controls distribution of journeys of empty trains to various working districts; (ii) as *surface* has similar responsibilities.

traffic manager; *see traffic superintendent*; *see* *colliery*; *see* *colliery*; supervises work of traffic foreman (q.v.); makes all important decisions in arranging traffic on railways,

canals; keeps a record, with clerical assistance, of all coal sent out of colliery; as smaller collieries, work usually done by traffic foreman under supervision of surface manager (040) (q.v.).

traffic manager's assistant; assistant traffic manager; assists traffic manager (q.v.) in arranging railway traffic, shunting trucks and ensuring that trucks are properly labelled for their destination.

traffic superintendent, see traffic manager.

underlooker; in *Midlands and Lancashire*, *see* *overman*.

viewer's apprentice; in course of being trained to become colliery manager; spends a period of time on each section of the work, learning in practical manner the technical, mechanical and safety work of a mine; duties are supervised by manager, under-manager, surveyor, deputy, overman, foreman, engine-wright, etc.

wagon inspector; inspects wagons at surface and is responsible for their maintenance in good condition; may do minor repairs, referring major defects to work repair shop; work usually done by foreman smith (100) or foreman carpenter (471) (q.v.).

washing master, washery foreman; foreman washer; supervises men engaged in coal washery; ensures supply of water and coal to washing machinery; supervises oiling and greasing; may carry out minor repairs.

weighing machine inspector; makes periodic inspections of weighing machines on which pit bank wagons are weighed on their journey to and from pit; maintains them in good order by making minor adjustments and repairs; usually represents weighing machine manufacturer who is under contract to maintain machines.

winding inspector; makes daily inspection of all winding machines and makes report on prescribed form to engineer-in-charge; usually a skilled fitter (210); duties usually performed by engine-wright (q.v.).

wire-rope inspector, see air road inspector.

wire rope superintendent, see rope inspector.

workmen's examiner, workmen's inspector; one of two practical working men (not being mining engineers) who are appointed and paid by workmen to make periodic examinations of all shafts, roads, levels, workings, airways, ventilation apparatus, old workings, machinery, etc. in accordance with Section 16 (1, 2, 3) of Coal Mines Act, 1911.

042.—BREWERS AND GETTERS.

apprentice; assistant collier; assists collier in getting coal or shale, filling tubs of coal or shale and pushing them to haulage road; fetches picks and tools; in shale mines, fetches tools under direction of miner; *see* *colliery*.

assistant collier, see apprentice.

back end man; cleans cuttings from back of coal cutting machine, so as to enable him to see peeps to roof and sprags or shocks or overhanging coal.

back stripper, see fitter; detaches wash pick and crowbar, breaks up and removes machine-cut coal left at end of free-shift (morning-shift).

bargain man (bawer); *see* *contractor hewer*.

bawer, bottom cutter; undercuts with pick coal to be taken down in following shift. *bawer*; a bawer (q.v.) who drives upper bench in thick working.

blower-down; *see* *breaker, coal breaker, pick*; gets coal down by means of blower and blower, after it has been undercut by machine.

bond miner, see battyman.

bottom cutter, see bawer; cf. bottom cutter (041).

breaking coal cutter, see coal cutting machine driver.

breaker, coal breaker, see blower-down.

battyman, see battyman.

battymaker; gets down angle coal or blawick with pick under direction of bawer.

batty; (i) worker at same face but on opposite shift, i.e. night shift man is the "batty" of corresponding day-shift man; (ii) in S. Wales is partner on same shift; (iii) *see* *stone miner* *see* *battyman*.

batty collier, see battyman.

battyman; *see* *batman, batty, batty collier, bond miner*; a contractor hewer (q.v.) who

takes stall or working place on contract, and pays men under him day wage.

cleanser; *see* *grazer, rake, rake-down, scraper, scraper, scraper*; *see* *grazer, rake, rake-down* or stone by means of long-handled flat shovel, called gunning used or langes, out of groove out by coal cutting machine, and loads into tubs or throws back into goaf.

coal cutter attendant, coal cutter driver, coal cutter man, see coal cutting machine driver.

coal cutting machine boy; *see* *collier, cutter, assistant*; assists coal cutting machine man underground; scrapes out drillings or cuttings; work similar to that of cleaner (q.v.).

coal cutting machine driver, coal cutting machine man; *see* *collier, coal cutter, coal cutter driver, coal cutter man, cutter, cutter machine man, driving machine driver, stoneman, worker, machine cutter, machine*.

coal, machine (coal miner), mechanical coal miner; *see* *operator*; operates in opening, coal cutting machine driven by compressed air or electricity; cleans obstructions with pick and shovel and lays rails to enable machine to travel along working face; sets timber supports not more than 6 ft. apart against old face which has been undercut; changes cutters on cutting wheel by hand.

coal miner; collier; general term for any worker engaged in underground in coal mines, more especially hewer.

coal miner's labourer, assistant to coal miner (q.v.); employed at time rates of wages, and engaged in filling or loading or in other old jobs.

coal trimmer; trims coal away from push of coal cutting machine.

collier, see coal miner.

collier contractor, contractor collier, see contractor hewer.

collier's draftsman; (*N. Staffs*) a hewer or contractor hewer (q.v.) who cuts drafts in cross measures of coal; cf. *collier draftsman* (047).

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

collier's helper, see assistant.

hook runner, *see* bank rider.

drag boy; attaches drag to rear end of tube according to haulage incline; *cf.* crane footer.

dragger-down; stands at bottom of haulage incline and drags down haulage rope.

dragger-up; controls and manipulates at pit between tubes after disconnection from haulage rope ready for bottomer, assister, or assistant bottomer (q.v.).

drum lad, drummer, *see* drawer.

draw rider, *see* bank rider.

draw tender, *see* drawer.

drawer, coal drawer, miner's drawer; draw lad, drummer, draw tender, hand putter, putter, runner, trailer, tram boy, trammer, triller, truck lad, trundler, troller, tugger, wheeler; pushes coal or shale in tube or carries from working face to pass-bys on main haulage road, along which it is afterwards taken to shaft by mechanical means.

drawer-off, *see* hooker-off.

driver; *galleyway putter, gal driver* (Levenshulme), *hailer, hauler, horse boy, horse driver, horseman, jigger, jockey, putter, put hauler, putter, putter, putter, putter*; drives horse or pony used for hauling tube in coal or shale mine or on surface.

drum lad, drum tender, *see* brakeman.

duddy rider, *see* bank rider.

endless chain haulage band, endless rope boy, or lad; general term covering all workers on endless rope or chain haulage roads, including clipper, crane footer, jigger.

endless rope man, endless rope minder; *see* section under *pulling* under *rope*; attends to rope of endless rope haulage system work; checks and oils pulleys, sheaves, rollers, etc., and does all minor repairs.

engine dip hooker; couples or detaches tube at foot of pit bank; *cf.* couplee.

fengine plane man; a railway man (q.v.) who is responsible for condition of ropes, sheaves and rollers, and also for signal arrangements; applies and checks ropes.

fastener, *see* coal fastener.

fat keeper, *fat coupler-on*; *fatman, fatter*; couples full and complete empty tube at "fat" or working face terminals of haulage system; places checks at fat ends to prevent tube running away.

fatman; *Warrickshire term, *see* fat keeper.*

faster, *see* fat keeper.

fitter, conveyor fitter, *see* puller-up.

foal; *ligger, ligger boy*; a young boy employed to help a bigger boy to "put" or draw; pulls in front whilst the header (big boy) pushes behind.

gal driver (Levenshulme), *galleyway putter, *see* driver*; *galleyway horses* are hitched used in mines.

gangger, gang minder, gang rider, *see* bank rider.

gangman, *see* bank rider.

ganger, ganger, gang minder, *see* jigger.

gunney, glaz tender (North-East Lancs. term), *see* incline brakeman.

glaz rider, *see* bank rider.

gripper, *see* clipper.

guard, train guard; *as for guard* (Tory) (q.v.) on underground lines conveying workmen to and from working places.

gugman (Somerset term), *see* incline brakeman.

hand putter, *see* drawer.

hanger-on; *hooker-on*; an assistant assister (q.v.) who couples empty tube to rope at bottom of shafting incline.

hatcher runner, *see* crane runner.

haulage band, haulage lad, haulage man; *bandman, bottom band*; general term for any person working on haulage system either above or below ground, including clipper, loader-on, roadman (184), chain haulage, etc.

hailer, hauler, put hauler, *see* driver; sometimes specially designated, e.g. night hauler.

header, coal header; a putter (q.v.) working with assistance of a foal (q.v.).

help-up, *see* pusher-up.

helpman; *see* Warrickshire, tightness clipper on rope on hill or incline before reaching steep place on underground haulage roads; *cf.* billman (1049).

hitcher, *see* assister; sometimes specially designated, e.g. night hitcher.

hitcher-on, *see* clipper.

hitcher-up, *see* pusher up.

hook boy, collar's hook boy, hodder, *see* carrying boy.

hooker, hooker-at-shaft, *see* assister.

hooker-off; *drawer-off, puller-off, putter-off*; pulls full tube off cage at surface, or empty tube off cage at pit bottom.

"hooker-on," *see* hanger-on.

hooker-up, *see* incline boy.

horse boy, horse man, horse driver, *see* driver.

harrower; *Warrickshire term*; a drawer, putter or transporter (q.v.) who carries tube from pass-by to working place; often helps hawer to fill tube; sometimes used in sense of corporal (1041) (q.v.).

hatcher, hatch runner; runs "hatches" (tube or frame loaded with coal or shale) from cage to dipper on surface, or between haulage terminals and cage at pit bottom, where "crawler" (endless chain) is not in use.

incline attendant; may be either incline brakeman or incline boy (q.v.).

"incline boy, incline lad; *hooker-up*; attaches and detaches tube to haulage rope or shaft at top or bottom of incline *cf.* endless rope boy.

incline brakeman, incline breaker; *placeman, gussy footer, guggan* (Somerset), *incliner hauler, incline man, incline minder, incliner, jigger* (N. Wales), *lig minder, jig tender, jingymann, janny footer, placeman*; a brakeman (q.v.) working self-acting inclined planes, either above or below ground, controlling movement of tube or wagons by means of brakes.

incline hauler, *see* incline brakeman.

incline hitcher; a jigger boy (q.v.) who is mainly engaged in hitching on at top or bottom of incline.

"incline man, incline minder, incliner," *see* incline brakeman.

incline rider, *see* bank rider.

jigger, jigger boy, jiggerer, jigger lad, *placeman, jig hooker, jigger, jiggerer, jig minder*; attaches or detaches tube, singly or in pairs, to or from endless rope, by plastic rope in foot of "jigger," or double cork, in socket at one side or at end of tube.

jigger (N. Wales), *lig minder, jig tender*, *see* incline brakeman.

jimny lad, *see* self-acting incline boy.

"janny man, janny tender," *see* incline brakeman.

jockey, jockeyer, *see* driver.

jourymann, journey rider, *see* bank rider.

junction boy; assists junction man (q.v.) by pushing tube, moving switch levers, or signalling by means of electric bell or other method.

junction man; *off-take keeper, off-take lad*; in charge at junction, where haulage tracks branch or cross; looks or unhooks tube from one rope to another to send them to proper destination; alters points of track by hand levers; gives haulage signals by electric bell or other method.

"landing minder, landing attendant, landing keeper, landing lad; *run loader, shifter lad, station minder, riding lad*; attends to haulage tube as they arrive on landings at junctions or at extremities of haulage system; pushes tube off and on main rope; detaches and attaches tube to rope; couples tube sets or trains.

ladder-on; *hooker*; fastens boxes or tube on haulage rope by means of lashing chains; *cf.* clipper.

leader; a boy who assists driver (q.v.) by leading pony by bridle.

linker, *see* coupler.

link carrier; carries couplings, or shackles, from place where they have been detached from loaded tube at one end of haulage road to place where empty have to be coupled at other end.

"linker," *see* coupler.

locker-up, lockerman; *shifter, switcher, shifter, switcher-up, switchman, spragger, spragman, tram spragger, wheel loader*; inserts lockers, switches, sprags, or switches, into wheels of trains to check speed or to prevent their moving when disconnected from haulage rope at landings, junctions or pit bottoms; gives signals to junction man.

locker-off, *see* taker-off.

lower-in; *tak loader*; manipulates tube one at a time from set and lowers them

down sliding to assister (q.v.); *cf.* taker-off and assister-onsetter.

machine rider, *see* bank rider.

mechanical haulage band; general term for any man or boy engaged in mechanical haulage, including haulage band, etc. (q.v.).

manipulator, *see* runner-up.

motion band, *see* haulage band.

motion wheel minder; (1) *see* endless rope man; (2) *see* ditchman; *cf.* brakeman.

shifter, *see* lockerman-up.

zipper, *see* coupler.

off-take keeper, off-take lad, *see* junction man.

"onsetter" bottomer, bottom man, zipper, hauler, hauler, hooker-at-shaft, put hauler man, runner-on, setter-on; stands at bottom of shaft in coal or shale mine to push full tube on to cage and remove empty ones; signals to winding engine when to start or stop winding; sometimes specifically designated, e.g. night assister.

pit bottom man, *see* assister.

place boy; oils or greases rope rollers, and does other light work about engine.

placeman, *see* incline brakeman.

plane rider, *see* bank rider.

plane runner, *see* bank rider.

point minder, *see* placeman.

pointman; *point minder, switcher, switch keeper, switch minder, switch loader, switch thrower*; moves points of switches controlling movement of tube or wagons on colliery railway or on underground haulage roads.

ponier, *see* driver.

pony driver, pony putter, *see* driver.

"puller-off, puller-out," *see* hooker-off.

puller-up, conveyor puller-up; *runner-up, shifter, shifter*; moves forward coal conveyor or foot or putter-way driver.

"pulley man, wheel wader; fixes pulleys or rollers on haulage road, and repairs any displaced; examines and keeps in order pulleys and other wheels used for hauling or lifting; sometimes done by railway man (q.v.).

puller minder, *see* endless rope man.

pusher-on; (1) pushes tube on to cage either above or below ground; (2) *along drive* for change haulage band with supervisory work of haulage bands; *cf.* haulage foreman (1044).

pusher-up; *assistant drawer, assistant drawer, shifter-up, shifter-up, putter* (Somerset), *drawer*; helps drawer in pushing tube when gradient too steep for use.

putter; (1) *see* drawer; (2) in Scotland, *see* pusher-up.

putter-off, *see* taker-off.

rack runner, rack runner, *see* bank rider.

ragger boy, ragger lad; *signal boy*; gives and receives signals on mechanical haulage system; runs on hollow tube or runs electric bell, etc.

raggerman; *shaft minder, shaft ragger*; shifts to shaft signals at insets where persons only are warned.

rider, *see* bank rider; sometimes specifically designated, e.g. night rider.

road boy; assists railway man (q.v.) on endless haulage system, driving, waiting, etc.

rolley driver; (1) drives "rolley," i.e., carriage used to carry cages along horse-roads underground; *choatman*; (2) *see* railway driver.

rolley lad, *see* railway driver.

rolley man, *see* railway man.

rolleyway driver, rrolleyway lad, rrolley driver, rrolleyway lad; *rolley lad, rrolley driver*; drives (q.v.) who drives horse or pony hauling sets of tube to or from shafts or railway track.

rolleyway man, rrolleyway man; *head minder, headman, rrolley man, stage shifter* (Cumbria), *transportman, wagon man, wagon mind man, wagonway man*; keeps in repair and working order roads or planes along which wagons or trains are hauled by ponies or by rope attached to stationary engine; sometimes also supervises haulage bands; *cf.* haulage foreman.

rope boy; *see* taker-off from one set of rails to other after sets of tube has finished its journey on inclined plane.

rope changer; *rope minder*; uncouples tube from the haulage rope and clips to another at junction, ending or landing; *cf.* position man.

rope tender; attaches rope end to tub to be hauled on main and tail haulage systems.
 rope guide; guides incoming rope on to winding drums of main and tail haulage engines.
 rope man; examines haulage ropes, splices and re-splices them.
 rope minder, rope runner, rope cleaner.
 rope runner, rope runner, see bank rider.
 "rope splicer; splices ropes of hauling system, sometimes done by rope inspector (041) (q.v.), by ropemans or by ropelayers (q.v.).
 transducer boy; *underground*; runs messages.
 run tender, see landing minder.
 runner, see drawer.
 runner-on, see assembler.
 run rider, see bank rider.
 snotcher, see bank rider, snotchman, see locker-up.
 sectional clock hunter; a clockman man (q.v.) clearing tubs from a section only.
 self-acting derrick boy, see block attendant.
 self-acting incline boy; *down* lad; an incline boy (q.v.) working on a self-acting haulage incline or jenny.
 setter; a railway man (q.v.) who makes up sets of tub for haulage.
 snotter-on, see assembler.
 snot tub, see rider, see bank rider, see blocker, see assembler.
 shaft lad; assists assembler (q.v.) at shaft bottom pushing fell and empty tubs in and out of shafts and cage; cf. assistant drawer, assistant assembler.
 shaft minder, shaft rigger, see rigger man.
 shovelmans, see brakeman.
 shover-up, see pusher-up.
 siding lad, see landing minder.
 signal bellman, see signaller.
 signal boy, see rigger boy.
 "signaller, signalmans; *signal bellman*; operates signals and switches for men driving trucks and teams on colliery railway; strikes bell or blows tube with hammer, or rings electric bell.
 slope rider; a bank rider (q.v.) employed on a slope road or incline.
 slotter (slang), see compiler.
 slummer, see compiler-on-shaft.
 snapper, snapper-on, see clipper.
 snapper; snapper or disconnector snapper or catch which holds tube in pit cage.
 snibbler, see locker-up.
 "spragger, spragman, see locker-up.
 spunny boy, see machine boy (q.v.) who attends to take on spenny or short self-acting incline.
 tango whipper; *Cumberland term*, see railway man.
 staple braker, staple brakeman; a brakeman (q.v.) who works at foot of staple pit, a small pit sunk inside main pit.
 staple lad; assists staple braker (q.v.) by attaching and detaching tubs and guiding them from staple pit to main haulage road.
 station lad, station minder, see landing minder.
 stonebed lad; assists stone contractor (041) (q.v.) by putting stone and empty tubs from place, where stone is being ripped, to main haulage road.
 stone putter; puts or draws stone in tub from drift or onch to stowboard (below ground) or from bank and picking bins to stone heap (above ground).
 switcher, switcher cooper, switch minder, switch tender, switch turner, see pointman.
 tail runner, see bank rider.
 "take-off; *lower-off*, *putter-off*; a jigger (q.v.) who only detaches tubs from haulage rope at top or bottom of haulage incline or at end of haulage road.
 "tapper-up; receives small trays of coal from low stalls and transfers coal to larger trays with shovel, where height of roadway permits.
 trauer, trading driver; drives pony in traces, to assist driver's pony attached to tubs, either above or below ground.
 trailer, see drawer.
 train man, train rider, train runner, see bank rider.
 "train boy, trainman, see drawer.
 train rider, see bank rider.
 train spragger, see locker-up.
 trainwayman, see railwayman.
 transit lad; general term for boys employed as haulage hands underground; cf. haulage hand.

trolley, truck lad, see drawer.
 trundler, see drawer.
 tubber, see drawer.
 tub fastener, see cover fastener.
 tub loader, see conveyor hand.
 tub lowering, see lower-off.
 tugger, tugger boy, see feel.
 "turner-out; turn out, *turn*; pushes full tubs from pass-type levels or sidings at top of self-acting machine, at bottom of "dock" or dip, or at branch off mechanical haulage road, ready for benches, chain runs or horse men (q.v.).
 turn rope hauler, turn minder, turnman; men that empty tubs are properly shared out among coal face men; daily usually performed by haulage foreman or corporal (041) (q.v.).
 underpuller, see clipper-off.
 underground bankman; *as for* bankman (049) (q.v.) placing empty tubs on and withdrawing full tubs from cage at top of staple pit underground.
 unlasher; unloads lowering chains, by which tubs or drums are fastened to haulage rope, as landings.
 "wagoner, see drawer.
 "wagon man, wagon road man, wagonway man, see railway man.
 weight end lad; unshackles tubs from rope and frees each other at weighing and of haulage system.
 wheeler; (i) see drawer; (ii) see brakeman.
 wheel lad, see brakeman.
 wheel man, see pulley man.
 wheel minder, see brakeman.
 wheel wedger, see locker-up.

044.—PERSONS MAKING AND REPAIRING ROADS.

(NOTE.—The occupational terms marked with an asterisk * are also applied to workers doing similar work on the surface; for other workers above ground, see (049).)

airman, airwayman, airway repairer; *retrovers, cutters, underfoot men, wind-up men*; keeps in repair underground air passages and ventilating airways by coal or shale mines; removes debris with pick and shovel; loads debris into tubs.
 assistant repairer; (i) assists road repairer (q.v.) in repairing roadways, and maintaining proper height and width; carries tools; pushes tubs for transport of debris; generally employed at night; (ii) *in some districts* also helps in repairing roadways above ground; this is done in daytime.
 assistant timberman, see timberman's laborer.
 back brusher, back ripper; a brusher (q.v.) working on backty, *is*, not at coal face.
 bargain man, bargain taker; makes contract with manager to take down, break up and clear away stone, etc., from roadways at an agreed price rate; engages and pays his working assistants.
 bator, see prick; g cutter.
 bomber; *Welsh term*, see brusher.
 blocklayer; fixes small blocks or wooden keys for tightening rails on tramways in coal mine, using a beamline.
 bottom man, bottom room man; fall rider; removes fallen debris in tubs; repairs timbers to roof, etc., in cased roadways or bords which have been driven in pillar and stall system of working.
 bottom outter, bottom scouter; *argoyr* (*Cumberland*); cuts away stone from floor of underground roads to increase headroom.
 brusher; *brusher, brushman, cutdown, crawler, brushman, metal man, metal wiper, rock blower, rafter*; cuts away this kind of stone in roof, floor, or side of coal roadway to improve height or gradient of working; may also drill holes for blasting by fireman; builds stone sheds obtained into pick walls alongside and parallel to roadways to support overlying strata.
 byeman, byewalker, byeworkman; byeman; general terms for any man working underground, not employed at coal face, and paid by the day, generally on repairing work, etc., or getting material other than coal.
 canchman, cancher, canchman, see brusher.

contractor's dayman; is engaged and paid by contractor in trained work, enlarging roadways, etc., in coal or shale mine; includes brusher, repairer, stoneman, etc. (q.v.).
 datcher, datcher, datcher; *diller* (*Lancs.*); general term for workers paid by the day, including repairers.
 dicker; *Lancashire term*, see datcher.
 dinker; a bottom outter (q.v.) who may also blast away floor to brighten roads, enlarge roadways; keeps picks and points in order, and cleans dirt off road.
 fall rider, see hodroom man.
 gatewayman; a road repairer (q.v.) who looks after gateway, *i.e.*, road kept through "good" in longwall working; *is* parts of *Yorkshire* also builds gateway packs.
 robber, see pick blinder.
 grey cutter; takes up or cuts away, with pick, grey coal (inferior coal or shale at bottom of seam) to make height in roadway.
 incline keeper, incline traveller; *plaine cleaner, incline roller, plaine cleaner*; road repairer (q.v.) who keeps incline planes free of obstructions due to fallen stones, etc. knockdown, see brusher.
 lipper; a brusher (q.v.) who takes down roof to make height.
 metal man, metal miner, see brusher.
 night repairer; a repairer (q.v.) working on night shift.
 oncostoman, see byeman.
 packbuilder, packer, packwall builder, packwallier, stone packer, stone roller, waller, millman; builds walls of stone or dirt, and packs in debris to support roof, in longwall working, along sides of head-ings, stalls, gateways and roadways.
 peltier; takes down pelt (shale stone) from roof, after coal and shored, after coal has been taken out in very thin seams, to raise height and allow coal cutting machine to get through.
 plane cleaner, plane walker, see incline keeper.
 pricking outter; *bater*; cuts away floor with pick in seams of creep or upward towards roof, caused by weight of overlying strata.
 rodder, stone rodder, roddman; rider, riddle lad, riddler; clears away stones in tubs, or in road, etc.; fills rubble into tubs, perfect fall tube away and empty tubs back; builds up packwalls of stone.
 "repairer; (i) general term covering road repairer, road repairer, incline keeper (q.v.); (ii) *in South Wales*, enlarges roadways and sets timber; *cf.* timberman.
 return man, see airman.
 rider, riddle lad, riddler, see rodder.
 ripper, road ripper, rock ripper, top ripper; a brusher (q.v.) who takes down with pick and bar roof of road to gain height.
 road cleaner; *road sweeper, way cleaner*; keeps underground roads clean, by sweeping up debris and loading into tub.
 road end (slang); a road cleaner (q.v.) who may also assist road repairer (q.v.) in any odd laboring work.
 road feller; *Yorkshire term*, see road repairer.
 roadman; *roadhouse*; general term for any man employed on haulage or ventilation roads, including airwayman, incline keeper, plasterer (037), railwayman (041), etc. (q.v.).
 road repairer; *road feller* (*York.*); keeps roadways in repair below ground; levels road with pick and shovel; repairs broken timber and sets any necessary light timber which can be handled by one man; raises bottoms under rails where dropped; generally keeps road between shaft and pit, flat, firm and secure.
 roddman, see roddman.
 road sweeper, see road cleaner.
 rock blower, see brusher.
 rodder, see brusher.
 roddman, road repairer; works roof in repair, by resetting old props, where necessary, or by setting new props, where necessary, due to timber (q.v.).
 sagger man; *Cumberland term*, see bottom cutter.
 shifter, shifman, shifman, stone shifter; *shifter*; general terms for laborers assisting repairers, timbermen, etc., in building stoppings and clearing falls of stone.
 slope cleaner, see incline keeper.

assistant dialler, see assistant surveyor.
 assistant surveyor, *assistant dialler*; *help surveyor* (040) (q.v.) in preparing plan of mine; frequently does work of draughtsman (032) (q.v.).
 banker, *banker-out*, see bankman.
 bank head lad, *bank lad*, *pick boy* *lead*, *pit head lad*, general terms for youths working on surface of mine; include dirt picker, *endless rope boy* (033), *number caller*, *tally lad*, etc. (q.v.).
 bank labourer; *pit head labourer*, *pit head labourer*, *surface labourer*; general term for workers doing unspecialized work at pit bank (coal or shale mine).
 bankman; *banker*, *banker-out*, *bankman*, *bankman*, *bankman*; draws full tubs of coal from cage at top of shaft, and replaces by empty ones; signals to winding engine-man (052) or conductor (043) (q.v.) and regulates lowering and raising of workmen and coal.
 bankwoman, see *pit brow girl*.
 bat picker, see *dirt picker*.
 belt boy, *belt lad*, see *dirt picker*.
 belt hand; (i) see *dirt picker*; (ii) carries out small repairs to belts under belt men (q.v.).
 belt man; (i) see *dirt picker*; (ii) attends to picking belts on which coal is conveyed from screens and cleaned of stone in transit, and is responsible for their smooth running under direction of screen foreman (044) (q.v.), who sometimes himself does this work.
 Billy boy, *Billy man*; attends to working of a Billy Pulley, a machine connected with screens, which registers weight of small coal to be dropped from gross weight sent to bank by each collier.
 bog trimmer, see *dirt rock man*.
 boxman, *nut coal boxman*; watches and attends to proper working of, and supply of water to, bases in which different sizes of coal are washed; cf. *coal washer*.
 branchman, *horse branchman*; drives a horse, which pulls railway trucks along colliery sidings.
 broken picker; a dirt picker (q.v.) with picking belt removing coal showing yellow (rotten) impurities.
 brow hand; general term for person working at pit head, e.g., taking coal from cage to pit access, or manhandling tubs at head of self-acting incline.
 brow-man, see *bankman*.
 cabin man; drives and looks after pit shifter's elevator in shifter at pit head.
 cart loader; loads coal with shovel into carts for sale in neighbourhood of pit; may fill, weigh and carry coal in sacks to carts.
 censor; examines coals sent from screens, and removes impurities, i.e., sticky coal, in readiness for sale as house coal.
 catch boy; (i) changes position in baggage rack; (ii) attaches and detaches oil in main and tail bearings; (iii) operates catches which hold tubs in cage.
 chook loader; loads up chook trolley into tubs to sent into mine.
 choker shifter, see *shifter*.
 cleaner, see *cleanser*.
 cleanser at breeze box; *colman* (046); works at box or bunker where "breeze" (small dirt or coke produced from coal or coal dust) is collected after screening; sweeps up round box and with long rake keeps mechanical screen clear of obstructions; sometimes opens chute to release breeze from box or bunker into wagon.
 cleanser; *cleanser*; cleans waste courses and drains, using rakes, shovels, etc.
 click boy, see *pin boy*.
 coal cleanser, see *dirt picker*.
 coal manipulator; general term for any surface worker handling coal, e.g., *conveyor*, *picker*.
 coal picker; (i) picks over spoil or rubbish heaps with pick to make any good coal to be found; (ii) a dirt picker (q.v.) who picks out pieces of good coal from produce of seam of variable quality as it passes along on picking table.
 coal refiner; may be either coal screener, *dirt picker*, or *coal washer* (q.v.).
 coal screener; *screenman* (Scottish), *screen attendant*, *screener*, *screen*, *screen*, *screen*, *screen*; watches that coal passes over screens and dust or small coal properly sifted through; may also pick dirt from conveying belt as coal passes to screens; cf. *dirt picker*.

coal washer; *slack washer*, *washer*, *washer labourer*, *washerwoman*, *washer*; works at machine for washing coal in washery to remove impurities; sees that machinery is working properly and that water supply is maintained.
 colman; *Gloucestershire term*, see *cleanser at breeze box*.
 counter, see *tally boy*.
 crusher boy, *crusher man*; attends to coal crushing machine where coal is crushed prior to sifting or making into patent fuel; shovels coal into hopper, if not conveyor fed; controls machine by levers.
 dactman; (*Leicestershire*) a labourer who loads dirt or refuse from colliery waggons into trucks for removal.
 dirt carrier; (i) carries dirt (stone or other refuse) from picking table floor and drops it into chutes through which it reaches conveyor belt; (ii) attends to tipping of dirt on rubbish heap on surface, and dirt tip boy.
 dirt couper, see *dirt rock man*.
 dirt picker; *bat picker*, *belt boy*, *belt hand*, *belt lad*, *belt man*, *coal cleanser*, *picker*, *screen boy*, *screen girl*, *screen woman*, *shade picker*, *stone picker*, *stone wiper*; picks out dirt (stone or other impurity) from coal as it passes on picking table.
 dirt rock boy, *dirt tip boy*, *rubbish washer*; assists dirt tipman (q.v.); loads dirt (stone or other refuse) placed out of coal at picking table into pit wagon, and tips it on surface waste heaps.
 dirt rock man, *dirt tip man*; *log loader*, *dirt couper*, *dirt tipper*, *rubbish tipper*, *rubbish unloader*, *spoil tipper*, *stone labourer*, *stone loader*, *stone tipper*; empties trucks containing rubbish or refuse from below ground or from picking tables, on surface waste heaps.
 drain filler; (*Gloucestershire term*); cuts coal to make deep.
 dust man; empties dust, i.e., fine tailings from screens or washery, out of wagons into bunkers at steam boiler.
 flight attendant, see *aerial flight attendant*.
 fireman, *fine cleaner*; cleans fine of boiler; sweeps down with long handled iron scrapers; brushes out with wire brushes and clears away rubbish with shovel and barrow.
 firtree mender; keeps grips in repair, i.e., looks need for leading coal or coke into wagons; usually done by blacksmith (120) (q.v.).
 head lampman; in charge of lamproom on surface; inspects, trims, lights and locks, and makes ready miners' safety lamps, and does minor repairs.
 hillman; (i) see *bankman*; (ii) general term for any man doing labouring work on surface; cf. *hillman* (043).
 keeper; controls keeps up key by lever at pit head, i.e., movable frame used to support cage containing tubs of coal when drawn to surface.
 knapper; (*Yorkshire term*), cleans top layer of shale from coal with knapper, a small hammer and pick combined.
 lamproom girl; helps in cleaning lamps in lamproom on surface.
 loader, see *bankman*.
 lockman (lamps), or for lamp keeper (047).
 molly boy, *Motty lad*, see *number caller*.
 number caller; *motty boy*, *motty lad*; calls out number chalked by hewer on colliery frames as they are weighed by the wagner (048) (q.v.); usually done by pin boy (q.v.).
 picker, see *dirt picker*.
 pin boy, *pin girl*; *click boy*, *pinner*, *tally boy*, *tally lad*, *taken boy* or *girl*, *taken lad*; takes pins, tokens or tallies off full tubs as they reach weighbridge, and hands to wagner; cf. *number caller*.
 pinner, see *pin boy*.
 pit bank woman, or for pit brow girl.
 pit brow girl; *bankwoman*, *pick brow*, *pick brow girl*, *pick head*, *pick head lad*; picks stone or dirt from coal on picking tables. see *dirt picker*; and does other light work at surface.
 pit brow labourer, see *bank labourer*.
 pit brow lad, see *bank head lad*.
 pit brow lass, see *pit brow girl*.
 pitcher; *pond cleaner*; cleans out pond or reservoir supplying boiler feed water, or sootling ponds into which dirty water from

coal washer is run to allow sediment to settle.
 pit head boy, see *bank head lad*.
 pit head girl, *pit head lass*, see *pit brow girl*.
 pit head labourer, see *bank labourer*.
 pit head man, *pit headman*; takes tubs off cage at pithead and weighs them; usually done by bankman or assistant bankman (q.v.).
 pit head runner; runs tubs from cage to weighbridge and thence to tippers and back.
 pit-head lad; does odd jobs at headstead, i.e., platform on surface where shaft where tubs are loaded and run to screens; pushes tubs on to platform from landing, etc.
 pond cleaner, see *pitcher*.
 pony trainer; trains pit ponies above ground in leading trucks, stepping over points in track, etc.; sometimes works them for a few days, when first taken underground; cf. *horse trainer* (017).
 pusher-in, see *assistant bankman*.
 red tipper, see *dirt rock man*.
 ridge lad, *riddler*; under instructions of coal inspector (041) (q.v.), shakes small fixed weight of coal through a sieve or riddle and weighs quantity of dirt and dust.
 rider-on-top; a rider (043) (q.v.) employed on surface haulage road.
 rubbish tipper, see *dirt rock man*.
 rubbish unloader; (i) see *dirt rock boy*; (ii) see *dirt rock man*.
 screeman, *Scottish term*, see *coal screener*.
 screen attendant, *screener*, see *coal screener*.
 screen boy, *screen girl*, see *dirt picker*.
 screen hand, *screenman*, *screen trapper*, see *coal screener*.
 screen woman, see *dirt picker*.
 shover-in, see *assistant bankman*.
 slack washer, see *coal washer*.
 shade picker, see *dirt picker*.
 slag boy, *slag picker*; picks slag from coal on wagons on pit top.
 smudge picker; picks out fine waste coal and dirt from coal washer.
 sorter, *coal sorter*; sorts soft coal from hard coal on picking belts, and separates different qualities.
 spoil tipper, see *dirt rock man*.
 stone dust man; in charge of a stone dust crushing mill which crushes stone for use on underground roads to render coal dust inert; feeds trough of stone to mill by hand and shovels dust into tubs.
 stone heap labourer, *stone heaver*, see *dirt rock man*.
 stone picker, see *dirt picker*.
 stone tipper, see *dirt rock man*.
 stone wader, see *dirt picker*.
 surface haulier; drives horses or ponies which draw small trucks of coal or rubbish at surface.
 surface labourer, see *bank labourer*.
 surface man; general term for men engaged in unskilled work at surface such as laying, shovelling and repairing branch railway and sidings.
 surface rider; a rider (043) (q.v.) hauling coal or dirt on surface.
 tally boy, *tally lad*; *counter*; (i) in charge of colliers' tallies, on surface where coal sent up by colliers is weighed; assists in circulation of tubs; (ii) see *pin boy*.
 tally man, see *taken man*.
 timber loader, *timber unloader*, *timber wader*; loads and unloads timber from railway trucks into pit waggons for transport to frame for demarcation to shaft and underground workings.
 tipman, *tipper*, *shale tipper*; pushes trains of coal or shale from top of shaft and tip contents into screens, or pushes trains in automatic tippler or transfer; may operate lever which tips tubs to empty them on bank or tips.
 tippler lad, *tippler man*; *tumbler*; operates lever which acts revolving tipplers in motion, and so empties coal or shale on to screen or bank.
 token boy, *girl* or *lad*, see *pin boy*.
 taken man; *tally man*, *taken wader*; keeps account of tubs sent up on fall tubs by each hewer and putter.
 token taker; (i) see *taken man*; (ii) *weighman's assistant*; receives tubs from

token boy or girl, calls out to weighman name or number of man to whom it belongs, and hangs token on numbered peg; of number caller and tin boy.
top cleaner: (1) is employed at surface in cleaning coal and removing dirt; also levels coal of wagons; (2) sweeps and cleans up gangways, floors and platforms at pit head or at picking tables.

top beamman: attends to scraper belts on top floor of washery and to engine or motor driving elevator; regulates sliding of coal bunkers.

traceman: drives a trace pony to waste in haulage of trucks on heavy gradients; drives up tute to couple to engine set, where gradient of road requires it.

truck setter: sets empty tube in position under screen ready for loading; sets coal or shale in full tube to prevent its falling off in transit.

traffic machine assistant: wagon boy, wagon led; assists at weighing machine; fixes labels either in springs of wagon or by tacks on side; may keep simple record in book.

truck man, *see* **drawee** (043).

tub cleaner: cleans tubs or covers in which coal is transported, by scraping out sides and bottom with shovel.

tumblerman, *see* **tipples** **lad**.

viewer, *see* **coal surveyor**.

wagon boy, **wagon led**, *see* **traffic machine assistant**.

wagon filler: fills wagons with coal, usually, slack or dirt, at screens or washer on surface.

walter: levels surface of coals on wagons under screens with bar or shovel.

walter, **walter-on**: (1) acts as bankman (q.v.) at making pit; (2) attends to digests and other work about shaft top in absence of bankman; responsible for tipping and removal of shaft debris lowering of materials, etc.

washer, **washery labourer**, **washery man**, **washman**, *see* **coal washer**.

waterscourse man: keeps waterscourses clear and in repair above and below ground.

weighman's assistant, *see* **token taker**.

yard labourer: does any unskilled work in colliery yard, including coal screening, packing tubs, cleaning tubs, tipping at heaps, etc.

Sub-Order 2.—In Metalliferous Mines and Workings.

000—OWNERS, AGENTS, MANAGERS.

agent: general manager; in charge of mine, or group of mines, and is responsible, on behalf of owners, for the proper working; also manages commercial side of undertaking; has statutory duties under Metalliferous Mines Regulation Act, 1872-5, or Coal Mines Act, 1911; may also be a mining engineer.

boss: slang term used in respect of any official post; sometimes specifically designated, e.g., **mate boss**, **shift boss** (061) q.v.

captain (Correspond); slang term for various officials, including agent, manager, under-manager q.v., **dialler**, *see* **surveyor**.

engineer, **mine** **engineer**: is responsible for installation, maintenance, and periodical overhauls and inspection of all engines and machines in use at mine.

general manager, *see* **agent**.
manager: is responsible for control, management, and direction of mine, in which he gives daily supervision; has various statutory duties under Coal Mines Act 1911, or Metalliferous Mines Regulation Act 1872-5, is subordinate to agent q.v., where both are appointed.

mine agent, **boss** or **captain**: is in general charge of all underground operations.
mineral agent: **steward**, **teller**; collects royalties due to owner of mineral-bearing land, and lets generally on the latter's behalf, making periodic inspections of mine workings.

steward, *see* **mineral agent**.
surveyor, **dialler**, *see* **surveyor** (047).

toler, *see* **mineral agent**.
under-manager: makes daily inspection of mine and is responsible for its safe working in absence of manager q.v.; has various statutory duties under Coal Mines Act, 1911, or Metalliferous Mines Regulation Act, 1872-5, *cf.* **underground agent** or **manager** (051).

001—SUBORDINATE SUPERINTENDING STAFF (including Inspectors, Contractors and Foremen).

agent, **underground**: raising captain (also), **underground captain** (also), **underground manager**; an agent (050) q.v. whose duties are confined to underground workings and who receives instructions of agent or general manager (050) q.v.

captain, **underground**; **mining captain**; **slang terms**, (i) *see* **agent**, **underground**; (ii) *see* **deputy**.

chief dresser; **foreman dresser**; in charge of dressing floor labourers (050) q.v.

contractor: (i) contracts for getting of ore in specified section at agreed rate per ton; employs and pays own assistants; (ii) contracts to keep in repair certain lengths of underground roads.

deputy, **floor deputy**: **examiner**, **foreman**, **mining captain** (also), **shift boss**, **underground captain** (also), is employed in stratified iron ore mine and has specific duties under Coal Mines Act; is responsible for safety and output of men working in his district; visits each working place at least once a day, tests ventilation, takes readings of thermometer and barometer, sees that all windholes are kept clear, that all drop holes and other dangerous places are fenced, and that all lights and stags are in proper order, etc.; keeps record of his observations in book, and reports verbally to manager or, in manager's absence, to official in charge of mine, e.g., **overman**; is furnished also with necessary roof supports; *cf.* **back-bye** **deputy**.

deputy, **back-bye**: is responsible for upkeep and safety of roads between working face and shaft or entrance level; puts in roof supports and does necessary timbering work, or supervises work of timbermen (054) q.v.

doggy, **dog whipper** (slang); is in charge of underground haulage; *cf.* **haulage foreman**.

engine wright; a foreman q.v. who is responsible under engineer (050) q.v. for all mechanical plant in use in and about mine; examines and tests periodically boilers, chains, pumps, winding machinery, engines, etc.; is assisted by various inspectors, e.g., **chain inspector**, **pump inspector** q.v.

examiner, *see* **deputy**.

foreman: legal title of a deputy q.v. who holds certificate to fire shots; *cf.* **shot firer**.

foreman; **master**: (i) directs and superintends a set of workpeople, under general instructions of underground captain q.v.; (ii) is some districts, **captain** q.v.; (iii) is in tin mines, is usually employed above ground unless specifically designated as underground foreman.

foreman dresser, *see* **chief dresser**.

foreman, **surface**; **yard** **foreman**; has charge of men and boys working at mine heap or brow; supervises tipping of ore, coupling and uncoupling of trucks; keeps time records of workers.

gaffer, **ganger**, *see* **overman**.

inspector, a shift boss q.v. employed, under direction of manager (050) q.v., to examine working of mineral and ensure that proper mine is taken to obtain best possible output from any working; also ensures straight driving or hoisting of place,

and sets compass marks for purpose; in some districts work is done by deputy q.v.

inspector, **chain**; **rope inspector**; assists engine wright q.v. by making periodical examinations of chains and ropes on haulage system; taps chains by hand with hammer to see whether links are sound.

inspector, **lamp**, *see* **keeper**.

inspector, **ore**; examines deposits, bed, lodes or veins of ore, ascertains probable mineral content and decides on most profitable method of working. **inspector**, **pump**; examines pumping machinery and reports as to maintenance and repairs to engine wright q.v.

keeper; **lamp inspector**; supervises screen men (050) and pickers (054) q.v. employed on the screens and picking holes; is responsible for the alone being sent out from the mine in a clean state; *cf.* **keeper** (041).

manager, **underground**, *see* **agent**, **underground**.

master, *see* **foreman**; sometimes used in sense of manager (050) q.v.

overman, **mining overman**; **gaffer**, **ganger**, **shift boss**; supervises working of large section of mine under direction of manager or under-manager (050) q.v.; acts as intermediate official between under-manager (050) and face deputy q.v. and is in charge in absence of under-manager.

is responsible for the safety and output of district or districts; makes daily report in prescribed form.

overman, **back**: an overman q.v. in charge of back or afternoon shift.

overman, **deputy**; a deputy q.v. who is responsible direct to the under-manager (050).

overman, **fore**; **underlooker** (Midlands); an overman q.v. in charge of mine in fore or morning shift in absence of under-manager (050) q.v.; is superior to back overman q.v.

shift boss; (i) *see* **overman**; (ii) *see* **deputy**.

underlooker; in Midlands, *see* **fore overman**.

waterman: is responsible for the inspection and maintenance of return airways from the last working place to the nearest shaft; has a gang of men working on them; has to build stoppings and doors necessary for ventilation, and to keep roads, sides, etc., in repair.

waterman, *see* **waterman**.

waterman; is responsible for the inspection and maintenance of return airways from the last working place to the nearest shaft; has a gang of men working on them; has to build stoppings and doors necessary for ventilation, and to keep roads, sides, etc., in repair.

054—OTHER WORKERS BELOW GROUND.

(NOTE.—The occupational terms marked with an asterisk are also applied to workers doing similar work on the surface; for other workers above ground, *see* (050).)

airwayman, **airway repairer**; keeps in repair underground air passages, or conduits for ventilation purposes; timbers up, when necessary, and removes fallen debris with pick and shovel.

back-bye man; an underground labourer q.v. who also performs timbering work; in some districts, **back-bye deputy** (051).

banker; **baggy head**, **baggy**, **baggy runner**; **ride rider**; rides with sets of tubs or trams, to couple and uncouple haulage ropes at sidings.

hargain man; general term for men on "hargains," or contract work, paid for at an agreed rate for given volume of work, whether getting ore, driving roadways, clearing stone, etc.; usually works on his own account; *cf.* **contractor** (051).

blaster, *see* **shot firer**.

baggy, **baggy head**, **baggy runner**; (i) *see* **runner**; (ii) *see* **bank rider**.

baggy horse, *see* **runner**.

borer, **material borer**, **horing machine**; (i) controls valves and switches of compressed air or electric plant to operate boring machine or apparatus to explore probable content, thickness and inclination of ore-bearing rock; (ii) occasionally denotes driller q.v.

***borer**, diamond; operates rotary boring machine, in crown of which diamonds are set, to obtain solid cores of strata bore through.

bottomer, see onsetter.

***brakesman**, drum brakesman, incline drum brakesman, drum sprayer, incline attendant, incline lad, incline man; controls speed of brakes or sets of tube at top of incline on haulage road by applying brakes to the drum round which the haulage rope winds.

brownman; receives and attaches tube to (or detaches tube from) the rope at top of underground brow or incline and pushes tube away from landing point.

brusher, or for brusher (044).

cabin boy, or for change house keeper (050), working underground.

cage attendant, see onsetter; cf. **brakesman** (050).

cager, **cager-on**, see onsetter.

***carrier**, drill carrier, see gear carrier.

***cartman**, **cartman**; **wagon driver**; drives and attends to horse drawing tube of iron ore underground; cf. **carrier** (050).

changer and grather; **grather** and **changer**; keeps buckets and clacks (or valves) of old bucket type of pumping engine in order; changes buckets when necessary; *obsolescent*. *work now done by pump doctor q.v.*

charger, see shot firer.

company keeper; **acompanies** and **assists** day wage worker, e.g., **pumpman**, working alone in isolated districts.

***coupler**, tub coupler, see endless rope lad.

dattaler, **dattalman**, **dattaler**; **day labourer**, **day man**, **labourer onession**; general terms for all workers, above or below ground, receiving fixed time rate of wages, including haulage hands, shafters, labourers q.v.

day labourer, **dayman**, see **dattaler**.

dog whizzer; **superintends** work of pony drivers and *hookers*.

door boy, **door minder**, see **trapper**.

drawer; (i) see **trammer**; (ii) see **driver**.

drifter; makes drifts or roadways for purposes of exploration or of ventilation, by drilling or blasting; removes debris in a tub or track.

drill changer; or **driller**, q.v. who changes drills as required, when holes for blasting are bored by power drills.

drill charger; drills, by hand or machine, hole for blasting, and inserts charge; cf. **driller** and **shot-firer**.

driller, **drilling machine man**, **drill worker**; **machinist driller**, **machine drillman**, **machinist rock driller**, **rock drill man**, **rock drill worker**, **shot loader**; (i) drills holes for blasting with hand or machine drills (pneumatic, hydraulic, etc.); sometimes also bore down loose rock after shot is fired; (ii) may also drill or bore for exploration of strata, etc. see **bore**.

***driver**; **driver**, **horse boy**, **horse drawer**, **horse driver**, **horse leader**, **leader**, **pony driver**, **wagon driver**; a haulier q.v. who leads or drives ponies or horses which pull tube between face of workings and sidings, and also above ground.

drum sprayer, see **brakesman**.

***endless rope lad**; **coupler**, **tub coupler**; attaches and detaches tube or bogies to and from endless rope, at top or bottom of incline, at pass-bore, or at pit bottom.

engine plane and **siding attendant**; receives tube arriving along mechanical haulage road; takes them to siding, where they are attached to another haulage system, sent up shaft or otherwise moved.

fat lad, see **greaser**.

***filler**, **kibble filler**, or **filler**, **skip filler**, **stone filler**, **wagon filler**; **loader**, **mine loader**; fills kibbles, skips, tubs, trams or wagons with ore or refuse, by hand or with shovel, for conveyance away from working place.

fireman, see **shot firer**.

furman man; attends to ventilating furnace, placed near bottom of up-curtail, to maintain upward current of hot air, and thus ensure circulation; *obsolescent*.

gear carrier; **carrier**, **drill carrier**, **pick carrier**, **pick wheeler**; takes drills and picks to smithy for sharpening and brings them back to workmen when sharpened.

getter, **hewer**, **miner**, **stone hewer**; gets ore at underground working face by hand with hammer and wedge or by breaking down rock, already undercut by **hewer**, with pick and bar; in some mines may also drill ore, fire shot and load into tubs.

grather and changer, see **changer** and **grather**.

***greaser**; **fat lad**; greases tub and bogie axles and sheaves and drums guiding haulage ropes.

hanger-on, see **onsetter**.

***hauller**; general term for any person moving tube or wagon in mine; complex and uncomplex tube, if necessary; in particular denotes underground pony drivers.

helper-up; helps trammers q.v. in passing or hauling tube, tram, or bogies up dip or bank.

hewer, **stone hewer**, see **getter**.

hitcher, see **onsetter**.

holer; holes, or undercuts by means of a mechanical cutting machine, mineral to facilitate its getting; also removes material overlying or underlying bed of freestone in mine, using pick bar and shovel.

holing machine man; operates machine used for "holing," i.e. making opening or road for connecting one part of mine with another.

hooker-on, see **onsetter**.

***horse boy**, **horse drawer**, **horse driver**, see **driver**.

***horsekeeper**, **horseman**; **otter**; is in charge of horses and stables below or above ground; grooms and feeds horses and attends to the harness.

hurrier, see **trammer**.

***incline attendant**; (i) takes tube, tram, or bogie to and from self-acting (gravity) haulage incline; (ii) see **brakesman**.

***incline lad**, **incline man**; (i) see **brakesman**; (ii) controls switch points on rails at top or bottom of incline.

***labourer**; (i) see **miner's helper**; (ii) see **dattaler**.

landing lad; is employed at junctions or extremities of haulage system to couple or uncouple tube as they come on or go off rope.

***leader**, **horse leader**; (i) see **driver**; (ii) assists driver by leading horse hauling tube to and from working places.

***loader**, **mine loader**, see **filler**.

machine driller, **machine drillman**, **machine man**, see **driller**.

miner; (i) see **getter**; (ii) more generally used to denote any underground worker in a mine; usually specifically designated, e.g., **lead miner**, **blende miner**.

miner, **hand**; a **getter** q.v. getting mineral by hand, and not by machine.

miner's helper, **miner's labourer**, **labourer**, **pit labourer**, **underground labourer**; does work other than actually getting of ore, e.g. filling, trailing, tramming or putting, in working places, and assists **miner** generally.

onsetman, see **dattaler**.

onsetter; **bottomer**, **cage attendant**, **cager**, **engines**, **Amper-on**, **Aitcher**, **hooker-on**, **shaftfoot man**; stands at bottom of shaft to put full tube into cage and receive empty ones; also signals to winding engine-man for raising or lowering of cage by means of bell signals.

***ore dresser**; picks away foreign substances from hematite rock got at working place, to clean ore; breaks up and sorts ore below ground; cf. **dresser** (050).

***ore sampler**; takes samples of ore-bearing rock, crushes them and examines by visual and simple chemical means to ascertain percentage of metal contained in the ore.

***ore sorter**; sorts ore into different grades which has been cleaned and broken up by ore dresser; sometimes also does work of ore dresser q.v.

***otter**, see **horsekeeper**.

packer; **stoner**; picks away waste material in rocked-out places; also builds stone into columns, piers, or walls, for supporting roof or for preventing waste material from falling into haulage ways.

***pick carrier**, see **gear carrier**.

***picker**, **metal picker**, **ore** and **metal picker**, or **picker** and **trimmer**; picks over, and sometimes sieves, contents of tube, tram, or bogie, to estimate deductions in weight for dirt, stone (metal, etc.).

***pick wheeler**, see **gear carrier**.

pipeman; a pipe fitter (053) q.v. who carries out any necessary repairs or keeps in order pipes conveying compressed air or water to machines for drilling, etc.

pit boy; does any odd work in mine.

***pit labourer**, see **miner's helper**.

pitman; (i) see **shaftman**; (ii) see **pump doctor**.

pony driver, see **driver**.

powder monkey; weighs out and carries round charges of explosives required for drilling and keeps record of same.

***pump doctor**, **pumpman**, **pump mender**, **pumpman**; **pitman**; operates, i.e. starts and stops pump and pumping engine; keeps parts oiled and cleaned; makes necessary adjustments; also packs glands, overhauls valves, etc.

pumper, **hand**; works hand pump for draining working places.

putter, see **trammer**.

putter, **hand** or **pony**; a **trammer** q.v. who pushes tube by hand or draws with pony.

***rapper**, **ragger** lad, see **signal boy**.

ratchet machine man; a **driller** q.v. who uses hand drilling machine on ratchet principle.

repairer, see **shifter**.

***road cleaner**; scavenges under and above ground roads, and keeps them in good condition for traffic.

roadman, **road repairer**, **roadman**, see **wagonwayman**.

rock driller, **rock drill man**, **rock drill worker**, see **driller**.

***rockman**; examines face and brow of quarry to ensure that it is in safe condition for men working below.

relieveyman, see **wagonwayman**.

rope guider; guides, with hook, haulage rope as it passes on to drum.

rope lad; runs in and hooks on or picks off and runs out, tube, tram, or bogie on or from rope haulage system; cf. **landing lad**.

***ropeman**; **upficer**; examines and keeps in repair ropes used (chiefly for haulage purposes) in or about mine.

rope mender; in large mines, is responsible for the maintenance of ropes, splicing, re-socketing, splicing, etc. sometimes does work of rope guider q.v.

rope runner; accompanies set of tube on haulage road for purpose of attaching them to haulage rope or detaching them therefrom; guides rope round pulleys, guides tube round curves, etc.; cf. **bank rider**.

rattler; in Cornish, *conveyors* are along underground ways in wheellarrow.

sanitary man; attends to sanitary conveniences underground.

sett rider, see **bank rider**.

shaftfoot man, see **onsetter**.

shaftman; **pitman**; goes down the shaft daily on top of cage and carries out an examination of the sides of the shaft, guide ropes, lumps, pulleys, cages, etc.; carries out necessary repairs and makes a report daily to the engineer (050) q.v.

*shale man, shale picker, shale shifter; shale sorter; shale cleaner; a belt man *q.v.* who separates ore from worthless shale.
shifter, shifتمان, shifتمان; receiver; works at muzz, when mine workers are absent; repairing roadways, etc.; in lead mines see timberman; cf. packer.
shot bore, see driller.
shot firer; blaster, charger, fireman; charges hole, previously bored by power-drilling machine, with explosive, and fires it by lighting a fuse or by electricity.

*shunt lad; attends to coupling and uncoupling, and marshalling, of trains, tubs, or wagons, when they are hauled along levels underground by means of locomotives; in iron ore mines, attends to landing, or passing, on haulage road.
siding attendant, siding boy, siding minder; makes up sets of tubs, and couples haulage rope to them, attends to tubs as they come on or go off rope at junctions or sidings on haulage road; and controls movements of tubs in sidings generally.

*signal boy; runner, copper lad; a boy who acts as signalman *q.v.*
signalman; attends to signals used on haulage road or at shaft, by striking a rod with a piece of wood or metal or by pulling levers which cause the hammer of a bell to strike.
skip roadman; attends to transport of skips; keeps in order roads along which skips are hauled, and generally supervises haulage.

*sneck lifter; assists another *q.v.* by lifting cage snecks (or latches) when tubs, trams, or bogies are being put in or taken out of cage.
sneck shifter; in Scotland, moves points on tramway.

*special pump attendant; attends to special steam or compressed air pump, used for pumping water, and known as a "special" pump.
*splicer, see ropeman.
*spragger; sets up spraggs, or short props, to prevent falls of stone and ore, work usually done by getter.
stone cleaner, see shale man.

stone hawser, see getter.

stopper; a miner *q.v.* who works ore away in stone or "stopes," either by "sinking" (underhand stoping) or by "rising" (overhand stoping); work performed by blasting and drilling.
stower, see packer.

sumpman; cuts and sets timbers, supports, ladders, cribs, and chutes, in and about mine shaft; constructs pumps for water drainage, and timbers them.

*switchkeeper; attends to switch, or points, controlling movements of tubs, etc., at junctions of railways, etc.
syphon minder; watches level of water in sump holes from which water is being syphoned and closes syphon valve before water falls so low that air would be let into syphon pipe; usually has other duties in road or pump maintenance.

telephone lad; has charge of telephone exchange underground.
timber drawer; timberman; withdraws timber supports no longer needed in working face advance, or supports which have been broken.
timberer, timber setter, timber shifter; timberman, woodman; props up with timber, where necessary, roof and sides of traffic roads in mine; cf. deputy, lookybo (361).

timber leader; keeps miners supplied with props, planks, brattice, and crown trees, etc.
timber loader; loads trains with timber for use in mine.

timberman; shifter, shifتمان, shifتمان (lead mine); (i) see timberer; (ii) at Hadfield (Cumberland) denotes official who inspects workings to see that they are properly timbered; (iii) see timber drawer.
trailer; in Cumberland, see trammer.

*trimmer; bogie hand, bogier, bogie runner, bogie shover, driver, boggie putter, trailer (Cumberland), wagoner; conveyor tubs, trams, or bogies containing ore or rubbish along haulage roads to sidings or to shafts, and brings back empty trams, etc., to working places.

*tramway man; (i) (from mikes) keeps tubs or trams moving on tramway by pushing when necessary; (ii) (the mikes) keeps tramway, along which trams are drawn or pushed, clean and in repair.
trapper, trap door minder; door boy, stopper, trapper; is engaged in opening and shutting trapdoors in airways of mine, to allow horses, tubs, etc., to pass.

tributer; a getter *q.v.* who raises ore in certain area, for which he receives from owner certain proportion of value of ore raised.
tub worker, tub workman; a bargain man *q.v.* in iron mines, more particularly a bargain man engaged on smaller jobs; in copper mines, more particularly one engaged on development work, *e.g.*, sinking shafts or driving levels and crosscuts.

underground labourer, see miner's helper.
wagon driver; (i) see cartier; (ii) see driver.
wagoner; (i) see wagon hauler; (ii) see trammer.
wagon hauler; wagoner; hauls or pushes wagons.

wagonwayman; roadman, road repairer, roadman, railway-wagoner; attends to roads or planes along which wagons, tubs, bogies, or trams are hauled by mechanical power; carries out necessary repairs to rails, etc., fixes or refixes pulleys and keeps rollers in order.
water leader, water badger; removes water from workings, where quantity is too small to be worth pumping, by haling it into a tub and conveying it to a place in which it runs away by gravity; sometimes also takes or gets in a supply of drinking water for ponies.

wedger; breaks up ironstone, with wedges and hammer in ironstone quarries in a mine is usually done by miner *q.v.*

*windlass man; operates windlass (hand or power-driven) used for hoisting or hauling.
woodman, see timberer.

belt lad, see picker.
bogie cleaner, see tub cleaner.
breaker, see crusher.
bucker; breaks up ore, ready for sizers *q.v.*, with a buck, *i.e.*, a beak-headed hammer.

buckle attendant, buckle cleaner, boddie, boddler, boddler; operates and keeps clean buckle, usually a series of plane or inclined troughs, in which ore, after it has been crushed and finely ground, is refined or concentrated by allowing running water to wash out lighter and less valuable portions.

buckle wheeler; wheel concentrated ore out of "buckle" (see buckle attendant) in wheelbarrow.
burner; attends to burning house in which the ore is calcined.
tubbin boy, see change house keeper.

cage attendant, cager, see bankman; cf. assistant (054).
change house keeper, change house man, changing house keeper, changing house man; cabin boy, dry boy or man, dry house attendant, dry house boy or man; keeps in order house or dressing room where miners change their clothes; attends to fire and dries the clothes.

check-weighman; checks, on behalf of miners, weight of ore got, and deductions therefrom at weighbridge; is employed and paid by the workmen.
cobber; breaks ore into small pieces with small hammer, and sorts it according to value.
contractor, or for bargainsman (054).

copper ore spaller; breaks up copper ore with mallet into small pieces.
copper picker; separates different grades of copper ore by hand as crushed ore passes on a travelling "picking" belt.
count house boy, count house out (Cotswall); an errand boy in counting house or office.
count house keeper, count house maiden, count house woman; mine girl; cleans counting house, or office, cooks meals for officials, and washes clothes.

crusher, crusher attendant; breaker, miller, mill feeder, millstone, ore crusher attendant, rock breaker, rock crusher man, rock feeder, stone breaker minder, stone crusher attendant; throws or shovels lumps of ore into crushing mills; controls mills by levers and cleans and oiled bearings when necessary; for first or coarse crushing, heavy rock-breakers are used, followed by other breakers, with jaws set to crush somewhat finer; for next stage rolls of many tapes are used, and for still finer crushings, ball and tube mills.

day labourer; general term for unskilled workers employed at the day's payman; term sometimes used in tin mines for owner's account man (054) *q.v.*
delver; digger; does any unskilled work with pick and shovel.
digger, see delver.

dresser (copper); dresser, either by hand or by machinery, ore sent out from mine, rejecting waste material and selecting that which is valuable; if two or more valuable minerals are both present in same deposits, separates them; first process is generally sorting, by hand; ore is then dealt with by jigs, ransoms, revolving tables, etc.

dresser (gold); general term for all workers in lead dressing shed, including boddler, digger, sluiceman, tablamman, vanner *q.v.*
dresser, ore; (i) as for ore dresser (054); (ii) tin mines, see dressing floor labourer, dresser, tin floors labourer; general term for workers on dressing floor, engaged in crushing, spalling, or dressing tin or tin ore

056.—OTHER WORKERS ABOVE GROUND AND IN OPEN WORKINGS.

(NOTE.—In addition to the occupational terms contained in this section, see also those marked with an asterisk in code 054.)

amalgamator (gold); shovels crushed gold bearing quartz evenly over mercury lying in shallow cast iron pan, contents of which are agitated mechanically; removes quartz residues which are swept to the sides of the pan by rotating arm; removes amalgam when sufficiently high in gold content, to be filtered and distilled.

ashman; a surface labourer *q.v.* who wheels ashes from boilers to ash tip, or loads ashes into wagons.
bat girl, bat maiden; (domestic term); mine girl; denotes a girl employed on the dressing floor, as a dressing floor labourer *q.v.*

bark labourer, see surface labourer.
bankman, banker; cage attendant, cager, loader, top hand; removes ore or waste from top of shaft; takes wagons out of cage, and puts in empty ones; or, where no cage is used, hooks "kibbles" on to winding rope or takes them off; signals to winding engine-man.

bark weigher, see weighman.
batter, see soil remover.
battery attendant, battery waterer, battery worker, see stamp labourer.
belt cleaner; cleans, and keeps in running order, belt on which ore travels, to enable pickers to remove refuse therefrom.

dry boy or man, dry house attendant, or man, see change house keeper.

excavator; is in charge of machine for excavating material from quarry face.

framer; tin frame attendant; regulates supply of tin ore and water to frames or "buddles."

gear sorter; collects and sorts picks, drills, etc., for sharpening.

grate mill; general term for surface workers of mine.

grate holder; (i) holds small sieve and shakes to separate crushed ore according to size; (ii) see sifter.

halvannar; general term for men working on inferior copper ore.

ironstone borer; removes overburden (topsoil) from ironstone in quarry.

ironstone cleaner; (i) see ironstone napper; (ii) see metal picker (054).

ironstone napper; ironstone cleaner. trims or cleans waste dirt, etc., from ironstone lumps with pick and hammer.

jigger, jigman; controls by levers and generally attends to jig, i.e., water concentration machine used to separate larger portions of ore from rock, stones, etc., with which it is found; watches apparatus for efficient working; oils working parts and keeps them clean.

klieve man; see toiser.

knapper; (Yorkshire term); cleans shale from ironstone with a knapper, a small hammer and pick combined.

lamp cleaner, lampman; attends to safety lamps used underground, and is responsible for cleaning them, etc.

lander, see bankman.

machinist (tin stream); fits up, maintains and repairs machinery used for obtaining tin ore from alluvial soil in beds of stream.

magnetic separator; feeds crushed ore to happen of separating machine; controls machine and removes magnetic ore and waste, as separated, when necessary.

millier, mill feeder, millman, see crusher.

millman (tin mines); works in ore dressing mills or plants; sees that ore is properly crushed and then distributed to bins, tables, buddles, or other machines.

mina girl; (i) in Cornwall, see bal girl; (ii) see count house keeper.

ore cleaner, see for picker, metal (054).

ore crusher attendant, see crusher.

ore washer; (i) (tin mines); see dressing floors labourer; (ii) (iron mines), see picker, klieve.

owner's account man, owner's count man (Cornwall); general terms for day workers working in owner's interest as distinct from contractor's, and paid direct by owner.

owner's account man (iron mines); weighs full tubs, trams, or bogies sent out by miners, weights of each tub being credited to miner who has sent it out.

picker, klieve; ore washer; fills with shovel and attends to bins or klieve, i.e., a washing tub in which crushed ore is stirred in water by mechanical means and allowed to settle.

picker, left lad; picks over ore as it passes over screen or table on travelling picking belt to remove stone, dirt or other impurities.

quarryman; gets mineral from quarry as distinguished from mine; otherwise similar to miner (054) q.v.

raceman; keeps up water-race in repair, i.e., channel conveying water to water wheel or turbine.

radium miner; general term for getter and other workers in mine producing ores containing radium.

refiner, see sampler.

rock breaker, rock crusher man, rock feeder, see crusher.

sample crusher; pulverizes average sample of ore with flat-headed hammer, ready for sampler q.v.

sampler, sample refiner, sample taker (Cornwall); refiner; selects average sample of ore, from which assay or analysis may be made, to determine character and value of material.

scraper, screener, grade holder; passes crushed iron-stone over screens or sieves, either fixed or movable, to extract iron ore dust.

slimman; general term for worker dealing with "slimes," i.e., finely crushed lead ore mixed with water in dressing operations, including tableman, tranker, vanner, and (in Scotland) buddler q.v.

soil remover; borer; removes topsoil or rubble from above ore.

sorter; picks out higher grade lumps of ore as they travel past on endless belt.

sorter (copper ore); sorts or picks out copper ore mingled with tin ore sent to surface.

sorter, pitchblende; sorts out from pitchblende ore lumps containing pitchblende in sufficient quantity to warrant further treatment, for extraction of uranium and radium compounds.

splitter; breaks ore into small pieces, with mallet.

stamper, stampman, stampman; crushes ore with heavy "stamps," or pestles raised by water or steam, or pushed by gravity; watches efficient working of apparatus, supervises stamp labourers, and signals to stamping engine driver q.v.

stamp floor dresser, see dressing floors labourer.

stamp labourer, stamp attendant, stamp washer, battery attendant, battery washer, battery worker; attends to chutes through which ore is run into stamps; regulates rate at which ore is so run.

stone breaker minder, see crusher.

stone crusher attendant, see crusher.

streamer, tin; takes from washing stream (natural), at convenient settling points, tin ore which has settled to bottom of water.

streamer, wolfram; impounds mineral washed down stream from waste of mills attached to wolfram mines, and recovers additional wolfram therefrom, for more exact practice, see magnetic separator.

surface hand; top hand; general term for man or boy employed at surface of mine.

surface labourer, bank labourer, pond labourer; an unskilled workman at surface of mine or quarry, engaged in wheeling ash, discharging timber, grease, oil, etc.

tableman, table washer; shovels powdered lead ore mixed with sand on to "Wulley" for concentrating table and controls it whilst in operation; removes concentrated ore and depleted sand.

tin cleaner, see toiser.

tin floor labourer, see dressing floors labourer.

tin frame attendant, see framer.

tin stream labourer; does unskilled work in or about tin stream.

tin stream worker; removes heavy alluvial deposits and generally attends to tin stream.

tipper; operates lever which tips tub to empty them of mineral, stone, shale, etc., on bank or tip; sometimes specifically designated according to contents of tub, e.g., stone tipper, sulphur tipper.

token lad; takes tokens off tubs when sent up to surface (tokens are pieces of metal or leather stamped with miner's or putter's number or mark, and filling or pitting).

top hand; (i) see surface hand; (ii) see bankman.

toiser, tozar; klieve man, tin cleaner; lowers or shakes pulverized tin ore into water in "klieve," or vat, tin ore being heavy, sinks to bottom, while refuse rises to top.

trunker; trims ore on railway wagons to prevent loss in transport.

truck filler; loads wagons with ore at surface.

trunker; separates slimes from ore by running mixture into end of a long box, leader or tank.

tub cleaner, bogy cleaner; cleans tubs, trams, or bogies in which stone or ore is transported.

vanner; leads and tends machinery of vanner machine, used for concentration of metal ore, i.e., for sinking out portions of heavy metal bearing ore from lighter rock after it has been crushed; sometimes specifically designated according to type of machine used, e.g., true vanner.

wagon coupler; couples wagons together at surface of iron mine; usually also uncouples wagons and assists shunter (704) q.v.

wagon filler; fills wagons with ore, etc., in quarry.

wagon loader; loads wagons with ore, shale, etc., at pit head.

wagon pusher; pushes wagons in quarry.

wagon tipper; tips wagons on surface, washer, ore washer; general terms for any worker who attends to machinery for washing ore, e.g., lead ore to remove impurities, including jigger and buddler q.v.

waterman, as for water leader (054).

weighbridge attendant, weighbridge man; weighs ore as it passes over weighbridge; sometimes also keeps record of wagons sent out and labels them to destination.

weigh lad; weighs ore at surface of mine or quarry.

weighman; bank weigher; (i) weighs full tubs or wagons on weighing machine, weight of each tub being credited to miner who has sent it out; (ii) weighs and despatches loaded railway wagons.

whim driver, drives "whim," a horse-driven capstan for raising ore or water from mine.

woodman; prepares, on surface, timber used for support of roof and sides of workings, and sends it into mine.

yard labourer, see surface labourer.

Sub-Order 3.—In Other Mines and Quarries.

070.—OWNERS, AGENTS, MANAGERS.

agent, mine agent; manager, mine manager, quarry manager, under, quarry master, steward, in complete control of technical and commercial affairs of mine or quarry pit, or working and is responsible to directors or owner alone for observance of Acts of Parliament and of regulations made thereunder, for safety and discipline of men and boys employed and for maintaining output.

agent, works; an agent q.v. who controls the operative or technical affairs only of a quarry, etc.

base, mine base; along terms for captain or manager q.v.

captain, mine captain (owner's representative); a foreman (071) q.v. endowed with fuller powers of control as owner's representative or agent q.v.; usually in small workings.

manager, mine manager, quarry manager; (i) see agent; (ii) in some districts, does work of *cf.* foreman (071); (iii) in Devon and Cornwall is responsible official in charge of on-site operations and superior to agent, owner; (iv) see agent.

manager, traffic; in charge of all means of conveyance in or about mine or quarry.

master, quarry master; (i) see owner; (ii) see agent.

owner, mine owner, quarry owner; master, quarry master; a person who, or member of a body corporate which, is the immediate proprietor or lessee of a mine or quarry, or of any part thereof.

steward, see agent.

071.—SUBORDINATE SUPERINTENDING STAFF (including Inspectors, Contractors and Foremen).

assistant agent; (i) see deputy; (ii) see foreman.

boss, shift boss (slang), see foreman.

captain (clay), clay captain, see foreman.

captain (stone quarry); in Devon and Cornwall; (i) cf. manager (070), (ii) see foreman.

chargehand, see foreman.

deputy; assistant agent; assists manager (070) g.v. acts in his absence; enforces compliance of Acts of Parliament, and special rules passed thereunder.

examiner; inspector; makes daily inspections of working places, overburdens, paths, roads, etc.; takes steps to ensure safe and efficient working; work often performed by manager or agent (070) g.v. examiner (slate, stone, etc.), see inspector (slate, stone, etc.).

fireman (blasting); legal title of deputy g.v. holds certificate to fire shots; cf. blaster (072).

foreman, mine foreman, quarry foreman; assistant agent, captain, chargehand, chip captain, ganger, overlooker, driver; also slang names: "boss," "gaffer," "John," "Gowman," shift boss, (i) superintends underground work of gang or set of workmen; (ii) is responsible for statutory duties under Acts of Parliament, where there is no deputy.

foreman (blasting); is in charge of drillers and firemen (072) g.v.; determines kind and quantity of explosive used and supervises its distribution.

foreman, rock; foreman of miners; directs work of quarries (072) g.v. to obtain best possible output of stone, etc., from quarry face.

gaffer (slang), see foreman.

ganger; (i) see foreman; (ii) is in charge of a set of workmen.

inspector, see examiner.

inspector (slate, stone, etc.); slate or stone examiner; examines slate or stone after dressing for damage or defects; checks output of dressers.

inspector, quarry; usually a pit-captain (471) g.v., who inspects wagons and keeps them in repair.

Johnny Gowman (slang), see foreman.

overlooker, examiner; see foreman; cf. agent (070).

sub-contractor; contracts with quarry owner or agent to pit stone, etc., at fixed rate; employs and pays his own assistants; is usually himself a quarryier (072) g.v.

072.—STONE MINERS, QUARRIERS,

banker, see brakeman.

banker hand; (i) see scabbler; (ii) dresses stone to put a finish on blocks after they have been roughly shaped by scabbler.

bank rider; bogie man, bogie rider, journey rider, rope runner, runner, run rider, sett rider, wagoner, wagon son; rides or accompanies trains of tubs or wagons containing stone; attaches and detaches ropes to set from tubs or wagons where required.

bankman; (i) see brakeman; (ii) see stageman.

barrer, stone barrer; burden man, excavator, felpier, muckman, muck, siddler, loader, stripper, tierer, top barer, top drier; removes over-burden (top-soil) with pick and shovel (hand or pneumatic), where over-burden is heavy or tenacious, explosive is sometimes used, or the over-burden is removed by channelling and piling.

blaster; blaster, shot-fire, shotman, shotman; blows down or out, or reads open, with explosive, the stone face; seen to drying of shot hole, inserts charge, tamps it up and fires it (with electric battery or safety fuse), often necessary to fire a series or range of shots simultaneously or after each other; by similar, but smaller, operations, breaks up larger boulders of rock which have been

from rock-face; cf. fireman (071); in granite quarries these boulders are never fired, but are split, see plug and feather man.

block chopper; stone cutter; (i) in Yorkshire cuts stone into smaller pieces with wedges, after it has been hewn from quarry face; (ii) see scabbler.

block cutter, blockier, blockman; cutter, stone cutter; breaks stone with heavy hammer (mallet) into rough blocks roughly a foot cube, ready for further cutting into 4 or 5 sections; in some quarries this work is done by settmaker (075) g.v.

bogie man, bogie rider, see bank rider.

borer, machine borer; (i) see driller; (ii) see rock borer.

bottom deliver; bottom getter; a deliver g.v. who works on lowest "bench" (step, tier or level), where quarry is worked in "benches."

bottomer; (i) makes holes with pick under large blocks of stone for insertion of wedges, (ii) hitcher; is quarryier attaches rope to wagon at bottom of incline, and signals to engine-man; (iii) in mines pushes filled trucks on to cage at shaft bottom, and winds stone up to surface; signals to winding engine-man; draws out empty wagons on descent of cage.

bottom getter, see bottom deliver.

breakman, brakeman, breakman; breaker, brakeman, shunter, framer, wagon breaker; (i) on inclined planes, controls speed of wagons by hand brake, or by drum-brake at top of incline; sometimes also hauls stone at top of quarry; supervises the men at the end of the detaching tubs to the ropes at landing end; (ii) has charge of engine for raising and lowering quarriesmen and stone; (iii) in large quarries assists engine-man in moving large wagons.

breaker and filler; a sledge g.v. who breaks up stone after blasting, with a large hammer and loads it into tubs for removal; cf. filler.

breaker (hand), stone breaker; crocker, junker, longer, maffer, maffer, meller, stageman, rubbier; breaks up stone with small hammer.

breaker (machine), stone breaker (machine), see crusher driver.

burden man; (ornish term, see barer).

butty, see cabin boy.

cabin boy; butty, little boy; looks after workmen's cabin; cleans mess room; boils water for men's meals; sometimes also carries tools; cf. tool boy.

carter, cartman, see horse driver.

causewayman, causeyman; (i) where quarries are worked in steps, keeps travelling way on each step clear; (ii) see roadman.

chain man; (i) examines chains for weak links, and keeps them in good condition; (ii) see slinger.

channeler; (i) operates machine which cuts channel in stone; (ii) cuts channel in stone, by hand, using hand tools.

charger, see blaster.

cleanser; roughly cleans stone, with sick when first it comes out of quarry.

contractor (existing stone); a quarryier g.v. who undertakes stone setting in a mine or quarry on contract; pays men working under him.

conveyor attendant; operates "conveyor" (belting which carries stone from place to place in quarry); controls conveyor by means of hand levers and looks after its running.

crocker, see breaker (hand).

crateman, see stageman.

crusher, stone crusher, see crusher feeder.

crusher driver; breaker (machine), crusher man, stone breaker (machine); controls stone-crushing machine by operating various levers; oils and greases working parts and looks after its running.

crusher feeder; crusher, crusher man, feeder, small breaker, small feeder, stone crusher; feeds revolving machine with broken stone, regulating

the supply of stone by means of trap door which is operated by hand levers.

crusher man; (i) see crusher driver; (ii) see crusher feeder.

cutter; (i) see hewer; (ii) see block cutter; (iii) see plug and feather man.

cutter-up, see flagstone cutter.

dayman; journeyman; a labourer g.v. paid time rate of wages.

dolph labourer; muck, quarry labourer; loads and unloads wagons, helps in repair of quarry roads and cuts out (iii) see plug and feather man; deliver; stone getter; loosens and gets blocks of stone from solid rock by various tools, when it has been blasted down, may also split blocks of stone with hand tools to reduce to convenient size.

deliver's labourer; assists deliver g.v. in getting stone and in loading it into trains.

digger, see quarryier.

dimension quarryman, see scabbler.

dredger; separates inferior stone from the bedrock.

dresser; dresser; face dresser; removes loose stone, etc., from face of quarry with pick and shovel; sometimes done by driller or miner g.v.

drift maker, see heading driver.

drill carrier, see tool boy.

drill driver, see driller (hand or machine).

driller (hand or machine), rock driller, rock drill man; barer, drill driver, drill runner, machine barer, rock barer, rock cutter; drills holes for blasting, for trawl borings, or for "plug and feather" (see plug and feather man) with hand or machine drills; sometimes also haws down loose rock after shot has been fired; cf. quarryier.

driller, electrical; a driller g.v. who operates an electrically-driven drilling machine in a stone quarry.

driller's attendant, see tool boy.

excavator, see barer.

face dresser, see dresser-down.

feeder, see crusher feeder.

fettler; fettler; does slight repairs to plant and machinery.

filler, rock filler; loader; loads stone by hand into wagons or boxes for removal from quarry face by another part of quarry; work may be performed by quarryier g.v.

fireman (blasting), see blaster.

fitter, see fettler.

flagstone cutter; cutter-up; cuts and cleaves flag rock, with picks, wedges, and spalling hammers, in readiness for flag dresser (075) g.v.

getter, rock getter; (i) see quarryier; (ii) see hewer; sometimes specifically designated, e.g. alabaster getter.

haulier, getter, blue rock getter.

getter (odd maker); works on face of rock in quarry, preparing it for setting up of large percussion drill; has a rope round him to protect him from falling; work sometimes done by miner or driller g.v.

getter, stone, see deliver.

greaser, see machine oiler.

hanger-on, see slinger.

haulier, see horse driver.

heading driver; drift maker; drives headings at foot of rock face, and puts in large charge of explosive; (i) rougher dresser stone with hammer pick after it has been loosened by blasting; (ii) see quarryier.

hitcher, see bottomer.

horse driver; barer, cartman, haulier, horse keeper, pony driver, horseman, wagoner, wagonman; drives horses about quarries; often also greases and feeds the horses and keeps horse feeder; feeds and grooms horses under supervision of horse keeper g.v.

horse keeper; cutter; (i) see horse driver; (ii) in charge of stables, supervises horse feeder and horse driver g.v. and attends to harness.

journeyman, see dayman.

journey rider, see bank rider.

drum man, see brakeman.

filter; loader, packer; loads slate into wagons or boxes for removal, or for conveyance to another part of quarry; work usually done by slate miner *q.v.* getter, slate getter, see quarrier. gleaner, see rubber.

hauler, see horse driver.

hoister; in slate mines or quarries, a brakeman *q.v.* who operates machinery which hoists slate from mine or quarry.

horse driver, horseman; carrier, carrier, hauler, driver, horse driver; quarries drawing tram wagons and cutting material where necessary; often also grows and feeds them. incline brakeman, incline driver, incline man; transporter. (1) see brakeman; (2) in very small quarries, may also push wagons to and from brow or bottom of incline. journeyman, see dresser.

labourer; does odd work in or about quarry; clears rubbish, unloads slate, etc.

lander; lands wagons or skips loaded with rock or slate on landing tables at quarry bank, or at end of aerial incline, and pushes wagons or skips from landing tables to haulage way.

loader, see filter.

machiner, see weigher.

marker, see counter.

miner, quarry miner, slate miner, see quarrier.

packer, see filter.

pumpman; oils and greases pumps in use at quarries, controls pump by operating various levers and keeps a watchful eye to see that water is coming through.

quarrier, quarryman, slate quarrier; getter, slate getter, miner, quarry miner, rockman, slate miner; drills the face of slate with hand or mechanical drills, taps up holes, then drilled and fires shot by means of time fuse, substitutes good slate rock for sending out to slate makers the refuse being removed by labourer *q.v.*

roadman; in mines, makes and repairs underground haulage roads; looks after supplies of timber or propwood, and clears away rock fallen from roof; in quarries, keeps roads and tram rails in repair and lays down new rails where necessary.

rock driller; drills holes for blasting, or for trial borings in the igneous rock with which slate is interbedded.

rockman, see quarrier.

rock quarrier; top rockman; in slate mines or quarries, drills, blasts and removes with explosive, beds of volcanic rocks overlying and underinterbedded with, or cutting through, slate beds.

rubberman, rubber man, see clearer. rubbish unloader, see tipman.

rubber; gleaner; usually as apprentice, or on loan not himself capable of taking "bargain" letter; is given blocks, to make into slates, as remuneration.

shaftman; a pumpman *q.v.* working at shaft used for raising water in mine or quarry, or for ventilation mine.

smasher; a labourer *q.v.* who breaks up worthless slate or stone with sledge hammer, and loads it into trucks for tipping.

stone cutter (setting slate), as for stone cutter (072).

striker; in slate mines and quarries, strikes top of drill with heavy hammer when drilling "double-band," *i.e.*, when another man turns drill, shaftless method.

timberman; props up roof and sides of roads with timber in underground slate mines.

tipman, tipper; rubbish unloader; tips rubbish over the spoil heap, makes the tip or heap and keeps it in order.

top rockman, see rock quarrier.

transporter, see incline brakeman.

trimmer, see dresser.

weigher, weighbridge man; workman; weighs slate or waste as it passes over weighbridge.

074.—CLAY, SAND, GRAVEL-PIT WORKERS.

bankman (clay, marl), as for bankman (072).

barer; burden man, burthenman (china clay) carrier, callowman, loader, napper, napping shifter, barer, topping shifter, unloader; as for barer (072).

bottomer; banger-on, lifter; as for bottomer (quarry) (072).

braker; pigger, pinner boy, wheel boy, wheeler; as for brakeman (072).

braker (china clay), marl breaker; breaks clay up into small pieces and loads them into circular tank to be mixed with water, forming creamy mixture called "slurry."

burden man, burthen man (china clay), see barer.

callower, callowman, see barer. chalk transporter; breaks down large quantities of chalk from quarry face by blasting.

clayman; gets out from sides of pit, clay and sand, which is then washed to bottom of pit by stream of water. clay worker; most worker; a quarrier *q.v.* getting clay.

craftman, see riddler.

crusher attendant, crusher feeder; suit attendant, panman; feeds and attends to crushing machine in which large pieces of chalk, clay, etc., are broken up.

cutler (clay marl), see quarrier.

digger (china, clay, flint, marl, gravel, digger, sand digger; excavator, excavator; digs chalk, clay, flint, sand or gravel, with pick and shovel, digger (coprolite); (3) digs "coprolite," *i.e.*, fecalised excrement of animals (usually mammals and fishes), which is ground up for use as manure; sometimes also loads it into barrows, etc.; (4) a man prospecting for "coprolite."

digger (flint); digs for fossils in chalk, etc., with pick and shovel.

drawer, see transporter.

dresser, clay dresser; (1) adds water to clay, etc., making creamy paste or "slurry," which is then run off and allowed to settle in "steeps" or "convers," the heavier impurities being left behind; (2) picks out impurities from material without making "slurry;" see sorter. (3) inspects working places and travelling roads and makes them ready for workers.

driver, drover, horse driver, pony driver, as for horse driver (072).

excavator, see digger (chalk, clay, flint, marl).

faceman, see quarrier.

fat boy, fat lad; greaser, slipper, wheel boy; greases axles of wagons, and does general odd jobs in quarries.

feather, see barer.

filler, chalk filler, clay filler; loader; as for filler (072).

flint boy, flint picker; removes top flint from loaded chalk wagons.

fossil breaker; sorts fossils taken out of mines, pits or quarries according to kinds.

gaulter; digs "gault," a kind of marl, at foot of chalk strata with pick and shovel and loads into trucks.

getter (china, marl, etc.) see quarrier.

getter (fuller's earth); (1) (open quarry) digs fullers earth by hand, *i.e.*, with pick and shovel, for use in cosmetics, etc.; (2) (miner) mines (fuller's earth); picks out fuller's earth or stone from overlying strata of coal seam with pick and bar; shovels into tubs for conveyance to crushing machinery; used for dusting mine to render coal dust less inflammable.

gravel dredger; gets gravel from river or sea bed by "pacer" mining method or by alluvial mining, generally with a digging line of buckets, worked by steam engine.

greaser, see fat boy.

grinder; (1) (china clay) lines pan of grinding machine with small pieces (pavers) of china stone, which have been broken up by ore crusher, and fuses other large blocks (runners) to

revolving arms, sets machine in motion, and empties material when ground to powder. (2) (quarry sand) controls level of grinding machine for grinding sandstone, gravel or other stone or clay; shovels and throws sand and lumps into feed hopper, when this is not automatically fed by chute or conveyor. banger-on, see bottomer.

hauler, see transporter.

hatcher, see bottomer.

holder, see quarrier.

knott, knott boy; see breaker.

knott hole man; Northamptonshire, Cambridgeshire, and Huntingdonshire term for clay, quarry or pit worker *q.v.*

labourer (ballast pit); digs sand or gravel for ballast with pick and shovel, loads it into trucks, etc., washes material to remove impurities; sometimes also sifts or screens it.

labourer (clay, marl, sand); general term for any unskilled worker employed in or about pit, mine, or quarry, loading, digging, wheeling, etc.

loader, see filter.

lyncher, see digger.

marl worker, see clay worker.

mill attendant, see crusher attendant.

miner, see quarrier.

mineral digger; gets fireclay from coal or fireclay mines in manner similar to coal mining, see barer (042), coal cutting machine driver (042); blows down with explosive, picks and burns down, cuts by machine, etc., at circumstances; fireclay occurs interstratified with coal.

miner (fuller's earth), see getter (fuller's earth).

miner's mate; gets material out after miner or gets *q.v.* has won it, *i.e.*, lifts, throws or gets material into trucks, pushes trucks to siding, may split large blocks or lumps with wedge and hammer.

napper, napping shifter, see barer.

picker, see fat boy.

pumpman, see crusher attendant.

picker, dirt picker, picker on bank, see sorter.

pitman; shaftman; attends to pumps by which sink clay in suspension in water is pumped up from pits or quarries; also attends to shafts by which clay is pumped; keeps valves of pumps clear and in good order.

pit worker, see quarry worker.

pumper, pump attendant, pumpman, as for pumpman (072).

putter, see transporter.

quarrier; cutter, faceman, getter, loader, holder, miner, quarryman; gets material from pit, quarry, face by pick and shovel, or by blasting. If explosive is used, gets hole, sets charge and, after explosion, brings down loosened material with picks, sometimes also loads into trucks.

quarrier (china clay); removes top-soil ("overburden") with pick and shovel, and washes out china clay by letting streams of water flow down face of quarry, producing solution of milky consistency.

quarrier (china stone); gets china stone by hand with pick and shovel, or by blasting.

quarryman; (1) see quarrier; (2) see quarry worker.

quarry worker; pit worker, quarryman; gets material for work employed as getter, labourer *q.v.* or in any other capacity in clay, marl or other pits.

riddler; crutcher, screener, screener; riddles, or sifts, sand or gravel by shovelling it against fine-meshed sloping sieve, sometimes called a "grizzly" to separate gravel, clay, stones and other coarse material; sometimes further designated "sieve" or "sifter," *i.e.*, *q.v.*

runner-out; runs trains or wagons from quarry face to bottom of incline.

and man (china clay pit); digs out sand which settles at bottom of "slurry" tanks and barrels into barrows; wheels barrows to tip. screener, screenerman, *see* riddler. selector, *see* sorter.

shaftman, *see* pitman. shaver-out (clay, mail); removes overburden waste, picks and shovels; drives in crow bar or wedge and shears out face of mail or clay quarry, to be shovelled away.

sorter, sorter on bank; dirt picker, picker, picks on bank, selector; examines clay, especially at bottom, as it comes from pit or quarry and picks out impurities, such as stones, nodules of iron pyrites, pieces of wood, etc. *cf.* clay dresser. tipper; operates tipping lever to tip contents of wagons, tubs, bogies, etc., at crusher house, railway trucks, dump, etc.

tirrer, *see* hauler. topping shifter, *see* loader. tramway; *driver*, haulier, *putter*; *as* for trammer (572).

unclawer, *see* harve. washer (general); cleans gravel by washing, usually in machine; shovels trash into machine, when gravel is not fed by hopper or conveyor; controls water supply and operates machine.

washer (slopes); washes china clay out of vein in pit by dredging clay with water so that a "slurry" or paste is produced, which can be pumped or run into settling tanks.

wheel boy; (i) *see* fat boy; (ii) wheels clay in barrows, etc.; (iii) *see* hauler.

wheeler, *see* breaker.

078.—WORKERS IN OTHER MINES AND QUARRIES NOT ELSEWHERE SPECIFIED.

alum clay worker; gets, or mines, clay shale used in manufacture of alum.

blaster (barites, rock salt, etc.), *as* for blaster (554).

blower (gypsum or plaster); a gypsum miner *q.v.* who drills holes (usually with hand auger), charges and fires them, and often wards up rock loosened by explosion; frequently also charges of small gang of miners; *cf.* quarryer (572).

hogie runner, beggie, *as* for trammer (554).

borer, rock salt, *see* drillier.

brake lad; incline lad; tends self-acting incline, *cf.* a tramway worked by gravity, on which descending full tubs or trams draw up empty ones.

cutler, *see* getter.

delver (barites mine), *as* for delver (556).

digger, *see* quarryer.

dresser (barites mine); dries barites, and grinds it, either between several pairs of revolving burr stones, or in a pulverizing mill; sorts it by floating in water, so that finer coarser particles settle, while finer remain in suspension; dries by steam-heated, and packs in barrels for despatch.

dresser, gypsum; picks over gypsum, after it has been quarried, with a pick, to remove foreign substances; sorts gypsum according to quality.

driller (barites, rock salt, etc.); rock salt borer; *as* for drillier (547).

farrier, rock salt; fills loose rock salt into trucks and conveys it to shaft for winding.

filler, *see* hauler.

ganister delver, ganister getter, ganister quarryer, ganister rock getter, *see* miner.

getter, *delver*, rock salt roger; works at rock face "petting" mineral, *e.g.*, rock salt, barites, etc., in a mine or quarry, by hoeing, drilling or blasting, *cf.* miner.

lower (barites mine), (i) *as* for lower (553), (ii) *see* picker.

incliner lad, *see* brake lad. loader; filler, rock salt leftman; *as* for filler (572).

leftman, rock salt; Irish term, *see* loader.

lycher; a getter *q.v.* in rock salt mining.

millier (barites mine); tends grinding plant which reduces barites to fine powder.

miner; *delviter delver*, *ganister getter*, *ganister quarryer*, *ganister rock getter*, *gypsum rockman*; *as* for quarryer (572); sometimes specifically designated according to substance mined, *e.g.*, alum miner.

another name: barites (bank) miner, ganister miner, gypsum miner, ochre miner, quartz miner, rock salt miner, spar miner.

mine worker; general term for any worker in or about mine, such as alum, barites, barites, calumene, feldspar, fluor spar, jet, malinite, ochre, plaster or gypsum, quartz mines.

navvymen, steam navvymen; assists steam heavy driver (555) *q.v.* in excavation work in quarries of gypsum, insulators, etc., directing operations by signals.

picker, rock salt; works underground, sorting out various qualities of rock salt.

pit-boy, pit labourer; does any unskilled work in pit or quarry, *e.g.*, signalling to engine-men, pushing tracks, cleaning and sweeping roadways, loading trucks.

pit worker; general term for any person employed in quarry or pit, including digger, getter, filler, loader, hauler.

putter, *as* for bogie (554).

quarrier, quarryman; digger; *as* for quarryer (574).

quarry worker; general term for all persons employed in quarries.

roadman; lays and repairs roads in mines and quarries, sometimes also lays rails; *cf.* platelayer (577).

rockman, gypsum, *see* miner.

roofer, rock salt, *see* getter.

shaftman, rock salt; is responsible for maintenance of shafts in salt mine.

striker, rock salt; detaches tubs of rock salt from haulage chain when they reach surface.

stromton digger, stromtonite digger, stromtonite quarryman; a quarryman *q.v.* digging or blasting for stromtonite.

stromton pit worker; general term for any person employed in a stromton mine or quarry.

Sub-Order 4.—At Oil Wells and Brine Wells.

079.—PUMPS AND LABOURERS.

pipeman, brine pipeman; maintains pipe lines conveying brine from wells to filter beds and reservoir in good condition, lays down new lines as required, usually also does work of pumpers.

pumper, brine pumper; attends and works pumping machinery which extracts brine from brine wells and pumps it along pipe lines to filter beds or reservoir.

pumpman (oil wells); attends and drives pumping machinery conveying oil from bore hole by pipe lines to refining tanks; usually maintains "dope" lines in good condition; *cf.* haulier (580).

shaftman, shaftsman, brine shaftsman; maintains shaft to salt beds in good repair; descends shaft to attend to brine pipes when necessary on account of choking substances, etc.; *cf.* wellman.

wellman (brine wells); is responsible for the brine and brine pipes leading to filter beds and reservoir, is also has charge of pumping machinery.

superior work of pipeman, pumper and shaftsman *q.v.* in large salt works; may also operate drilling machinery to bore fresh boreholes or wells to salt beds; *cf.* drillier (brine wells) (580).

wellman (oil wells), oil wellman; general term for all workers at oil wells including those attending pipe lines, pumping machinery, raising tanks, etc.

ORDER IV.—WORKERS IN THE TREATMENT OF NON-METALLIFEROUS MINE AND QUARRY PRODUCTS (excluding Workers in Gas Works).

Sub Order 1.—Makers of Coke and By-Products (excluding Tar Distilling).

081.—FOREMEN AND OVER-LOOKERS.

coke inspector; inspects cokes to ensure that it has been sufficiently quenched to be safely removed from bench, for loading, etc.

coker; a foreman *q.v.* in charge of coking process from time when coal is charged into oven until it comes out as coke; decides when process is complete; *cf.* coker (568).

foreman, oven foreman; *softer*, *gunner*, *overlooker*; is in charge, under supervision of manager or chemist, of a battery of coke ovens or certain processes carried on at coke works; controls men engaged in such processes as coal handling, screening, crushing, sifting, quenching and stacking; directs charging and discharging of ovens and oversees general control.

getter, *getter*, *see* foreman.

overlooker, *see* foreman.

washery foreman; a *ganget* or foreman *q.v.* in charge of washery department, sees to the sifting and greasing of the various parts and is responsible for the supply of coal and water through the washery.

088.—OTHER SKILLED WORKERS.

burner, breeze burner, elinder burner, coke burner, gland burner; *esker*; superintends coking of crushed coal in "beds" or coke ovens; directs work of loader, doorman and drawer (569) *q.v.*; obsolete.

charger, charger man, oven charger; coke oven top man, *esker*; controls power-driven coal charging machine for charging coke ovens, by operating various electrical controls; *cf.* coke oven loader (569).

coke oven top man, *see* charger; *cf.* coke oven top man (569).

coker, *see* burner; *cf.* coker (561).

compressor man; *stumper*, *stumper* man; operates, by hand, machine which compresses charge of partially dried coal into a solid cake, ready for delivery into oven by charging machine. *see* charger; regulates supply of coal coating down chute from bunker to compressor by means of trap door.

discharger, *see* ram engine man.

gas main man, *see* valveman.

gas regulator; regulates supply of gas and air for heating oven walls of coke oven plant, by opening various valves; reverses valves periodically so that air inlet flow may be heated by exhaust gases; oils and cleans valves, and generally keeps them in working order.

machine man; general term for any worker engaged on a machine used for charging or discharging coke ovens, including charger, compressor man, electric ram driver, ram engine man *q.v.*

pusher, *see* ram engine man.

ram driver, electric; a ram engine man *q.v.* who operates, by means of various levers, an electric ram or discharging machine.

ram engine man, ram man; *see* charger, jacker; operates, by lever, machine (electric or other) which travels along the front of coke oven and forces red-hot coke from oven with a mechanically driven ram; ram is sometimes fitted to compressing machine or stamp mill, and often includes a coal levelling tool, or is adapted for charging as well as discharging.

stamper, stamper man, *see* compressor man.

stoker, *see* charger.

valve-man (coke oven); gas valve man; works hydraulic means, controls valves which shut off gases from gas mains while they are being charged and discharged ("pushed"); cleans out suction pipes and lines, by hand, using various tools.

090.-OTHER WORKERS.

belt man, *see* conveyor man.

benchman; general term for any labourer who works at coke bench, drawing, quenching and forking coke after it is drawn from retorts and deposited on bench; includes coke filler, hearth man, quencher, *q.v.*

breeze man, breeze oven labourer (by-product oven); breeze filler; cleans up breeze of small coke, on coke bench by hand, using shovel and sometimes brush, and loads it into railway wagons, or wheels it to breeze dump; *cf.* filler, coke.

bunker-man; in charge of bunkers at coke ovens where coal is stored, after it has been washed, to allow gases mixture to draw off, before coking process begins; operates slides and doors admitting coal into bunker compartments, and is in charge of crushed coal elevator, and of scrapers or conveyors.

carman; haulage man; operates motor for moving "cars" or wagons of quenched coke from coke ovens to stacker.

chucker, coke, *see* filler, coke.

coal crusher, coal grinder; tends coal crushing machines in which coal is crushed, either before or after washing, to a size suitable for treatment by stamper-man *q.v.* prior to loading into coke ovens.

coke and by-product man, coke oven man; *coke*; general terms for any worker employed on any process in or about a coke oven or by-product plant.

coke oven plant worker; coke worker; general term for any worker at coke oven plant, including coke doorman, coke drawer, coke filler, coke picker, coke screener, coke stacker, coke washer, dauter, oven loader, quencher, ram engine man (1885 *q.v.*).

coke oven top man, *see* crane-man; *cf.* coke oven top man (1885).

cooker, *see* coke and by-product man; *cf.* cooker (1881 and 1885).

coke worker, *see* coke oven plant worker.

conveyor man; belt man, creeper man; attends to creeper or belt conveyor, which transports coal or coke; regulates tension of belt by operating screw controls, oils machinery and chutes.

cooler, coke cooler; *see* quencher.

crane-man; coke doorman, coke oven doorman, coke oven man, coke yard doorman, doorman, jackman, winchman; lifts doors of oven, either by hand or by mechanical means, to facilitate charging and discharging; *cf.* crane-man (1885).

creeper man, *see* conveyor man.

dautler, dautler, daut man, daut worker; general terms for any persons employed in coke oven plants who are paid at daily wages rates.

daut boy; (i) *see* washer, doer; (ii) *see* dauter.

dauter; daut boy, tauter, glauter; plasters interstices between bricks and door of a by-product oven with "loam," i.e., a mixture of clay and

coke dust or boiler ash, by hand, so that air supply is diminished gradually and finally sealed off, when door is broken down to allow discharge, wheels away old clay to daut grinder *q.v.*

daut grinder; pug mill attendant, pug mill man; feeds and discharges pug mill, using a shovel, pug mill which grinds up breeze, clay, and previously used daut, to make fresh moist daut for "luting" (sealing) coke oven doors (*see* doorman).

doorman, coke doorman, coke oven doorman, coke yard doorman; (i) *see* crane-man; (ii) *stagger*; closes doors of chamber or oven before charging, and plants them with puddled clay to make them airtight; *see* dauter, and door washer; (iii) ("beehive" oven), builds up and daubs it with clay to prevent coal from running out.

draughtsman *see* drawer; *obsolete*.

drawer, coke drawer; draughtsman (*obsolete*); breaks down and draws out coke from coke "beehive" coke oven (1885).

elevator man; controls elevator (or bucket conveyor) which transports coke to screens, tip, or hopper, or cow to coal breaker in a coke oven works.

exhauster boy, *see* gas exhauster driver (1890 *q.v.* in light unskilled jobs e.g. cleaning up, stoking).

filler, ash; coke ash filler; a yard labourer who fills ash or breeze with coke driven from boiler furnaces and coke benches, to be wheeled away by ash wheeler or ballast wheeler *q.v.*

filler, breeze, *see* breeze man.

filler, coke; coke chucker, coke lifter, coke loader; a benchman *q.v.* who fills railway trucks, etc., with coke, using a large fork; *cf.* breeze man.

gas regulator's assistant; *see* gas regulator's assistant, a labourer who assists gas regulator (1885 *q.v.* in opening and shutting valves).

grinder, *see* exhauster boy.

haulage man, *see* carman.

hearth man; (i) a benchman *q.v.* employed on "beehive" ovens; (ii) general term for man working on hearth, i.e. discharging end of coke oven, including doorman, quencher *q.v.*

hearth man's assistant; term sometimes applied to doorman *q.v.* assisting a quencher *q.v.* on hearth (discharging end) of coke oven.

hopper man, hopper lad; is engaged at hopper, discharging mechanically weighed quantities of crushed coal into wheeled buggies for charging into retorts.

hydraulic main man, *see* tar main man.

jackman, *see* crane-man.

labourer; does any unskilled work in coke oven or by-product plant; usually specifically designated, e.g., by-product labourer, coke labourer, coke oven labourer, sulphate labourer, valves labourer, yard labourer.

leveller, coke oven leveller, oven leveller; levels coal in coke oven by hand with a long rake, work only performed in older type furnaces or when mechanical leveller breaks down; usually done by ram engine man (1885 *q.v.* with a mechanical appliance joined to his ram).

lid man; removes oven lids before charging; replaces them after charging, and sweeps tops of ovens.

lifter, coke, *see* filler, coke.

loader, coke, *see* filler, coke.

loader, coke oven; coal loader, oven loader; charges coke ovens by hand, by tipping small trucks of crushed coal through steel door at top of oven; *cf.* charger (1885); work only performed when ovens are top charged.

loader's assistant, coal; removes cover of top charge hole of coke oven in preparation for charging; assists generally in tipping trucks and shovelling or sweeping up scattered coal; *cf.* charger (1885).

luter, *see* dauter.

picker, clinker; coke picker; picks out foreign materials, i.e. clinker and burnt shale, from quenched coke as it travels on conveyor bands to be screened.

plasterer, *see* dauter.

pug mill attendant, pug mill man. *see* daut grinder.

quencher, coke quencher; coke cooler, cooler, *see* quencher; benchman *q.v.* who cools down quenched red-hot coke with water, by hand, hose, or quenching machine, does work of burner (1885 *q.v.* in old-fashioned "beehive" ovens).

riddler, coke, *see* screener.

runner, *see* runner, small.

runner, coke; (i) fills tubs with coke for conveyance to blast furnace (beehive process); (ii) *see* runner, small.

runner, small; coke runner, runner; fills tubs on rake with crushed coal from a hopper; wheels tubs to coke ovens, and tips coal into them; *cf.* loader.

screener, coke screener; coke riddler, coke lifter, lifter; watches proper working of screen, i.e., mechanically-shaken sieve, which sorts coke according to size; controls motion by lever, cleans and sets working parts.

screen man, breeze, *see* washer, breeze, lifter, coke lifter, *see* screener.

slack creeper; a conveyor man *q.v.* on belt carrying slack or small coal.

stacker, coke; coke tipper; a yard labourer or coke labourer who quenches coke after it has been quenched and screened, either by hand (in barrows, etc.), or in bucket conveyors, and tips or stacks it in yard.

stopper, *see* doorman.

tar main man; hydraulic main man; cleans out bituminous deposit from gas mains which conduct gases from coke ovens by opening small trap doors on top of the mains and raking the deposit along from one trap door to another, until eventually the whole of the deposit is raked into the lower bench.

tipper, coke, *see* stacker, coke.

valve-man's assistant, valves labourer, *see* gas regulator's assistant.

washer, washery man; (i) regulates supply of coal from conveyor down chutes to washer, which separates coal (to be cooled) from earthy materials and reduces ash content by mechanically wetting it in water by means of jets or compressed air; manipulates valves, watercocks and power levers; watches machine for faulty working; cleans and oils working parts; (ii) *see* washer, breeze.

washer, breeze; small coke washer; breeze screen man, washer, washery man; washes breeze (small coke) in tubs of water with a hand riddle to remove dirt, and to prepare it for use in smiths.

washer, door; daut boy; bashes liquid puddled clay over oven doors during coking process to prevent surface of airtight plaster (lute) from cracking.

waterman; *see* quencher.

wheeler, ash; ballast wheeler; a labourer who wheels away tubs or barrows of ashes drawn from boiler furnaces and coke benches of a coke oven plant; generally also does work of ash filler *q.v.*

winchman, *see* crane-man.

Sub-Order 2.-Makers of Other Products.

091.-FOREMEN AND OVER-LOOKERS.

bankman; a foreman *q.v.* at salt works, at surface or "bank" of mine or quarry.

charge hand, *see* ganger (artificial stone and cement).

charge man; (i) (patent fuel) is in charge of operations in manufacturing patent fuel; tests the mixture of

coals and pitch in process of manufacture, and decides when consistency is correct; (ii) (self work) is responsible for regulating supply of steam, lime, etc., and general working of plant in vacuum process.

coal foreman, coal mill foreman (cement); a foreman *q.v.* in charge of grinding mill in which coal is ground for use in manufacturing cement.

foreman; allocates duties and directs work of semi-skilled workers and labourers; maintains discipline; engages and discharges workers under him; authorizes time sheets; sometimes, specifically designated, *e.g.*, fillers' and loaders' foreman (cement works), foreman lead mason (pencil works), foreman lime burner (lime kiln), kiln foreman (cement), lead mill foreman (pencil works), mill foreman (cement works), paste lead foreman (black lead works).

gaffer, see *ganger*.

ganger (artificial stone and cement); *charge hand*, *gaffer*; supervises work of men engaged in making artificial stone in concrete table and blocks under instructions of general foreman.

overlooker (cement); a foreman *q.v.* responsible for a specified section of work and in charge of men engaged thereon.

sampler (artificial stone); see *tester*.

superintendent of mixture (patent fuel); is responsible for the working of machines and belts, etc., which convey coal or coke dust and pitch to the hoppers.

tally man (cement); keeps account of weight or quantity of raw materials received and of cement produced; sometimes done by foreman or ganger of fillers and loaders (099).

tester (artificial stone); *sampler*; tests manufactured stone, to ascertain its tensile strength; inserts specimen in testing machine, applies pressure or pressure, hydraulically or by weighting beams; observes and records pressure or force at crushing, breaking or cracking point; usually done by manager or by foreman.

092.—KILN MEN AND LIME BURNERS.

blue lime burner, blue lime burner, blue lime burner, blue lime burner, blue lime burner, or for burner.

burner; furnace man, kilnman; is in charge of a kiln, oven, or furnace in which chalk, limestone, gypsum, or other mineral or combination of minerals is burnt (calcined); duties vary according to mineral burnt, and according to process, type of kiln used, etc., but usually feeds kiln, etc., with mineral by hand, or by setting feed apparatus in motion; feeds furnace with fuel; regulates heat of kiln, and decides when process is complete; often further designated according to mineral burnt, or according to process, type of kiln, etc., *e.g.*, blue lime burner, chalk burner, gray stone lime burner, kiln burner, rotary burner.

burner, kiln burner (cement); *clinker kiln man*; a burner *q.v.* in charge of a kiln in which mixture of chalk (or limestone) and clay is "burnt," usually in this country a rotary kiln; *cl. burner, rotary kiln*.

burner, chert, or for calciner, flint.

burner, gypsum, see *kiln man, gypsum*.

burner, lime; lime kiln man, lime maker; has charge of chalk (or limestone or chalk) in burnt; shovels limestone or chalk into top or mouth of kiln; maintains combustion by regulating draught; decides when process of burning is complete; sometimes also shovels fuel into furnace at base of kiln, and draws out quicklime, *e.g.*, lime after burning process, from bottom of kiln.

burner, plaster; boil plaster of Paris (gypsum) in a boiling pan.

burner, rotary kiln; rotary kiln man; is in charge of rotary kiln, used in manufacture of cement; regulates supply of slurry (mixture of lime stone, or chalk, and clay with water) to kiln by means of levers and throttles; regulates hot blast from furnace.

burner, rouge; rouge oven man; a burner *q.v.* in charge of a kiln in which ferrous sulphate is burnt to a powder (rouge), used in polishing metal surfaces.

burner, Schneider kiln; loads Schneider kiln (a vertical bottle-shaped kiln) with a layer of coke, which is fired; novels mixture of chalk (or limestone) and clay, in form of briquettes, through top or mouth of kiln, which is then sealed up by bricklayer or mason; when calcination is complete, withdraws bars on which coke and briquettes rest, allowing briquettes to fall to bottom of kiln; briquettes are then drawn out and taken away by labourers.

calciner, flint; charges kilns or cupolas with fuel, to be used in manufacture of china and earthenware or of glass; sends fuel to furnace; draws out calcined flints when process is complete.

calciner, magnesite; throws magnesite into kiln or furnace, which is kept always full; takes out magnesite, through an opening at bottom, where it is sufficiently burnt.

chamber man (cement), see *kiln man, chamber*.

dry man; dry kiln man; controls levers of lockout conveyor which carries slurry china clay from settling tank to heated floor of drying kiln; supervises labourers spreading clay to dry and removing dried clay in lumps.

fireman, abrasive wheel; abrasive wheel kiln man; attends to gas or coal heated furnace in which vitreous wheels (placed in a mould) are fired; sees that correct temperature is maintained; regulates heat by means of valves (if gas heated) or by opening or closing furnace door of coal heated furnace; removes moulds from furnace with tongs.

fireman, emery wheel, or for fireman, abrasive wheel.

fireman, oven (cement), see *kiln leader* (cement).

furnace man, see burner.

furnace man, whitings; shovels fuel into furnace heating hot plate, or bed, on which "clarry" of washed chalk is automatically run (becoming "whiting" when dried); sometimes also, where not working under supervision of foreman, judges whether furnace is at correct temperature.

kiln filler, kiln loader (lime burning); *kiln packer, limestone filler, stone filler* (lime burning); shovels chalk or limestone into blue kilns, with or without admixture of clay, in preparation for burning; may bore into buckets of feeding conveyor.

kiln loader, kiln filler (cement); *kiln setter* (cement), *oven fireman* (cement); charges kiln by shovelling in alternate layers of coke and of slurry drawn from kiln chambers, and attends to firing of charge.

kiln man, see *burner*; often specifically designated according to material burnt, or according to process or type of kiln used, *e.g.*, abrasive wheel kiln man, cement kiln man, Dutch kiln man, dry kiln man, lime kiln man, rotary kiln man.

kiln man, abrasive wheel, see *fireman, abrasive wheel*.

kiln man, cement, see *burner, kiln*.

kiln man, chamber (cement); *chamber man* (cement); regulates supply of gas to chamber kiln, in which chalk or limestone and clay, to calcine, are manufactured of cement, and is responsible for all material and fuel put into kiln.

kiln man, dry, see *dry man*.

kiln man, emery wheel, or for fireman, abrasive wheel.

kiln man, fuller's earth; shovels fuller's earth into a wheelbarrow; shovels it into kiln, and spreads it evenly over floor, with a shovel; turns it over with a shovel periodically, so that it is burnt evenly and completely; attends to furnace which heats kiln; cleans out furnace with a rake, by hand.

kiln man, gypsum; gypsum burner, gypsum ovenman, plaster boiler; spreads powdered gypsum on travelling bed of kiln (like a baker's oven); controls flow of hot furnace gases by means of dampers and so controls gypsum to relatively low temperature to drive off part of moisture, or dehydrate it, removes plaster of Paris at delivery end of kiln; *cf. gypsum boiler* (099).

kiln man, lime, see *burner, lime*.

kiln man, rotary, see *burner, rotary kiln*.

kiln packer, see *kiln filler* (lime burning).

kiln setter; builds up alternate layers of limestone and of coal in horizontal kiln.

kiln setter (cement), see *kiln loader* (cement).

lime maker, see *burner, lime*; sometimes further designated, *e.g.*, blue lime maker, hydraulic lime maker, stone lime maker.

limestone filler, see *kiln filler* (lime burning).

oven man, gypsum; see *kiln man, gypsum*.

oven man, rouge, see *burner, rouge*.

plaster boiler, see *kiln man, gypsum*.

stone filler (lime burning), see *kiln filler* (lime burning).

098.—OTHER SKILLED WORKERS.

abrasive wheel maker; general term for any operative engaged in making emery or other abrasive wheels, including grinding and making machine attendant (099).

artificial stone maker; casts mixture of cement, ballast, shingle, breeze, etc., into blocks, by hand or by machine, and faces them to represent stone.

asbestos sheet cutter; cuts sheets of asbestos fabric into lengths, or according to pattern, with shears; sometimes also prepares patterns (from paper or gum) from dimensions supplied to him.

block maker, breeze; puts "breeze," i.e., crushed or small coke, into a digger, and grinds it to powder; mixes powder with melted pitch, and passes it into a moulding machine, which presses it into blocks.

block maker, building; makes building blocks; (i) casts and sometimes faces concrete blocks; (ii) fills hollow blocks of clay, or brick, with mixture of cement and breeze or shingle.

block maker, cement, or for block maker, building.

block maker, concrete; fireproof block maker; concrete (fireproof) wall maker; or mixes "aggregate" of granite or other hard stone, chinker or gravel, and sand; passes it through mesh of given size, according to thickness of concrete required; mixes "aggregate" with cement, in definite proportions, in mixing machine, and puts mixture in hydraulic or hand press, which forms it into blocks; takes out blocks and leaves them to harden, watering them at intervals; (ii) makes concrete blocks by tamping or ramming "aggregate" and cement into moulds.

blockman (salt), see *lump maker, salt*.
breeze concrete partition maker; porphyry cut maker; (i) mixes cement, breeze (crushed or small coke) and water together, in definite proportions, in a mixing machine; puts mixture in machine which presses it into blocks by hydraulic or hand power; (ii) makes partition blocks by ramming or tamping breeze and cement into moulds.

composition stone maker, *see* flag maker, artificial.

concrete damp course maker, *as* for block maker, concrete.

concrete (damp-proof) wall maker, *as* block maker, concrete.

concrete pipe maker; (i) makes pipes of re-inforced concrete; places prepared cylindrical framework of strong steel wire in rotating machine into which concrete is poured, controlling velocity of rotation according to size of pipe, and stopping at intervals to allow water to drain off; transfers pipes, in moulds, to steam chamber for 24 hours; removes pipes from moulds and leaves them immersed in water tank for about one month; (ii) pours concrete into fixed moulds containing steel wire for re-inforcing; (iii) (for pipes less than 6 inch bore), stamps concrete, without re-inforcement, into moulds by hand.

concrete post maker; shovels newly mixed concrete into wooden moulds, smooths over top with trowel, and, when fairly firm, removes posts to dry in the open; posts are to be re-inforced, uses steel bars or wires in mould.

crayon maker; general term for any person engaged in making crayons, including mixer and moulder (crayons) *q.v.*

drower, salt; salt maker, *seller*; draws or scoops out, with skimmer, from bottom of boiling pans, salt which is continually being re-precipitated therein; places coarse salt in bulk on hurdle for drying, to warehouse, and fine salt in moulds or takes oriler (micante); drile brine in sheet mica, with a mechanically-driven drill.

electrical insulation maker (mica); general term for any person engaged in building up mica, insulating purposes, and in forming and pressing to required shape in a mould and placing mould in a semi-heated press; includes mica cutter, mica ring leader *q.v.*

emery cloth maker, emery paper maker; separates, by hand, levers of machine which spreads thin coating of glue on a piece of cloth or of specially prepared paper and automatically sprinkles it with emery stone; feeds machine, by hand, with pieces of cloth or prepared paper.

emery roller coverer; covers steel rollers with emery cloth, in form of a thin strip or fillet, for use in textile trades.

emery wheel maker; mixes ground emery stone with a binding material, *e.g.*, soluble glass, or shellac; moulds mixture into shape of a wheel, and dries it by application of heat.

fire cement wall maker; a concrete block maker *q.v.* who pours concrete "aggregate," re-inforced by rags or wood fibre, into moulds, and smooths off with trowel.

finisher, artificial flag; artificial stone finisher, composition stone finisher; concrete block finisher, patent slab finisher, patent stone finisher, plasterer; applies plaster mixture to surface of artificial stone, to make it smooth; slides stone into press (hand or by means of a lever); removes stone, by hand, after pressing.

finisher, concrete block; (i) cleans concrete blocks, after they have been taken out of moulds, with a wire brush, to remove dust and small pieces of foreign matter adhering thereto; (ii) *see* finisher, artificial flag.

finisher, partition slab, *as* for finisher, concrete block.

finisher, patent slab; patent stone finisher, *see* finisher, artificial flag. fireman (soda work), salt fireman; lights and feeds fires under salt pans; maintains correct temperature by adjustment based on experience and by judgment of flow dampers; also cleans; sometimes also does work of salt drawer *q.v.*; *cf.* salt boiler.

fireproof door maker, *as* for flag maker, artificial, except that pumice stone is used, instead of ordinary stone or gravel.

flag maker, artificial; artificial flag-stone maker, cement flag maker, concrete flag maker, paving flag maker; composition stone maker, concrete slab maker, concrete paving slab maker; fills buckets with broken stone or gravel, pumice stone, binding material, water, etc., which have been mixed by another worker; empties buckets into wooden moulds, and rams down mixture with a wooden rammer; repeats process until mould is full; places over on mould, and beats it with rammer to give greater pressure; leaves moulds to solidify; before concrete has completely hardened, gives final surface, with a trowel, to part of flag not covered by mould; removes concrete from mould, when it has solidified.

furnace man (lead pencil); fills crucibles and pots with dried strips of graphite (plumbago, or black lead), and places them in furnace or kiln, to burn to fire and empties furnace or kiln when process is complete.

ganger, cement, *see* taster, cement.

glass cloth maker, glass paper maker, *as* for emery cloth maker.

lead worker (lead pencil); general term for any person engaged in preparing graphite (plumbago, or black lead) for lead pencils; includes furnace man, lead presser, lead layer (002), machine band (003), mill band (004), lead mixer (005) *q.v.*

lofter (salt); takes salt from drying stoves; puts it on a hand truck, and conveys it to a loft, and stacks it there.

lump maker, salt; lumpman; blockman; turns salt out of mould in blocks; carries it to stove at back of fire, where it is thoroughly dried, dryness being proved by "ringing" or sounding it; sometimes also stores it in room over stoves until it is sold as "stared" salt (*see* lofter).

mica cutter; cuts off rough edges from split mica plates with a knife; also turns mica into forms and patterns with large shears and punches, operated either by hand or by mechanical power.

mica ring builder; assembles thin mica sheets, out to circular shape; daws surface with shellac, and builds one upon another to required thickness; puts these "mica shapes" in ring mould or hot press.

mica splitter; splits mica, which has already been separated into plates, into sheets of extreme thinness with a thin-bladed knife.

mica worker; general term for any person working with mica, including mica cutter, mica ring builder, drile, mica splitter *q.v.* mixer; measures or weighs out ingredients of mixture; sometimes also tips them into mixing machine, sets machine in motion, and decides when mixing process is complete, often further designated according to material mixed, *e.g.* article manufactured, *e.g.* abrasive wheel mixer, emery wheel mixer, lead mixer, liquid lead mixer; *cf.* mixer (001).

mixer, lime (soda work); weighs out lime, and places it in water, whence it runs into mill, and is mixed and ground along with silica materials.

moulder (abrasive wheels); fills moulds with abrasive materials, mixed, ground, and moistened to form a paste, places mould either in a hydraulic press or in a hot-dry chamber, to dry; sometimes also puts mould in a kiln or oven.

moulder (crayons); supplies crayons paste to machine, which shapes it into sticks; these are automatically cut off in short lengths as they issue from machine.

moulder, patent slab, *as* for flag maker, artificial.

patent slab maker, patent stone maker, *as* for flag maker, artificial.

plaster chopper, plaster cleaner; removes outer covering of stone from plaster of Paris (gypsum), by chipping it off with a special apparatus.

plasterer, *see* finisher, artificial flag; *cf.* plasterer (507).

plate builder, micante plate builder, plate layer, micante plate layer; coats surface of thin shavings of sheet of pumice with shellac, and builds them one upon another (usually upon an oiled iron sheet) to desired thickness; plates are then heated in oven, to drive off excess of spirit, and pressed in steam-heated press.

presser, lead; (general) prepares and fills seal pots with mixed ingredients of lead; puts pots under hydrostatic press, and operates press by means of levers.

pressman, black lead; feeds and operates small hand or hydraulic press which presses a "black lead," in paste form, into blocks.

roof panel maker, concrete; fireproof roof panel maker; makes thin slabs of concrete, by mixing concrete and putting it into a mould, and either pressing it in a hand or machine press, or allowing it to dry and harden in air.

salt boiler; builds open pan, heated by furnace underneath, in which brine is boiled; sees that pan is supplied with brine, and sometimes maintains fire in furnace; if fireman (only) in some works also acts as salt drawer *q.v.* salt maker, *see* drawer, salt.

samples, cement, *see* taster, cement.

sampler (salt, patent fuel, pitch); takes sample of patent fuel, etc.

every hour during manufacture and assists chemist to carry out tests for volatile matter and chloric content, and paper maker, *as* for every cloth slab maker, concrete; concrete paving slab maker, *see* flag maker, artificial.

slab maker, partition, *see* concrete concrete partition maker.

taster, cement; cement sampler, cement taster; cement sampler, cement taster; as prescribed in British Standard Specification for (a) fineness—by means of standard sieves; (b) chemical composition—by chemical analysis on standardized methods; (c) tensile strength—by making briquettes of standard form and dimensions and submitting them at certain ages, *e.g.*, 7 days, to breaking stresses in special machine; (d) setting time—by means of Vicat apparatus; (e) soundness—by the Le Chatelier or other methods, *i.e.*, a determination of the expansion on setting; is often done by chemist, but tests vary according to quality tested.

turner, abrasive wheel; dresses rims of emery or other abrasive wheels with a toothed disc pressed against rim in a lathe, and turns rim in a lathe, using a diamond tool.

turner, emery wheel, *as* for turner, abrasive wheel. mica, turns sheet mica to turner, mica; required diameter on a power-driven lathe, *e.g.*, to reduce diameter of washers previously stamped out of sheet mica.

Venetian pavement maker; an artificial flag maker *q.v.* who mixes coloured materials with other ingredients of aggregate.

walker (salt), *see* drawer, salt.

000—OTHER WORKERS.

abrasive wheel maker's helper; carries material for abrasive wheel fireman (002) *q.v.*, helps in firing furnace and removes fired wheels in a barrow.

asbestos fuel maker; pours asbestos cement, in a liquid state, from a can or other receptacle into iron moulds; applies special composition to these moulds, to prevent cement sticking; asks and marks mark (patent fuel); washes; removes ash from furnace, and keeps furnace stoked and clean.

asphalt block maker; attends a large boiler in which ground rosin asphalt is "cooked"; empties sacks of asphalt into top, or mouth, of boiler, together with a certain proportion of lump bitumen; sometimes also adds mixture (whose boiler is not fitted with mechanical stirrer) feeds furnace which heats boiler with coke or other fuel; runs off asphalt (now liquid) through a cock from boiler into buckets or draws it off in ladles; empties buckets or ladles into moulds in which asphalt is left to cool and harden.

asphalt block maker, asphalt mixer; mosaic maker; (1) coats asphalt in a boiler (see asphalt block maker) sometimes turns over ingredients with a shovel, before cooking, to mix them thoroughly; sometimes also adds lime and gravel, as well as bitumen, to asphalt, which may or may not be run into moulds for making blocks; (2) (in North or Maryland) sprays tar, usually from a hand-manipulated pumping engine, on to granite chips, which are then turned over and over with shovels until thoroughly saturated.

bagger (concrete); fills bags or sacks with crushed or ground clinker, granite, or other stone, mixed with sand, for use in making concrete.

bagman (cement); see filler, cement.

both brick maker; mason; a yellow brick of siliceous material by mixing sand and clay; puts it into a moulding machine, and subjects it to great pressure.

beater (cement); bag beater, sack beater; cleans sacks by beating them with a stick, to dislodge particles of cement adhering thereto.

belt conveyor attendant; a conveyor man *q.v.* in charge of a conveyor of the endless-belt type.

belt conveyor, belt repairer; wears put of glue, spreads glue on leather belt and applies emery powder to make or repair polishing belt for cleaning iron castings; repairs cover on belt when worn off by use.

belt man (patent fuel); takes briquettes off travelling belt connected to press, and piles them on trolleys ready for despatch.

blaman (patent fuel); bunkerman; loads bags in such piles, coal, or coke is stored, from trucks, by hand, using a shovel; sees that bags are kept filled for use in manufacture of briquettes.

black lead labourer; black lead mill hand, lead mill man; brings raw material to mill (if not equipped with automatic feed apparatus), and removes material therefrom after grinding; handles coils of plumage (graphite, black lead); charges grinding and mixing plant, and does any other labouring work in black lead mill.

black lead maker; stone polish maker; a black lead labourer *q.v.* who mixes automatic mixing pan, which mixes together ingredients of black lead.

boob chunder getter; takes clinders from bottom of water box.

breaker; crusher, crusher works labourer; shovels or throws material into breaking or crushing machine, where machine is not fed by conveyor belt or buckets; breaks material by hand with a crusher hammer, if it is too large to enter machine; watches machine as it breaks up material, automatically sorts it by size and throws it out, for further working, cleans and oils working parts; controls machine by means of levers; sometimes specifically designated, e.g., crusher breaker, granular breaker, gypsum breaker, silica breaker, slag breaker, stone breaker.

brick mill boy; assists pugger-up (cement) *q.v.*; takes bricks, automatically cut from a plastic bar as it issues from pug mill, to be dried.

brquette maker; general name for any person employed in manufacture of patent fuel briquettes, including bin man, mixer *q.v.*

bucket man, see elevator attendant; sometimes further designated, e.g., pitch bucket man.

bunkerman (patent fuel); see binman.

calometer boy (cement); chemist's boy, sample boy, test boy (cement); takes samples of calmed products (clinker "1") from kiln to analyst or to cement tester (008) *q.v.* for examination.

carrier, trolley; fetches and carries bags or sacks; wheels cement, salt, or other minerals or materials from place to place in a hand or mechanically-driven truck; or does other similar carrying jobs; sometimes further designated, e.g., bag carrier, sack carrier.

calculator (cement works), cement worker; general terms for any person employed in cement works; includes kiln leader (002), conveyor man, clincher driver, cement filler, grinder, mill hand, pug mill man, sample boy, silico man, speckling boy, trimmer, washmill attendant, weighman *q.v.*

chemist's boy (cement); see calculator boy.

clay feet maker; a briquette maker *q.v.* who makes briquettes by mixing coal dust and clay, and stamping mixture into blocks.

clay tank attendant; is in charge of a slurry tank, in which clay is mixed with water to form a paste or slurry; directs labourers shovelling in clay, controls flow of water by means of cocks and mechanical agitators by means of levers; runs off slurry and directs labourers in digging out gravel, etc., from bottom of tank.

cleanser, washmill (cement); cleans and keeps in order, washmill in which "slurry" is made, see washmill attendant.

coal chucker (slag); see coal man.

coal man (patent fuel); coal chucker (slag); general term for any worker engaged in handling coal for manufacture of patent fuel, including binman, coal tipper, not coal man, screeman, trimmer *q.v.*

coke boy (cement); loads coke into buckets, which are pulled up to kilns.

concrete block worker; general worker; for any worker engaged in manufacture of concrete blocks; includes concrete block maker (006), three cement wall maker (008), concrete mixer *q.v.*

concrete tube worker; general term for any worker engaged in manufacture of concrete tubes; includes concrete pipe maker (008), concrete mixer *q.v.*

conveyor man (cement); is in charge of conveyors (generally screw conveyors) which transport cement in grinding mills, warehouses, etc.; does other work when needed, and maintains them in running order.

conveyor, screw, see screw attendant.

cracker, crusher works labourer, see breaker; sometimes further designated, e.g., granular cracker, gypsum cracker, silica cracker.

crusher, crusherman, crusher feeder; minds a crushing machine, which either he is for pulverising material, or (more commonly) for breaking up large masses, in preparation for grinding, or for calcination, etc.; throws or shovels material into machine, unless it is fitted with automatic feed apparatus; other operations similar to those of grinder *q.v.*; sometimes further designated according to material crushed, e.g., clincher crusher, emery crusher, slag crusher.

digger, pitch, see pitch man.

discharger; (i) unloads barges, trucks, etc., with shovel and barrow; (ii) feeds conveyor with material for removal; (iii) removes goods from conveyor, and piles them on trolleys, etc., for removal; (iv) further designations, e.g., fuel discharger, pitch discharger.

dodger (salt), removes "sand slate" from salt pan with dodging hammer; also takes salt off fireplaces to side of pan during precipitation.

drummer, lime; pushes trucks ("trams" or "drawn") of lime along a light railway track either to crusher at works, or to kiln.

drawer, clincher; kiln drawer, kiln driver (cement); draws out, takes out "clinker," i.e., cement in large unbroken masses, after calcination, from furnace; shovels it into trucks or takes it on to conveyor or travelling belt, for removal to grinding machine.

drawer, coke (cement); pushes trucks or barrows, loaded with coke from coke stack to kiln; pushes coke into trucks back again, often done by kiln attendant *q.v.*

drawer, kiln (cement); see drawer, clincher.

drawer, lime; stone drawer; takes out lime, after it has been burnt, from opening at bottom of kiln; usually also loads trucks or barrows therewith; sometimes further designated, e.g., blue lime drawer, hydraulic lime drawer; worker sometimes done by lime burner (002) *q.v.*

dryer, salt; dryer man (salt); adjusts supply of steam, hot air, etc., to drying machine; also regulates supply of salt to stores (in vacuum process) by adjusting speed of automatic discharge.

dryer, slurry (cement); works valves to regulate escape of waste gases from cement kiln, used to heat floor on which "slurry" (mixture of cement, or limestone, and water) is dried so as to come from mixer.

elevator attendant; bucket man; attends to elevator, i.e., a series of small buckets, mechanically-driven in an endless chain, for lifting material; controls power by means of levers; cleans and oils working parts; sweeps up spilt material.

emery grinder and washer, see washer, emery.

feeder; shoveler; shovels material into hopper of machine, on to belt or other conveyor or elevator, for conveyance to machine; or controls automatic feed apparatus of machine; often also controls, by means of levers, starting, stopping, and speed of running of machine; sometimes further designated, e.g., mill feeder, basic slag mill feeder.

feeder, ball mill; feeds and operates ball mill (rotating cylinder partly filled with stones or with steel balls) in which chiles, slates, limestone, etc., are crushed.

filler, cement; bagman (cement), cement pocker, or for filler, lime.

filler, coal (cement); loads coal from wagons or from dump, into trams or tubs, to be taken to kilns by coal wheeler *q.v.*

filler, coke (cement); charges cement kilns with coke.

filler, lime; lime pocker, stone filler; (i) shovels lime in tramp, or powdered state, into sack; ties mouth of sack with string, and carries it to store, (ii) looks sack on to chute, through which powdered lime from grinding machine automatically runs into sack; sacks are then automatically weighed and mouth automatically sewn up with wire; lifts off sack and carries it away.

filler, salt; see leader, salt.

filler, slag; slag getter; knocks down slag from dump or pit; fills wagon or tub therewith, and runs it to crusher.

filler, stone, see filler, lime.

filler, whitening; whitening pocker; fills boxes or other packages with powdered whitening, either by hand with a small trowel or by placing the packages on a mechanical feeder and operating hand lever which allows a quantity of whitening to run into each; seals boxes or packages for despatch.

filter press man (whiting); pumps liquid containing pure chalk on compression (see washer, whitening) into a filter-press, which squeezes out water, leaving filter bags filled with whitening.

finer, black lead; refines graphite (plumbago, black lead) by washing it with hydrochloric acid; also a change of graphite with sand, and some of liquor containing impurities, leaving sediment of pure graphite.

fire block maker (patent fuel), see pressman (patent fuel).

fine attendant (concentrator); regulates dampers, in flues, conveying kiln and furnace gases round kilns, through drying chambers, etc.; sweeps or rakes out dust from flues to flues through fine doors.

ganister maker; ganister pug grinder; a ganister grinder *q.v.* who mixes ground ganister with water in an edge runner mill (adding freecay or lime, if necessary) to make "ganister pug," a plastic material for use in building furnaces or retorts.

gas fuel maker; pours by hand, from a can, a slurry of asbestos composition into iron mould; clamps the top of the mould into position by hand and places in a hot air drying chamber until the composition hardens, removes hardened composition from mould by hand.

general man, see labourer.

getter, slag, see filler, slag.

grab labourer; attends on grab of crane, guiding it into position, signals to engineers when load is ready to move.

greaser; greases bearings of machinery, working parts of rotary kilns, shafting, wagon wheels, etc.; sometimes specifically designated, *e.g.*, kiln greaser, wagon greaser.

grinder, grinder attendant; grinding machine attendant, grinding mill attendant, grinder, mill attendant, miller, mill man, miller, mill worker, grinder (patent fuel); shovels or throws material into hopper of grinding machine, or controls, by means of levers, automatic feed apparatus, if machine is fitted therewith; sometimes breaks, with a hand breaker-hammer, before grinding, lumps that are too large to go into grinding machine; regulates, by means of levers, starting, stopping, and speed of running, of machine; oils bearings of machine; decides when process of grinding is complete, unless, as is now usual, machine is fitted with screens which automatically sift material after grinding; fixes into position, by hand, screens used for sifting material; directs work of any labourers assisting; often further designated according to material ground, *e.g.*, black lead grinder, coal grinder, china clay grinder, emery grinder, *cf.* breaker.

grinder, cement; clinker grinder (cement); cement miller; a grinder *q.v.* who operates a grinding mill in which "clinker" (cement in large masses, after calcination) is reduced to powder; sometimes also opens steam throttle, admitting steam into mill together with about 1 per cent. of gypsum, to improve setting qualities of cement.

grinder, ganister; ganister roller; a grinder *q.v.* who turns over materials, *e.g.*, broken ganister, lime, etc., to mix them; shovels materials after mixing into grinding machine (if not provided with automatic feed apparatus); adds water to mixture in machine.

grinder, ganister pug; see ganister maker.

grinder, gypsum; gypsum miller, gypsum millman; (i) shovels unburnt gypsum, previously broken by gypsum breaker *q.v.* into feed-hopper of a machine, in which it is finely ground (unless machine is equipped with automatic conveyor); (ii) operates a mill provided with stones, or with edge runners or rollers, which reduces gypsum, after calcination, to fine powder.

grinder (patent fuel); pitch-mill man, (i) a grinder *q.v.* who breaks up largest pieces of diamond pitch with a hammer and shovels the whole, by hand, into mill; (ii) a grinder *q.v.* who tips transmuted pitch into mill-

grinder (salt); salt millman; is responsible for feeding and discharge of crushing machine (mill) in which salt is ground and sifted, after which it is automatically passed into a hopper and run into bags; controls mill by means of levers, and directs operations of labourers who wheel salt to elevators, which carry it to top of mill, and of those who remove it when bagged.

grinder, silica cement, see silica cement maker.

grinder, soapstone; a grinder *q.v.* who grinds soft soapstone (talc) to powder, between burr stones, for use in manufacture of French chalk.

grinding machine attendant, grinding mill attendant, grinding miller, see grinder.

gypsum boiler; spreads finely powdered raw gypsum, with a shovel and rake, in a layer two or three inches deep, upon metal plate or shallow dish placed over a fire; heats it gradually, and stirs it occasionally until boiling ceases; *cf.* gypsum kiln man (192).

handy man, see labourer.

hearthstone maker; (i) squares rough lumps of natural hearth stone, by hand, with a small axe or chopper, into small blocks of convenient size; (ii) stands before hearth fitted with two sunk boxes or moulds, and with a hand press, fills boxes with a mixture of crushed hearth stone and a little cement, which is supplied to him ready mixed; screws down press, and after a few moments uncovers it, pushes finished hearth stone up, by pressing on a foot lever, mounted, by hand, and puts it on a tray; takes tray, when full, to drying room, where it is left to harden.

besterman (patent fuel); is responsible for heating of powdered and mixed coal and pitch in a heated chamber (whereby coal dust is coated with pitch and thus conglomerates more readily when pressed); tests consistency of mixture by pressing it in his hands from time to time; controls heating by opening or closing valve through which superheated steam is admitted to chamber.

halper (salt); assists salt farmer (195) *viz.*, usually on fine salt pan, during night shift.

hopper man (cement); attends to hoppers which keep kilns or mills supplied with material (chalk, limestone, clay, etc.); opens and closes throat of hopper by operating slide with a lever.

kiln attendant (cement); charges lime kiln with stone (also layers of chalk, limestone and coal by hand, using a shovel, in preparation for burning; may also do work of coke drawer *q.v.*; *cf.* kiln burner (192).

kiln packer (abrasive wheels, emery wheels); packs kiln with mounded wheels (ribbed wheels), ready for firing.

knocker-out, patent slab; taps slabs of artificial stone smartly when they are fired, so as to loosen them, lifts them from mould and stacks to dry in open air.

labourer; general man, handy man; does any unskilled manual work, such as shovelling, carrying, loading or unloading, pushing trucks, etc.; often specifically designated according to department in which labour is done, *e.g.*, lime slag labourer, cement labourer, coal washer labourer, kiln labourer, plaster mill labourer, sack store labourer, yard labourer.

ladder man (patent fuel); a pugman *q.v.* who operates coal or pitch elevators by hand, by means of levers, allowing pigs to be fed with either pitch or coal dust.

lead layer (pencil); lays strips of prepared graphite (black lead) from press on boards; cuts them into lengths, and places them in drying room.

loader; loads material from dump into railway wagons; wheels sacks or coals from warehouse, and loads them into lorry, or takes them to quay for loading barges; sometimes further designated, *e.g.*, cement loader, lump loader, rough slag loader, whiting loader.

loader, salt; salt filler; shovels salt into a cart; whenever it is tipped or shovelled into a barge or wagon.

loader, wagon (tar macadam), see mixer (tar macadam).

machine hand (lead pencil); shovels lead, *i.e.*, a compound of graphite, which has been ground by mill attendant, into hopper of automatic machine which presses lead into shape for pencils.

marker, oak; marks goods with shawl showing brand, weight, etc.

mastic maker, see asphalt maker.

mixe, slurry mixe (slag), see slurry man (cement).

mill attendant, mill hand (lead pencil); (i) shovels lead, *i.e.*, a compound of graphite into hopper of grinding machine; removes final bits of ground lead; (ii) see grinder.

mill, see grinder; often further designated according to material milled, *e.g.*, basic slag miller, cement miller, coal miller, gypsum miller, lime miller, lime has lime miller, hydraulic lime miller, stone lime miller, whiting powder miller.

miller, dry; a grinder *q.v.* who grinds material in dry state as distinguished from wet miller, or wash mill attendant *q.v.*

miller (wash mill), wet miller, see washmill attendant.

miller's mate; assists miller or grinder *q.v.* with less skilled work of shovelling, trimming, etc.

mill hand, black lead, see black lead labourer.

mill hand (cement); general term for any person employed, in any capacity, at a mill in which coal or other material for use in cement manufacture, or clinker, *i.e.*, cement after calcining, in large unbroken masses, is ground.

mill hand (paste lead); by means of a small hand shovel or trowel, feeds top roll of power-driven roller mill with paste lead, *i.e.*, graphite clay and water, from wooden tub in which it has been mixed by hand mixer *q.v.*

mill man, see grinder; sometimes further designated, *e.g.*, filler's millman, gypsum millman, salt millman.

mill man, lead, see black lead labourer.

mill man, whiting; breaks up, with shovel, large pieces of chalk, and picks out therefrom, by hand, flints or other foreign substances; shovels chalk into wash mill, where it is ground with water to form a thin cream or slurry, which empties itself from machine into pits; switches power of machine on or off, as required.

mill worker, see grinder; sometimes further designated, *e.g.*, barytes mill worker.

milner, see grinder; sometimes further designated, *e.g.*, lime milner.

mixer, cement; mixer attendant (cement); slip mixer, slurry mixer (cement); keepman; (i) feeds and operates a rough mixer, in which powdered limestone is mixed with powdered clay, etc.; (ii) controls flow of "slurry" (a mixture of ingredients in semi-fluid, paste form) into tanks, called mixers, to which he adds chalk or clay (also in form of "slurry"), as directed by analyst, to obtain correct proportions of these ingredients; controls mechanical stirring device which mixes contents of tanks.

mixer, lead (pencil); prepares and mixes, under supervision, graphite ("black lead"), clay, and water, ready for grinding; mixes materials by hand, in a tub.

mixer, paste lead; paste lead

laborer; under direction, tips weighed quantities of ingredients for paste, "black" mud, etc., into mixing machine; controls machine by levers; sometimes also operates filling machines.

mixer (patent fuel); feeds, by means of conveyor belt, and operates a mechanically driven mill in which small coal and pitch are powdered and mixed in correct proportions, under instructions of charge man (001) g.v., for making briquettes; discharges the ground mixture by opening a door underneath the mill and receives either in a barrel or by conveyor belt.

mixer, slp (cement); slurry mixer, see mixer, cement.

mixer (tar macadam); pickler, screen attendant, scraper, fender (for macadam); supervises screens in which washed stone or slag is sifted; operates hopper which conveys screened slag to mixer; operates tar mixing gear, and dumps tarred material into wagon; looks after mixing machine attendant (abrasive wheels); receives raw materials (emery or other abrasive material, and binding material) which have been weighed out by foreman or mixer in prescribed grades and sizes and shovels them into mixing machine, sometimes adding water thereto; stops machine when mixing is complete; sometimes clears away mixed material from machine with a shovel; sometimes also wheels or carries mixed material to moulding shop.

mop dresser, mop and bob dresser; as for belt dresser; sometimes specifically designated, e.g., culm mop dresser.

muckman, see ash and muck men.

nut coal man (patent fuel); is in charge of screens (sifting apparatus) on which coal is sifted and classified; regulates, by turning a tap on or off, supply of water which washes coal it is runned after washing (see washer, coal); keeps screen clear by removing with a rod or spade handle, matter released in rinsing coal; lubricates screen and generally maintains efficiency; watches and controls running of water launder feed, etc.

oilier and tipper (patent fuel); a coal tipper g.v. who, in small works, also does work of oilier g.v.

oilier; oils and greases machinery, gear, shafts, blocks, etc., used for grinding or conveying materials, or for pulling coal wagons on to tipping platform and tipping into him; sometimes specifically designated, e.g., sulzer's oilier (cement).

packer, cement, see filler, cement.

picker, lime, see filler, lime.

picker, whitening, see filler, whitening.

paste lead labourer, see mixer, paste lead.

patent fuel maker, patent fuel processman; general terms for any person employed in manufacture of briquettes, fire blocks, or other kinds of patent fuel; includes sampler (008), belt man, blower, briquette maker, grinder hesterman, mixer, nut coal man, pitch picker man, pitch valve man, pressman, screenerman, slurry man, superheater, well man g.v.

put maker, put man (cement); weighs and measures out specified proportions of cement and water (or cement, sand and water), mixes and pours into moulds to make put or small cubes or bricks for use in standard tests; assists cement tester (008) generally.

putting slab labourer, concrete; stacks artificial flags, blocks, or stones; loads and unloads stones, etc., or materials; pours cement into moulds and presses it by hand or by machine; knocks slabs out of moulds when they have set hard enough, and does other labouring work.

picker, clicker (cement); examines clinker after it has been cooled from kiln by clinker drawer g.v. and sets aside, for further burning, any parts not properly calcined.

picker, lime; lime sorter, lime trimmer; picks lime free from stone, coke, clinker, etc., at kilns with hand fork; sometimes further designated, e.g., blue lime picker, hydraulic lime picker.

picker, pan (salt); removes scale from bottom of boiling pan, when pan is empty, with chipping tool, hammer and scraper; usually done by salt drawer (008).

pickler (tar macadam), see mixer (tar macadam).

plier (patent fuel); receives pressed blocks from the pressman and loads them on to trolleys for conveyance to stores.

pitch man (patent fuel); pitch digger; a labourer g.v. who digs out pitch from stock heaps and shovels it into trains or barrows; usually also acts as pitch chandler g.v.

pitch-mill man, see grinder (patent fuel).

pitch valve man (patent fuel); attends to pumps and apparatus, which convey melted pitch to makers or miller; regulates flow by means of hand operated valve.

plaster mill labourer (cement); a plaster works labourer g.v. who assists in crushing or grinding plaster cement, i.e., cements having gypsum as their base.

plaster works labourer; does general labouring work, such as bevelling or wheeling material, in works where plaster of Paris or plaster cement is manufactured from gypsum.

preparer, china clay; controls by means of sluices flow of china clay slurry first down long channels, called "sand drags," in which sand is deposited; then more slowly through other channels, called "mosses" or "moss runs," in which fine meshed gauzes and traps are fixed to retain mucus and other impurities; and finally into settling tanks, where clay settles out and water is pumped off.

presser, artificial stone; press man (artificial stone); slides stone under press, by hand; brings down press upon stone, and releases it again, by moving a lever; takes stone out of press, by hand; sometimes also fills moulds, by hand, with ingredients of artificial stone.

pressed (patent fuel); fire block maker; feeds and operates a heavy hydraulic or other press or set of rollers, which compress a mixture of powdered coal dust and pitch into briquettes, or other forms of patent fuel; regulates feed by opening and closing door of pug mill by means of a lever or, in some instances, a screw.

press room man (patent fuel); a labourer g.v. who sweeps up floors in the press room, rubbish, etc.

pug grinder, pugger-up, pug man, pug mill man; attends automatic feed apparatus; causes materials, (e.g., chalk or limestone and clay, in case of cement, or coal dust and pitch, in case of patent fuel) to be discharged into a pug mill, where they are worked up by revolving knives into a paste with water, and issue therefrom as a plastic bar; controls pug mill by means of levers; examines plastic mass or bar being discharged for faulty work; cleans and oils working parts.

pulverizer (patent fuel), see grinder.

purification man (salt); regulates purification of crude brine; filters of sediment and grit; operates pumps for pumping brine to vacuum plant.

quartz worker (electric lamps); cleans and sorts quartz to be made into continuous conductors for lamps and heaters.

rammer (artificial stone), see tamper.

rammer, salt; tube cleaner; cleans steel tubes in salt works, by ramming a bar of steel, with cutter attached through them to remove coating of hard salt deposited during evaporation of brine.

roadman (patent fuel); keeps in repair, roads on which trucks and trolleys run.

roller, gambler, see grinder, gambler.

roller, silica, see for grinder, gambler.

roofman (patent fuel); sweeps dust from pug mills or mixers, which are settled on roof of factory, down chutes, to be collected and used in manufacture of briquettes for factory boilers.

runner, see wheeler; sometimes further designated, e.g. lime runner.

sackman; is in charge of sack store, and directs sack sorters and labourers g.v. employed therein.

sample boy (cement), see calcimeter boy.

saturator (cement); shovels gypsum, after it has been calcined, into tanks containing a chemical solution, and shovels it out when saturated; works under direction of a foreman who decides when saturation is complete.

scraper (cement); scrapes cement from used bags with a piece of iron.

screen attendant (tar macadam), see mixer (tar macadam).

screenerman (patent fuel); attends conveyor fed machine screens for sifting and classifying different qualities of coal; watches delivery from screens and clears away with use of metal rod or shovels any pieces which may have become lodged in screen perforations during sifting; lubricates mechanism.

screw attendant; screw conveyor, worm bog (patent fuel); a conveyor man g.v. in charge of conveyor of screw, or spiral, type which conveys paste or mud from bins by means of elevator to the mill, or ladder man; sweeps round the presses and keeps everything clean around the elevator.

shipper (patent fuel); loads briquettes into carts or railway wagons, or stores them in holds of ship.

slave man (salt); puts fine dry salt into bags, and wheels it to storehouse.

silica cement maker; silica cement grinder; a grinder g.v. engaged in grinding materials for cement containing a proportion of silica.

silica works labourer; breaks up, with sledge hammer, large pieces of silica rock or gambler, which it in barrows or tubs to breaker or crusher g.v. and attends to elevators and chutes; loads carts with gambler pug, and packs silica cement in bags; wheels and unloads coal at kilns, and does other unskilled work in yard of silica works.

slidemans (patent fuel); attends to slides below coal hoppers, and regulates amount of coal passing through openings on to conveyors.

slurry man, slurry pond man, slurry pond navvy (cement); sinks, slurry sink (slang); pumps out slurry (mixture of chalk or limestone and clay with water) from wash mill or slurry pond, and regulates supply to kiln chamber.

slurry man (patent fuel); opens valves periodically in bottom of settling tank of washing box, through which slurry is discharged in compressed form.

sorter, bag; sack sorter; sorts and keeps account of bags or sacks.

sorter, lime, see picker, lime.

sorter, mica; a man of mica-bearing rock into sizes ready for mica splitter (008) g.v.

sorter, pumice stone; sorts pumice stone (imported in bulk) according to grades of stone, and according to quality, as indicated by sound made when stone is hit against a piece of wood.

sorter, sack, see sorter, bag.

spare man; works odd shifts at various operations, in absence of a regular man, through illness, etc.

spout man (cement); a cement filler g.v. who controls trap of chute from which bags are filled.

spreader, slurry; spreads slurry (mixture of chalk or limestone and clay, with water); after water has been partially drained off, and after slurry has been treated in mixer, on a floor, to be dried by gas from kiln, stacker, artificial flag; stacks artificial flagstones in warehouse or yard.

stove polish maker; see black lead maker.

superheater (patent fuel); a stoker who attends to apparatus for superheating steam which heats mixture of coal and pitch.

tail worker; general term for workers engaged in production, i. e., mining, crushing, pulverizing, screening, etc., of talc.

tampier (artificial stone); rammer; presses into mould, by hand, "aggregates" i. e., mixed ingredients used in compounding artificial stones.

tared material maker, tarmac worker; loads and unloads stone and other materials; passes broken stone through crusher, preparatory to sorting it with a cylindrical screen, and mixes screened stone with tar, by hand or machine, to form tarmac, for road paving; cleans yard, and does other labouring work in connection with manufacture of tarmac; see mixer (tar macadam).

temperer (cement); see mixer, cement.

test boy (cement); see calcimeter boy.

thrower-out, kiln thrower-out; see drawer, clincher.

tipper, coal; works apparatus which draws railway wagon on to a cradle, and tips out coal into bins.

tongman (patent fuel); trolley man; attaches to and detaches from endless rope by means of clip or tongs trolleys used to convey finished products from store sheds to point required for shipment.

trimmer (cement); trims, i. e., disposes with a shovel, convenient for packing, heaps of cement formed at bottom of spouts of cement grinding machine; and shovels back on to heap, cement which has been spilt from sacks or which has encroached on concrete.

trimmer, lime; see picker, lime.

trimmer (patent fuel); trims, i. e., shovels, coal in bins, to make it flow more evenly on to elevators and conveyors; cf. binman.

triuman, salt; (i) trims, i. e., shovels, coarse salt of water has been loaded into ships or barges in bulk, so that the cargo is evenly disposed in hold; (ii) trims bulk salt in warehouse.

trolley boy; assists trolley man (q. v.).

trolley man (patent fuel); (i) pushes up trolleys loaded by belt man (q. v.) from presses to yard or to side of ship; (ii) see longman.

trotter; see carrier.

tube cleaner; see rammer, salt.

valve man (salt); operates valves for dropping salt out of pans ready for drawer.

washer (cement); see washmill attendant (cement).

washer, coal; washing box man (patent fuel); operates machine in which shale and other coal impurities are removed from coal by mechanical agitation of water; controls, by levers, flow of water and through perforated tray and of coal into washing box, and opens and closes shutter through which shale is expelled.

washer, stony; every grader and washer; shovels stony into a rotating drum, from which it is washed in water.

washer, whitening; feeder; operates a wash mill into which chalk is shovelled, or delivered by mechanical means; pumps in water, and operates levers controlling "barrows" or "lines" (breaking knives) which powder chalk, run off fluid into channels in which impurities settle, leaving pure chalk in suspension.

washing box man (patent fuel); see washer, coal.

wash mill attendant (artificial stone); shovels gravel or other ingredients of

artificial stone into wash mill, where it is washed with water, to remove dirt; controls water supply by means of cocks.

washmill attendant (cement); washmill hand, wash roller, washmill man; miller (wash mill), miller (cement), wet miller (cement); controls, by means of levers, wash mill machine, and sees that it is working properly; if machine has no automatic feed apparatus, feeds machine with materials (chalk or limestone, clay, etc.), which are then mixed with water and converted into a slurry, from which cement is made.

welcher, coal truck (patent fuel); weighs coal or coke dust in truck or wagon before it is placed in storage bins, and keeps a record of coal stored.

welgher, fuel (patent fuel); weighs quantities, when loaded, into wagons ready to leave works; runs wagon on to machine or weighbridge, and deducts tare of wagon from gross weight.

welgher, pitch (patent fuel); see for washer, coal truck.

wal g a s o n; weighman-to-mill (cement); weighs raw materials received at cement works; sometimes also weighs finished product.

wall man (patent fuel); clears out wells into which fine dust from brunettes is carried by water from surface of tables and moulds.

warehouse man (cement); (i) wheels or carries cement sacks or barrels and lowers them into barges through chutes, or by hoisting them with cranes; (ii) unloads on to wharf, loads of clay, coal, chalk, etc.

wheelier; rammer; wheels materials or finished products from place to place in works, in trucks or barrows; sometimes further designated, e. g., chalk wheelier, clay wheelier, coal wheelier, or coal wheelier, ditch wheelier.

whiting ball maker, whitening block maker; settling moulder; receives thick paste whitening from becks (settling tanks) or filter press and roughly shapes it into balls or blocks, which are then dried either by drying balls first on slabs, then on racks, for air currents to play round them, or by placing them on a hot plate with fire underneath.

whiting dabbler; scoops out whitening from becks or settling tanks, into a bucket, and wheels it to brick making; sometimes also does work of whiting ball maker (q. v.).

whiting maker, whitening worker; general terms for any person employed in making whitening, including whiting ball maker, whitening moulder (q. v.).

whiting moulder; see whiting ball maker.

worm boy (patent fuel); see screw attendant.

ORDER V.—MAKERS OF BRICKS, POTTERY AND GLASS.

Sub Order I.—Makers of Bricks, Pottery and Earthenware.

101.—FOREMEN AND OVER-LOOKERS.

head miller (pottery); is responsible for whole working of mill and superintends work of millers and millmen (104) (q. v.) in feeding, sampling and cleaning of pans or cylinders, and firing of new runners and paviors; also sees that machinery is well oiled.

potter's overlooker; examines pieces of pottery by sight and touch in greenhouse, i. e., in clay state, after drying, as received from potter's bench, before they go to press or firing, and sends back to slip house, to be broken up, those which are defective; sometimes done by looker to ware (115) (q. v.).

102.—BRICK AND UNGLAZED TILE-MAKERS, MOULDERS, PRESSERS, AND CUTTERS.

angle maker; a moulded brick maker (q. v.) who specialises in making angle bricks.

battay; bends or bats bricks, partially dried on flats, with a tool called a clapper, as they are packed, in order to correct any warping which may have taken place during first drying; work usually done by moulder or brick-maker (q. v.); cf. battor (119).

block maker, fireclay block maker; lamp maker, mold maker; makes large fireclay blocks used for furnaces, boilers, etc.; places a watted wooden mould on sanded portion of drying floor; throws large masses of fireclay clod or pug with great force into mould; compresses clay as equally as possible by vigorous pom-melling with fist and kneading with fingers, and removes excess of clay with stretched wire, or stroker, i. e., a specially shaped stick.

brick machinist; see brick maker, machine.

brick maker, chrome; a brick maker (q. v.) who makes bricks from chrome iron ore, finely crushed and ground, and mixed with lime, tar, or other binding material, and water.

brick maker, stamelled; glazed brick maker; a brick maker (q. v.) who makes bricks of materials suitable for glazing with a mixture of felspathic glass; may also dip bricks by hand in tank of glass and sand on pallet, usually done by dipper (105) (q. v.).

brick maker, facing; faces facing brick maker, red facing brick maker; a brick maker (q. v.) who makes, by hand, or presses and, if necessary, re-presses, in a machine, good colouring clay to form heavy, smooth-surfaced bricks of good colour, and accurate in size and form, for outer walls of buildings.

brick maker, glaze bricks, glazette, glazed firebricks, silica, steam; a hand brick maker (q. v.) who makes bricks of fire-clay, glazette, silica, etc., by similar process.

brick maker, hand; moulder; general term for worker who makes bricks by hand; includes brick maker (plop), brick maker (solid-faced), brick maker (moulded) (q. v.); sometimes also does work of battor (q. v.).

brick maker, machine; brick machinist; (i) see presser, pressman; (ii) attends to grinding, mixing, pressing, rolling, shaping, or other machine used in brick making.

brick maker, magnesite; (i) hand makes bricks of burnt magnesite, with or without a bonding material, by processes similar to those for brick maker (hand) (q. v.); also makes magnesite brick tubes by hand, magnesite mixture being rammed into metal tubes, which are used for lining furnaces; (ii) (machine) a pressman or presser (q. v.) who attends to presses used in making magnesite bricks, for steel furnaces, etc.

brick maker, mixed; a brick maker (hand) (q. v.) who makes mixed bricks in a mould or press and cuts to special shape with a template.

brick maker, moulded; bumper; makes more elaborate and highly-finished forms of hand-made bricks; throws a small ball of clay with great force into mould, and presses it well into corners with his fingers; repeats process until mould is full; scrapes off superfluous clay with a plane or stick, and turns out brick on to a pallet or rack for removal to drying chamber.

brick maker, paving; a moulded brick maker (q. v.) who specialises in making paving bricks.

brick maker, pressed; brick re-presser, re-presser; a brick maker (machine) (q. v.) who operates hand or power-driven press to shape and compress clay into bricks; hollow faces of bricks, mark name of manufacturer, or to make denser and

better finished bricks by repressing wire cut bricks made by brick-making machine.

brick maker, sand faced; sand stock brick maker; sand flatter; sprinkles stock board or bed with sand; plunges mould into a sand bed so as to cover surfaces with sand, and prevent sticking; places mould on bed; takes clod or prepared lump of clay, from attendant; throws it with force into mould; works it well into crevices with his fingers, and places mould on pugo, i.e., tray, for removal to drying chamber.

brick maker, slung; a moulded brick maker (q.v.) who makes paving bricks of clay.

brick maker, stop; takes clay enough to make one brick; forms it into a solid lump or clod by rolling it by hand on a table; throws it with great force into wetted and sanded wooden moulds; presses it red into crevices with his fingers; scrapes off superfluous clay with a stretched wire, or with a specially shaped stick called a stroker or with a flat wooden trowel called a plane; dusts with sand and turns out brick on to a pallet or rack for removal to drying chamber.

brick maker, special; a brick maker (q.v.) who makes special kinds of bricks, e.g., angle bricks.

brick maker, stable; a moulded brick maker (q.v.) who makes bricks used for paving floor of stables.

bumper; see brick maker, moulded.

chimney pot maker, chimney top maker; makes chimney pots, by pressing red or buff clay into a specially prepared wooden or plaster mould.

clinker maker; a brick maker (hand) or a brick maker (machine) who specialises in making bricks with a mixture of clay and ground clinker.

crane maker; ridge maker, ridge tile maker; a tile-maker (q.v.) making tiles for ridges of roofs, sometimes called crane tiles.

crest moulder; a tile maker (q.v.) who specialises in making crested ridge tiles for roofing by pressing clay into moulds by hand.

cutter, cutter-off; operates with hand lever, a wire cutting frame, which slices clay as it emerges on cutting table from brick-making machine of pug-mill type; sometimes also removes bricks to drying chamber.

finial maker; a tile maker (q.v.) who specialises in moulding finials, i.e., ornamental roofing tiles by pressing clay into a mould with his hands.

gas fuel maker, gas-fire fuel maker, gas-fire radiant maker; makes gas-fire fuel by pressing fine fireclay into specially prepared moulds with the hands or by using a hand screw trowel.

hip and valley maker; a tile maker (q.v.) who specialises in making hip and valley tiles, i.e., roofing tiles, by pressing clay into a mould with his hands.

lump maker; see block maker.

mitre maker; a chimney pot maker (q.v.) who specialises in moulding mitres, i.e., a form of chimney pot moulder, see brick maker, hand.

pan tile maker; a tile maker (q.v.) who specialises in making pan tiles by moulding in flat dies ready for stacking by horse (q.v.) or by presser, pressman; (q.v.) brick maker (machine); controls brick or tile press by levers; watches for faulty work; his dies are required; may remove pressed bricks from machine, when these are not automatically conveyed to drying chamber or tunnel.

quarry tile maker, quarry maker; a tile maker (q.v.) making flooring tiles, called quarry tiles, either by hand using a wooden mould, or by machine.

re presser, brick re-presser; see brick maker, presser.

ridge maker, ridge tile maker, see crane maker

stove back maker; a block maker (q.v.) making lumps or blocks of silica sand, instead of ordinary fireclay, for certain work owing to its extreme refractoriness.

stove block maker (for smelting furnace); see block maker.

stove back maker, gas stove back maker; presses fireclay into specially shaped wooden moulds with his hands; shapes back by hand, using a wooden mallet or operates a machine driven press which forces the clay down into box containing plastic clay.

tile maker; makes tiles, by hand or machine, by processes identical with those employed by brick-makers (q.v.), i.e., hand, machine, moulded, pressed, save that greater care is needed on account of thinness of article; uses either plastic or non-plastic clays; sometimes specifically designated, e.g., fine tile maker, paving tile maker, roofing tile maker.

tile maker, clinker; a tile maker (q.v.) who specialises in making tiles from a mixture of clay and ground clinker.

tile maker, field; a tile maker (q.v.) who specialises in moulding field tiles (small drain pipes) in a press.

tile maker, steam; a tile maker (q.v.) who makes tiles of fire-clay to be used in setting steam engines and boilers.

tunnel oven pot maker; makes parts of tunnel ovens, i.e., long ovens through which articles are slowly drawn, by pressing fireclay with the hands into specially prepared moulds; work similar to that of block maker (q.v.).

walk flatter; see brick maker, sand faced.

103.—FURNACE AND CRUCIBLE POT MAKERS.

condenser maker (zinc); see pot maker, zinc.

crucible maker, crucible worker; casting pot maker, crucible pot maker, furnace pot maker, melting pot maker, pot maker, smelting pot maker; makes crucibles by throwing mixture of fireclay and grog, i.e., lumps of hard-burnt clay, broken bricks, etc., ground to a powder, with or without a further admixture of plumbago on potter's wheel (a small revolving table) and working it up to desired shape with hands; (ii) makes crucibles by pressing paste into moulds, usually of plaster of Paris, with his hands, using simple pads and other tools; cleans up defects, and smooths out roughnesses and cracks with a knife or smoothing pad when article is partly dry; (iii) presses clay or pug into shape between top and bottom moulds in hand or machine press, as in crucible pot.

crucible maker, glass; see pot maker, glass.

crucible maker, plumbago; a crucible maker (q.v.) who makes crucibles from a mixture of refractory clay and plumbago (graphite).

fireclay moulder, fireclay worker; special terms for a pot maker in fire clay, e.g., fire brick maker (102), crucible maker, block maker (102), potter maker (q.v.).

pipe maker (slint); see pot maker, slint.

pot maker, casting pot maker, crucible pot maker, furnace pot maker, melting pot maker, see crucible maker pot maker; glass makers' pot maker; glass crucible maker; (i) mixes raw and burnt clay, kneads it and shapes it by hand in successive layers; clay from bottom mould is forced to be used in molting glass; allows time for drying between each layer, smooths out roughnesses and marks with a knife or smoothing pad; (ii) presses clay into shape between top and bottom moulds in hand or machine press to form pot.

pot maker, zinc; pot man, potter; condenser maker (zinc), pipe maker (zinc); a retort maker (q.v.) who

makes fireclay retorts and condensers for zinc smelting furnace.

retort maker, fireclay retort maker; (i) builds up successive layers of fireclay on a wooden frame, e.g., round, D-shaped, or oval, allowing time for drying between each layer; then moulds on flange, to which door will afterwards be attached, (ii) makes small retorts on machine similar to that used for making sanitary pipes of steel, or on a sanitary pipe maker, stoneware maker (100).

stopper maker (steel works); makes stoppers for steel ladles; removes sleeves and bands from used stoppers; bonds red to pattern, and puts on new firebrick sleeves and bands.

stopper maker, tinned maker (glass works); makes, by hand, fireclay blocks, with or without the use of moulds, for covering mouths of furnaces in which clay pots (used to melt "sodal" in) are baked at plate glass works; cf. stopper maker (138).

104.—POTTERS' MILL WORKERS; SLIP MAKERS AND ARKMAN.

ark man; see slip maker.

blunger, clay blunger; a slip maker (q.v.) who feeds and discharges machine, which draws up clay in water, with paddles, to form slip.

clay maker, clay miller, see slip maker.

clay preparer; clay temperer, tripper (pottery); prepares potter's clay for use in manufacture of certain classes of tiles, by putting it on dumping slabs of plaster which absorb moisture from clay before it is passed to tile presses; cf. dust-lifter (114).

dilatometer attendant; see grinder, clay.

flint mill worker, flint miller; see grinder, flint.

glass grinder, glass miller; feeds and attends mill grinding various ingredients of liquid glass used in pottery manufacture, working under direction of glass mixer (q.v.).

glass mixer; see slip maker (q.v.).

grinder, general term for a worker grinding materials in a mill, including clay grinder, flint grinder, marl grinder, mill man (q.v.).

grinder, clay; dust grinder, disintegrator, attendant; shovels lumps of pottery clay into pan, or hopper of disintegrator machine; watches smooth working of grinding machine, elevator and sifting screens; oils working parts, also cleans resultant fine dust in steel boxes with water.

grinder, flint; flint miller, flint mill worker; shovels flints into mill which grinds them to powder, for preparation of "slip" flint, to be used in making potter's clay, or for use in packing earthenware and china articles in saggers, in readiness for firing.

grinder, marl; shovels marl clay into mill to be ground up, ready for use in making red bricks, tiles, and saggers, i.e., fire-clay boxes in which ware is fired.

grog mill worker; shovels burnt clay (grog) into mill or use in making certain classes of fireclay and earthenware goods.

mill, millman, pottery millman, dust miller, feger miller, potter's miller, pottery miller; potter's material miller, stone miller; feeds with a shovel grinding mill, pan, or cylinder, which grinds up feger, china stone, or flint, used as raw materials in potteries; regulates supply of water and when grinding is complete, turns up through a trap or vent and allows it to flow down a trough to mixing ark or where desired; oils and cleans mill, pan or cylinder; occasionally assists in fixing or repairing runners and pulleys which grind material.

pan mill man (blast furnace); see temperer (blast furnace).

press emptier; a pressman (q.v.) in a slip-house, principally engaged in emptying "leaves" or flattened

sheets, of clay from canvas bags in which they are pressed.

pressman, clay pressman, filter pressman, press feeder, press filter, press worker; inserts press cloth or canvas bags into a filter press and starts and stops pump which pumps clay slip through nozzles into bags; turns off tap on nozzle as each bag is filled and requires flattened leaves, i.e. sheets of clay from filter press cloth.

pugger, clay pugger, pugma, clay pug man, pug miter, clay pug miller, pug mill man; throws flat slabs ("leaves") of clay produced by filter press into pug mill, which kneads them into a homogeneous mass, free from air bubbles, for use in pottery manufacture, for stoneware, thence or through freely dirt from steep into mill, cf. pug miller (brickworks) (119).

sliver; a slip house man (q.v.) who looks after machine which sifts clay "slip" by passing it through a fine lawn mesh, thus removing any flow of slip, and thence stoves to prevent clogging.

slip house man; general term for men who assist slip maker (q.v.) in slip house, where clay is mixed and prepared, including clay press man, clay pugger (q.v.).

slip maker, clay slip maker; ark man, clay maker, clay mizer; releases traps to run, by means of troughs from tanks, proper proportions of the various ingredients of pottery's clay which have previously been finely ground and made into a slurry with water, into a large tank or "mixing ark"; sets working machinery which thoroughly mixes ingredients; when mixed starts machinery to pump slip to filter press.

slip maker, glaze; glaze mizer; makes glaze slip, in which ware is dipped before being fired in glaze oven, by mixing "slips" of fritted glaze, china clay, china stone, ball clay, etc.

temperer, clay temperer (potteries); see clay preparer.

temperer (blast furnace); pos mill worker; prepares clay for plugging furnace top hole and tunds, i.e. air holes through which blast is forced into furnace; shovels clay into pan of tempering mill; adds spray of water from time to time till correct consistency is reached; controls mill by levers.

wedger, clay wedger; cuts lump of clay into pieces or wedges with wire cutter, and beats one piece of clay vigorously against another to make it homogeneous and free of air bubbles, for use in manufacture of highest class ware.

105.—POTTERS; WARE-MAKERS, CASTERS AND FINISHERS.

art ware maker; a caster, jollier, presser or thrower (q.v.) who makes ornamental articles.

baker maker, earthenware baker maker; a potter (q.v.) who shapes clay into the form of a deep oval article, called a "baker," by hand pressing.

basin maker; a jollier (q.v.) who makes basins with a jolly.

bath maker; a sanitary ware maker (q.v.) who makes baths usually by pressing, but occasionally by casting.

bath maker, earthenware; a sanitary ware maker (q.v.) who makes baths of earthenware; (rarely done, baths usually made of freelay).

barer; piercer; bores holes by hand, using steel pointer, tool, in soap drawers, fish-dish drawers, at the base of soap spoons, and in other perforated or hollow articles of clay-ware.

bowl maker, generally a jollier (q.v.) who makes bowls by jollieving process; may mould by hand or by jiggering process.

bowl maker, hand; a hollow-ware presser (q.v.) who specialises in pressing large bowls for toilet sets, etc.

howl maker, inventory; a caster or presser (q.v.) who makes inventory sanitary ware either by casting or by pressing.

bowl maker, muffin; a jollier or a presser (q.v.) who makes small bowls, e.g., sugar bowls, known in the trade as "muffin" bowls.

box maker; a presser or jollier (q.v.) who makes earthenware boxes for potted meats, tooth pastes, etc.

best maker, or for figure maker.

capsule maker; a thrower, presser or jollier (q.v.) who makes small free-cylindrical called capsules.

caster; pours clay or fire-clay "slip," i.e., clay ground in water, into moulds, which are sometimes revolved on a turntable during pouring; when enough clay has been deposited on inside surface of mould, rest of slip is poured out, and mould, with clay adhering thereto, is taken to drying room; sometimes specially designed, e.g., china presser, earthenware, plaster, hollow-ware, castor, hollow-ware, castor, parian castor, sanitary castor.

caster maker; sofa runner maker, stove roller maker; a turner (q.v.) who places a long tube of clay, formed by throwing or by casting, on lathe, and shapes it into small perforated cylinders, known as castors, runners or rollers, by applying a stool tool thereto as it rotates on lathe.

china dish maker; a flat presser (q.v.) who makes china ware dishes, generally by method of pressing.

china door furniture maker; a presser or turner (q.v.) who makes finger panels, door knobs, etc., by pressing or by throwing; sometimes specifically designated, e.g., china knob maker.

clay worker; general term for any worker engaged in preparing clay, or shaping articles therefrom, up to first firing (when clay ceases to be plastic).

clay worker, jollier (q.v.); a presser (q.v.) who makes pans for cloths by casting in a mould or by pressing.

cover maker; a jollier (q.v.) who makes covers for dishes.

cup maker; a thrower (q.v.) who makes cups, i.e., small crucibles used in assaying precious metals, by throwing, on potter's wheel, a paste composed principally of bone ash.

cup maker; a jollier (q.v.) who makes cups on a single or double cup jolly; may sometimes be a thrower, turner or caster (q.v.).

dish maker; a flat presser (q.v.) who makes dishes on a jigger or by pressing.

domestic utensil maker; a jollier (q.v.) who makes domestic utensils usually on a jolly.

edger; a fettler (q.v.) who smooths edges and joints of clay ware articles with a knife, leather or sponge before firing.

edger, tile edger; fettler, tile fettler; grinder; trims edges of tiles, and smooths out slight defects with a palette knife, also removes excess of glaze from tiles after dipping; cf. ware cleaner (118).

electrical fittings maker, electrical ware maker; a die presser, caster or a jollier (q.v.) who makes electrical accessories with a die press, or, more rarely, by casting or by jollieving.

electrical furniture maker; a presser (q.v.) who makes electrical fittings of earthenware, usually in a hand or mechanical press, by compression of powdered clay; in some cases, work may be done by throwing, see thrower.

encaustic ware maker; encaustic tile maker; a presser (q.v.) who makes tiles and other articles which are to be finished in an unglazed state and which are usually made of clays of different colours, and inlaid to form a pattern.

fettler, fettler of clay ware; trimmer; assists jollier, caster or presser (q.v.) by smoothing rough edges of articles before they are fired, and any removing irregularities with a knife, leather or sponge.

fettler, sanitary pipe fettler; grinder; fettles or trims drain pipes; smooths pipes on a vertical or horizontal cylinder turned slowly by mechanical power; applies small rubber or sponge to surface to smooth it and remove defects; removes cracks with a knife, makes grooves in socket and on spigot.

fettler, tile fettler, see edger, tile.

figure maker; a caster (q.v.) who makes statuettes by casting; or, more rarely, a presser (q.v.) who makes them by pressing.

figurer; moulds relief figures for plastic decoration of pottery; see flowerer.

finisher; (i) see fettler, sanitary pipe; (ii) see edger, tile.

finisher, terra cotta; a fettler (q.v.) who finishes, or makes perfect, decorative pieces of terra cotta ware, by hand, with steel and wooden tools, after they have been taken from mould and before they are fired in kiln.

finisher, terra cotta ornamental; ornamental finisher (terra cotta); applies hand-modelled ornament to terra cotta ware requiring highly carved figures or floral decoration, after article has been removed from mould by smoothing the clay and pressing on to the article.

flat ware maker; a jiggerer or a flat presser (q.v.) who makes flat ware, e.g., plates, etc., either by jiggering or pressing.

flowerer; makes relief flowers for plastic decoration of pottery by pressing clay into a mould with the hands.

flower pot maker, garden pot maker; a thrower (q.v.) who makes flower pots.

galley maker; a drain-pipe maker (q.v.) who makes galleys for sewers.

handle maker, handle man, handier; makes handles for cups, jugs, teapots, etc., by pressing clay into a mould with the hands and attaches them to ware by moistening both ware and handle and pressing them together.

hollow-ware maker; general term for any worker engaged in making pottery hollow-ware, including hollow-ware, castor, hollow-ware jollier, hollow-ware presser (q.v.).

hollow-ware squeezer, see presser, hollow-ware.

insulator maker; a presser (q.v.) who makes electrical porcelain insulators.

jigger, jiggerer; makes flat-ware such as plates, saucers; presses hat of clay on top of mould, already revolving on vertical spindle; smooths top surface with hand, brings down profile tool on to clay, thus shaping outside of flat ware, the mould shaping inside; cf. jollier.

jiggerer, sanitary; a jiggerer (q.v.) who makes sanitary appliances on jigger machine; work usually done by sanitary presser (q.v.).

jigger turner; turns jigger by hand, where mechanical power is not available, for jiggerer or jollier (q.v.) by means of a wheel which drives a belt connected with the jigger.

jollier; makes hollow-ware by pressing, and or slab of clay, or a plaster of Paris mould, which revolves on a vertical spindle; starts spindle and mould revolving and regulates speed; fixes profile tool in clamp and turns inner surface of article by pulling down profile tool into mould as clay revolves (outside being formed by mould) mould and article are then removed to stove by runner (119) (q.v.); cf. jiggerer.

junction maker; a pipe maker (q.v.) who specialises in making junctions for drain pipes.

majolica maker; makes, by casting, by pressing, or other process, tiles or other articles to be glazed with majolica glazes.

moulder, see presser; (term used in London and elsewhere, but not in N. Staffs).

muffin maker, muffin turner; a presser or jiggerer (q.v.) who makes small plates, technically called "muffins," by pressing or by jiggering.

ornamental basket maker (earthenware); a presser or a caster (q.v.) who makes baskets of earthenware by pressing or, for cheaper baskets, by casting.

ornamentation; decorates high-class ware by applying relief designs to ware in clay state.

pen maker; a presser or a jollier (q.v.) who makes kitchen pens by pressing or by casting.

perian maker, parian marble maker; a caster (q.v.) who casts perian ware, a ceramic ware resembling unglazed biscuit, used for statuettes, etc.

piercer, see borer.

plimble maker; a presser (q.v.) who makes small pottery pipes, uses one thread to run through in textile machinery, usually in a hand press by compression of powdered clay.

pipe maker, drain pipe maker, earthenware pipe maker, sanitary pipe maker, sewerage pipe maker; sanitary pipe machinist; makes drain pipes by operating pipe making machine; pulls wire to drive plunger; directs workers filling cylinder with clay and removing pipes when made; oils working parts of machine and watches proper working.

pipe machinist, sanitary, see pipe maker.

plaque maker; a presser (q.v.) who makes plaques usually by flat pressing.

plate-maker; a presser or a jollier (q.v.) who makes plates either by flat pressing or by jollying.

potter, clay potter; (i) general terms for a worker shaping articles of pottery in the clay state; (ii) sometimes used in an even more general sense, as applying to any person employed in any occupation in a pottery.

pottery furniture maker makes finger plates, door knobs, castors, and similar articles, usually in a mechanical press by compression of powdered clay.

presser; moulder; makes articles by pressing clay into mould; when two or more moulds are used for one article, fills one mould, straps on another and fills it, and so on, to make complete article; rabe joints in clay smooth with a sponge.

presser, die presser; makes tiles and other articles by placing finely disintegrated clay, which is slightly moistened, in a screw-driven press; releases wheel which presses die into box containing the clay dust and compresses it; occasionally, for certain types of tiles, uses plaster clay.

presser, flat; makes plates and other flat articles by pressing on a mould, to form inside of article, clay which has previously been made into a "bat" by batter (119) (q.v.).

presser, hollow-ware; hollow-ware presser; a presser (q.v.) who makes bowls, jugs, vases, pots, and other similar articles by pressing clay into moulds.

presser, plastic; a presser (q.v.) who works plastic clay with the hands into a mould rotating on a whirler, until mould is full.

presser, sanitary; makes certain classes of sanitary goods by pressing prepared fire-clay paste into a mould, usually of plaster of Paris, with his hands, using simple pads and other tools; examines partially dried article, touches up defects and smooths out roughness or small cracks.

presser, terra cotta; a presser (q.v.) who makes articles of terra cotta by pressing plastic terra cotta clay, i.e., a brown clay of special consistency, with the hands, using simple pads and other tools, in a mould which contains shape and decoration of article.

presser, tile; tile maker, dust tile maker; a die presser (q.v.) engaged in making tiles.

red ware maker; makes, by throwing, pressing or other process, articles such as breadpans, etc., out of red clay sound in various districts.

rum and vinegar jar maker; a thrower (q.v.) who makes jars for bottling rum or vinegar.

saddle maker; a die presser (q.v.) who makes saddles, or strips of clay with sharp edges, on which ware rests while in sugar, i.e., fireclay box in which ware is placed for firing.

sanitary tube maker, as for sanitary ware maker.

sanitary ware maker, sanitary appliance maker, sanitary vessel maker; (i) general terms for workers engaged in making articles of sanitary ware by any process, including sanitary castor, sanitary presser (q.v.); (ii) makes large articles, e.g., bathtubs, by gradually building them up, with lumps of clay by hand, with or without the use of moulds.

saucer maker; a figurer (q.v.) making saucers.

scalloper; a felter (q.v.) who trims, by hand with a knife, each piece of scalloped ware. In "green" or clay state, before it is pressed to sponger or fire-ware (q.v.).

shuttle eye maker; a die presser (q.v.) who makes small earthenware or porcelain rings, or "eyes," for shuttles of weaving looms, by pressing damp clay dust, i.e., finely disintegrated clay, in a die.

silica ware maker; a potter (q.v.) making silica ware, i.e., high class earthenware pottery of silica.

slip decorator, kitchen sink and trough maker; a presser or caster (q.v.) who makes sinks and troughs usually by pressing but sometimes by casting.

slip decorator; applies a pattern to pottery in the green state by blowing on coloured clay slips, e.g., by tube lining (see tube liner), or by sponging (see sponger), i.e., by compressing on a design in clay on surface of article.

smoother; (i) see sponger of clay ware; (ii) see sponger, flat; cf. smoother (118).

soft runner maker, see caster maker.

sponger of clay ware; smoother; removes, with a damp sponge, any irregularities from ware in clay state, i.e., before firing.

sponger, flat; smoother; a sponger of clay ware (q.v.) who rubs smooth any lines or inequalities in ware made by flat presser, plate maker or saucer maker (q.v.) in preparation for driving and firing.

sponser maker; a caster or presser (q.v.) who makes spouts of teapots, jugs, etc., and fixes them on to article with damp clay.

spur maker; a die presser (q.v.) who makes little earthenware "spurs" used to support articles which have been dipped or enamelled and to keep them separate during subsequent firing.

stickier-up; (i) fastens handles and spouts on to teapots, cups, jugs, etc., usually done by handle maker or spout maker (q.v.); (ii) puts together large ornamental articles made in two or more pieces, by moistening each piece and pressing together; (iii) fastens relief flowers, which have been moulded, on to ornaments.

still maker; a die presser (q.v.) who makes "stills" used to support dipped ware during slow firing, to prevent articles sticking together when clay melts; cf. spur maker.

stone bottle maker; a thrower or a presser (q.v.) who makes stone-ware bottles, e.g., ginocer beer bottles, hot water bottles, ink bottles, etc.

stone roller maker, see caster maker.

stoneware maker; a jollier, a thrower, a caster or a presser (q.v.) who makes iron jars, insulators, beer bottles and other similar articles of "stoneware," i.e., ware made from clays having a large proportion of free silica and usually requiring only a single firing; sometimes specifically designated, e.g., brown stoneware maker.

table maker (sanitary ware); a sanitary caster (q.v.) or a sanitary smoother (q.v.) who makes lavatory basins. Known in the trade as "tables."

tap and bend maker; a presser or a caster (q.v.) who makes taps, bend pipes, etc., of china, porcelain, or earthenware, used as fittings for vessels for holding acids.

teapot maker; a caster or a jollier (q.v.) who makes teapots by casting or by jollying.

terminal maker; a presser or a caster (q.v.) who makes porcelain terminals for electrical work.

terra cotta doctor; doctor, or makes good, family pieces of terra cotta ware after they have been fired in kiln, by filling in, or "stopping" holes or other imperfections with a mixture of plaster of Paris and clay slip, coloured or stained to match body of ware, using a knife or small stick of wood.

thimble maker; a die presser (q.v.) who makes "thimbles" of clay, which fit into one another, and are used to support, and to keep separated, dipped ware while it is being fired; cf. middle maker, spur maker, still maker.

thrower, throwster; works on a ball of clay rotating on a small revolving table or "thrower's wheel," and fashions therefrom all kinds of article shapes with his hands, generally without using any tools.

tile maker, see presser, tile; sometimes specifically designated, e.g., decorated tile maker, faience tile maker, fance tile maker, glazed tile maker, tessellated tile maker, vitreous tile maker.

tile maker, bisque; a tile presser (q.v.) who makes porcelain tiles which are not to be glazed.

tile maker, dust, see presser, tile.

tile maker, enamel; a tile presser (q.v.) who makes tiles which are afterwards decorated with enamel, i.e., "on glaze" decoration.

tile maker, encaustic, see encaustic ware maker.

turner; smother; clay ware articles, after they have been made, by pressing a piece of tow against them while they revolve on a small round table upon which is fixed a mould covered with canvas to hold the articles in position; manipulates revolving table by means of pulley gear worked with the knee.

trap maker; a sanitary caster or a sanitary presser (q.v.) who makes drain traps and pans for water closets either by casting or by pressing.

trimmer, see felter.

trough maker; a sanitary caster or a sanitary presser (q.v.) who makes troughs, either by casting or by pressing.

tube liner; a slip decorator (q.v.) who blows coloured slip through a tube on to ware while it is on lathe; sometimes done by turner (q.v.).

turner; heider; smooths, jolled, pressed or thrown ware by pressing a steel tool against it as it revolves on a lathe; often also does work of slip decorator (q.v.); sometimes specifically designated, e.g., china turner, china knob turner.

turner, insulator; a turner (q.v.) who turns electrical porcelain insulators on a lathe, after they have been thrown or pressed by insulator maker (q.v.), to complete shaping process and to produce a smooth finish before they are fired.

turner, muffle, see muffle maker.

twirler, see turner.

urinal maker; a caster or a presser (q.v.) who makes urinals by casting or by pressing.

vessel maker; a presser (q.v.) who makes large vessels to hold acids, generally by pressing.

ware maker; general term for any operative engaged in making pottery from clay in plastic state; includes plate maker, saucer maker, spur maker, still maker, muffle maker, dish maker, muffle maker; does not include those who make articles from liquid clay, or slip, by moulding process.

107.—DIPPERS AND GLAZERS.

dipper; glazer; dips biscuit ware, i.e., after first firing, or bricks, stoneware, or other articles, in liquid glaze, and turns each article about to ensure glaze running evenly over surface; glazes dipped ware on dipping boards to dry before firing; sometimes specifically designated, e.g., sanitary dipper, tile dipper, majolica dipper dipper, clay tobacco pipe; dips clay pipe in a kind of seal-glaze, e.g., clay tobacco pipe varnish (119).

glazer, see dipper.

mottler; gives a mottled appearance to ware, by applying coloured glazes thereto with a sponge.

sagger washer, sagger washer; pours a little thin glaze, i.e., sagger wash, into sagger, an open fireclay box in which ware is fired, and swirls it round to coat inside; may use a stumping brush to apply glaze where necessary.

108.—PAINTERS, PRINTERS, DECORATORS.

gold worker, see etcher.

aerographer; aerograph decorator; colour blotter, enamel blotter; blows liquid colour on to ware, by means of compressed air, using aerograph machine; sometimes uses a stencil to form pattern; cf. glass blower.

artist; does highest class of decoration, by hand painting, on fine domestic ware, on vases, or on other ornamental ware.

bander; applies, with a brush, bands of colour to ware as it revolves on a table.

bander and liner; combines duties of bander (q.v.) and liner (q.v.).

blower, colour; enamel blower, see aerographer.

blower, glaze; blows liquid glaze on to ware using glass bottle or an aerograph, which ejects glaze, by compressed air, as spray; cf. aerographer.

burnisher; polishes up best gold decoration on ware with an agate stone, after firing.

burnt; on, unlike liquid gold decoration, best gold comes out of kiln dill, and requires burnishing.

copyist (art ware), colour copyist; an artist (q.v.) who copies a special design or picture on to piece of earthenware.

decorator; general term covering any worker engaged in decorating ware by any method, including aerographer, painter, printer, etc. (q.v.).

decorator, aerograph, see aerographer.

decorator, tile; a painter (q.v.) who applies decoration to tiles, either in colour (under-glaze or enamel) or in gold.

designer, colour designer; works in decorating department of a pottery, where he designs new patterns, and suggests colour schemes in which they shall be carried out; prepares drawings from which printers work.

engraver on copper plate; generally controls all workers in decorating department.

duster, colour duster; (i) dusts, with a wad of cotton wool, freely ground colours on to ware, on to which a printed pattern has been transferred in an oil or adhesive substance; colours adhere to oil, and are removed from rest of surface, leaving pattern on colour; (ii) often used colloquially in sense of ground layer (q.v.).

enameller, enamel painter, painter; a painter or paintress (q.v.) who applies enamel, i.e., on glass colours, to glass ware; work may range from filling in patterns, already in outline, to hand painting.

enamel maker; grinds up metallic oxides, e.g., of iron, chromium, cobalt, tin, received as oxides and mixes in prescribed proportions with a flux of red lead, borax and flint; melts the frit ingredients together (cf. fritter (109)); may also grind frit in a mill (mechanical grinder) cf. enamel maker (105).

etcher (glazed ware); acid worker; cuts patterns, e.g., acid borders, on glass ware, i.e., after glazing, by means of printed transfer and acid bath; applies transfer to ware, e.g., to edge, and peels it off again; paints with a brush part of ware not covered by transfer with pitch or tar for purposes of protection; dips ware in bath of hydrofluoric acid by hand, wearing rubber gloves, and allows it to remain in acid for a certain time; removes ware from acid and rinses in bath of water; removes pitch or tar by washing with turpentine.

filler-in; an enameller (q.v.) who fills in colours in pattern already outlined on ware.

glider, a bander, copyist or liner (q.v.) who applies, with a camel hair brush, specially prepared gold paint to ware.

gold grinder; feeds and attends to mill which grinds metallic gold to powder to be made into gold paint for decoration of ware.

gold worker; applies, with fine camel hair brush, a decoration in "liquid gold" to china, earthenware, or tiles.

ground layer; paints pattern on ware in an oil or resinous medium, and then applies powdered colour, with a wad of cotton wool, which adheres to ware only where pattern has been painted.

liner, penciler, potter's penciler; applies, with a brush, lines of colour to ware as it revolves on a table; lines of gold are generally applied to ware by glider or tracer (q.v.).

liner, biscuit; a liner (q.v.) who applies lines of colour to ware in biscuit state, i.e., after first firing.

liner, tube; a liner or the decorator (q.v.) applying colour by squeezing it out of tube or container.

lithographer; (colloquially, see transfer); lithograph; cf. lithographic printer (329).

machine painter, printing; printing machines; a printer (q.v.) who attends printing machine in which pattern is engraved on cylinder.

marbler; a printer or transfer (q.v.) who applies design in imitation marble to ware, generally by printing and transferring.

mixer, printer's; printing mixer; mixes colours for printer (q.v.).

painter, paintress, colour painter, paintress; paints with a brush designs on ware either before glazing ("under-glaze" decoration) or after glazing ("on glaze" decoration), or applies coloured glasses as in majolica ware; sometimes specifically designated, e.g., flower painter, majolica painter.

painter, paintress, biscuit; under-glaze painter, paintress; applies under-glaze decoration to ware by painting, with a brush or sponge, designs on "biscuit" ware, i.e., ware which has been once fired, and before glazing.

painter, paintress, enamel; see painter, enamel.

painter, paintress, glaze; applies liquid glaze to part or whole of surface of ware with brush or sponge.

painter, paintress, tile; a painter or majolica painter (q.v.) who decorates tiles.

painter, paintress, underglaze; see painter, biscuit.

penciler, potter's penciler, see liner; obsolescent.

preparer, lithograph; assists transfer (q.v.) by printing face of litho with a size of Canada balsam.

printer; places prepared copper plate on stone to warm; covers plate with colour, excess of which he scrapes off with palette knife before rubbing plate with a cloth dabber; places sheet of soaked tissue paper on plate, and passes them both through rollers, thus transferring pattern to paper to be used in decorating ware.

printer, block; prints off transfer patterns from a block on to tissue paper, or sometimes direct to ware.

repaler, restorer; touches up, with a brush, glaze in places where article has been imperfectly glazed; cf. china restorer (369).

stamper; stamps patterns on ware with an India-rubber stamp, stamped with gold print or with liquid colour, sometimes specifically designated, e.g., gold stamper.

stenciller; an aerographer (q.v.) who applies a decorative pattern to ware with stencil.

tracer; a glider (q.v.) who applies fine gold lines to ware.

transferer, printer's transferer, printing transferer; arranges pieces of transfers, cut by cutter (q.v.), on ware, so that joins in pattern cannot be seen; rubs pattern on ware until pattern is transferred to ware; cuts own lithographic transfers when such are used.

transferer, lithograph; lithographer; applies lithograph or coloured transfers bearing pattern to ware, and, when pattern is transferred, washes off tissue paper of transfer.

109.—KILN AND OVEN MEN; KILN SETTERS AND PLACERS.

annealer, pot annealer (rebrake); a kilnman (pottery) (q.v.) who stokes and cleans fires of kiln, in which clay rebrakes and unglazed ware (in zinc extraction) are slowly cooled down.

baker (artificial teeth); sets trays of porcelain artificial teeth in muffle furnace; controls temperature of furnace, by action of firing or adjustment of dampers, etc., and takes out finished teeth.

bedder; places china flat ware in saggers (fireclay boxes in which ware is fired); cushions surrounding ware and then fills saggers with ground flint.

bedder and flinter; combines duties of bedder and of flinter (q.v.).

burner, kiln burner; American, kiln fireman, kiln stoker; is responsible for burning of bricks or tiles or firing goods in kilns; sees that "setting" has been properly done before lighting fires, and keeps kilns at correct temperature in small works and kiln works also acts as settler, drawer, etc. (q.v.), and generally attends to all operations at kiln.

burner (pottery), see kilnman (pottery) (term not used in North Staffordshire).

dottler, glaze dottler; packs saggers, i.e., fireclay boxes in which ware is fired, for glaze patches (q.v.) in works where flat articles are "dotted," i.e., kept apart during glaze firing by a dotting stick or thumb.

drawer, biscuit (pottery); a kiln drawer (pottery) (q.v.) working at biscuit oven in which first firing takes place.

drawer, enamel kiln (pottery); removes pieces of decorated ware from small enamel kiln after decoration has been fired.

drawer, glost (pottery); a kiln drawer (pottery) (q.v.) working at glaze oven, in which glaze surfaces are fired.

drawer, kiln drawer (bricks, etc.); (taken-out) (brick); removes "burnt," i.e., fired articles from kilns after they have been cooled to required temperature; often done by burner (q.v.).

drawer, kiln drawer (pottery); removes and carries away to bench, or assists placer (q.v.) in removing, saggers (fireclay boxes in which ware is fired) from ovens or kilns after firing; takes articles out of sagger and places on bench or in wheeled basket or wagon; in North Staffs, does not, as in other districts, include biscuit drawer or glaze drawer (q.v.).

drawer, see settler.

drawn, biscuit, see kilnman, biscuit.

drawn, enamel kiln, see kilnman, enamel.

drawn, hardening-on kiln, see kilnman, hardening-on.

fireman, kiln fireman (bricks, etc.), see burner, cf. *slaker* (119).

fireman, kiln fireman, oven fireman (pottery); burner, furnace *slaker*; see kilnman (pottery); feeds furnaces that heat enamel, hardening-on, or majolica kilns, and in districts outside North Stafford, biscuit or glost ovens; sometimes specifically named, e.g., biscuit fireman, glost fireman, sanitary fireman.

firer, kiln firer, see burner

flinter; flint sagger, i.e., fireclay box in which ware is placed for firing, with ware, and puts a small quantity of powdered flint between each article and each layer of articles to prevent fusion together, and packs remaining space with flint to prevent articles warping during firing.

fritter (pottery); mixes charge of ground ingredients of glass, i.e., borax, lead, etc., and pours from cruse, i.e. suspended scoop, into frit tank to be fused, runs resultant frit into water tank; clears tank of frit to frit bins.

glost putter-up; puts up pottery ware on trays as it leaves hands of dipper (107) (q.v.).

gormer (bricks, etc.), see setter.

kiln filler (bricks, etc.), see setter.

kiln filler (pottery); places ware, usually on "bats" or cast iron trays, and arranges them in kilns for firing; cf. *gincer*, setter.

kiln hand (bricks); assists burner (q.v.) and other skilled workers generally; includes drawer, taker out (q.v.).

kiln hand (pottery); general term for any person employed at or in connection with enamel, hardening-on, or majolica kilns; or, in districts outside North Stafford, with biscuit or glost ovens in addition.

kilnman (bricks, etc.); general term for any man employed about kilns, including burner, setter, drawer, and kiln hand (q.v.).

kilnman (pottery); burner, fireman (pottery), oven fireman; superintends firing of ware in kilns; decides temperature to which kiln shall be raised, how long it shall be maintained at that temperature, by what stages temperature shall be reduced, and when "chamunge" (by which mouth of kiln is blocked up during firing) shall be taken down; sometimes specifically designated, e.g., enamel kilnman, biscuit kilnman, hardening-on kilnman, terra cotta kilnman.

kilman, biscuit; biscuit fireman; a kilnman (pottery) (q.v.) who superintends the first firing process; cf. enamel kilnman, and hardening-on kilnman.

kilman, enamel; enamel kiln fireman, enamel kiln gloser; a kilnman (q.v.) who fires ware after decoration has been superimposed on glazed surface; cf. glost kilnman, hardening-on kilnman.

kilman, glost; a kilnman (pottery) (q.v.) who fires biscuit ware, after it has been dipped in liquid glaze.

kilman, hardening-on; kilman, printer's kilnman; hardening-on kiln fireman, hardening-on setter-in; a kilnman (q.v.) who fires "biscuit" ware which has been decorated before glazing, thereby burning decoration into the ware to prevent it running, etc., during glazing process.

oven man, glost; general term for workers employed at or in connection with glost ovens, including glost placer, glost fireman, and glost oddman (110) (q.v.).

oven man (pottery); general term for workers employed at or in connection with biscuit or glost ovens, including biscuit placer, glost placer, biscuit fireman, glost fireman, biscuit oddman (110), glost oddman (110) (q.v.).

placer (bricks, etc.), see setter.

placer, biscuit; packs clay ware in saggors (fireclay boxes); carries full saggors to biscuit oven for first firing, and stacks them in bungs (piles)

nearly up to roof of oven; also generally does work of biscuit drawer (q.v.); in china factories also acts as flinter (q.v.).

placer, enamel kiln, see kilnman, enamel

placer, glost; flint sagger, i.e., fireclay boxes in which ware is placed for firing, with "biscuit" ware which has been dipped in liquid glaze, and carries them to glost oven, piling them in bungs (piles) nearly to roof of oven.

placer, majolica kiln, see for placer, glost

placer, sanitary; a biscuit placer or a glost placer (q.v.) working on sanitary ware.

pot arch man; attends "pot arch" or kiln in which clay pots are annealed after drying, requires fires, gradually increasing the temperature for about a week, and decides when pots are ready to be removed from kiln.

putter-in (bricks, etc.), see setter.

pyrometer attendant (pottery); assists kilnman (q.v.) in reading and care of pyrometers; readings usually taken by kilnman himself.

setter, brick setter, kiln setter, setter-in, setter-up; dresser, gormer, kiln filler, placer, putter-in; places bricks, or saggors (fire-clay boxes) filled with tiles or fireclay goods, in kilns; after they have been dried, to be "baked" or baked, arranging them so as to use heat to best advantage, and to prevent damage to goods; cf. kilnman, and placer.

setter, pipe; a setter (q.v.) who sets pipes, e.g., drain pipes, etc., on level in brick kiln to be fired.

setter-in, hardening-on, see kilnman, hardening-on

stoker, furnace, see fireman, kiln (pottery).

taker-out (bricks), see drawer, kiln (bricks, etc.).

110.—KILN AND OVEN ODDMEN.

oddman, biscuit oddman, glost oddman; setter-up; takes charge of an oven in absence of biscuit or glost fireman (100) (q.v.); fetches coal, breaks up entrance of oven before firing, and opens it after firing, and does other odd jobs about oven.

setter-up, see oddman.

118.—OTHER SKILLED WORKERS.

acid worker; cleans specks and stains off finished ware with a small soap stick which has been dipped into hydro-fluoric acid and French chalk.

bad maker; (1) a butter-out (q.v.) who makes flat refractory slabs, for use as partitions in saggors or kilns; (2) see frame filler

batter-out (saggors), sagger batter-out; hammers out with a heavy wooden mallet on a fire heated metal table thick slabs of plastic material (mixed sagger mud and "grog") used for making saggors in readiness for sagger maker (q.v.).

bottom knocker, sagger bottom knocker; knocker-out; a sagger maker's attendant (q.v.) who mixes "bats" of coarse mud mixed with "grog," to form bottoms of saggors.

box maker; a sagger maker (q.v.) who makes fireclay boxes with open ends, for holding in place majolica tiles in kilns.

breaker, colour stone, see crusher, colour.

brusher, ware crusher; cleans up firing, by brushing away sand, dust, etc., and any unprevented with stiff brush; sometimes specifically designated, e.g., earthenware biscuit brusher.

clay tobacco pipe moulder, clay pipe maker, clay tobacco pipe maker, clay tobacco pipe moulder; presses prepared roll of partially dried pipe clay with an alied wire to form bowl, presses clay into one half of metal

mould; fits on other half and places mould into a hand press fitted with steel die which passes through the mould into clay and forms head and bowl; removes pipe from mould and withdraws wire; in some cases, fills each half of mould separately, pressing ware down centre of one half.

cleaner, biscuit; see sagger, biscuit, cleaner, glost; glost cleaner, see sagger, glost

cleaner, ware; (1) see sagger, biscuit; (2) see sagger, glost

colour drying kiln man, colour drying man, colour kiln fireman; attends fires used for drying pan, or "kiln" (see distinguished from an oven built for high temperatures) in which ceramic colours are evaporated.

colour dry sifter; knower; sifts ground colour material through a fine lawn sieve.

crank maker; fashions, by hand, fireclay stands, known as "cranks," having three feet, on which high-class articles of flat ware are placed for glost firing.

crusher, colour; colour stone crusher; colour stone breaker; breaks stone, by hand or power, into small pieces, in preparation for grinding, in ceramic colour-making establishment or department.

dental moulder; pours porcelain slip or powder, or presses paste, by hand into moulds, to make artificial teeth.

dresser; (1) see sagger, biscuit; (2) see sagger, glost

dust damper; spreads clay dust (dry powdered clay) on damp plaster slabs, to allow it to absorb moisture before being taken to press shop to be made into tiles, etc.; cf. clay preparer (104).

fat knocker; shakes powdered flint from between flat articles of china ware, after firing, by knocking edges of a pile of such articles on a leather pad.

flow maker; prepares "flow" in powder or cake form, to be put into glost saggors (open fireclay boxes, in which ware is placed for firing, after dipping in glaze) when "down" effects are desired, i.e., a blurred or indistinct outline to patterns (usually found in decorations carried out in blue, white, or green); mixes ingredients as directed and presses as press into small cakes of required size or fills powder into special cups.

frame filler, sagger frame filler; bad maker; a sagger maker's assistant (q.v.) who hammers out a uniform thick slab of material (mixed sagger mud and "grog"), with which he fills a frame for use of sagger maker (q.v.).

glaze kiln hand; feeds fire, and attends to frit kiln in which are "fritted" (fused) some of materials used for making potter's glaze.

greenhouse hand, rawn, worker; Aot house hand, warehouseman (q.v.) who takes charge of warehouses in which ware is stored in the "green" state, i.e., dried but before first firing, fetches, stacks and carries ware for potter's overlooker (101) (q.v.).

grinder, colour raw material; grinds raw materials in pan or other mill, in a ceramic colour-making establishment or department.

grinder, ware, see polisher, glost, horser; shapes roofing pan tiles, or other curved tiles, by placing slabs of clay received from gaultle maker (102) (q.v.) on a wooden "horse" or stand and pressing with another horse, the two horses being shaped convex and concave.

hot house man, see greenhouse hand.

idle back maker, see mould maker.

knocker-out (pottery), (*slang*), see bottom knocker.

lawner; (1) see colour dry sifter; (2) passes glass "slip" (fluid glass) through a sieve of fine silk lawn, or fine metal gauze to remove any large particles, as it flows into glass tub from tap of glass ark.

lead house man; general term for workers employed in any capacity in department where glasses are made. (117) (q.v.) and stored; includes glass grinder, fritter (109) (q.v.).

looker-over (pottery); inspects decorated, painted, or plain biscuit-ware, after first firing, but before glazing, and removes specks of colour, or other blemishes.

looker-to-ware; carries by hand articles made by thrower (105) (q.v.) to heated drying chamber and inspects to better (107) (q.v.) when firm enough to be handled; in some cases, carries article from drying chamber to turner (100) (q.v.) to be turned; sometimes does work of potter's over-baker (102) (q.v.).

millier, colour; colour millman, mixes ground colours for use in decorating pottery.

modeller, clay; makes clay models of images, statues, etc., for use in mould-making, either by building up model gradually from a mass of clay with his fingers, or by shaping the clay at a moulded form with wooden tools and with his fingers.

modeller (pottery); models new shapes of pottery for trade, working to plans made by himself or by head setter-out (q.v.).

modeller, terra cotta; ornamental modeller (terra cotta); models in plaster clay, by hand, using small hand tools, original pieces of terra cotta ware from which moulds are made, rarely an employee, but works in own studio and sells productions to manufacturers.

model maker (bricks and tiles); makes with fine clay, from designs of draughtsmen (302) (q.v.), models of ornamental bricks and tiles.

mosaic artist; works in a pottery, designing pavements, mural decorations, etc., to be carried out in mosaic.

mosaic cutter; tesserae cutter, tesserae maker; cuts up strip-shaped tiles of vitreous biscuit ware of other material into small blocks, to be used in making mosaic work, by scratching with a diamond cutter and breaking with a small hammer.

moulded maker, see mould maker.

mould maker, pottery, mould maker; sets block suiter (145), moulded maker, makes pottery moulds by pouring plaster of Paris into "cases" or on to "blocks" and allowing it to solidify.

mould maker (bricks and tiles); constructs wooden casing round a mould, casts bricks with suitable material; pours in plaster of Paris, which is allowed to set into shape of master mould.

mould maker, magnesite; a mould maker (q.v.) who specialises in making moulds of magnesite.

potter's maker; a potter (106) (q.v.) who makes pots, etc., following designs of head setter-out (q.v.), carried out by draughtsmen (302) (q.v.), and passes them to mould maker (q.v.) who makes moulds from them.

picker, pin; stick picker, thimble picker; examines tiles, slabs, spurs, etc., used to support articles for firing in glost oven, and rejects those that are unfit for further use.

polisher (bricks, etc.); smoother; polishes surface of ware with wood or metal to close up surface and make them less porous; cf. pantile polisher.

polisher, glost; ware grinder; removes small irregularities from surface of ware, after glost firing, with small emery wheel and polishes surface with wheels of softer materials, e.g., cork, polisher, pantile; brushes weather surface of pantile, after partially drying and thackening, with slip of finely prepared clay, and smooths over or polishes with flat pieces of wood having an edge shaped to form of pantile.

rubber, biscuit, see scourer, biscuit.

rubber, glost, see scourer, glost.

rubber, ware; (i) see scourer, biscuit; (ii) see scourer, glost.

sagger (or segger) maker; makes saggers, i.e., receptacles in which ware is placed for setting in kiln, by building up fireclay to shape required by hand, or, in some cases, by machine.

sagger maker's assistant, sagger maker's attendant; a sagger batter-out, bottom knocker or a frame filler (q.v.) who assists sagger maker (q.v.).

sanitary mason; cuts supply pipe holes and outlet openings in pipes, etc., after they have been fired, using hammer and special chisels, drilling machine, etc.

scourer, biscuit; china-ware scourer; biscuit cleaner, biscuit rubber, dresser, smoother, ware rubber; brushes powdered flint from china ware or powder from earthenware, after it has come out of "biscuit oven" in which it receives its first firing.

scourer, glost; china-ware scourer; slipper's cleaner, dresser, gloss cleaner, ware rubber, ware dresser, ware smoother; removes superfluous glaze adhering to ware after dipping, with a knife or with a wet sponge.

selector, ware; sorter, ware sorter; examines ware, under supervision of warehouseman (q.v.), and grades it into first (best quality), or seconds (inferior quality), and breaks up ware too damaged to be used; stacks ware, if working in plant shipping, moves irregularities by chipping with a "sartling" tool.

setter maker; a sagger maker (q.v.) who makes "setters," i.e., small fire-clay boxes in which fine china flat articles can be bedded slugs for biscuit firing.

setter-out, head; plans out work for modeller or model maker (q.v.) and for mould maker (q.v.); is assisted by draughtsmen (302) (q.v.) who embody his setting-out in designs.

slabber; cements together tiles and other shaped articles for hearths, kerbs, etc.

smoother, see polisher (bricks).

sorter, kiln sorter; sorts bricks, etc., after withdrawal from kiln, grading them according to quality, and rejecting imperfect ones.

sorter, ware sorter; see selector, ware.

stopper (biscuit warehouse); fills up cracks and holes found in ware during process of manufacture. cf. repainer, restorer (108).

tesserae cutter, tesserae maker, see mosaic cutter.

testery; applies special tests to finished articles, e.g. hydraulic tests to stone-ware bottles, electrical tests to high-tension insulators, etc.

threader-up (pottery); strings small electrical fittings or other small articles together on wire with a needle between each, so that all can be dipped (glazed) at once.

trimmer (artificial teeth); trims artificial teeth, after they have been moulded with beach, fly, and clock.

warehouseman; is in charge of warehouse where ware is stored, supervises assembly of sets of ware by ware selectors (q.v.) and issues them to various groups of workers, e.g., painters, dipper, potters; keeps large orders together, to ensure that all parts are finished at about same time; sometimes specifically designated, e.g., warehouseman, glost warehouseman.

washer, colour; removes impurities from ceramic colouring materials after grinding, by washing them with water in a fine sieve or through a filter.

white glaze worker; general term for any worker employed in white glazing process; includes slip maker (104), dipper (107), fireman (100) and add-on (101) (q.v.).

wag room boy; sorts bags and does any odd job in works.

washer, thrower's briler; a thrower's attendant (q.v.) who weighs out a lump of clay, and shapes it with his

hands into a ball for use of thrower (105) (q.v.); taken ware made by thrower to drying stove on a board.

bank oddman; fetches and carries materials or ware and does other miscellaneous labouring work in a pottery, for potters.

barrow loader; loads barrows with clay (or transport from pit to mixer, or from mixer to maker; or loads barrows at press, as bricks emerge; or loads barrows with bricks for conveyance from drivers to kiln; commonly also wheels bricks away, cf. wheeler, better, better-out; bats or tempers a suitably sized lump of pugged clay ready for jiggerer, potter or presser (106) (q.v.) who uses it with chess-shaped Plaster of Paris bat, turning it over and over during the process; may bat out by placing lump of clay in battening machine; cf. better (bricks) (102).

batterman; shovels chalk and clay in given quantities into a mill where they are ground to a batter or mill; regulates flow of water to mill to ensure that batter acquires correct consistency for slip.

battier, clay; see carrier, clay.

biscuit emptier, china biscuit emptier; removes china biscuit ware from baskets in which it has been carried from oven to china scoring shop.

bodler, clay, see fireman, slip kiln.

brickeroft labourer, brick labourer, see brickyard labourer.

brick lad, see brickyard boy.

brick factory; brick works; does various manual unskilled jobs in brickyard, such as "taking off" from press, etc.

brick kiln labourer, carries out general labouring duties in connection with a brick kiln; trims coal from bins, wheels coal to kiln mouth, etc.

brick kiln lad; a boy who carries out minor labouring duties in connection with a brick kiln.

brick maker's assistant, see moulder, etc.

brick sorter; sorts bricks into grades, i.e. first, second and third, according to quality after they have been fired in brick kiln; may also sort tiles.

brickyard boy; brickfield lad; boy employed in minor labouring work in brickyard.

brickyard labourer; brickeroft labourer, brick labourer; does any unskilled work in brickyard, such as wheeling, loading, and unloading, etc.

carrier; carrier-up; carries ware to warehouses or to potters, or carries ware designated according to ware handle, e.g., sanitary pipe carrier.

carrier, brick; carrier-off, flat carrier, kiln carrier, litter-off, off-carrier; takes off from brick-making machine and carries away bricks, etc. also places them on trolleys, flats or floor near at hand, or loads them on barrow and wheels them away to drying sheds or tunnels, or thence to kilns.

carrier, clay; clay bearer; carries clay from after press to pug mill machine, or from pug mill to thrower, poller, turner, or presser (105) (q.v.).

carrier, dust; dust drawer, dust mill feeder; carries powdered clay, e.g., clay dust, to shape where tiles or other articles are made by compression of powdered clay.

carrier, flat, see carrier, brick.

carrier, kiln; (i) see carrier, brick, (ii) carries ware to hardening-oven (enamel kilns, to be set in; helps kilnman in setting in).

carrier-off, see carrier, brick.

carrier-off, dipper's (brick); dipper's turner-off; carries ware, bricks, etc., from dipper (107) (q.v.) to drying flat, rack, or barrow; cf. dipper's assistant (pottery).

carrier-up, see carrier.

carrier-up, biscuit; carries ware, drawn from biscuit oven (in which first firing takes place), to biscuit warehouse.

119.—OTHER WORKERS.

clasp man; builds, fires and generally attends to "champs," i.e., a rough kind of kiln built of the bricks themselves, and of layers of coal, and covered with clay to retain heat; when bricks are fired, breaks away covering and removes bricks.
clay treader; mixes clay and spreads it on floor; sometimes it and treads it with bare feet to render it homogeneous for making into crucibles; seldom done by crucible maker (103) (q.v.).

cleaner; removes, by hand, shives and magnets from washing machine (which takes out impurities from clay slip); washes them with hose and sponge and replaces in machine; sometimes done by slip maker (104) (q.v.).

crank; arranges flat ware on "cranks" (fireclay stands) for glaze firing.

crowder; a brick carrier (q.v.) who loads hand made bricks on "crowding barrow" for conveyance to dryer or kiln.

cutter, paper cutter; assists printer (108) (q.v.) by cutting up into suitable pieces sheets of paper containing printed or lithographed designs, for use of transferer (108) (q.v.).

day girl, see brick factory girl.

dipper's assistant, dipper's boy (pottery); (i) he is a dipper (107) (q.v.) for taking off articles as they are dipped; (ii) see putter-up or, taker-off.

drawer, dust, see carrier, dust.

dust man, dust mill hand; general terms for workers employed at or in connection with "dust" mill, including dust carrier, clay grinder (104) (q.v.).

feeder, clay; feeds with a shovel, pan of grinder, mixer, pugmill, or other brick making machine, with clay, or regulates automatic feed by means of lever; cf. mill top man, pugger (footery) (104).

feeder, pan; feeds pan of grinding-mill, in brickworks.

feeder, pot mill; feeds pugging mill with clay to be used by glass pot maker (103) (q.v.); cf. pugger (104).

finisher, clay tobacco pipe; scrapes marks of mould connections off pipe with knife; rejects all pipes which show a set free from obstruction.

fireman, slip kiln; slip house stove fire; clay heater; stokes, cleans and attends to firing of furnaces for use in drying excess clay in slip, or fire, stove; stokes, cleans and attends to firing of stoves in "green house" in which pottery is dried before baking.

gatherer; removes dipped ware from "mangle" (series of stationary or travelling rollers) on which it has been placed to allow glaze to dry before firing, and puts ware on glaze placer's bench or on board to be carried to glaze placer (109) (q.v.); cf. taker-off.

glaze oven labourer; wheels coal, and does other unskilled work at or in connection with glaze oven.

grog mill worker; attends to mill which grinds "grog" (lumps of hard-burnt clay "bits" or broken brick) to a powder, for admixture with clay in making certain kinds of brick, or stoneware.

thunderer, mixer; in stoneware, mixes clay for use of potter (106) (q.v.).

hooker-on, see pusher-on.

lather, lathe treader; assists china turner (104) (q.v.) by working treadle of lathe and handing ware.

layer-down; a brick carrier or a wheeler (q.v.) who lays down bricks, etc., in drying sheds and tunnels.

lift-off, see carrier, brick.

tloader; loads articles of earthenware, fireclay, etc., in wagons or railway trucks.

machine man, machine minder; general terms for worker who operates one or more machines in brickworks, e.g., grinding-mills, mixers, pug mills, etc.; includes grog mill man, mixer, pug miller.

malaxerman (plate glass works); a pug miller (q.v.) who mixes fire-clay, of which pots (to melt glass in) and treads (clay coverings for mouths of furnaces) are made, or mixer; mill top man? (i) superintends the work of feeding clay grinding plant with clay which is tipped from wagons into hopper; watches automatic feed from hopper into grinding pan and elevators which carry ground clay to top screen at top of mill; (ii) sees that screens or sieves work properly and oils machinery; (iii) feeds clay to pan with shovel, where feed is not automatic.

mixer; a pug miller (q.v.) who attends to mixing machine, which mixes clay, lime, or ganister, etc.

mixer-boy; assists mixer (q.v.) generally.

moulder, clot; slop moulder; brick maker's assistant; prepares table and moulds for brick maker (102) (q.v.); works and forms lumps of clay ("clots") for his use, and assists either maker generally.

mould runner; (i) a puger (q.v.) who carries moulds to maker (102) (q.v.); (ii) takes moulds containing ware shaped but not fired, from joller or presser (105) (q.v.) to drying stove, or shillings, on a board by hand.

nipper; tile maker's assistant; nips or turns up two small pieces of ware by pressing with his thumbs to form "nips" or ears on edge of roofing tile (to facilitate its being fastened in position); carries to drying chamber and lays on floor or shelves.

oddman; general term for any unskilled labourer employed in brick or pottery works; cf. oddman (110).

off-bearer, see carrier, brick.

tomaker, see bonmaker.

oven labourer; wheels coal, or does other unskilled work about biscuit or glaze oven.

page, pager; holds tools, and hands them to maker (102) (q.v.) as required; makes lumps or "clots" of clay, washes moulds, and helps maker generally.

picker, clay; examines semi-plastic clay, and picks out from it stones, earth, or any other impurities.

pitcher; stacks bricks or other articles in drying sheds, in kilns, or in ware-house.

pitcher, bullet; carries lumps of clay in a brickfield.

pony; brick carrier; drives horse or pony used in machines driven by horse-power.

pot bank labourer, pot bank worker (North Staffs); general terms for any labourer or worker in a pottery factory (called a "pot bank" in North Staffs).

potter's assistant, potter's attendant; general terms for any worker who assists potter (103) (q.v.), including mould runner, fettler (105), tower (105), hat maker (118), lathe treader, etc. (q.v.).

potter's helper (man); assists zinc pot maker (103) (q.v.) by bringing and preparing clay, according to size of pot being made, and taking away finished article.

pug boy; assists pug miller (q.v.) generally.

pug miller, pugger, pugman, pug mill attendant (brick work); attends to feeding and working of pug mill (clay tempering machine) in brick making sheds or throws lumps of clay into pan; adjusts water spray to add sufficient water to give required consistency; cf. pug miller (pottery) (104).

puller-up; recovers clay wagons as they are heeled from pit by means of a power-driven endless chain and pulleys to mill top; in some cases, where power is not used, winds up chain by hand, using a windlass.

pusher-off, pusher-out; hooker-on; starts loaded clay wagons from pits on power-driven endless chain, which carries empty wagons to descent by gravitation, on light railway track; often done by puller-up (q.v.).

putter-up, dipper's putter-up; dipper's assistant, dipper's boy (pottery); hands up ware, e.g., bricks or bisquit ware, to dipper (107) (q.v.) and assists dipper generally.

retort dresser (brickyard); carries clay and scrapes inside of brick kiln or retort with a knife.

riddler; (i) attends to mechanical riddle attached to clay-breaking machine; (ii) riddles clay, after grinding, with screens, sieves, or riddles; removes coarse particles to mill; cf. mill top man.

ridge-runner; carries ridge-tiles from ridge-tile maker (102) (q.v.) to drying-sheds or tunnels.

sizer; raises tempered mass for silica bricks from floor to bench on which moulder works; sometimes done by clay weatherer (q.v.).

roller, clay; attends to clay rolling machine, i.e., edge runners or cylindrical rolls for crushing, breaking down, and tempering plastic clay, usually also does work of clay scraper (q.v.). cf. pug miller, clay grinder (104).

roller, clay tobacco pipe; makes rolls of pipeclay for clay tobacco pipe moulder (118) (q.v.).

runner, clay runner; serving boy, general term for worker who carries wodge of clay from slip house to potter's bench, feeds potter (103) (q.v.) with moulds and removes mould, etc., when processes are complete.

sand paperer, clay tobacco pipe; clay tobacco pipe scourer; smooths surface of pipes with sand-paper after burning.

scraper, clay; removes clay from edge-runner mill or mixer with a specially formed long-handled shovel unless machine is entirely automatically fed, and provided with a bottom discharger; usually done by clay roller (q.v.).

serving boy, see runner.

setter; (i) sifts powdered flint in a hand sieve, or by shovelling against a screen, after it has been used for bedding or flinting, to remove any large particles of mixed flint and clay that may have been formed; (ii) sifts "dust" (powdered clay) which has been ground in a disintegrator, through fine sifting machine, if necessary, damp ready for the presser (105) (q.v.).

skintier; opens out "backs" or stacks of half-fired bricks in dry-stack, into such formation as will allow free passage of air; usually done by stacker (q.v.).

stacker; stacks bricks in drying shed as they come from maker (102) (q.v.) in such a manner as to allow free passage of air.

stacker, clay; stacks clay in readiness for use of moulders and pressers (106) (q.v.).

stoker (brickyard); cleans, fires, and generally attends to boilers and furnaces of dryers.

taker-off (bricks); takes off bricks from pressing machine or from brick wire-cutting machine and places on trolley for removal to drying chamber or kiln.

taker-off, dipper's (bricks), see carrier-off, dipper's.

taker-off (pottery); takes dipped ware from dipper (107) (q.v.) and carries it to drying stillages; cf. gatherer.

thrower's attendant; removes article from thrower's table when it is made, and takes it to turner (105) (q.v.) to be turned on lathe, or to drying stove to be dried; sometimes also acts as helper (q.v.).

thrower's benchman (stoneware); a thrower's attendant (q.v.) who also does work of baller (q.v.).

tile lifter; carries tiles from maker (102) to placer (109) (q.v.).

tile maker's assistant, see nipper.

turner's attendant; brings ware to turner (105) (q.v.) to be turned, and then removes it to drying stove.

tunloader; unloads raw material, fuel, etc., from trucks in siding.

varnisher, clay tobacco pipe; applies generally with a brush, a varnish which dries hard without firing; cf. clay tobacco pipe dipper (207).

wad squeezer; throws old bricks and clay into a small pug-mill, which ejects long sausage-like wads of clay or grog (sari), used for sealing up interstices between raggars when in oven, thus preventing entry of oven gases, etc., into raggars.

wagon filler, wagon loader; loads finished articles on wagons for removal.

washer, clay tobacco pipe; washes finished pipes prior to packing.

waterer, clay; tempers clay by sprinkling it with water, and either kneading it by hand, or treading it with bare feet; also covers clay with wet cloths for the night; may also tread clay, see clay treader.

weatherer, clay; disintegrates clay by spreading it out in layers to expose it to weather, examining and turning it from time to time as needed.

wheeler; wheels raw materials, in barrels, to makers, or wheels finished goods away to dryer or to kiln, or from kiln to stacks or wagons; sometimes specifically designated, e.g. wheeler-away, wheeler-off, wheeler-deck, clay wheeler, crest wheeler, grog wheeler.

wheeler, dust mill, see carrier, dust.

wheel turner; turns a handle which makes thrower's wheel revolve; obsolescent.

Sub-Order 2—Makers of Glass and Glassware.

121.—FOREMAN AND OVER-LOOKERS.

batch foreman; (i) supervises mixing of batches by pot makers (132) (q.v.), and pot filling; ensures correct proportions of ingredients go into pots at right intervals; sees that tanks are kept clean; (ii) (glass bottle works) engages and disengages batch mixers; determines formulae for glass; supervises weighing of batch ingredients; watches metal in pot to ensure up to standard, adds colouring, if necessary to tint.

cutting shop foreman; (i) (table glass, etc.), supervises work done in cutting room; receives table or decorative glass, notes instructions for cutting and distributes work among cutters (129) (q.v.) according to skill of each; examines, etc., finished work; (ii) (bottles) examines fitting of stoppers in necks of bottles; rejects faulty work; is generally responsible for stoppers (133) (q.v.).

gaffer (slang); is in charge of workmen in any department, e.g. principal blower (q.v.) and head of gang, shop, or "chair"; (bottle making) is bottle finisher or bottle maker (124) (q.v.); (table glass making) is maker or worker (124) (q.v.).

overlooker, see workshop foreman.

tank manager; an under manager responsible for one tank of molten metal and for workpeople engaged about it, etc., glass blowers (124), glass gatherers (123), and block makers (139); superintends, e.g., filling, running, cleaning of tanks; ensures tank levels and temperatures maintained.

workshop foreman (optical glass); overlooker; maintains and selects stock in glass stock room; works-out, from instructions received, particulars of cutting, grinding, etc., to be done and sends particular with glass required to workshop concerned; organises workmen; and is responsible for efficient production; examines and tests lenses and prisms produced, by measuring, Newton colour ring test, etc., as necessary; keeps record of work sent out.

122.—TEAZERS AND FOUNDERS.

founder; melter, melter; (i) supervises filling of pot with "batch" and "cullet"; adds successive relays of material as mixture shrinks, until pot is filled with molten "metal"; draws small portions of "metal" on iron rod, to ascertain if it is melted clear, and free from "seeds" and bubbles of gas; (ii) (bottle factories) does above; also checks furnace-furnace keeper, furnaceman; (i) see stoker; (ii) where furnaces oil heated, watches burners and turns tap on or off to regulate oil flow.

kiln worker; shovels coal or coke into circulating kiln furnaces; sees that kilns are used in correct rotation, allowing each to cool-off in turn; reports any damage to kiln, melter, see founder; cf. melter (139), melter, see founder.

optical glass maker; makes glass suitable for optical instruments; slowly adds specially mixed ingredients to already crucible in furnace heating up glass formed, stir it to render homogeneous and free from bubbles; allows to cool slowly in furnace; when glass is cold, breaks crucible and examines block or blocks of glass for flaws.

stoker; watches, during night, pots containing molten glass, and regulates temperature by stoking, cf. stoker, or by adding fresh glass.

skimmer, pot skimmer; skims all impurities, bubbles, etc., from surface of "metal" ready for gathering (132); only employed in large firms; elsewhere done by blower (124) or, less frequently, by stoker (q.v.).

stoker; (i) (glass making) furnaceman, furnace keeper; shovels coal or coke into furnace; rakes-out clinker to improve draught; sometimes also acts as skimmer (q.v.), or, batch mixer (138) (q.v.); (ii) (bottle making), see founder; (iii) in small glass works often acts as lehrman (136) (q.v.); places articles on pots and into annealing lehr or annealing oven; allows annealing over fire, as needed, as for stoker, except that, when in charge of large furnace, sometimes regulates heat by means of gages.

123.—GATHERERS.

ball blower; makes foundation for tube drawing; gathers on end of blowing iron, quantity of "metal," i.e., molten glass, shapes ball of metal by working it backwards and forwards on a marver, a steel plate or stone slab; creates space inside of foundation by blowing gently into blowing iron, and hands-on iron and foundation to coverer (124) (q.v.). gatherer, glass gatherer; takes up molten glass from furnace on heated end of iron blow-tube; rolls it on a marver, or on a block, to remove excesses; and hands it, on the tube, to blower (124) (q.v.); cf. marver bottle gatherer (125).

ledler; ladles molten glass, metal, into frames or trays used in making plate glass.

124.—BLOWERS AND FINISHERS (not Machine Hands).

blower; assembler; duties vary greatly; in general, when not himself gathering, takes down-tube with glass attached from gatherer (125) (q.v.) and blows with his mouth down tube to shape glass into required shape, with or without aid of mould, holding mould closed over glass until glass fills mould; when not using mould, rolls glass on polished iron table, marver, to assist shaping; measures glass for size with calipers; in some branches of glass manufacture, often carries production further, e.g., does work of foot maker (q.v.), using blowing iron, marver, bones, pinces, and punty rods; sometimes specifically designated, e.g., bottle blower, chemical glass blower, electric bulb blower (q.v.), cf. machine glass bottle blower (126).

blower, bottle; bottle hand; a blower (q.v.), in bottle branch of glass trade, blows glass and hands it to bottle maker (q.v.).

blower, chemical glass; scientific and chemical glass blower; blower (lamp), a male lamp blower (q.v.) making complicated scientific and chemical glassware by combining work of several girl lamp blowers, using lamp and hand tools similarly. blower (lamp); tube drawer; (i) heats tubes or other glass formations in lamp having from one to three jets, heat of which she controls, and forms chemical, waste, and tubing, stoppers, U tubes, by shaping plastic glass in flame, using tweezers, files and other hand tools; (ii) see blower, chemical glass.

blower, lamp (electric), see maker, bulb.

bottle hand, see blower, bottle.

bulb worker; see maker, bulb; cf. bulb worker (316).

chairman, see maker.

coverer, parison maker; gathers, from furnace pot hole, more glass upon foundation received from ball blower (125) (q.v.), until, by size and weight, he decides sufficient glass gathered; shapes to form parison, or thick cylinder for drawing, by working glass to and fro on marver, a steel plate, while rolling blow-iron in his hands to spread glass evenly; hands-on to drawer (138) (q.v.).

finisher (glass bottles); bottle worker; a maker (q.v.) in glass bottle trade; receives bottles from two or more blowers (q.v.), until, by size and weight, he decides sufficient glass gathered; shapes to form parison, or thick cylinder for drawing, by working glass to and fro on marver, a steel plate, while rolling blow-iron in his hands to spread glass evenly; hands-on to drawer (138) (q.v.).

finisher (glass bottles); bottle worker; a maker (q.v.) in glass bottle trade; receives bottles from two or more blowers (q.v.), until, by size and weight, he decides sufficient glass gathered; shapes to form parison, or thick cylinder for drawing, by working glass to and fro on marver, a steel plate, while rolling blow-iron in his hands to spread glass evenly; hands-on to drawer (138) (q.v.).

finisher; (i) makes crown glass by rotating, in his hands, bulb of glass on attached pontil rod, at mouth of auxiliary furnace, until it spreads out, by centrifugal force, into circular disc; (ii) plain glass trade, a servitor (q.v.) who rotates glass, as above, until blower is ready; (iii) stained glass trade, rotates, as above, to burn-in colour.

finisher; (i) makes crown glass by rotating, in his hands, bulb of glass on attached pontil rod, at mouth of auxiliary furnace, until it spreads out, by centrifugal force, into circular disc; (ii) plain glass trade, a servitor (q.v.) who rotates glass, as above, until blower is ready; (iii) stained glass trade, rotates, as above, to burn-in colour.

finisher; (i) makes crown glass by rotating, in his hands, bulb of glass on attached pontil rod, at mouth of auxiliary furnace, until it spreads out, by centrifugal force, into circular disc; (ii) plain glass trade, a servitor (q.v.) who rotates glass, as above, until blower is ready; (iii) stained glass trade, rotates, as above, to burn-in colour.

finisher; (i) makes crown glass by rotating, in his hands, bulb of glass on attached pontil rod, at mouth of auxiliary furnace, until it spreads out, by centrifugal force, into circular disc; (ii) plain glass trade, a servitor (q.v.) who rotates glass, as above, until blower is ready; (iii) stained glass trade, rotates, as above, to burn-in colour.

finisher; (i) makes crown glass by rotating, in his hands, bulb of glass on attached pontil rod, at mouth of auxiliary furnace, until it spreads out, by centrifugal force, into circular disc; (ii) plain glass trade, a servitor (q.v.) who rotates glass, as above, until blower is ready; (iii) stained glass trade, rotates, as above, to burn-in colour.

maker, crown glass; a maker (q.v.) who rolls crown, or thin sheet, glass on an iron table by means of heavy steel rollers to produce a perfectly level surface.

maker, shade; a blower (q.v.) who specializes in making lamp-shades.

manbler, see blower.

mark, see pointer, painter, see

sculptor, cf. painter (130).

sculptor; receives article, e.g.,

flower stand, from blower (q.v.), heats

in furnace and shapes with wooden

hand tool to form therein cracked

edges.

servitor; painter, painter, painter;

second in gang or "chais" in hand

made glass trade; peaches duties vary;

usually, receives "metal" from foot

maker (q.v.), casts it to body of

article and finishes attachments, e.g.,

wine glass stem, using hand tools,

measures blown bulb with compasses

and chisels for shearing by worker

(q.v.); cracks-off superfluous glass by

touching with cold moistened iron

tool; sometimes also makes foot, cf.

foot maker.

splitter, cylinder splitter, glass

splitter; splits cylinders of sheet

glass with a diamond cutter, as they

lie on dose of flattening kiln, or less

frequently, by placing along inside

length a long red-hot iron rod touch-

ing glass, and then chaffing line of

contact with touch from cold iron

rod; removes split cylinders to hotter

zone of kiln to soften and open out

flat.

tube drawer, see blower (lamp).

worker, workman; a maker (q.v.) in

hand made glass trade; arrange work

of service, foot maker, taker-out (139)

(q.v.); receives article from servitor,

heats in furnace, shears, where

marked, re-bends, and smooths sheared

edges; opens-out and otherwise shapes

body of article by eye alone, using

calipers, compasses, measuring rod,

to obtain correct dimensions; releases

article from clench wherein secured,

for taker-in (139) (q.v.).

125.—MOULDERS AND PRESSERS.

bottle machinist, bottle maker, bottle

moulder; machine bottle presser,

machine glass bottle blower; machine

glass bottle moulder; (i) gathers

melted glass, "metal," on rod and

transfers to moulding machine, judg-

ing amount required, pushes "metal"

into position for mechanical

filling, starts machine, which fills

mould and blows bottle by compressed

air; precise duties vary according to

type of machine used; (ii) adjusts an

oven machine with great care; sees

that blank moulds and finishing

moulds are at same temperature, ad-

justing wind gauge for this; regul-

ates oil feed and other working

parts, then starts machine which

automatically fills moulds by suction,

blows bottles by compressed air and

releases bottles into annealing kiln.

glass tile maker; or for moulder.

semi moulder; heats pieces of plate

glass in furnace; and moulds them in

die into form of lenses.

lustre maker, lamp lustre maker; a

moulder (q.v.) who makes lamp

lustres.

machine bottle gatherer, machine

glass bottle blower, machine glass

bottle moulder, see bottle machinist,

cf. gatherer (125).

moulder, presser, pressed glass

maker, puncher; (i) rolls out molten

glass poured into trays specially pre-

pared for manufacture of plate glass;

(ii) pours molten glass, "metal," into

moulds, or cuts glass rough by

gatherer into pieces for moulds, using

above; pulls lever operating plunger

on machine which makes pressed

ware, e.g., glass tiles, pavement

lights, railway signal lenses; usually

does not set machine; this done by

litter (130) (q.v.).

railway signal lens maker; a

moulder (q.v.) who makes railway

signal lenses.

stopper and marble maker; a moulder

(q.v.) who makes stoppers and marbles

for aerated water bottles in multiple

moulds.

tablet maker; a moulder (q.v.) who

makes glass tablets for signs, door

plates, etc.; also makes up, as re-

quired, from moulds into which

molten glass is run, from suitable

metal parts which are screwed or

keyed together.

126.—ENGRAVERS AND CUT GLASS WORKERS.

acid bath worker; fills metal cage

with glassware, immerses in acid bath

to etch designs, etc., and removes

after an immersion of stated time.

acid polisher; immerses glass in hot

water to remove grease, and polishes

by dipping in acid, washes same and

acid from glass for scrubbing purposes

and after final immersion, drains

glass and polishes on cloth.

hader, glass hader; as for etcher

(electric lamp); cf. sand blaster.

brilliant cutter, glass brilliant

cutter; marks pattern on piece of

cut glass to be cut; presses glass

against revolving stone wheel and

moves it about to cut faces, in mak-

ing a brilliant.

cut glass worker; general term for all

workers engraving, cutting, etching

and bevelling glass ware.

cutler (flint glass), glass cutter;

an engraver or an intaglio cutter

(q.v.); sometimes also does work of

marker-out (q.v.).

drop cutter, glass drop cutter, glass

lustre cutter; glass lustre load

(chandelier); specializes in cutting

drops or lustres for chandeliers, etc.;

as for cutter (q.v.) work less skilled.

embosser; etcher; marks-out design,

using bristles, rollers, etc.; cuts

lines of design with knife and

straight edge and fills in remainder

of surface with embossing block; ex-

poses glass to acid fumes or pours

on acid, to etch design, or, coats sur-

face of glass with wax, traces design

on wax, then removing wax and ex-

posing glass as above.

engraver; engraves designs on glass

with small copper disc, mounted on

special form of lathe; mixes abrasive

with oil, etc., and applies, on a pedestal,

to disc; works lathe by power or by

foot treadle; holds glass against disc

and builds up design by series of

scratches, etc.; works usually by eye

only, from sketch; sometimes first

draws guiding lines on glass; often

also does work of intaglio cutter

(q.v.), and is also able to do work of

engraver, glass measure; engraver,

thermometer (q.v.).

engraver, glass measure; an en-

graver (q.v.) who holds measure con-

taining fluid, handed-on by gradu-

ator (125) (q.v.), against revolving

copper disc and in marks fluid level,

conducting fluid through in con-

junction with graduated, finally en-

graves figures and symbols, e.g.,

drachms.

engraver, thermometer; places

thermometer in ice bath and hot

water bath respectively, and with

index ink, marks freezing and boil-

ing points on thermometer tube;

divides space between these points

into intervals, either using ink and

straight edge and then engraving

graduation lines as for engraver, glass

measure; or, etching divisions as for

etcher (q.v.).

etcher; stamper; (i) see embosser,

(ii) chemical ware—thermometers,

etc.) coats article with wax; adjusts

mechanism of a machine to mark

surface of required width and, if

required, each fifth or tenth degree,

or other distinguishing mark; places

article in position and sets machine

in motion, by treadle or switching on

power drive, causing needle in

machine to cut intervals in wax; then

cuts wax as for embosser; (iii)

(electric lamp) marks maker's name,

voltage, and capacity on bulb of

lamp, using a stamp and acid.

etching shop girl; places article,

coated by waxer (130) (q.v.), in a

machine; turns handle causing needle

to move in path set by mould and to

trace pattern in wax; stops machine

and removes article after tracing.

froster; a sand blaster (q.v.) or a sand

blast labourer who gives frosted

appearance to glass by exposing it to

sand-blast, or who completes frosting

process by placing glass in an acid

fume cupboard; often works alter-

nately at sand blast and fume cup-

board.

glass lustre hand (chandeliers), see

drop cutter.

intaglio cutter, intaglio worker, as

for engraver, except that intaglio

cutter uses stone instead of copper

disc; he works on tablets and large

articles instead of small glassware;

machine is always power-driven; cuts

glass more deeply.

marker-out; prepares glass for en-

graving or for intaglio cutter (q.v.)

by marking out divisions on glass,

within which design is to be executed,

with mixture of whiting and gum

or red lead; works free-hand but with

help of divided rings to get even

spacing; glass must be given

object to centre of frosted part of

design by rubbing with moistened

cock and emery; assists engraver or

intaglio cutter by marking outline of

design.

obscure; a sand blaster (q.v.) who

frosts glass to make it opaque.

sand blaster; places a stencil over

hole in screen with one hand, while

he holds glass article against stencil

with other hand; by foot treadle,

tarnish or sand blast is given

"frosted" appearance to surface not

covered by stencil, decorating it,

printing maker's name, etc.; or,

frosts whole surface of article.

stamper, see etcher (electric lamp).

—GLASS BEVELERS.

beveler, often beveler, see beveller.

beveller, glass beveller; bevels edge of

mirror or plate glass by applying it

to horizontally rotating iron wheel,

which is kept supplied with sand and

water; sets wheel to correct angle

against gauge; switches on power

glass worker (plate glass); general term for operative engaged in any process in connection with production of plate glass; *cf.* *fouder* (129), *moulder* (125) (q.v.).

glazer; glazes (inside of new pot, or crucible by taking molten glass from another pot and plastering inside therewith all round, to close pores of clay).

glazier battery; bats, *sic*, shears, spectacle lens to shape for edgew (q.v.).

grinder, glass grinder; (i) grinds glass on mechanically-driven wheels, which are kept automatically supplied with sand or emery and water; moves glass to and fro to form pattern; (ii) grinds ends of tubing after cutting; (iii) is a disc man (q.v.); (iv) (watch glasses) removes glass from bender (q.v.); soaks sponge in oil and so secures glass in contact with carbundum wheel; grinds and bevels glass on wheel.

grinder, lens, optical lens; (i) *skip work*, puts emery paste on inside of cup-shaped mould to correct curvature placed on spindle starts-up spindle by pulley lever, holds lens blank against revolving mould until desired curvature is obtained, reverses lens blank and repeats operation (ii) *high quality work*, a rougher or smoother (optical lens) (q.v.).

grinder, lens (spectacle lens); puts lens received from rougher (q.v.) in a cap or holder and brings in contact with a revolving mould, deeper than those used by rougher; keeps cap in contact with mould by slipping a rod in position in top of cap; removes lens when ground to correct curvature; feeds mould with emery paste.

grinder, marble, as for grinder, stopper.

grinder, prism, see flat worker (optical glass).

grinder, stopper; a grinder (q.v.) who grinds stoppers and glass balls on a special lathe.

hand finisher (lens); receives lens from smoother, or, if edged, from edger (q.v.); fits into ring of desired curvature on which operated spindle and, using fine abrasives, works surfaces of lens up and down against revolving mould; frequently applies Newton test, i.e., holds upper surface of lens against surface of another lens of desired curvature and notes colour rays thrown-up; when lens is optically correct, inserts felt in mould and polishes, using rouge.

hot packer, see lehrman.

Inspector, see sorter.

linn dresser, see lehrman.

lamp lustre glider, as for enameller.

linnman, see burner; cf. linn dresser.

layer-out; receives painted designs; coats a sheet of glass with wax, picks-out suitable pieces of glass from a box, and presses into position in wax to finishing design for skinned glass painter (q.v.).

lehrman, lehr man, lehr linn man, lehr minder; *enameller, hot packer, linn dresser, piler*; packs articles in lehr or annealing oven, exercising care in placing different sized articles so that none crack through excessive heat; regulates firing to control heat, usually himself shovelling fuel on fire; directs assistants (139) (q.v.) if any; in hand made glass trade is a *glassworker* (q.v.).

small glass works places parts of hot glassware in hot end of lehr and collects as they emerge at cold end, rejects faulty glass.

lens finisher, see polisher (lens).

lens maker; *as for glass worker, optical*.

lens maker (micro-objective hand work); makes objective lenses for high power microscopes, working at small side back; sometimes makes right through from piece of plate glass; otherwise first receives glass from rougher (q.v.); either case, does

work of smoother (lens), polisher (optical lens); is sometimes an *achromatic hand* (q.v.).

lens maker (photographic); general term for all workers making photographic lenses, *e.g.*, rougher, grinder, polisher, band - finisher, edger, enameller, *assembler* (q.v.), except flat worker.

lens worker; general term for a worker engaged in any of the skilled or semi-skilled operations in lens manufacture, including enameller, finisher, grinder, polisher; sometimes specifically designated, *e.g.*, *micro-objective lens worker*, *achromatic lens worker*.

looker, glass looker; (i) *see sorter*; (ii) examines plate glass after polishing.

matcher; (i) sorts out plate glass in thickness and size suitable for laying on grinding tables; (ii) sorts stock glass into grades according to size, colour, and quality.

mixer, hatch mixer; weighs out and mixes, in wooden trough with shovel, under direction of manager or foreman, specified proportions of materials which go to make metal, *cf.* *mixer* (139).

monocist, mosaic worker; builds-up mosaic in enamelled glass from coloured design, exactly matching colour gradations; chips glass to shape with hammer and chisels and glues two downwards on leaves page, support it for mounting; sometimes also works in stone; *cf.* *monocist (stone)* (571).

mounter, lustre mounter; after (*chandelier*), mounts lustres on chandeliers, etc., after they have been drilled, threading wire through holes therein, connecting wire into position if necessary, and, with tressers, bending wire to form rings, hooks, etc., often also drills as for perforator.

object glass edger, see edger (optical glass).

object glass finisher, as for polisher, lens.

object glass maker, as for lens maker (micro objective hand work).

optician, working; grinds, adjusts or otherwise prepares lenses in workrooms; sometimes spends part time in serving customers behind counter.

perforator (glass manufacture); grinds, glass drill; (i) *sheet or plate glass*, drills holes in glass with steel hand drill fitted with a ratchet; oils drill when necessary; (ii) *smaller articles*, drills with a bow drill or any other type of hand drill mounted on a bench stand, moves an attachment connected with drill up and down or backwards and forwards; or operates a sensitive drill press, switching on power, and regulating pressure of drill upon glass by pressing on an adjustment to drill.

place opener; softens mouth of glass article in furnace and opens out with wooden jacks or spring tools with charrred wood prongs; tests dimensions with calipers.

piler, see lehrman.

pitcher, see blocker-out.

polisher (flat glass); polishes flat glass articles, by holding them against revolving wheels or brushes, and moving them about as required; in hot work polishes on wood or cork wheels fed with pumice powder; glass with rotten stone, and finally with putty powder; in fine work on circular fibre brushes 6 to 7 inches in diameter, fed with mixture of putty powder and water.

polisher (optical lens); receives lenses from enameller holders and polishes as for smoother (lens) (q.v.), using rouge instead of emery paste, and using felt lined moulds.

polisher (plate glass); polishes plate glass by hand on polishing tables, using rouge, or pumice, and polishing cloths, pressing evenly on glass to obtain uniformity.

polisher, lens (spectacle lenses); places spectacle lens, from lens

grinder (spectacle lens) or from smoother (lens) (q.v.), in a cup or holder and fixes that in contact with mould; moves lens to engage cloth or felt covered mould with pulley and shifting so that lens is polished by rubbing against rough, applies rouge with brush or by hand to mould; changes moulds as necessary.

prescription assistant, prescription hand (optician's); does best class work in making spectacle lenses, in manufacturing optician's establishment, according to customer's prescriptions; has usually served apprenticeship and has been through various workshops, roughing, grinding, finishing, cementing, etc.

prism hand, prism maker, prism worker, see flat worker (optical glass).

ranger; a cutter (q.v.) who uses a "range" or gauge to determine thickness of glass, price of which depends on weight in proportion to area.

roller man; controls levers of power driven rollers used by presser (125) (q.v.) in making plate glass.

rougher, lens rougher; rough edger; (i) *for flat work* receives prism from edger (q.v.); holds against revolving disc, to which he applies abrasive, and moves prism about until its surfaces are worn to desired extent; tests surfaces and angles with straight edge, etc.; (ii) *for curved work*, lays slab where partially cut by edger, to finish into portions; marks lens outline thereon and shapes off superfluous glass; grinds such blanks to standard curvature, testing against gauge, and using series of moulds of gradually deeper curvatures, fitting moulds to spindles; wears abrasive on moulds string grinding.

rough plate cutter, see edger.

runner plater; fastens and adjusts iron plates on grinding or revolving grinding arms, in plate grinding.

setter, lens setter; receives lenses from enameller (lens) (q.v.) before balsam quite set and finds common optical centre as for edger (optical lens); watches reflected image of light from mirror and moves lens to one of component lenses until they are concentric; allows cement to harden.

showman, showman; takes hand made glass out of lehr (annealing kiln) as cool and, and sorts into sizes.

sider (mirror); examines glass for defects and selects more polished side marked, with marking, etc., for silverer (q.v.); and polishes out scratches and stains with cloths, etc., and rouge, or, revolving bob; sometimes done by cutter (q.v.).

silverer (mirror, looking glass); lays sheet of glass to be silvered, face downwards on table, sometimes heated, covered with felt, and puts on back of it a sheet of nitrate of silver, ammoniac, and salts, causes a deposit to be formed thereon; then pours off surplus solution, washes and paints it with special paint, to protect silver.

silverer's assistant; assists silverer (q.v.) generally.

slitter, slicer; optical glass cutter, cuts, or "slices," glass into slabs or slices for lens making, and cuts discs, etc., from glass prism, according to instructions from works foreman and flat worker respectively; measures and marks glass for slitting; holds glass against revolving steel disc or clamps it into a holder and slides into position for slitting; applies diamond paste or other abrasive with brush to disc during process, or, before slitting, makes notches in edge of disc with hand tools, inserts abrasive and closes notches; holds wet cloth over glass and disc to moisten disc, and to trap splinters; measures, marks, and parts off, cuts through slab used for lehrman, for rougher (q.v.).

smoother, *see* flattener and straightener.

smoother (lens); glass rollers, received from blacker-out (q.v.), each on smoothing machine spindles, inserts in machine smoothing moulds of right size and curvature, applies emery paste and moves lever causing moulds to rotate about lenses on holders; applies emery as necessary and stops process when he considers smoothing complete.

smoother and polisher (lens), a youth engaged in processes of smoothing and polishing, by hand, small cheap lenses; cf. smoother (lens) polisher (lens).

sorter; *cammer*, glass locker, inspector, locker; examines finished or partly finished articles in warehouse to detect defects, etc., and grades them for size, quality and class.

squares; a glass cutter (q.v.) who measures and cuts discs of crown glass into convenient sections or squares with glasser's diamond, reducing waste to minimum.

stained glass window worker; church window maker; general term for worker engaged in any capacity in production of stained glass windows, including draughtsmen (345), glass painter, stainer.

stainer; *struer*; traces outline of drawing, in stained glass window manufacture, with a brown pigment containing finely powdered glass, and covers surface of glass with a wash of this pigment.

staker-on, *see* blacker-out.

starter-off, *see* disc man.

sticker-up, *see* blacker-out.

stopperer, stopper filler, stopper grinder; does some or all of following operations: puts glass stopper in (lathe) cuts strip tin to shape and hammers it out into a thin band; sprinkles band with moistened emery powder and bends it round revolving stopper; continues grinding until, by trial, stopper almost fits neck of bottle; cuts and hammers tin to shape and hammers it on to a peg to form a plunger; using emery on plunger, grinds bottle neck until, by trial, stopper fits perfectly.

stopper maker, cf. stopper maker (143).

straightener and flattener, *see* flattener and straightener.

teemer; pours molten glass on to casting table.

traces, *see* stainer.

trimmer; trims or shears any excess of glass at ends of cast plate after rolling; prepares table for plate glass polishing by spreading bed of plaster of Paris to receive annealed plate.

watch glass maker; general term covering blender (watch glasses) and grinder (watch glasses) (q.v.).

139.—OTHER WORKERS.

assistant taker, *see* cave emptier. batch labourer, batch mixer's labourer; fetches and carries material for batch mixer (138) (q.v.) and assists generally about mixing crucibles.

bench boy, bencher, *see* disc boy.

block layer; repairs polishing pads or "blocks" and polishing tables, by removing old felt and recovering with new.

block mixer, block boy; (i) couples up air nozzle in blowing cylinders for sheet glass; (ii) with a brush, dabs rouge or emery to blocks or moulds in less grinding or polishing; fetches and carries, rouge, lenses, etc., for grinders, polishers, etc., and assists them generally; (iii) assists gabberer (139) (q.v.) in process of cylinder making; keeps clean, and blocks gabberer's block, or marker, takes glass for re-heating before further blowing.

blower-up; manipulates compressed air on machine.

boy (glass tube drawing), *see* fanner (glass tube drawing).

brusher-up; keeps floor around bottle tank free from glass.

carriage runner (glass manufacture); a labourer who pushes carriage or trolley loaded with glassware to and from lehns or kilns and who carries in pots for setting.

carrier; general term for any person engaged in carrying or tracking materials or finished goods, including carrier (cylinder), carrier-off, taker-on, taker-out, smoker man, splitter girl (q.v.), etc.

carrier, cylinder; splitter girl; a carrier (q.v.) who carries cylinders to and from cylinder splitter (134) (q.v.).

carrier-down, *see* post boy.

carrier-off; (i) *see* taker-out; (ii) carries bottles from sector (138) (q.v.) to tiers for stacking in warehouse.

cave emptier, cave man; assistant taker, under boy; assists founder or leaser (122) (q.v.) by removing clinkers and ashles from cave, a furnace under furnace; also acts as glass producer attendant (353) (q.v.). charcoal man; heats and wheels charcoal to furnaces for plate glass.

checker in plate tube drawing, checks work from maker (139) (q.v.), looks it for effice check for sorters (138) (q.v.), and removes it into warehouse.

clinder boy, *see* cave emptier.

cleaner, glass cleaner; (i) cleans glass from dirt and stains after it has been ground and polished; (ii) in flint glass trade is a warehouse hand (342) (q.v.) cleaning glass.

cullet picker, cullet worker; sorts out cullet, i.e., waste glass for re-melting, according to its suitability for various uses.

cutter-up; (i) cuts short lengths of rod or tube into still shorter lengths, with glasser's diamond, (ii) cuts long lengths of tube, but from drawing into lengths, by touching tube, at points indicated, with cold moistened iron tool, causing glass to crack.

clabber-up; dabs clay round furnace doors to make air-tight and keep in heat.

disc boy; bench boy, bencher; supplies sand for grinding wheels in manufacture of plate glass, and assists disc man (138) (q.v.) generally by keeping discs clean and ready to disc man's hand.

drawer boy, *see* post boy.

dribble boy, dribbler; removes with metal scraper on to casting table, the dribble or drops of molten glass left in cast (molding) pot after molten glass has been poured; puts back this dribble into pot to be re-melted.

enameller (chemical glassware); rubs enamel, or powder, into gradations on chemical glassware.

fanner, fanner (glass tube drawing); boy (glass tube drawing); fans glass during tube drawing with his cap, or with wooden fan under direction of blower (139) (q.v.), draws (138) (q.v.), to cool glass and reduce speed of attenuation; with other hand using callipers, etc., measures glass and informs blower or drawer when correct gauge reached; does other odd jobs, e.g., fetching water used in cooling glass, touching glass with cold tool to break glass into lengths.

feeder-up; is a learner who dabs pumice powder, rotten stone, or putty powder, on wheels and brushes used by plasher (flint glass) (136) (q.v.).

freeser-off; removes lenses from block or runner by exposing them to sea-cold water.

gunman, *see* layer.

general hand; (i) is a labourer who renders general unskilled help; (ii) in flint glass works is a glass house worker, usually one acting as extra footman (124) (q.v.).

glasshouse boy; taker-in; assists bulb maker (124) (q.v.) by gripping hand moulds during blowing; catches blowing iron when it is thrown on grid by bulb maker; kneads off adhering

glass from end of blowing iron into box for re-melting, etc.; collects bulbs from grids and carries them to job.

glass house labourer; does any unskilled work in glass house, such as wheeling pot lorry, assisting in pot setting, etc.; cf. glass house worker (138).

grinder-off; rubber-off; rubs sharp edge of machine made twist-off bottle on stone slab.

heaver-off, heaver-out; transferer; moves bottles from parison mould to turning machines or semi-automatic machine; transfers articles from mould in which they were pressed to mould in which they will be blown up.

hookman; in vertical drawing of cylinders attaches hook, from overhead block and pulley to lower cylinder to horizontal position; also does other general labouring work in department.

iron boy; cracks finished article off blowing iron and cleans iron of superfluous glass.

ladle boy; in rolled plate and draws glass making runs empty ladles back to water cooling tank.

layer; grinders, lays glass on grinding tables in preparation for grinder (138) (q.v.).

lehr drawer, lehr assistant; *panner-up*; takes out finished work from cold end of lehr, or annealing oven; returns empty pans to front of lehr, cf. drawer (138).

lens cleaner; removes traces of pitch, i.e., adhesive, from lenses, after freezing off, with naphtha or other solvent.

melder; fuses sharp ends of cut drawn tubes, from drawer (138) (q.v.), by placing tubes in clips and subjecting to Hansen flame.

mixer; mixes plaster in buckets for use by layers (q.v.); cf. mixer (136).

mould boy; assists blower (124) (q.v.) by opening, closing, and cooling moulds.

mucker; shunt team for labourer who cleans up slop and dirt in plate glass grinding sheds.

panner-up, *see* lehr drawer.

pan window (glass works); in small establishments a labourer stationed at old type of annealing kiln, winds, by hand, chain to draw pans of glassware through kiln; does fetching and carrying to and from kiln.

pipe warmer, pipe hanger; heats glass-pipes ready for use by gatherer (129) or blower (124) (q.v.), joins pipes, and hangs them up when returned from use; is usually a pouter or a pony sticker (q.v.).

pouter, punter; smooths off marks left on articles of glass ware after breaking off pouty, pouty or pontil, i.e., small stick of glass by which article is held from gathering.

by holding against revolving wheel, automatically fed with sand and water, and finishing on grinding and polishing stones; cf. pouter (124).

pouty sticker, pouty sticker; assists maker (124) (q.v.) by gathering small quantities of glass on solid rod, "pouty" or "pouty" for marking stem or foot of a glass, or for attaching to an article in process of making, to hold it when taken off blowpipe.

post boy, post holder, post man; carrier-down, drawer boy, punter puller (glass tubes); assists drawer (138) (q.v.) in glass tube drawing; places shaped end of post, i.e., large type of pouty rod, against glass foundation and keeps even strain as drawer walks backwards from him in drawing; rolls post when drawer rolls blowing iron, to preserve shape of drawn tube.

pot chipper; chips off from old pots portions of glass adhering thereto, for re-melting; is usually engaged on other work for part of his time.

pot filler (glass house); shovels batch, i.e., mixture of materials, or cullet, i.e., waste glass for re-melting, into pots or crucibles.

pumper puller (glass tubes), see post boy.

pusher; assists flattener (138) (q.v.) in plate glass manufacture by pushing glass cylinder into kiln, and by pushing flattening stone into and out of kiln.

rubber-off, see grinder-off.

runner, machine runner; oils, and keeps in adjustment, automatic continuous bottle making machines.

runner, carriage; a carrier who conveys cylinders of glass on metal carriage to filling kiln.

sand burner; fills receptacle, placed over a furnace, with sand, intended for glass making; heats to redness, to destroy any organic matter, stokes furnace.

sand filler; fills sand boxes used in connection with sand heating machine.

sludge pit man; a labourer who empties sand settling pits in grinding sheds.

splitter girl, see carrier, cylinder.

stocker-up, see take-out.

sucker man; guides glass as it is carried by overhead crane, to which articles are attached by means of suction cane.

taker-in, see glasshouse boy.

taker-off; takes finished article from mould of machine, and places it ready for taker-in (q.v.).

taker-out; carrier, stocker-up, wheeler-out; a carrier (q.v.) who takes finished articles from belt, i.e., annealing furnace, to warehouse.

transferer, see heaver-off.

washer, bottle washer; a warehouse hand who washes finished articles ready for packing.

washer, cullet; metal washer; shovels cullet, i.e., waste glass for re-melting into "metal," into a store; dips in water and shakes to remove dirt and other foreign matter; sometimes sorts into grades for sale.

washer, sand; shovels sand intended for glass making into washing machine, where any salts, chalk and other impurities are washed away; controls supply of water.

waxer; keeps a vat filled with wax; stokes furnace thereunder to melt wax; places glassware in wire cage, immerses, and removes when coated.

wetter-off; (i) in glass house assists blower; disconnects blown article from tube by dipping a piece of iron, "mallet," etc., in cold water and bringing into contact with hot blown article to crack it; (ii) in silvering room washes sheets of glass with distilled water after polishing and beveling, prior to silvering for mirrors, etc.

wheeler, cullet or molli; removes scrap or waste glass, sometimes called molli, from working places or to furnaces.

wheeler, frit; wheels batch, or mixture of materials, to melting tank, for sheet glass making.

wheeler, sand; (i) wheels sand, after it has been washed and burned, to mixing room; is usually occupied in other work for part of his time; (ii) supplies sand for grinding wheels in manufacture of plate glass.

wheeler-out, see taker-out.

winder-up; in factories where annealing is done on a stage level above glass house, raises or winds finished bottles from glass house floor to stage level, for taker-in (q.v.) to carry to annealing kiln or arch.

wiper; in floating room cleans glass finally before it is examined.

wiper-out; a warehouse girl who washes off dried putty powder from glass after polishing process.

ORDER VI.—WORKERS IN CHEMICAL PROCESSES: MAKERS OF PAINTS, OILS, ETC.

Sub-Order I.—Workers in Chemical Processes.

141.—FOREMEN AND OVER-LOOKERS.

match maker; a foreman who supervises workers in a match making factory or part thereof; watches output of machines; maintains correct temperature in certain rooms.

142.—DISTILLERS AND STILL-MEN.

acetate of lime maker; a distiller q.v. who distils crude acetate acid run in from wood distilling plant and controls by means of valves, passage of purer product of distillation into gas of milk of lime; allows acetate of lime to settle, opens valve to run off liquid and lets in steam to jacket of pan in order to dry the product, which is removed by labourer.

acetic acid maker; wood acid maker; a distiller q.v. who heats a mixture of crude calcium acetate (cf. acetate of lime maker) with sulphuric acid of known strength, by means of steam coils to make pure acetic acid; shovels or empties sacks of lime acetate into tank; opens valves and starts and stops mechanical stirrer; removes residue from tank with shovel.

acetone maker; a distiller q.v. who distils acetone from acid calcium acetate by heating it in perforated trucks in a retort; shovels acetate into trucks; pushes trucks into arches in retort; closes doors and opens dampers, acetone vapour is evolved and condensed in condenser; on completion of distillation, re-opens door, withdraws bangers with long iron hook and empties them.

acetone recovery man, acetone recovery; solvent recovery man, in cordage manufacture, is in charge of plant for absorbing acetone vapour from fumes given off from cordite drying stores; controls switch of fan driving fumes through towers down which sodium bisulphate solution (forming, with vapour, an acetone emulsion), flows into collecting tank ready for distilling; regulates flow of solution in tanks; in artificial silk spinning, attends stills for recovery of acetone, process similar to that in cordite manufacture.

acetone rectifying man, acetone rectifier, acetone purifier; solvent rectifying man; a distiller q.v. who distils solution of acetone in sodium bisulphate to recover acetone, alcohol recovery worker; a distiller q.v. who in a variety of manufacturing processes, in which alcohol is used, takes residue or mother, mixes it with water or other solvent and collects alcohol in condenser of steam-jacketed still.

anthracene maker (distiller); a distiller q.v. who distils crude anthracene, deposited from coal tar when cool with lime and caustic potash; further purifies distillate by sublimation.

benzene collas maker; a distiller q.v. who distils a mixture of benzene and nitric and sulphuric acids to make nitrobenzene, used as perfume and as base for aniline dye, benzol extractor, benzol maker; a distiller q.v. who extracts commercially pure benzene from coal tar distillate by fractional distillation, i.e. collects in separate vessel all distillate from still between certain narrow temperature limits.

chloroform maker; a distiller q.v. engaged in preparation of chloroform from acetone and chloride of lime (bleach).

coker, wood; a distiller q.v. who loads wood blocks, by hand, into a retort, closes and controls heating of retort by dampers so that all volatile matter is driven off, and wood coke, or char, is left in retort; opens valve to allow vapours to pass through condenser in which wood tar is deposited, controls by valve passage of non-condensable gas to burners beneath retort where it burns to heat retort, concentrating acid man (explosive); de-nitrator (gun cotton), de-nitrating acid man; pumps or opens valve to allow to run from tank, weak waste acid, after nitration of cotton or glycerine, into highest of a series of pans set in furnace fire, top pan when filled overflows into pan below, and so on, thus as acid falls lower in series it becomes gradually hotter, causing water and nitric acid to boil off, finally leaving sulphuric acid to run out from lowest pan into storage tank.

creosote maker; opens valve to run coal tar heavy oils into tank; allows oils to settle; opens valves to run off creosote and re-distills, see distiller; runs out residue oils from tank.

crude benzol maker, crude benzol man; a distiller q.v. who distils off benzol in steam from creosote, solvent in which benzol is dissolved from coal gas or coke oven gases in benzol scrubbers; opens and shuts valves controlling flow of steam and creosote oil to still, and process of distillation.

de-nitrator (gun cotton), de-nitrating acid man; a distiller q.v. who concentrates acid man left after nitrating gun cotton, cf. nitrator (gun cotton) (143), by running waste acid into still and opening valve admitting steam to steam jacket or tending furnace to heat acid direct, thus heating and driving off nitric acid; controls by a valve, passage of water through outer jacket of condenser; runs off condensed nitric acid into lead or porcelain-lined or glass vessels; (ii) see concentrating acid man (explosive).

distiller; stillman, in charge of process of distillation; charges still by shovelling in solids, running liquids from previously prepared or mixed, controls temperature of still by opening or shutting valves regulating passage of (1) furnace gases to still, (2) secondary air to produce gas, and also, of producer gas itself, (3) oil to acid burner, (4) steam to steam coils, steam jacket by which still may be heated, (5) cold water to cooling coils by which temperature of action is kept low, and thus regulates flow of acetone product of distillation from still to condenser; uses also regulates flow of water through condenser, by means of a valve, so that temperature of gases leaving condenser is constant; instructs labourers as to nature of vessel to be placed at outlet of condenser to collect liquid coming therefrom, e.g., glass or lead-lined vessels for certain acids, and so on; in steam distillation, controls valves regulating passage of steam to still through contents of which it is allowed to bubble, thus carrying off volatile product in fractional distillations, controls temperature of distillation as above, and by means of valve diverts products of distillation to various containers, after leaving condenser, so that products distilled between certain limits of composition are kept separate from each other; in continuous process, by means of valves regulates rate of flow of cooling liquid, controls fall of temperature of gases to be condensed, collecting products of condensation in a tank along condenser according to temperature at which they condense; instructs labourers as to discharging of solid residues from still, and cleaning of still before re-use; conditions under which distillation takes place, temperature, method of application of heat, nature of condensing apparatus, material of which still and rest of plant is made, vary according to products made; sometimes specifically

designated by raw material distilled or by product of distillation, e.g. acetic acid distiller, benzol distiller, benzoline distiller, camwood distiller, essential oil distiller, fatty acid distiller, naphthalene distiller, oil distiller, pitch distiller, resin or rosin distiller, shale oil distiller, tar distiller, wood distiller.

diacetyl glycerine maker; glycerine worker (explosive); a glycerine stillman *q.v.* in explosives manufacture who re-distills a very pure glycerine for use in making nitro-glycerine and dynamite.

ether maker; a distiller *q.v.* who distils carefully prepared samples of exact proportions of alcohol and sulphuric acid in steam jacketed lead-lined stills; the ether is collected in leaden vessels.

evaporator man (insurer); runs solution of animal grease in benzene into closed evaporating pan and distils off benzene from grease to recover it for further use; *cf.* distiller.

glycerine process man; see glycerine stillman.

glycerine stillman; glycerine refinery stillman; glycerine process man; a distiller *q.v.* who distils glycerine in vacuo with superheated steam; *cf.* glycerine maker (153).

glycerine worker (explosives); see dynamite glycerine maker.

hectaman; see shale burner.

motor spirit plant attendant; see for rectifier.

naphthalene still fireman; shovels coal or coke into, and takes out naphthalene from furnace beneath still for purifying naphthalene by sublimation; sometimes also controls flow of gases by valves.

petroleum oil maker; see for distiller.

process man (glycerine refining); see for glycerine stillman.

recoverer, solvent (cellulose); a distiller *q.v.* who recovers solvent in recovery of cellulose; the principal constituents of which are ether, carbon and gummaton.

rectifier; redistiller, refiner; a distiller *q.v.* who rectifies purities, a chemical product by distillation, or a series of distillations, or by fractional distillation, *i.e.*, separating various constituents according to the temperatures at which they distil; sometimes specifically designated according to product of rectification, e.g., benzol rectifier, petrol rectifier, petroleum rectifier.

redistiller, see rectifier.

refined benzol maker; see for distiller.

refiner; see rectifier; sometimes specifically designated according to chemical refined, e.g., benzol refiner, glycerine refiner, oil refiner, petrol refiner, petroleum refiner.

refiner, carbolic acid; runs caustic soda solution into tank containing lower boiling liquid obtained from the fractional distillation of coal tar; mixes liquids by mechanical mixer or by hand stirring, and allows sodium phenate formed to separate out as lower layer of liquid, runs off latter solvent, and then gradually, sulphuric acid still phenol separates out as a light oil, which he distils fractionally; *cf.* distiller, collecting purest phenol between 180° to 190° (1); cools phenol, running it to crystalline and dries off crystals; *cf.* carbolic acid process worker (143).

revert attendant, revert man (shale), *see shale burner*

shale burner; heaterman, revert atten-

dant, revert man (shale); controls process of distillation of oil shale in vertical retorts; charges shale into retorts, by shovelling or tipping, and operates valves controlling flow of product gas and air to heat retort, and flow of steam into which run ammonia from nitrogen in the shale. also controls outflow of vaporized shale oil and ammonia gases from retorts to condensers.

solvent recovery man; see acetone

recovery man.

solvent rectifying man; see acetone

rectifying man.

still attendant (celluloid), see for still man (xylonite).

still attendant (shale burning); controls, by means of a valve, flow of ammonia liquor from condensers, of shale burner, through still against powerful current of steam which he turns on as required; regulates by another valve flow of liberated ammonia gas to saturators where it is treated by sulphate house man (143) *q.v.*

still fire attendant, see for distiller.

stillman; see distiller; sometimes specifically designated according to product distilled, e.g., alcohol stillman, ammonia stillman, benzol stillman, carbolic stillman, ethylamine stillman, oil stillman, tar stillman.

stillman, bleach; in charge of stills in which hydrochloric acid and steam are passed into heated manganese dioxide mud, controls valves regulating inflow of gas and steam and outflow of chlorine gas made; sometimes labours on to cleaning out of stills at intervals, and recharging with manganese mud by shovelling.

stillman (xylonite); a distiller *q.v.* who distils alcohol that has been used in manufacture of celluloid, refines for further use; runs into tank impure alcohol and adds powdered chemicals by hand; opens and shuts valves, admitting steam to jacket and alcohol vapour to condensing vat.

tar rectifier, tar refiner, see for dis-

still fire attendant; a distiller *q.v.* who also regulates temperature of tar still by feeding furnaces heating still and adjusting dampers; removes ashes from furnace with iron rake and shovels them into barrow.

terpentine distiller, see for distiller.

wood acid maker; see acetic acid

maker.

143.—PROCESS MEN AND FURNACEMEN.

absorber man; shovels lime into tank and opens valve admitting water, controls, by hand, lever of mechanical stirrer and continues adding water and stirring till milk of lime is of required consistency, opens valve regulating supply of chlorine gas under pressure, after test by chemist, runs off contents of tank to next process in manufacture of potassium chlorate.

acetate of sodium maker (artificial silk); crystal house man, crystalliser (artificial silk); crystallising man, acrylamide; attends at vat to neutralization, crystallization and drying of sodium acetate; opens valve to run acetic acid into lixiviating vat; shovels caustic soda to vat till acid is neutralized, starts mechanical stirrer by hand lever, and admits steam to jacket of vat by means of valve to cause solution to crystallize; runs off mother liquor for reuse and shovels crystals out of vat into barrow.

acetylizer; see cellulose acetate maker. **acid maker; general term for a process** worker *q.v.* employed on and making plant.

acid oil attendant (margarine); treats free fatty acids and other by-products of margarine refinery, by heating with steam and by adding sulphuric acid, to produce acid oils (raw material for soap making).

acid worker; in acid manufacture,

general term for persons engaged in manufacture of acids, includes acetic acid maker (132), carbolic acid refiner (142), acid burner, chamber man, column man, concentrating acid

man, de-americator, hydrochloric acid maker, kerosene, acid mixer, nitric acid maker, column man, oxalic acid maker, acid purifier, sulphuric acid man, towerman, in explosive

manufacture, general term for persons making, blending, or denaturing

acid and sulphuric acids in explosive

factory, includes concentrating acid

man (142), de-nitrator (143), hand

mixer, nitrator, nitro-glycerine maker, picric acid worker; in celluloid manufacture; *cf.* acid worker (148).

aluminous colour maker; a process worker *q.v.* engaged in making aluminous dyes from dyelake, antimony, alizarine maker; artificial sodder maker, a process worker *q.v.* making alizarine, a base from which alizarine dyes are made.

alkali meter; shovels soda ash (sodium carbonate) into tank, and stirs it up with water; shovels in lime and stirs and heats mixture by opening valve admitting steam at bottom of tank, when action is complete allows liquor to settle and runs or pumps off caustic soda solution formed to boilerman (518) *q.v.*

aluminous cake maker; a process worker *q.v.* who makes steam cake by mixing, by mechanical mixer,

measured quantities of *see* process, calcine, clay or other aluminous material, and sulphuric acid in lead-lined vessels and allowing product to solidify; weighs out powdered clay and tips it into vessel; then runs in known volume of acid, and operates valve which sets stirring apparatus in motion.

ammonium chloride maker; see muriate of ammonia maker.

ammonium sulphate plantman; see sulphate house man.

aniline dye maker; a process worker *q.v.* making dyes from dyelake aniline; runs aniline or a derivative into vessel, and runs in other chemicals, stirs mixture by hand or mechanically, controls temperature by means of valve letting in steam, hot or cold water to coil in vessel; allows products to separate and runs off product required, may also distil off product if necessary; *cf.* distiller (142).

anthracene maker, anthracene man, anthracene plant man; a process worker *q.v.* in charge of plant in which that part of coal tar distillate, called anthracene oil, is

allowed to stand and cool, till impure anthracene separates out, runs off liquid part of distillate; dries

anthracene by shovelling into a hydro-extractor, and passes it to

powerful hydraulic press in which more of solvent oil is squeezed out;

feeds cakes of pressed anthracene to grinding mill; adds steam, or

powder, formed in closed vessels with solvent naphtha to extract more

impurities; runs off naphtha and

impurities, leaving anthracene ready

for next operation; *cf.* anthracene

man (140).

artificial sodder maker; see alizarine

maker.

artificial silk worker; general term covering workers in manufacture of

artificial silk, *cf.* acetate of sodium

maker, *see* acrylamide; *cf.* artificial

silk worker (328).

ash finisher; see furnaceman, allan.

ash recovery man; see soda recovery

man.

bench man; controls, by means of

valves, passage of hydrogen and chloro-

form gas to heat chamber in which

the hydrogen burns at series of jets

to form hydrochloric acid gas; controls

flow of water down tower against up-

rising stream of hydrochloric acid gas,

minutes, then leaves them to separate and draws off acid layer, washes residual liquor in similar way with dilute caustic soda, and runs off washings, leaving benzol paper and ready for further distillation.

best settler man, see *chlorate of potash maker*.

bicarbonate of soda maker; *carbonate of soda maker*; a process worker *g.v.* in charge of part or whole of plant in which bicarbonate of soda is made by ammonia-soda process. May be an ammonia stillman (142) *g.v.* or control apparatus in which he saturates strong brine with ammonia gas by passing ammonia from still through a valve to bottom of vessel containing brine cooled by cold water coils; also controls flow of lime kiln gases, containing carbon dioxide, by means of valve to carbonating tower into which he pumps brine solution saturated with ammonia; runs out from bottom of tower, sludge containing bicarbonate of soda crystals, for recrystallisation.

black ash maker; *alkali furnaceman*, *ball furnaceman*, *ball potman*, *black ash furnaceman*, *furnaceman*; converts a mixture of salt cake (acid sodium sulphate), broken furnaces and small coal into black ash by heating it in a furnace, ashore or slip mixture on to bed of furnace, or into hopper of reversing furnace, which he subsequently sets revolving by moving a lever; controls, by moving dampers, passage of furnace gas, heating mixture, and in case of fixed furnace, rakes over mixture at intervals to ensure completion of action; when mixture is at fusing point, works black ash as formed up into beds which he rakes and shovels from furnace into iron barrows to solidify.

black ash man; *ashista black ash maker* *g.v.* in furnacing salt cake mixture and preparation of black ash.

bleacher (explosive); general term covering any worker engaged in bleaching cotton for use in explosives; may be placing cotton in tanks, running in bleaching solution and agitating by mechanical stirrer; drying cotton in hydro-extractors and drying stores; making up dried and bleached cotton into bales, by hand, for despatch to explosives factory.

bleaching powder maker; *chloride of lime maker; wheels barrows of slaked and ground lime to elevated ladders, chambers, spreads lime raked into furrows over floor of chamber; controls, by means of a valve, flow of chlorine gas into and temperature of chamber by diluting chlorine with air should temperature tend to rise too high, rakes lime over by hand to expose fresh surface to assist absorption of chlorine, and blows out excess of chlorine at end of operation ready for bleach pecker (149) *g.v.**

blender, *cellulose acetate blender* (artificial silk); mixes and blends different grades of cellulose acetate, in manufacture of artificial silk, by running them into mixing tank and stirring by hand or mechanically.

blender, oil (mercural oil refining); *acetate mixing plant* which he runs different kinds of oil, blends them by stirring and beats them in pans to complete blending process.

blow stone maker; a process worker *g.v.* who runs sulphuric acid into lead-lined vessel into which he has previously tipped or shovelled refined copper ore, stir contents by hand, and may also beat by means of a steam coil controlled by a valve to assist solution of copper ore by acid; runs out copper sulphate solution formed into vats, in which copper sulphate crystallises out, *i.e.*, blue stone, *cf.* crystalliser.

boiler (gun cotton), see *washer* (gun cotton).

boiler, *kier* (gun cotton); *kier man*; attends *kier* or *vats* in which he boils raw cotton in caustic solution, preparatory to its being made into gun cotton.

brewer's colouring maker; a process worker *g.v.* who makes caramel to add to beer, aerated waters, spirits, or vinegar, by heating sugar to specified temperature in a metal vessel until action and colour change to dark brown are completed; allows to cool, dissolves caramel in water, and concentrates solution in steam-purged pan, regulating flow of steam by means of valve, runs out caramel into kegs or drums for export.

burner, acid, see *burner*, pyrites.

burner, animal charcoal; *revivifies animal charcoal*, after use in sugar refining, by washing it in water to remove adhering sugar solution, and then burning it in a pipe kiln with external gas or coke furnace heat; feeds washed char to top of pipe by tipping or bucket conveyor; controls opening of pipe so that as char gradually falls it becomes roasted, and opens door to bottom of pipe to allow roasted char to fall into sheet iron cooling pipes provided with valves, which he opens at intervals to allow cooled roasted char to fall out ready for re-use.

burner (bones, etc.), see *calciner* (bones, etc.).

burner, copper stone, see *burner*, pyrites.

burner, mangle, see *burner*, pyrites.

burner, oxide, *shovels oxide* (polysulphide or iron recovered from gas works) into mechanical screen whence it is mechanically conveyed to top of furnace, where sulphur and sulphides are burnt out of iron oxide; watches proper working of conveyor and furnace works and automatic discharge; adjusts furnace dampers.

burner, pyrites; *acids burner*, *copper stone burner*, *mangle burner*, *sulphuric acid burner man*, *sulphuric acid furnaceman*, *sulphuric acid kiln man*, *vitriol burner*; a kiln man, *g.v.* who stokes coke fires in furnace which roast iron pyrites; controls pyrites into kiln; carefully regulates supply of air to kiln by keeping kiln door partially closed, so as to produce sulphur dioxide, used mainly in manufacture of sulphuric acid, when charge of pyrites contains no more sulphur, takes out spent ore and recharges kiln by hand shovelling, *cf.* sulphur burner.

burner, sulphur; *shovels broken pieces of sulphur into hopper of sulphur burner*, which is slowly revolving; adjusts screw feed by which sulphur is fed to end of burner; adjusts dampers to control air supply and degree of flames and acid fumes to Glover tower where pure sulphuric acid is condensed and concentrated.

burner, vitriol, see *burner*, pyrites.

burner man, acid burner man, see *kiln man*.

burner man, sulphuric acid, see *burner*, pyrites.

burner (bones, etc.); *burner* (bones, etc.); *shovels bones into retorts and feeds furnace fires which heat retorts and so drive off volatile compounds* (bone oil, etc.), leaving bone ash; at end of calcination takes out ash (or animal charcoal) and re-charges retorts.

camphor maker; is in charge of chemical plant in which camphor is synthesised from pinene or other chemical compound, runs liquid pinene into vessel, opens valve admitting dry-chlorine gas to vessel, runs in acid fumes, controls stirring apparatus and valve of steam heating coil to form camphor.

carbide of calcium maker; feeds an electric furnace, by hand, with a mixture of carbon and freshly burned lime; taps off carbide at intervals and casts into hard grey blocks in moulds.

carboic acid man; *assists carboic acid stillman* (142) *g.v.* in separation or distillation of carboic acid (phenol); controls steam valves, washes out still, runs in acids, etc., under direction of stillhead.

carboic acid process worker, *carboic plant man*; a process man *g.v.* in charge of plant for making phenol (carboic acid) from liquor remaining after extraction of naphthalene from coal tar, *carboic edis*; runs in caustic soda solution, mixes it with liquor; runs off layer of sodium phenate solution, neutralises with sulphuric acid or carbon dioxide gas, and runs off phenol which forms a separate layer.

carbonate of ammonia maker; a process man *g.v.* who shovels a powdered mixture of exact proportions of soda ash and ammonium sulphate into a pan, which he beats by means of a furnace; fumes evolved pass over into cooling chamber and condense on sides and roof as ammonium carbonate; scrapes deposit of chamber and shovels into casks or bags.

carbonate of potash maker, see *potash extracter*.

carbonate of soda maker, see *bicarbonate of soda maker*.

carbonating man, *carbonator man*; (i) opens valve to run liquor to be carbonated into tanks and controls valve which passes lime kiln or waste furnace gases containing carbon dioxide through them; runs out liquids when carbonation is completed; (ii) adds lead scrubbing material in charge of carbonator, a tank with mechanical stirring apparatus, which produces white lead by Britton's process; adjusts valve to control flow of carbon dioxide, usually spent furnace gases, through lead acids suspended in water, *acidic acid*; starts and stops mechanical stirrer; runs off liquor when settled and shovels residue of white lead from tank into barrows; (iii) *ammonia soda process*, carbonates concentrated solution of ammonia in brine in carbonating tower by allowing solution to flow down towards upward current of lime kiln gases, passage of which he controls by a valve; withdraws sludge of sodium bicarbonate crystals from bottom of tower, by opening valve and allowing it to flow out.

carbon dioxide maker; adjusts valve to regulate trickle of weak potassium carbonate solution from tank at top down coils filled cylinders in tower, up which furnace or lime kiln gases, containing carbon dioxide, are passing; takes sample of solution at foot of cylinder for test as to content of carbon dioxide and adjusts valves accordingly; from cylinder pumps solution of carbon dioxide, which runs off from bottom of cylinders, into boilers where it is heated and the gas thereby set free, passes gas to gas holder or compressing pump.

caustic finisher; fills a series of iron pots with caustic liquor by means of power pump, and ladles out finished caustic after evaporation; sometimes also feeds and attends to fires which heat pots.

caustic fireman; feeds and attends fires for evaporating caustic and assists caustic finisher *g.v.*

causticiser, see *caustic soda maker*.

causticiser man, *soda causticiser man* (paper manufacture); *caustic maker*, *pot man* (paper); stirs up, by hand or mechanically, product from incinerator, *cf.* incinerator man, with water, and shovels in powdered lime to convert caustic soda into *caustic soda*; boils and stirs liquor by opening valve admitting steam to bottom of vessel, and, when action is complete, allows sludge to settle, runs off caustic liquor and agitates sludge with fresh water to extract last traces of caustic.

caustic maker (linear caustic); a process worker *g.v.* who makes linear caustic (nitrate of silver) by dissolving silver in nitric acid, evaporating to dryness in hot water or steam jacketed pan, controlling hot water or steam by means of valve and then leading to fusion pots, for surgical

purpose, fused product with potassium nitrate and caustic in this cylindrical tank.

caustic potash maker, *as for caustic soda maker.*

caustic soda maker, *causticizer*; a process worker *g.v.* who introduces powdered slaked lime, in sodium carbonate solution, (usually purified tank liquor is used, *i.e.*, liquor obtained by dissolving black ash in water, *cf.* black ash maker); stirs mixture by mechanical means, or by opening valve and bubbling live steam through it; allows precipitate to settle, and runs off caustic liquor.

caustic soda man; *caustic caustic soda maker g.v.* by opening valves, starting-up stirrer, etc., under his direction.

caustic weak liquor man; operates a pump which drives weak caustic liquor, made by caustic soda maker *g.v.* into pans heated by waste heat from black ash furnace, or from other sources, and allows tank liquor carbonate or other salts deposited on concentration; continues concentration till specific gravity of liquor is about 1.4, then runs liquid out for further concentration in caustic pots; *cf.* caustic finisher.

cellulose acetate maker, *cellulose maker*; *acetylator*; puts measured quantities of several chemicals into vessels and mixes them mechanically.

chamber man, *acid chamber man*, *sulphuric acid chamber man*; controls flow of steam by means of valve and allows current of sulphur dioxide nitric fumes and air to pass into first of a series of leaden chambers in manufacture of sulphuric acid; sends samples of chamber acid (or acid drips formed by reaction of those gases in chambers) to laboratory periodically for analysis, watches progress of action through glassed apparatus and operates valves which drive gases from last chamber to Gay Lussac tower in which residual nitrogen oxides are extracted; supervises firing of pyrites burners *g.v.*

charcoal maker, *animal*, *see* retort hand, *animal charcoal.*

charge hand (*gun action*); in charge of processes and plant for making of gun cotton; gives instructions as to charging, nitrating, washing or heating, etc., to various workers, including tier boiler, band mixer, nitrator, washer, burner (148).

chlorate of potash maker; *best settler man*; a process worker *g.v.* who passes chlorine into cylinders of milk of lime, by opening valve, and moves lever which controls stirring apparatus inside cylinders; continues to pass chlorine till analysis shows that all milk of lime has been converted into calcium chloride or chlorate; runs liquor into settling tanks, and stirs in powdered potassium chloride; allows precipitate to settle and runs off solution into concentrating pans; controls by valve admission of steam to steam jacket and takes out crystals of potassium chlorate formed.

chlorate of potash man; a process man *g.v.* engaged on plant in which chlorate of potash is made; assists chlorate of potash maker *g.v.* by shovelling lime into cylinder, running in water and stirring mixture, usually to make milk of lime; or does any other part of process to help chlorate of potash maker *g.v.* generally.

chlorate of soda maker, *or for chlorate of potash maker.*

chloride of calcium man; a process worker *g.v.* who concentrates calcium chloride, usually by evaporator, by heating in steam-jacketed pans, controlling steam by means of a valve and, after cooling, runs liquor into drums.

chloride of lime maker, *see* bleaching powder maker.

chlorine liquefaction man; drives powerful gas pump, by opening valve or switch, and traps pure chlorine gas, made electrolytically,

through concentrated sulphuric acid into a cooled condensing coil, whence it flows in liquid form into strong acid vessel; controls valve regulating flow of water in outer jacket of condenser; draws off liquid chlorine, then proceeds into cylinders as required.

chroma maker; makes chrome yellow pigments by precipitating lead chromate from a solution of potassium bichromate by running into it a solution of lead nitrate or acetate and stirring mixture to ensure thorough mixing; allows precipitate to settle, runs off liquor; runs in water and stirs up with precipitate to ensure thorough washing; runs out wash water and shovels out chroma on to porcelain plate to dry in hot air stove.

coal tar dye maker; a process worker *g.v.* engaged in converting coal tar products into dyes.

cobalt finisher, *cobalt refiner*; (i) operates a muffle furnace in which black oxide of cobalt from filter presses is heated and afterwards ground; (ii) in charge of muffle furnace in which ground oxide is reheated in process of further refinement.

cobalt gassing man; a process worker *g.v.* who runs hydrochloric acid into tanks into which he shovels broken iron pyrites (ore); sulphuretted hydrogen thus generated passes through tanks of solution containing cobalt and other compound thus precipitating iron and copper as sulphides; allows precipitate to settle, runs off solution which contains cobalt and nickel compounds, and stirs precipitate with water to extract last traces of cobalt and nickel salts.

colouring oven man, *see* furnaceman, red lead.

colour maker; (*paints*) a process worker *g.v.* who makes colours for painting, etc., by mixing under suitable conditions fixed quantities of various chemicals; adds water to quantities of chemicals, adds water to dissolve them, mix and stir up solutions so made, filter off precipitate formed, place filter and precipitate on shelf of drying oven to dry and scrape off precipitate formed; (*dye*) a process worker *g.v.* who, under the guidance of chemist is in charge of process of making dyes, by treating various chemical liquors, solutions or powders, taking great care that instructions as to quantities, methods of preparation, temperatures of action, duration of action, etc., are rigidly observed.

column man, *acid column man*, *sulphuric acid column man*; *acid tower man*, *Glover tower man*; sulphuric acid tower man; a process worker *g.v.* who controls valve on pump or compressed air blower, supply and distribution of circulating acid in towers at inlet and outlet of series of sulphuric acid chambers.

concentrating acid man, *acid concentrator*, *concentrating man* (*acid*), *concentrator*; acid *g.v.* who concentrates; opens valve admitting steam to jacket of concentrating pan in which he has previously run acid to be concentrated; in this way drives off excess of water from weak acids; controls temperature of pans to avoid overheating and consequent decomposition; sometimes specifically designated, *e.g.*, nitric acid concentrator, sulphuric acid concentrator.

condenser attendant (*nitric acid refining*); *fun attendant* (*see* man); controls valve which starts up or stops gas exhausters (pumps) which draw vapours of acid and ammonia from oil still through condensers and thence to scrubbing towers, where gas is washed before it is returned to retorts for heating purposes; attends pump which pumps water through outer jacket of condenser to condense vapours coming from oil still, runs off at intervals, and disposes in condenser tanks into storage tanks.

condenser man; superintends working of condenser attached to a distillation plant; controls circulation and temperature of water by means of cooling medium, in condensing tank by running in water as required, and maintains clear passage through condenser by regulating speed of passage of condensing water by control valve, so that temperature does not fall low enough to cause distillation products to solidify; runs off condensed liquid into tanks or carboys, and sees that condenser plant is cleaned out after suitable intervals.

condenser man (*hydrochloric acid*); *sulphate of soda towerman*; a hydrochloric acid maker *g.v.* in an alkali works; controls, by means of valve, flow of water down towers in which hydrochloric acid gas is absorbed.

coppera maker; *sulphate of iron maker*; in tin-plate manufacture, attends to vats in which he boils spent acid from pickling process with scrap iron; runs liquor off into vats and allows it to cool and deposit crystals of copper on bottom; stirs off cooled liquor, and detaches crystals from strips and sides of vat.

copper extractor; *extractor* (*copper, see* process); a process worker *g.v.* in charge of plant, comprising lifting and precipitating vats, in which he stirs up by mechanical means roasted copper ore and so dissolves them in water, and deposits copper from solution by shovelling in iron turnings; washes deposited copper free from impurities in chemicals to filling and discharging of vats with copper compounds and liquors.

copper sulphate maker; a process worker *g.v.* in charge of plant in which copper sulphate is made as a by-product in other chemical processes, or direct from copper ore or copper turnings and crystallised to render it pure.

crystalline plant man, *as for carbolic acid process worker.*

crystal settler man, *crystalliser, crystallising man*; (i) is engaged on a plant in which chemical solutions are concentrated by heating, and allowed to cool in large tanks in which are suspended metallic strips on which crystals form; (ii) is engaged in filling boilers, running in solutions, putting metal strips into tanks, bending valves admitting steam to steam jacket where tanks are heated in this way, removing, drying, sorting, or sieving crystals; (iii) is engaged in running off weak solutions; sometimes specifically designated, *e.g.*, coppera crystalliser, prussiate crystalliser; (b) (*artificial silk*) *see* acetate of sodium maker.

cudbear maker (*paints and colours*); boils up, in vats, certain vegetable substances yielding coloured liquors; concentrates and filters off liquor which is called cudbear; *obscurest*, *deepest* plant man; *deepest process man*; decomposing man; a process man *g.v.* who makes chlorine gas by acidifying hydrochloric acid gas which he passes with air over red hot fire-bricks, impregnated with cuprous chloride, or other suitable agent; regulates volume of gas and air by means of valves; fills chamber in which action takes place with impregnated firebricks by shovelling, and burns producer gas through it so to keep it heated, opens vents for supply of secondary air to producer gas burners.

de-arsenicator, *sulphuric acid*; *acid de-arsenicator*, *acid de-arsenicating sulphuric acid man*; *acid de-arsenicating sulphuric acid man*; *sulphide of arsenic maker*; opens valve which either admits a stream of sulphuretted hydrogen through a tower, down which sulphuric acid is allowed to run, or operates pump which flows through the sulphuric acid, after adding alkali or hydrochloric acid, to remove arsenic; allows arsenic sulphide to settle and runs off de-arsenicated acid from tanks. *decomposing man*, *see* decan plant man.

deteriorator man; runs charge of mono-nitro-toluene into tank containing waste acids from tri-nitro-toluene plant, and fitted with mechanical stirrer; stirs up liquids to ensure solution of any tri-nitro-toluene present in waste acids in mono-nitro-toluene; allows liquids to separate and runs off each separately, waste acids to de-nitration plant, cf. *deteriorator* (gun-cotton) (142), and solution to nitration plant, cf. *nitrator* (gun-cotton) digester man, see *pan man* (alum salt).

dissolver man; (i) see *tower man*; (ii) shovels soda ash into tank, runs in water, and stirs by hand or mechanically to assist formation of solution for manufacture of soda crystals or caustic soda; (iii) dissolves any solid or liquid chemical in a liquid in process of making a further chemical product, e.g., for crystallization, precipitation or filtration; usually works at dissolving or mixing tanks; opens and closes valves, tips or shovels in or admits from hopper solid chemicals, controls mechanical stirrers.

dresser; see *furnaceman*, red lead.

dryer, cellulose acetate; stove heated, puts cellulose acetate into steam-heated drying stove; empties stove after drying.

dynamite maker; makes dynamite by pouring a measured quantity of nitro-glycerine into a pan into which has been placed a weighed quantity of dry powdered kieselguhr; stirs up by hand till all nitro-glycerine has been absorbed by kieselguhr; runs mixture through a metal sieve to obtain it in granulated form.

e.c. worker, electrolytic chlorine worker; general term covering a process man *q.v.* engaged in making chlorine by electrolytic decomposition of salt solution, and assistants, e.g., coil room man (148), runs in salt solution in continuous stream, and runs out sodium hydrate solution formed by opening valves; switches on current and takes samples periodically for test by chemist; opens valve allowing chlorine formed to pass to bleaching powder or to liquifying plant.

epson salts maker; a process worker *q.v.* in charge of plant in which epsom salts crystalline magnesium sulphate, is made by action of sulphuric acid on mineral magnesia, and product crystallized; shovels powdered mineral into tank, runs in dilute sulphuric acid, and stirs mechanically to ensure thorough mixing; runs liquor into crystallizing tanks, and turns on valve admitting steam to steam jacket thereof, runs out weak liquor and detaches crystals from sides of tank or from strips of metal hanging in it.

evaporator man; (i) in charge of plant in which solutions of chemicals are evaporated by furnace gases or steam jacket or coil; runs liquor into pans, opens trigger admitting furnace gases to flow beneath them, or opens valve admitting steam to steam jacket; runs out solution when sufficiently strong; (ii) runs spent lye from epso salt bleaching tank into evaporating pans and controls heat, as above, which concentrates liquor to syrup consistency; passes concentrated lye to incinerator man *q.v.*

extractor (copper, wet process), see *cupper extractor*.

fan attendant, fan man, see *condenser attendant*.

ferro-prussiate maker; prussiate maker, prussiate of potash maker; a process worker *q.v.* who shovels leather scraps, animal hooves, cuttings from skins, etc., potassium carbonate powder and iron turnings into large pan set on hearth of reverberatory furnace, stirs up mixture during heating up to fusion point, and runs out metal produced; boils it in pans with water to extract prussiate of

potash, runs off liquor, and evaporates in steam-jacketed pan to form crystals; rakes out crystals.

filterer (paraffin wax); *pression* (paraffin wax), *wax refiner*; a steam-jacketed pan by hand with crude or partially refined paraffin wax, paraffin scale; shovels in powdered charcoal and fuller's earth into wax by opening valve admitting steam to steam jacket, and stirs mixture by operating mechanical stirrer; allows bulk of charcoal and fuller's earth to settle and runs off wax to filter press; operates lever applying pressure to press forcing out molten wax and retaining last traces of charcoal, etc., runs off residual oil, called heavy oil or soft paraffin which separates out from wax in separate layer, in refrigerating plant or to hydraulic press.

flowers of sulphur man, see *refiner sulphur*.

furnaceman; (i) see *black ash maker*; (ii) see *kiln man*.

furnaceman, acid, see *kiln man*.

furnaceman, alkali; *ash finisher*, *ash furnaceman*; (i) see *black ash maker*; (ii) shovels or tips soda crystals, shovels or tips crystallized liquid from black ash filtration tanks, into pan and feeds furnace which heats pan and drives off water of crystallization from soda crystals; rakes over soda crystals and when anhydrous, shovels white ash into sacks ready for despatch.

furnaceman, alum; shovels or tips powdered mixture of bauxite and calcined soda ash on to hearth of reverberatory furnace; feeds area of furnace and regulates them by adjusting dampers to give just bright red heat and avoid fusing mixture; rakes out mass with long handled iron rake into iron hoppers, pushes buggies to grinding mill ready for lixiviation of sodium aluminate formed.

furnaceman, ash, see *furnaceman, alkali*.

furnaceman, ball; *black ash furnaceman*, see *black ash maker*.

furnaceman, chrome ore; shovels into furnace chrome ore to convert them into bi-chromates; feeds and attends fire heating furnace; withdraws metal ores with long handled rake.

furnaceman, electric; in charge of furnace which he heats by passing a powerful electric current through material to be treated.

furnaceman (orange lead), see *orange lead maker*.

furnaceman (points and colours); feeds with fuel by shovel or adjusts gas burners of furnace for heatings naturally occurring pigments (native earths) and other materials to produce such points as ochres, ambers, siennas, etc.; adjusts dampers to maintain correct temperature.

furnaceman, red lead; *colouring oven man*, *drover*, *lead oxide maker*, *red lead maker*, *red lead storeman*; charges litharge, i.e. lead which has undergone a preliminary process of fusion in a furnace, on to hearth of reverberatory furnace or dropping oven, and rakes it over thus continually exposing fresh surfaces and stimulating oxidation, until it becomes bright red in colour, i.e., red lead; removes product from furnace by shovel and allows it to cool.

furnaceman, salt cake; sulphate of soda furnaceman; *salt cake maker*, *salt cake man*, *salt cake water maker*; when barrow loads of salt from salt shed to weighing machine and then to salt cake pot; shovels or tips known weight of salt into large shallow pan; opens valve to run in correct quantity of sulphuric acid, and mixes up both thoroughly with long handled iron paddle; tends and feeds furnace which heats pan and contents, allowing hydrochloric acid gas fumed to pass from pan into plant in which it is condensed and collected when gas is larger escapes, pushes charge from pan on to floor of soda-

cent muffle furnace with long handled iron paddle and raises temperature to complete action by suitably sticking furnace; keeps mass stirred and raked over floor whilst heated; rakes out salt cake when action is finished into iron tubs or barrows provided with lids, for removal to black ash furnaces or salt cake sheds.

furnaceman, sulphuric acid, see *burner, glycer*.

glycerine maker; *glycerine process man*; a process worker *q.v.* engaged in recovery of glycerine from spent lye, a by-product of soap manufacture, or from sweet water, a by-product of candle making, or in its refining, e.g. as crude glycerine maker, glycerine stillman (142), or white glycerine maker *q.v.*

glycerine maker, crude; *crude glycerine recovery worker*, *glycerine recoverer*; a process man *q.v.* who attends to plant in which glycerine is prepared in an impure state, from soap lye, by allowing lye to stand, skimming off any residual soap which floats on surface; then runs lye into lead-lined vessel, runs in hydrochloric acid and aluminium sulphate solution; opens valve to admit compressed air which stirs up mixed liquids thus precipitating fatty acids; then off precipitate by pumping liquor to filter press, opens valve of filter press as required, runs filtrate from press into tank, runs in alkaline solution and concentrates by heating in steam-jacketed pan or in special evaporator.

glycerine recoverer, crude glycerine; *factory worker*, see *glycerine maker, crude*.

glycerine worker, see *nitro glycerine maker*.

green scale attendant; runs off residual oil from refrigerators in which mineral oils are cooled to freeze out wax; shovels crude wax into barrows and wheels to filterer (paraffin wax) *q.v.*

grille man, grille plant attendant, see *alum man*.

grinder, cellulose acetate grinder; runs dried cellulose acetate into mill for grinding and attends to grinding operation.

grinder (explosives); feeds and operates a mill in which raw materials or constituents materials are ground, to ensure that an explosive thoroughly uniform in composition is made; cf. *incorporator* (148).

grinder, kieselguhr; *quar mill attendant*; feeds, by hand, hopper of grinding mill with kieselguhr, absorbent infusorial earth, which with nitro-glycerine is mixed in manufacture of dynamite; starts and stops mill by lever; controls chute by which ground kieselguhr falls into barrows or containers; replaces full containers by empty ones.

guhr kiln attendant; spreads ground kieselguhr on floor of kiln by hand, and attends to fire below which heats kieselguhr to dry powder ready for use in manufacture of dynamite; rakes out dried kieselguhr into tubs of barrows for removal.

guhr mill attendant, see *grinder, kieselguhr*.

hydrochloric acid maker, hydrochloric acid man; *maric acid man*; controls by a valve flow of water down towers filled with coke up which hydrochloric gas, made as by-product in salt cake manufacture, *cf. salt cake furnaceman*, is led; takes samples of liquid acid falling to tanks at bottom of towers for chemist; adjusts flow of water accordingly; runs off or pumps acid away to storage tanks.

hydrophosphate of soda man, see *pot man* (alkali).

hydrophosphate of soda man; a process man *q.v.* who shovels scrap zinc into vessel containing sodium bisulphite solution; moves lever raising mechanical stirrer to assist action of zinc, runs in milk of

lime to precipitate zinc, allows precipitate to settle and runs off solution, shovels in salt and runs off precipitate sodium hypochlorite, runs off solution, adds water to dissolve precipitate, concentrates solution by admitting steam to jacket of vessel, and takes out crystals as formed; dissolves up crystals again in water and runs in excess of caustic soda solution than on stirring, precipitates sodium hydrochloride as a fine powder; runs off liquor and stir powder up with alcohol to remove all traces of solution; runs off alcohol and allows to dry, ready for packing, shovelling often done by chemical labourer (140) g.v.

hypochlorite of soda maker; controls valve of pumping apparatus which blows chlorine vapour under pressure into tanks containing caustic soda solution; takes samples of chlorite produced for tests by chemist; shuts off chlorine acid; opens valve to run liquid into storage tanks ready for filling of casks.

incinerator man, soda incinerator man (paper manufacture); pan oven (paper), *cooker oven, soda roaster oven;* receives concentrated spent lye from storage tanks or from evaporating plant, *cf.* evaporator man, runs it into shallow pans heated by means of a furnace which he tends; heats it to dryness and continues heating until all organic impurities have been burnt off, leaving sodium carbonate as marketable residue; takes out residue into tanks ready for next process of fixation.

iron crystal man; opens valve to run sulphuric acid after de-aerification, *cf.* de-aerification, into tanks into which he shovels or tips scrap iron, usually tried to save oxidation at expense of acid; adds water and hand with iron stirrer, promotes solution of iron; allows liquor to settle and runs off clear liquor when sufficiently strong into covered evaporating tanks; opens valve to admit steam to steam jacket and so concentrates solution, causing it to crystallize; runs off mother liquor and detaches crystals from sides of tank with iron scraper.

Kesslerman; concentrates sulphuric acid from Glover tower of plant; regulates valve to blow acid from weak acid tanks at foot of tower into concentration tanks heated by producer gas; opens valves admitting producer gas and air to combustion chamber; continues heating until acid is sufficiently concentrated; regulates, according to amount of acid fumes passing upwards, flow of acid down tower into weak acid collecting tanks; when chemist's test reveals standard strength acid, runs out concentrated acid to storage tanks, or to tanks for filling casks for despatch; regulates valve to pump rolls of weak acid into concentration tanks.

kester man; a concentrator *q.v.* who attends to kester plant for evaporating liquors, mainly used for evaporating weak caustic soda ready for incinerator man *q.v.*

kier man, see boiler, kier (gun cotton).
kiln man, acid kiln man; acid burner-man, acid furnaceman, burner man, furnaceman (soda ash manufacture); attends to kilns in which ore and other raw materials are heated to a high temperature, *i.e.*, burnt, calcined, or roasted; changes, by shovelling, kilns or furnace with ore, tends and feeds fire, and by opening or closing dampers, regulates supply of air to heated area, and to furnace below.

kiln man, claus; shovels a certain depth of ferric oxide upon claus kiln grate and pumps a mixture of sulphuretted hydrogen and air into cylindrical space below grate; beats aside, by means of small fire below, in order to start kiln; mixed gases pass up through heated ferric oxide and form sulphur and steam by combustion, keeping oxide hot; sulphur

vapour passes into series of cold chambers where it is deposited as molten sulphur, or, as flowers of sulphur, runs off liquid sulphur at intervals, or scrapes flowers of sulphur from roof, sides and floor of chamber, and shovels it into sacks, bags or trucks.

kiln man, sulphuric acid, see burner,

cooker oven, soda roaster oven.

kiln man (fertiliser), see kiln stoker

(manure).
kiln man (vitreous enamel); shovels powder composed of constituents of vitreous enamel into special crucible, and places three by means of long-handled tongs into furnace which he tends; continues heating till contents of crucible are fused together, withdraws mass from furnace, pours out fused mass into tank of water to cool and breaks it up ready for grinding to powder.

kiln stoker (manure); lifts man (fertiliser); shovels degassed bones, or refuse animal charcoal from sugar refineries, as a fire for kiln; feeds acid attenda fire below which issues charcoal, etc., and so converts it into bone ash; rakes out bone ash into barrows, to cool ready for grinding.

lead man (sulphuric acid works); adds scrap lead in iron pot and melts lead sulphate residues with coke in small furnace; also makes lead sulphide by adding powdered sulphur into molten lead, and running lead sulphide into strikers for use in de-aerating sulphuric acid.

lead oxide maker; (i) *see* litharge maker; (ii) *see* furnaceman, red lead, **lethal gas maker;** a process worker *q.v.* in charge of plant in which poisonous gases are made, *e.g.* chlorine, cyanogen, phosphene, etc. **lims house man (soda works);** wheels barrels of lime into lime house, tips lime into slaking bin and sprays with water, by hand, shovels slaked lime into belt conveyor, feeding grinding and screening machine, which in turn supplies bleaching powder maker *q.v.* with ground, sifted slaked lime; cleans, by hand, at intervals, sieves of machine.

liquor maker, liquor man; cf. runner; a process worker *q.v.* who is responsible for preparation, strength, and running off, of liquors ready for crystallising. *See* also **chemicist;** prepares liquors by stirring chemicals shovelled into tanks with water by hand or mechanically; varies strength of liquors by adding water or other solvent, or, by heating in pans by steam jacket, to which he admits steam by opening valve.

litharge maker; lead oxide maker, shovels or pours by hand pure metallic lead on to hearth of reverberatory furnace, where it is heated to dull redness, constantly rakes it over with long-handled metal rake to promote oxidation, until yellow or yellowish red substance in a fused state, known as litharge, is formed; rakes out litharge when oxidation is complete; wheels it in barrows to grinding and sifting machine; shovels it into machine hopper; at intervals, cleans, by hand, machine sieves; *cf.* water.

litharge worker; an explosive worker (145) g.v. who shovels, with wooden shovel, picric acid crystals into steam-jacketed tank; turns on steam to melt crystals, liquid litharge flows through grid in tank bottom to storage tank for shell filling; *cf.* picric acid worker.

methylated spirit maker; is engaged in production of partly or fully denatured alcohol; runs pure alcohol into tank and adds mineral naphtha or wood naphtha and colouring dye to it, carefully measuring volume added in order to conform with customs regulations; stirs mixed liquids by mechanical stirrer, and runs it out into storage tank.

mixer, acid; accumulator manufacture, runs pure sulphuric acid into mixing tank, then runs in slowly, fixed

volume of distilled water, stirring acid continuously by mechanical or hand stirrer during, and after addition of water, to ensure uniformity of mixed acid for electrical accumulators; in chemical works, attends valve or tanks into which he runs, pumps or blews, by compressed air, acids to be mixed; controls stirring apparatus to ensure thorough mixing, controls valves governing flow of brine in cooling coils when temperature changes, caused by mixing of acids, are not desirable.

mixer, Atlas; an explosive worker (138) g.v. who pumps ammonium nitrate into an Atlas mixing machine to be dried and ground to powder; starts and stops machine and empties contents into containers by hand levers.

mixer, caustic, see causticizer man,

mixer, hand (explosives); mixes with the hands in leaden trough, gun cotton and nitroguaraine for making cordite or rockets, by hand, materials for making other explosives.

mixer, gun (explosives); mixes ingredients of gunpowder by grinding weighed materials together in a pan mill.

monardist maker; a process worker *q.v.* engaged in preparing pure chemical monards, *e.g.*, bicarbonate of potash or soda, iron salts, stannous chloride, or aluminium compounds.

morphia maker; in charge of plant in which morphia (or morphine) is made from poppy-bloss by being extracted, filtered off with milk of lime, filtering off and concentrating filtrate, boiling it with ammonium chloride and allowing to stand till morphia separates out and can be filtered off. **marlate of ammonia maker, marlate of ammonia man; ammonium chloride maker;** opening a valve, runs ammonia solution, or ammonia gas under pressure, into a tank, and similarly, runs in hydrochloric acid till ammonia is neutralized (revealed by chemist's test), admits steam to steam jacket to concentrate solution; shovels crystallised ammonium chloride from sides of a concentrating tank and runs mother liquor back from tank for re-use.

marinate acid man, see hydrochloric acid maker.

naphthalene maker, see naphthalene worker.

naphthalene man, naphthalene plant man; a process man *q.v.* engaged on any part of naphthalene plant of coal tar distillation works; extracts naphthalene by sifting part of coal tar distillate to collect in tank; runs liquor from impure naphthalene crystals deposited in tank, dries crystals in hydro extractor, and presses out residual oils in powerful hydraulic press; may also purify naphthalene by heating it in shallow iron pan, by means of a steam coil, admitting steam by a valve, naphthalene passes off as a vapour and is condensed in large brick chamber; scrapes naphthalene from sides of chamber and shovels it into tanks.

naphthalene worker; naphthalene maker; general term covering all persons employed in extracting and purifying naphthalene obtained from coal tar by distillation, and includes naphthalene man, naphthalene pressman (134) g.v., naphthalene refiner, naphthalene whizzerman (140) g.v.

naphtha refiner; *sic* **sophia refiner;** rectifies products of petroleum naphtha distillation by running them into vessel, running in sulphuric acid and stirring by hand or mechanically; allows liquor to settle and separates, runs off acid and impurities; runs in water and stirs again to remove traces of acid, allows to stand and separate again, and then runs off water with acid washings, repeats once again with fresh water, and runs naphtha away to store and sells as neutralizer; (i) *scrubbing powder* or chlorine, runs liquor, product of hydrochloric acid and manganese dioxide after chlorine has been

consist of one or more of the following operations; weighs out or measures quantities of chemicals to be used, runs liquors into or out of vats, towers, tanks, etc., beginning or end of action; opens valve admitting steam or hot water to heating coils or cooled brine to cooling coils, changes, by shovelling, tipping or by means of hopper, raw materials on to hearth of furnace, and tends fires of furnace to heat such charges; controls electrical apparatus for producing chemical by electrolytic action in bath of liquid, and extracting samples of liquid for analysis at intervals to ascertain progress of reaction; shovels metal scrap into tank of liquor for purpose of depositing on other metal; stirs up mixtures of liquids, or of liquid with solid usually in form of powder, to promote or stimulate action; stirs by hand, taking care to use stirrer which will not affect liquors being stirred, or operates mechanical stirrer; evaporates liquors in shallow pans, heating them with furnace gases, or by means of hot water or steam coils; extracts crystals formed on concentration by raking them out or by withdrawing strips of lead on which crystals have been deposited which have been suspended in liquors whilst cooling after evaporation; purifies liquors by running into them other liquors, stirring up by hand or mechanically, allowing two liquids to settle, and draining off pure liquid separately or allows impurity or precipitate to settle out and draws off purer liquor; extracts chemicals from mixture of chemicals in solution, by adding a further solution to precipitate chemical required, and then pouring whole on to small wooden frame to filter off precipitate, or pumps it to filter press, and extracts precipitate in cakes from filter press bags; to purify gases, passes them up towers, down which is allowed to run a liquid which dissolves out impurities, or opens valve which allows them to pass through chambers spread with layer of chemical which extracts impurities, or may purify gases by causing them to bubble through liquids which extract impurities; sometimes carefully watches temperature of reaction, and regulates it by increasing or decreasing circulation of steam, hot water, or cooled brine through coil, by means of valves, or by turning on supply of gas to burners; is usually assisted by chemical workers and labourers (149) *q.v.* who may do most of work described above under process worker's supervision and instruction; process worker can usually do his work in absence of chemist, and would refer to latter only in case of need.

granulate maker, granulate of potash maker, see ferro-prussiate maker.

purifier; a process worker *q.v.* who extracts impurities from chemicals by washing, chemical action, filtering, freezing, crystallising, distilling, etc.; sometimes specifically designated, *e.g.* acid purifier, sulphuric acid purifier.

purifier, mercury; attends to plant for purifying mercury used in electrolytic chlorine production; regulates a valve, flow of steam into sodium mercury amalgam in a tank forming caustic soda, and liberating mercury, which he runs off from lighter caustic soda back to electrolytic cell.

purifier, guanine, see refiner, guanine.
pyridine maker; a process worker *q.v.* who prepares pyridine from tar, by opening a valve, runs product of distillation of bones into tank and, similarly, adds measured quantity of sulphuric acid; then opens valve which passes stream of ammonia gas into liquors; concentrates tar, and pyridine forms a separate layer on surface of liquor; runs off liquor into another tank and collects layer of pyridine in drums placed beneath tank draining pipe

pyridine plant man (tar plant); is in charge of tar plant in which he prepares pyridine by one of following methods; (a) opening a valve, runs acid tar from naphtha washer into tank and adds water and starts a mechanical stirrer, causing tar to come to surface; skims off tar, with hand scoop, and runs in alkali solution till acid is neutralised, allowing pyridine to form separate layer; skims this from liquor and places into another tank for distillation; runs off remaining liquid; (b) runs clarified acid liquor into tank and opens valve passing ammonia through it; skims off separated pyridine as above.

rectified sulphuric acid man; rectified sulphuric acid pan man; a concentrating acid man *q.v.* who concentrates rectified sulphuric acid.

red lead maker, see furnaceman, red lead.

refiner, acid; (i) *see de-arsenicating sulphuric acid man;* (ii) *see concentrator;* (iii) a purifier *q.v.* in charge of plant in which acids are purified and concentrated; sometimes specifically designated, *e.g.* sulphuric acid refiner.

refiner, kerosene; paraffin oil maker, paraffin oil refiner; purifies that fraction of petroleum which distils over between 150° and 200° C., by running it into tank, adding sulphuric acid and stirring up liquids by starting mechanical agitator; allows sulphuric acid to separate and then runs it off; repeats process with caustic soda solution, and finally with water; separates oil in each case by allowing it to form layer on top of other liquid and running off either upper or lower layer.

refiner, naphtha, see naphtha rectifier.

refiner, naphthalene; a process worker *q.v.* in charge of plant for refining naphthalene received from naphthalene pressman (148) *q.v.*; pieces, drops, etc., cakes of naphthalene in steam-jacketted tank, opens valve admitting steam to jacket thus melting naphthalene, moves lever to start up mechanical stirrer and opening valve, runs in small quantity of strong sulphuric acid, continues stirring to bring acid into close contact with naphthalene; allows liquor to settle and runs off acid (lower) layer, repeats process with water and then with a caustic solution; then runs off naphthalene to vessel to be refined; may also purify it further either by subliming or by distilling the insoluble residuum in steam.

refiner, paraffin oil, see refiner, kerosene.

refiner, guanine; guanine purifier; in charge of plant in which guanine sulphate, obtained from cinchona bark, is purified by recrystallisation; runs solution of guanine sulphate into steam-jacketted pans, opens valve admitting steam, and takes out crystals as formed; re-dissolves crystals in water and repeats this operation until sufficiently pure guanine is found.

refiner, saltpetre; saltpetre man, saltpetre refinery man; shovels crude saltpetre into steam-jacketted pan, runs in water and stirs it mechanically, at same time opens valve admitting steam to jacket or coil, thus dissolving saltpetre; if any solid impurities are present, runs liquor through muslin frame filter into another steam-heated tank; continues beating liquor until crystals begin to form, takes out crystals from sides and allows solution to cool depositing more crystals in doing so; shovels crystals into revolving pan of hydro-extractor to dry them.

refiner, sulphur; flowers of sulphur man; shovels crude sulphur or brimstone on to hearth of closed firebrick chamber and tends and feeds fire beneath this hearth, so that sulphur melts and finally vaporises; vapours pass into a cool brick chamber where they are deposited on sides, roof, and

floor in a pure state; removes deposited sulphur at intervals, by scraping from walls and roof of chamber and shovelling off from floor into sacks, redner, wax, see filterer (paraffin wax); *cf.* wax refiner (138).
refinery man, smelter; in charge of sulphur refining plant; charges retort with brimstone and feeds furnace; runs off refined sulphur in viscous state and takes out black or residual sulphur from retort; may also break up agglomerated refined and black sulphur; *cf.* brimstone grinder (149).

refinery man, saltpetre, see refiner, saltpetre.

retort hand, animal charcoal; animal charcoal maker; makes animal charcoal by shovelling cleaned (degassed) bones into retort, closing door thereof, and heating retort by means of producer gas or by direct furnace firing until decomposition is complete; takes out charred bones; vapours pass over into condenser and condense forming bone oil.

revolver fireman, revolver firer, revolver man; a black ash maker *q.v.* who shovels mixed and broken salt cake, *cf.* salt cake furnaceman, limestone, and coal dust into large revolving furnace; closes door of cylinder, and attends to fire, hot gases from which pass axially through centre of revolving cylinder; moves lever causing cylinder to revolve thus ensuring even heating of materials; continues process until flames of carbon monoxide are seen to pass from surface into chimney, when heating is stopped; then opens charging door of cylinder and takes out fused mass (black ash) into iron trucks placed ready to receive it.

roaster man, acid roaster man, see incinerator man (paper manufacture).

roaster man (chemicals), see kiln man.

roaster man, salt cake, see furnaceman, salt cake.

salt cake maker, salt cake man; (i) see pot man (alkali); (ii) see furnaceman, salt cake.

salt man (coke ovens), see sulphate house man.

saltpetre man, see saltpetre refiner.

S./Am. maker; construction for sulphate of ammonia maker, see sulphate house man.

saturator man, see sulphate house man.

schwab man, see sulphate house man.

Scott man; an evaporator man *q.v.* who attends a Scott evaporator; opening a valve, runs or pumps into apparatus liquor to be evaporated; opens valve admitting steam which heats up liquor; runs concentrated liquor out of apparatus.

silver mud man; a process worker *q.v.* who recovers precious metals from "mud" and "slimes" in making sulphate of copper by dissolving process, or produced from bottom of baths in electrolytic refining of copper, using beating or smelting process; *cf.* ore furnaceman (171).

small maker; places powdered mixture of cobalt oxide, silica (pure sand) and potassium carbonate into a wheeled fireclay crucible, and wheels crucible to furnace; attends to heating of furnace by shovelling coal therein or by regulating gas valve; when powder is fused, withdraws crucible, and using iron rod, turns fused mass, into water to break it up ready for grinding again to powder which is a blue pigment known as small.

soda ash maker; shovels impure crystals of sodium carbonate on to hearth of furnace and feeds and attends fire which heats furnace and drives off all water of crystallisation from crystals leaving anhydrous sodium carbonate or soda ash; when action is complete, takes out soda ash by means of trolley to rool; may purify ash by grinding up soda ash with small coal or sawdust and beating mass in furnace again; latter method obsolescent.

soda ash man; general term for any man engaged in manufacture of alkali by ammonia-soda process; includes ammonia stillman (143), bicarbonate of soda maker, soda ash maker g.v.

soda crystal maker, see soda maker.
soda crystals man; see soda crystal maker g.v.

soda maker; soda crystal maker, washing crystal maker, washing soda maker; shovels soda ash, of soda ash maker, into tank, runs in water (or mother liquor) from previous operation and stirs mechanically to assist solution of chemical; allows solution to stand and settle, runs off clear solution into shallow pans heated by waste gases from black ash furnaces or by steam jacket or coil, and allows soda to crystallize out on cooling; takes out crystals as formed.

soda man; assists bi-carbonate of soda maker g.v. in shovelling soda ash, raking-out crystals, etc.
soda recovery man; alkali recovery man; general term for any man employed on a plant for recovering caustic soda from spent lye that has been used for bleaching paper in paper manufacture, including incinerator man, causticizer man, and evaporator man g.v.

spinner, silk spinner (artificial silk); runs (liquor) silk dope, composed mainly of cellulose acetate, into spinning machine and maintains flow of silk dope through jets.

steeper (gun cotton), see washer (gun cotton).

stove hand, see dryer.

stove man, red lead, see furnaceman, red lead.

sugar of lead maker; a process worker g.v. who makes sugar of lead (lead acetate) by speeding, with shovels, litharge (lead oxide) on shelves in copper containers, and opening valve which admits acetic acid vapour to vessels; continues until chemist's test reveals completion of process; shovels out lead acetate formed into tank, adds water and stirs mechanically; evaporates solution in steam-jacketed vessel by opening steam valve, and takes out, from a condensing tank, crystals formed from vapour.

sulphate house man; ammonium sulphate plant man, a. one, maker, sell man (see oven), sulfurizer man, shovels men, sulphate maker, sulphate man, sulphate of ammonia maker, sulphate of ammonia man, sulphate plant attendant; engaged on plant in which ammonia formed in gas and coal tar manufacture is converted into ammonium sulphate; may perform any of operations involved, e.g. runs or pumps ammoniacal liquor into settling tanks to allow residual coal tar to settle out; runs out pure liquor through heated coil, and thence into still down which it passes slowly against steam which heats it and drives off part of ammonia; opens valves controlling entry of steam to bottom of still, and of milk of lime solution at middle of still, thus mixing them with ammoniacal liquor and driving off rest of ammonia and other gases (impurities); sprays run cycle on grids of purifiers and recovers it when spent; ammonium sulphate formed in absorption tank falls to bottom as crystals which are taken out by hand scoop or blown out by steam or air pressure, shovelled into hydro-extractor, dried, and scooped into bags.

sulphate maker; (i) see sulphate house man; (ii) is in charge of evaporating and crystallizing plant in which sulphate of ammonia liquor is treated; opens valves to run sulphate of ammonia and other liquids respectively into a tank; opens steam valve to pass steam through liquor or through tank jacket; stirs, with hand rod, allows liquor to crystallize, runs off mother liquor for re-use and shovels-out crystals; dries crystals in centrifugal hydro-extractors.

sulphate man, see sulphate house man.
sulphate of ammonia maker, sulphate of ammonia man, see sulphate house man.

sulphate of iron maker, see copperas maker.

sulphate plant attendant, see sulphate house man.

sulphide of arsenic maker, see de-arsenicator.

sulphonator man (picric acid); opening valves, runs into sulphonating plant, i.e. big lead-lined tanks fitted with mechanical stirrers, fixed quantities of strong sulphuric acid and phenol (carbolic acid), stirring continuously to ensure thorough mixing and production of phenol sulphonic acid; opens valve to pump this away to nitroting plant, where picric acid is made, see picric acid worker.

sulphuric acid man; vitriol man; a process worker g.v. engaged on plant producing sulphuric acid by either chamber or contact process; may be doing work of pyrites burners, or sulphur burners g.v., workers who shovel nitre and run sulphuric acid into nitre pots to form masses of nitro-glycerine, boiler attendants who raise steam for making the acid or for driving machinery, chamber men g.v., or acid pump men who pump acid formed into tanks at tops of Gay Lussac or Glover towers, or away to storage tanks.

sweater; runs molten wax, containing oil, into trays to cool; places trays on shelves of oven, and opens valve to turn on steam in oven, causing oil to exude from wax leaving pure wax still solid on trays; allows oil to drain away and by further heating melts wax, and pumps it away to be further purified by treatment with charcoal and fuller's earth.

tankman (copper, wet process); shovels copper ore, after calcination, into tank, opens valve to run in weak solution of acid and operates mechanical stirring apparatus, thus dissolving and freeing ore from lighter and more soluble impurities; runs out liquor and shovels out purer ore ready for extraction of rest of copper by wet process.

tannin extract maker; a process worker g.v. in charge of plant for extracting tannin from bark; feeds strips of tannin bark to bark cutting machine, which cuts bark into chips; shovels chips on to false bottom of tank and runs in water, opens valve passing steam through coil below false bottom, thus heating water and extracting last traces of tanning; runs out liquor into tank and adds blood or alumina to bleach it, runs it into evaporating tank heated by opening steam valve admitting steam to jacket, and evaporates liquor under reduced pressure by opening valve connecting tank with gas pump; after evaporation, runs out tannin extract into containers for despatch.

tar recovery attendant (mineral oil refining); runs crude oil and sulphuric acid into run vessels and opens valve admitting jet of compressed air to stir them; allows tarry matter and acid to settle out and runs off oil; runs in caustic soda solution, stirs up mixture by compressed air as above, and separates soda tar by drawing off pure oil; washes both acid and soda-tars in water, separates them from washing liquor, and pumps tar off to storage tanks; liquor from acid tar washing is used for manufacture of sulphate of ammonia.

towerman; (i) see column man; (ii) dissolver man; opens valves to pump sulphuric acid up to tank at top of tower, to run it therefrom over copper ores in tower and to pump air up tower against acid; acid on reaching bottom of tower runs into storage tank as sulphate of copper; tips fresh copper ore into tower from time to time; runs off sulphate of copper to crystallizing plant.

towerman, acid; Glover towerman, see column man.

towerman, separator (explosive); extracts nitric acid from waste acids after nitration, by opening valve which allows mixed sulphuric and nitric acids, i.e., waste acid, to run out of tank at top and run down a tower which is heated at bottom, passing nitric acid to be driven off as nitric fumes, which are subsequently condensed; runs out sulphuric acid from bottom of tower into cooling vessels, and pumps them thence into storage tanks; regulates valves, levers, etc., when running acid down tower, and passing brine through cooling coils, etc.; sometimes done by denitrator (142) g.v.

towerman, sulphate of soda, see condenser man (hydrochloric acid).

towerman, sulphuric acid, see column man.

ultramarine maker; weighs out and mixes, by shovelling them into lever-operated grinding machine, dried silica, iron, sodium, carbonate, charcoal, and sulphur; shovels mixture on to hearth of closed muffle furnace, and tends to gas or fire which heats furnace, thus taking mixture; takes out calcined mixture and mixes with more sulphur, and calcines again; repeats this until product is of desired colour (ultramarine); grinds ultramarine, when sufficiently cool, for use.

vatman (gun cotton), see washer (gun cotton).

vat runner, see liquor maker.

viscous man (artificial silk); general term for men employed in viscous department, prior to spinning of artificial silk, including acetate of sodium maker, cellulose acetate precipitator.

vitreous enamel maker; general term for any man engaged in mixing, fusing and quenching vitreous enamel, including dry grinder (vitreous enamel) (143), kiln man (vitreous enamel) and kiln laborer (vitreous enamel) (140) g.v.

vitriol man, see sulphuric acid man.

washer, cellulose acetate washer; attends plant for washing cellulose acetate, prior to spinning artificial silk.

washer (gun cotton); boiler (gun-cotton), steeper, cut man (gun-cotton), place in vat mixed cotton (i.e., gun-cotton) received from nitration, (gun-cotton) g.v., opens valve to run in cold water, stirs up mechanically, admits steam until water boils, to remove acid up to 1 per cent., and runs off washing water; repeats this operation several times in order further to remove acids used in nitration process and to hydrate unsoluble bodies in cotton; finally washes in cold water and leaves cotton in vat for beater (148) g.v.

washing crystal maker, washing soda maker, see soda maker.

waster; produces lead massicot (a powdery yellow oxide) by a process similar to that used by litharge maker g.v.; furnace is slightly different and temperature of action lower.

Weldon recovery process man, see oxidizer man.

Weldon's plant man; employed on any process in production of chlorine by Weldon process; may do any one or more of processes described below; shovels pyrolusite (natural manganese dioxide) or runs in Weldon mud, from previous working into still, runs in hydrochloric acid, and opens valve which passes steam into still to drive off chlorine; at end of reaction, runs out manganese liquors into tanks in which he also runs milk of lime to neutralize acid, stirs mixture mechanically and pumps it to settling tank, runs off clear liquor and passes it, together with milk of lime solution, down oxidizer towers on which steam and compressed air are passed; blows air through liquors for some hours till manganese is ox-

dised, withdraws samples for analysis at intervals to note progress of oxidation; when complete runs out liquor and mud that has formed into settling tank; runs off clear liquid and runs mud into chlorine still for next process.

white ash finisher, *see* black ash maker; *obsolete*.

white glycerine maker; a process worker *q.v.* who makes pure glycerine from glycerine by rectifying glycerine and clarifying distillate by mixing it with powdered charcoal and filtering; shovels powdered charcoal, in measured quantities, in steam jacketed tank containing glycerine; turns on steam and starts mechanical stirrer to heat and mix tank contents; glycerine vapour passes to condensing tank; opens valve to start air pump, which flows glycerine to a filter.

white lead carbonating man, *see* carbonating man.

Yarvan man (paper); an evaporator man *q.v.* in charge of special type of evaporating pan called a Yarvan in the soda recovery process in paper manufacture, in glue making, etc.

148.—OTHER SKILLED WORKERS.

acid shop worker (celluloid), *acid worker* (xylene factory); general terms covering persons employed on machines for nitrating cotton, or paper made from cotton, in process of making celluloid or xylene; may mix nitric and sulphuric acids in cooled tank, weigh out cotton, put it in nitrating pan, and run in acids, and at end of operation, run off acids to denitrating plant, etc.; *cf.* acid worker (143).

talum kieve man, *see* alum maker.

talum maker; *alum kieve man*, shovels alum cake into tank into which he runs water, opens valve admitting steam to steam jacket or coil, thus heating contents of tank; starts up mechanical stirring gear; makes up solution of potassium sulphate in similar way and runs it into tank, stirring contents mechanically during addition; evaporates solution by continuing steam-heating, and by further stirring, causes small, and therefore fairly pure, crystals of alum to settle out; runs off residual liquor and washes crystals and stirr, mechanically, in cold water to remove impurities and adherent liquor.

ammunition maker; general term covering all persons engaged in making ammunition, *e.g.*, composition maker (explosives), dipper (gun cotton), filler (149) *q.v.*; *cf.* explosive worker.

anatto maker; natural dye worker, vegetable dye extractor; extracts anatto, a yellow colouring matter, from pulp round seeds of shrub grown in West India; shovels seeds into hopper feeding roller mill; puts in alcohol to dissolve out anatto, which drains into storage tank.

anode man (copper refining); anode remover; fits by hand, thick anodes (blocks) of impure copper into a frame and manipulates gantry to lower frame into copper refining tank containing acid copper sulphate solution; similarly, fits in thin cathodes of pure sheet copper on which electrolytically pure copper is to be deposited; switches on current; using gantry, removes anodes when sufficiently large and removes anodes, when most of copper has dissolved, leaving impurities on anode and substitutes fresh block of impure copper as anode.

anode man (gold extracting); *see* for anode man (copper refining) except that solution in electrolytic refining tank is gold chloride, and anodes and cathodes are inserted by hand.

anode remover, *see* anode man (copper refining).

beater (gun-cotton); pulper, pulp maker; tends and operates beating and peeling machine, which he feeds by opening valve admitting in washed nitro-cotton suspended in water; moves lever to start-up paddles which tear nitro-cotton into loose uniform condition and free it from grit and other foreign substances; opens valve to allow peeling gun-cotton to flow into huge blending tank; *cf.* blender (gun-cotton).

beaterman, *see* blender.

benferrer, *benferron* (celluloid); benferrer; washes pulps and bleaches nitro-cellulose to whiten it. **blender** (gun-cotton); mixes all gun-cotton made in explosives factory in a day or other suitable period in order to obtain perfect uniformity, opens valves so that as soon as made, in form of slurry with water, it flows by force of gravity through enormous blending tanks, mechanically agitated, to render it uniform throughout. When blended, runs slurry to centrifugal drier for drying by *strickle* *q.v.*; starts and stops agitators as necessary.

blender (cordite); bundles together various sizes of cordite sticks and sticks up with tape; rejects faulty sticks.

blender (gunpowder); places previously weighed ingredients, i.e., carbon, saltpetre, etc., in a special mechanically driven motor mill, controlled by hand lever; when materials are sufficiently blended or mixed, removes mixture from mill with scoop by hand.

boiler, dyewood liquor, *see* dyewood extract maker.

borax maker; borax refiner; one of a gang of men, usually four, who prepare commercially pure borax from native boron compounds by feeding them to grinding machine, and shovelling powdered compound into tanks, running in water, opening valve admitting steam to heating coil or jacket; mix air mechanically to aid solution of solids; run off liquor to settle, and run off clear solution to crystallizing tanks to cool and crystallize, rake out crystals of borax as formed, or scrape them off sides of tank and strips of lead suspended in liquor.

carmine maker; cochineal dresser; makes carmine (a colouring matter); shovels cochineal insects into steam jacketed kettle, turns on steam, maintains boiling point temperature for some time, and opens valve to strain off liquid into a vat; runs in water and shovels in lump alum, or run in alum solution to precipitate colour; opens valve to drain off liquor and washes precipitated color by running water through vat; dries precipitate by placing it on blotting paper on shelves of drying room.

casten worker; general term applied to workers employed interchangeably in different processes making casten or castens, such as gallatin, erinoid, emphath, anoid, etc.

cell room assistant; assists cell room man *q.v.* in shovelling salt, running in water, starting up stirrer, etc.

cell room man; shovels salt into tank-runs in water and sets mechanical stirring gear in motion, causing salt to go into solution; pumps solution into storage tanks and pumps it thence to electrostatic cells in which chlorine and sodium hydrate are made; controls flow of solution by means of valves; *cf.* *e.c.* worker (149).

centrifugaller; in charge of centrifugal drying machines into which he pumps nitro-cotton, i.e., gun-cotton, in suspension in water from blending tanks; starts centrifugal machine which drives out, by centrifugal force, through fine cylindrical stores, most of water from nitro-cotton; starts dried product out of pipe of machine; starts and stops pump and centrifugal machine by means of levers.

chamber man (white lead); makes white lead by chamber process:

hangs strips of metallic lead in a chamber in which sulphuric acid is waive pots containing acetic acid; has chamber sealed by hand breaking up doorway and caulking of crevasses with rag, opens valve admitting steam to steam coil, thus heating chamber and by opening another valve, fills and by opening another valve, fills chamber with carbon dioxide; leaves chamber till lead is corroded by formation of basic lead carbonate or white lead; unseals chamber at conclusion of process and removes corroded lead as lead carbonate to place where uncorroded lead is extracted by grinding and washing; *cf.* white lead grinder (149), and beck man (149).

charge man (explosives); is in charge of process or processes in a workshop in which explosives, or materials for making explosives are prepared, assembled, including such cartridges, fuses, primers, detonators; supervises certain skilled workers, *e.g.*, blenders, incorporators, or himself performs skilled work without supervision.

chemical worker; carries through various processes under direction of process worker (143) *q.v.* and with assistance of chemical labourers (149) *q.v.*; duties consist in performing any single process operation in which he is usually skilled, for types of which, *see* process worker (143).

cobalt dissolver; a chemical worker *q.v.* who works at a series of pans or tubs in which calcined oxides of cobalt and nickel are dissolved in hydrochloric acid.

cobalt divider; a chemical worker *q.v.* who works at tubs or vats in which cobalt and nickel are separated by precipitation.

cothelene dresser, *see* carrying maker.

composition attendant; assists composition maker (matches) *q.v.* in weighing and mixing materials for composition in which match sticks are dipped to form heads.

composition mixer (detonators, etc.); composition mixer, weighs out match weights out and mixes, by hand, fulminate of mercury, antimony sulphide, magnesium, aluminium and other compositions for percussion caps, detonators, rockets, lights, flares, star shells, etc.; for making mixing, *cf.* composition maker (149).

composition maker (matches); (i) paraffin, or "afrike anywhere" matches. Weighs out prescribed amounts of ingredients, i.e., powdered potassium chlorate, phosphorus, glue, and powdered sulphur, and sets match composition, and mixes them by hand stirring, adding a little water to form mixture into a paste; (ii) safety matches, weighs out ingredients and mixes up composition in two parts, one, in which match sticks are to be dipped, consisting of potassium chlorate and glue, etc., the other, for coating match box, consisting of phosphorus and glue.

composition worker; assist maker; weighs out, measures, and mixes in a grinding machine, or with hand pebble and mortar, chemicals, dry or in solution, in making up patent medicines, ointments, perfumes, etc., according to formulae; sometimes specifies ingredients, designated according to product compounded, *e.g.* drug compoiser, ointment compoiser, perfume compoiser.

compressor, carbonic acid gas; operates a pump which pumps pure carbonic acid gas (carbon dioxide) under pressure through cooled pipes into strong cooled chamber, where gas liquefies at a certain pressure; opens taps in chamber bottom and draws off water, or air, cylinders placed thereunder; operates, etc., apparatuses pumping gases through cooling pipes.

cooler (gunpowder); places trays of black powder in stores, controls, by means of valves, water, or air, drying apparatus; shakes trays periodically to present fresh surfaces of powder for drying, and removes trays when powder is dry.

cordite maker; an incceptorator *q.v.* who also adds sections to assist incorporation of cordite into the cordite paste worker, see moulder, (explosive).

cosmetic maker; a compounder *q.v.* who weighs out, measures and mixes by hand, or mechanically, ingredients of cosmetics according to formulae.

detonator maker, electric; an explosive worker *q.v.* who places, by hand, number of metal detonator tubes in a perforated metal holder, inserts holder in machine which automatically fills tubes with high explosive, sometimes inserts, by hand, strip of platinum wire in each tube; withdraws filled cases ready for use filler (149) *q.v.* cf. detonator filler (149).

digester, digester man (white lead, white lead digester man) pumps acetic acid into wooden tubs or vats containing granulated lead, and pumps out lead acetate solution, when it is sufficiently strong, to carbonizers, cf. carbonating man (143); for conversion into white lead; operates pumps by hand lever, coals and cleans them.

dipper (gun cotton); receives dried cakes of gun cotton from nitro-cotton dryer *q.v.* and dips them, by hand, in bath of melted paraffin wax to obtain protective coating; withdraws and puts aside to cool and solidify wax; regulates valve admitting steam to jacket or bath of paraffin wax, and adds fresh wax as required.

dipper (matchbox) (lead dipping) receives from frame filler (149) *q.v.* dipping frame containing about 4,000 match splints, and beats tops, *i.e.*, heads, of splints by holding frame over heated iron plates, immerses splints head down, in bath of paraffin, and then in shallow tray of warmed match composition, sets frame aside, in heated room, to dry, dips steam-heated tray with match composition at suitable intervals, and regulates flow of steam to jacket of tray to ensure match composition being kept suitably fluid; (working dipping) mechanism, machine and; empties boxes of splints into hopper of machine which conveys match splints automatically, head downwards, in perforated endless belt, over hot metal plate, then into bath of paraffin, and thence over roller which revolves in bath of heated match composition; belt then passes with matches over series of rollers in a heated atmosphere to dry and machine finally ejects finished matches into containers.

displacement man (celluloid); spirit dryer; attends apparatus in which water in nitrated cellulose is displaced by alcohol.

display hand (fireworks); pyrotechnician; assists at fireworks display, lighting fuses to fire rockets, set pieces, roman candles, etc., after fixing fireworks on suitable framework, and attaching fuse for purpose of lighting; travels to any part of country as required; when not engaged, works in factory as a filler (firework) *q.v.*

dryer, fulminating; pours from containers quantities of fulminating powder on to mudin discs placed on table of drying room; switches on electric fan to create air current to dry powder, shakes disc periodically to prevent fresh surface from drying; pours dried powder into vessels for use in detonator mixing.

dryer (gunpowder), see storeman (gunpowder).

dryer, nitro-cotton; drives water out of wet gun cotton by spending it on trays in warm air drying stove, removes it from stove when dry; regulates heat of stove by opening or closing valve admitting steam to steam coils; on, by feeding it into a hydraulic press which compresses it into a cake; while cake is in press, forces alcohol through it, thus driving out residual moisture; removes

cakes of gun cotton and places them on shelves in current of dry air to remove alcohol.

dryer, spirit, see displacement man (celluloid).

dyewood extract maker; dyewood liquor boiler; shovels chips of dyewood into tank, runs in water, opens valve admitting steam to steam jacket, and, using a pole, stirs to promote extraction of dye; when most of dye is extracted, opening a valve, runs off liquor and evaporates to small bulk in steam-jacketed tank.

embrocation maker; a compounder *q.v.* who measures out, weighs, and mixes together various ingredients of embrocation according to formulae.

emulsion maker (photographic); measures and weighs ingredients of emulsion intended for coating photographic plates, films, or paper; mixes, by hand, in tanks or earthenware bowls, or, more usually, puts ingredients in bags and switches on pump, causing him to revolve; when ingredients are mixed stops and empties bag.

emulsion melter (photographic); melts sensitive emulsion used for coating plates, films or papers; places silver-lined vessels, containing cold (jelly) emulsion, in tank of hot water; opening valve, bubbles steam through water to maintain boiling point; removes vessels when emulsion liquefied.

emulsion washer (photographic); washes solidified photographic emulsion to remove by-products; places blocks in emulsion tank, turns on cold water; turns over blocks repeatedly to remove salts in emulsion, after specific period, opening a valve, runs off water and removes blocks from tank for emulsion melter (photographic) *q.v.*

examiner (cartridges), see viewer (cartridges).

examiner, fuse; examines fuses to ensure that they are correctly assembled and filled, tests each fuse with gauge and by hand to ensure that fusing pin is properly inserted; usually is in charge of number of detonator fillers (149) *q.v.*

examiner (perfumery) (i) (boiling department) inspects filled, unsorted bottles of scents and rejects when foreign bodies present therein; passes forward clear bottles for sealing; (ii) (packing department) inspects sealed bottles and rejects when unfit for packing.

examiner, semi fuse; examines safety fuses in first stages of manufacture (semi fuse) and rejects faulty work.

explosive worker; general term for any person handling explosives, in manufacture of cartridges or other ammunition, or of rockets, fuses, etc., *e.g.*, hydride worker, atlas maker, filler (fireworks), filler (149) *q.v.* cf. ammunition maker.

extractor, indigo; indigo maker, natural dye worker; extracts indigo from leaves of certain tropical plants; tips leaves into steam-jacketed vats, runs in water, turns on steam to heat apparatus into action; allows liquor to settle and, opening a valve, runs off clear liquid to waste; removes sediment of indigo and places on floor to dry.

extractor, vegetable dye, see annatto maker.

filler (firework); fills paper tubes or containers with specified quantities of various chemicals, ramming home with ramming tool, ready for dabbler (149) *q.v.*

filler, shell; shell packer; an explosive worker *q.v.* who (i) opens valve, drawing off into vessel measured quantities of liquid T.N.T.; (ii) pours measured quantities into each shell, usually of large calibre; (iii) places each shell in calibre shell cases on holder of Jackson's horizontal extruding machine; adjusts a special screw feed which loads each shell with known weight of explosive; operates

machine by lever; removes filled shell cases as they are automatically released by machine.

finisher (cartridges); is engaged on finish of a number of processes for inspection of finished cartridges; uses gauges, etc., to test size and workmanship; may also himself do repetition work, *e.g.*, inserting cartridge in machine which crimps cartridge case against bullet.

fish guano maker; passes cooked bones, oil, or fish scraps, received from a fisher man (149) *q.v.* through a hydraulic press, to squeeze out any condensed steam or grease, and then through a rotary or other drier to dry them ready for use as manure; feeds and empties press and drier, by means of a shovel.

foetal gland maker, see for detonator maker.

fulminating powder maker; makes fulminating powder by pouring a measured quantity of alcohol into a solution of mercury in nitric acid, opening valve in tank, filters off liquor, scoops out precipitate, places it on mudin frame and allows to dry by leaving in current of cold dry air.

fuses maker; dips, by hand, frame containing wooden match splints into slow burning composition; removes to drying room and, when beads are set, tips them with match composition by another dipping operation.

ganger (aristol); using a gauge, measures thickness of sheets and blocks of casein; marks and sorts them in readiness for further processes in manufacture of aristol, *e.g.*, dyeing, mottling; may also test, with gauge, moulded articles of aristol.

gelatine man (explosives), see incceptorator (cordite).

granulator (i) set pill and tablet machine with cakes of compressed granular powder, in order to crush them into granules; operates machine by hand lever and conveys delivery hopper containing crushed granular powder to storeman (gunpowder) *q.v.*; (ii) (T.N.T.); granulates trinitrobenzene by causing large water cooled metal cylinders to revolve in a tank of water and explosive, the machine scrapes off solidified T.N.T. or cylinder in flakes by means of an adjustable knife, flakes fall down hopper into pecking room below; replenishes supply of explosive at intervals, runs cold water into cylinders, starts-up cylinders and admits steam or hot water to jacket which keeps explosive melted.

graphiter (explosives); coats granular explosives, usually gunpowder, with graphite, by putting granules into a revolving cylinder and adding finely powdered graphite, scoops coated granules from cylinder and passes through sieve by hand.

grinder; miller; feeds and attends to grinding mill to reduce chemicals or raw materials to powder form, to prepare them for sale or for further chemical action; shovels materials into hopper, adjusts and runs machine; sometimes specifically designated according to product ground, *e.g.*, dry grinder, dry grinder (nitrobenzene channel), dyewood grinder, indigo grinder, logwood grinder, madder grinder, ware grinder.

hydrogen bench attendant (airship stations); in charge of bench where hydrogen is extracted from water gas by cooling and compression of carbon monoxide; attends to refrigerating and condensing pump and removal of liquid carbon monoxide; attends to valves supplying water gas and controls flow of residual hydrogen from plant to gas holder.

incorporator; gelatine man (explosives); gelatine water, paste worker (explosives), paste worker (cordite); feeds measured or weighed quantities of constituent parts of various

temperature man (explosive); controls temperature at which an action takes place in explosive factory, by opening or shutting valve which regulates supply of steam, cold water, brine, etc., through coils in, or jackets round vessel in which process is taking place; carefully watches thermometer which registers temperature of contents of vessel.

tester, gas cylinder; tests gas cylinders by attaching them to powerful hydraulic pump with pressure gauge attached, opens valve which slowly increases pressure in cylinder until certain standard is reached; strikes cylinder smartly with sledge hammer to ensure that it will not break when jolted; lowers cylinder into a water-filled brick testing chamber and gauges still lighter pressure.

tooth powder maker; a compounder g.v. who, working from formulae, mixes, by grinding, weighed amounts of china clay, antiseptic powder and aromatic compounds, feeds and operates grinding machine, by shovelling, operates machine by hand lever. treatment maker (glycerine recovery); mixes chemicals used for treating lye, i.e., by-product of soap making, in preparation for recovery of glycerine therefrom.

tub room man, cobalt tub room man; general term for any worker employed in or about dissolving and precipitating tubs and tanks, including cobalt dissolver, cobalt divider g.v.

turner, logwood; turns logwood chips over with a shovel to assist oxidation, prior to use of chips for extraction of dye.

viewer (cartridges), cartridge viewer; examiner, inspector; overlooks work in progress to discover defects; sometimes also gauges cartridges, using ring or rule gauge, to detect incorrectness of machine work; cf. gauger (279).

white lead maker; general term for any person engaged in making white lead by any process.

wringer (gunnott); removes excess of acid or water from gunnott in a centrifugal machine; places gunnott in machine, switches on power, stops machine and removes dried gunnott.

149—OTHER WORKERS.

acid labourer (explosive); a chemical labourer g.v. who assists in acids section of explosive factory, making nitric or sulphuric acids, or acid mixing, storing, decanting, or concentrating plants; cleans out nitric acid retorts, or acid tanks, tends to valves controlling compressed air used for blowing acid from tank to tank, etc.

acid man (dyes, galvanised sheet, etc.); assists in unloading carboys of acid received at works; wheels to acid shed, keeps stock, empties acid from carboys to tanks; returns empty carboys to store; assists in loading lorries with empty carboys.

alkali worker; general term for persons engaged in manufacture of alkali. includes alkali labourer, lime dresser, alkali dryer, caustic pecker, salt man, etc.

alum kieve lad; assists alum maker g.v. by wheeling alum from mill to tanks, shovelling cake alum into tank, etc.

alum mould man; attends to re-erecting of mounds which are filled with re-dissolved (refined) alum runs off remaining liquor bearing lamp of alum in mould which is taken to pieces for removal of alum.

anthracene man; a chemical labourer g.v. employed on anthracene plant of coal tar works; shovels partially dried anthracene into revolving oil extractors (whizzers), or bags anthracene, etc.; cf. anthracene man (143). arsenic labourer; a labourer g.v. who assists generally in arsenic plant, wheeling coal, and ore, clearing out condensing chambers and flues, and in

any unskilled work connected therewith.

beck man; wash beck man, wash house man; shovels dumped powdered white lead which contains some unshored metallic lead into vat; runs in water, and operates mechanical stirring gear which stirs white lead powder into suspension; runs off liquor into another tank, leaving sediment of uncorroded blue lead in vat; may repeat process two or three times to ensure extraction of all metallic lead; allows liquor to stand, thus causing white lead to settle, runs off water and shovels out white lead to dry; or runs or pumps off white lead as a slurry to filter press.

bed man (white lead), blue bed man, set setter, lime bed.

bed woman (white lead), blue bed woman; as for bed man (white lead); obsolete, as work is not now permissible for women.

bitumen worker; opens valve to run off residue of bitumen from bitumen still into barrels or tanks, while still hot; cleans out still with scraper and brush, ready for next charge.

bleaching powder man; assists bleaching powder maker (143) g.v. in raking lime over and removal of powder; puts lids on casks of bleaching powder and removes casks to store.

bleach blower; loads lime into wheelbarrows, wheels it into gas-tight chambers for conversion into bleaching powder, spreads it in furrows on floor of chamber; in modern mechanical plant, so regulates inflow of steam lime and chlorine gas by means of valve, that finished bleaching powder emerges from outlet.

bleach shop worker (celluloid); assists bleachman (146) g.v. in attendance on washing, pulping and bleaching machines.

bleaching house man (gunpowder), see mixing house man (gunpowder).

blower, blower man; (i) attends to valves controlling compressed air which he uses to blow liquids, usually acids, not easy to pump from storage tanks to plant, or vice versa, or from place to place in plant; sometimes specifically designated, e.g. acid blower, chemical blower, sulphuric acid blower; (ii) fan man, jet man; controls blower or fan for driving gases from place to place in chemical plant.

blue bed worker, see setter, lime bed.

boarder-up (matches), see filler, frame.

bogie man (explosives), bogie runner; charge house man (gunpowder), runner, service trolley, trolley man; wheels bogies (small trucks) of raw materials, intermediate or finished products, between stores and scattered workshops of explosive factory as required.

bonier, bone (manners); bone dresser (cartridge); (i) tips, shovels or places raw bones in large iron pots or pans, runs in water and opens valve admitting steam to jacket or coil, thus boiling bones to extract all grease and dirt; runs off liquor leaving cleaned bones ready for grinding; (ii) places bones to be cleaned in covered metal pot, and controls valve of open steam pipe leading thereto; digests bones with steam under pressure, runs off liquor as before.

bone manure man; general term for any unskilled worker, other than a maintenance man, employed in a bone manure factory, boiling, sawing up, calcining and grinding cleaned bones or assisting in any of these operations. bone meal man; a grinder g.v. who grinds up bones for bone meal.

bottler (chlorine), see packer, chlorine. bottler (disinfectants), corker; operates bottle-filling machine which fills four bottles simultaneously. the, by hand, loosely corks bottles and presses corks into position with small power press.

breaker, ice; a chemical labourer g.v. who feeds and operates a machine for breaking up ice into small pieces for

refrigerating purposes in chemical works; places ice blocks into machine and depresses lever.

breakerman (shale), see feeder, breaker's.

breaker, pyrites, see dresser, pyrites. breaker, stone; a labourer who breaks pyrites or other ores, etc., by hand with sledge hammer or who places or shovels ore into hopper of crushing machine, in preparation for treatment in a furnace; shovels broken ore into baskets or trucks for transport to other parts of plant.

brine house man; an e.v. worker (143) g.v. who cleans, by hand, aeres or filters through which brine is pumped to cell room for electrolytic chlorine production, sometimes also does other work, e.g. that of cell cleaner g.v.

briquettes maker; makes briquettes from iron ore or steel scale for use in blast furnaces, shovels clay and broken ore or scale into grinding, mixing and moulding machine, which is controlled by levers.

bronze powder maker; attends to milling machine in which he grinds to a fine powder a bronze-coloured alloy of copper and zinc; shovels small metal nuggets or shavings into chase or hopper; watches smooth working of machine.

buddle man, see washer, buddle.

burner, briquette (iron ore); fires kiln in which briquettes of iron ore dust and a binding composition are burned; loads and unloads kiln with briquettes with hand rake, etc.

by-product worker (coke oven); general term for any man engaged in by-product departments of coke oven plant; includes benzol distiller (162), Pump man (363), scrubber man (363), sulphate labourer (149), tar distiller (142) g.v.

camphor cleaner; a camphor shop worker g.v. who does unskilled work in connection with distilling or washing camphor for recovery of camphor of first class.

camphor shop worker; is engaged in manufacture of (a) synthetic camphor, (b) pure camphor from crude camphor; assists processman (143) g.v. in weighing and weighing in large loads of camphor, for distilling, cleaning, tanks, etc.; cf. camphor maker (143).

cap maker, percussion cap maker; general term covering persons making percussion caps, including cap drawer (204), cap filler g.v.

capper, places holder containing cartridge cases in automatic machine which loads them with primed caps; operates machine and removes holder when primed.

capsule maker, medicated; pours, etc., powdered or liquid drugs into hopper of automatic capsule making machine, attends machine lever, and turns handle of lever, or of getting in materials as required, by pulling in strips or blocks of gelatine.

carboy man, see filler, carboy.

carrier, see service waiter (cartridges).

carrier-away (matches); carries trays of matches from dipping machine to box filling machine for use of box feeder (matches) (949) g.v.

cartridge maker; general term covering workers on automatic machines which assemble parts of cartridges. fill and finish them off, including loader, charger, filler, primer, rammer, service waiter, shotter, turn-over g.v. centrifugal attendant (celluloid); whizzer; places nitro-cellulose, after washing, in hydro extractors (whizzers); switches on power, stops machine when water no longer drains away and removes nitro-cellulose.

charge house man (gunpowder), see bogie man (explosives).

charger (cartridges), see loader, cartridge.

charger, hand burner; screens oxide (polysulphides of iron received from gas works) with shovels against vertical screen; shovels oxide into furnace through several holes; rakes over contents by hand with rake; pushes contents to discharging hole in furnace bottom, when burnt; cf. oxide burner (148).

charger, retort; runner (shale burner); tips buckets of crushed oil shale into hoppers which allow it to fall by gravitation into retort.

charger, rocket, see filler, rocket.

chemical labourer, chemical works labourer; performs work of unskilled nature in chemical works; assists chemical worker (148) g.v. or process worker (143) g.v. in various chemical processes, such as emptying, filling or cleaning out tanks, coal wheeled, cleaning out filter presses, stills, vats; unloading and carting raw materials and sending and carting about finished products; shovelling, shovelling products into vats, on to hearth of furnace, attending to stoking of fire, running liquors into and out of vats, etc., under instructions of process worker (143) or chemical worker (148); making samples of products at stated intervals from plant to laboratory for analysis; removing bags from filter presses, and taking out dried contents of bags; shovelling wet chemicals, e.g. crystals from crystal vats, into pan of hydro extractor, and removing dried crystals from pan with scoop and packing into barrels; washing out bottles or other containers by hand or by means of special machine, placing bottles inverted on racks in drying room or chamber, or any of the simpler operations performed by chemical worker or process worker under immediate supervision of same; sometimes specifically designated, e.g. acid works labourer, alkali labourer, sulphate plant labourer.

cleaner, cell; cleans out cells in electrolytic plant for manufacture of chlorine, after residual solution has been run out; removes, by hand, brine deposits from electrodes and cathodes and refills cell with brine.

cleaner, filter press; a chemical labourer g.v. who cleans out filter press after use; washes out valves, cleans pipe connections by means of hand rods, and removes traces of solids from filter press cloths and metal sieves.

cleaner, retort pipe (mineral oil refining); cleans, and keeps in working order, pipes conducting gases from retorts, in which oil shale is heated, to condensers, where oil and ammonia are condensed; uses long-handled tool with sagger end which he moves backwards and forwards along pipe wrapping out condensed tar, etc., which settles on sides of pipe and would choke it if not removed; cf. sagger (see works) (869).

cleaner, still; cleans out stills at end of distillation operation; in mineral oil refining removes coke from bottom of stills by breaking it up and shovelling out into bins.

cleanser, bone (manure), see boiler, bone (manure).

cobalt blue worker; assists cobalt furnaceman (143) g.v. making cobalt oxide, by shovelling and crushing oxide and other chemicals on to hearth of furnace, feeding and attending to furnace fire, etc.

collar, tape (safety and mining fuse); winds by hand 24 feet of safety or mining fuse on to a bobbin and secures bobbin with tape.

composition blue worker (gunpowder); see mixing house man (gunpowder).

composition maker; composition mixer, mixing pyrites (explorer); a mixer g.v. who mixes, by machine, fulminate of mercury, antimony sulphide, magnesium, aluminium and other compositions for percussion caps, detonators, rockets, lighted fuses, star shells, etc., for hand mixing; cf. composition maker (148).

cookhouse woman (white lead); fills small earthenware pots with wet cakes of white lead from filter presses, cf. white lead filter pressman, places them on shelves of large stove heated by steam pipes, and thus dries white lead; when dry removes pots from stove; shovels as work is not new person for season.

coolerman; (i) controls, by means of valve, circulation of cold water through coils or pipes in tanks of acids, etc., where temperature must be kept low; (ii) attends to vats in which strong solutions of salts are allowed to cool and deposit crystals; runs in hot solutions, and runs out weak cold solutions; removes, by hand, crystals from vat sides.

coppper bossman; turns over, by shovelling, lining of saddle iron pyrites (sulphide of iron), lying in open air, to stimulate oxidation, and thereby convert it into coppers (sulphide of iron).

corrosive disinfectant, see bottle (disinfectant).

corning house man (gunpowder); see granulating house man.

crate boy; carries crates of empty match boxes from store to box filling machines for use of box g.v., or to match-making machine, where the matches as made are automatically filled into boxes.

crusher, bone (manure); a crusher (manure) g.v. who attends and feeds a crushing machine with bones which they have been cleaned by bone boiler g.v., to break them up prior to grinding by bone grinder g.v.

crusher man, see grinder.

crusher (manure); shovels raw material into hopper of crushing machine, which breaks it up to size convenient for next process, that of grinding; watches machine for faulty work; cleans and oils working parts.

cutter, cordite; sets, feeds and operates a guillotine machine which automatically cuts cordite thread or tape to required lengths according to work for which it is required.

cutter, dyewood; saws, by hand or by small circular saw, pieces of dyewood into convenient size and feeds these pieces into special chipping machine, which cuts them into chips ready for extraction of dye by boiling in water; cf. dyewood extract maker (148).

cutter, logwood; as for cutter, dyewood.

cutter, pulp (artificial silk); pulp worker; cuts up and weighs pulp for chemical treatment in initial processes of artificial silk making.

cyanide worker; general term covering persons engaged in making cyanide compounds from any of their various sources.

cylinder house man (gunpowder); places, by hand, pieces of wood (usually alder or willow) into metal cylinders; clamps lid and drags them into a furnace for curing.

den man; shovels or takes out, into den man's tubs, finished artificial manure from dens, i.e. steel cylinders in which phosphate manure is made, and wheels bogies to store where he tips out manure.

depositing department worker (copper); fills tanks with acid, assists sagger man (148) g.v., and does other unskilled or semi-skilled work in depositing department, i.e. department where copper is refined by electrolytic process.

detonator drummer, see sifter, detonator.

detonator maker, see filler, detonator.

devilman (fertiliser); attends devilling, disintegrating or grinding machine into hopper of which he places or shovels bones that have been cleaned by bone boiler g.v. and/or crushed by bone crusher g.v.; cf. grinder.

digester man (manure); shovels into a digester house, tank, or meat still, which is slowly carried by a spiral conveyor along a pipe, in opposite direction to a current of steam; controls, by lever, etc., speed of conveyor or inlet of steam so that effluents are thoroughly cooked; cf. all fat, etc., boiled out and carried over by steam current.

digger man; controls, by lever or switch, steam or electric mechanical digger, which digs out finished artificial manure from dens, i.e. steel cylinders for conveyance to packing room or store.

dish man; attends to shallow vessels in which alum cake is cooled; opens valve to run in liquor, puts in dividers and removes cooled cake from trays, chipping wire pieces; dissolver (salt); in electrolytic preparation of chlorine, shovels excess of salt into pan, runs in water and moves lever which sets stirring apparatus going thus promoting solution of salt in the water; allows excess salt to settle and runs out solution into storage tanks.

drawer, retort (mineral oil refining); drainer, retort drainer; rakes out, by hand rake or machine, spent oil shale from retort into bins.

dresser, lime; shaker, lime, i.e. quicklime, by pouring water on it, either mechanically, modern practice, or by hand; sifts lime when slaked, by shovelling it through sieve or into hopper of mechanical sifter.

drainer, pyrites; pyrites breaker; a stone breaker g.v. engaged in crushing, by hand with sledge hammer, pyrites, an ore containing sulphur and iron for use in manufacture of sulphuric acid.

dropper, retort dropper, see drawer, retort.

dryer, alkali; places alkali crystals in hydro-extractor, i.e. a perforated cylinder revolving at high speed, with shovels or scoop; moves lever setting motion in the water; allows excess salt with scoop when alkali is dry.

dryer, ammonium nitrate; unloads casks of ammonium nitrate; breaks up nitrate with hammer, shovels into Atlas drying machine, and sifts dried powder by hand.

dryer, colour (dye); takes cakes of wet colour from drying press and lays them out in drying ovens; switches on fan, or gas drying apparatus; removes cakes from ovens when dry and trucks to store.

dryer (cordite), see layer-out (cordite).

dryer, cotton (gun cotton); places, by means of fork, washed cotton, before nitration, on travelling band of drying chamber, through which a current of warm air passes carrying off moisture; regulates speed of band and heat of chamber; places bins for reception of dried cotton when actually needed from chamber, ready for nitration (gun cotton) (143) g.v.

dryer, oxalic acid; fagel man (oxalic acid); as for dryer, alkali.

dryer, splint (match); splint frames which have been treated by impregnator g.v. on shelves of drying oven; removes frames when dried and places them on trolleys for conveyance to clippers (143) g.v.

dubber (fireworks); closes and seals ends of paper tubes containing stars and fuses; folds and varnishes in by filler (fireworks) (148) g.v.

dusting house man (gunpowder); places (gunpowder); shovels or scoops gunpowder into hopper of machine which sieves gunpowder after gravity in order to extract dust, which is returned to incorporate (148) g.v. for further treatment.

efflu man (glycerine recovery), crude glycerine efflu man; opens a valve, runs dilute solution of glycerine in water into machine, where excess traces it by a continuous process of evaporation in vacuum pump; removes, by shovelling, salt which is

deposited from solution and which falls into separate tank; runs out concentrated glycerine for purification.
emptier, tray; empties blocks of paraffin wax out of trays in which they have been broiled by sweaters (143) g.v.; returns empty trays to tray fillee.
examiner, see tester, milk.
fan man, see blower

fatty acid worker; general term covering all persons employed in a works in which fats are hydrolysed and resultant acids are neutralized with alkali in manufacture of soap; may perform any part of work which comprises placing, or shovelling acid lumps into steam-jacketed tank, running in dilute acid or alkali solution, and opening valve admitting steam to steam jacket to melt fats, operating mechanical stirring gear, shovelling in salt to salt out soap mass, running out separately glycerine, fatty acid, or soap, i.e., alkaline salt of fatty acid, and salt; assists in unskilled part of work of purifying these compounds.
feeder, breaker's; *breakerman (shale);* tips lumps of oil shale into hopper of crushing machine, and tends it whilst shale is broken up ready for burning; shovels crushed shale into trucks for removal to retorts.
feeder, splint (matobes); feeds frame-filling machine or dipping machine with splints; cf. frame fillee, dipper (145).

fertiliser maker; general term for any worker engaged in making artificial manure, including bone bailer, bone crusher, devilman, stone miller, mixer, screener, slag phosphate worker, trimmer, dog man g.v.
filter, blue lead, see sifter, blue bed.
filter, cap (peristaltic cap); cap primer, primer (cartridge); feeds and attends machine for filling brass percussion caps with explosive composition; as for detonator fillee.
filter, carbonyl; carbonyl man; runs into carbonyl, feeds storage tank. Measured quantity of acids or other liquid chemicals which need glass containers, ready for despatch; cocks, seals, labels carbons when filled and loads for pickup or wheels to store.
filter (cartridge), cartridge fillee, tea loader, cartridge;

filter, detonator; *detonator maker, detonator weigher;* an explosive fillee g.v. who fills small copper detonator tubes with fulminate of mercury or other detonating composition, by machinery. Places fulminate of tubes in holder, places holder in machine for automatic filling and withdraws when tubes filled, ready for use fillee or, if pressing required, for detonator pressor g.v.
filter, explosive fillee; general terms for any explosive worker (148) g.v. who fills, by hand or machine, explosive into cartridges, shells, bombs, grenades, including detonator fillee, cartridge loader; sometimes specifically designated, e.g. fuse fillee, mine fillee, mine fillee, tube fillee.
filter, frame; *frame-filler (matobes);* puts match splints into hopper of frame-filling machine, and places empty frame in position; and moving levers, fills perforated rectangular wooden frame with match splints ready for hand dipper (145) g.v.
filter, gas cylinder; controls valves connecting gas (oxygen, acetylene, carbon dioxide, nitrous oxide, etc.) pumps to gas cylinders, and continues pumping gas until a predetermined volume of gas has been pumped in as dial, stop, pump, closes valve and detaches cylinder.

filter, klier (explosive); assists klier boiler (148) g.v. by filling boiler with cotton, etc.
filter, oxygen, as for filter, gas filter.
filter, rocket; rocket charger; fills rockets with explosive and coloured fire compositions, wraps up each separately and connecting sections of rockets by a fuse.

filter, tray (mineral oil refining); fills trays with blocks of paraffin ready for sweating; work sometimes done by sweater (143) g.v.

filter-out, sheep dip; draws off liquid sheep dip from a tank into metal drums and casks, and solders openings of drums.

filterer, see mixer, silk dips.

filter man; pours or runs liquids containing precipitated solids, or suspended impurities on to frame of muslin, canvas, linen or other filtering medium; removes precipitate, after washing it, on to blotting paper, and places it on shelf of drying cupboard or chamber, to dry.
filter pressman, cobalt filter pressman; (i) operates filter press in which black oxide of cobalt is filtered and pressed into cakes; (ii) cobalt pressman, cobalt washer pressman, washer operates filter press in which precipitated oxide of cobalt is washed and the water finally expressed.
filter press man, white lead; operates filter press in Birmingham process of making white lead; constructs pipe which regulates flow of white lead suspended in water until canvas bags of filter press are filled; pressure generated by pump forces water out of canvas bags leaving comparatively dry "leaves" of white lead in bags; closes valve connecting pump to filter press, and turns lever applying heavy pressure to contents of press, squeezing out almost all liquid from bags; opens press and removes "leaves" of white lead, which are taken to white lead storeman g.v. to be dried.

finisher; gums labels on bottles and packets of chemicals, affixes cork capsules, covers corks with wax or oiled paper caps to prevent evaporation of liquid contents.
fireman, still; stokes coal or coke fire under a coal tar still, and sees to burning of waste gases (from still) therein; opens small doors (or ports) which admit air to allow gases to burn.
firework maker; pyrotechnist; general term for persons engaged in making fireworks, mixing compositions for explosion or coloured effects, assembling, wrapping, attaching instructions, etc. includes roller (150), fillee (148), chaffer, and other workers not specifically named.

formaldehyde hand (erinoid); hardens block or sheet resin by immersion in baths containing formaldehyde solution; removes after set period.
fragman (centrifugal dryer), see dryer, oxide acid.

fuse coverer, fuser; an explosive worker (148) g.v. who attaches, by hand, conical tin fuse-caps to shells, or inserts shell into a machine and depresses lever to attach fuse-cap.
fuse maker, safety fuse maker; an explosive fillee g.v. who fills and makes safety fuses.

gall roaster; places gall nuts on iron tray and roasts over gas jets or in oven until shell cracks, so that tannic acid can be more easily extracted for use in process of ink manufacture, or as dye for staining furs or skins.

gelatine capsule maker; pours pure clarified melted gelatine, draws off from steam-heated tank of gelatine, into capsule moulds to form flexible or hard capsules used as containers for liquid or for powdered medicines, drugs, etc.

getter, pitch; pitch noder; a labourer g.v. who breaks up, with steel wedges and heavy hammers, solidified pitch which has been run out as residue from tar still into cooling tank, and thence into huge brick-cut pitch bay; loads broken pitch into wheelbarrows or crane skips for removal.
gizling house man (gunpowder); reeler (powder mill); shovels, by means of scoop, granulated gunpowder into revolving barrel which, by rubbing, glass surface of granules; cf. granulator (148).

granulating house man (gunpowder); carries loose man; assists granulator (148) g.v.

grinder; crusher man, miller, mill hand, mill lad, millman; feeds and operates a grinding mill, either edge runner type, by shovelling material to be ground, on to pan of mill, or roller type, by shovelling material into hopper fixed above rollers, to reduce to powder a raw material, or intermediate or finished chemical product; sometimes specifically designated according to the material to be ground, e.g. animal charcoal grinder, arsenic grinder, basic slag grinder, bauxite grinder (manufacture of aluminium compounds), bone flour grinder (manure), bone grinder (manure), brimstone grinder, charcoal grinder (gunpowder), guano grinder (manure) (in some districts he does not usually feed mill, this being done by a labourer), red lead grinder, white lead grinder.
grammetter; ties grammets, loops of rope, on shells to protect copper bands, e.g. of animal charcoal, which project and which might otherwise be injured in transport.

halper (wet process); copper millman (wet process); millman (wet process); shovels or tips crushed copper ores into vats, and opens precipitate into smelting furnace; also does other manual labouring work in connection with treatment of copper ores by wet process.
hydro extractor (operated); shovels wet crystals of chemical compounds into perforated drum of hydro extractor machine, which rotates by means of machine, i.e. rollers, round of cylinder, which drives crystals by centrifugal force; shovels out dried crystals when operation is complete.
impreginator; fillee frame, cf. frame fillee, with safety match splints and dips, bands and set period in a bath containing impregnating solution, ether phosphate of aluminium, or boracic acid, to prevent glowing of wood after match is blown out; puts frames on shelves in drying room to dry ready for dipping.

jet cleaners; cleans metal pots with nozzles to ensure free flow of alk dip in spinning of artificial silk.

jet man, see blower.

kill labourer (vitreous enamel); feeds kiln with prepared ingredients of vitreous enamel; draws material, taking care to distribute powder evenly; rakes out fused product, which he quenches with water from a hose; rakes this over to expedite drying of finished enamel or flux.

knocker-down, bleach knocker-down, see packer, bleach.

layer-down (cordite); dryer (cordite); *storeman (cordite);* stores (cordite); lays out cordite cord and cordite sheets of drying stores or rooms, where it is heated by steam pipes to drive out acetone, ether, or alcohol used in incorporation of explosive, cf. incorporator (149).

liquor man; is engaged upon an acid plant; does unskilled or semi-skilled work, e.g. opening valves to allow mother liquor to flow back from crystallising tank, starting pump to draw liquor to Glover tower, testing liquor for residue for chemist's test.
loader; a chemical labourer who loads packed chemicals on to trucks, lorries, vans, etc.

loader, cartridge; cartridge fillee, charger, fillee (cartridge); an explosive fillee g.v. who fills cartridges with cordite for other explosive and covers charge with felt or cardboard wads, by machine, or for fillee, detonator.

luter; applies lute or luting, composition to exclude air, with a brush or screw threads of fuses, plugs, etc., ready for firing.

matchmaker; general term for persons engaged in making or packing matches, includes frame fillee, impreginator, racker-out, splint dryer, splint feeder, splint splitter g.v.

mill, mill hand, mill lad, millman, see grinder; sometimes specifically designated according to product to be milled, e.g., alumina millman, bauxite millman, coprolite miller, miller (manure), phosphate miller, stone miller (manure).

millman, copper millman (wet process), see helper (wet process).

millman (gunpowder), assists grinder (143) or incorporator (145) g.v. in mixing house.

mixer, bark; mixes fresh tea bark, i.e., tannery waste not previously used in white lead manufacture, with bark that has been used, by turning over both with fork or shovel; prepares mixture for use by line bed setter g.v.

mixer (chemicals, disinfectants, fertilizers): (i) runs liquid for mixing, in specific order, into tank and moves lever setting mechanical stirrer in action, to ensure complete intermixing of contents, as complete chemical action; when action is complete, or, liquids thoroughly mixed stops mechanical stirrer; pumps fluid mixture into storage vats; (ii) mixes liquid and powdered solid in similar way, by hand stirring using a wooden stirrer; adds solids by use of scoops or shovel, or by opening door of chute; (iii) mixes two solids by shovelling them together into hopper of grinding mill and operating mill.

mixer, composition, see composition maker.

mixer, dry (medicinal powders); a mixer (chemicals) g.v. who mixes powdered chemicals, etc., according to prescribed formulae, usually by weighing out proportions, emptying them into pan and stirring up by mechanical stirrer or by hand.

mixer, silk dups; *gilder*; prepares and filters silk ready for spinning artificial silk.

mixing house man (gunpowder), *mixing house worker* (gunpowder); *blending house man* (gunpowder), *composition house worker* (gunpowder); assists in gunpowder mixing room, wheels ingredients in from store, assists in weighing them, pours them into large mixing pans and stirs up by mechanical stirrer until mixing is complete; empties mixed gunpowder out of pan by means of scoop into barrels.

mixing operator (explosives), see composition maker.

mundic cleaner; assists pyrites harner (145) g.v. which pyrites ore to be cleaned, shovels harner ore therefrom and wheels to warehouse or to railway trucks.

nitroglycerine powder worker, *nitroglycerine worker*, *nitroglycerine millman*; an explosive worker (148) g.v. engaged on repetition work in nitroglycerine manufacture, e.g. opening valve to run glycerine into acid tank, measuring liquids, washing nitroglycerine with soda water solution, opening valve to pass explosive through cooling coils.

packer, alkali, as for packer (solids); usually packs alkali, i.e. soda crystals etc., in casks or brown paper packages.

packer, arsenic; packs finished metallic arsenic oxide in casks ready for despatch.

packer, bleach; *bleaching powder packer*, *bleach packer*, *black packer*, *black packer*, *black packer*, *black packer*; shovels bleaching powder from floor of chamber, where it was made, down through holes in floor whence it falls through chutes directly into casks below; in mechanical bleach production, attends to draw hopper, pushes away filled casks and replaces them by empty ones under delivery spout.

packer, caustic; attends to handling of troughs and ladles for transferring caustic liquors from pot to pot, and assists caustic finisher (143) g.v. in packing it into drums and sealing them.

packer (chemicals); *liquids*, runs measured quantity of chemical liquids into bottles, tanks, carboys, drums, or other suitable containers; corks, or

in other ways seals container, and may also label same, ready for stores or clients; *solids*, *crystals*, *powders*, etc., packs weighed or measured quantities of solid chemicals into cardboard, wooden or tinplate containers, casks, or sacks by means of scoop or shovel, ties up or seals container, and labels same according to contents.

packer, chlorine, bottler (chlorine), *solvent man*; opens valve and so draws off liquid chlorine from strong steel tank, in which it collects as made, into steel cylinder on weighing machine, until known weight of chlorine is in cylinder; removes filled cylinder on trolley.

packer, sulphate of ammonia; *salt filter*; shovels fixed weight of sulphate crystals into sack, and sews up sack ready for despatch.

paint machina girl; places number of match box covers on endless feed belt of machine which adds to each paint, on which "safety" matches will ignite, to sides of match box covers; or, removes covers as delivered on hand from machine.

paraffin attendant; attends to and replenishes as necessary steam-heated bath of melted paraffin used in heated splines are dipped, either in dipping machine, or by hand dipper (145) g.v. in a frame; shovels wax into bath, stokes furnace fire or adjusts steam to steam packet, etc.

paste boy, *sheep dip*; wheels empty drums or casks to sheep dip filler-out g.v.; brushes labels over with paste ready for sheep dip labeler (340) g.v. and stencils marks on drums and casks.

picker (gun cotton); an explosive worker (145) g.v. who picks grit, etc., from cotton before making of gun cotton.

pick harrow, see getter, pitch.

picker, prepacer; (i) applies by hand with brush or knife, medicinal preparation of adhesive consistency upon linen, leather, silk, or other fabric; (ii) operates machine to do work described above.

picker, detonator; puts electric tubes into perforated plates ready to receive explosive charges; as for filler, detonator.

pocket man (copper), *pocket picker* (copper); shovels calcined copper ore from furnace, and empties it from barrows into washing tanks preparatory to being treated with acid in wet process.

precipitator (copper), *precipitator man* (copper); zincine run (600-cwt) machine which calcines copper ores in tank, runs in acid, controls mechanical stirring apparatus; drops or shovels in iron scrap, turnings, etc., to solution formed, and stirs to assist precipitation of copper from solution; runs off liquor and adds fresh water to wash deposited copper, ready for melting.

preparer (i) see prepacer, cotton; (ii) see prepacer, paper.

preparer, cotton (artificial silk); *preparer*; feeds machine with cotton to be teased out, i.e. loosened, prior to chemical process.

preparer, paper (artificial silk); *preparer*; feeds sheets of paper to machine which cuts them up prior to chemical process.

presser (cordite); using hand masher, runs weighed amount of cordite paste into metal cylinder having perforated base, and passes to moulder (explosive) (145) g.v.; sometimes himself moulds.

presser, detonator; presses detonating composition into detonators, tubes, etc., by special press; places filled detonators, etc., of filler, into press and depress lever.

press house man (gunpowder); assists *primer* or *pressman* (148) g.v. in press house; wheels trucks of milled gunpowder to *pressman*, and tips or empties it into hopper (145) g.v.; places cakes of gunpowder on trucks and wheels them away.

press man, cartridge; feeds and operates machine for compressing

gunpowder into cylindrical pellets for use in blasting charges in mining.

pressman, cobalt; *cobalt washer* *pressman*, *washer pressman*; see *filter pressman*, *cobalt*.

primer, cap (percussion caps); *primer* (cartridges), see *filler*, *cap* (percussion caps).

primer, electric (ammunition); as for detonator filler.

printer, wad; stamps or stencils size of slot on end of cartridges.

purifier, effluent; (i) attends to purification of liquors allowed to run to waste from chemical or other works, shovels into prepared hollows, special chemicals to render liquors harmless; (ii) controls flow of liquors through settling tanks, shovels therein neutralising agents and similarly removes sediment when tank is empty of liquor.

pyrotechnist, see *firework maker*; cf. *pyrotechnist* (145).

racker-out, *racker*; matches out of frame in drying room after they have been dipped and dried, and empties into wooden containers; cf. *dipper*, (hand dipping) (145).

reloader (cartridges); runs home, felt or card and wad, into paper case in hand press, after it has been filled with explosive.

reeler (cordite); winds cordite, after smoothing by charge moulder (148) g.v., on to light wire, alternated zinc wheels, ready for drying.

reeler, fuse reeler (mining and safety fuses); winds fuse on to reels by machine; fixes reels on machine and sets machine in motion; stops machine and removes reels when indicator shows that correct length has been wound.

reeler (powder mill), see *glazing house man* (gunpowder).

refined chalk worker; a chemical worker g.v. making refined chalk to be used as a base for pills and tablets; shovels powdered chalk into tank, runs in water and stirs stirring gear in motion; runs off pured chalk in suspension in water and repeats operation till chalk is thoroughly washed and all impurities have sunk to bottom of tank; allows liquor to stand to deposit chalk; runs off water and shovels out purified (levigated) chalk on to trays to be dried in drying chamber.

retort assister, see *rodman*.

rodman; *refill*; carries oil shale retorts which have been jammed, by pushing shale with long iron rods.

roller man (white lead); feeds and attends to power-driven crushing rollers, through which he pushes corroded lead strips to powder up white lead ready for the process of extraction of metallic (blue) lead, which has escaped corrosion, by *beck man* g.v.

runner (explosives), see *hogie man* (explosives).

runner (shale burning); see *charger*, *retort*.

salt filler, see *packer*, sulphate of ammonia.

salt man (alkali); a *hogie man* g.v. salt man; salt from store to salt tank, where wheels salt from store to salt tank, decomposing pan man (143) g.v., or in electrolytic process of chlorine manufacture, shovels salt into solution, in which it is used up as a solution.

sawyer, bone (vanner); saws up large bones by half off them against a circular saw, & separates best parts, used for cutlery handles, from inferior parts which are to be ground up for manure.

scrubber (manure); tends an automatically fed screen which separates oversize particles from material discharged from grinding mills; oils bearings, flanges and stops screws required by means of a lever; may also shovel rejected lumps into trucks or barrows for further grinding.

separator, gun cotton; an explosive worker (145) g.v. who assists nitrobar (gun cotton) (145) g.v. who operates valves to run off nitrating acids after process, or to run in water in place of acids.

service writer (cartridges); carrier, trucker; carries on small hand trucks, materials or half finished products to or from various workers.

service writer (explosives), see bogie man (explosives).

setter, blue bed; bed maw (white lead), blue bed sian, blue bed worker, blue lead filler, blue lead setter, stock maw; spreads thick layer of spent tan bark on floor of large brick chamber; sets thorough slake earthenware pots containing dilute acetic acid, and rests strips of metallic sheet lead on top of pots; covers this layer with boards; builds thence another layer, and so on, until stock so made reaches nearly to top of chamber; pauses due of chamber and keeps closed until corrosive action complete, e.g., six weeks; meanwhile decar, takes down stock, removes white lead formed.

setter, blue lead, see setter, blue bed.

setter, pots; assists blue bed setter g.v. by putting pots in blue beds in stock process of white lead making.

setter, stove, see storeman, white lead.

setter, vat; breaks up, with sledge hammer, black ash, of black ash maw, revolver fire (143), into lumps, which he wheels away; shovels material into lixiviation vats, runs in water, bubbles in steam, heating until liquor reaches standard by Twaddell test, runs off liquor and shovels precipitate from vat for sulphur recovery.

shaker, splint (matches); puts match splints into a machine which shakes them parallel, straightens, cleans and deposits them in a box; carries boxes of splints to trolleys for despatch to match-making department.

sheep dip maker; chemical sheep dip, attends steam-heated pans in which he dissolves ingredients of arsenical sheep dip in water; starts and stops mechanical stirrer to add mixing; runs-off cooled liquor to concentrating tanks; sulphur sheep dip, general term for any person engaged in manufacture of sulphur sheep dip, e.g. drying, grinding, packing, etc.

shooter (cartridges); places shot or bullets in hopper of machine and moves lever operating automatic apparatus which fires bullets in or loads shot into cartridge case.

sifter, detonator; detonator drumman; as explosive worker (148) g.v. who feeds, starts, and stops machine which sifts detonators with sawdust after fumes of mercury charge has been pressed in, cf. detonator presser, to remove any local particles of fulminate that may adhere, replenishes saw dust hopper at intervals as required; places detonators into, and takes from, barrel of machine.

sifter (cordite); works-up, by hand, pulp of nitro-glycerine and gun cotton, transfers to a sieve box alongside leaden, mixing trough, and rubs pulp through sieve to find and extract all impurities and lumps in it.

sifter (gunpowder), see dusting house man.

sifter (nitro-glycerine powder); after mixing of nitro-glycerine with kieselguhr, carefully runs dynamite powder through metal sieve to extract any lumps which may have been formed.

stor, sizing house man (gunpowder); shovels granulated gunpowder into machine to be automatically sifted into sizes.

slag phosphate worker (mannure); general term for any unskilled worker, other than a maintenance man, employed in a slag phosphate works, e.g. grinding, wheeling, mixing, bagging, snap cap maker; tends machine which makes snap caps, for toy pistols, by sticking two narrow strips of paper together and enclosing between them at regular intervals a small quantity of explosive paste; machine may also cut caps apart; feeds machine with paper, gun, and explosive paste as required.

sorter (mannure works); picks out foreign matter, horns and hoof, pieces of metal, rag, leather, etc., from bone heaps; also sorts bones, to separate better material for use in manufacture of bone handles, buttons, etc.; cf. bone sorter (150).

spinner, semi-fuse; controls automatic machine with hand lever which spins cotton yarn round a centre core of gunpowder; replaces empty bobbins of cotton with full ones, watches proper flow of gunpowder through glass panel.

spirit shop worker (celluloid); assists spirit mixer (148) g.v. in spirit shop in recording stock of spirit, and amount issued to celluloid processmen; distributes, by hand, carefully measured quantities.

tapout girl; passes filled boxes of matches down a spout or chute of automatic wrapping machine or down spout supplying wrapper (matches) (349) g.v.

stock man, see setter, blue bed.

star maker, starlight maker; an explosive worker (148) g.v. who attends filling machines which load carbide cases of star shells with explosive and lightening chemicals; replenishes machines with chemicals, inserts cases, depresses levers.

stove hand (artificial silk); stove maw (artificial silk); places yarn in hot air stove to dry.

storeman (alkali); attends to drying soda ash for drying finished products; shovels alkali into and out of stores, regulates gas or steam valves or stoves furnace to heat drying room.

storeman (artificial silk), see stove hand (artificial silk).

storeman (cordite), see layer-out (cordite).

storeman (paints and colours); attends drying stoves in which he dries natural pigments after being refined by levigator (148) g.v.; places trays containing moist pigments on shelves of drying stove and removes them when dried.

storeman, white lead; stove maw; (i) places white lead pulp in trays, places trays on wheeled metal frames, and puts into steam-heated stoves until white lead is dry; regulates steam valve to heat stove; removes white lead from stove when dry; using trolleys, white lead from trays, fills small earthenware pots with wet cakes of white lead from filter press, cf. filter press man, and places them on shelves of large steam-heated stoves to dry, removes pots carefully when white lead is dry.

stripper (cordite), see layer-out (cordite).

stripper (artificial silk); removes yarn of artificial silk from stoves when dried.

stripper (gold, electrolytic process); using special tool, strips off deposit of gold from cathode upon which it is deposited out of solution by passing an electric current.

stripper, white bed; white bed man; empties stack or chamber and carries lead, now corroded and changed into white lead, in trays, to mixing rollers, where it ground ready for levigating in order to separate from it any remaining metallic lead.

sulphate of copper worker; assists copper sulphate maker (148) g.v. by wheeling over, running acid into tray, shovelling sediment from vats, etc.

sulphate plant labourer; does unskilled work in connection with a sulphate of ammonia, or other sulphate, plant; cleans out tanks, runs in acids and other liquors, removes crystals from crystal pans, operates and feeds hydrotractor for drying crystals, and bags crystals ready for despatch; may also attend to lining of ammonia stills, assist at stills, and help sulphate maker (148) g.v. generally tank man (tar distilling); discharges and loads crude or refined liquids from or into tanks, connecting up

flexible pipe lines and operating valves and pump; cleans tanks and tank wagons.

tar plant attendant; general term for persons employed on plant in which coal tar is distilled and individual products extracted and purified, includes tank man g.v.

tar works labourer; does general labouring work in tar distilling plant, e.g. wheeling coal, opening and closing valves admitting or running off liquor, cleaning tanks, cf. tank man (tar distilling).

tester, silk; denier, examiner; samples, weighs and tests artificial silk for quality when spun.

tetryl corning worker; places tetryl, high explosive, into spinning or grinding machine and depresses lever for automatic making of pellets used in shell primers.

tillage works labourer (East Coast); a labourer preparing dried and pressed sewage sludge for manure; shovels manure from drying trucks into barrows, feeds and attends grinding and sack filling machines, etc.

tipman (shale burning), see tipper (spent shale).

tipper (spent shale); tipman (shale burning); takes spent shale, after distillation from hatches on to spent shale heap or bing.

trimmer (mannure); shifts or trims by shovelling heaps of slag phosphata, etc.; shifts other raw materials or manufactured products at rock sheds or at docks.

trolley man, see bogie man (explosives).

trucker, see service writer (cartridges).

turner-over, cartridges; turns in mouth of shell caps and cartridges (spinning cartridges) to hold charge in position, using a power or hand lathe.

twister, detonator; threads by hand, electric wire through holes in cap of detonator and twists wires together by hand.

valve man, see packer, chlorine.

varnishar, fusa; (i) varnishar time runs of time fuses, etc., by dipping in varnish; (ii) varnishar parts of metal fuses.

wash back man, see back man.

washer; a chemical labourer g.v. who cleans chemicals by shovelling them into tanks running of water, dips in notices, mechanical stirring apparatus, or stirring by hand, allowing chemical to settle out and running off water with soluble impurities.

washer, anodes; washes spent copper anodes and withdraws from electro-depositing tanks, to detach metallic sludge which is to be treated for silver and gold.

washer, buddis; buddis man; washes, by directing hose on, tar bark taken from white beds, i.e., bins, beds in which corrosion of waste, strips is complete with formation of white lead, to remove residual lead and prepare bark for reuse.

washer, cathode; washes off, by hand, sulphate of copper from pure copper cathode after removal from electro-depositing tank.

washer (celluloid); feeds and attends machine through which sheets of nitro-cellulose, after bleaching, are passed over and under rollers in several water baths.

washer, crude glycerine salt; salt washer (glycerinal); a washer, g.v. who collects and removes salt through out of glycerine liquor which is being concentrated; salt falls into special vessel at bottom of evaporating apparatus, and may be extracted by opening valve and allowing it to run out, or by blowing it out by means of compressed air; washes salt to remove glycerine, by stirring it up with cold water, and running off liquor.

washer, drum (glycerine); places over steam pipe and so washes out new or old lumps and drums in which refined glycerine is to be packed for transport; removes lumps to drain.

washer (gold electrolytic process); removes, by hand, anodes and cathodes from electrolytic gold recovery bath; immerses them in bath containing strong sulphuric acid to clean.

washer, salt (glycerine), see washer, crude glycerine salt.

washer, still; a chemical labourer, e.g., employed in washing out residues in stills to clean them for further use.

wash house man, see back man.

wax vests maker; general term for any person engaged in making wax vests matches from specially prepared thin wax taper; includes duffer (148), frame filler, spout girl.

weigher; weighs out on special weighing machines (some working semi-automatically) quantities of chemicals, acetone, raw cotton, gun cotton (into rubber bags), etc., for (during manufacture of explosives or for charging of cartridges, shells, etc.), sometimes specifically designated, e.g., acetone weigher, charge weigher, cotton weigher, nitro cotton weigher.

weigher, detonator, see filler, detonator.

weigher, pulp, see cutter, pulp (artificial silk).

wheeler, wheeler-off; wheels out trolley or truck various materials in chemical works; wheels broken ones, stones, etc., from heap to furnace and ash or residues from furnace to bins; wheels in coal and wheels away cinders, wheels liquids in tanks, loads of anodes, etc., on trucks; sometimes specifically designated, e.g., ash wheeler, coal wheeler, white salt wheeler.

white bad man, see skipper, white bad.

whizzer (celluloid), see centrifugal attendant.

whizzerman, naphthalene; shovels or scoops naphthalene crystals taken from naphthalene crystal vats into large metal hulk-extractor or whizzer and moves lever operating same to extract as much coal tar oil as possible, before sending crystals on to naphthalene pressman (148) g.e. willower, gum-drier, places cotton, from picker (crystallizer), e.g., into willowing machine, starts up mechanical beaters for removal of dust and removes willowed cotton from machine.

wincing man (copper), see precipitator; chalcocent term.

Sub-order 2. — Makers of Paints, Oils (not Mineral), etc.

151.—FOREMEN AND OVERLOOKERS.

chargeman, polish; assists polish foreman g.e.; checks mixing of ingredients and gives directions to labourers (in boot, floor, etc., polish factory).

foreman, blue mill; in charge of mixing department of factory where laundry blue is made; supervises work of weighing out and mixing of components.

foreman fat maker, foreman fat melder; superintends all processes in making of edible and non-edible fats, sorting of bones, etc.; bleaches melted fat by stirring it and adding sulphuric acid and alkaline permanganate to precipitate impurities.

foreman, oil house; attends to storage of refined oil, and superintends men engaged thereon, and cleaning, etc., of tanks.

foreman, polish; supervises making of boot, floor, furniture, etc., polish, and is in charge of workers engaged thereon; allocates duties, maintains discipline, engages and discharges workers; determines ingredients and supervises weighing and mixing of them under instructions of chemist.

head varnish maker; a foreman in charge of works or part of works in which varnish is made; in charge of men employed; gives orders as to

processes to be carried out, and is responsible to works manager for quality of varnish made.

process man (paints and colours); general term for man in charge of a process or processes in paint or colour manufacture; gives instructions as to quantities to be mixed or ground, as to fineness of grinding required, etc.

small foreman, spell tone (change); a foreman in charge of a shift or spell in seed crushing, oil expressing, and cake-making plant; supervises proper working of conveyors, crushing rolls, hydraulic presses, etc.; allocates duties, maintains discipline, authorizes pay sheets.

152.—PAINT GRINDERS.

blender and dresser, colour, see mixer (leather cloth), cf. colour blender and dresser (139).

cobalt blue maker; scoops mixture of weighed proportions of cobalt oxide and alumina into hopper of grinding mill which grinds it, forming dry colour; mixes powdered colour either with gum, glycerine, and water in mixing machine to form moist (artists') colours, or with oil, etc., to form paint.

coloured stucco maker, see stucco paint maker.

colour maker (leather cloth), see mixer, colour.

colour striker, see tints mill hand.

colour worker; general term for any worker employed in making paints and colours, including colour grinder, and colour striker g.e.

dilatator maker; makes special water paint, called dilatometer, on wet or dry form, by mixing colours with a foundation, or body, of powdered lithopane, a white substance consisting of mixed zinc sulphide and barium sulphate; weighs ingredients, places in grinding mill, adds water, stearic and stops mill by lever; shovels paint from mill.

dry colour maker, see grinder (dry).

enamelled colour worker; general term for person engaged in grading, mixing, and striking enamel paint.

enamel maker, enamel paint maker, see mixer (enamel).

enamel maker (hollow-ware); mixes and grinds up in mill various components used to make high impervious enamel for applying to hollow-ware; shovels components into mill and similarly removes after grinding; cf. grinder (enamel).

grinder, colour grinder, enamel grinder, paint grinder; pugger (enamel); shovels lump colours into hopper of roller grinding mill or into pan of edge runner, and by hand lever, operates mill which reduces them to powder ready for use in making paints, enamel paints or linoleum paints; runs in oil or water for wet grinding; shovels colour from machine or opens trap to run colour into a container; in case of enamel, shovels weighed components into cake grinding mill.

grinder (dry), dry colour grinder; dry colour worker; makes high impervious enamel and operates mill in which colours are ground in dry state, i.e., without oil; sifts colours and shades them, by mixing with zinc white or other base.

lash maker, see colour mixer (leather cloth).

mixer, colour; (i) see mixer, paint; cf. colour mixer (155); (ii) (leather cloth) colour worker, wash maker; feeds and attends machine grinding colour and oil together for printing patterns on leather cloth, linoleum, etc.; as for colour grinder.

mixer, black; a paint mixer g.e. who mixes lamp black and oil by machine for coating black leather cloth.

mixer, enamel; enamel maker, enamel paint maker; attends mixing machine into which his tips or shovels paste, made by enamel grinder, ground colours and linseed oil; adds round varnish and gold size and controls

stirring apparatus which mixes ingredients thoroughly; runs out enamel when finished.

mixer, paint; colour mixer, paint maker; shovels or tips dry colours, as produced by colour maker and colour mixer (158) g.e. into mixing vat, and runs in oil, or shovels in other colour, and sets stirring apparatus in motion thus mixing thoroughly; grinds them very finely in a mill, to render them suitable for use in painting.

painter's bench hand; a paint mixer g.e. who mixes, by hand, colours with driers, oils, etc., under direction of painter (152) g.e.

paint maker, see mixer, paint; sometimes specifically designated, e.g., antiseptic composition paint maker, silicate paint maker, stucco paint maker.

paint mill man, paint miller; mixes white lead pulp with oil in semi-jacketed grinding mill; shovels in white lead, admits oil, starts up mill, turns on steam, runs off mixed paint to cooling tank.

pugger (enamel), see grinder (enamel).

shaker, colour shaker, see tints mill hand.

tints mill hand, tints mill man; colour striker colour shaker, shaker; tips weighed quantities of paint colours into mash tub; starts and stops mechanical mixing arms; adds small quantities of different colours to match required tint; discharges contents of tub through trap in bottom or shovels them out.

sine white maker; a paint mixer g.e. who mixes in a mixing machine zinc oxide with linseed oil to make a paint known as sine white.

153.—OTHER SKILLED WORKERS.

acidifier (candles); attends to copper vessel containing lime fatty acids combined with lime from autoclave; cf. autoclave man (candles); also runs in measured quantities of sulphuric acid, opens valve admitting steam to steam coil thus boiling mixture, and stirs it mechanically; adds liquor to settle and runs off fatty acids, leaving sludge of lime salt (sulphate) to be washed out.

acidifier (oil), acid man (oil), see refiner, acid.

albumen man; blood refiner; pours blood of animals into shallow pans; skims off upper layer of pale yellow serum which rises to top on standing; filters it through silk gauze into store vessels; places these in drying room until serum becomes solidified, i.e., ready for use in special gum making.

autoclave man (candles); in charge of an autoclave, or copper digester, placed underground, in which melted fat, as received from fat melter (159) g.e., lime and water, are subjected to steam at high pressure for sterilizing and regaining flow of steam which hydrolyses fat, producing lime salts of stearic or other fatty acids and glycerol; allows liquor to stand and separate into two layers, glycerol water and fatty acids, and runs or pumps them off, glycerol water to glycerine plant, and fatty acids to acidifier (candles) g.e.

black maker; a colour mixer g.e. preparing black pigments or paints from charcoal, graphite, calcined ivory or bone, carbon black, drop black, etc.

bleacher, shells; removes natural coloring matter from gum lac by stirring it up in lime and water. shovels gum lac into tank, runs in water and shells in lime; stirs mixture mechanically till colour of gum lac is absorbed by liquor, when it is then run off; shovels out bleached product and leaves to dry in drying chamber.

blender, oil; oil mixer; (i) mixes together oils in mixing tank, in varying proportions according to use for which oil is required, runs oil into tank and sets mechanical stirrer in

mation; runs out finished product into storage tanks; (u) (varnish making) oiler (ternish); pours boiled linseed oil from time to time to gum pot containing melted gum, quantity of oil added varying according to nature of varnish to be made; cf. runner, gum.

blue-mould maker, see pressman, blue, boiler, bone (size and glue), see boiler, glue.

boiler, fish oil; controls valves regulating steam-heating of pans into which he empties buckets of fish livers; draws off fish oil which exudes during process, and removes livers at end of operation by shovelling into trucks.

boiler, glue; bone boiler, glue boiler, glue vatman, vatman; controls temperature by means of valve of steam-heated tanks into which he runs water and tips degreased bones, or scraps of hides, leather, skins, etc., into vatman's boiling until a sample of liquor sets to a firm jelly on cooling; runs liquor off to another tank for clarifying, and boils up residue of scraps with fresh charge of water; also usually performs duties of glue maker g.v.

boiler, oil; oil boiler (kitchen); attends to pot or tank into which he pours, runs, or pumps, linseed or other oil, which he heats to boiling point over a furnace; stirs oil mechanically during process and sometimes adds nickel, cobalt, litharge, manganese, or other driers, to stimulate oxidation, for use in paint, varnish and linoleum making.

boiler, oil (cortine); cortine maker; an oil boiler g.v. who subjects linseed oil alone to prolonged heating, causing it to polymerize, in making cortine.

boiler, printing ink varnish (or oil), as for boiler, oil.

boiler, resin (paper, cardboard); stir maker; empties powdered resin and solution of soda ash from containers into steam-heated boiling pan; turns valve cock to admit water and steam and stirs mixture by hand with wooden stirrer; draws off size and strains through sieve into storage vat; boiler, sizing, see size maker.

boiler, varnish; tends gum pot into which he runs mixed molten gums and linseed oil, mixed by gum runner g.v., over a furnace, keeping temperature fairly constant at about 500° Fahr.; continues boiling until samples withdrawn show that amalgamation of oil and gum is complete; removes pot from furnace to cool ready for thinning by varnish maker g.v.

boiler, varnish oil, as for boiler, oil, candle maker, see trowler, candle.

child's light maker, see night light maker.

cod liver oil maker; a fish oil boiler g.v. who makes cod liver oil by heating cod livers in a steam-jacketed pan.

colour maker (ceramic); shovels weighed quantities of metallic oxides and powdered china, etc., into hopper of grinding mill, and grinds them up together to mix them intimately, places powdered mixture into crucibles and sets crucibles by means of tongs into small furnace to fuse mixture; superheats firing of furnace, usually gas fired; draws out crucible of fused material whilst still hot, and pours out fused mass into water to break it up ready for next operation of wet grinding, in a ball or pan grinding mill into which he shovels it.

colour maker (paints and colours); introduces colours, in dry state, from various chemical substances; usually makes solution of chemicals by shovelling it into tank, and running in water, or other solvent; stirs mechanically to promote solution; runs this solution into tank containing solution of another chemical similarly prepared, stirs liquid, usually mechanically to promote thorough mixing, allows precipitated colour to settle and runs off liquor remaining; washes precipitate by running in water, stirring up mechanically and allowing precipitate to settle, and running off

washing liquor; repeats this till precipitate is purified; shovels out precipitate on to trays for drying.

colour man; (i) assists colour maker g.v. in taking charge of dry colour room, serving out weighed amounts of colour to colour mixer g.v. in proper proportion.

colour worker (soap); a processman who makes colouring solutions for soaps; mixes chemical constituents in grinding mill; shovels ground mixture into steam-heating tank and opens valve to admit water or weak acid; adds measured quantity of liquid or powdered dyestuffs; starts mechanical stirrer and admits steam; when prepared, runs solution to vats or direct to soap boiling vats.

colour worker (xylene); working from formula, weighs out, measures, and dissolves in spirit, dry colour base required for colouring xylene (celluloid); runs colour, in measured quantities, from tank into another tank containing nitro-cellulose.

composition maker (printer's oiler); vatmen broken up clarified glue in water, melts it with treacle in a steam jacketed tank, stirring mixture until dissolved; adds a little Paris white (whiting), and mixes them up again whilst still warm; pours mixture into wheeled tanks or casts into shlong blocks for despatch.

cortidine maker, see boiler, oil (cortine).

degreaser, benzine degreaser, bone degreaser (benzene process), see extractor, grease.

decoloriser; attends vessels in which extracted oil is steamed to make it colorless; controls valve regulating inflow of steam and runs off condensed steam from decolorised oil.

dip maker, digger; dips and withdraws, by hand, one wick, or a number of wicks attached to a frame, into a steam-heated trough of molten wax specially prepared for making thick altar candles; continues alternately dipping and withdrawing (by raising and lowering counterbalancing pulley) attached to frame over a trough until wax has adhered to wicks; hangs frames of dips on shelves to harden; substitutes

dope maker (acroprene dope); pours or runs constituents of acroprene dope, acetone, benzol, cellulose acetate, and benzyl alcohol, etc., into large covered tank with a medium high speed stirring apparatus, and, when dope is thoroughly mixed, draws it off into wooden or metal drums.

engine oil maker; as for oiler maker (coranic).

engine oil maker, engine oil man; an oil blender g.v. who blends or mixes lubricating oils.

extractor, grease; extractor man; (i) benzene degreaser, bone degreaser (benzene process); degreaser; extracts grease (solvents) from kitchen stuff, or butchers' scraps, by dissolving fat in petrol or kerosene in agitated pans; shovels kitchen stuff, etc., into pans, runs in solvent, and controls mechanism for agitating mixture, runs off solution formed, into steam-heated solvent vessel from which he evaporates off solvent, leaving liquid grease in pan; (ii) fills large perforated metal container with kitchen waste and butchers' scraps, and places it in covered machine in which it is made to rotate rapidly; opens valve admitting steam to container, thus causing fat to melt and to pass by centrifugal force through perforations of container, together with condensed solvent, into outer jacket of machine; collects fat and water thus separated, cools and runs off water from solidified fat; empties residue from container for making into fertilizer.

extractor, oil (seed crushing); fills extracting pans with crushed oil seeds, which may or may not have been pressed to extract majority of oil, runs in some solvent, usually petroleum spirit, allows to stand so that spirit can dissolve residual oil in

seeds; runs off solution of oil in spirit to distilling plant, where solvent spirit is distilled off leaving oil; repeats process until most of oil has been dissolved out of seeds; attends valves, and discharges of spirit.

extractor (woollen mill), oil extractor; and purifier; superheats recovery of wool fats and oils from spent wool-scouring liquors, passes these into a tank and runs in refined oil or tallow which causes fats to separate and rise in form of cream; runs off liquid through filters leaving grease on floor of tank to be shovelled out for purification.

fisher, gelatin; glue preparer, glue stock preparer, lining man, skin man; shovels or tips skins and scraps of hides in brick lined pit of lime and allows them to soak to remove flesh adhering to them, removes them from lime pit, and, using scraping knife, scrapes away flesh still loosely adhering; washes in open tank, steeped in dilute acid to remove lime, and then in water to remove acid; runs out water and removes skins by means of long poles or forks, ready for glue boiler g.v.

fisher, gelatin, see glue boiler g.v.

glue maker, see boiler, glue.

gold beater's skin maker; dips skin, prepared by gold beater's skin preparer g.v., in alum, singeing and white of egg, and when dry, cuts it into small pieces ready for use by gold beaters (298) g.v.; secret processes are also in use.

gold beater's skin preparer; immerses outer coat of intestines of cows in weak potash solution, allows it to soak, with stirring and scrapes with a knife, then beats it, soaks in water and finally stretches it before passing to gold beater's skin maker g.v.; secret processes are also in use.

grader, fat; by inspection grades fat, on its receipt at factory into edibles, i.e., fats which can be purified sufficiently to be made into margarine, etc., and technically sorts fats into appropriate bins or heaps.

grease maker (lubricating); tips, shovels, or runs fats, bellows, etc., into steam-jacketed tank, in which they melt; runs in solution of alkali in order to saponify them, and adds a specified quantity of mineral oil; stirs mixture by mechanical means until required blend is obtained; runs it off into kegs, barrels, etc., for despatch.

grinder, ink; writing fluid grinder; in most factories, mixes, by grinding together ingredients, used in making ink, either with pencil and mortar or, more usually, in a machine with rollers; using shovels, feeds and empties machine; starts and stops it by pulley lever; may also grind evaporated ink into ink powders.

grinder, printing ink; an ink grinder g.v. who feeds and attends a roller grinding machine, for grinding or chilled steel rollers, for grinding ingredients of printers' ink; decides when process is complete.

grinder, writing fluid, see grinder, ink.

ink maker; writing fluid maker; makes ink by adding proper proportions of water to mixed red and ground ingredients; heats mixture, if heating is required, to proper temperature; sometimes specifically designated, e.g., marking ink maker.

Japan maker; makes a special kind of black or colour ink; mixes asphaltum for black Japan; or mineral colours for coloured Japan, in a pot set in a furnace fire, and pours in, and mixes hot linseed oil and a drier (red lead, copperas, or litharge); boils up mixture and mixes in turpentine to thin it ready for use; runs off into drums for export.

lacquer maker; lacquer mixer; a spirit varnish maker g.v. who makes a lacquer, or transparent varnish, by dissolving shellac, or damar gum, coloured with aniline dyes, in methylated spirit, or wood alcohol.

lampblack maker; burns refuse oil in a brick chamber into which, by regulating valve, he admits only a limited supply of air, causing burning oil to give off smoke and soot; scrapes soot from off sides and roof of chamber; if required in manufacture of printing ink, places soot from chamber in a crucible and sets it in a furnace to dry off residual oil and tarry matter; withdraws crucible, allows to cool and removes lampblack.

liming man, see fletcher, gelatine.

mastic maker; a resin maker *q.v.* who makes mastic, a special resin used in making pale-colored spirit varnishes and for lithographic work; shovels weighed quantity of resin into a tank, measures and pours in spirit; allows resin to dissolve and runs off solution into bottles.

mixer and charger, blue; mixes, usually with a stirring apparatus in a pan, ingredients of washing blue, which have been measured out according to a precise recipe.

mixer; grinds, by machine, ingredients for making blacking, boot polish, dubbin, etc.; tips powdered material into mixing vessel, puts in wax or fat, or runs in oil according to nature of material to be made, opens valve admitting steam to steam jacket of vessel thus heating contents, and moves lever starting up mixing apparatus; runs out blacking, etc., into steam-jacketed hoppers of filling machines, or into tubs for export; sometimes specifically designated, *e.g.* blacking mixer, boot polish mixer, dubbin mixer, etc.; also colour mixer, barium blacking mixer, metal polish mixer, polish mixer.

mixer, colour; mixes dry pigments under direction of colour maker *q.v.*; pours pigments of different colours into mixing machine operated by hand or mechanically, consisting of a vessel provided with rotating metal sails, stops machine when mixture in homogeneous and colour uniform throughout; opens valve to run colour to storage tank; *cf.* colour mixer (152).

mixer, fat or oil (soap making); oil mixer; pours oil or shovels fat from barrels into mixing race feeding steam-heated tanks and by opening valve admits steam to jacket or bubble-in steam, thus heating and melting solid fats; controls stirring apparatus to ensure thorough mixing.

mixer, ink; weighs out according to formula and mixes ingredients of ink either by hand, or more usually, in a special machine, with water or other solvent.

mixer, lacquer, see lacquer maker.

mixer, oil; (i) see blender, oil; (ii) see mixer, fat or oil.

mixer, printing ink; weighs out or measures quantities of ingredients of printers' ink (lampblack, varnish and pigments); tips them into tank and stirs by hand or mechanically to ensure thorough mixing, runs out printers' ink into drums for export; in printing works, changes consistency of printing ink, as required, by adding proportions of one or more of ingredients and mixing it up together; usually done by manager, or machine minder (529) *q.v.*

moulder, candle moulding; candle maker; pours melted candle wax into hot water jacketed moulds, through centre of which wick passes; cools moulds by running off hot water to hot water tank and replacing it by cold water, thus solidifying wax; raises candles out of moulds into frames by means of lever and cuts sticks, leaving frames of wire; replaces spoons of cotton candle wick used up by candle moulding machine.

moulder, night light; *cf.* for moulder except that night light has no wick when moulded, see wicker.

night light maker; child's light maker; general term for any person engaged in making night lights, including night light maker (130), night light moulder, night light refiner, and wicker.

oil blower; runs oil into tank, opens valve admitting steam to coil which heats oil, and also opens valve which blows compressed air through heated sludge night light maker (130), has become viscous by oxidation and suitable for use as lubricating oil.

oller (varnish), see blender, oil (varnish).

oxidizer, oil (linoleum); (i) see boiler, oil; (ii) oxidizes linseed oil by running it into steam-jacketed vessel and opening valve admitting steam to steam jacket, thus heating oil; raises temperature as oxidation proceeds; stirs oil during heating process by control of mechanical agitator; (iii) tips boiled linseed oil over scrim (coarse cloth), hung in festoons, causing it to dry at intervals (usually of a day) until almost oxidized (solidified) oil are about $\frac{1}{2}$ to 1 inch thick; cuts down skins of solid oil ready for subsequent processes in oil-rich manufacture.

petrifying liquid (paste) maker; a paint mixer (152) *q.v.* who mixes ingredients, largely silicates of soda, to form a liquid paste which is applied to stone surface as a preservative.

preparer, glue; glue stock preparer, see fletcher, gelatine.

presser, blue; blue pressman, pressman (blue); blue moulder maker; shovels or tips powdered laundry blue as received from blue mixer and charger *q.v.* into hopper of press which automatically presses blue into cakes; removes cakes ready for wrapping.

printers' varnish maker; shovels or tips a mixture of raw gums into large cast iron gum pot, and tends furnace which heats pot; stirs, by hand, continuously to ensure equal heating and to melt gums; when mixture is hot, gradually removes pot from furnace and allows contents to cool somewhat, then pours in turpentine, stirring to ensure complete homogeneity; runs out varnish into cooling tanks and therefrom into drums for export.

printing ink maker; general term for any worker engaged in any process in printing ink manufacture; includes printing ink grinder, printing ink mixer.

pressman (soap); in charge of one or more presses in soap manufacture under direction of chemist; directs work of soap boiler, caustic and specialty band, checker, cleaner, cooler, crutcher, frame filler, berring machineman, slabbing machineman, miller, pan man, fat purifier, trimmer (159) *q.v.*

process worker, glue; a general term for one in charge of glue making processes, and able to carry out all operations; includes glue boiler, glue dryer (150), glue moulder (150) *q.v.*

process worker (oil cake); general term for workers engaged in extracting or expressing oil from seeds and in compressing residual seeds into oil cake; is in charge of a process or series of processes and is responsible for smooth running of plant under his control; includes oil extractor, cotton oil refiner, pressman (180) *q.v.*

purifier, oil, see refiner, oil.

purifier, and, see extractor (wooden mill).

putty maker; tips ground whiting, and a little white lead into a tank, pours in linseed oil, and stirs mixture mechanically to work it up into a stiff paste, *i.e.* putty; removes paste by means of scoop or shovel and packs it in cakes.

putty powder maker; (i) melts metallic tin in heated pot; skins tin oxide from off surface of metal; sometimes adds white lead powder to tin

oxide so obtained and mixes them together; (ii) heats metallic tin with dilute nitric acid, to form tin oxide, decants off liquid and washes oxide with water, dries oxide in oven, and mixes it with a little white lead powder.

refiner, acid (oil); acidifier, acid maker (*cf.*); runs acid into steam-heated tank, and adds small measured volume of sulphuric acid, opens valve admitting compressed air to tank thus stirring mixture by bubbling air through; opens valve admitting steam to steam coil in tank to warm up mixture, then allows liquids to settle, runs off lower layer of impure acid; runs in acid and stirs up little caustic soda solution to neutralize acid left, runs out partly neutralized caustic solution, then runs in water and stirs again for final purification; allows to settle, and runs out water leaving oil pure ready for pecking; *cf.* and refiner (142).

refiner, blood, see albumen maker.

refiner, night light; child's light refiner; refines paraffin wax for use in making night lights; places cake of wax in large steam-jacketed tank, opens valve admitting steam to jackets thus melting wax, runs in dilute acid or other purifying agent, and stirs liquid vigorously by mechanical stirrer; allows liquid to separate, and runs off purified wax.

refiner, oil; oil purifier; refines oil expressed from seeds, or extracted from fish or kitchen waste, by running it through special oil filter to remove any solid impurities, and/or, by boiling it with water, caustic soda solution, acid or other special chemical mixture in tank containing steam coil, allowing liquors to separate and running off purifying solution, or by distillation, *cf.* distiller (142); supervises plant, makes periodic examination of thermometers for temperature, draws off samples for test by chemist, and directs operations of men employed in the refinery; sometimes specially designated, *e.g.* cod liver oil refiner, cotton oil refiner, engine oil refiner, medicinal oil refiner, rape oil refiner.

refiner, spermaceti; refines spermaceti, made by spermaceti maker *q.v.* by melting it with water in steam jacketed tank, stirring up liquids and allowing spermaceti to cool and solidify; opens valve to run off wax with impurities, and runs wax solid to spermaceti presser (150) *q.v.*

resin maker, rosin maker; sorts out resin in various qualities as imported, and picks impurities therefrom; shovels sorted resin into a coke-heated metal pot to melt, and opening valve, runs liquid resin into moulds to set.

runner, gum (varnish); charges gums into covered gum pot, and attends to careful heating of pot by gas or gas furnace; stirs gum continuously during heating process, by mechanical stirrer, and mixes in boiled linseed oil from time to time, as added by oil blender (varnish) *q.v.*; when of right consistency, runs varnish into cooling tank.

size maker; (i) sizing boiler; boils up residues of leather, etc., scrap, left after making glue, in steam-heated pans of copper; regulates temperature of pan by valve controlling flow of steam runs off size through sieve into tubs, etc., to cool and solidify to a jelly; usually done by glue boiler *q.v.*; (ii) (paper, cardboard), see boiler, resin.

skin man, see fletcher, gelatine.

spermaceti maker, spermaceti man; runs spermaceti oil into tank, and cools it, then opening valve passing cooled brine through a wire mesh in cooling jacket of tank, thus causing spermaceti to crystallize out; runs off residual sperm oil, and shovels out solid residues of spermaceti, into barrows *etc.*, for conveyance to spermaceti refiner *q.v.*

spirit varnish maker; french polish maker; tends apparatus for dissolving gum shellac in alcohol in making spirit varnishes; shoves weighed quantity of gum shellac into alcohol in a drum which revolves and oscillates automatically, to assist solution of shellac; runs out liquor, when all shellac is dissolved, into drums or bottles for export.

sponge cleaner; bleaches sponges by dipping them, by hand, in a string bag successively in solution of potassiumate of potash, hydrochloric acid, and lime water; washes bleached sponges to cleanse them from chemicals.

sponge cutter; see sponge trimmer.

sponge dresser; combines duties of sponge cleaner and sponge trimmer *q.v.*

sponge trimmer; sponge cutter; trims supported sponges by cutting off uneven edges with scissors.

stamper, stamping machine attendant; feeds slabs or tablets of soap to hand-operated, or power stamping machine, which, by means of dies, stamps impressions and wording on them.

varnish maker; opening a valve, runs live-rod into steam heated tank and adds known quantity of gum; regulates steam valve to maintain required temperature; adds turpentine to this mixture, by hand, a little at a time and starts mechanical stirrer to ensure thorough mixing; when correct proportion of turpentine has been added, and mixture well stirred, allows it to stand in large tanks to cool.

vatman, glue vatman, see boiler, glue twicker; cuts off short piece of proposed night light wick, and passes it through piece of perforated tin in centre of cardboard bottom of night light; slips moulded night light, in which a hole has been left during moulding, over wick.

wick preparer; attends wick making machine, which plate cotton threads loosely into wick; soaks wick in solution of borax and sulphate of ammonia and leaves it to dry; replaces empty cotton spools on wick-making machine with full ones.

wood stain maker; a varnish maker *q.v.* who makes a varnish, which dries dull or flat when applied, by adding tung oil during stirring and mixing of ingredients, according to formula.

writing fluid maker, see ink maker.

159—OTHER WORKERS.

alley girl (soap); inspects and passes (or rejects) tablets of soap as they leave stamping machine; places on one side those with defective imprints or coarse surface; *cf.* stamper (158).

barreller, oil barreller; in charge of burrelling of by-products or of finished oil in oil refinery; runs oil from storage tanks into barrel, closes barrel and seals it, stencils details of contents on outside.

barreller, fish oil, as for barreller.

bean man; a hand conveyor attendant *q.v.* who attends castor oil seed conveyor.

bleacher, beeswax; wax bleacher; (i) bleaches beeswax by exposing it to sunlight; (ii) melts beeswax and stirs it up, in a steam-jacketed vessel with mechanical stirring apparatus, with chromic acid or with hydrogen peroxide, or runs a stream of oxidized air through it; allows bleached wax to cool and solidify, runs off liquid and stirs up wax with hot water to remove last traces of chemicals, and allows it to cool and solidify.

blocker (candle); moulder (candle); runs purified molten paraffin wax into small moulds in candle moulding

machine and places over moulds metal covers which become attached to cooled wax blocks; removes solid blocks of paraffin wax from machine and places in power press which forces wax into containers and separates from metal covers.

blood collector; places tin pans below slaughtered animals to catch blood; empties pans into barrels which he carts when full to albumen maker (158) *q.v.* in blood shed.

blue mill labourer; weighs out correct proportions of ingredients of laundry blue according to formula; mixes them roughly by means of turning over with scoop, and feeds mixture to hopper of grading mill by means of scoop or shovel; removes powdered and mixed product.

bogey lad; wheels small trucks of material to man engaged in weighing out ingredients of compound (cattle) cake.

boogie man, see shower, cake.

boiler, beeswax; wax boiler; places beeswax (honeycomb) into steam-heated tanks, runs in water and turns a valve admitting steam to jacket of tank, thus melting beeswax; starts mechanical stirrer to agitate liquor to dissolve out any soluble impurities in water, allows liquids to settle and separate, then runs off wax straining it by running it out through fine muslin frame to extract solid impurities; runs it into moulds ready for beeswax bleacher *q.v.*

boiler, bone, see cleaner, bone.

boiler, grease; lubricating grease boiler; (i) iron and steel rolling, collects waste lubricating grease, cleans it in steam-jacketed pans, and casts it into blocks for greasing necks of rolls in rolling mill; (ii) *see* cleaner, bone.

boiler, hard soap; hard soap maker; a pan man (soap) *q.v.* who boils hard soaps, i.e., soaps made by saponification of oils with caustic soda.

boiler, pan, see pan man (soap).

boiler, scum; grease melter (olive, etc.); shovels meat scraps, etc., into steam-jacketed tank; admits water, turns on steam and skims scum of grease or fat from top of liquor for use in manufacture of glue.

boiler, size (carpet and rug); prepares mixed size for starching yarn, for carpet weaving, by boiling it in closed pans, temperature of which he regulates.

boiler, soap, see pan man (soap).

boiler, soft soap, see soft soap maker.

boiler, toilet soap, as for pan man (soap).

boiler, wax, see boiler, beeswax.

boiler, wax (electric cables); melts resin, pitch and wax in heated pots, to form a waxy liquid for use in annealing cables, and in tape and bending machines.

boiling hand, soap, see pan man (soap).

boiling house man (candles); tubs wax; shovels into steam heated tanks solid fatty acids; runs in oils, and adds colouring matter when candles are to be of coloured wax; tends valves of heating coils and controls automatic stirrers; runs mixed candle wax into small tanks or tubs ready for candle moulder (158) *q.v.*

bottler, ink; ink filler; fills bottles with ink, either by pouring from a can, or from a larger receptacle filled with a tap, or by means of a syphon filling machine; may also cork and seal bottles with sealing wax and seal; *cf.* ink bottle corks, ink bottle sealer.

boy labourer (soap); wheels small trucks of soap to drying room to be started; takes soap to presses to be made into tablets; helps in wrapping

and packing, keeps packers supplied with wrapping material, and does other light unskilled jobs.

brightener, oil brightener; operates valves, which admit oil to heated pan and superheated steam to heating coils; when water in oil is driven off and oil brightened, runs oil to storage tanks.

cake maker, lined, as for pressman (compound cake).

cakeite maker, see pressman (compound cake).

cakeite man, see kettle man.

cart grease maker, cart grease man; cart grease meller, coach grease meller, coach grease maker; a fat meller *q.v.* who makes cart grease by mixing together, in hot water or steam-jacketed pan, tallow, palm oil and plumbeago; maintains mechanical stirring until mixture is nearly cold.

caulker, boy caulker (soap); caulks soap frames, i.e., drives by means of hammer and chisel packing of hemp or oakum into joints between sides of soap frame in which soap, whilst still fluid, is run to cord, to prevent leakage.

caustic and spent lye hand (soap); soap lye meller; weighs out caustic soda and shovels it into tank, runs in definite volume of water and stirs to promote solution; runs out solution when required into tank containing melted fat or oils to produce saponification, *cf.* pan man (soap); also receives spent lye, i.e., lye after caustic chemical has been used up in saponification, which is run off from soap boiling pan by pan man (soap) *q.v.* and collects it in storage tanks and runs or pumps it off as required to plant for subsequent extraction of salt and glycerine.

cellar man, oil; in charge of oil storage tanks; operates valves and pumps for charging and discharging; keeps record of stock.

chamberman, see silo man.

charge-man, see potman.

checker (soap); checks and records quantities of raw materials received and of finished products made.

clarifier man, see settler, fat.

cleaner, bone, see scraper, bone.

cleaner, cotton seed, as for cleaner, seed.

cleanser, drum; cleans out drums in which oils and fats and other liquid chemicals are received in or despatched from soap, candle, oil, etc., works by inverting them over steam and water jets, which may be part of revolving table of washing machine; *cf.* washer, barrel.

cleanser, gum, see picker, gum.

cleanser, mill; a labourer who assists in cleaning seed crushing mill and machinery; also takes oil cake parings in truck from presser *q.v.* to cake grinder *q.v.* to be mixed up with fresh material and treated afresh for expression of oil.

cleanser, pan; press cleaner, see mucker-out.

cleanser, seed; attends a cleaning machine which sieves dirt and other impurities from seed, tips seed out of sacks into hopper of machine and keeps machine oiled; may also act as seed screener *q.v.*

cleanser, bone; bone boiler, grease boiler; boils bones, after they have been scraped by bone scraper *q.v.* in water to remove last traces of fat, skins off fat from top of liquor.

cleanser (soap); superimposes process of cleansing, i.e., runs off pure settled soap, from soap pan in which it is made, into strainer (washing machine) or into cooling frame; this usually forms part of work of pan man (soap) *q.v.*

coach grease maker, see cart grease maker.

compound cake maker, *see* pressman (compound cake).

conveyor attendant, band conveyor attendant (seed crushing); attends to conveyor on which he places sacks of seed or shovels loose seed for conveyance from place to place in seed crushing works; controls conveyor by means of lever, and oils it periodically.

conveyor attendant, salt; controls valve governing flow of brine into soap kettle or pan during process of graining, i.e., throwing soap out of solution into granular mass, and liberating glycerine; controls valve of salt or brine; runs off glycerine and shovels soap from tank.

cookar, *see* kettle man.

cookar lad; attends cooking machine in compound cake making; opens valve admitting steam to jacket of cooker, and tends bucket conveyor which fills cooker with crushed seed ready for expressing of oil after heating; rakes, or scoops out heated seeds and places them in press for next operation.

cookar (candle); opens valve admitting cold water to outer jacket of candle moulding machine to cool wax in moulds; usually done by moulder (158) g.v.

coolar (soap); (i) operates and controls cooling apparatus in which soap is cooled by circulation of cold water; regulates flow of water, and working of machine which forces out soap mechanically as it solidifies; (ii) *see* filler, frame.

copperside man, *see* pan man (soap).

cooker, ink bottle; cork filled bottles of ink, either by hand or machine.

cotton oil man; mounds cotton oil refiner (158) g.v. and performs general unskilled work in connection with manufacture of cotton seed oil.

cracker, bone, *see* crusher, bone.

cracker (line); shovels gums and resins into a breaking or grinding machine in preparation for making of lardene soap.

cracker (oil), *see* kibbler.

crusher, bone; bone crusher; shovels or puts bones into hopper of crushing machine or cracker, and controls machine, which crushes them up ready for extraction of fat in tallow factory; cf. bone crusher (meat) (149).

crusher (oil seed), crusher (seed crushing); angle roller man, grinder (seed crushing); roller man; feeds by shovelling seed into hopper, or by means of a conveyor, and tends machine, composed of heavy rollers, in which seeds or nuts are crushed to extract oil and for making cattle food; sometimes specially designated according to nature of seed crushed, e.g., cotton seed crusher, linseed crusher.

crutcher; attends to crutcher, a large steel pan in a steam jacket, and provided with a mechanical stirrer; runs in ingredients of soap, i.e., cleansed soap from soap pan (cf. cleanser, soap), scent, colouring material, carbolic acid, or filling material (where this is to be added), and tends stirring of mixture till which is homogeneous; leaves soap to stand for some hours (usually overnight) and runs it into soap frames to cool, cf. frame filler.

cuber, cuber man; attends hydraulic press, by which crushed and cooled oil seeds are compressed into cubes of cattle, for compound cake soap shute of hopper to charge press and controls hydraulic press to compress cake by means of levers; removes cake from press.

cutter (candle); cuts wicks, and removes candles, which have been forced up, after moulding, into clamps which he has previously placed on top of candle moulding machine; cuts, by hand, candles into lengths according to standard or specified measurements.

cutter, cotton; cuts with scissors and prepares lengths of cotton wick for candles of unusual dimensions, or for beeswax candles, which are not moulded.

cutter, court plaster; feeds sheets of court plaster between rollers of a cutting and/or perforating machine, to be cut up into small pieces.

cutter, fat; *see* *handman, tallow* cutter; shovels, etc., beef, mutton, or other animal fat, received from bone scraper g.v. into automatic cutting machine, to cut it up ready for operation of boiling out tallow.

cutter, gelatine; cuts out gelatine, while still in jelly state, from moulds in which it is poured by gelatine moulder g.v.; cuts large moulds into small blocks with knife by hand; sometimes also does work of gelatine slabber g.v.

cutter, glue, *see* cutter-out, glue.

cutter, isinglass; puts damped and rolled fish swimming bladders, cf. isinglass roller, in a machine which cuts them into narrow strips or shavings.

cutter, soap; (i) cuts large blocks of soap received from stock stripper g.v. by drawing a wire through it at previously marked intervals; (ii) cuts slabs produced by machines, cf. slabbing machine man, in similar way.

cutter, tallow, *see* cutter, fat.

cutter, wax taper; cuts wax tapers into lengths, with a gullotine knife, as they leave machine.

cutter-out, blocking; cuts solidified blocking to size and shape required, usually by machine, which both cuts and wraps up blocking.

cutter-out, glue; *glue* cutter; cuts out glue whilst in jelly state, by hand or machine, from moulds or troughs into which it is run from glue boiling vat; cuts glue, by hand operated wire frame, into blocks or slabs.

delinter (seed crushing); *linter*; attends and feeds machine which removes short fibres adhering to cotton seeds, after long fibres have been detached in ginning process; shovels seeds into machine, attaches rollers beneath delivery chute and trucks cleaned seeds to warehouse; removes fibre from machine.

deodoriser's assistant; assists deodoriser (158) g.v. tending tank in which expressed oil is deodorized by bubbling steam through it; controls steam, and oil inlet and outlet valves, under direction of deodoriser; cleanses out tanks between successive charges.

dextrina maker; attends revolving cylinders into which he charges material, usually potatoes, potato starch, wheat or maize, after dressing or sowing; closes cylinders and attends to furnaces which convert contents by calcination into dextrine; discharges cylinders at end of action.

digestor man; feeds digester with bones and fatty refuse and meat off-balls on cover, controls temperature of digester by means of steam valve, which causes fat to melt and flow out when drawn off; empties digester of residual oil, i.e. greaves, at end of operation.

dipper; dips compound cake, compressed crushed oil seeds, into water, to obtain shiny surface on cake, and places it in racks to dry.

draw-off; *moulder* (seed crushing); (i) *sees* filler (seed crushing); (ii) draws off ground material (oil cake) from chutes and fills into sacks, ready for despatch; ties sacks up and removes to store.

dresser, gum; empties from sacks broken glue into hopper feeding a stove; brushes glue against stove and hand brush, to dress or sift dirt from glue; cleans wire periodically.

dripping maker; (i) melts sweet, adds preservative and strains off product, into moulds; (ii) *draining* moulder, *dripping* refiner; tends steam-jacketed hand wheel in which used fat scraps are boiled in water, till fat rises as liquid to surface; skims off fat and pours into receptacles to solidify.

dryer, continuous (soap); operates and controls continuous soap drying apparatus, which receives fluid soap into a hopper from which it runs out in thin smooth sheet on rollers of revolving water-cooled cylinders where it solidifies, and from which it is detached by a fixed knife-edge, as cylinder revolves; soap drops off from cylinder in thin strips, passes through heated chambers on endless belt, and emerges, finally, dry; sometimes combines this with work of drying machine band g.v.

dryer, gelatine; *puller-on, spreader*; lays strips or slabs of gelatine on trays of nets, and places trays in a rack in a current of air, to dry gelatine; removes trays when gelatine is dry.

dryer, glue; (i) *glue* layer-out, *layer-out, putterer-on*; places slabs of glue, of consistency of jelly, to dry on nets in open-air, or on nets in frames, in a current of dry air, caused by electric fan in tunnel drying chamber; (ii) *seeds* and *feeds* machine, composed of heated rollers, over which glue is allowed to pass slowly and is thus dried; places glue on rollers; regulates gas burners heating rollers.

dryer, size, or for dryer, glue.

drying machine band (soap); operates a machine which sends a current of warm air into drying room to dry soap; sometimes combines this with work of continuous dryer g.v.

dry soap maker, *see* soap powder maker.

envelope maker, *see* wrapper man.

fat maker, *see* mallet, fat.

feader, feeder man (seed crushing); (i) weighs compound cake ingredients and shovels, pours, etc., down chute, supplying mixer (seed crushing) g.v. (ii) shovels seeds, kernels, etc., into crushing or other machine, when not done by mixer; (iii) in charge of conveyor apparatus, which conveys seeds to cleaning, crushing, or pressing machines; puts conveyor as required and may place sacks of seed on conveyor, or removes them.

feeder (soap), *see* pan man (soap).

filler, enamel paint; enamel paint packer; a paint packer g.v. who pours or runs enamel paint made by enamel mixer (152) g.v. into tube, drums, or kegs and closes same ready for despatch.

filler, frame; cooler (soap), frame man; runs warm liquid soap, after crushing, cf. crusher, into large rectangular boxes or frames on wheels, fitted with detachable sides and ends; leaves soap in frame for two or three days to cool and solidify; when soap is quite solid, passes frames to stock stripper g.v. to be taken to pieces.

filler, ink, *see* bottler, ink.

filler, oil, *see* packer, oil.

filler, paint, *see* packer paint.

filler (seed crushing, etc.); *draw-off, sealer*; fills drums or barrels with oil, molasses or hy-products, and seals barrels by driving in bung, and drums by means of screw cap.

filler, varnish, *see* putter-up, varnish.

filter man; operates pump valve to control flow of oil to oil filtering plant; removes and cleans sieves, by hand, when required.

food man (seed crushing), *see* valve man.

frame man, *see* filler, frame.

furniture polish maker; general term for any person engaged in making polishing wax or cream; processes similar to those in manufacture of boot polishes, and similar machinery used, e.g. weighing of components, mixing in steam-heated pans, and pouring into tins, bottles, jars or drums; includes mixer (178), filler (149) g.v.

gelatine maker; *gelatine melder*; shaggs cleaned and bleached bones or animal skins in water, in pans heated by steam coil, keeping temperature below 85° C.; when liquor is sufficiently strong, runs it off, bleaches it by opening valve to blow sulphur dioxide gas through it; hydrogen peroxide is used if gelatine is to be edible; runs liquor out on sheets of glass cooled with water, or into wooden troughs to solidify.

gold size maker; boils a mixture of various gums with turpentine in hooded pans, to produce a varnish and paint drier called gold size; weighs and shovels gum into pans; opening valve, runs in measured quantity of turpentine; turns on steam to heat pans; runs off boiling liquid to cool.

grease maker, see melter, fat.

grease maker, railway; *railway grease melder*; mixes tallow, mineral oil, and soda solution in a steam-jacketed pan, to make grease used for lubricating wheels of railway vehicles; runs mixture out into barrels for despatch.

grease maker (varnish); opening valves, runs into a mixing tank oil and milk of lime; starts up mechanical stirrer or stirs by hand until a "doughy" mass of grease forms; shovels grease from tank into drums or casks.

grease maker (wool combing); *see seak maker.*

grinder, grinder feeder; feeds material to hopper, or direct to grinding machine, to be ground to powder for further handling or sale as powder; tends machine generally; sometimes specifically designated according to name of material ground, e.g., *calcium grinder* (oil cake or compound cake), *dry soap grinder*, *gum grinder*, *soap powder grinder*, *stearic acid* (or *stearine*) grinder.

grinder, gelatine; shovels dried glue or gelatine into grinding mill; when sufficiently ground, feeds automatic lifting apparatus into play by means of lever; fixes empty sacks under chutes and removes full sacks to truck.

grinder (seed crushing); *see crusher (oil seed).*

gum chopper; breaks up gum in a small chopping machine, shovels gum into machine; effects sacks beneath machine delivery chute and trucks filled sacks to store.

gum maker, gum runner; makes gum by melting imported gums in covered gum pot, adding sufficient water to dissolve gum, and then pressure of liquid from gum cone stirs continuously during heating process; strains off clear gum from sediment, and fills barrels, jars, bottles, etc., with finished gum; cf. *gum runner (varnish)* (153).

hard soap maker, see boiler, hard soap.

hasherman, see cutter, fat.

heather man, caketee, see kettleman.

heathall maker; melts and mixes together mineral wax and lampblack in heated pans; runs mixture into moulds to cool.

lingglass maker; general term to cover all semiskilled workers in manufacture of linglasses, includes cutter, roller, etc.

kettleman; *caketee* *heather man*, *caketee man*, *coker*; attends steam-heated pans or kettles, in which cleaned and crushed seeds, in form of meal, are cooked ready for pressman (compound cake) g.v.; controls steam valves and charges pans.

kilbaker, kilhlberman; *cracker* (oil), *nutcracker*; attends and feeds machine in which he breaks up cake into modular pieces before grinding into meal; places cake in feed hopper; shovels broken cake from delivery hopper into sacks for despatch or into barrels which he trucks to machine run (seed crushing) g.v.

kitchen stuff maker, see melter, fat.
layer-out, glue layer-out, see dryer, glue.

layer-out (gelatine), see slabber, gelatine.

linter, see delinter (seed crushing).

linter lad; assists delinter g.v. generally.

machine attendant, machine hand (seed crushing); general term for any person minding and feeding any machine, but more especially used for attendant of maktee or melting machine, cf. *pressman* (compound cake).

machineman, barring (soap); places slab of soap on bar-cutting machine, and forces soap, by operating a lever, through frame of wire, to cut it into bars.

machineman, plodding; tends and operates plodding machine which he feeds with milled soap; machine forces soap by means of a spiral screw through perforated plate, causing soap to emerge as a number of threads of soap, which are then squeezed in machine into form of continuous bar. **machineman (seed crushing);** attends disintegrator, which grind up nodules of cake, after kibbling, into meal, prior to mixing ingredients for compound cake; shovels nodules into machine; engages driving pulley; opens trap door periodically to deliver meal into container beneath machine.

machineman, slabbing (soap); attends machine which forces solid block of soap on wheeled base, of stock stripper, through a frame of wire, which cut soap into slabs ready for barreling. **machineman g.v.;** pushes soap on to machine feed platform; removes cut slabs.

melter (seed crushing), see drawer-off.

mealman (cattle cake), see mill hand (cattle cake).

melter (candle); *melting house man* (candle); (i) melts crude paraffin wax in large tanks, by means of an open steam pipe, in readiness for reformer g.v. (ii) reformer, stearine (iii) re-former pressed cake of fatty acid and wax from pressman (candle) g.v., and melts and charges them ready for candle moulder (158) g.v. or for dipper g.v.

melter, cart grease, see cart grease maker.

melter, coach grease, see cart grease maker.

melter, dripping, see dripping maker.

melter, fat; (i) extracts fat from residue after animal skin, hair, hide, etc., (excluding bones) have been bled, and boiled for extraction of glue; runs in sulphuric and hydrochloric acids to break down insoluble lime soap and release fatty acids; (ii) *fat melder, fat purifier, grease maker, grease melter* (fat extraction), *grease refiner, kitchen stuff maker, kitchen stuff melter, kitchen stuff refiner, tallow melder, tallow refiner*; tends steam heated tank or digester in which he melts out fat from beef, mutton, etc., scraps and bones; tends mechanical stirring apparatus which ensures thorough heating of material, and runs off fat at intervals from top of liquor; extracts fat from tissue with sulphuric acid and steam in open pans; generally also refines fat by adding caustic soda, allowing it to settle and solidify and pouring off washing liquor; (iii) empties out *fat* or oils into tanks from barrels or drums in which they are received and sells them; cf. *melter, oil*.

melter, gelatine, see gelatine maker.

melter, grease (fat extraction), see melter, fat.

melter, grease (glue, size), see boiler, steam.

melter, kitchen stuff, see melter, fat.

melter, night light; attends copper vessel in which mixture of paraffin wax and stearine, used for making night lights, is kept hot and liquid for use of night light moulder (155) g.v. stoker fire, regulates gas burners or steam valve to control heating;

opening a valve replenishes vessel with mixed molten wax and stearine (fat) at intervals as required.

melter, oil; (i) melts oil in barrels or drums, by injecting steam or by putting it in heated chamber. (ii) collects solid residue containing fat, such as butcher's waste; spreads on heated plates and runs oil which exudes into tanks or other suitable vessels; (iii) heats solid oils in covered pans, usually by means of steam coil, which he regulates and runs off liquid oil into mixing tanks as required.

melter, railway grease, see grease maker, railway.

melter (soap), or for melter, oil.

melter, stearic acid; tends pan in which solid stearic acid, from which stearic acid has been pressed out from tallow, is melted by means of steam jacket or coil; operates valves controlling supply of steam to pan.

melter, stearine, melter (candle); takes animal and vegetable fats from casks in which they are received, empties casks either by inserting open steam pipe in bung hole, turning on steam, and so running melted fats into a tank or by shovelling fats from cask into tank; turns on steam to clarify them by removing fibrous matter, which settles out; runs off melted stearine through a filter to settling vat and from thence to cooling tank until it is ready to solidify.

melter, tallow, see melter, fat.

melting house man (candle), see melter (candle).

miller, oil; a *crusher* (oil seed) g.v. who crushes oil seeds or nut kernels to express oil contained therein.

miller (soap); millman (soap); (i) operates and controls a soap mill which grinds dried soap chips or shavings, into long transparent ribbons of soap, which may either be converted into flake soap ready for sale, or passed on to plodding machineman g.v. for conversion into solid cake. (ii) *grinder*; attends some times specifically designated, e.g. *dry soap miller, soap powder miller*.

mill hand (cattle cake); mealman (cattle cake); passes grain through mill, consisting either of grinding stones or steel rollers to crush it into meal; feeds mill with grain; adjusts stones or rollers according to required fineness of meal, and supervises working of machinery.

millhand hand (soap); a miller (soap) g.v. or labourer in soap mill assembling milled soap into cakes.

millman (soap), see miller (soap).

mixer (fat); shovels paraffin wax from casks, drums, etc., into steam-jacketed tank, turns-on steam and, opening valve, runs liquid wax to moulding machine; cf. *Mocker* (candle).

mixer (seed crushing); shovels crushed seeds and other ingredients of compound cake to mixing machine, engages driving pulley, and when ingredients are sufficiently mixed stops machine and shovels ingredients therefrom.

mould (candle), see blocker (candle).

moulder, cake moulder (compound cake); steam moulder; from steam kettle, heat of which he regulates, draws-off quantity of crushed and heated meal into a tray; fills therefrom a mould into a tray; operates a lever, he superimposes upon a cloth wrapper; withdraws mould and wraps meal in cloth; puts aside wrapped meal for pressman (compound cake) g.v.

moulder, gelatine; runs clarified pure gelatine, while hot, out of purifying tanks into wooden troughs or moulds, regulates steam valve of tank.

moulder, glue; *glue runner-off, runner-off* (glue, size); shovels dried glue into steam-jacketed pan; turns-on steam and runs melted glue, whilst still warm, into wooden troughs or moulds.

moulder, steam, *see* moulder (compound cake).

mountant maker, *see* paste maker.

mucker-on, *see* cleaner, *see* washer.
pans cleaner, raker-on; cleans up pans, tanks, presses, wells at foot of presses, conveyors, kibbling machines, etc., cleans floors, etc., in a seed crushing or oil cake mill.

puttermen, *see* kibbler.

oil house man (seed crushing); a general labourer in extractor house in which oil is extracted from crushed seeds by chemical solvent, *cf.* oil extractor (seed crushing) (158).

oil mill nipper; carries oil cake or compound cake away from press; or forches and carries for foreman.

packer, enamel paint, *see* filler, enamel paint.

packer, oil (vegetable oil refining); *oil filler*; draws off oil into drums or barrels from storage tanks; closes and seals containers ready for despatch, with cork screw cap, and wire.

packer, paint; paint filler, fills, by drawing from storage tank, drums, kegs, and tins with prepared paints, *i.e.* pigments that have been partly or fully made up with oils and turpentine ready for use; weighs them, makes up deficiency by pouring from small vessel and curbs, by hand.

packer, varnish, *see* putter-on, varnish.

pan man (seed crushing), *see* potman, pan man (soap).

panner (soap), *see* boiler, pansman, soap boiler, soap boiling; runs oils and fats into a large pan, heated by steam coils which he controls; runs in caustic alkali, and boils mixture until saponification is well under way; runs in brine or shreds in salt, boils again and allows to stand till layer of soap paste forms at top, and one of spent lye, *i.e.* liquor containing weak caustic alkali, brine, and glycerol, at bottom; runs off spent lye to be sent to glycerine extraction plant; runs in more caustic alkali, boils again to ensure complete saponification, and finally runs off, by means of pipe on swivel joint, layer of soap into crutcher (*cf.* crutcher); may also perform duties of soap waste recycler, *q.v.*

pansider, *see* pan man (soap).

parser, cake parser; cake trimmer, scroffler; feeds and operates machine which automatically cuts off rough edges of oil cake formed during oil expressions, to be returned to pressing machine for further expressing of oil; places trimmed cakes in iron frame to be wheeled to cake weigher *q.v.*

parser (soap); feeds bars of dried soap to rotary soap-chipping machine, which cuts them into small thin chips. soap shaker; catches chips as they fall from machine into a small box ready for packing in cartons, etc.

paste maker; mountant maker, mixes up powdered starch and water, or flour and water and a preservative, into an adhesive semi-solid mass, usually by warming in steam jacketed tanks; pours fluid off while still warm into containers in which it is to be sold.

perfumer (soap); adds essential oils or other perfuming material to soap during process of manufacture, usually during crutching operation, *cf.* crutcher.

picker, gum; gum cleaner, gum sorter; sorts out various qualities of gums as imported from Egypt, India, etc., and removes dirt therefrom, process mainly carried on abroad.

pile (soap); piles bars of warm, newly-made soap loosely across each other, to allow free circulation of air in pile, in heated drying rooms, through which an air current is driven by an electric fan.

polish maker; general term for any worker engaged in making, mixing, or polishing up all kinds; includes mixer (155), filler (149) *q.v.*

potman; skagrooman, pan man (seed crushing), assists oil extractor (158) *q.v.* by shovelling seeds into or out of extraction vessels or pans and under his direction opens valve, *e.g.* to run in spirit solvent.

press attendant; shovels moist colour sludge into frames; puts frames in presses and operates valves to control presses; removes frames, screws them and removes colour sludge; washes frames with brush or hose pipe.

presser, cake; (i) *see* pressman (seed crushing); (ii) *see* pressman (compound cake).

presser, metal polish; feeds and attends a press in which he presses mixed ingredients of solid metal polish into blocks ready for sale.

presser (seed crushing), *see* pressman (seed crushing); sometimes specifically designated according to kind of seed pressed or product made, *e.g.* cotton seed presser, linseed presser, oil presser, seed presser, etc.

presser, shoddy (oil extraction); operates valves of filter press through which shoddy or dirty oil is forced to free it from carbon and foreign matter; changes filter gauzes periodically.

presser, sperm; places lumps of refined sperm into a steam-heated press, which shapes it into blocks ready for export; controls press by levers; removes blocks when pressed.

pressman, algic, *see* pressman (seed crushing).

pressman, cake; a pressman (seed crushing) *q.v.* who operates cage press, usually four, in which he crushes cakes of seeds to extract oil in cold-drawn process, in which seeds are pressed, without any cooking, by kettleman *q.v.*; fills cages with seeds, inserts in press and proceeds as for pressman (seed crushing), *cf.* crutcher (seed crushing).

pressman (compound cake); cake presser, cakelette maker, compound cake maker; (i) places mounds of meal, received from moulder on wooden slide, in spaces in hydraulic press; presses, cooks and crushed seeds (or meal) into cake form, operates valve applying pressure; removes cakes by hand when pressed and passes to stripper; (ii) shovels meal into a roller machine which presses meal into cakes or nuts, small pieces of compound cake which are ready for use without breaking; watches automatic ejection of small cakes for smooth working; controls pressure by lever or valve.

pressman (seed crushing); (i) charges hydraulic press with crushed kernels, nuts, etc., from hopper, and then operates levers to express oil into storage tank; removes cake of seeds from press ready to be taken to parser *q.v.*; (ii) cake presser, *presser* (*cf.* crutcher, *q.v.*); (iii) *see* pressman; places mounds of crushed and steamed oil seed, which have been wrapped in press cloths by wrapper man *q.v.* between plates of a heavy hydraulic press; operates press thus squeezing out oil; also attends kettle when there is no separate tea man.

pressman, stearine; wax pressman (candles); stearine recycler; places crystalline stearine or crude paraffin wax into press cloths or canvas bags, and places in hydraulic or filter press, moves lever which applies pressure to bag and contents the bag squeezing out all non-solid oils, *i.e.* stearine attaching to crystals or lubricant grease; releases pressure, takes out bags and empties pure stearine from bags or yellow cakes of wax from press cloths into trucks.

puller-on, *see* dryer, gelatine.

puller-out, are removed pressed oil cakes from press, and takes them to paring machine; *cf.* parer.

purifier (candles), *see* refiner (candles).

purifier, fat, *see* melter, fat.

purifier, fat (oil); oil purifier (soap); fat *or* oil refiner; refines fats or oils as received in factory, into which and purifies them by boiling them

with dilute sulphuric acid in lead-lined or wooden tank heated by a steam coil; draws off purified fats when they have settled into anathema tank for saponification.

pusher-in; shorer-on; puts wrapped, crushed, and cooked seed into press for pressman (compound cake) *q.v.*; sometimes also acts as wrapper man *q.v.*

putter-on, *see* dryer, glue.

putter-up, varnish; varnish filler, varnish pocker; fills and labels cans, jars, bottles, kegs, barrels, etc., with varnish from a tank in which it has been stored for at least a year to mature.

raker-out; (i) *see* mucker-on; (ii) (seed crushing) rakes out material left by strikers in extraction vessel after steaming, *cf.* oil extractor (158).

recooper, soap waste; (i) runs off from soap boiling tank, *q.v.*, *i.e.*, a layer of liquid which flows from under soap layer, and which contains an inferior soap; mixes this liquor with fat and oil, and boils up afresh with soda lye to make pure soap; (ii) bleaches nigre by adding sodium chlorate, sodium hypochlorite, hydrogen peroxide, and then works it up into a coarse cheap soap; usually done by pan man (soap) *q.v.*

recooper, stearine (candle), *see* pressman, stearine.

refiner, beeswax; wax refiner; strains melted beeswax through a fabric to extract impurities; usually combines this with work of beeswax bleacher *q.v.*

refiner (candles); purifier (candles), refines *beeswax*; melts, reduces paraffin wax used in making candles, night lights, and tapers, by melting it in large tanks heated by steam coil; then admits steam which he bubbles through the wax, pumps or runs molten wax and water into settling tanks, runs off water and draws wax off into trays placed in ovens where oil is sweated away, by passing in open steam; further purifies wax by melting it in large pans provided with agitators, which stir it up with charcoal to remove all traces of colour; allows wax to settle and runs it off into moulds to solidify.

refiner, dripping, *see* dripping maker.

refiner, fat or oil, *see* purifier, fat (soap).

refiner, grease; (i) *see* melter, fat; (ii) passes cat, *etc.*, grease whilst still liquid and hot through steam jacketed felt filter to extract lumps and impurities; runs grease then into casks for despatch; sometimes specifically designated, *e.g.* cart grease refiner, coach grease refiner, railway grease refiner.

refiner, kitchen stuff, *see* melter, fat.

refiner, stearine; places blocks of stearine, received from stearine pressman *q.v.* in tank, runs in water and heats whole by opening valve allowing steam to pass through the water; agitates liquor mechanically, allows stearine and water to settle out, and runs off purified stearine.

refiner, tallow, *see* melter, fat.

refiner, wax; (i) *see* refiner, beeswax; (ii) (candles) collects wax left in candle moulding house, renders after candle making; puts wax to be collected in wooden tub, melts it by means of admitting steam to coil in tub, adds acid and stirs up liquor by hand; allows to settle, runs off acid, washes wax with water and allows to cool and solidify; adds clean wax to that in tanks of candle moulding house; *cf.* wax refiner (145).

refiner's assistant, refiner's labourer (vegetable oils); assists oil refiner (158) *q.v.* on process work generally, such as oil filtering, neutralising, boiling with purifying agents, settling of liquids and removal of deposits of different specific gravities separately, *etc.*

refinery floor man, oil; sweeps up and keeps clean floors of oil refinery.

refining, house man, *see* refiner (candles).

refrigerating plant attendant; attends to refrigerating plant, in which heavy oil or suit paraffin residue from wax refining process, and useless for candle making, is converted into blue oil, to be mixed with lubricant oils and greases, contains tanks of heavy oil and drag-in of blue oil and unconverted this oil by means of valves.

roller, *slagless*; passes damped fish rounds, or air blades into a rolling machine, which rolls them out flat, ready for impaling cutter *q.v.*

roller lad; assists crusher (oil seed) *q.v.*

rollerman, angle rollerman, *see* crusher (seed crushing).

rubber; treats edges of compound cake after pressing, as for parer, *cake*.

runner-off (glue, soap), *see* moulder, glue.

sampler, tallow; takes samples of tallow from refineries, etc., for test and examination; usually employed by a broker.

scaldman (soap); weighs raw materials for use in soap, etc., manufacture.

scraper, bone (tallow extraction); bone cleaver; scrapes or cuts off from bones, using special hand tool, fat and meat to be used for tallow extractions.

scratcher, *see* parer.

screener, seed; screenerman; feeds, by shovelling or tipping seed into hopper or by means of a conveyor, and attends to screens which sort seeds from any impurities, such as other types of seed, dirt, etc.; operates screens starting and stopping screen as required, *cf.* cleaner, *seed*.

seak (or seack) breaker; receives hard cakes of wool grease from which oil has been squeezed out by seak (or seack) maker *q.v.* and breaks them up for soap garden mixture, or, for use as fuel, by feeding into the hopper of cracking or breaking machine.

seak (or seack) maker (woollen mills); grease maker (wool combing); (i) runs sulphuric acid into soapy liquor (containing wool grease) that has been used to wash out fats from raw wool; mixes liquid by mechanical stirring, allows fats to settle out from liquor, which he runs off; puts fat, from which all liquor has been drained, into canvas bags, and expresses oil from bags in steam-jacketed hydraulic press; collects oil in barrels, and removes hard cake from bag ready for seak breaker *q.v.*; (ii) purifies effluent from silk-cleaning cloth laundry, where silk-cleaning cloths for machinery are washed, by running it into tank and treating it as in (i) above.

sealer, ink bottle; seals filled bottles of ink with sealing wax or with paper seals; sometimes also improves firm's name, etc., on sealing wax, using hand stamp.

sealing wax maker; tends to pot in which he melts together and mixes by stirring measured quantities of shellac, resin, turpentine, and coloring matter (vermillion, lamp-black, red ochre, ultramarine, etc.), and tests product into sticks; warms up sticks of sealing wax to fire surface and so gives wax polished appearance.

seed man (seed crushing), *see* sile man.

separator, metal ball oil (engineering works); runs used oil from drain into steam-jacketed pans, where it is warmed; opens valve or drives pump pushing oil through filter press, to storage tanks for re-use.

settler, fat; (chaff) men; runs off melted fat from digesters into tanks, and settles or clarifies it by shovelling in salt; drains off fat, as it separates, into containers, where it is left for about three days before being dealt with by stearine pressman *q.v.*

shower-in (seed crushing); (i) shovels seeds or nuts into hoppers of machines for cleaning, crushing, steaming, or

pressing, where automatic feed is not installed; (ii) *see* push-in.

siever (paint); shovels or tips powdered colour into hopper of sifting (or sieving) machine, which eliminates insufficiently ground particles; removes powdered colours from machine after they have been sifted; returns large particles to paint millman (152) *q.v.* for regrinding.

sile man; chamber man, seed man, seed trimmer, trimmer (seed crushing); receives seed from wharf; attends elevators, conveyors and screens; performs general work in elevator, shovels seed in silos, etc., so that bucket conveyors are able to pick it up.

size maker (carpet and rug); prepares size for boiling by combining starch or flour with a softening substance and mixing these in water.

slabber, gelatine; layer-out (gelatine); cuts blocks of gelatine, as received from gelatine cutter *q.v.*, into slabs; places gelatine in a frame and cuts by pulling two-handed knife, attached to frame; work sometimes done by gelatine cutter *q.v.*

soap leach maker; *see* caustic and spent leach maker.

soap powder maker; dry soap maker, washing powder maker; general term for any man employed in manufacture of soap powder, including pail man, crutcher and soap powder grinder *q.v.*

soft soap maker; soft soap boiler; a good mack *q.v.*, who mixes and boils fats and alkalis; caustic potash must be used and not caustic soda, to produce a soap which at ordinary temperatures is a soft paste.

sorter, bone; sorts bones, before they are boiled, setting aside those which are liable for brush making, cutlery handles, etc., and placing rest into a bin for bone crusher *q.v.*; *cf.* sorter (manure works) (149).

sorter, gelatine; sorts out into categories, according to quality gelatine required, bones, skins and scraps of hides to be boiled together to make gelatine.

sorter, gum, *see* picker, gum.

splitter, soap (oil refining); opening a valve, adds acid to soap emulsion in a soap collecting tank, starts up mechanical stirrer and turns on steam to heat mixture; runs off liquid to settling vats, causing fatty acids to separate out; runs off separating acid and scoops fatty acid from tank.

spreader, *see* dryer, gelatine.

spreader (candles); spreads candles received from stringer *q.v.*, suspended by their wicks, along rods for cooling and hardening and places in cold air drying chamber.

stamper, sealing wax; presses a steel die into a stick of sealing wax, which has been warmed up to acquire polish, leaving an impression of manufacturer's name, etc., thereon.

stancher, glue; seals bung holes of tubs or casks, used for holding glue, seals tubs in large vat with hot water, removes to drain vat, and scrapes up glue drained therefrom for re-use.

stearic acid maker, stearina maker (candle); general terms for any man engaged in any process necessary for production, refining, and solidifying of stearine or stearic acid, including acidifier (153), autoclave man (155), stearic acid meller, stearine pressman, stearine roller, etc., *q.v.*

storage tank man; watches oil tanks to see that conveyor pipes thereto are working properly.

stovary; attends stove or drying chamber in which surface of soap is dried by a current of warm air, which is sent from drying room frames received from strip stripper *q.v.*, tends fan which blows dry warm air into chutcher or exhausts damp air.

stover, calke, logic man; converts oil cake or compound cake to warehouse on a truck and stacks it there.

stringer; strings together, by their wicks, dip candles, candles of beeswax, or of unusual dimensions, for spreader (candles) *q.v.*

stripper (candles); removes cakes of distilled fatty acids from canvas bags in which they have been pressed by stearine pressman *q.v.*; shakes cakes into trucks ready for transport to vat in which it is to be melted and mixed with wax.

stripper, frame, *see* stripper, stock.

stripper (seed crushing); takes oil cake out of press (oil crusher or wringer), after oil has been expressed by pressman (seed crushing) *q.v.*; operation frequently performed by puller-out or by parer *q.v.*

stripper, soap frame, *see* stripper, stock.

stripper, stock; frame stripper, soap frame stripper; removes, by unscrewing fastenings, sides and ends of frame, which has been filled with liquid soap by frame filler *q.v.*, and allows it to cool and solidify, thus leaving a solid block of soap on a wheeled base.

takar-off; secures and opens, respectively, before and after compound cake, by coupling, sides of steam-jacketed cookers, by screwing and unscrewing.

tank man; attends conveyors and storage tanks in compound cake works; empties tanks, etc., of acids into tanks or other containers; opens valve to pump oil to automatic oil filters from tank containing expressed oil from presses.

taper girl (wax matches); attends machine in which threads are passed through steam-heated tanks of wax and gum, and through steel dies to remove excess or uneven deposition of wax; machine then passes coated threads slowly backwards and forwards through tank of wax over large revolving drums, and taper girl lowers temperature of tank of wax each time, until enough wax has adhered to threads; replenishes bath of wax at intervals as required.

taper maker (candles), *as for* taper girl (wax matches).

teaser assistant; assists teaser attendant *q.v.* and cleans up teasing machine room.

teaser attendant; feeds teasing machines, which tear up old press bags, used in seed crushing, to make flock for sale to mungo merchants; starts or stops machines by engaging pulley lever; removes flock from machine by hand.

toller, soap maker; a miller (soap) *q.v.*, who makes soap mass.

trimmer, cake, *see* parer.

trimmer (seed crushing), seed trimmer; (i) shovels seeds or nuts into machines for cleaning, crushing, steaming, or pressing where automatic feed is not installed; (ii) shovels seeds so that buckets of bucket conveyor can pick them up; (iii) *see* sile man.

trimmer (soap); using special hand tool, removes any excess of soap from tablets of soap, etc., after they have been stamped (149) *q.v.* and, using greased pad, polishes tablets if necessary, by hand.

truckman, blue; moves trucks of materials from place to place as required in plant where laundry blue is made.

tub man (candles), *see* boiling houseman (candles).

valve man; food man (*seed crushing*), assists oil extractor (153) *q.v.* attending to valves.

water seal maker; shovels powdered gelatine into a steam-jacketed pan, runs in water and turns on steam; adds glycerine, by hand, and stirs mixture with a paddle; when heat reduces liquid to pulp, runs or scoops it into glass moulds; starts up electric fan to dry mixture, etc., when dried, from moulds and feeds to machine which cuts it into wafers.

washer, barrel, washers; attends machine in which barrels are washed; places barrel over steam and water jets on revolving table of washing machine; removes washed barrels.

washer, glass; dips slabs of dried glass in water to polish surface.

washer, ink can; washes out mixing cans in which solid ink is mixed with water, or filter cans from which filter (ink) g. v. fills bottles, jars of ink.

washer man; assists gelatine bleeder (158) g. v., by washing scraps of leather, skin, hides, etc., after liming and acidifying, to remove traces of acid, by stirring them up in water.

washer, oil washer; operates valves running oil into tank, admitting acid solution under direction of chemist to wash out impurities, and running oil to oil brightening plant.

washer, pan; oil pan washer; washes out pans in oil house by injecting over steam and water jets; cf. sucker-out.

washer (size); tends boiling tails in which dressings from lannery are boiled and washed.

washing powder maker; see soap powder maker.

wax taper maker, *as for* taper girl (wax matches).

weigher, cake; (i) weighs oil cake in sack frames as received from refinery g. v. and records in weigh book prior to removal to warehouse; (ii) weighs and records quantities of oil cake leaving warehouse for despatch.

wheeler (vegetable oils); wheels oil cake into warehouse.

wrapper man (vegetable oils); re-wraps maker; wraps press cloths or wrappers round chimes of scrubbed and steamed seeds before it is placed in hydraulic press.

ORDER VII.—METAL WORKERS (NOT ELECTRO PLATE OR PRECIOUS METALS).

Sub-Order 1.—Employers, Managers, Foremen.

104-169.—FOREMEN AND OVER-LOOKERS.

contractor; takes contract from employers for certain work e.g. removing scrap iron and other metal from trucks to steel furnaces, so much as ten; engages and pays men engaged on job under him.

contractor, gentry; contracts with firm for mending ore, etc., into roasting kilns at blast furnace; is paid at so much a ton and himself supervises and pays gentrymen (376) g. v.

fat overlooker (card clothing); a foreman in charge of fat cleaners (235) g. v.; overlooks work and rejects any faulty dials; examines good working of machines and makes adjustments, if necessary.

gaffer; slang term for foreman in steel works.

hillman (shipbuilding); see iron checker.

hoistman (blast furnace); in modern works where most of the operations are mechanical, controls from a small room by means of various electric levers and switches, such operation as charging furnace, tipping bell dipping rod; works by scrutiny of a working model and alarm of the furnace and sees progress of charging etc., from observation of electric lights and signs.

iron checker (shipbuilding); hillman; foreman of iron stores (270) g. v.; records and checks incoming and outgoing steel material, coal, etc.; intends painting in racks and issues of plates, angles, bars, etc.; cf. iron stockkeeper (340).

loom supervisor; superintends erection of looms in weaving mills, travels from place to place as required for setting-up of loom, sees that necessary adjustments are made by

loom mender (210) g. v., and hands over loom in working order.

mill superintendent (advanced sheet, tin plate), see roll turner.

pipe major (foundry); a foreman supervising work of moulders (189), casters (183), and pipe pit labourers (183) g. v. in pipe foundry.

plumbers' foreman; superintends work of plumbers (202) g. v. on a contract; usually himself a working plumber; may travel from job to job supervising work, e.g. laying of lead roof, run and fall of pipes, jointing, etc.; generally works in conjunction with general foreman of job regarding cutting away or making good brick-work or woodwork to follow a through of pipes; usually engages and discharges plumbers and renders wage sheets and time records to office.

rate fixer; fixes piece rate or time limit for a certain piece of work in an engineering shop, on basis of practical experience in many operations (usually repetition work); may himself perform operations or may watch and time an average worker, usually done by foreman.

roll turner; (i) (iron and steel roll) turns rolls, or is responsible for turning, facing and setting of rolls, on a lathe, when surface of rolls has become uneven through much use; is responsible for working and condition of rolls, and usually controls work of hot and cold rolling department; superintends work of roll rollers (200) g. v. where employed; (ii) (galvanized sheet and tinplate trades) mill superintendent; turning duties as worker (i); does not, however, control both hot and cold rolling departments. (hot rolling) also works out specifications for different sizes and weights of sheets, and determines margin to be allowed in size and weight of bar for construction of sheets of given size (cold rolling) does not work out specifications; is usually known as cold rolls foreman.

testing officer (waterworks); superintends work of testers (378) g. v. who examine taps, castings, etc., visually, by weight in balance, by screwing on hydraulic machine which registers water pressure by means of dial; records results of tests.

Sub-Order 2.—Furnacemen (Not Foundry) and Puddlers

170.—CONVERTERS.

blower; Bessemer converter man, converter, converter man, steel converter; in charge of process of conversion of iron into steel in Bessemer converter and directs work of men engaged thereon, including puddlerman (173), bulleman (279), pitman (278), tapper (278), roasterman (278), ladle liner (279), slopperman (279) g. v.; gives instructions to workers and watches all operations, in which charge of molten pig-iron (usually 10-30 tons) is run into tilted converter, valve admitting high pressure air blast to tuyeres passing through bottom of converter, is opened, and levers controlled by which converter is hydraulically or electrically brought into upright position; watches flames issuing from mouth of converter until their colour shows that all carbon has been burnt up; gives instructions as to amount of molten spiegeleisen to be run into ladle and causes converter to be tapped and contents run into ladle; in event of temperature of charge falling too low, causes steel to be admitted with air blast; instructs labourer to add steel scrap to cool charge when too hot.

converter, converter man, Bessemer converter man; see blower.

converter man (copper); Mowble man; a blower g. v. who is in charge of and often himself manipulates

lovers of a Bessemer converter for oxidizing and removing impurities in copper matte; when all impurities except sulphur are burnt away or contained in slag, tilts converter and runs off slag into pots; continues blow, keeping surface of copper covered with coke, which is fed in from hoppers to prevent oxidation; still smelter is burnt away; tilts converter and pours copper into ladle for casting into ingots; judges progress of operations by watching colour of flames at top of converter.

Mowble man, see converter man (copper).

steel converter, see blower.

171.—SKILLED FURNACEMEN (INCLUDING KEEPERS AND MELTERS).

air furnaceman; a furnaceman g. v. who attends to and controls reverberatory furnace, in which charge is heated by means of gas from blast at side of hearth and directed so as to play on surface of charge on furnace hearth; charges, by hand or machine, material on to hearth and removes it when action is complete, either by means of ingot or by running it off as molten metal; as a rule no blast is employed.

alloy furnaceman, see distiller (lead).

annealing furnaceman; a furnaceman g. v. who charges, by hand, tong or crane according to nature of material, iron or steel bar, rod, or plate on to hearth of furnace; superintends firing of furnace and allows charge, when heated to fixed temperature, to cool slowly by regulating fire.

anode furnaceman (copper); a furnaceman g. v. who charges purified copper on to hearth of reverberatory furnace, stirs molten copper and causes slag formed by oxidation of impurities; shows it to surface of copper, charcoal or anthracite to prevent oxidation of copper and pushes pole of "green" wood into metal to reduce any partly oxidized copper; extracts samples at intervals, with hand ladle, to test state of purity; when action complete, runs molten copper into ladle for casting into copper anodes in final electrolytic purification of metal.

antimony furnaceman, antimony re-finer; charges crucibles with crushed stibnite and crushed or fused iron scrap and salt and heats in reverberatory furnace; pours crucible contents into a mould and knocks off slag when cold; recharges crucibles with metal (after crushing) and heats with stibnite and antimony flux to refine it; pours into ingot moulds.

arsenic burner, arsenic calciner, arsenic refiner; arsenic crucible, arsenic roaster; chokes or tips crushed arsenical pyrites on hearth of reverberatory, revolving, or muffle furnace; feeds furnace fires to produce white arsenic as vapor which passes over and is condensed on cool sides of large brick-chamber.

arsenic furnaceman; general term for any worker employed at or about arsenic calciners or refining furnaces including arsenic burner, arsenic refiner g. v.

arsenic re-refiner; shows powdered mixture of arsenic and charcoal into earthenware retorts in a furnace setting; attends to firing of furnace and thus drives over pure arsenic into receiver; at end of action, detaches sublimed arsenic from sides of receiver.

arsenic roaster, see arsenic burner.

arsenic smelter, arsenic smelterman; shows crushed arsenical ores into freelay roaster set in a furnace, and tends fire; detaches, by hand, with scraper, arsenic which has sublimed into freelay receivers, ready for refining.

assistant furnace keeper, assistant keeper; under keeper (*furnace*); assists furnace keeper *q.v.* and takes his place when he is away; sometimes done by first hand slogger (278) *q.v.*

azle furnaceman, a bloom heater *q.v.* who sometimes also assists azle forger in heavy work.

bismuth maker, bismuth smelter; shovels crushed bismuth ore into iron retorts set on an incline in a furnace, and tends to fire which heat retorts carefully watches pyrometer to control temperature; takes bismuth, which runs down retorts and out at end into iron basins, into iron moulds to form ingots.

blast furnace tender, see furnace keeper (blast furnace).

bloom heater; sets blooms, *i.e.* bars power-hammered from ingots of iron and steel, on hearth of furnace by means of overhead cranes and tongs; attends to furnace fires which heat blooms, and, when at correct temperature for next process, *i.e.* rolling, forging, etc., removes them in some way; judges temperature of bloom by its appearance or colour; cf. furnaceman.

bronze crucible man, bronze furnaceman, bronze smelter; a furnaceman *q.v.* engaged in smelting copper and tin ores, combined in fixed proportions to make bronze.

burner, see roaster.

burner (tinsplate); a heater *q.v.* who heats and reheats sheets of iron and steel in rolling of tin plate, etc.

bustler; a furnaceman *q.v.* who bundles up (takes together) in a furnace, iron turnings, punchings, etc., and draws out bundles at welding heat ready for blooming under steam hammer.

calcinar, furnace calciner, ore calcinar; calcines attendant, calcines watcher; tends in a calcining furnace; stokes furnace fire, charges furnace with ore and in some cases coke, *e.g.* spelter, by tipping or shovelling; takes over by hand or mechanically and discharges roasted or calcined ore by raking out into barrows; sometimes specifically designated, *e.g.* arsenic calcinar, blende calcinar, nickel calcinar, spelter calcinar, tin calcinar; cf. roaster, ore furnaceman.

calcinar, calcinar man (copper extraction); loader; a furnaceman *q.v.* who feeds, stokes and attends furnaces which roast or calcine copper ore to eliminate portion of sulphur or roast granulated oxide metal (or matte) to oxidize sulphide of iron contained therein.

calcinar (scrap); scrapperson, scrap smelter, scrap refiner; a tin furnace smelter *q.v.* who calcines scrapings from tinning pots (tinsplate making) in a small reverberatory furnace.

calcinar attendant, calcinar watcher, see calcinar.

charger; a heater *q.v.* who charges furnace with billets of gas metal into position whilst suspended by overhead crane and tends to furnace fire and air blast, which heats billet up to forging or rolling temperature; judges by colour of billet when to withdraw it from furnace by means of tongs and attaches it to crane by chains and grips to be taken to roller or steam hammer for next process.

charger (tubes); with tongs places in oil or gas furnace small pieces of flat iron for heating in process of socket making by machinery, withdraws them when at proper heat and when required by machinist.

clock operator (electric furnace); watches "clock" indicating temperature of electric furnace and maintains furnace at desired temperature.

coach spring furnaceman; an annealing furnaceman or heater *q.v.* who anneals and tempers leaves of coach spring.

cobalt furnaceman, cobalt matte calciner; (1) an ore furnaceman *q.v.* who heats a paste of cobalt oxide and carbon, pressed into cubes and placed by hand on hearth of muffle furnace; takes out metal with long rake or rabble; (2) general term for men employed in roasting or calcining cobalt ores or oxide in a furnace.

crucible man (not brass foundry); crucible steel maker; smelter (*first hand*); makes special "crucible" steel by shovelling weighed quantities of broken blast steel into special crucible crucibles, and adds chemically determined weights of vanadium, tungsten, chromium, or other metal; places crucibles, by means of tongs, into muffle or other furnace; when steel is made, removes crucible from furnace and sends it to teemer (278) *q.v.* for pouring into moulds.

cupel furnaceman, see refiner (lead).

cupola furnaceman (copper smelting); cupola man, cupola tender, smelter, smelting furnaceman; is in charge of a blast furnace or cupola, and directs men employed in loading, feeding furnace, removing slag pots, etc.; supervises operations of charging furnace from top with copper ore, coke and flux (flux, etc.), and controls valves to regulate blast of air delivered under pressure; advises men in position of furnace; directs breaking of clay hole with iron bar and "taps" off copper at intervals; slag is removed as it runs out into pot through slag hole; he potters; controls cocks to regulate flow of water in jacket round furnace.

cupola man, cupola tender, see cupola furnaceman.

cupola tender (Bessemer steel); as for furnace keeper except that molten metal is run into ladle for pouring into Bessemer converter (see run direct into converter) in manufacture of Bessemer steel.

distiller (lead); alloy furnaceman; shovels triple alloy of lead, zinc and silver into stout graphite retort, heats it to about 1000° C., when zinc distils over and is condensed in condenser attached to retort; when zinc has distilled over, removes condenser and heel ladles out residue of lead and silver alloy, and casts it into bars; taps molten zinc from condenser by breaking clay hole with iron bar.

distiller (zinc), see smelter (zinc).

first hand at furnace, see leading furnaceman.

forehand (copper); general term applied to men in charge of any process or apparatus in copper extraction work; usually *q.v.* as prefix, *e.g.* forehand furnaceman.

forge furnaceman; attends to and feeds furnace in forge department; places by means of tongs, etc., bar, rod or billet of metal in furnace, and withdraws it when sufficiently hot, using tongs, and takes it to forge; if heavy, moves metal by means of overhead crane, using tongs to guide it; generally assists forger (190) *q.v.*

forgerman's heater; a forge furnaceman *q.v.* who heats planks for scythe forges (190) *q.v.* and assists him generally.

founder; S. Wales; see furnace keeper (blast furnace).

frame fireman; plate fireman; a furnaceman *q.v.* who attends to furnaces used by frame turners (222), plate benders (190), etc., *q.v.* in shipyard.

fume roaster (lead smelting); smelter, fume roaster (lead smelting); a furnaceman *q.v.* who attends a slagging or sintering furnace in which he roasts fine dust or fume, collected in furnace flues, to free it from sulphur

preparatory to treatment in blast furnace, charges furnace at top from a hopper and discharges into pot through tap hole by breaking clay with iron rod.

furnace first hand (zinc extraction); furnace man who is in charge of a furnace, into which retorts are shovels a mixture of zinc oxide and coal dust; is assisted generally by a furnace second hand; takes with soft clay, a receiver on to end of each retort; supervises firing of furnace usually using producer gas, regulates flow of gas by means of valve, also regulates flow of secondary air for burning with gas; when zinc has distilled into receivers, removes ladles and heats zinc till it runs out into ladles and casts it into ingots or plates in iron moulds.

furnace keeper (blast furnace), blast furnace keeper; blast furnace tender, founder (S. Wales), keeper (blast furnace); is in charge of a blast furnace, and is assisted by men on it; superintends charging, slagging and tapping of furnace; making of pig moulds and breaking up pigs for removal, taps furnace by driving with heavy hammer, steel rod into baked clay plug in pouring hole of furnace, breaks up plug, which is swept aside by stream of molten iron (or lead, as the case may be); superintends and may assist at re-plugging furnace pouring hole; gives instructions when large lump of clay is to be thrown into hole and assigns gang of men in driving plug home with long metal rods.

furnaceman, blast furnaceman; general terms for any worker employed around a blast furnace; includes furnace keeper, cupola furnaceman (copper), smelter (copper) *q.v.*

furnaceman, drop stamp; attends furnace, coal or gas fired, in which he places small lengths of iron or steel bar or rod to be heated for drop forger (190) *q.v.*; withdraws bars or rods, when sufficiently hot, by means of tongs, and passes them to drop forger.

furnaceman (open hearth steel); general term covering smelter, first hand, second hand, third hand, fourth hand *q.v.*

furnaceman, ore furnaceman; is in charge of furnace in which he roasts natural ores, usually crushed to powder, either alone or mixed with suitable substances; superintends heating of ores by tending fires below furnace or regulating valve admitting producer gas and secondary air to gas jets in furnace; charges ore to hearth of furnace or into top of furnace, by hand shovelling, tipping from barrows, or by mechanical conveyor, and takes it over by hand, or mechanically, to ensure equal heating of charge; withdraws charge when action has proceeded to certain stage by hand or machine raking, or by other mechanical means; may also regulate flow of air to furnace if charge is not to be oxidised during roasting, by opening or closing dampers; cf. calcinar, roaster.

furnaceman (rolling mill or steel forge); mill tender (rolling mill), sheet mill furnaceman, sheet mill heater; tends furnace and superintends firing of same, carefully controlling temperature to ensure that bars, billets, or rods of iron or steel, which he sets in it, are brought to correct temperature for rolling or forging; judges (frequently) correct temperature by appearance of iron or steel or by pyrometer readings; removes heated metal bars, etc., by means of tongs and travelling crane to steam hammer or rolling mill; sometimes specifically designated, *e.g.* guide rolling furnaceman, plate furnaceman, sleeper mill furnaceman, spindle furnaceman, wire rod mill furnaceman.

refiner, refining furnaceman, **copper refinery man** (copper); a **reverberatory furnaceman** (copper) who shovels "blister" (95 per cent. pure) copper with a shovel from on hearth of furnace; stirs copper when molten to assist oxidation of impurities; poles metal with log of green wood to reduce oxidized copper; takes sample or button for test by chemist; taps out copper at intervals into ladles or mould.

refiner, refining man (iron); a **furnaceman** g.v. in charge of process of refining pig iron by re-heating it in furnace before puddling.

refiner, refining furnaceman (lead); **refiner furnaceman**, **refiner** (lead); a **reverberatory furnaceman** g.v. who shovels or tips impure lead, e.g., pig lead, containing silver and/or gold on to movable hearth of special cupellation furnace, pushes hearth, which is on wheels, into position in furnace; when charge is melted, opens valve which causes blast of air to be directed to surface of lead thus oxidizing it to lead oxide which, as it forms, is blown by blast to one side of hearth and away through special channel out of furnace; continues process until silver and/or gold only is left which cannot be oxidized in this way, holds out hearth on its rails at intervals to ascertain when action is complete, and taps furnace to extract silver and/or gold at end of process.

refiner, spelter, **see smelter** (zinc).
refiner, tin; a **reverberatory furnaceman** g.v. who places blocks of impure tin on sloping hearth of furnace and gradually raises temperature of furnace by adjustment of dampers so that purer tin melts first and runs down to lower level of hearth; ladles metal at intervals into cast iron kettle, allows it to settle and runs off less pure tin from surface of tin in ladle for further refining; pours purer tin into moulds.

refinery man (zinc); **ingot maker** (zinc); melts zinc plates or ingots produced from refining furnaces in cast iron pot, skims off oxides, thoroughly agitates molten metal with pole of green wood; reduces temperature by closing dampers, when lead present collects at bottom of pot, then ladles off zinc and casts it in iron moulds of form and size of plates or ingots required.

re-heater; a **furnaceman** (rolling mill) g.v. who takes metal sheets, rods, bars, etc., that have become cool during rolling operation, and heats them up again to rolling temperature; soaks sheets, etc., with tongs, places them by hand, or by crane if too heavy, into furnace, switches them to reverse colour change which indicates that they are again fit for rolling, and then withdraws them, using tongs and crane, handing them over to roller (173) g.v. again.

reverberatory furnaceman; is in charge of a reverberatory furnace in which fire is at one side and metal furnace and so constructed that flames and hot gases are conducted over top of metal and are bent down by a sloping roof on to surface of charge on hearth; superheats, charging of furnace by hand shovelling or tipping into hoppers over hearth, raises charge during heating, if necessary, and takes it out when process of heating is completed, regulates admission of air to fire by means of fire doors if charge is to be oxidized or reduced, by opening or partly closing them respectively.

revolver man, **revolving furnaceman**, **rotary furnaceman**; a **furnaceman** (rotary furnace) g.v. in charge of a furnace having rotating platforms at different levels on to which ore is automatically raked, used for calcining or roasting copper and other ores; oils and greases working parts of machinery; maintains flow of water in cooling channels; watches outfall of calcined ore on to conveyor

at bottom of furnace and repeats to foreman if fault in process arises.

roaster, **ore roaster**; a **furnaceman** g.v. who attends to hand or mechanically charged furnace in which crushed ores are heated directly by a fire beneath the hearth or by hot gases which pass under and over it, may rake over ore by hand, or central levels of machines which do it mechanically; when ore is sufficiently roasted, it may be speckled from furnace mechanically or shovelled out by hand into barrows; also attends to furnace fire; sometimes specifically designated, e.g., arsenic tin roaster, tin roaster, g.v. calciner, mine burner, ore furnaceman.

roaster, roaster furnaceman, **roaster man** (copper ore); a **roaster** (ore), **man** (copper ore) who feeds ore into furnace through which hot air is led to convert white metal (containing about 70 per cent. pure copper) into "blister" copper (95 per cent. pure copper and 5 per cent. iron, sulphur, arsenic, etc.).

rod mill furnaceman; a **furnaceman** g.v. who combines duties of furnaceman (rolling mill) and annealing furnaceman g.v. in a rod rolling mill.

rotary furnaceman, **see revolver man**.
scale melter; collects scale, i.e., partially oxidized iron which forms on iron and steel plates during rolling operation, and, being stiff, chips off as plates bend; shovels it into furnace with powdered coke, and taps off melted iron at intervals into ladle.
scrap furnaceman; shovels or tips steel scrap into crucible, or cupola of melting furnace, sends furnace and taps off melted steel into ladle.

scrappman, **scrapp melter**, **scrapp roller**, **see calciner** (scruff).
scythe smith's heater; heats blades for scythe smith or scythe forger (190) g.v. and assists him generally.
sheet mill furnaceman, **sheet mill melter**, **see furnaceman** (rolling mill).

Siemens-Martin furnace man; general term for melter (first hand, second hand, third hand, or fourth hand) g.v. engaged in making open hearth steel by the Siemens-Martin process.

sister (lead smelting), **see fume roaster**.

sintering hand, **see potman**.

slagger (lead smelting), **see fume roaster**.
slagman; a **furnaceman** g.v. who beats copper slag (produced at first melting of bullion lead) until "matted" (mass of molten lead mixing with sulphides of metals such as iron and copper) separates by gravity from "spume," i.e., metallic compound containing lead, cobalt, iron and arsenic, with traces of other metals; cf. **slagman** (170).

smelter, **smelting furnaceman** (copper), **see cupola furnaceman** (copper smelting).

smelter (open hearth steel), **see for melter** (first, second, third or fourth hand).

smelter (zinc); **distiller** (zinc), **melter, spelter refiner**; a **furnaceman** g.v. in charge of process of smelting zinc, including zinc; controls workers carrying out process; is responsible for proper working of furnaces and for quality of spelter produced.

smelt mill man (lead); attends to Scotch hearth or roasting furnace for lead ore; feeds fire, charges, discharges and regulates heat of furnace.

soaker fireman, **soaking pitman**; is in charge of large brick chambers (soaking pits) into which ore to be lowered, by travelling crane, from steel ingots, moulded by beamer (175) g.v. whilst still very hot; places lid on chamber and leaves ingot in it throughout the soaking and then removes it ready for rolling by attack, regulates, by a valve, flow of producer gas and, by series of dampers, flow of secondary air to burners

around pits, these keeping hot and bright hot during soaking process, and softens, softening furnaceman (lead), **see improving furnaceman**.
spare hand keeper; acts as furnace keeper g.v. in absence of regular furnace keeper; is usually a chief or senior slagger (173) g.v. and is so employed when not required to act as furnace keeper.

spelter furnaceman; (i) a **reverberatory furnaceman** g.v. who charges spelter, i.e., partially purified zinc ore, on to sloping hearth of reverberatory furnace, and tends furnace so that lead in spelter melts first and runs into hollow; ladles out lead; raises temperature to melt "hard zinc," an alloy of zinc and iron, and finally melts nearly pure zinc which he ladles off from hollow in hearth; cf. **refinery man** (zinc); (ii) a **assistantman** g.v. who roasts zinc blends or calcines to prepare it for smelting.

steep cupola man; a **cupola tender** (Bessemer steel) g.v. who is in charge of cupola for melting spiegelsteins to be added to charge of pure iron in molten state in Bessemer converter.
steel furnaceman, **steel melter**; general terms covering melter, first hand, second hand, third hand, fourth hand.

steel press furnaceman (forge), **see for furnaceman** (rolling mill).

stone burner, **see mine burner**.

stove fireman, **stove firer** (blast furnace), **see stoveman**.

stoveman (blast furnace), **stove mixer**, **stove dresser**, **stove firer**; attends to stores in which blast furnace gases are burnt to heat brickwork inside stove until brickwork is sufficiently hot; moves lever diverting blast furnace gases from one stove into another and opens valve admitting air, blown in under pressure, to pass through stove; changes passage of blast furnace gas into different stoves, usually four to each furnace, and passage of air from above air pipes, through stoves to furnace, at regular intervals, usually every hour; sometimes done by gas man g.v.
Talbot furnaceman; (first hand); is in charge of Talbot furnace, in which steel is made as a continuous process by the open hearth method; work similar to that of melter (first hand) g.v. except that tapping of steel is done at regular intervals by moving lever which lifts hearth thus pouring out steel into ladle; (second hand); assists Talbot furnaceman (first hand) g.v.; work similar to that of melter (second hand) g.v.; (third hand) assists Talbot furnaceman (first and second hands) g.v.; work similar to that of melter (third hand) g.v.

tinker g.v. **see potman**.

tin cupola smelter, **tin furnace smelter**; **tin smelter**; a **reverberatory furnaceman** g.v. who tips or shovels an intimate mixture of roasted tin ore ("black tin") and powdered coal on hearth of furnace; keeps furnace doors nearly closed to avoid oxidation due to excess of air in furnace gases; rakes over tin ore till tin is reduced and melted, ladles off tin and slag (dross) from furnace in a kind of ladle, allows it to settle and skims off dross, leaving tin ready for pouring into moulds to make ingots.

timberhouse fireman; controls valve regulating supply of producer gas and opens "ports" admitting secondary air to combustion chamber set beneath tin pots in intimate dipping machine; replenishes tin at intervals by adding fresh material; also replenishes grease pot by adding palm oil; generally done by tinman (263) and/or his helper.

tin smelter, **see tin cupola smelter**.
undressed furnaceman; (i) assists furnaceman g.v. in any way as required; (ii) general assistant; **undressed melter** (second, third or fourth hand) g.v. at open hearth furnace; (iii) on small furnace may be engaged on

except that steel is pushed along on dead rollers, i.e., not mechanically driven, by catches and assistants using tongs and special grapping irons for turning steel over opposite next gap in rolls; when rolls have been reversed by roller *g.v.*, pushes steel by hand back over "dead" rollers till it is gripped by rolls, and then passes from back to front; (three-high mill, not modern) as for three-high mill, modern, except that moving of steel back towards rolls for backward pass is done by hand over "dead" rollers using steel bars, tongs, and grips; (Note, chief difference between mechanical and manual handling of steel is that catches and assistants are exposed to great heat in latter case, whereas, in former case, rollers is removed some distance from steel and elevated on platform; sometimes one man or boy moves all levers controlling rollers and platens both before and behind rolls, under direction of roller; (in plate mill) arrangements under direction of roller (plate mill) *g.v.*, return pass of steel plate from back to front of mill; work as for catches described above except that plate does not require to be moved through different gaps in (plate mills are usually too high and reversible in this country); sometimes specially designated according to mill, e.g. sheet mill catcher, or according to position, e.g. front catcher.

catcher (rod rolling); turner; since end of rod, as it emerges from back of rolls, with tongs and turns it so that it passes back over roll as roll revolve.

catcher (tinplate), see behinder (tinplate).

catcher and sticker (wire); turner; catches rod from finishing train of hot rod mill and passes it into adjacent set of rolls, where rolls are continuous.

charger (tinplate), see doubler (tinplate).

cogger; bloomer; blooming mill roller, cogging roller; is in charge of first set of rolls in steel mill, in which steel ingots direct from soaking pit, see soaking pitman (171), are rolled to reduce them to plates or billets of more manageable proportions, i.e., to plates about 6 in. thick or billets about 6 in. square; is in charge of men and boys engaged on cogging rolls; either manipulates ingot himself or directs its mechanical manipulation by signals to man or boy, who, by means of a crane, moves "live" rollers, on which ingot is laid to revolve, then moving ingot forward towards rolls; sets suitable rolls in rolling machine or supervises the setting; guides ingot in its passage on rollers by means of tongs, or catches actuated by levers, so that it is forced between rolls; when steel has passed through all sections of one set of rolls, operates machinery which moves it and while platform of rollers on which it is rolled, to another set with smaller gap; passes steel plate or billet on rollers to re-heating furnace.

cogger's helper; a catcher *g.v.* engaged at back of cogging mill.

cogging roller, see cogger.

cold roller; a roller (steel) *g.v.* who passes steel plate or sheet, without previous heating, between heavy cylindrical rolls to smooth out any unevenness and polish surface, and also to render it tougher; in case of sheet metal for tin or blackplate, feeding is done by hand, but for larger sheets or plates, pushes them on "dead" rollers or by means of "live" rollers up to rolls through which they pass.

copper plate roller; rollerman (copper sheet mill); a roller (plate mill) *g.v.* who rolls out copper ingots into plates, of $\frac{1}{8}$ inch thickness or more.

copper rod roller; a section roller *g.v.* who rolls copper ingots, or billets into rod form.

copper roller, copper rollerman; (1) as for roller (steel); work is somewhat lighter as copper is softer, i.e., more easy to roll; (2) as for cold roller.

copper sheet roller; rollerman (copper sheet mill); (1) as for sheet roller, (2) as for cold roller.

doubler (tinplate); charger (tinplate); charges furnace with bars and draws first "least" steel furnace for passage to rolling mill; returns partially rolled sheets for re-heating, doubles sheet, gripping one with tongs and holding other end firmly on floor with his foot, and turns ends of doubled sheet using doubler's shears; repeats operation till sheet is eight-fold, see roller (tinplate); sometimes also steels and cleans; usually done by furnaceman (171) *g.v.*

edge tool roller; shapes blanks for edge tools, clamped over by hot or cold stamp, by passing them between successive rolls in a mill; feeds tool blanks to mill by hand with tongs.

electric roller machine minder; a roller *g.v.* who is engaged on rolling mill driven by electric power, moves electrical controls which operate rolls, "live" rollers, and rolling mill platens; see roller (steel) for purpose of rolls, "live" rollers, and platens.

finer (cutlery), see roller (cutlery).

finisher (cold rolls, tinplate); as for black cold roller *g.v.* except that thin steel sheet to be rolled has been "white pickled" (in weaker acid) and tinned.

finisher (roller), see finishing roller, finishing backhoe, finishing catcher; a catcher *g.v.* who recovers rolled metal at back of finishing, or final, set of rolls, works under direction of finishing roller *g.v.*

finishing front hooker; catcher *g.v.* who feeds partly rolled metal to last or finishing set of rolls, under direction of finishing roller *g.v.*

finishing roller; powder (roller); a roller (steel) *g.v.* who receives steel roughly shaped in roughing roll (see roughing roller) and passes it through rolls which shape it to final desired shape, such as girders, angles, channels, rod, bar, hexagon bar, strip, etc.; work is same as that of roughing roller except that rolls are more accurate and greater exactness is required, it being necessary to measure plates, wire, and rod sometimes with a micrometer screw gauge; passes finished goods on to large cooling tank to cool before being moved to warehouse.

forge roller, see puddled bar roller.

former (tubes), see roller (tubes).

front hooker; takes wrought iron in form of bars or blooms after it has been treated under forge hammer and has passed through first or breaking down rolls, and passes it to a second set of rolls, using an iron hook to lift metal; only found in mills unprovided with mechanical feed gear; *cf.* hooker, back hooker.

guide roller; usually a roller (steel) *g.v.* who is engaged on a small rolling mill in which guide rails are clamped in position on either side of live rollers to prevent jamming of metal being rolled and so that bars can be easily guided; may work in other metal.

guide roller backer; a catcher *g.v.* employed on a guide mill; *cf.* guide roller.

hard roll worker; general term for any worker assisting in rolling billets or rods in a wire drawing mill; head roller; turns applied to rollers in charge of a set of rolls and of men engaged thereon; controls work of front and back catcher, re-beater (171), shaver (279), hooker, and laborers (279) *g.v.* and is responsible that final product of mill is what is required, decides what rolls are to be used, and adjusts roll to thickness required; when rolls are no longer fit for use sends them to roll turner (169) *g.v.* to be repaired.

thresher-over; (1) (steel rolling mill), see catcher; (2) (other rolling mills) pulls steel ingot, suspended by crane, with long hook, and sends it into desired position on rollers ready for cogging, see cogger; *cf.* heavier-over (279).

hooker, back hooker; back side hook, back side hook-over, back foreman; stands at back of rolls and receives steel, or other metal, as it emerges from rolls, grips it with tongs or special hook, and guides it along over "live" rollers to next set of rolls, or to shavers, see shaver (279), or to re-heating furnace, see re-heater (171); *cf.* front hooker.

hooker-in, hooker-over, see catcher, hooking bar trailer; a hooker *g.v.* who uses hooking bar to lever bar up to entrance of roll.

iron roller, iron bar roller, see merchant roller.

lead roller, lead sheet roller; sheet lead millman, sheet lead roller; a cold roller *g.v.* who rolls lead ingots out into sheet lead, between smooth steel rolls.

merchant roller; iron bar roller, iron roller, strip roller, strip steel roller; as for roller (steel) except that material used is wrought iron, and product is iron strip, lengths of which are known as merchant bars.

mill behinder; (1) see behinder (tinplate); (2) see catcher.

millmen; general term for any man engaged on rolling mill, *g.v.*, roller, doubler, furnaceman (171) *g.v.*; sometimes also applied to their respective helpers, i.e., catcher, behinder, shaver (279), cogger, cogger's helper *g.v.*

muck roller; feeds by means of long-handled tongs bundles of wrought iron scrap which have been heated to welding temperature to heavy muck rolls, through which scrap passes and is welded under pressure into bars known as muck bars.

paragon frame roller (umbrella); a roller (steel) *g.v.* who passes heated steel strip through rolls to obtain V-shaped strip for making into patent umbrella ribs.

passer; see harrier; often further designated according to allocation of duties, e.g., first passer, second passer.

pen steel roller; a sheet roller *g.v.* who rolls steel bar into thin sheets from which pen nib blanks are stamped out in the cold.

plate gauger; measures thickness of plate, *g.v.*, steel, copper, etc., at intervals during rolling of plate, taking measurements at various places to ensure uniformity of thickness; also makes final exact test after rolling; gauging frequently done by roller (steel) *g.v.*, and afterwards checked by checker (275) *g.v.*

plate rolling machine attendants; assists roller (plate mill) generally; moves levers operating rolls and live rollers or may do work of catcher (plate mill) *g.v.*

puddled bar roller, puddle roller; forge roller; as for roller (steel) except that he rolls puddled iron which has been roughly hammered into bar form by shaper (174) *g.v.* roll maker, rail roller; a roller (steel) *g.v.* who rolls heated steel billets into rails for railways, tramways, etc.

receiver, see catcher; sometimes specially designated, e.g. sheet mill receiver.

rim maker, rim roller, see wheel rim roller.

rod mill hooker, see bull dogger (rolling mill).

rod mill roller, rod roller; wire rod maker, wire rod mill roller; a roller (steel) *g.v.* who rolls heated steel bars or billets into rods, from which wire may subsequently be drawn.

roller (cutlery), *finer*; as for roller (steel), rolling steel into rough shape of cutlery blade.

roller (plate mill), plate mill roller, plate roller; a roller (steel) g.v. who is in charge of rolling mill in which steel ingots or billets are rolled down between annular rolls to form steel plate; in case of rolling thick armour plate, commences with steel ingot from soaking pit; continues rolling process until plate is of required thickness, i.e. slowly adjusts distance between rolls by screw; when mill the required thickness is obtained, during rolling operation may send plate for shearing if required.

roller (steel); rollerman; is in charge of sets of rolls and of men who assist in operating them, e.g. behinder, hearse-up, breaker-down, catcher, doubler (simplex), hooker, rougher-up, screwer, and including men engaged in heating up steel when it is to such a temperature that further rolling cannot be done, see heater (171); nature of work varies according to plant installed, that in modern plant being almost wholly mechanically performed, whereas in older type plants there is considerable manual work involved in pushing bars, billets or blooms of steel about on rollers up to the rolls; further, rolls may be two-high, in which case they are reversible, by which means steel bars or blooms can be rolled from back to front of rolls; or three-high, in which case steel passes through lower pair of rolls on to movable platform which roller's helpers raise mechanically so that steel passes back between top pair of rolls, and thus saves reversing rolls; superintends placing of rolls in rolling machine, to ensure that suitable rolls are used according to product required, receives heated steel in one form or another, e.g. beam, billet, rod, bar, etc., from soaking pitman (171), or re-heater (171) g.v.; supervises helpers who, at his signals, move levers to actuate live rollers which move it to rolls; or helpers who push steel along floor of mill over "dead" rollers, i.e., not mechanically-driven, up to rolls; supervises, in particular, catchers g.v.; determines duration of rolling process, if rolls are in same train, places rollers on intermediate rollers or platform, sometimes specifically designated, e.g., hot roller (to distinguish from cold roller g.v.), sheet mill roller, sheet roller, spindle roller.

roller, rollerman (tin plate); is in charge of process of rolling out rough steel bars into steel plate, ready for tinning; sets rolls for first rolling; picks up steel bars with tongs from floor where they have been laid along by furnaceman (171) g.v.; places bar between rolls and repeats pass till thin enough, receiving plate over top of rolls each time from behinder or catcher g.v., and adjusting rolls by means of hand screw; returns plate to doubler g.v. who doubles plate and slides it along floor to furnaceman (171) g.v. to be reheated ready for continued rolling; doubling, reheating and rolling continue until plate is eight-fold, passes plate to shearer (279) and opener (279) g.v.; supervises work of catcher, doubler and furnaceman (171) g.v.

roller (tubes); former (tube); as for roller (steel), rolling iron and steel strip for tubes.

roller and bloomer, see repper.

rollerman; (i) see roller's assistant; (ii) see roller (steel).

rollerman (copper plate mill), see copper plate roller.

rollerman (copper sheet mill), see copper sheet roller.
roller's assistant; roller's helper, roller's second hand; rollerman; under roller, underhand roller; general terms for all men assisting at rolls, guiding or pushing steel billets, bars, plate, sheet, etc., to rolls and from rolls to shearer (279) or re-heater (171) g.v. or to next set of rolls, adjusting rolls under direction

of head roller g.v. or controlling mechanism of modern mechanical mill, term includes: hooker, behinder, catcher, roller goy boy (279) g.v. rougher, see roughing roller.
rougher-down; a roughing roller g.v. in a rolling mill in which raw material used is steel billets, i.e., mill has no cogging rolls, but obtains billets from coarser rolls.
rougher-up; guides bar by means of clods or pins into roll and signals to screwer, who operates worm gear to adjust roll to varying thicknesses of bar.

roughing hooker; a hooker g.v. who works at roughing rolls, as which have or billets are roughly rolled to shape. According to final product required: roughing roller, roughing mill roller; roller-down (Northern Counties), rougher; a roller (steel) g.v. who receives heated lengths of billets (steel bar about 6 inches square) and rolls them roughly into shape in which they are finally required, after which the rough shaped product is reheated ready for finishing roller g.v.; billets are received from reheating furnace to which they are sent from cogging rolls, thus roughing rolls are intermediate between cogging rolls and finishing rolls.

runner; through, guide rolling runner-through; (i) puts foremost end of metal being rolled into guide box of rolls by means of tongs, and closes box as soon as section is applied in rolls; (ii) (wire rolling) a catcher g.v. who centres end of rod as it emerges from rolls, which are three-high, and turns end into next pass hole above where it passes between rolls revolving in opposite direction. screwer, screwer-down; screws down rolls of rolling mill to obtain required space between rolls, according to a gauge set by rollerman g.v.; may be done by turning a wheel by hand, by lever (for small rolls) or by operating levers or wheel controlling hydraulic or electric mechanism, see screw gear driver, sometimes specifically designated, e.g., first screwer (at first set of breaking down rolls), second screwer.

screw gear driver; a screwer g.v. who adjusts distance between rolls by operating levers or wheel controlling hydraulic or electric mechanism.

section roller; general term applied to any finishing roller g.v. who produces finished rolled steel in any form except plate or sheet, i.e., in form of bar, rod, strip, girder, channel, angle, etc.
sheet lead millman, sheet lead

sheet lead roller; a roller (plate mill) g.v. who is rolling steel bars or ingots into plates for ships.

side roller (type moulder); a roller's helper g.v. who assists in rolling types of steel wheels.

square hand (rolling mill); does odd work in rolling mill, e.g. loading, piling, and takes place of any roller's helper g.v. absent from mill through absence sickness, etc.
strip roller, strip steel roller, see merchant roller.

subordinate roller; takes roller's duty during night shifts, where roller (steel) g.v. works on contract.
sword blade roller; a finishing roller g.v. who rolls out from special bar steel, strips of steel from which sword blades are stamped or forged.

tapered strip roller, see wedge roller.
tea lead roller, tea lead worker, see lead roller.

tin foil beater, tin foil roller, as for lead roller; tin foil is usually an alloy of tin and lead.

turner-in (rod rolling), see catcher.
turner-in (rod rolling), see catcher and staker (wire).

tyre roller; wheel roller; a roller (steel) g.v. who operates special set of rolls, called tyre rollers, rolling mill which rolls steel tyre of cast iron, etc. wheels; grips heated circular forged blank of tyre with tongs and places it on end of one roll,

and after setting rolls in motion screws up other roll so that it approaches first roll thus rolling tyre. underhand roller, see roller's assistant.
under roller; (i) general term applied to roller who does less important rolling; any work so night shift; (ii) (sheet mill) see breaker-down; (iii) see roller's assistant.
wedge roller; tapered strip roller; a section roller g.v. who rolls wedge-shaped sections of iron and steel packing used by shipbuilders.
wheel rim roller; rim maker, rim roller; a sheet roller g.v. who rolls steel bar into strip of cross-section of wheel rim.
wheel roller, see tyre roller.

wire rod mill, wire rod mill roller, see rod mill roller.

zinc roller; as for roller (steel), except that work is not so heavy and final product not as varied, product is usually zinc rods or sheet.

Sub-Order 4.—Foundry Workers.

180.—MOULDERS (not Blast Furnace).

aluminium moulder; a moulder (hand or machine) g.v. who makes moulds in sand for casting aluminium, usually in small lots where a machine does it unsuitable.
axle bush moulder; a moulder (hand or machine) g.v. who specializes in preparing moulds for casting, and in casting axle boxes, or axle bushes, principally for railway work.

bell caster, or bell founder, bell foundry, bell caster, bell moulder; superintends mixing and melting of bell metal (hard bronze, an alloy of copper and tin), and makes a last mould in which bell metal is cast in casting pit of bell foundry this fixes crook (a double compass of wood whose legs are shaped like cross section of bell) or to pivot of stake firmly fixed in bottom of casting pit; builds up core of inside of bell with mixed sand, clay, bricks, etc., using inner leg of "crook" to obtain correct shape, plaster on moulding sand, grease and tan dust with trowel, lights are inside this core to dry it thoroughly and then when dried, plaster clay on it with trowel till clay coating is in form of bell itself (outer leg of crook acts as guide in making bell of clay), mould by hand with hand tools, top at "crown" of bell in clay, thus completing clay bell; dries this bell and bakes whole by means of a second fire kindled inside core; when cool, places on clay bell, moulds, any ornamentation, scrolls, figures to be cast on bell; scores surface of clay bell with grease and tan dust by hand, and then builds up sand mould outside clay bell, ramming firmly round bell raised brick in mould to help it to bind; completes making of outer sand mould, and makes pouring gates, and risers; when dried, raises it off clay bell, which he carefully breaks away from core, lowers mould again into correct position over core; pours molten bell metal from crucible or ladle into mould; leaves mould and casting to cool and when cold, supervises breaking down of mould and removing of bell for finishing, other term may be applied to proprietor of bell foundry.

bell moulder, see bell founder.
bench moulder; tub moulder (brass); a hand moulder g.v. who makes small moulds at bench, instead of on floor of foundry; cf. green sand moulder.

brass caster; caster (brass foundry), foreman caster, principal hand, principal tub foundry hand; superintends melting of brass, bronze, etc., placing weighed quantity of copper in crucible set in furnace, and adding gradually,

weighed quantity of zinc; makes mould and file in the core ready for casting, duties as for moulder (hand or machine); pours metal into moulds when it has reached correct temperature and superintends removal and cleaning of castings; in some cases, making of mould is done by a second hand or moulder and brass caster merely superintends work of foundry, and attends to actual pouring of metal; cf. *caster* (1884); all work of moulding is done at a moulding tub which resembles a large wooden trough, in consequence a brass caster is known as the "principal tub hand" and his assistants as "tub hands"; sometimes specifically designated according to article cast, e.g. brass letter caster, brass look caster, brass weight caster.

brass moulder; *caster's helper*, second hand, *tub moulder*; looks after heating of crucibles in furnace in which copper and zinc are melted together, puts cores in core oven to dry; makes moulds (see hand or machine moulder) and fastens in cramps; in other than large works, sometimes does work of brass caster.

bronze article caster, bronze caster, as for brass caster.

caster (brass foundry), see brass caster.

caster's helper (brass foundry), see brass moulder.

chair moulder, railway chair moulder; iron chair maker, rail man (chair foundry), railway chair maker; a moulder (hand or machine) q.v. or a plate moulder q.v. who specialises in casting metal chairs for railways.

connection moulder; a moulder (hand or machine) q.v. who makes moulds for casting pipe connections.

copper roller maker; moulder (hand or machine) q.v. who attends to melting of copper in crucible in furnace, prepares moulds, and pours molten copper thereon to form copper rollers.

core filar; reduces size of core, or finishes it by rubbing it with a wire file; usually done by coresmaker q.v.

core maker, core moulder; (i) (hand) makes core which is to be fixed in mould, see moulder, when ready for pouring of molten metal; (single shaped stout core) makes clay, sand, and clay mixed with horse manure

(to provide for compressibility under contraction of casting) into wooden core box, i.e. a moulding box for cores, so that core takes shape of core box; takes core box apart and smooths surface of core where necessary.

places core in oven to be thoroughly dried; (complicated shapes) builds up core round cast iron skeleton or framework, winding bar or steel bands (ropes) to form base on which bar, frame and, clay and horse manure in core box, is

moved over and dried in oven; (cores for pipe moulder) builds up core as above on basis of perforated iron bar; smooths surface of core by turning it on lathe and places it in oven to dry; finally passes core to moulder for inclusion in mould; (ii) (machine)

makes cores by any of above hand methods, except that ramming of clay and sand is done by machine press, which holds core box, pulls lever operating mechanical ramming apparatus; in all cases carefully cuts vent holes in core with special tools to liberate any gases generated on pouring; in more complicated cores inserts waxed threads in core, the wax melting in drying oven and being absorbed by sand to leave vent channels; sometimes, specifically designated, e.g. ploughshare

coresmaker.

core turner; makes metal core bars require on strong cast iron trowels while core maker q.v. winds on hay or straw bands, and affixes mixed clay, sand, core, gum, etc., on a circular core.

dry sand moulder; a moulder (hand or machine) q.v., using dry sand with addition of certain amount of old loam, which is dried before use, to make moulds; is usually engaged on production of long large moulds for castings such as pipes, columns, and flywheels.

floor moulder; a hand moulder q.v. who makes moulds on sand floor of foundry, usually done in case of large moulds to avoid unnecessary lifting.

foundryman moulder, see brass caster.

foundry; general term for any worker engaged in casting yellow metals, including brass caster, brass moulder q.v.; usually prefixed by name of metal worked in, e.g., brass foundry, brass moulder.

green sand moulder; a moulder (hand or machine) q.v. who specialises in making moulds for casting those articles which can be best cast in green sand moulds, i.e., moulds which do not need to be dried in the core oven. cf. batch moulder, floor moulder.

hand moulder; makes moulds in which molten metal is poured to produce castings; shovels sand and loam (drag) of moulder's flask

into it; fills then places wooden or metal pattern, made by pattern maker (480) q.v., in centre of box and using mallet, hammers it into sand until approximately one-half is submerged; smooths off rest of sand.

ramming it firmly into position round pattern; removes pattern, sprinkles facing sand, a mixture of fine sand and cool dust, in mould shape produced; batters pattern again into sand to bind fresh sand added, and then, after removing pattern again, coats whole of sand surface with black-wash

containing carbon, using hand broom; replaces pattern, places upper box of moulder's flask on lower one, and fills this with sand, carefully ramming sand firmly by hand, round pattern, as usual; and, if necessary, rammed, also puts in with sand, metal supports which help sand to retain shape when upper box is removed;

removes upper box, turns it over, sprinkles finer sand in mould shape made by pattern, presses it again on pattern, and then paints moulded surface with black-wash as was done in case of lower box; replaces upper box on lower and with sharp metal instrument, makes hole down through sand to pattern, and heaps sand round top of hole to form pouring bole for caster (183) q.v.; removes

upper box, takes out pattern, sprinkles a little "parting" sand (burnt sand) on upper surface of lower box, then replaces upper box, clamping it firmly to lower one; sets mould sand ready to be thoroughly dried in oven, after which it is dry for

caster; in case of mould in which cores are required, moulder also places "core print" in sand with pattern and on finally removing pattern and core print (two-piece pattern of core itself) replaces latter by core.

iron chair maker, see chair moulder.

iron corer; fixes an iron core or chill in mould in place of whole or part of ordinary sand core, so that the surface of casting is cooled rapidly and so hardened.

loam moulder; makes moulds of loam, a mixture of clay, sand and chopped straw, usually without aid of a pattern to be used in casting large, more or less circular objects, builds up foundation on special plate or on floor of casting pit, using loam bricks and loam which is wet and easily worked; levels off foundation, fixes spindle vertically in centre of plate and fixes templates on to spindle by means of which he builds up

outer mould, or "cope," with loam bricks and loam and also builds up core in similar way ("face" both "cope" and core with plastic loam and smooths them off with trowels and scrapers to coincide with templates supplied, revolving template on spindle to ensure uniformity in

all parts of mould; leaves space inside core for fire to be made (if mould is too large to be dried in core oven), and superintends making of fire, flow plate on top of mould when finished and clamps upper and lower plates together; in case of core which is loose inside mould, fixes it in position, using template as a guide, and by means of bolts and nuts, fastens it to upper and lower plates, which would be complete, dries it ready for caster.

machine moulder; makes moulds by machine for use in casting articles in metal; work involved depends upon type of machine; (hand moulder) machine) as for plate moulder, except that separation of upper part of "flask" from pattern plate is performed by moving lever; pattern plate is then raised, and carefully removed, when after casting mould with "black-wash" hand machine moulder clamps parts of flask together and removes them from machine ready for drying in oven; (moulding press) as for hand moulder, machine) as for plate moulder, except that ramming is done by moving lever operating press (hand, steam, pneumatic, or hydraulic) which descends on sand and squeezes it into all crevices and interstices of pattern; (moulding machine) as for plate moulder, except that moulding sand is shovelled into filling frame from which it passes into "box" or upper and lower part of "flask" by moving a lever; ramming is also done by moving levers, and upper part of "flask" and pattern plate are moved up and down for removal of plate and coating of mould with black-wash — by mechanical means.

marker-off, a specially experienced moulder who prepares core iron, i.e., roughly cast iron framework on which more complicated and large cores are made, and superintends fitting up of boxes.

matrix maker; mould maker, pattern plate moulder; a highly skilled hand moulder q.v. who makes, for repetition machine moulding, a metal mould which is afterwards machined to accurate dimensions by the metal

chiseller (200) q.v. so that the best and cleanest castings only may be obtained from it.

moulder; mould maker; general term covering any type of moulder, e.g., hand moulder, machine moulder, plate moulder, or moulder, bench moulder, etc.; sometimes specifically designated according to metal to be cast in mouldable mode, e.g., aluminium moulder, brass moulder, bronze moulder, gun metal moulder; according to type of sand used as moulding medium, e.g., green sand moulder, dry sand moulder, loam moulder, sand moulder; or according to article to be cast in mould made, e.g., chair moulder, hollowware moulder, nail moulder, pipe moulder, roll moulder, shell moulder, stamp moulder (straight

pattern).

mould maker; (i) see moulder; (ii) see matrix maker.

nail moulder; a plate moulder q.v. or a machine moulder q.v. who makes moulds to be used for casting nails.

oddside man; a moulder (hand or machine) q.v. who makes moulds using an oddside mould as a pattern; "oddside" mould is very carefully prepared by a more skilled moulder, for use in repetition work, e.g., gas

slots; latter is a plate of Paris cast of a number of patterns fixed in correct position in mould.

oddwork moulder; a jobbing or general moulder (hand or machine) q.v. who makes moulds, from any type of pattern in green or dry sand for casting articles for various trades and general purposes.

pattern moulder; a moulder (hand or machine) q.v. who uses a wooden pattern to make moulds in which iron or other metal patterns are to

be cast for use by other moulders; (work is necessarily very accurate, as errors in mould would be repeated in every casting taken from subsequent moulds made by master metal pattern).

pattern plate moulder, *see* matrix maker.

pipe bank moulder; iron pipe moulder, pipe founder, pipe moulder; a moulder (hand) *q.v.* who makes moulds for casting pipes on a sand heap (called a bank) using boxes set on an incline and not vertical boxes used by pipe pit moulder *q.v.*

pipe founder, pipe moulder, iron pipe moulder; (i) *see* pipe bank moulder; (ii) *see* pipe pit moulder.

pipe pit moulder; *see* pipe founder, pipe founder, pipe moulder; a moulder (hand) *q.v.* who makes moulds for casting big pipes in foundry pit using vertical boxes.

plate moulder; a moulder who uses sand into which molten metal is to be poured by caster (183) *q.v.* using metal plate, on to sides of which have been bolted or cast, shapes of two halves of article to be moulded (roughly cut-half on each side); shovels sand into wooden or metal box, opens top and bottom, rams on sand, until box is filled; places plate flat on box and, using mallet, rammers it down, until plate takes shape of one side of mould; places another similar box on top, fills it with sand and rams sand down on plate using hand rammer; when sand has been firmly rammed down on upper side of plate, makes hole in sand down to plate using small sharp metal instrument, and heaps sand up round top of hole to form pouring hole for caster; with help of assistants, lifts off top box or flask, gently taps plate and removes it carefully, parts, with hand brush, those parts of mould which will come into contact with hot metal, with a liquid blackwash containing carbon to prevent oxidation, or surface of casting and fusion of sand of mould; replaces top box (cope) on lower one (drag) and clamps them together, mould is now ready for caster.

principal hand, principal tub hand, *see* brass caster.

rail man (chair foundry), railway chair maker, *see* chair moulder.

sand caster, *see* brass caster.

second hand (brass foundry), *see* brass moulder.

setter; a loam moulder *q.v.* who sets out and supervises work of other loam moulders.

spray moulder; a moulder (hand or machine) *q.v.* who, in making a mould for a cast, has the complicated casting, or number of castings (when several moulds are made together), makes a runner and a number of gates for each casting, so that molten metal can run into all parts of mould quickly and that imprisoned air and generated gases are easily able to escape; (when caster pours molten metal into mould, it fills up runners (pouring holes), and gates (ventilating holes) and, as a result, when cooled and sand is removed, cast metal runners and gates form a spray).

tub hand; general term applied to moulders, gutters-down (185), *etc.* *q.v.*

tub moulder (brass); (i) *see* brass moulder; (ii) *see* bench moulder.

tuyra maker; a moulder *q.v.* engaged in making tuyeres for blast furnaces by the usual moulding methods.

charger, cupola; furnace charger; cupola feeder; who fills trucks or barrows of coal or coke, pig iron or scrap iron, and limestone from top of hoist to oblong door of cupola, opens door and tips in contents of barrow, closes door and returns empty trucks to hoist for refilling, of blast furnace charger (279).

crucible man (steel furnace); places or begins containing materials for pouring special steel in furnace, uses long-handled tongs, and withdraws it when steel is melted, and at suitable temperature for casting.

cupola feeder, *see* charger, cupola.

cupola hand; furnace attendant, furnaceman; general term for men assisting at cupola furnace in foundry, including cupola charger, charge wheeler (279) *q.v.*, men assisting at tapping molten iron and slag into ladles, and re-plugging top holes, or performing other simple, semi-skilled or unskilled work about the cupola.

cupola man, cupola tender; blast furnaceman, cast house furnaceman, furnace tender, iron heater (foundry), smelter (foundry); is in charge of cupola, a furnace in which pig iron and scrap are melted ready for casting, and supervises men engaged thereon.

is responsible for correct charging of cupola with coke and iron, for air blast blown in near bottom through tuyeres, and for periodic tapping of molten iron and slag into ladles; work similar to that of furnace keeper in ironworks (171) *q.v.*, except that cupola is usually smaller and is charged with pig iron instead of iron-ore; usually tops cupola himself by breaking baked clay stopper with hammer and pointed iron bar to its bottom, and metal into separate ladles and assists in plugging hole with moist clay; prevents accumulation of slag by poking with iron rod at blast, or tuyere; watches progress of melting of iron through men windows set in side of cupola, some times does work of cupola tetter (565) *q.v.*, of cupola man (279).

electric furnaceman (foundry); controls switches which supply electric current to small furnace in which special steels are melted by heat generated by electric current; places known weights of steel, broken into small pieces, in furnace and adds carefully weighed amount of manganese, chromium or other special metal in furnace and switches on current which melts mixture; taps off metal into small ladle for casting.

furnace attendant, furnaceman, *see* cupola hand.

furnace tender, *see* cupola man.

iron heater (foundry), *see* cupola man.

smelter (foundry), *see* cupola man.

183.—IRON OR STEEL FOUNDRY FOUNDRY LABOURERS.

beck tetter; attends to removal of slag at back of cupola and assists in charging, *etc.*

berreller, *see* tumbler.

box filler; *gutter*; fills up moulding box with sand by shovelling, after moulder (180) *q.v.* has placed pattern in box and covered it with special sand that has to be nearest to casting, in small moulds, box filling is done by rider (180) *q.v.*

box lifter; *after-up*; lifts up box containing pattern embedded in sand, after sand in top box (cope) has been rammed, and turns it over so that sand in lower box (drag) can be rammed, this occurs only in hand moulding and in case of smaller moulds, may be done by rammer *q.v.* or even by moulder (180) *q.v.*

breaker, iron; pig breaker, breaker

man; breaker; breaks up pig iron and scrap iron ready for charging into cupola by cupola charger (279) *q.v.*; uses sledge hammer if by hand or places pigs or scrap under power hammer or breaks them with bar breaker.

breaker-off; knacker-off; a settler *q.v.* whose special duty it is to break off "gates," "risers," and "runners" from castings, using hammer and chisel; ("gates," "risers," and "runners" are solid bars of metal which result from solidification of molten metal in pouring holes and ventilation holes, running from casting to top of mould and in connecting holes which are made to permit passage of molten metal from one mould to another when more than one article is cast in a series of moulds at a time, or when two or more castings are made in one mould).

breaker-up, *see* breaker, iron breaker; a fettler *q.v.* who cleans up a casting by hand, using a wire brush with which to brush off adherent sand cake maker; makes sand bricks by ramming sand into square moulds, seals brick or "cakes" to oven to be dried; ("cakes" are used by moulders to strengthen weak places in large moulds, and to ease off contraction).

caster; feeder; pourer; pours molten metal, iron or steel, from ladle into mould; (small hand ladle) grip-ladle or crucible, in which steel is melted, with tongs or other gripping device and tips it gradually, allowing edges to fall into pouring hole (gate) in top of mould; continues pouring until mould, gates and runners, *i.e.*, ventilation holes, are filled with metal, so that as metal cools and contracts, a vacuum is gotten and runs of metal into mould will keep it full; (large ladle) receives ladle of molten metal swung from arm of casting crane, pulls it into position over mould and more lever of ladle opening pouring hole in its bottom, watches metal as it goes, and gates and runners are filled, and then turns off flow of metal; instructs casting crane-man (609) *q.v.*, as to where ladle is to be moved for next casting, and continues pouring until ladle is empty; sometimes specifically designated, *e.g.*, comb caster, cutler caster, iron cabinet caster, key

caster, nail caster, pillar caster, rail

caster (bedsteads), tuipe pipe caster,

caster, angle iron, *see* runner; a

caster *q.v.* who pours ends of angle

iron bar, *i.e.*, iron beams of angle

section, in special mould and pours or

rams molten metal into mould to cast

dovetail on end of beam.

caster, French; a caster *q.v.* who casts

cast-iron corner pieces and angle

irons to pillars of bedsteads, *see*

caster, angle iron.

caster, malleable; a caster *q.v.* who

makes castings of malleable iron, *i.e.*,

pig iron from which most of carbon

has been burnt off.

caster, addwork; a caster *q.v.* who,

not specializing, casts miscellaneous

articles, as required.

catcher, iron catcher; catches molten

metal tapped or poured from foundry

furnace in large ladle for distribution

to smaller ladles or shanks.

chair scrubber; a fettler *q.v.* who

specialises in cleaning up railway

chair castings.

chipper; a fettler *q.v.* who cleans up

castings by chipping off irregularities

by hand, using a hammer and

cold steel chisel, or by machine

using a pneumatic hammer or

chisel, sometimes iron specified

designated, *e.g.*, bedstead

chipper, iron hollow-ware chipper,

rod chipper.

cleaner, *see* fettler; sometimes

specifically designated, *e.g.*, castings

cleaner, iron cleaner, metal cleaner,

ring cleaner (pistons), steel cleaner

(foundry).

cleaner-up; smooths over surface of

mould with trowel and cleaners, and

applies a thin coating of foundry

blacking on mould prior to casting,

after mould has been dried.

closer; mould filler (iron or steel

foundry), resins, dried parts of

mould and cores ready for

assembling; inserts cores in correct

182.—IRON OR STEEL FOUNDRY FURNACE AND CUPOLA MEN.

blast furnaceman, *see* cupola man.

blast tender; in charge of fans or

blowers which produce blast to assist

in melting of iron in cupola or fur-

nace.

cast house furnaceman, *see* cupola

man.

position and places cope, *s.e.* upper part of mould, on drag, *i.e.* lower part; fixes on cramps to hold two parts rigidly together during casting which is next operation.

core box; runs up small sample cores in foundry, and turns core bars by hand for core turner (180) *g.v.*; *assists* core maker (189) *g.v.* generally, keeping his armoured with materials, and carrying or wheeling away cores to core oven.

core oven attendant; attends to oven in which he places cores, *see* core maker (189) and *g.v.* (189); removes cores and moulds when dried and passes them to closer *g.v.*; attends to flues and dampers round oven through which pass waste cupola gases to heat oven.

cut-off (iron pipes); a breaker-off *g.v.* who removes "runners," "gates" and "risers" from iron pipes after casting by means of hand or machine saw.

dresser, *see* fettler; sometimes specifically designated, *e.g.* axle fettler, casting dresser, comb dresser (usable for cotton combing machines), dry sand dresser (castings made to dry sand moulds), greens sand dresser, iron dresser, iron eastern dresser, loam dresser, metal dresser, pipe dresser, steel dresser, and runner, *see* closer, angle iron.

fettler, *see* closer.

fettler (foundry), fettler of castings; cleaner, dresser, slobber, rougher, rubber-off, trimmer (iron foundry); general terms covering all foundry workers engaged in removing adherent sand from castings, and chipping off any irregularities, *i.e.* fins, gates, etc., in metal surface of casting either by hand or machine; work varies according to kind of sand of which mould is made, elasticity of mould and character and kind of finish that casting must have; (hand fettling) (i) removes sand from casting by means of wire brush, *see* brusher, and removes unevenness in metal by means of hammer and chisel or pneumatic chisel, *see* chipper; (ii) removes roughness and unevenness from castings by hand filing, *see* foundry file (333); (machine fettling) (i) places small castings in a revolving metal drum; castings roll over one another and brittle projections break off, castings thus smooth each other, *see* tumbler; (ii) holds casting up against revolving abrasive wheel or vice versa *cf.* grinder (foundry) (237); (iii) holds moulds of sand filled against parts of castings to be fettled; this method is used specially in fettling large castings which cannot easily be handled; *see* sand blaster (280); "gates," "risers," and "runners" by hand with hammer and chisel, or by means of hand or machine saw and grinds down stumps left on removing abrasive wheel; removes tar from casting, breaking core and cores from it if necessary, taking care not to damage casting; sometimes specifically designated, *e.g.* axle bearing fettler, iron fettler, plough share fettler, *see* fettler (276).

filer-in, *see* box filler.

finisher; a fettler *g.v.* who completes operation of fettling of castings after first roughness has been removed by chipper, breaker-off, or sand blaster (209) *g.v.*; may be done by a filer (253) or a grinder (237) *g.v.*

foundry labourer; general term for any unskilled or semi-skilled man employed in a foundry, including fettler, sand riddler, closer, sand wheeler, etc. *g.v.*; sometimes specifically designated, *e.g.* roll foundry labourer.

foundryman; general term for any man who works in a foundry whether skilled or unskilled, including moulder, coremaker (180), furnace-man (182), and foundry labourer *g.v.*

grinder, sand; sand roller; shovels sand, either new or from moulds which have been used, into pass of edge runner mills; sets mill in motion and shovels out ground sand when sufficiently fine.

knocker-off, *see* breaker-off.

knocker-off, *see* opener.

ladle man; useful carrier; brings ladle to cupola tapping hole by pushing it if on wheels, or by guiding it with chains, bars, etc., if swung on crane; removes ladle when metal has been tapped into it, and by means of several types it and pours metal into moulds direct (*cf.* closer), or may pour it into smaller ladles if two or more castings plus require metal at same time; examines ladle at intervals and, when necessary, does small repairs to lining, or sends it to be relined.

lifter-up, *see* box lifter.

loom mill man, *see* pug mill attendant.

metal carrier; (i) *see* ladle man; (ii) *see* shank carrier.

mixer, loam; sand mixer; (i) mixes different sands together, *e.g.* old sand with fresh, or sand with a little clay or horse manure as a binder, by turning them over with a shovel by hand; (ii) *see* pug mill attendant.

moulder's assistant, moulder's labourer; assists moulder (180) *g.v.* by fetching sand, pouring sand, foundry black, moulding boxes, patterns, core-pins, etc., mixes special sand mixtures for special moulds; may also act as runner-up or filer-in *g.v.*, or assist generally under moulder's supervision.

moulder's help, *see* riddler.

moulder's server (malleable nails), *see* moulder's assistant.

mould fitter (iron or steel foundry), *see* closer.

moulder, *see* fettler.

opener; knocker-out; removes clamps from moulding "flasks" or boxes, when casting has had time to cool and solidify; lifts off upper part of flask (cope) and removes casting and covers from mould; knocks away bulk of adhering sand and places casting on block for conveyance to fettling; shank is further returned to cope and moulding flask from which he knocks out all sand, and clamps to store ready for further use; with sharp hand tools, breaks away sand from core iron, and withdraws core iron, breaking it if necessary, care being taken to avoid damage to casting; pipe pit labourer; is employed in casting pit in which pipes are cast, assisting in general capacity in preparing pipe mould for casting, in cleaning mould, *see* closer, and setting it upright, ready for pouring of metal, and in opening, *see* opener, by removing moulding box, sand and core bar; removes core sand from bar and returns bar to store.

pourer, *see* closer.

primer; plunges iron rod into molten metal in pouring hole of mould while metal is being poured into iron casting mould to prevent iron becoming spongy and also prevents it setting in concrete form at surface of heavy moulds.

pug mill attendant; loam mill man; loam mixer, sand mixer; shovels sand, clay, straw or horse manure, or in case of sand for core making, sand and flour, resin or special core gas or other binding material, into hopper of pug mill and sets pug mill in motion, mill runs up and thoroughly mixes ingredients which are forced out of end of mill raised ready for use by moulder (180) *g.v.*; in some cases, shovels out mixture through door in bottom of machine.

runner, runner-up, box rammer; works in close conjunction with moulder (180) *g.v.*, ramming sand tightly round pattern when placed in bed of sand in lower part of moulding "flask" or "drag"; uses either a

small or large hand rammer, a steel plate fixed at right angles to handle or a pneumatic rammer; repeats operation of ramming when pattern is placed in upper part of moulding "flask" or "cope" and then again when flask is turned over by box lifter *g.v.*; sometimes also drives metal wedges into sand, after ramming, to assist in making mould firmer; work sometimes done by moulder (180) *g.v.*

rattler, *see* tumbler.

riddler, sand riddler; moulder's help; riddler, *i.e.* moves large heaps of sand and carries moulder's cores; grinds dust which moulder shapes over patterns to prevent adhesion of sand and coal dust, used to put clean face on casting; after casting, turns over sand and gets hot castings out of sand with short pliers; ratters sand to fit it for re-use, and breaks ridges and scrap from casting to be re-moulded; performs any other odd jobs for each moulder to whom he is allotted; usually takes iron from two to four moulders; is engaged in foundries specialising in small castings where moulder's assistants *g.v.* are not employed.

rocker; grades sand to be used in foundries by shovelling it into rocker or rocking sieve; rocks sieve to facilitate sifting of sand.

rougher, *see* fettler.

rubber-off, *see* fettler.

rumbler, *see* tumbler.

runner maker; makes holes in mould into which molten metal is to be poured, forcing sand aside with sharp metal instrument; work usually done by moulder (180) *g.v.*

sand preparer; general term applied to worker engaged in preparing sand for moulder (180) *g.v.*; includes sand grinder, sand mixer, sand riddler *g.v.*

sand roller, *see* grinder, sand.

shank carrier; metal carrier; carries small ladle, fitted with iron bars for carrying and handling, to cupola or to large foundry ladle for filling with molten metal, and then carries filled ladle to casting pit for use of *g.v.*; carries emptied shank back for refilling.

skimmer; skims dross or slag from surface of metal in ladle by means of piece of bent iron; also removes ash or dross which runs into pouring "gate" of mould to prevent it being carried into mould.

stove man; places cores and moulds on shelves of stoves, or core ovens, to attend to dampers which open or shut fires permitting hot gases from cupola to play on oven when it is to be heated; removes dried cores and moulds and sends them on trolleys to casting pits.

trimmer (iron foundry), *see* fettler; sometimes specifically designated, *e.g.* iron trimmer, ploughshare trimmer, *see* fettler.

tumbler; barrel, rattler, rumbler; places castings inside hollow metal cylinder, closes door and moves lever which causes cylinder to rotate on its axis, thus tumbling castings over one another and over small cast iron "shims" which are put in to assist process; continues operation till sand and irregularities in castings have been worn down and then empties "rumbler."

wheeler, loam; sand wheeler; unloads sand, loam, etc., from railway wagons, wheels it into barrows or trucks to and from sand grinding, mixing and riddling departments and to moulder when ready for use; may also assist on grinding and riddling machines.

yard labourer; performs manual moulder's work in yard of foundry, *e.g.* sand wheeling, loading and unloading, stacking, etc.

184.—BRASS, BRONZE FOUNDRY FURNACEMEN AND CASTERS.

brone ingotman, *see* caster, brone ingot.

caster; pourer; pours molten brass or bronze from crucible into ladle or special mould, holding crucible with tongs, *see* brass caster (181); sometimes specifically designated according to metal cast, *e.g.* brass caster, brone caster, copper caster, *etc.* bit caster, brass letter caster, brass lead caster, brone statue caster, or according to type of mould, *e.g.* loan caster, sand caster, *etc.* brone ingotman; or for ingot, strip, *etc.* *see* caster, strip; *see* caster, strip; *see* caster; *see* caster, *g.v.* who pours molten brass into iron ingot mould previously prepared with a dressing of oil and charcoal to make flat brass ingots for rolling into sheets.

cathosue furnaceman (yellow metal), *as* for furnaceman, brass foundry.

crucible man; draws crucible containing molten yellow metal from furnace and passes with tongs to caster, *g.v.*; usually done by brone-furnaceman *g.v.*

furnaceman, brass foundry; metal mixer, water, smelter; melts brass in crucibles in foundry ready for casting; generally works in weighed amounts of ingot brass sorted brass scrap (rejected castings, gates, runners, fins, *etc.*), from either brass castings and brass turnings, borings or drillings from machine shop; also adds copper scrap, and places crucible in furnace to melt contents; shovels broken charcoal on to surface of molten contents to prevent oxidation, and adds carefully weighed amount of zinc (spelter) gradually, stirring it with metal rod after each addition; when all zinc has been added, places lid on crucible and leaves it in furnace to raise temperature of metal to casting heat, then withdraws crucible by means of tongs and passes it to brass caster (181) and (184) *g.v.* mixer, metal mixer, *see* furnaceman, brass foundry.

pourer, *see* caster.

smaller, *see* furnaceman, brass foundry.

185.—BRASS, BRONZE FOUNDRY LABOURERS.

bell chaser; a fettler *g.v.* who rough finishes bell, after casting, by chiselling down pouring gates, fins, and other irregularities in casting, using hammer and chisel; *cf.* chippier.

bell foundry's labourer; fettler-down (bell founder); performs any odd manual work in bell foundry, and assists bell founder (186) *g.v.* generally, *e.g.* shovels sand and clay into casting pit for making core, clay ball, and core, and tends fire inside core, *see* drying it, mixes sand, pugs clay, for use of bell founder.

brass founder's labourer; *caster's* labourer, fettler-down, third hand; performs any odd manual labouring work in brass or brone foundry; generally assists brass moulder (180) or brass caster (181) *g.v.*; *cf.* tub-hand (180).

caster's labourer, *see* brass founder's labourer.

chippier, *as* for chippier (183).

cleaner, cleaner-up, castings cleaner, metal cleaner, *see* fettler (brass foundry).

dirt washer; washman; (i) washes brass or brone castings with wet cloth when removed from mould, to remove adherent grease, sand, *etc.*; (ii) shovels ashes, sand, *etc.* of brass foundry taken from neighbourhood of casting pit and furnace, into a bawrow; wheels it to washing machine, shovels ashes into sieve and turns on water supply to wash away sand, *etc.*, and to recover any brass, *etc.*, that may have been spilled during casting operations.

dresser, castings dresser, *see* fettler (brass foundry).

supplier; knocks out sand *etc.*, from moulding boxes or flasks, after castings have been removed.

fettler (brass foundry), brass fettler, castings fettler, castings cleaner, castings dresser, cleaner, cleaner-up, dresser, metal cleaner, scourer, trimmer (brass); general terms covering all persons engaged in clearing up brass castings when taken from mould; work is similar to that of fettler (iron or steel castings) (183) *g.v.*; operations covered include rough filing, *as* for foundry filer (235), floating, *as* for filer and smoother (236); emery holding, *as* for emery holder (237), tumbling, *as* for tumbler (181), sand blasting, *as* for sand blaster (270), and chipping, *as* for chippier (183) *g.v.*; sometimes specifically designated, *e.g.* axle brass fettler.

fettler-down; (i) *see* brass founder's labourer; (ii) (bell foundry) *see* bell founder's labourer.

and riddler, *as* for riddler (183).

scourer, *see* fettler (brass foundry).

sootier, bell, a fettler *g.v.* who cleans and polishes, by dipping and by hand filing and grinding, bells after casting.

skimmer; skims dross (slag) from surface of molten brass, in crucible, before casting, using a long bent iron rod, *cf.* skimmer (183); may be done by caster (181) *g.v.* from special skimming gate, *i.e.* pouring hole in top of mould, *as* required during casting operation.

third hand, *see* brass founder's labourer.

trimmer (brass), *see* fettler (brass foundry).

washman, *see* dirt washer.

186.—OTHER FOUNDRY (NOT TYPE) FURNACEMEN AND CASTERS.

accumulator plate maker, *see* caster, plate.

aluminium founder, *see* caster, aluminium.

caster, *as* for caster (183) except that usually casting is done by pouring from hand ladles, dipped into larger ladles, *as* non-ferrous castings are generally small; also moulds are usually made of metal except where sand, shapers or cores are used; *g.v.* are required; sometimes specifically designated, *e.g.*, lead caster.

caster, aluminium; aluminium ingot caster, ingot caster (aluminium), aluminium founder; a caster *g.v.* who pours molten aluminium from ladle or crucible, usually by hand, into moulds (either sand or metal moulds), or into iron ingot moulds, for casting aluminium articles or ingots; *cf.* die caster (270).

caster, *acid*, *see* caster, plate.

caster, needle; hockery needle caster; hockery needle moulder; sets bearded hockery needles in mould and pours molten lead from hand ladle into mould, so that when cool, one end of needle is fixed in bed of lead; removed from mould and takes out needles.

caster, plate; lead plate caster; accumulator plate maker, grid caster; a lead caster *g.v.* who pours molten lead from hand ladle into iron moulds to form plate or grids for accumulators, fills hand ladle, *as* required, by dipping in iron tank of molten lead maintains fire or gas under container or tank at proper heat.

caster, shot; shot moulder; runs, by means of pipe from iron crucible or ladle, molten alloy of lead and arsenic over a wire sieve set at an angle, so that lead falls through sieve about 100 feet down into tank of water, assuming spherical shape in fall; under current of lead that formed, into machine which sets them into size.

caster, tea lead; (i) a caster *g.v.* who casts lead into strip ingots for rolling into lead sheet for making tea.

(ii) (older method) pours molten lead into gutter, at top of sloping table,

and gutter is filled and lead overflows and runs down table into gutter at bottom; when table is covered with this film of lead, strips lead sheet from table and, if necessary, passes it to be rolled.

furnaceman, aluminium foundry; places aluminium ingots into plumbago or iron crucibles and places crucibles, by means of tongs, into smelter furnace, either gas or coke fired; regulates heat of furnace by opening or closing valve admitting gas to burners or by regulating supply of coke; watches thermometer dial to ensure that temperature of furnace is kept at just above melting point of aluminium; when molten, stirs aluminium sand and chips into crucible with a steel bar and throws on flux (crystals of zinc chloride, or cryolite) to prevent oxidation of metal on surface; withdraws crucible when ready and places it on a chair for convenience by hand to caster *g.v.* furnaceman (lead shot); places gas lead and scrap lead in iron crucible set in furnace and tends to heating of crucible and contents; when lead is molten, shovels in arsenic to form alloy; stirs it in with iron rod; inserts iron pipe under surface of lead and turns on tap running lead on to sloping wire grid, through which it will into tank of water below, assuming spherical form in falling; replenishes crucible with gas and scrap lead and arsenic at intervals.

moulder, hockery needle, *see* caster, needle.

shot maker, *see* caster, shot.

187.—OTHER FOUNDRY (NOT TYPE) LABOURERS.

aluminium foundry labourer; a foundry labourer (183) *g.v.* who assists moulder (180) and caster (186) *g.v.* in aluminium foundry; brings hand ladles, molten metal from furnace, and metal moulds from store, *as* required; removes castings from moulds to fettling shop, and may also do fettling, wheels in sand, riddles or meshes to filter sand, moulds are to be used, and assists in any other general way.

Sub-Order 5.—Smiths and Skilled Forge Workers.

188.—SMITHS AND SKILLED FORGE WORKERS.

agricultural machine knife plater, agricultural machine knife wagner; a blacksmith (handy *g.v.* or a machine forger *g.v.* who hammers out steel bar or sheet which he has heated in forge, till it takes, roughly, shape of knife required, cuts off blade so formed from rest of bar by bringing hammer down on sharp angled steel strike which he holds on bar; reheats forging in forge fire *as* required.

angle iron bander; an angle iron smith *g.v.* who specialises in work of bending angle and channel iron; is assisted by two or more strikers *g.v.* and sometimes by a forge furnaceman (171) *g.v.* supervises heating of angle iron in furnace and withdrawal (with assistance of crane if necessary) on to steel table; holds angle strikers on to steel table, and in bending free end round template and in clamping bent bar to table; holds flatter (a flat steel block) against bar and directs blows of strikers to hammer out bar; caused by bending; angle iron smith, anglemill; a smith *g.v.* who specialises in working in angle and channel iron (such as striders); work includes that of angle iron bender, angle iron straightener, welder *g.v.*; of bent angle striders; angle iron smith's hammerman, angle iron smith's striker, anglemill's hammerman, anglemill's striker; a striker *g.v.* who assists angle iron smith *g.v.* in drawing out angle iron from furnace when ready

for forging, using tongs and, if necessary, attaching it to crane; clamps down on angle iron on smith's steel table, assists in bending or straightening, welding, etc., by hand hammering on hot metal or on an anvil or other forging tool held in position by angle iron smith; removes clamps when iron is cool and removes angle iron from smith's table; places fresh piece of angle iron (which may be up to 10 yards long) in furnace for next forging operation.

angle iron straightener; as far as angle iron bender, except that angle iron which has just bent since being rolled, is bent and then clamped down on steel table so as to straighten it, i.e., it is not bent round a template.

axe aprander; a smith *q.v.* who receives steel blank which has been stamped out hot by drop hammer, and "aprends" or hammers out blade to shape on anvil or beneath pneumatic hammer.

axe forger, axle iron maker; a smith *q.v.* who usually a forge hammerman *q.v.* who forges axle from heated bar steel under a power hammer.

axe setter, axle straightener; a smith *q.v.* who welds two halves of coach or carriage axle together and makes whole axle straight by heating it, hammering it on flat steel table.

axe worker (perambulators); an Oliver man *q.v.* who forges axles of perambulators from steel bar.

back bender (shipbender); manipulates, by means of hammer, steel bar, rod, etc., under power hammer whilst forge hammerman *q.v.* holds forging tool on it on which power hammer descends; moves heated steel or iron about, according to forge hammerman's instructions; *cf.* inside make (engineering).

bar fixturer; bar former; shapes copper and brass bars cold on an anvil, by bending and hammering, for fitting together to form armatures, transformers, commutators, rotors and stators.

barrel forger; a forge hammerman *q.v.* who hammers steel ingot, from which central core has been removed on a lathe, under power hammer roughly into shape of inner tube of big gun; directs work of leveller, furnaceman, press driver and crane driver in manipulating ingot which may weigh 100 tons; directs play of water in and around tube to keep it cool; continues hammering and turning of ingot until it approximates to length and shape of big gun barrel, removes barrel to be heated in vertical furnace for purpose of tempering in oil bath.

barrel ribber (rifles, guns); a smith *q.v.* who forges by hand barrel ribber sporting guns or rifles.

barrel welder (twist); obsolete; a highly skilled smith who makes Demoussieu gun barrels used for sporting rifles; welds strips of iron and steel and binds together by rolling between rollers, using a wide hand tool; turns and works again on a mandrel in a lathe; beats again and completes welding on a former.

bar straightener (rolling mill); straightens bars of iron or steel which have been rolled, by heating them and hammering them over or beat parts on flat steel table.

beaking hammerman; a striker *q.v.* who forms flange on tyre of railway wheel, hammering steel on a beakiron or beaking arvil; assists tyre becker *q.v.* generally.

bender; axle; an axle forger *q.v.* who specialises in cranking or bending and welding of axles, *e.g.* for tub cars, mill shafts.

bender (bedstead); a smith *q.v.* who beats steel tubing in forge fire and bends it whilst hot to fit steel pattern, stripping it with cold, and fixing it with clamps to pattern till cold; places flattening tool (a large hammer with flat square head) on bends of tube and

causes striker *q.v.* to hit tool with sledge to keep tube flat and prevent bowing (rolling mill, safe, etc.); *see* plate bender.

bender, wheel spoke; a smith *q.v.* who operates a small press in which he squeezes rolled steel bars heated at middle point; moves lever, which causes press to force bar to V-shape thus forming spokes of wheel on to centre of which a hub is subsequently cast.

bill hook maker, bill maker; *claw* maker; a callery forger *q.v.* who forges bill hooks from bar or strip steel, bending them to shape whilst hot.

blacksmith, *see* smith; sometimes specifically designated, *e.g.*, locomotive blacksmith (railway).

blade forger; a smith *q.v.* who receives short strip of heated steel (specially made cutlery steel) from his striker *q.v.* and hammers it out under the aid of striker on anvil, roughly to shape of blade to be made.

body maker, safe; a plate bender *q.v.* who bends stout steel plates to shape of body of safe in a powerful hydraulic press, ready for welding; makes ends of same iron together, also welds steel tubes into boiler plates of water-tube or fire-tube boilers.

boiler welder and flanger; does work of flanger *q.v.* and welder *q.v.* on boiler plates and tubes.

bolster, bolster maker, bolster stamper (puffed blade); (i) (hand forging) a hand forger *q.v.* who works a bolster iron, out of which shoulders and tang of knife are shaped, on to hand-forged blade of knife; heats both blade and bolster iron and, with use of a flat and rapid blade of small hand hammer, shapes shoulders and welds two parts together; (ii) (drop stamping) a drop hammer smith *q.v.* who takes knife blade and bolster, which has been made in one piece by means of pneumatic hammer, and stamps out bolster into shape of shoulders of table or other knife.

bolt dresser; (i) a smith *q.v.* who finishes off machine-made bolts by hand forging, using a swage; (ii) an Oliver man *q.v.* who does similar work by means of Oliver hammer.

bolt maker (forged), boltsmith; machines off (machine-made) bolts by hand forging, using a swage; (ii) an Oliver man *q.v.* who does similar work by means of Oliver hammer.

bolt maker (forged), boltsmith; machines off (machine-made) bolts by hand forging, using a swage; (ii) an Oliver man *q.v.* who does similar work by means of Oliver hammer.

bolt maker (forged), boltsmith; machines off (machine-made) bolts by hand forging, using a swage; (ii) an Oliver man *q.v.* who does similar work by means of Oliver hammer.

bolt maker (forged), boltsmith; machines off (machine-made) bolts by hand forging, using a swage; (ii) an Oliver man *q.v.* who does similar work by means of Oliver hammer.

bolt maker (forged), boltsmith; machines off (machine-made) bolts by hand forging, using a swage; (ii) an Oliver man *q.v.* who does similar work by means of Oliver hammer.

bolt maker (forged), boltsmith; machines off (machine-made) bolts by hand forging, using a swage; (ii) an Oliver man *q.v.* who does similar work by means of Oliver hammer.

bolt maker (forged), boltsmith; machines off (machine-made) bolts by hand forging, using a swage; (ii) an Oliver man *q.v.* who does similar work by means of Oliver hammer.

boxed frame maker; hammers brass strip over a mould or template to required shape, fits on iron frame and crams (clips) together; often done by frame forger *q.v.*

centre glutter (wheel); *see* glutter.

chain joiner, chain joiner; joiner (chain); a welder *q.v.* who welds chain chain bar to shape by drop chains ready for welding, by link bender *q.v.*

chain maker, chain cable maker (iron and steel), chainmaker; cable maker, linkmaker; (i) (hand) a smith *q.v.* who forges chain and steel (dressed) to shape of chain link and welds ends to close link thus made; in case of large chains, is assisted by a striker *q.v.* who heats steel rod and helps at forging and welding; (ii) (machine) a forge hammerman *q.v.* who heats stout steel bars into form of link on swage block under steam hammer and welds ends and sometimes short cross bar in middle of link, and, in case of large chains, who forges links from heated steel bars by means of dies, i.e., welds chains; sometimes specifically designated, *e.g.* block chain maker, curb chain maker (dressed), dolled chain maker, hammered chain maker, scoring chain maker, steering chain maker, tanned chain maker, twist chain maker.

chain maker, dolled; roughly welds link (*see* hammered chain maker) omitting finishing blows; inserts end of roughly welded link into one die of dolly, which is a tool holding a pair of dies, which together correspond in shape to section of iron used for making the chain, lower half is stationary and upper half, which is hinged, is pushed up and down about one foot long, with top die first at end; brings top half down on it and smooths the end of link by striking several blows on iron bar, turning the link about so that each part of weld is strongly made and smoothly finished; for large sizes of dolled chain, is assisted by striker who holds top half of die and strikes the bar.

chain maker, hammered; a chain maker *q.v.* who makes chains, having hammered welds, entirely by hand; prepares iron or heated bars fire with bellows by means of long lever placed beneath left hand; takes a rod of iron (received in bundles, packed according to size) and heats end in fire; withdraws heated rod from fire and pushes end up against lighter end, piece of iron which has been "set" on block behind chisel, according to length of iron required to form the link; rests rod on chisel and hammers over this point, thus nicking the rod at point where it will be knotted off to form one link of chain; sets gauge by eye, to make correct number of links per foot required; hammers nicked iron roughly to shape of link on hooked end of anvil and hammers it with a blow of the hammer, at which point one end overlaps ends of rough link to form the weld; returns roughly shaped link to fire and heats for welding; welds link flat on anvil, not more than six blows usually required for commonest quality chain; for better class chain, goes round the weld again with lighter blows to make stronger and better finished weld; subsequent links are linked into the last after being roughly turned, measures chain to ensure that right number of links per foot is produced; if not quite correct, alters gauge.

chain maker, tanned; makes medium sized chain between large and small sized dolled chain; operates Tommy (Oliver machine) by a foot treadle instead of striking top arm of dolly; *cf.* dolled chain maker, cleek forger, cleek head maker (Scotland), shapes golf cleeks and similar iron heads from heated bar iron on anvil with hand hammer; forges neck of head and hammers out blade, following specifications as to size, angle, etc.

coachsmith; *iron forger*; a smith *g.v.* who forges by hand or under power hammer (drop hammer, steam hammer or small running hammer) iron work used in building railway or tramway coaches, motor vans, cars, etc., including work of angle iron smith *g.v.*; repairs, cleans and tempers coach springs, and welds axle ends (of cars) together.

coach spring forger; *coach spring machineman*, *as for spring smith* (Innsmouth springs).

collsmith; *are spiral spring smith*.
colt fork maker; a *forksmith* *g.v.* who forges by hand or under power bell-driven rapid spring hammer, shovel-shaped forks used in handling coal and coke breeze, picks out clumps in bar and draws out singly each prong to desired length, and bends to shape whilst still hot.

cutlery forger; a smith *g.v.* who forges out blades from heated steel bar for cutlery by hand forging or under a small rapid automatic hammer, or a drop forger *g.v.* who stamps out blades in dies from heated steel rod, bar, sheet or plate, sometimes specifically designated, *e.g.* *butcher's blade forger*, *chopper maker*, *cleaver maker*, *gait hook maker*, *harpoon maker*, *hatchet maker*, *matchet maker*, *resping hook maker*, *sickle maker*, *cutlery*, *horse nail*, *as for Oliver man*.

cutler-out (*spade and shovel*); a drop forger *g.v.* who cuts out metal part of spades and shovels from heated steel sheet by a die forging machine.

cyclesmith; a smith *g.v.* who makes parts of cycles by forging, welding, etc., by hand, or more usually by means of drop forge, *are drop forger*.

die maker; *are bill block maker*; *die forger*; a smith *g.v.* who makes by hand, out of special steel, dies which are to be used for drop forging or stamping machines; when die is made, heats it to correct temperature and quenches it in water or oil to harden surface.

die stripper, *die stripping machinist*; a drop hammer smith *g.v.* who knocks off, or "strips" the fins (excess metal) from drop stampings, made by another drop hammer smith, by placing forgings on die which is pierced throughout a whole block, moves lever causing hammer to descend and strike forging so that it is knocked right through die, leaving fins of metal held in block; usually done by the forger *g.v.* **dolly maker**; a tool maker *g.v.* who forges (*are forger*) dollies, *i.e.* steel tools held under rivets during riveting process.

draw; a smith *g.v.* who draws, *i.e.* beats out, strips of heated iron or steel by hand or under an automatic hammer to make them thinner and longer.

dresser (*bolts, nuts, etc.*); a smith *g.v.* who hammers with hammer and forge tools on anvil drop-forged nuts, heads of bolts, etc., to give them a better finish for high-class work, usually done by Oliver man *g.v.*

dresser; *puddler's feedman*; a smith *g.v.* who tempers the hammer on anvil puddler's tuble after use in raking fire up into balls by puddler.

drill sharpener (*name or quarry*); a general smith *g.v.* who sharpens drills by hammering out on anvil fresh points; hardens points by quenching in water or oil.

driver; a smith *g.v.* who drives a hole in head of anvil to form loop, using a punch (or drift) or *are* **drift**; a drop forger; drop hammerman, drop hammer smith, drop stamp forger, *flue-out*; bolts two halves of steel dies to steel table and under drop hammer, adjusting dies so that when hammer falls on table, two halves of die exactly coincide; receives heated bar of iron or steel from heater *g.v.* and holds it with tongs, firmly on lower die, pulls or pushes which causes drop hammer to descend and stamp out hot metal into shape of die, pulls lever again to raise hammer

and, with tongs, takes out the forging from die; drop forging is carried on when large numbers of small forgings of same shape are required, *e.g.*, parts of guns.

drop forge worker; general term for any man engaged in making drop forgings in a drop forge works, or assisting drop forger *g.v.* to do so; includes Bradley hammer smith, cutler-out (*spade and shovel*), die stripper, die stripping machinist, drop forger, drop stamp hammer, driver, edge tool stamper, flye maker, goffed blade stamper, gun action forger, moulder (*goffed blade*), addwork forger, Oliver man, Oliver smith, Oliver assistant, Oliver hammerman, pocket blade flue-out, pocket blade forger, razor forger, roving flyer maker, shell stamper, wrist maker, spur forger, stamp, steel toy maker, table blade stamper *g.v.*

drop hammer assistant; *see drop stamp driver*.

drop hammerman, **drop hammer smith**; *are drop forger*.
drop stamp driver, **drop stamp hammer driver**; drop hammer smith; out; assists drop forger *g.v.* by pulling lever which causes hammer, to lower side of which a die is bolted, to descend vertically on table of drop forger; also brings heated bar from forge or furnace to drop forger *g.v.*

drop stamp forger; *see drop forger*.
drummer (*Birmingham and S. Wales*); *are striker*.

edge tool stamper, *as for drop forger*.
engine smith; a smith *g.v.* and sometimes an angle iron smith *g.v.* employed in forging by hand or machine, and welding, when necessary, parts of locomotive or stationary engines, work which is of heaviest kind and is usually done by a large hammerman *g.v.* or in case of repetitive forging of small parts may be done by drop forger *g.v.*

engine tool smith, *as for toolsmith*.
farrier; *horse shoe, shoeing smith*; shoe horses, mules, donkeys; cuts hoof to shape, nails on iron shoe and shapes points of nails over that may protrude; may also make horse's strip wrought iron working as a smith (*hand*) *g.v.* with hammer on an anvil, and if using ready made shoes, may adjust them, by heating in forge and hammering, to fit foot; may possess skill in treatment of ailments of horse's feet; in small country farrieries, frequently combines occupation of farrier with that of wheelwright (473) *g.v.* and general smith *g.v.* repairs agricultural machines and implements.

file forger, **file maker**, **file smith**; (i) a smith *g.v.* who rapidly beats out heated strip, of steel or wrought iron, into form of file, using a rapid hammer; (ii) *are* **file maker**; *are* **file smith**; a smith *g.v.* who beats, cuts and welds hot angle iron to shape of frame of file box of horsehoof.

flange maker; a large pressman *g.v.* who, by means of dies bolted to bed plate and head of powerful hydraulic press, presses out flanges from heated plates of steel which he holds by means of tongs under press; is assisted by press driver *g.v.*

fitter's pressman; a pressman *g.v.* who operates a small forcing power press to modify machine parts under instruction of fitter (210) *g.v.*
flange maker (*beams, tubes*); *are* **flange smith**; a large pressman *g.v.* who places by means of tongs, a tube (or beam or angle iron girder) one end of which has been heated in large fire, into press and moves lever which drives down press, carrying the die which slowly forces out end of tube (or beam) into shape of flange; raises

press and removes tube (or beam) to cool, or sends back to furnace for heating of other end.

flanger; (i) (*hand*) a smith *g.v.* who hammers over edge of heated plate or heated end of tube to form a flange; (ii) *are* **flange smith**; (iii) *are* **flange maker** (*beams, tubes*).

flange welder, **flange welder-on**; *are* **flanging smith**; a smith *g.v.* who specialises in welding flanges on to tubes or other iron or steel articles; receives from striker *g.v.* a piece, heated at end, and whole of flange at welding heat, cleans surfaces to be welded by scraping off scale, ash, etc.; adds a flux (*borax powder*) and by means of tongs holds tube and flange in position as, beam of anvil whilst striker hammers two together causing them to weld.

flanging machinist; *are* **flanging press attendant**.

flanging press attendant; *are* **flanging smith**; a large pressman *g.v.* who operates heavy hydraulic press which he causes to bring down die on to end or side of heated steel tube, or plate, etc., causing edge of same to turn over and form a flange.

flanging smith; (i) *are* **flange welder**; (ii) *are* **flanging press attendant**; (iii) *are* **flange maker** (*beams, tubes*).

flanging smith's striker; a striker *g.v.* who assists flange welder *g.v.* by holding tube or other iron or steel article to be flanged, and flange in position as, beam of anvil, and strikes them, when ready, with sledge causing them to weld again.

flue-out; *see drop forger*.

flye maker; *fly forger*, *fly maker*, a drop forger *g.v.* who accepts one part of flywheel for textile spinning machinery; work may be sectionalised and performed by following persons:—flye logger, flye logger, flye presser forger *g.v.*, flye rougher-out, flye smoother.

fly forger, **fly maker**; *see flye maker*.

forge assistant, **forge helper**; general terms covering any man or boy engaged in forge assisting smith, forge hammerman, drop forger or forge pressman *g.v.*; may be engaged in (a) tending power hammer or (b) using the lever operating same under instructions from smith, etc., (c) heating bars, rods, etc., of iron or steel in forge fire, (d) bringing bars, or rods when heated from fire to anvil on power hammer, by hand, using tongs, or, if large, standing bar or billet to hand or power crane, for transference from forge fire to steam hammer, (e) as his driver *g.v.*, (f) as *striker* *g.v.*, (g) as *draw* *g.v.*, (h) as *draw* *g.v.*, (i) as *draw* *g.v.*, (j) as *draw* *g.v.*, (k) as *draw* *g.v.*, (l) as *draw* *g.v.*, (m) as *draw* *g.v.*, (n) as *draw* *g.v.*, (o) as *draw* *g.v.*, (p) as *draw* *g.v.*, (q) as *draw* *g.v.*, (r) as *draw* *g.v.*, (s) as *draw* *g.v.*, (t) as *draw* *g.v.*, (u) as *draw* *g.v.*, (v) as *draw* *g.v.*, (w) as *draw* *g.v.*, (x) as *draw* *g.v.*, (y) as *draw* *g.v.*, (z) as *draw* *g.v.*

forge hammerman; *are* **forger**; a smith *g.v.* who forges articles of iron or steel under power hammer, hydraulic, steam, electric, pneumatic or drop; receives heated steel bar, etc., from large fire in which one of his assistants (*or* "anvil") has heated it to forging temperature, holds metal and power hammer by means of tongs, and instructs hammer driver *g.v.* as to the kind of blow to be delivered (light, heavy, etc.); in special forging tools have to be used, *e.g.* *Barrett*, *are* **barrett**, *are* **barrett**, holds these tools on heated metal bar and has an impulse made *g.v.* to hold steel in position for him; instructs inside mate as to moving about of forging, but when special work is to be done, takes over power hammer and moving forging under hammer until it is completed; is responsible

for seeing that metal is heated to correct temperature, and forge furnaceman (171) *q.v.*, where employed, as responsible to him.

forgerman; (i) general term for any skilled man employed in a forge in which forging is done by means of power hammers, usually steam hammers; (ii) *see* **forge hammerman**; usually specifically designated, *e.g.*, **steel forgerman** (in charge of large forging shop), **round forgerman** (supervises heating and transport of metal); **forgerman** without qualification, usually means **first forgerman**, sometimes specifically designated according to article being forged, *e.g.*, **another forgerman**, **hook forgerman**, **reaping hook forgerman**, **scylo forgerman**, or according to kind of forge, *e.g.* **hydraulic forgerman**.

forge pressman; **steel presser**, **steel pressman**; in charge of heavy hydraulic press which carries die which pressman bolts into position; supervises heating of iron or steel bar, etc., and places it by crane and hence brings under press, which he instructs from driver *q.v.* to actuate, bringing down die on to hot metal, thus shaping it.

forger (hand or power); general term for any man who shapes hot metal on anvil with sledge or hammer (*see* **drop hammer**) under drop hammer (*see* **drop hammer forger**) or under steam, pneumatic, or automatic hammer; term is frequently a synonym of **smith**, but has a more particular application to manufacturing of tools, as it is not often used alone but usually specifically designated, *e.g.*, **action forger** (*gun action*), **navy forger**, **axe forger**, **bayonet blade forger**, **bayonet forger**, **beam forger** (scale beam), **bit forger** (harness), **blade forger**, **blade hand forger**, **blade power forger**, **blade steam forger**, **bolt forger**, **bolt machine forger**, **bucket forger**, **butcher blade forger**, **cart gear forger**, **curb bit forger** (harness), **cutlery forger**, **edge tool forger**, **hoon forger** (surgical instrument), **iron forger**, **flyer forger** (textile machinery), **fy forger** *q.v.*, **fork forger**, **furniture forger** (*gun making*), **ginslet forger**, **golf club forger**, **gun action forger**, **gun furniture forger**, **gun lock forger**, **gun work forger**, **hame forger** (harness), **hammer forger**, **hammer forger** (guns), **hand forger** (cutlery), **harness hame forger**, **hoe forger**, **horse nail forger**, **ingot forger** *q.v.*, **iron forger** *q.v.*, **iron harness forger**, **key forger**, **knife forger** (for cutlery), **lance forger**, **machine bolt forger** (machine coupling), **machine knife forger** (*i.e.* **forger machine knife**), **magnet forger**, **mounting forger** *q.v.*, **odderork forger** (iron hollowware) *q.v.*, **palette knife blade forger**, **pocket blade drop forger** (cutlery), **pocket blade forger** (cutlery), **prussic acid forger**, **rasp forger**, **razor forger**, **ring forger** (textile machinery) *q.v.*, **scale beam forger**, **scissors forger**, **scylo forger**, **shockle forger** *q.v.*, **shot forger** (scissors) *q.v.*, **shuttle spring forger**, **shuttle tip forger**, **spade and shovel forger**, **spooner forger**, **spike forger**, **spring forger**, **spring bar forger**, **spur forger**, **steel component forger** (eyebolt), **stiletto forger**, **stirrup forger**, **sword blade forger**, **table blade forger** *q.v.*, **tool forger**, **vise forger**, **wrench forger**.

fork drawer, **fork moulder**, **forksmith** (agricultural, etc. forks); a smith *q.v.*, or a **forge hammerman** *q.v.*, who forges garden, etc. forks by hand or with steam hammer, roughly cuts out blank from heated plate and then cuts out triangular pieces between prongs; splits open triangular holes in each fork, and draws out by forging each separate prong to suitable length and then roughly points each prong.

forksmith (cycles); a smith *q.v.* who welds strips of steel into end of steel tube and cold presses it to shape in

hand press; when drilled in machine shop, welds two tubes to fork head.

fork splitter (agricultural, etc. forks); a smith *q.v.* who cuts out triangular spaces between prongs of fork by causing striker *q.v.* to hammer sharp cutting tool which he holds, by means of tongs, on heated plate of metal; usually done by **forksmith** *q.v.*

fork strap maker (garden forks); a smith *q.v.* who forges, by hand, tang of garden fork into form of straps into which handle of fork is to be fastened.

framesmith; an angle iron smith *q.v.* who, by bending and welding angle iron, makes framework of boilers, buildings, tanks, etc.

fract saw maker, **fract nail maker**, **fract screw maker**, **fract stud maker**; an Oliver man *q.v.* who forges fract nails from iron or steel rod.

geff hook maker; a smith *q.v.* who forges from steel rod, by hand, geff hooks or harpoons.

general smith; a smith *q.v.* who is skilled in repair of machinery of any special kind, or of every general kind; is usually attached to manufacturing works, colliery, etc., for repair of any broken parts of machinery or plant; is sometimes also a **farrier** *q.v.* who acts as **tyresmith** and **coachsmith** in villages or small towns.

glutter, **wheel glutter**; **dozer**, **centre glutter**, *see*; a smith *q.v.* who fits up small gage wheels. Functions of wheel, after wheel boss has been cast on in foundry, by hammering rod hot steel bar into interstices between sections, whilst wheel is firmly fixed in vice; is assisted by **striker** *q.v.* who beats steel bar and does some of the hammering; after glutting, wheel is ready for shrink in on of tyre.

guffed blade stamper, **guffer**; a drop forger *q.v.* who stamps out cold blades by means of dies from heated steel sheet, rod bar or plate, sometimes specifically designated, *e.g.*, **pocket blade guffer**.

gun action forger; a smith *q.v.* or more frequently, a drop forger *q.v.* who stamps out parts of gun actions by means of dies; in specially delicate and expensive work, may do forging from heated steel rod or bar by hand.

gun lock forger, *see* **gun action forger**.

gun work forger; may be either a **gun action forger** or a **gun lock forger** *q.v.*

hammer attendant, **hammer driver**, **force hammer driver**, **hammerman** (*steel forger*); **seats force hammerman** *q.v.* by operating power hammer in force; moves lever which can hammer to descend or rise in accordance with verbal instructions of force hammerman, or feeding, or on feeding tool which force hammerman holds on forging, thus shaping it as required; when not engaged on power hammer, assists force hammerman generally.

hammerer, **carriage** (textile); a **striker** *q.v.* who assists smith in forging parts of carriages for textile spinning machinery.

hammerman (*Scottish*); *see* **striker**; also applied to men who do hand hammering on forging held in position on anvil of steam hammer by hammer itself, *i.e.* steam hammer is used as a vice; sometimes specifically designated, *e.g.*, **axe hammerman**, **beaking hammerman** *q.v.*, **blacksmith's hammerman**, **blade hammerman** (machine knife), **pneumatic hammerman** *q.v.*, **smith's hammerman**, **tyre hammerman**.

hand forge smith; a smith *q.v.* who forges iron or steel articles by hand, as distinct from machine forger; is usually assisted by a **striker** *q.v.*

horse shoe maker; a smith *q.v.* or a drop forger *q.v.* who makes horse-shoes by hand or drop forging from wrought iron strip or plate, or shapes horse-shoes from wrought iron strip in a special combined bending and rolling machine.

horse shoer, *see* **farrier**.

hot presser; bolts dies to press head and bottom plate of hydraulic press, holds in hot bar, sheet, etc., with tongs on lower die and gives signal to press driver *q.v.* to move lever bringing down upper half of die thus pressing out bottom; removes forging from die when press-head is raised; work is of smaller nature than that of **forge pressman** *q.v.*

hot straightener, **straightener**; (i) a hot smith *q.v.* who straightens axes, bars, angle iron, or other iron or steel goods, by heating them in forge fire and causing striker *q.v.* to hit them at suitable points on flat steel table, till buckle has been removed, then held in flatter or hammer with a large flat-faced hammer head) on forging and cause striker to hit this with sledge, to straighten out bends; (ii) straightens heavy bars, rods, angle iron, etc., whilst hot, by pressing under steam hammer or (see **forge hammerman**) or hydraulic press (*see* **forge pressman**).

hubber; a **forge pressman** *q.v.* who presses a relief steel die into heated steel block, leaving an impression which forms matrix for die stamping; process termed "hubbing".

hydraulic pressman (*Scientific Marling*); a **forge hammerman** *q.v.* who manipulates steel ingot under hydraulic press to improve grain and texture of steel prior to rolling, and may also roughly forge it to shape suitable for rolling.

hydraulic press smith; (i) a **forge hammerman** *q.v.* who forges iron or steel under hydraulic press; (ii) a drop forger *q.v.* who uses a hydraulic press to obtain forging from large dies, too large to be stamped on ordinary drop forge.

hydraulic press worker; general term for any man engaged on forging by means of hydraulic press; is frequently applied to assistants of hydraulic press smith *q.v.*; helps in bringing heated billets or bar of steel from furnace or forge to press, holds it firmly with tongs whilst forging is in operation, turns or moves it as required, attaches it to and detaches it from crane according to smith's instructions; may operate press itself by moving levers admitting water power to press, raising or lowering it as required.

ingot forger; a **forge hammerman** *q.v.* who forges steel ingot under steam hammer roughly into shape of forging required for large axes, crankshafts, stern frames, etc., or into bar, ready for rolling in preparation of steel or sheet. Inside mate (*engineering*); when not required to hold work under power hammer, resumes duties as **striker**, assisting **forge hammerman** generally from forger; (i) *see* **forger**; (ii) *see* **coachsmith**.

iron straightener, **iron stretcher**; general term for smiths who specialise in straightening iron or steel articles, rods, bars, angle iron, etc., including angle iron straightener, bar straightener, hot straightener, plate straightener (278) *q.v.*

joiner (chains), *see* **chain joiner**. **laminated spring maker**, *see* **spring smith** (laminated springs). **leverman** (steel forger); (i) *see* **hammer attendant**; (ii) *see* **press driver**.

lift driver; attends to crane, either by hand or steam, which is used to carry heavy forgings from forge furnace to power hammer and back as required, and to hold forging whilst under power hammer; assists in moving and turning forging under hammer by raising and lowering it

according to forge hammerman's instructions; exercises great care to ensure that forging is firmly held on table of power hammer, as blow of hammer on ill-balanced forging would bring down crane and tend to wreck whole forge; may also manipulate lever controlling rise and fall of hammer.

lighter (files); a smith, q.v. who files in an anvil after they have been annealed.

link bander (chain); a chainsmith, q.v. who heats rod or bar of wrought iron, or steel in forge, places it in die under steam hammer, or on swage block; moves lever actuating press or hammer, thus squeezing strip of metal into shape of link ready for final welding.

linksmith, see chain maker.

machine bolt forger, see boltmaker (forged).

machine forger; (i) screws suitable tools or "heads" on to special forging machine which has from two to six arms or slides; on moving lever to do so, move to a central point bringing all tools together and leaving small space between them which is to be occupied by heated metal rod, bar, plate, etc.; receives heated metal from assistant and places it, using tongs, against one of tools or dies; pulls lever causing other tools to move closer towards heated metal and press it between them into required shape; moves lever again, causing tools to withdraw, and remove forging with tongs, placing it on one side to cool; (ii) see drop forger.

machine knife and section swager; a smith, q.v. who hammers out roughly to shape machine knives and sections by hand from heated steel bar, or by means of automatic hammer; in latter process, holds piece of metal between tongs and passes it back and forth under rapidly moving small automatic hammer, which is actuated by placing his foot on a lever.

machine knife smith, machine knife smith; section smith (machine knife); a smith, q.v. who hammers machine knife blade after tempering, to make it straight or curved as required, and again (if necessary) after grinding.

machine nut maker, see nut cutter.

machine smith; (i) a smith, q.v. who makes forgings for subsequent machining into parts of machines; (ii) a drop forger, q.v. who makes large number of similar articles on machine designed for repetition work, popularly termed mechanical blacksmith.

wooder (gouged tools); a drop forger, q.v. who blanks out by means of dies roughly shaped forgings of cutlery blades ready for final forging by hand or automatic hammer.

motor smith; a smith, q.v. who forges parts of motors for subsequent machining, or who welds broken parts of motors in a large garage.

round squeezer; a smith, q.v. who welds heated tang on to cutlery blades by squeezing them together in a mould with flux.

round steeler (edge tools); a smith, q.v. who welds on a hard steel cutting edge on back plate of iron or cheaper steel; may weld plate of hard steel of iron and steel together ready for subsequent forming, by toolsmith, q.v., into edge tools.

mounting forger, see oddwork forger.

nail maker (forged); an Oliver man, q.v. who makes nails from iron rod; cuts off heated lengths of rod after making point with hot steel bar hammer; inserts heated length in hole in anvil and brings down Oliver hammer to form head of nail.

nut cutter, nut forger; machine nut maker; a machine forger, q.v. who places heated steel plate between anvil and nut forging machine and presses lever with hand or foot,

causing specially shaped tools or dies to squeeze or stamp heated bar into shape of nut.

oddwork forger; mounting forger; a smith, q.v. or a drop forger, q.v. who forges fittings for boiler work.

Oliver assistant, Oliver hammerman, Oliver jumper; an assistant to an Oliver man, q.v. who beats up bars, rods, etc., of iron or steel in forge furnace, and passes them to Oliver man, and then he takes him to stamps out die forging on Oliver machine by kicking foot lever which actuates drop hammer.

Oliver man, Oliver smith; a drop forger, q.v. who operates special forging stamp called an "Oliver", fixes upper and lower dies and controls hammer by kick lever or by directing assistant to actuate lever, removes forging and receives fresh bar of heated iron or steel from assistant, Oliver jumper, q.v. sometimes specifically designated, e.g. horse nail Oliver man.

pansmith (salt works), salt pansmith; a general smith, q.v. who does forging work required to keep in repair evaporating plant in salt works consisting mainly of large steel pans in which brine is evaporated; bolts and welds steel plates together to form pans, and repairs pan by welding on fresh plates.

perambulator file smith, perambulator smith; undercarriage maker; a smith, q.v. who bends to shape and welds as required, iron rod, tube and strip for parts of undercarriage of perambulators, malicars, etc.

permanent way smith; a smith, q.v. who resharpen and repairs plate-layers' tools, e.g., crowbars, picks, jim-crowes, usually by hand forging.

pick dresser, see picksmith.

pick repairer, pick sharpener, pick sharper; a smith, q.v. who sharpens picks of mines, quarries, road repairers, etc., by hand forging fresh points on ends of old heated ends in order to harden them for use.

picksmith; (i) see pick stamper; (ii) pick dresser; a smith, q.v. who forges heads of picks by hand from heated steel bar.

pick stamper, picksmith; a drop forger, q.v. who stamps out heads of picks from hot steel bar by means of dies; quenches pick heads in water to temper them for use.

pipe welder; a smith or welder, q.v. who joins together edges of steel plate which has been bent round in form of pipe; obsolete; cf. welder (249).

plate bender (plate mill, or boiler making); bender (rolling mill, etc.); bends steel plate to required curvature for making boilers or for shipbuilding, by heating in furnace and placing it, by means of travelling crane on rolls of plate bending machine, guides plate on to rolls so that it rests on two lower rolls and is beneath centrally fixed upper roll; screws down upper roll till it holds plate tightly and bends it slightly forcing plate down between the two lower rolls; moves lever imparting rotary motion to roll causing plate to be rolled between them and then bent over all its length; increases curvature of plate by screwing down upper roll as required, and attaches plate to crane for removal when sufficient.

plater (cutlery, etc., forging); a smith, q.v. who hammers out to shape of cutlery blade, heated bar or rod of steel using a hand or belt-driven hammer, sometimes specifically designated, e.g. edge tool plater, box plater, acylite plater, shovel plater; (ii) see setter.

plate smith; a smith, q.v. who is engaged in bending, straightening, or welding iron or steel plates.

pneumatic hammer driver, pneumatic hammer man, pneumatic hammer smith; gun-powder worker; a smith, q.v. who forges small articles from mass of a small lump of saw hammer; receives heated pieces of steel bar, rod, etc., from bender, q.v.,

and moves them about under continuously striking hammer on small steel table, using tongs to hold and manipulate heated metal; continues till metal is forged to required shape.

pocket blade fier-out, pocket blade forger; (i) a drop forger, q.v. who stamps out blanks of blades for pocket knives; (ii) a smith, q.v. who forges from heated strip steel, blades of pocket knives by hand forging; almost obsolete.

gun-powder worker, see pneumatic hammer driver.

pot welder; a welder, q.v. who fuses iron handles on iron pots.

press driver, press driver man, press hand, pressman, press operator; leverman (steel forge), smith's pressman; controls lever which applies power (hydraulic, steam, electric, etc.) to forging press, receiving instructions from assistant, q.v.; in case of small forging presses, may do both forging and operate lever of press; sometimes specifically designated, e.g. wheel press operator.

presser (rolling mill); a large pressman, q.v. who is in charge of powerful hydraulic press under which he presses steel plates to improve grain of steel, or by means of which he shapes them to form of railway sleepers, etc., or cuts them into smaller plates using special cutting tool; bolts steel die to under side of press-head and sets lower die in bed plate of press, sometimes specifically designated, e.g. sleeper mill presser.

poddler (steel forge); a presser.

poaching hammerman; a forge hammerman, q.v. who reduces steel ingots to shape suitable for subsequent forging into railway wheels, using heavy punch, fixed on steam hammer head, which punches central hole in wheel for axle.

quarry smith; a general smith, q.v. employed in a quarry; does smith's work on repairs to plant and does smith's work in keeping shovels, shovels, and other tools sharp and otherwise fit for use.

railway spring maker, see spring smith (laminated springs).

razor maker; a smith, q.v. who cuts off length of special strip or bar steel, and when heated, forges it roughly to shape of razor under a rapid running (bell) hammer; cuts off razor to required length and forges point on finely tapered blade; welds on wrought iron tang or forges steel tang to shape ready for fitting into razor handle. may also attach hilt and hand guard to razor.

razor forger; a drop forger, q.v. who stamps out by means of dies, from heated steel bar, blanks of shape of razor blades ready for razor blade grinder (237) and forgers, who by plunging them into cold water or oil.

reducer (bolts); a smith, q.v. who by squeezing reduces thickness of end of bolt that is to be threaded for purpose of screwing on nut; may be done by hand or by Oliver man, q.v. on a rivet machine.

rich forger (run); a smith, q.v. who welds steel rim on sides of gun barrel so that, when barrel recoils, rim runs in slides and subsequently ensure that barrel comes back into original position.

roller, roller maker; a file forger, q.v. who makes several concave forgings for files, called rollers.

rim welder (motor); wheel welder; a welder, q.v. who joins together ends of strips of steel that has been bent round in heavy hydraulic press to form rim of motor wheel.

roving spar maker; a drop forger, q.v. who stamps out steel rod flyers for textile roving frames, by means of dies.

saw file forger, see file forger.

saw tang maker; a hot presser, q.v. who operates small press in which he presses small heated strips of saw ready for poaching and riveting on to saw handle.

scale smith; weighing machine smith; a smith *q.v.* who forges parts of scales by hand or by drop forging; *see* drop forger; repairs scales as required by weighing, bending or remaking broken parts.

scale stamper (cutlery); a stamper *q.v.* who stamps out from heated metal plate or sheet, scales which are to be riveted to the sides of cutlery blades to form metal handled knives, pocket knives, etc.

scissors forger, scissors smith; a smith *q.v.* who makes scissor blades by hand forging or drop forging; may also weld rivet to one side, and screw other side on to it; afterwards have been ground, reheats them and tempers them by plunging in water.

scythe back bender, scythe back maker; a smith *q.v.* who forges to shape, steel bar used to stiffen back of scythe blade.

scythe finisher; a smith *q.v.* who hammers forged scythes to shape, hammers out tang and thickens back of scythe by hammering; marks scythe with trade mark using die and hammer.

scythe forger; a cutlery forger *q.v.* who forges blade of scythe to shape from a strip of heated steel or from composite bar of iron and steel previously welded together, under a rapid (belt) hammer; pattern forged blank on for finishing, grinding, etc. *see* forger, *as for die forger.*

section smith (machine knife); *see* machine knife smith.

setter (cutlery); *plater (cutlery, etc., forger), smith (cutlery);* sets and straightens cutlery blades by bending them between two upright steel pillars on an anvil, using a hammer if necessary; hardens and tempers them by heating in fire and cooling in water and oil respectively; sometimes also marks shoulder of blade with trade and other symbols by use of hammer and steel dies.

shackle forger, shackle smith; a chainsmith *q.v.* who forges shackles from iron or steel rod or bar by hand or power hammer.

shinkee (scissors and hand shears), *see* shot forger.

sharpen, gear; tool sharpeners; a general smith *q.v.* who repairs, by forging processes, points and cutting edges of tools, *e.g.*, points on knives or navies' gear or tools, picks, drills, automatic coal cutters, etc.

shell stamper; a drop forger *q.v.* who stamps out parts of shells, steel nose caps, etc., by means of dies.

shingler (forging); roughly hammers heavy forgings into shape under power hammer, assisted by hammer driver *q.v.* to get them ready for forger hammerman *q.v.*

ship blacksmith, shipsmith; a smith *q.v.* or forger hammerman *q.v.* employed in a shipyard who forges by hand or power hammer, frames, etc., of ships, assisted by group of strikers, hammer drivers and labourers who manipulate forging under shipsmith's direction.

ship packing maker; tapered packing drawer; a forger hammerman *q.v.* who forges metal packing to correct shape for use in packing space between ship-frame and plates where necessary.

shipsmith's striker, *see* forger.

ship thimble maker, thimble maker; a smith *q.v.* or a drop forger *q.v.* who makes metal eyelet (called a ship's thimble) round rim of which rope is spliced so that eyelet forms end of rope which is thus easily attachable to a hook or another rope by means of eyelet.

shoeing smith, *see* farrier.
shot forger; shanker (scissors); a smith *q.v.* who welds strip of iron on to steel hand-forged scissor blade, and forges it to shape of shank and bows of scissors; in drop-forged scissors, blade, shank and bows are forged in one piece of steel.

shovel plate; a smith *q.v.* who forges, by hand or power hammer, block of heated steel into shape of shovel.

sickle back maker, *see* forger
sickle back bender; (i) bends sickle blank to right curvature by hand whilst hot, round template, using tongs, and clamps firmly to cool; (ii) sets gauges in roller bending machine, inserts sickle blank either hot or cold, and controls bending operation by means of levers.

signal smith; a smith *q.v.* who is responsible for maintenance of signal wires and rodding, point and crossing rodding and locking frames; makes small adjustments, repairs or replaces bent or broken rods and cleans and oils joints in signal and point apparatus; does repairs to broken bent rods, etc.; works in railway shops, not on permanent way; *cf.* signal lineman (293).

sniffle man; a general smith *q.v.* in a colliery.

smith; blacksmith; general term for any man engaged in heating iron or steel bars, rods, plates, etc., in small furnace (forge) to a white heat and shaping it by hammering on an anvil or other metal block; work may be done by hand, by hand operated machine or by power machine, according to size of job and whether a special order or repetition work; may perform any of the following operations: (i) fullering or swaging, *i.e.*, reducing size of rod, bar, etc., by means of hand hammering on special swage tool on hot bar; (ii) upsetting, *i.e.*, hammering on end of heated bar to cause it to increase in width, or by allowing heated bar to drop from a height on to steel block; (iii) bending, either by hammering bar, etc., which is heated at point where it is to bend, on an anvil, or by levering it round a fulcrum; it is usually necessary to upset a bar or rod, before bending to avoid making bend thinner than rest of metal; (iv) raising, *i.e.*, welder; (v) punching, *i.e.*, driving a pointed steel punch through heated bar, plate, etc., so that hot metal is forced aside, or by driving a larger sharp-edged punch through metal so driving piece of metal before punch is driven right out of edges of metal; (vi) cutting off, *i.e.*, hammering sharpened tool on heated bar, plate, etc., to cut it off at that point; smith may also forge metal by hammering directly on to heated part without use of special tools mentioned above, assisted or not by striker *q.v.* according to size of job; smith is usually assisted by hammerman or striker *q.v.* who hammers on heated metal or tool held on it by smith himself; *cf.* forger; sometimes specifically designated, *e.g.*, agricultural machine knife smith, anvil smith, angle iron smith, anglemill, anvil smith, axle box smith, axle smith, blade smith (cutlery), boilersmith, boltsmith, Bradley hammer smith, bull, dozer smith, carriage smith, chain-smith, coach smith, spring smith, coil smith, crosscutsmith, drop hammer smith, engine smith, engine tool smith, file smith, firebox framesmith, firebox smith, fangsmith, fork-smith (cycles), foundry smith, frame-smith, general smith, hand forge smith, iron smith (reaping hooks), iron wheel smith, link smith (chain making), machine knife smith, machine smith, motor smith, Oliver smith, passmith, perambulator (faro) smith, pick hammer smith, plate smith, pneumatic hammer smith, poddler's tool smith, quarry smith, rasp smith, reaping becomsmith, saw passmith, scale smith, scissor smith, scythe smith, section smith (machine knife), shackle smith, ship blacksmith, ship-smith, ship tool-smith, shoeing smith, spiral spring smith, spring hammer-smith, spring smith, stamp smith

steam hammer smith, steel frame smith (shipbuilding), steel hammer-smith, tool-smith, turner smith, clock smith, tyre smith, wagon smith (railway wagon), wagon spring smith, wheel-smith.

smith (cutlery), *see* setter (cutlery).

smith (shoes); a smith *q.v.* who trues shoes after receiving by hammering them flat on anvil by hand.

smith's finisher; (i) a forger helper *q.v.* who finishes off rough forgings either by hand filing or on emery wheel; (ii) a smith *q.v.*, assembling and fitting up general smith's work.

smith's fitter, smith's work fitter; erects fittings for buildings made by smith *q.v.*

smith's hammerman, *see* striker.

smith's pressman, *see* press driver.

sockets maker; a drop forger *q.v.* or Oliver man *q.v.*, who forges sockets for welding on pipes and tubes.

sockets welder; a smith *q.v.* who specialises in welding sockets on ends of tubes, by hand hammering heated socket on heated end of tube.

sparrow hill maker, *see* wrought nail maker.

spiral spring smith; coil-smith, spring smith (spiral spring); (i) a spring smith *q.v.* who makes spiral springs by winding heated iron or steel wire or rods round circular metal core by means of hammer and tongs; (ii) drags heated metal from furnace with tongs and fits it in grips of power driven mandrel; sets mandrel in motion and allows coiled metal to cool gradually whilst clamped in position.

spring bar and swirl maker; a smith *q.v.* or a drop forger *q.v.* who forges spring bars and swirls for harness making.

spring hammer smith; a smith *q.v.* who operates a spring hammer, *i.e.*, a belt driven hammer used for light and heavy spring and having a laminated spring either over shock preventing device between hammer and source of power.

spring smith; (laminated spring), laminated spring maker, railway spring maker; receives strips of tough steel of graduated lengths and smooths off shape; seats them in fire of forge and bends them to spring shape on metal template, clamping them into position and leaving them to cool; hammers heated ends of springs to taper them off, and by means of punch, hammers two notches on each end of spring lever, so that notches can be hooked with bumps (which are undersides of notches) in next layer, thus helping to strengthen spring; fastens series of layers together by suitable bolts, and welds on to each end of spring, a steel nut by which spring is subsequently attached.

spring smith, *see* coil-smith, sometimes specifically designated, *e.g.*, wagon spring smith.

spur forger, spurrier; a drop forger *q.v.* shaping spurs, or, a smith *q.v.* who makes spurs by hand; *see* shoelet; spurs are mostly cast in malleable iron or nickel.

stamper, drop stamper, hot drop stamper, set stamper; stamp smith; general term for man employed in stamping out articles from hot iron or steel rod, bar, sheet or plate by means of dies; may be a drop forger, Oliver man, fly pressman, forger forging stamp; work done, *as for* drop forger; sometimes specifically designated, *e.g.*, bolster stamper (knife), edge tool stamper, hammer stamper, handle stamper (cutlery), heavy edge tool stamper, shoe stamper, horse shoe stamper, stamper, ring stamper, scale stamper, shell stamper, spade stamper, stamper (iron and steel stamping and drop forging), stamper (iron tube fittings), stamper (rolling

mill, stamper (smithy), stamper (steel tube sockets), table blade stamper, tyre stamper, wheel stamper.

stamper smith, see stamper.

staple maker; an Oliver man g.v. who makes staples from heated iron rod or stout wire.

steam hammer driver, as for hammer attendant.

steam hammerman, steam hammer smith; a forge hammerman g.v. who is in charge of forges in which power hammer is operated by steam.

steel pressman, steel pressman, see forge pressman.

steel tyro maker; a drop forger g.v. who stamps out steel tyros from hot steel plate or rod by means of drop forges.

steel tyre presser; a forge pressman g.v. who places strip of steel in heavy hydraulic press and by operating press causes it to be bent round steel template into shape of tyre ready for welding in rim welder g.v. straightener; (i) are hot straightener; sometimes specifically designated, e.g., angle iron straightener g.v., axle straightener, bar straightener, drill straightener, iron straightener, twist drill straightener; (ii) are cold straightener g.v., who while drawing out steel into long thin strips by means of a tilting hammer, so hammers steel that it is kept straight.

straightener, frame shop; an angle iron straightener g.v. who straightens heavy frame work of locomotive undercarriages, by pressing it whilst hot, under a steam hammer or hydraulic press.

striker, forge striker, drummer (Birmingham and S. India), hammer-smith, smith's hammerman (Scotland); assist smith g.v. in forging iron or steel articles from bar, rod, plate, sheet, etc., by placing bar, etc., in furnace or forge fire, tending to hammer which admits it to be drawn under direction of smith, withdraws metal when smith judges it to be sufficiently hot for forging process, e.g., welding, bending, swaging, etc., and places it, by means of tongs, on anvil of steel table; using slide hammer, strikes hot metal, or forging tool held on hot metal by smith, in accordance with smith's instructions; may hold metal in tongs during forging process and turn it during forging as instructed, or this may be done by smith himself; cools article made with tongs and places it in forge fire for further heating, if necessary, or removes it to one side to cool; acts as general assistant to smith (there may be one striker or more according to nature and size of work); may also be a smith's fire with small coal, usually damped, as required, except where there is a special forge furnaceman (71) g.v.; sometimes specifically designated, e.g., anvil smith's striker, angle iron smith's striker, angle smith's striker, anvil smith's striker, anvil striker, auger striker, bar maker's striker (seville), blacksmith's striker, blade striker, chain striker, coach smith's striker, edge tool forger's striker, edge tool striker, fork striker (agricultural implements), general smith's striker, hand forge smith's striker, hand forge striker, iron wheel striker, axle wheel striker, ship blacksmith's striker, smith's striker, wagon spring smith's striker.

stud cable maker; a chainmaker g.v. who forges large chains which have central crossbar in each link.

swager, swaging machine worker; operates swaging machine by means of which he swages or hammers out to thinner dimensions rods or bars of heated iron or steel, which he holds in tongs; sits in front of machine and moves heated bar backwards and forwards beneath swaging tool which automatically rises and falls on lower swaging tool fixed on steel blocks; moves from one set of swaging tools to next as required (machine has

three or more sets usually, and swaging, i.e., reducing, is done gradually; receives heated bars of metal from heater g.v. and returns them to him for re-heating if necessary; swaging by hand is part of smith's work, see smith; sometimes specifically designated, e.g., agricultural machine knife swager, machine knife and section swager.

swivel maker; a chainmaker g.v. specialising in making swivels for chains or anchors.

table blade forger (hand); a tinsmith (hand) g.v. who hammers out blades of table cutlery roughly to shape from heated strips of special steel; works on bolster and hammers out iron tang of knife.

table blade stamper; a drop forger g.v. who, by means of dies cuts out, from heated sheet of special steel, standard blades for table knives; may stamp out blade and handle in one piece in case of cheaper class of knife.

tanger (roffed blade); a smith g.v. who welds bar of iron on to forged blade, cuts it off about one inch or less from weld, heats it up in forge fire and hammers it out by hand or machine to form tang which is to be bedded in handle of knife; may also draw or hammer out a slab of metal left on blade to length and thickness of tang.

tapered packing drawer, see ship packing maker.

thimble maker, see ship's thimble maker.

tilter (steel), tilt hammer-smith; a smith g.v. who holds, by means of tongs, heated bars of steel under an automatic hammer and moves them backwards and forwards under hammer so that steel is beaten out into long thin strips of definite size and thickness. Hammer is known as a tilt hammer and is raised by leverage of a series of projections, i.e., cams, on a revolving shaft, and allowed to fall by its own weight as soon as released from cam and before next cam raises it again; steel is prepared in this form for sale; cf. tilter (279).

tool forger, toolmaker, toolsmith; a smith g.v. who heats bars of special steel in small forge, hammers them to required shape by hand, re-heats them to definite temperature, usually in gas or electric furnace, and then hammers, by swaging it in water or oil, in case of large tools, e.g., metal shears, forges small piece of special steel to shape by hand, and welds it on to tool so that it is in position to do work required; sometimes referred to according to nature of tool made, e.g., bit maker, brace maker, chisel maker, coupling nailer maker, chasing tool maker, crowbar maker, drill maker, mattock maker, punch maker.

tram hammerer and inspector (rolling mill); hammers plates by table and hand, using a hammer and gauge plates, trammer or trams (special gauges for testing alignment); rejects faulty plates, marking fault with chalk.

transmission; an angle iron smith g.v. who shapes and welds together angle iron to make framework of colliery or other industrial trams and undercarriages, usually also carries out smithing repairs.

T-ring welder; an angle iron smith g.v. who bends hot angle iron round a pattern and welds ends together to form rings of steel of T-section, i.e., angle iron.

tube smith; a smith g.v. who specialises in tube welding, flange welding on to tubes, and tube bending.

tyre becker; a smith g.v. who forges railway and tramway tyres, smoothed by becking hammerman g.v. and using a becking anvil.

tyre shrinker; wheel tyrer; heats steel tyre in gas fired furnace, withdraws it when hot by overhead crane and places it, by means of tongs, on wooden or steel wheel centre, in hydraulic press; receives press, by means of lever, and so brings tyre under hydraulic hammer; may also hammer on by hand a retaining ring.

tyresmith; a smith g.v. who makes steel tyre for motors by hand forging, bending and welding from steel strip; cf. steel tyre presser.

tyre stamper, see wheelman.

undercarriage maker, see paramblator fire smith.

speeding machineman; a smith g.v. who operates by chains and levers an upsetting machine, by which metal bars, etc., can be thickened or widened; heats part to be thickened, sets up in machine by means of special clamps, or crane, and with assistance of helpers either hammers on end of bar or allows bar to drop vertically on steel block.

veer, see glutter.

vertical man (shipyard); heats steel plates in large vertical furnace, and then withdraws them by crane, and bends them in plate bending machine; cf. plate bender.

wagon smith, as for transmitt, making and repairing steel framework of wagons.

wedge maker; a smith g.v. or a drop forger g.v. who forges wedges, i.e., wedge-shaped chisels used in road mending.

welding machine smith, see angle smith.

welder; a smith g.v. who joins two pieces of iron or steel together, whilst hot, by hammering them; receives two parts to be welded from striker g.v. who has heated them to welding temperature in charge furnace; joins them with tongs and holds parts together on anvil, having first scraped off scale and scales and sprinkled a little powdered borax on surfaces to be welded to act as flux; holds parts together firmly whilst striker bites them with wedge causing them to weld; welding by above method is usually part of work of smith; cf. oxy-acetylene welder (249), electric welder (249), gas welder (249), wire (249), gas welder (249), sometimes specifically designated, e.g., barrel welder, chain welder, and welder, flange welder, pipe welder, rim welder, side welder, socket welder, T-rim welder, wheel welder.

wheel hose maker, wheel centre maker; better; a smith g.v. who forges to required shape the centres of railway or other steel wheels.

wheel disc presser; a forge pressman g.v. who presses out wheel discs for motors, etc., from heated steel steel.

wheel drummer; a striker g.v. who assists wheel smith g.v. in forging steel wheels for motors, railway coaches, etc.

wheelman; tyre stamper; a forge pressman g.v. who presses out steel tyre rollers, etc., from heated steel strip.

wheel smith, iron wheel smith; a smith g.v. who makes wheels by forging; may include work of rim welder, steel tyre presser, wheel glutter, wheel spoke bender g.v.

wheel spoke bender; a forge pressman g.v. who bends heated steel bar in a press fitted with dies, into shape of closed V so that sides of V form spokes and top arc forms part of rim.

wheel tyrer, see tyre shrinker.

wheel welder, see rim welder.

wrought nail maker; sparrow bill maker; an "Oliver" man g.v. who forges wrought iron nails from iron rod.

Sub-Order 6.—Machine Tool Workers.

200.—SLOTTERS, MILLERS, TURNERS, AND OTHER MACHINE TOOL WORKERS.

axle operator, **bar** auto operator; works semi-automatic capstan lathe, for turning, from bar iron or steel, small turned fittings used for rolling stock; places bar metal in mandrel, fits lathe tools in chucks, and operates hand wheel and levers adjusting working parts of lathe during turning.

axle tender; a turner *q.v.* who operates a special axle-tending and centering lathe, which faces and centers ends of axle for wagons, locomotives, etc., which are afterwards again turned on lathe by axle turner.

axle rougher, **axle rougher-out**; a turner *q.v.* who turns railway axles roughly to size.

barrel roller; sets rifle barrel, in its finished bore.

barrel fitted; an operator who fits center barrel and cut rifling grooves when power is switched on; watches proper working of lathe.

barrel stripper, *see* turner, barrel.

barrel chamferer; operates a chamfering lathe to chamfer or bevel bottom edge or shield of metal hob-biss, or metal flange or ferrule generally inserted in or on bottom of wooden cone or bottle-shaped bobbins; fixes shield or ferrule in lathe, sets chamfering tool, starts, stops and adjusts lathe for turning.

bore; boring machine worker, *boring* machinist; (i) sets up, controls and operates boring machine, *e.g.*, horizontal, vertical, etc., used for making or enlarging holes in metal, of a size greater than holes made by drill; work varies with type of boring machine; generally fixes work on machine table, adjusts it to a desired angle, other than horizontal or vertical position, if necessary, and sets boring bar, or spindle and cutters; (ii) sets up and operates machine such as lathe, or drill lathe and boring machine, used for drilling and/or boring small work; sometimes specifically designated according to article or material bored, *e.g.*, hole borer, iron borer, screw borer, web borer, tyre borer, wheel borer, wheel hub borer, or kind of machine used, *e.g.*, horizontal borer.

bore, barrel fine; (i) takes barrel after drilling, *see* barrel driller, and enlarges bore with a square bit on resamming or horizontal drilling machine; *cf.* bore, driller, resamer; (ii) sets up and controls levers of type of lathe or drilling and boring machine which cuts and forms from bar steel, barrels of rifles, pistons, and machine guns; widens out bore either on same machine or on boring or resamming machine, *are* bore, resamer, to form chamber; sometimes also finishes by machining and grinding.

bore, bell (tube), *see* bore, long.

bore, commutator, *see* turner, commutator.

bore, counter; (i) counter sinker; a driller *q.v.* who operates a drilling machine to bore, drill or counter sink, in metal articles, enlarged holes to form seating to receive a screw; (ii) *see* bore, turner.

bore, cylinder; counter borer; accurately finishes internal surface of metal cylinders for engines, pumps, automobiles, etc., (usually castings), on boring or drilling and boring machine, by enlarging the already bored-out cylinders; *are* *for* drill lathe or borer; sometimes bolts cylinders, *etc.*, for boring, to sliding carriage of special machine used, instead of to table of ordinary boring machine.

bore, long (tube); *bell* borer; a bore *q.v.* who bores or drills holes in tubes or bells used in drawing butt-welded tubes; measures accurately with micrometer and files, if necessary,

boring machine worker, boring machinist, *see* bore.

boring mill operator; a bore *q.v.* engaged on boring mill, a machine adapted for wide variety of work and capable of boring, or enlarging, up to several feet diameter; bolts down or otherwise disposes work, adjusts gears, shafts, and other driving and boring mechanism, and controls mill during boring.

broacher; broaching machinist; a driller *q.v.* who enlarges or smooths out core hole, a hole previously drilled, using a broach or reamer in a drilling machine.

bullard operator; a turret lathe turner *q.v.* working at Bullard vertical turret lathe.

capstan lathe hand, **capstan lathe worker**; attends capstan lathe, used in repetition work; sets-up work in jig, fixes tool in capstan and controls tool and power levers of lathe.

center, *see* turner, centering machine worker, center; lars of fix work to be marked, *e.g.* of railway axle in V-shaped channel of lathe or centering machine; manipulates two levers and so marks exact centre and at same time punches or drills mark simultaneously at each end; sometimes specifically designated, *e.g.*, axle center.

chamberer (gun barrel), barrel chamberer (gun), gun barrel chamberer; widens-out bore of broach end of gun, rifle, etc., with resamming bits on a capstan lathe to form chamber; sometimes done by barrel fine borer *q.v.*

chamberer, champherer; a bolt facer or nut facer *q.v.* who feeds and operates specially converted lathe on which set of horizontal and round end of bolts are formed.

cleaner; a chamferer *q.v.* who also cleans up and sharpens thread of screw, by hand.

copying machine worker, *see* profile.

counter sinker, *see* bore, counter, cutter, gear; gear cutting machinist; mounts and sets-up work in gear cutting machine; makes necessary fine measurements and adjustments of cutting tools; controls levers and watches correct working of machine; sees that flow of lubricant is maintained; *cf.* miller; sometimes specifically designated, *e.g.*, bevel gear cutter (both inclined to axis).

cutter, manhole, *see* machinist, man-hole.

cutter, screw; cuts screw-thread in fittings, machine parts, etc., on a screw-cutting machine; sets work and steel die in lathe clutch and holder; controls power-drive levers.

cutter, shell; a lathe hand *q.v.* who cuts end of shell cases, after drawing, with parting tool on lathe.

cutter, spiral; a turner *q.v.* who cuts large screw-threads, or worms, in a lathe.

cutter, steel letter; steel letter carver; a vertical miller *q.v.* who makes large steel letters, figures, etc., from steel plate on a vertical milling machine; *cf.* profiler.

cutter, vice (box) cuts in a lathe, usually semi-automatic, spiral slot on inside of vice box, into which, pin of vice box fits and moves.

cutter, vice pin; cuts in a lathe, usually semi-automatic, spiral slot on end of vice for fitting into vice box.

cutter, wheel; a gear cutter *q.v.* who cuts teeth in chain wheels for cycles.

cutter, worm; cuts, in lathe, worm threads for balance screws, or for re-feeding gear, on wheeling machines.

die maker; machinist and finishes draw plates and tribble dies which have previously been forged, and which are used in tube drawing; *cf.* die sinker (230).

drifter, *see* facer, nut and bolt.

driller, machine driller; drilling machine attendant; drills machine work; drilling machinist; (i) operates drilling machine for drilling holes in metal; sets-up work, with or without jig, adjusts drills, controls power drive by levers; duties vary with type of drilling machine; where machines are built to allow small shops may set up, *see* machine; sometimes specifically designated, *e.g.*, axle box driller, barrel driller, body driller (motor car), brass driller, card cylinder driller, card roller driller, cast-iron driller (metal), circle driller (textile machinery), cycle driller, faller driller, flyer pin driller, flyer pressor driller, frame driller (piano), gas burner driller, gas ring driller, handle driller, textile machinery, hole tip driller, hook driller, iron driller, jill driller (textile machinery), key driller, machine knife driller, metal castment driller, plate driller, and hub driller, rim driller, toe driller, vice pin driller, wheel driller, wheel hub driller, wheel rim driller, window frame driller (metal castment), window pin driller.

driller, radial; a driller *q.v.* employed on a drilling machine having drill displaced on radial arm to allow drilling on large or awkwardly-shaped work.

driller, sample; a driller *q.v.* who drills holes in test steel castings, with vertical drill, to facilitate work of analyst.

driller, slot; operates special drilling machine with flat ended drill, which cuts straight parallel sided grooves in shafts, etc., to accommodate key.

driller, vertical; vertical machine driller; a driller *q.v.* who is operating a drilling machine having drill vertically disposed, as distinct from horizontal or radial drill; changes work on table of machine, brings drill to bear on work and controls power by hand or foot levers; may use template or jig to fix position of holes.

drilling machine attendant, **drilling machine worker**, *see* driller.

drill maker, twist drill maker; (i) turns and machines steel twist drills in lathe or in automatic milling machine; (ii) general term for persons employed in drill making, including drill fluter, drill grinder (237) and drill pointer (237) *q.v.*

edge tool machineman, *see* machinist.

face; facing machinist; faces, *i.e.*, renders flat and true surfaces of pipes, valves, machines, engines and parts that need tight jointing, on face plate lathe; from work so that face may be traversed by tool; *see* driller, who operates lathe; *cf.* facer (235); sometimes specifically designated, *e.g.*, pipe facer.

facer, nut and bolt; bolt facer, nut facer; driller, head shaver, trimmer; a facer *q.v.* who feeds and attends nut facing machine which gives bright finish to nuts and bolts.

ferrule maker; ferrule turner; a turner *q.v.* employed in turning ferrules for protecting ends of boiler tubes; *see* turner, ferrule.

finisher; a turner *q.v.* who receives roughly turned work and turns it true to gauge on a finishing lathe; makes necessary fine adjustments and measurements; sometimes specifically designated, *e.g.*, axle finisher, axle bush finisher, wheel finisher.

fitter; grinder; cuts grooves or flutes in drills, taps, reamers, etc., on milling machine, or machine having special grinding or cutting tool, or on traversing lathe fitted with abrasive wheel, sets or faces work in jig or template, clamped to table of machine; controls table, tools and power by levers; sometimes specifically designated, *e.g.*, drill fitter.

fluter, roll (rolling mill): (1) turns rolls of rolling mill (hot or cold) in size; fits up special tool rest or guide in front of rolls and cuts away irregularities and trues up surface of flutes or grooves with hand tools as rolls revolve; (2) a turner *g.v.* who fits up rolls in special lathe, when they become unserviceable through wearing of surface; as roll turns in lathe, trues up surface with cutting tool.

fluter, roller (textile machinery): (1) operates a small planing machine fitted with cutting tools to cut grooves in metal rollers; (2) operates a milling machine which mills-out grooves in metal rollers, for use in drawing frames, and other textile machinery; in both cases, work is usually set up by machine tool setter (211) *g.v.*; sometimes specifically designated according to roller worked upon, e.g., bottom roller fluter, top roller fluter.

flyer cutter-out: cuts-out groove in hollow leg of flyer, i.e., yarn twisting mechanism.

flyer holder: a driller *g.v.* who drills holes in flyer leg for insertion of pins in fitting up flyer mechanism.

flyer rancier: a driller *g.v.* who enlarges socket hole in boss or flyer, used in yarn twisting.

Gisholt lathe operator: a lathe attendant *g.v.* who operates a Gisholt lathe for boring metal.

glazier's diamond ferrule hand: a lathe hand *g.v.* who makes metal portion of diamond tool handle.

groover, see fluter.

head shaver, see facer, nut and bolt.

hub maker, see turner, wheel hub.

hub worker, wheel hub worker: general term for worker engaged in hub making, including wheel hub holer, wheel hub driller, wheel hub taper, wheel hub turner *g.v.*

jogger; jogging machinist: sets-up and operates machine, shaping light steel sections used in construction engineering to form jogger, or step of T-silon, which permits flattening of iron against another plane surface; sometimes shapes sections by hand.

key seater: machines keyways, in shafting and gear of locomotive engines and rolling stock, on a slotting or milling machine; *cf.* miller, slotter.

lathe attendant, lathe hand, lathe-man: general term for operator engaged on a lathe, automatic, semi-automatic, etc.; duties vary considerably with lathe and type of work concerned; may merely hold tool to material, and start and stop lathe for repetition work, *see* capstan hand, or, may be a skilled turner *g.v.*

machine man, machine operator, see machinist.

machiner; edge tool machineman: general term for drifter, grinder, miller, planer, etc., *g.v.* engaged in making machine knives and hand tools.

machiner, action: operates machine for planing, turning, etc., parts of sections of small arms, from hand or drop forgings or castings.

machiner, barrel: shapes barrels of rifles, pistols, or sporting guns, by bringing them into contact with milling cutters in milling or other machine; precise duties vary with type of machine upon which engaged.

machinist, metal machinist; machinist man, machine operator: general term for any operative working on a machine which turns, planes, drills, bores, reams, slots, taps, or otherwise operates on metal, by means of machine tools; sometimes specifically designated, e.g., axle box machinist, carriage machinist (textile), oscio machinist, gun machinist, motor machinist, rifle machinist, shell machinist, transmission machinist, ball bearings; attends and feeds a semi-automatic machine which grades roughly pressed balls into spherical form between grinding cutters, and which highly polishes

them; maintains supply of lubricant, watches for faulty work and reports to machine tool setter (211) *g.v.*

machinist, layonet socket: operates a milling and drilling machine used in slotting and drilling layonet sockets; sets and adjusts special jigs and fixtures.

machinist, broacher, see broacher.

machinist, drilling, see driller.

machinist, facing, see facer.

machinist, fitter's: a machinist *g.v.* who performs small machine operations, on engine parts, etc., *g.v.*, planing, milling, under instructions of Miller (210) *g.v.*, usually skilled in setting up and operating various machine tools.

machinist, gear cutting, see cutter, gear.

machinist, jogging, see jogger.

machinist, machine: machine cutting machinist; machine cutter; sets-up and operates special machine for cutting circular or oval manhole openings in plates.

machinist, metal window: a driller or miller *g.v.* who machines various parts of metal elements, to ensure accurate fitting; may also punch holes *see* puncher (275).

machinist, milling, see miller.

machinist, nosing: sets barrel in small-hole lathe, and brings cutting tool to bear to round-off muzzle ends or muzzes of gun barrels; may finish them with a belly brace.

machinist, plate planer, see planer, plate edge.

machinist, reamering, see reamer.

machinist, screwer: screwing machinist, see screwer.

machinist, shaper, see shaper.

machinist, slotter, see slotter.

machinist, socket (swords, etc.): a slotter *g.v.* who makes T-slot at grip end of bayonet, to fit into T-piece on rifle.

machinist, spinning: a slotter *g.v.* who cuts slots for feathered keyways (splines), etc., in shafting, pulley hubs, etc.

machinist, tapping, see tapper.

machinist, waving: sets-up, and operates lathe adapted to produce curved raised portions, or "waves," near base of shells, to take and exactly to fit copper driving band of shell.

mill: milling machines men, milling machine worker, milling machinist: (1) sets-up, attends to, and operates milling machine, which shapes metal by means of many toothed rotating tool-like cutters; duties vary with type of milling machine at which engaged but include setting gauges by hand and fixing various tools and devices in position, moving hand or foot levers to control power drive, position of work and of tool; (2) attends, sets-up, and operates machine other than milling machine which shapes metal by means of cutting tools having action similar to those of milling machine; sometimes specifically designated, e.g., axle box miller, layonet miller, cyclo miller, machine knife miller, sword blade miller, tool miller.

miller, die: a miller *g.v.* who reduces dies to correct shape and dimensions by treating surfaces in milling machine, before dies are cut by die setter (230) *g.v.*

miller, set: a miller *g.v.* who mills "false" of textile carding machine (upon which card clothing is nailed).

miller, profile, see profiler.

miller, saw: a miller *g.v.* who cuts teeth in a number of saw blades clamped together.

miller, space band (linotype machine): a miller *g.v.* who operates special semi-automatic machine for milling small strips of steel to be used as space bands in linotype printing; does not usually set up machine.

miller, universal: a miller *g.v.* who sets-up and operates a universal milling machine, which is of complicated mechanism and suitable for milling

numerous classes of work; makes accurate micrometer measurements and adjustments of cutting tools; controls machine by manipulation of numerous hand and foot levers.

miller, vertical: a miller *g.v.* who sets-up and operates a miller machine having spindles vertically disposed; this permits of end and face cutting, and also of profiling, *see* profiler.

milling machine man, milling machine worker, see miller.

parser, scythe parer: sets-up and operates machine having specially designed tools for cutting, shaping, paring or planing scythes, sickles and rasping hooks; work may be done by a lathe hand, or a planer *g.v.*

planar; planing machine worker: sets-up work and operates reciprocating machine which cuts shavings from metal articles to bring them to desired shape; faces gauges and tool in position making accurate adjustments; sometimes specifically designated, e.g., axle box planer, flat planer (carding engine), girder planer, machine knife planer, rail planer, switch and crossing planer.

planer, die: a planer *g.v.* who shapes surfaces of die to bring die to required dimensions before cutting by die sinker (230) *g.v.*

planer, plate edge; plate planer; plate planer machinist: plate planing machine attendant, plate *g.v.* engaged on a plate edge planing machine in which tool travels backward and forward along edge of plate clamped on table of machine.

planer and slotter, wall slot fitter and planer, wall slot and copper, planing and slotting machine, which is fitted to a wall, works vertically and is adapted for dealing with large and awkwardly shaped work.

planing machine worker, see planer.

plate planing machine attendant, see planer, plate edge.

profiler, profiling machine worker; coping machine worker, profiler, miller: vertical miller *g.v.* who pulls form arm of machine against outline of the form, or profile of object to be copied, and so guides milling cutters to reproduce profile of work, e.g., for curved chandeliers or slotting, ornamental metal work.

rancier (textile machinery), see reamer.

reamer, reamerer; rancier (textile machinery), reamerer machinist, rancierer, rancierer: sets-up and operates machine, such as lathe (*see* lathe hand), which enlarges holes to required size, by means of a reamering tool; *cf.* borer, and driller; sometimes specifically designated, e.g., flyer reamer, driver reamer, rancierer, rancierer, *see* reamer.

reder maker (textile machinery): a turner *g.v.* who specializes in turning and making on lathe, various iron rollers for use in textile machinery.

roller sawyer (steel): (1) feeds and attends cutting machine which cuts mild steel rods into sections for small rollers used in roving and spinning machines; (2) places roll in supports under power-driven back bar, operated by hand lever.

roll runner (rolling mills): assists roll turner (109) *g.v.* by helping to place rolls in position in lathe by means of a crane; sometimes does rough or first turning of roll; helps to remove roll from lathe.

sculpting machine worker, see scarfer.

scarfer, scarpher, sculpting machine man; sculpting machine worker: sets up job on sculpting machine and operates it to taper corners and ends of plates and angles, to allow them to overlap each other, when riveted in position, in shipbuilding.

screwier; screwer machinist, screwing machine attendant, screwing machine man, screwing machine worker, screwing machinist, threader (bolt, nut and

screw, wormer, feeds and operates automatic or semi-automatic screwing machine, which cuts threads on bolts, in nuts, spindles, etc.; may be limited to screwing i.e. external threading, or may do screwing and tapping (cf. tapper) by adapting machine, adjusting tools, etc.; machine is usually set up by machine tool setter (211) g.v.; sometimes specifically designated, e.g., hexagon lock screwer, button screwer, copper bolt and nut screwer, iron cog screwer, iron stud screwer, stud screwer, turret screwer.

screw, axle box; axle bush screwer, see turner, axle box.

screw, tube; machines screw thread on tubes under such conditions in diameter; cf. turner, steel tube.

screwing machine attendant, screwing machine hand, screwing machine worker, see screwer.

shaper; shaper mechanism, shaping machine; machine: from small iron and steel component parts, e.g., die, axle box, bolt head, on bed of shaping machine tool (a kind of planing machine); uses gauges and sets cutting tool in hand of reciprocating arm or ram and controls power drive by means of levers; sometimes specifically designated, e.g., axle box shaper, bolt head shaper, die shaper, nut shaper; cf. lathe hand, miller, planer.

shaper, ship; propeller; a planer g.v. equipped in training-up propeller blades to correct pitch on metal planing machine fitted with special adjusting gear.

shaping machine, see shaper.

slasher (sewing machine needles); a planer g.v. who feeds needles into semi-automatic planing machine, which cuts a flat surface on side of shaft of sewing machine needles.

slider, shaft slider, sliding machine-man; a turner g.v. who fashions long lengths of shafting on shaft sliding machine adapted for such work.

slotter; slotter machinist, slotting machine man; sets-up and operates slotting machine which cuts slots in metal, or dies or patterns of metal, in lathe and milling machines are commonly used for this purpose, see lathe hand, miller; sometimes specifically designated, e.g., flyer slotter (textile machinery), machine knife slotter, plate slotter, spindle slotter.

slotter, axle; makes slotted hole, by means of special slot drilling machine, through axle and fixes therein, pin which holds together axle and box.

slotter, spring; pierces on slotting machine, steel springs used in building rolling stock; cf. spring puncher (264).

slotter and planer, wall, see planer and slotter, wall.

slotting machine man, see slotter.

spindler; a lathe hand g.v. who operates lathe in which cycle spindles are turned and screwed; cf. spindler (279).

steel letter carver, see cutter, steel letter.

stock maker (textile machinery); (1) a turner g.v. who fashions cylinders to correct size; (2) a miller g.v. who mills reeves on turned cylinder ready to receive matrices into which needles of circular comb are fixed.

tapper; tapers holes, after drilling, to fit taper pins by boring up to required machine, or by use of hand reamer.

tapper; tapping machine attendant, tapping machine hand, tapping machinist, threader (bolt, nut, screw, etc.); sets-up, and controls machine for tapping, i.e., cutting threads in nuts, etc., as distinct from external threading, e.g., on screws; cf. screwer; may be engaged on a lathe or drilling machine, tapping by means of tapping tools; sometimes specifically designated, e.g., button tapper, hub tapper, nut tapper, wheel hub tapper.

tapper, stay; stay hole tapper; a tapper g.v. engaged on tapping holes in condenser shafts into which stays are fitted.

tapper and bolter, wheel; drills and afterwards taps, holes, (see driller, tapper) in wheel centres, to receive screws holding wheel tyre to centre.

tapper, screw; sets tyre to centre, screws in studs, or set screws, and tightens them up.

tapping machine attendant, tapping machine hand, see tapper.

threader (bolt, nut, screw, etc.); (1) see screwer; (2) see tapper.

tracker; sets-up and operates semi-automatic machine which tests seatings, or track or ball race, of ball bearings.

traverser; a turner g.v. engaged in shaping long shafts, rollers, or cylinders, mainly in the rough, i.e., without putting a finished surface on them.

tread, wheel treader, see turner, tyre.

trimmer, see faser, nut and bolt.

turner; fashions metal, by applying a cutting tool to it, as it rotates in lathe; sets-up work, fixes and adjusts tools and gauges by means of clamps and screws in chuck, tool rest, etc.; arranges gears to obtain most suitable cutting speed; controls lathe during turning, by means of hand wheels and levers; understands working of common makes of lathes, including setting-up and operating of more complicated lathes, such as turret lathe, and use of lathe tools, cutters, drills, etc., as distinct from lathe hand, e.g., capstan lathe hand, who may possess no such skill; precise duties, e.g., guiding tool, and hand control of lathe in use of tool, vary with work and lathe concerned; sometimes specifically designated, e.g., aluminium turner, axle turner, axle tree turner, beam turner (textile machinery), turner, bowl (or roller) turner, turner, bowl turner, calender bowl turner, centre boss turner, copper turner, copper hand turner, crank turner, die turner, engine tool turner, (textile) flyer socket turner, flyer top turner, fly wheel turner, gun mounting turner, hinge turner, hollow-ware turner, iron turner, lead turner, locomotive turner, loom turner, machine tool turner, mechanical turner, marine turner, motor turner, piston lock key turner, rim turner, ring turner (spinning frame), roller turner, shell turner, stock lock key turner, stud turner, textile turner, tool turner, tyre turner, valve turner, vice box turner, vice pin turner, wheel axle turner, window pin turner.

turner, axle box; axle box screwer, axle bush screwer; a turner g.v. who finishes rough castings to required dimensions for an axle box or axle hush in lathe and threads, i.e., puts screw thread on end to receive brass grease cap.

turner barrel; barrel stripper; a turner g.v. who turns, on lathe, to required diameter moulins, i.e., for and rolls blanks of gun or rifle barrels.

turner, capstan; capstan lathe turner; a turner g.v. performing skilled work on a capstan lathe, a lathe in which turning is done by means of a tool fixed in a capstan head; sets up work and tools in capstan head, making necessary adjustments to ensure accurate work; cf. capstan lathe hand for repetition work, and other work not requiring fine skilled work.

turner, commutator; commutator borer; sets up and operates lathe or other machine for boring out commutator in preparation for building up on armature; after boring, files down copper ends of armature and machines or turns it smooth and true; cf. borer, turner.

turner, copper roller; a turner g.v. who drills and bores copper castings, then turns roller in a lathe to make it true, after casting has been assembled with steel spindle to form roller.

turner, cutter; a turner g.v. who shapes on lathe, round parts of cutting tools used on cutting and worming machines; work sometimes done by tool maker (267) g.v.

turner, engine; (1) a turner g.v. who turns crank-shafts and similar engine parts, on lathes; (2) old name applied to turner who operated power-driven lathe.

turner, engraver's; turner's (roller engraving); a turner g.v. who turns off designs, which have been previously engraved on rollers, to provide new surface for fresh engravings.

turner, ferrule; see ferrule maker.

turner, gun; turns, on lathe, heavy steel forgings for guns; sets cutting tool, makes changes in gearing, etc., during turning, and generally controls semi-automatic machines boring and turning parts of large calibre guns.

turner, hub; see turner, wheel hub.

turner, key; turns, on lathe, using template cutting tool, round parts of keys.

turner, rim engine (rifles); sets-up and operates on engine-turning lathe to turn rifling, or more, of small calibre on ribs of better class small arms.

turner, rough; a turner g.v. who is engaged on rough turning in boiler, railway and other engineering work.

turner, steel tube; (1) turns screw threads on ends of tubes, eight inches or more in diameter, for connecting purposes; cf. tube screwer; (2) a lathe hand g.v. who turns-down, i.e., reduces diameter of ends of cylindrical tubes in preparation for screwing.

turner, tube; cuts in lathe to required length large and heavy tubes, having bore from eight to twelve inches in diameter, cf. faser.

turner, turret lathe; turret hand, turret lathe hand, turret lathe operator; a turner g.v. who sets-up and operates turret lathe, having tools, usually four to six in number, gripped in turret, and which brings round tools in due succession to perform necessary operations, e.g., turning, screwing, reaming and finishing cuts, drilling and boring; also operates tool if necessary, for cross cutting or outlining.

turner, tyre; treader, wheel treader, wheel turner; a turner g.v. who turns, on a special lathe, treads of rolling stock tyres, after they have been ground on axle.

turner, wheel; (1) turns wheels of railway rolling stock, sets-up in lathe, castings of wheels, and trues-up to suitable dimensions for fitting tyres; (2) see turner, tyre.

turner, wheel hub; hub maker, hub turner; shapes hubs for perambulator and similar wheels, on lathe, by drilling, boring, tapping, etc.

turner-off (roller engraving), see turner, engraver's.

turret hand, turret lathe hand, turret lathe operator, see turner, turret lathe.

vargar (face carriage making); a lathe hand g.v. who cuts out the verge or semi-circular setting for hobbin.

vertical man, see driller, vertical.

wheel toppler; a turner g.v. who turns on lathe, periphery of wheel centres of wheels for railway or tramway rolling stock; cf. wheel tapper and borer.

wharver, scraper, wheel scraper, wheel scraper; a lathe hand g.v. in spindle department of textile machine works, who finishes off (scraps) parts already turned.

wormer, see screwer.

Sub-Order 7.—Fitters and Millwrights.

210. ERECTORS, FITTERS.

adjuster; overhauler; a fitter or motor fitter e.g. who overhauls and adjusts after assembling is completed. stationary engines, cars and similar vehicles, component parts of valves or crankshafts, and similar mechanism; cases lock units, screws, etc., with hand tools; in case of motor car, may give car a road test.

adjuster, unit; an adjuster g.v. who works on a complete unit, e.g., engine of motor omnibus.

adjustment operator (sewing machine); *ajdstwa* sewing machine parts with hand tools; may grind down parts on small treadle grinding machine, drill holes or make existing holes larger with bow drill, etc.; cf. *fitter* (sewing machines).

arm shaft free; an adjustment operator, *g.v.* who specializes in adjusting, by hand, bevelled cogs or eccentric cams to be fixed on arm shaft of sewing machine; may grind cogs or cams on grinding machine.

beam flanger; a fitter g.v. who repairs
and fits metal flanges to warping
beams.

beam maker (metal); flange fixer (beam making); a fitter g.v. who fits together, adjusts screws and bolts, and alters with hand tools, if necessary, shaft flange ends, adjustable sockets, spindle bar or cupped ends with shafts, together, sometimes

bearing reliner (railway): a bearing fitter (see fitter) who specialises on refitting linings to bearings of rolling stock.

bedder; a fitter *g.e.* who assembles and fits together locomotive wheels and axle boxes, or who fits cylinders

blade, turbine blade; blade fitter, a fitter *q.v.* who attaches blades to rotors and casings of marine steam turbines, making necessary adjust-

blocker; a fitter g.v. who assembles and fits together component parts of lifting blocks, or pulley lifting tackle e.g., bearing checks, block stop

garnage hand (hosiery machinery); a fitter g.v. who assembles and fits together main framework, i.e., rails, shafting blocks, back bars and all outside heavy work of hosiery knitting

car frame setter; sets side and cross members of chassis frames in a jig or lay-out; if part does not fit accurately clamps it in a vice and with forked lever, bends or sets the inaccurate

so that the part eventually fits the jig; may sometimes bend to corner shape in power press; sometimes done by chassis frame builder or creoler e.g. carriage hammer (iexila), see flutcher, carriage.

chassis frame builder; chassis frame
erector; builds up parts of chassis
frame on line and rivets them

comb maker, see combwright.
combwright; comb maker; a fitter

g.r. who assembles parts, builds & repairs textile combing machines; is engaged upon repair work only or maintenance work in mill, see mende (comb making).

elastic loom builder; an erector g.v. who assembles and fits together looms for elastic weaving.

erector; *assembles, fits together, and erects machines, engines, structural work, etc., and makes any necessary adjustments in course of erecting; does not prepare or make parts for erecting; cf. fitter; uses hand tools, spanner, hammer, screw driver; works usually from blue prints and specifications; some times specifically designated, e.g., erector body erector, airship erector.*

cultivator erector, engine erector, home box erector, lift erector, locomotive erector, loom erector, machine erector, screen erector, sheeter erector, steel folder erector, wall machinery erector.

erector, agricultural machine; agricultural fitter, agricultural machine fitter; a fitter and erector q.v. who fits together component metal and wooden parts of agricultural machines, adjusting them as required

erector, chassis; chassis fitter; a motor fitter g.e. who builds up and

bolts together sub-assemblies, e.g., wheels, axles, springs, differential gear, etc., upon chassis frame, etc.

erector, chassis frame, see chassis frame builder.
erector, dynamo; dynamo fitter, motor builder, motor erector (generators, etc.); usually a fitter

and erector g.v. who builds together and erects in position, dynamo machinery and electric station plant.

erector, frame (locomotives); frame filler (locomotives); an erector q.v.

who erects, bolts and rivets together parts of underframe of locomotive with stiffeners; may also erect smoke

erector, motor (generators, etc.), see
erector, dynamic

erector, motor (rolling stock), see

erector, motor (self propelled road vehicles—not steam). *see* fitter.

motor (self propelled road vehicles—
not steam).

erector, printing machinery; printing machinery fitter; a specialised fitter g.v. who erects printing machines in printing works; tests correct running of machine, when erected.

erector, pump, see lifter, pump.
erector, wagon, see lifter, wagon.
downright: erect, maintain, and

inwrought; erect, maintains and repairs fans for forced draughts or for ventilating purposes.

finisher, carriage; carriage straightener: (i) a mule fitter *q.v.* who adjusts and trues-up running sections of mule carriages; sometimes done by carriage fitter; (ii) bobbin and carriage straightener, carriage

Specifically designated, *s.g.* locomotive
saw apparatus filter, armpush filter,
alternator filter, axle box filter, bearing
box filter, body filter, body machinery
filter, bottle mould filter, brake
filter, brass bearings filter, carding
engine filter, car filter, chaff filter,
carriage filter, cast iron machinery,
chain filter, machine filter, clip chain
(stenter) filter, compound filter
(locomotive), die filter, double
(dobby) filter, engine filter, engine-
gear filter, engine shop machine
filter, frame filter (rolling
stock), frame filter (rolling
stock), free wheel filter (cycles),
gas and oil engine filter, gun
engine filter, gear filter (cycles), gun
filter (ordnance), gun and measuring
filter, hydraulic filter, hydraulic
ho filter, hydraulic machinery filter,
interlocking filter (railway signals),
ironmonger's filter, ironmongery
filter, iron pattern filter, knof filter
(agricultural), knof filter (textile),
knof filter, knof filter, looking
filter (railway signal), loco-
motive filter, machine filter, machine
sieve filter, machine tool filter,
magneto filter, machine engine filter,
male filter, male filter, oil engine filter,
oven filter (bauxite factory), pattern filter,
permanent way filter, plate pat-
tern filter, puting and growing filter,
potter's de filter, preparing filter,
power house filter, preparing ma-
chinery filter, railway filter, railway
engine filter, railway signal filter,
engine filter, roller filter, work-
rough filter, ship filter, ship tele-
graph filter, sight filter, signal
filter, speed filter (textile ma-
chinery), speed gear filter, spring
filter, spring terminal filter, steam
filter, steam filter, steam filter,
straps filter, steam gauge filter,
stember chain filter, stock filter
(metal bedsteads), switch and cross-
ing filter, tender filter, textile filter,
textile filter, tire filter, tire filter,
filter, tramcar filter, track filter
(tram), turbine filter, vacuum brake
filter, valve filter, wedge filter (rail-
way signals), Westinghouse brake
filter, wire filter, wire rope ma-
chine filter.

fitter, aeroplane; a fitter *s.v.* engaged on adjusting, fitting-up and repairing aeroplane parts; is often engaged in aeroplane erecting, *cf.* aeroplane builder (1888), but usually specialises on aeroplane parts, *e.g.* wheel, chassis, controls.

erector, agricultural; agricultural
machine erector, see erector, agri-
cultural machine

fitter, balance weight; fits weights used on loco wheels to counterpoise weight of cranks; cuts away metal from spokes to receive plates with acid-etched hammer and file marks

gold, silver, hammer and file; places plates and bolts in position; brings up arms of hydraulic riveting

machine slung in chains and rivets
plates together; pour molten lead
between plates to fill up space
between spokes.

fitter, blade, see **bladder**.
fitter, boiler; boiler mount **fitter**;
boiler monster, monster (boilers);
adjusts and fixes valves, taps, and
several mountings in position on

builders, either in works, or after boiler has been placed in position for use; of other boiler size.

fitter, boiler pipe; adjust and screws
into position, pipes attached to boiler

both within and without; boiler fitted
g.s. sometimes also does this work
fitter, box (iron or steel foundry)

ropeways, ching tills, etc.; makes extra parts and adjusts where necessary; keeps colliery plant in running repair.

fitter, dynamo, *see* erector, dynamo.

fitter, frame (locomotives), *see* erector, frame (locomotives).

fitter, frame (textile machinery), *see* assembler and fits parts to form textile machines; sometimes specifically designated, e.g., dobby fitter, loom builder, etc.

fitter, furnace, a fitter and erector g.v. who fits or sets furnace, iron pot, etc., after brickwork is completed; makes all necessary adjustments to metal work with hand tools.

fitter, line, linotype fitter; a fitter and erector g.v. who prepares parts, where necessary, and erects linotype machine in position in printing works, ready for use; also fits sub-assemblies in engineering workshop.

fitter, loom, *see* loom builder.

fitter, mechanical; a fitter g.v. who fits mechanism of generators, motors, etc., as distinct from dynamo, *see* erector, dynamo.

fitter, meter; fits remainder of mechanism of gas and water meters after clockwork has been fitted; sometimes, usually in small factories, also machines metal parts before fitting; sometimes specifically designated, e.g., gas meter fitter, wet gas meter fitter.

fitter, motor (rolling stock); motor erector (rolling stock), motor fitter; fits to bogies or under carriages of electric trams, motor used in propelling them; erects dynamo in position by building parts together.

fitter, motor (self propelled road vehicles—not steam); motor erector (self propelled road vehicles—not steam); general term for fitters engaged on fitting chassis, motor, etc., to motor cars, lorries, etc., including adjuster, car frame erector, chassis fitter, motor engine fitter, etc.

fitter, potter's die; fits die into blocks for pottery shaping machines; polishes or liggers; repairs or makes dies in wood or soft metal if urgently required.

fitter, printing machinery, *see* erector, printing machinery.

fitter, pump; pump erector, pump worker, pumpwright; is engaged in fitting up and repair of pumps and pumping machinery of all kinds; cf. pump doctor (244).

fitter, railway signal; fitter-up (railway signals); a fitter g.v. who specialises in fitting railway signal mechanisms; erects signals, connects them with boxes and signals boxes, etc., in signal box.

fitter, sanitary (pottery); a fitter g.v. who adjusts and fits up all machinery making pottery sanitary ware; does repairs and maintains steam piping, etc.

fitter, sanitary engineer; cuts metal piping by hand, mows cutting dies; turns pipes, uses stocks and dies; brazes pipes or sections brazed using blow pipe; does other similar work in fitting up pipes of brass or copper, preparation and adjustment of metal parts of sanitary apparatus and fixing of such apparatus in position.

fitter (sewing machines); a fitter g.v. who tests more important sewing machine parts on template for accuracy in readiness for assembling; cf. sewing machine assembler (279); adjusts parts, which assemblers are unable to fit easily, by grinding, etc.; passes work to minor adjustment to adjustment operator g.v.; may assemble certain of larger sub-assemblies.

fitter, stand, *see* stand builder.

fitter, steel door; cuts, dresses, and files plates and framework of steel doors used for safes, fireproof chambers or divisions of buildings as a protection against burglars or as a safeguard against fire; work sometimes done by planer (222) g.v.; cf. door maker (268).

fitter, tube; sketch hand; assembles sockets, flanges, points, couplings, bends, elbows, etc., on tube and fits on the various attachments to finished tubes; makes up special ranges of tubes or fittings, to specification.

fitter, tube (locomotives), engine fitter; cuts and fits tubes into boilers, barrels and fireboxes of railway engines.

fitter, wagon; railway wagon fitter; wagon erector; a fitter and erector g.v. who fits and erects railway wagon from prepared component parts.

fitter and erector; combines experience of both fitter and erector g.v.; first prepares parts to fit, then lays out for assembling and/or erecting, and finally erects according to blue prints and specifications.

fitter and finisher, box iron; cleans, dresses and machines castings intended for bodies of box gowns; drills holes in steel or brass fittings and assembles them; finishes brass by attaching wooden handles, etc.

fitter and turner; combines duties of fitter, and of turner (200) g.v.

fitter-up (iron and steel foundry), *see* fitter, box (iron or steel foundry).

fixer-up (railway signals), *see* fitter, railway signal.

flange fixer (beam making), *see* beam maker (metal).

funnel setter; a fitter g.v. who fits funnels used in manufacture of rayon (artificial silk).

frame maker, a fitter g.v. who assembles and build-up "beek" or framework on which berles are manipulated in a loom.

hydraulic valve man; a fitter g.v. engaged in maintenance of hydraulic plant; fits new parts, as required; also cleans, cleans and keeps in working order, valves and cocks of hydraulic system.

inside hand (bosiery machines); a fitter g.v. who fits up all internal intricate mechanism of bosiery machines after frame has been erected by cutters hand g.v.

lace machine builder; a fitter and erector g.v. who assembles parts and erects lace machines; does any necessary fitting in process of erecting.

liner, liner-out, liner-out, marker-out, marker-out, marker-out, *see* marker-out, marker-out, marker-out; with surface table man; prepared with chalk or whitening surface of casting, forging, etc., to be hand cut, drilled, machined, etc.; places casting upon surface table having dead level base, lines-out, i.e., marks, establishes planes and surfaces, relative dimensions of casting or forging to be toolled; in small shops, liner-out may be done by fitter g.v.

liner, engine; a fitter g.v. engaged in lay-out engine beds in proper relation to shafting, etc.; inserts liners (strips of metal) on bed to adjust level or balance of engine for more perfect running.

liner-up; a dynamo erector g.v. who places electrical machinery in test beds or otherwise in proper alignment, for driving.

liner upon test plate; a liner g.v. who places upon dead level surface of test plate, work to be examined for accuracy, and follows measurements given on blue print or in specification with scribbling block, dividers, compass, etc., as far as possible to prove correctness of cutting, machining, etc., done by fitter, driller (200), turner (200) g.v. on object under test.

loom builder; loom fitter; a fitter g.v. who assembles, fits together, and adjusts component parts of weaving loom.

marker-off, marker-out, *see* liner.

mender (comb making), comb mender, comb mender; a combwright g.v. who specialises in repairing the combing mechanism of textile combing or similar machines; e.g. mill box machines; may be engaged in

textile machinery works, or, as a maintenance man in a textile mill; sometimes done by pin molder (258) g.v.

motor builder, *see* erector, dynamo.

motor fixer, *see* fitter, motor (rolling stock).

mounter (boilers), boiler mounter, *see* fitter, boiler.

mounter, loom, (1) a fitter and erector g.v. who mounts special parts such as Jacquard or dobby attachments in looms, cf. dobby fitter, in textile machinery works, or, as a maintenance man in textile factory; (2) a maintenance man in textile factory, as distinguished from loom builder, loom erector g.v. in machinery works.

mounter (vehicles); attaches body, wings, slays, steepwheels, etc., to chassis, with bolts, screws and rivets, after erecting.

overhauler, *see* adjuster.

press builder, press maker; a fitter and erector g.v. who assembles, builds up and adjusts cast, forged and machined parts to form hand or power presses.

pump maker, pumpwright, *see* fitter, pump.

scraper, setter-out, *see* liner.

setter-up (machinery); (1) a fitter or an erector g.v. who sets up, i.e. assembles, fits together and adjusts, textile machinery in mill; (2) a handyman employed as an erector by scrap dealer, to erect in position second-hand machinery sold to a purchaser instead of being scrapped; cf. setter-up (machinery) (211).

sketch hand, *see* fitter, tube.

slay setter, slay setter; a loom builder g.v. who fits and adjusts lathe or slay in a loom.

special part hand (bosiery machines); an inside hand g.v. who fits to bosiery machines intricate parts such as needles, barlocks, or other special knitting devices of various types of bosiery machines.

spindle backer (textile machinery); a fitter g.v. who assembles and fits together top (running part) to bottom (fixed part) of spindle.

spindle setter; a fitter g.v. who adjusts and re-adjusts textile spindles on spinning machines.

stand builder; stand fitter, table builder; benches-up castings to form sewing machine stands, and mounts table in readiness for fitting of mechanism; does any fitting necessary in building of castings; cf. fitter, sewing machine repairer (244), fitter, sewing machine assembler (279).

stockwright; fits together component parts of metal stocks, or cylinders, of circular textile combs, preparatory to the fixing thereon of card clothing.

straightener, bobbin and carriage, *see* finisher, carriage; sometimes further designated, e.g., late machine bobbin and carriage straightener.

straightener, carriage, *see* finisher, carriage.

straightener, sinker; finisher (sinker making); adjusts and trues up sinkers (knitting machine mechanism) after they have been pressed-out, by filing and hammering them, using also, a precision gauge.

surface table man, *see* liner.

swift builder; an erector g.v. who builds a winding machine having spools or skelets cylinders of steel rods on circular hoops, on which yarn is wound into bales.

table builder, *see* stand builder.

temple maker (loom); a fitter g.v. who assembles and fits together component parts of wide temples, used, on looms, for keeping woven cloth stretched to proper width.

weaver's harness maker and enterer; is engaged in textile machinery works in making and fitting-up loom harness, by means of which warp threads are alternately raised and depressed, loom builder g.v. normally does this work.

wood comb maker; a combwright g.v. engaged on wood combing machines.

211.—TOOL SETTERS.

automatic machine fitter, automatic machine setter; machine setter; a tool setter *q.v.* who adjusts and clamps or screws firmly in position various cams, cutting tools, etc., of automatic or semi-automatic machines; gives instruction to attendants, *e.g.*, machine minder (237), and does running repairs.

capstan setter; a tool setter *q.v.* who prepares capstan lathe when it is used for repetition work and is attended by unskilled or semi-skilled worker; *cf.* capstan lathe hand (200).

die setter (*die box*, etc., making), see tool fitter, press.

fig setter; puts together sections of jig and fixes or sets it with accuracy machine tool, using micrometer in certain cases; usually done by tool setter or automatic machine setter *q.v.* in all but large workshops.

machine setter, see automatic machine fitter.

nickel and turner's fitter; furnace fitter; a tool setter *q.v.* who prepares machine for nickel (279).

rutiny setter; a tool setter *q.v.* engaged in timber, etc., trade, in fixing and adjusting outsets of rotary cutting machines, and in executing running repairs.

screw-setter, see worming fitter (screws).

setter-up, see tool setter.

tool fitter, engine; a tool setter *q.v.* engaged in preparing tools, etc., and fixing and adjusting them in machines in an engine shop, *i.e.* machining and finishing-off shop of large engineering works.

tool fitter, press; die setter (*die box*, etc., making), press tool setter; file dies or press tools in power presses; keeps presses in working order.

turning fitter; a tool setter *q.v.* who makes machine tools; *cf.* tool maker (265).

tool setter, machine tool setter; setter-up, tool fitter, tool maker; fixes and adjusts with clamps and screws, tools, *e.g.*, drills, knives, dies in machines, *e.g.*, automatic or semi-automatic machines, lathes, presses, stamping machines; also sets or fixes gauges, cams, levers and similar mechanism which machine is tended by machine minder who has no knowledge of tool setting; operates machine tool to ensure correct working before handing over to machine minder; sometimes instructs new minder in working of machine; does running repairs and sometimes makes machine tools.

tool setter, press, see tool fitter, press.

turning fitter, see nickel and turner's fitter.

worming fitter (screws), screw-setter; a tool setter *q.v.* who prepares machine for wormer (200) *q.v.*

212.—MILLWRIGHTS.

engine millwright; a millwright *q.v.* who erects engine in proper alignment with pulleys, shaftings, transmission plant, etc.; does not usually erect shafting, etc., but may do so.

mill attendant, rolling mill attendant; a millwright *q.v.* working in rolling mill, etc., who aids with help of gantry or derrick and levels up mills, using lines, *i.e.*, strips of metal for picking under supports.

millwright; a highly skilled and specialised fitter (210) *q.v.* who sets up machines, engines, pulleys, shaftings, transmission gear, etc., having regard to friction, tension, vibration and other factors which aid or prevent efficient working of plant; term originated in iron mills, etc., where water power was used, when tasks of fitting, erecting, gear cutting, etc., both in wood and metal now specialised, were performed by millwright.

zigger (rolling mills, tubes, etc.); roll skifter; erects and fits up rolls or mills used in manufacture of tubes, wire, etc.; dismantles worn rolls and remounts new rolls; sets rolls for new sized work.

roll shifter, see zigger.

213.—ERECTORS', FITTERS', MILLWRIGHTS' LABOURERS.

erector's labourer; lifts, carries, and holds work in position for erector (210) *q.v.*; stands by to hold tools.

fitter's assistant, see fitter's mate.

fitter's labourer; lifts, carries and does rough work for fitter (210) *q.v.* but does not generally use tools; *cf.* fitter's mate; sometimes specifically designated, *e.g.* boiler pipe fitter's labourer.

fitter's mate; fitter's assistant; keeps tools clean and assists fitter (210) *q.v.* by handing him tools or machine parts during fitting; does elementary work such as tightening-up nuts, tapping and screwing, and generally also does precise duties vary with different branches of engineering.

millwright's labourer; fetches and carries for millwright (212) *q.v.* and assists in placing in position heavy shaftings, machine parts, etc., by hauling, lifting or slipping by means of ropes; does not use tools.

Sub-Order 8.—Other Workers.

220.—ANNEALERS, SOFTENERS, HARDENERS AND TEMPERERS.

annealer; assessing furnace man, unrolling man, muffleman, muffle worker, softener; heats metal, or metal articles in process of manufacture in an open fire furnace, to a given temperature, and then allows to cool slowly in order to soften metal or to relieve stresses, or to reduce crystalline structure or to produce all those results; when dealing with small articles, fills off annealing pots, adds oxide of iron and plunges in oven by hand or by pushing them in on truck or carriage; also attends to firing of ovens; opens and closes dampers or gas pressure valves, to regulate temperature; often specifically designated, *e.g.*, blade annealer, cartridge annealer, rim annealer.

annealer (files); heater, from heater; an annealer *q.v.* who softens or anneals blades, files or any other closed furnace; softens or anneals and used files.

annealer (finished wire); an annealer *q.v.* who anneals finished wire to make it soft and ductile; places wire in coils in large pans holding 2 to 5 tons of wire; fits pans into position over brickwork cap in furnace by use of crane; covers top with metal cap; watches condition of wire under heat and straps pan off furnace when operation is judged complete.

annealer, head (galvanised sheet), superheated annealing process and directs men engaged in it; is responsible for proper annealing and for working of furnaces; as for annealer (tin plate).

annealer (nails, bolts, screws); blower, muffleman (nails); an annealer *q.v.* who anneals nails, screws or bolts by heating in muffle or furnace.

annealer, rough (wire); an annealer *q.v.* who anneals bulk of iron or steel between operations of rolling into rod or wire.

annealer (tinplate); piles sheets on iron stand; covers them with an iron box which he takes air-tight by sliding with sand, runs the whole into reverberatory furnace, and after being heated, allows it to cool gradually, to restore softness and pliability to sheets after rolling.

annealing furnace man, annealing man; an annealer, *q.v.*

bluer; (i) see annealer (nails, bolts, screws); (ii) see temperer (fish-bone); (iii) see temperer (needles).

carbonizer, carburizer, see hardener, case.

case hardening furnaceman, see hardener, case.

case, see hardener, case.

cleaner, see hardener's assistant.

gaffer; (i) hardener (saw); a hardener *q.v.* who hardens or "gades" circular saws, by heating them and then placing them flat, between flat iron table, and heavy plate of gaffing press, the former of which lies in cooling or quenching bath; lowers heavy plate on saw by moving power lever; (ii) fits certain types of saws between heated blocks of metal.

hardener; a worker who reduces pressure by lever control and leaves saws to cool slowly under pressure.

hardener; hardens finished iron and steel articles by heating to redness, in a hardening furnace, and quenching by plunging into bath of oil or water.

in some cases, also tempers articles by reheating to a lower temperature and cooling in air; feeds and tends furnace fire; sometimes specifically designated, *e.g.*, as blade hardener, die hardener, file hardener, edge tool hardener.

hardener, case; carbonizer, carburizer, case hardening furnaceman, burner; heats metal articles, iron and steel forgings, casting, etc., in a muffle furnace, together with a constant position of nitrogenous substances, in order to harden outer surface of metal; or cures them with a case-hardening mixture within an iron box, a sagger or other fire-clay vessel, within which they are heated.

hardener (needles); a hardener *q.v.* who places roughly finished needles in closed pans; heats the rods in furnace from which air is excluded, and then plunges them into bath of whale oil.

hardener (ring); a case hardener *q.v.* who hardens metal rings for ring spinning frames.

hardener (saw); (i) heats saw to redness in flat-bottomed furnace and then cools it by immersion in oil; (ii) (small saws, *e.g.*, back saws) heats in a muffle oven in oil or in salt and cools by plunging in oil; (iii) (circular saws), see gaffer.

hardener, scissors; a hardener *q.v.* who hardens and tempers semi-finished scissor blades before they are fitted together; usually done by scissors fitter (193) *q.v.*

hardener's assistant (saw); cleaner; moves levers lifting and closing door of hardener's furnace, when working on large saws; cleans off, after "gaffing" or cooling, excess oil adhering to saws, by rubbing in sawdust.

heater, iron heater (files), see annealer (files).

malleable iron oven man; places white iron castings in metal pail or box with oil covering, or hematite ore dust, to render them malleable; places whole in gas furnace, blocks up furnace door with bricks and fireclay and when process is judged complete, withdraws box from furnace to cool.

muffleman, muffle worker, see annealer.

muffleman (nails), see annealer (nails).

oil proofer (metal work); dips metal parts, quenched in water, back into boiling oil until they attain a specific colour, to anneal them after being stamp pressed.

put man; an annealer *q.v.* who anneals metal articles in annealing pots.

rubber; straightener; places large bundle of hot wires (the length of two needles) held together by two iron bands at each end, on iron-topped table after annealing, with turned iron bar,

coiled a "file," presses on wires and rolls them to and fro, to remove coil curve from wire.

softener; see *annealer*; sometimes specifically designated, e.g., *flyer softener*, *joint softener*, *saw softener*, *straightener*, *see rubber*.

tampers; reheats articles of steel, after hardening, to a given temperature and then cools in such a manner as to make metal hard, soft, tough, ductile, as may be required, i.e., may reduce temperature sharply to a second given point by plunging in oil, and then allow to cool slowly, or may quench quickly by plunging metal into bath of oil or water, or may set articles aside to cool slowly in air.

temperer (fish-hooks); *bluer*; places fish-hooks after hardening in iron cylinder, which he causes to revolve over gas or charcoal until fish-hooks become light blue in colour; then quenches them into a pan of coal.

temperer (needles); *bluer*; spreads needles, after hardening, on pans in oven, or passes them in machine over gas jets.

temperer (saws); beats saw blades, after hardening, on comparatively low temperature, and then allows them to cool slowly, to render them elastic; works at furnace, upon or across flat bottom of which blade is rotated or drawn, while subjected to pressure, or "galled" by weighted top plate; cools blades in open air.

temperer's assistant; feeds saws into tempering furnace and generally assists temperer (saws) *q.v.*

wire taker, steel (wire works); an attendant *q.v.* who subjects steel wire to heating process in sealed tube to soften it for drawing.

221.—ART METAL WORKERS.

art iron worker, *see* **ornamental iron worker**.

art metal fitter; receives forged metal from art metal smith *q.v.* and marks off on metal, positions of holes to be drilled, angles shaped, etc., by his mate; fits parts together into required design with bolts, rivets and screws according to blue print; *cf.* *fitter* (210).

art metal fitter's mate; assists art metal fitter *q.v.* in putting work together and shapes, drills and files metal as required under instructions, using shaping machine, hand and machine drills, punching machine, tapping and screwing stock and dies, files and hammers.

art metal smith; *as for* smith (100) specialising in art metal work, usually in iron, brass and bronze, works from blue prints; cuts metal bar, rod or sheet with cold chisel or for heavier work, hot with cutting tool on anvil; shapes metal with assistance of hammering or striking metal, hot or cold, by means of scroll wrench and horse in a vice, for leaf work, uses top and bottom tools to shape cast metal under hammer; welds heavy work where necessary, *cf.* *welder* (190).

art metal worker; general term covering all the terms in this section, i.e., workers engaged in making ornamental articles from sheet, wrought and strip of bar metal—iron, brass, bronze, copper, e.g., gates, grilles, chandeliers, balustrading, altar rails, church screens, canopies, balconies, benches.

brass medieval furniture maker; an art metal worker, usually a repoussé worker *q.v.* who specialises in brass furnishings or fittings of medieval design.

chandelier ornament maker; an art metal worker, usually an art metal smith *q.v.* who specialises in chandeliers, ornamented with scrolls, leaf work, etc. *

church brass worker; a repoussé worker, *q.v.* who specialises in church brasses; may also perform engraving work, *see engraver* (hand) (216).

leaf beater; an art metal smith *q.v.* who specialises in production of leaf work; uses top and bottom tools on anvil and shapes sheet metal under assistance of hammering machine for very light work, uses a lead block on which to strike.

medieval metal worker, medieval smith; an art metal smith *q.v.* who specialises in ornamental gates, grilles, lift screens, brackets, etc., of medieval design.

modeller, *see* **repoussé worker**.

ornamental iron worker; art iron worker; an art metal worker, usually an art metal smith *q.v.* who specialises in ornamental iron work, e.g., gates, railings, screens; sometimes more specifically designated, e.g., *medieval iron worker*, *eccelesiastical iron worker*.

repoussé worker; *modeller*; makes ornamental name plates, shields, fire screens, church brasses, brass furniture, etc., from sheet copper or brass; works from blue print or design; shapes sheet metal by cutting with hack saw or with chisel and hammer; beats and raises surface of metal to required design on a pitch or lead block with chisel's hammer, chasing tools and punches; sometimes uses a power-driven vibrating snarling iron.

saw piercer; cuts a perforated design in sheet iron, brass, copper or bronze with a fret saw.

222.—BOILER MAKERS, PLATERS AND IRON SHIPWRIGHTS.

hammer (shipyard), *beam hoister*, *see* **erector, beam**.

beam maker; a plater *q.v.* who constructs beams or girders of plates, angle iron, etc., riveted together.

bender, plate bender; a plater *q.v.* bending plates into circular and other shapes for boilers, etc.; sets plate in hydraulic machine and applies power; superintends hoisting of plate in furnace when plate is bent hot; *cf.* *plate bender* (223).

bendyer, frame; ship frame bender; frame turner, *ship frame setter*, *ship*

frame turner; bends, or "turns," to shape, angle iron framework forming skeleton of ship to which ship plates are subsequently riveted; receives beaded angle iron (girders) from lapses or furnace, places them on perforated iron floor in which pegs can be inserted to indicate required curvature of angle iron; causes residents to hammer girder to make it bend round to curvature of pegs; prevents buckling of angle iron by hammering on top of angle iron at intervals during bending process; *cf.* *angle iron bender* (160).

boiler maker; (i) general term for any man engaged in the manufacture of boilers, including platers, riveters (225), frame turners, angle iron smiths (190), etc., *q.v.*, (ii) sometimes loosely applied to platers and other sheet iron workers engaged in other industries (principally shipbuilding), who belong to same trade union as boiler makers proper and may be engaged on iron plate work, e.g., cement kilns.

boiler pipe expander, boiler tube expander; drives end of pipe or tube with hammer, a special tool or tube expander to expand end of pipe or tube so that it fits closely into flange, causes rollers in tool to revolve by turning spanner as tool is hammered in, may insert end of tube into hydraulic tube expanding machine for same purpose; usually aided by boilermaker *q.v.*

boiler tube fitter; boiler tube bender; cuts length of tube required, in tube cutting machine, fits in position and

expands and (*see* boiler tube expander); may also brass or weld tubes in position; *cf.* *braser* (222), *tube welder* (206).

boiler (boiler); a plater *q.v.* who makes casings of boilers from light steel plates and angle iron.

chalker, *see* **marker**.

chimney maker (boiler); an iron plate worker *q.v.* making boiler chimneys of riveted steel plates.

cistern maker (plate); an iron plate worker *q.v.* making cisterns, tanks, condensers, etc., from plates.

collarman (shipyard); a plater *q.v.* fixing water-tight collars on openings in bulkhead or vice versa, sometimes done by iron welder (275) *q.v.*

erector, beam; *bender* (shipyard), *beam hoister*; fixes steel beams of ship in position on skeleton framework, directs hoisting and lowering operations by signaling to crane driver; guides beam to place and secures with bolts ready for riveting fast; is usually also a frame erector *q.v.*; works under direction of shipwright (160) *q.v.*

erector, frame; *framer*; *as for* beam erector; erects steel frame bars of ribs of ship, building them up from double bottom; usually also does work of *bender*, *vice versa*, *q.v.*; works under direction of shipwright (160) *q.v.*

framer, *see* **erector, frame**.

frame turner, ship frame turner, *see* **bender, frame**.

frame turner (boilers and tanks); cuts and bends (see turns) angle iron for frame work of boilers and tanks, using forge and hand tools; *cf.* *angle iron smith* (190).

funnel maker (ship), *ship's funnel maker*; a plater *q.v.* who makes large funnels for ships.

iron plate worker; *iron plater*; cuts iron plates on table of power shears; bends, in bending machine or with hammer on block shape; rivets and fits up iron plates generally in connection with constructional iron work; *cf.* *plater*.

iron ship maker, *see* **mast maker** (plate).

marker, marker-off, maker-out (boilermaking and shipbuilding), *chalker*, *temperer*; a plater *q.v.* who chalks or marks out plates or sheets for shearer and puncher (279) or drillor (300) *q.v.* by use of template or by measurements taken from blue prints.

mast maker (plate); *iron ship maker*; a plater *q.v.* specialising in construction of masts, derricks, pillars, etc., from steel plates and angle iron.

patcher (boiler making), *boiler patcher*; a plater *q.v.* who carries out repairs by fixing patches on boilers and similar articles; cuts away cracked or broken plating with chisel or oxy-acetylene flame; marks out for drilling; may drill or punch rivet holes; rivets on patch and rivets up.

plate fitter; fits in position, he bolting in one or two places, plates for boilers, ships, etc., prior to drilling, punching or bolting up.

plate leveller, *see* **straightener, ship plate**.

plater; (i) marks out, from drawings or templates, shape of plates to be used in making boilers, tanks, hulls, etc.; carries out machine processes by which they are cut, sawn, straightened, bent, roughly shaped and punched or drilled with rivet holes, fits up in readiness for riveter (255) *q.v.*; sometimes specifically designated, e.g., *beam plater*, *boiler plater*, *bridge plater*, *plant furnace plater*, (ii) general term including puncher (279), shearer (279), puncher and shearer (279), templater, furnace-man (171), plate bender, bender-up (225), frame setter (160), roller trim (225) *q.v.*

plater (domestic engineering); makes ventilators, parts of ventilating or heating apparatus and other similar articles, of heavier gauges than those

made by air pipe maker (266) g.v. r.e. of thicker metal, plate instead of sheet.

plater (gun mountings); a plater g.v. working on shields of gun mount, which protects gun's crew in action, or on "spray shields," which shelter crew in heavy seas; supervises cutting of plates, routing or bending to shape and riveting in position.

plater, heavy; a plater g.v. using heavy plates for boiler shells, furnace and combustion chambers, etc.

plater, inside, jobbing plater; a plater g.v. working on any plating job in interior structure of ship.

plater, iron, see iron plate worker.

plater, light; a plater g.v. working on smaller and lighter shells, tanks, etc.

plater, outside; shell plater; a plater g.v. working on outside, or shell, of ship.

plater, stern; a plater g.v. who prepares and works stern plates, which usually require heating in furnace and bending to fit stern of ship.

screw-er-up; closes up nuts on bolts in structural steel work on ship in preparation for riveting; usually done by plater or by riveter (253) g.v. of ship frame setter, see bender, frame.

shipwright (Govt. dockyard); as for plater g.v. marking, shearing, punching and rolling plates generally used in war contracts.

straightener, ship plate; plate leveler; takes dents out of, or straightens ships plates by hammering with heavy mallet on metal slab or by passing through power-driven rollers, if plates are thick; in latter case, raises plate in chains of overhead traveling gear.

strapper (shipyard); a plater g.v. who fits butt straps in position over joints in ship's plates.

stretchier, hydraulic plate machine; hydro plate stretcher; a plater g.v. stretching sheets, plates, etc., in hydraulic machine; fits gauge in machine and adjusts pressure on load of machine; controls hydraulic power by valves and levers.

tank maker; a plater g.v. specializing in making iron and steel tanks.

templater, see marker.

tuber, boiler tuber, see boiler tube fitter.

tuber, engine, as for boiler tube fitter.

223.-BOILER MAKERS' AND PLATERS' LABOURERS.

conveyor, see labourer, boilermaker's.

hanger-up, see plater's tackle man.

helper, boiler maker's; boiler's helper, see labourer, boilermaker's.

helper, plater's; shipyard helper; helper, plater's labourer, ship fitter's labourer; lifts and carries plates; strikes for and generally assists plater (222) g.v.; cf. striker (150).

humpster, see helper, plater's.

iron carrier, see labourer, boilermaker's.

jobber (boiler making), see labourer, boiler maker's.

labourer, boiler maker's; boiler shop common labourer, boiler shop labourer; boilermaker's helper, boiler's helper, conveyor, iron carrier, jobber; does heavy, unskilled labouring work in boiler-maker's shop, e.g. hauling, hoisting, dragging, etc.

labourer, boiler tube fitter's; tuber's labourer; does unskilled manual labour in connection with fitting tubes into boilers and assists boiler tube fitter (223) g.v. generally.

labourer, plater's; ship fitter's labourer, see helper, plater's.

labourer, tuber's, see labourer, boiler tube fitter's.

plate bender (ship building); a plater's helper g.v. who bends ship plates to desired shape, in hydraulic machine, under direction of plater; cf. plate bender (222).

plater's assistant; assists plater (222) g.v. in his work.

plater's tackle man, shell plater's tackle man; hanger-up; a plater's helper g.v. who hoists finished plates to work of ship and fixes them temporarily with bolts, ready for riveters; on N.E. Coast work usually done by plater (222).

porter bar man (boiler making, ship building); (i) turns over large plates for ships, boilers, etc., or large forgings, during forging operation, with porter bar, i.e. a long steel bar; (ii) holds porter bar, used to control work in fire and on anvil, during welding.

rollerman; a plater's helper g.v. who passes plates through rolling machine, before bending or during other operations of preparing them for hanging up.

224.-BRASS FINISHERS AND TURNERS.

bobbin maker (huss); general term for any worker engaged in pressing, stamping, turning, machining, assembling or finishing brass bobbins.

brass capstan hand; a capstan lathe hand (200) g.v. working in brass.

brass finisher; general term for any worker employed on finishing brass castings or stampings, including brass turner, filer (228), burrisher (228), polisher (228), drillor (200), solderer (228), fitter, etc. g.v.

brass finisher (bobbins); finishes component parts of brass bobbins by turning off roughness in power-driven lathe and reducing to correct dimensions in milling machine; positions on buff in lathe, assembles and fits parts together with nuts and screws.

brass fitter; fitter-up (brass); assembles and fits small brass parts, making any necessary adjustments with file, etc., if necessary, solders them together; is engaged entirely as bench and vice.

brass fitter, angle; cuts and fits brass angle work, using hack or circular saw and nutre box; sometimes does brazing or soldering of angles.

brass fitter, wagon; a brass fitter g.v. who specializes in fitting brass furniture to wagons, rail coaches, etc.

brass lathe hand, brass lathehand, see brass turner.

brass letter carver, brass letter cutter; traces letter or design on surface of brass plate, outlines it with graving tool, by hand, and cuts out letter, by routing machine; finishes by sand, with file, etc.; may also ornament metal by carving or cutting the surface according to design, with hand or machine tools.

brass machinist; feeds and feeds automatic or semi-automatic machine which makes brass goods required in large quantities, e.g. screws, chains, nuts, bolts.

brass turner; brass lathe hand, brass lathehand; operates lathe for machining brass articles to cylindrical form (externally internally or both), and cuts threads on brass articles, and brass turner, axle break; axle cap brass turner; a brass turner g.v. who turns on lathe, faces and threads brass caps for axle bushes of road vehicles.

brass weight finisher; (i) turns on lathe, and files, as necessary, castings of brass weights, testing from time to time in balance against standard weight; (ii) machines small weights on capstan lathe.

brass weight maker; a brass turner g.v. turning weights from brass rods.

brass maker (for bearings); turns or mills out on lathe, from phosphor-bronze or brass linings or bushes for machine or engine bearings.

fitter-up (brass), see brass fitter.

225.-CARD CLOTHING.-CLOTHIERS, SETTERS, NAILERS.

card clothier, see card nailer.

card dresser; card finisher, dresser; (i) (card clothing factors) operates and adjusts machines having very fine adjustments, to correct the angle or setting of card clothing wires and to grind wires to even length by means of emery wheels; cf. grinder (card clothing) (237); (ii) (beetle nail machine) inspects card clothing fast by foot, and sees that material is perfect for working purposes; uses small tools and files to adjust wires to correct length.

card finisher, see card dresser.

card nailer; card clothier, card setter-in, nailer (card clothing); scraps-on were card clothing from scribbles, carding engines, etc., and replaces it with fresh; directs winding of card clothing fillets on to carding machine cylinders which is revolved mechanically, and secures fillets by driving nails or tacks into wooden pieces set in cylinder; may be a master man, contracting direct with textile mills, and himself working, or may be employed by card clothing manufacturer.

card setter, card teeth setter, card setting machine minder, see machine attendant.

card setter-in, see card nailer.

circle (comb making); fixes by hand, by means of powerful adhesives, fillets of card clothing to small cylinders, or flats forming a "circle." In combing machines used in fine cotton spinning, is highly skilled and is usually employed in large cotton spinning and weaving mills.

circle setter; fixes fillets, already containing card clothing, in position on a carding machine, by bolting them with nuts on to a revolving frame-work, the whole when completed forming a circle of fillets; is always employed in textile mills, and is card clothing manufacturing establishments; cf. circle setter (278).

comb leather maker; gill leather maker; (i) attends machine, or machines, for setting wire teeth into a leather foundation for making textile comb, etc., clothing; (ii) as for machine attendant.

dresser, see card dresser.

fitter-in, fitter-up (card teeth setting); replaces defective or missing wire card teeth by threading new pieces of fine wire, by hand, into the strips of card clothing, and by cutting wire to correct length by means of pliers; sometimes also pares edges of card clothing foundation, with sharp knife, to width required.

flat clothier, flat cloth worker, see flat stretcher.

flat stretcher, card flat stretchers; flat clothier, flat cloth worker; adjusts and tensions the textile fillets, chains and fillets, a machine which mechanically stretches card fillets, and clamps them to metal flats.

gill leather maker, see comb leather maker.

machine attendant, machine tender; card setter, card fitter, card nailer; setting machine tender; attends and makes very fine adjustments to machine, or series of machines, which "set" into textile foundation of card clothing, varying lengths and thicknesses of fine wire to form teeth of card clothing; places coils of wire on reels, threads wire into feed and through cutter die; places roll of cloth on spindle and feeds into machine; watches for any faulty work.

nailer (card clothing), see card nailer.

teeth setter; an assistant to card nailer g.v. who may be learning the trade; rarely so called, as work is usually done by general hand supplied by textile mill to assist card nailer.

226.—CONSTRUCTIONAL ENGINEERS (not professional), STEEL ERECTORS, STRUCTURAL IRONWORKERS.

bench hand (patent roofing); prepares patent roofing for fitting in position by cutting rods and angles from to size in machine shears, drawing holes, bending to shape, etc.; works mainly at bench with vice, wrench, files, drills, etc.

constructional steel worker, constructional steel erector; cuts, saws, straightens, bends, roughs shapes and punches or drills, by aid of various machines, iron or steel girders and plates used in constructional work.

engineer, constructional; general term for skilled workers engaged upon erection or design of structural steel work, e.g., bridges, steel buildings, including erector, fitter, etc.

engineer, iron roofing; roofing engineer; sees roof piler.

erector; constructional erector, fitter, fitter-up; fits sections into position and builds up structure, e.g., door frames, stairways, roofing, from blue prints; works at bench to carry out fitting operations, e.g., bench hand, fitter (226).

erector, galvanneal roofing, sheeter, sheetor and erector, zinc roofer; cuts galvanneal sheeting to size, with hand and machine shears; places it in position on roof and rivets or screws it as required.

erector, gas holder; gas holder fitter; cuts of a gang of iron erecting a gas holder; slings and holds up plates, etc., in position and holds together in readiness for riveter (255) etc.

erector, girder; steel girder erector, iron work erector; erector (steel); places in position, with assistance of crane, steel girders in readiness for riveters (255) etc.; directs hoisting, swinging and lowering operations by signals to crane driver; much of this work is usually done by labourers.

erector, roof; iron roof erector; builds up of all steel girder structure by bolting in position framework and plates prepared by roof piler, etc.

erector (steel); see erector, girder.

eye ribber (ferro concrete); fixes in position with wire, iron or steel rods, prior to erection of shuttering in construction of ferro-concrete buildings.

fitter, constructional fitter, see erector.

fitter, gas holder, see erector, gas holder.

fitter, iron (building trade); erects framework of structure; fits various components, girders, columns, etc., on site; may also do work of blacksmith (156) in altering component parts.

fitter-up, see erector.

iron roofer, see erector, roof.

patent glazing, fixer, patent roofing glazier; assembles and fits together metal framework and glass of patent glass roof; with assistance of labourers, raises framework into position with tackle and bolts; details elements all joints; lines glass in frame with cement.

roof piler; iron roofing engineer, roofing engineer; marks out shape and size of steel plates and framework used in constructing roof of all-steel girder structures, from blue prints; measures, fits and marks out metal for machine man (200) etc. and puts together ready for riveter (255) etc. in shop.

sheeter, sheetor and erector, see erector, galvanneal roofing.

zinc roofer, see erector, galvanneal roofing.

227.—COPPERSMITHS.

come maker (felt hat manufacture); a coppersmith or a making copper cages on which fur and felt hats are formed.

copper pen smith; a coppersmith etc. specialising in making copper pens.

copper pipe worker; a copper sheet, with hand or machine shears; forms over a mandrel to shape of pipe with hammer or mallet, or hammers to shape on a bellows block; leaves joint; obsolete term as copper pipes are, in modern practice, drawn by copper tube drawer (206) etc.; pipes of peculiar shapes or unusual measurements usually made by coppersmith etc.

copper sheet worker; a coppersmith etc. who specialises in making copper sheet goods.

coppersmith; makes copper vessels, pipes and fittings for ships, distilleries, railway shops or general engineering work; cuts copper sheet to shape with hand shears, snips or guillotine, and copper plate with shearing or circular cutting machines; bends light pipe or sheet by hand, and heavy pipes or plate in bending machines or hydraulic press; fits pipes with resin or lead before bending, when bending sheet for boiler, uses rolling machine; shapes metal by beating with hammer on anvil or bolster, or hollow block, usually working from blue print but occasionally using wooden patterns; sews scales for certain goods, in setting machine, brass or solder joints or attaches cast copper flanges and fittings by heating with gas blow-pipe or on open hearth or forge, see brazer (242); planishes, i.e., smooths and polishes, sheet goods by hand, hammering with smooth-faced hammer on anvil, or by holding on steel heads of special shape under power hammer; drills and punches holes as required with hand drill or with drilling and punching machines; rivets joints or attaches fittings by use of riveting tool on anvil head, may also attach fittings with bolts, sometimes done by fitter (210) etc.; also uses inside and outside of copper vessels at times; pits, see copper tinner (233); sometimes, specifically designated, e.g., brewers' coppersmith, marine coppersmith.

tube smith; usually a coppersmith etc. making and fitting copper tubes in steam locomotives.

228.—CUTLERS.

assembler (pen knife, pocket knife, spring knife), see cutler, pen knife.

cutler; (i) assembles blades, bolsters, and handles of cutlery; after drilling on drilling machine, truing and file parts, and cleans article on emery wheel or doily; (ii) general term covering cutlery workers engaged on all processes subsequent to wet grinding and rough glazing.

cutler, bayonet; assembles and puts together parts of bayonets; files parts to fit correctly and rivets where necessary.

cutler, fork; steel fork cutler; fork putter-together, steel fork putter-together; assembles and puts together parts of forks; files prongs and sides of forks after they have been stamped out, and before they are nickelled or electro-plated.

cutler, pen knife, pocket knife, spring knife; assembler (pen, pocket, spring knife), pen knife setter-in, pocket knife setter-in, spring knife setter-in; an assembler or putter-together (278) etc. puts together blades, bolsters, linings, springs, etc., of penknives, pocket knives, spring knives, using hand tools and machine drill; adds corkscrews, files, etc., where these are included; sometimes also repairs hair and puts a final buff or polish on finished article.

cutler, surgical; shapes surgical knives in forge, see forger (190); files knives in forge, see forger (190); files by heating blades in furnace and quenching in water or oil; tempers blades by reheating, grinds on emery wheel and polishes on doily; also buffs them, if they are not all in one piece.

cutler, sword; sword maker, sword fitter; assembles parts of sword, hilt and handle; polishes blade on buffing wheel, and mounts embellishments.

hafter; moulder; shapes blades of cutlery to fit by filing, shaving, etc.; hones, and polishes hafts, fits tang into bored haft either with resinous cement or, if of xylonite, by driving on, or by riveting scales to flat tangs; sometimes specifically designated, e.g., docket hafter, fork hafter, table knife hafter, pen knife hafter.

hafter, razor; adds piece of lead, or other material used to add sport handle scales; rivets on plate in position and smooths by filing; sometimes done by razor setter-in etc.

moulder, see hafter.

moulder, sword, see cutler, sword.

putter-together, fork; steel fork putter-together, see cutler, fork.

setter-in, pen knife, pocket knife, spring knife, see cutler, pen knife.

setter-in, razor; sets blade in "scales" (two halves of handle) and fastens them together with rivet or pin, adding lead weight for correct balance; polishes and finishes; sees that blade fits properly and works smoothly; sometimes whets blade on grindstone.

sword fitter, see cutler, sword.

229.—CYCLE-MAKERS, FITTERS AND MECHANICS.

bicycle maker, see cycle builder.

brake fitter; a cycle fitter etc. who specialises in fitting and adjusting brakes to cycles, etc.

cycle assembler; cycle builder; assembles component parts of a cycle, e.g., frame, forks, chain wheels, pedals, wheels, and adjusts for smooth running; works entirely by hand, using gauges, screw driver, file, etc.

cycle builder; bicycle maker; (i) in large works, see cycle assembler; (ii) in small workshops, makes and assembles cycle throughout; cuts steel tubing to size with hook saw to make frame and forks, fits to lugs and brackets, pins and brace joints, see frame builder; builds wheels, see wheel builder (378); makes handle bar, see handle bar builder; makes, repairs, and nickel plates frame, see nickel plater, and other parts, see picker (250), jaggoner (241) and wheel piler (382); assembles component parts and makes adjustments for smooth running, see finisher; (iii) general term for makers of component parts, e.g., frame and fork, wheels, handle bars, seat pillar.

cycle engineer; repairs cycles, see repairer, and builds cycles to specifications, see cycle builder.

cycle mechanic; general term for any man who repairs or erects cycles, including cycle assembler, brake fitter, cycle repairer etc.

finisher, cycle finisher, cycle finishing assembler; fits on all accessories of a cycle according to specifications, e.g., lamp brackets, brakes, saddle, pump ellipse, saddle bag; makes minor adjustments with file, etc., though with standardised fittings, very few alterations are necessary.

fork builder, cycle fork builder; a frame builder etc. who specialises in building forks.

frame builder, frame and fork builder, frame fitter; cuts steel tubing to required lengths; drills small holes through lugs, fork crown, bottom bracket, back fork ends, etc., and through tubes with machine drill; assembles parts on a bolder or jig; inserts small steel peg in each hole to keep permanently in position; brazing or welding; may sometimes braze joints, see frame brazer (383) or welder (349); sometimes specifically designated, e.g., cycle frame builder.

frame setter; sets brass frame into holder or jig, and tests proper alignment against points on holder; beats any part out of alignment by means of blow pipe and beads by hand, when soft enough, to correct shape.

handle bar builder, handle bar fitter; a cycle builder *q.v.* who specializes in cutting, bending and brazing steel tubing to make handle bars; may also pickle and nickel plate bars in small works.

motor cycle fitter; a frame builder *q.v.* making motor cycle frames.

motor cycle maker; general term for workers building and erecting framework, engine, etc., of motor cycles, including frame builder, engine fitter (215) *q.v.*

repairer, cycle; repairs; makes adjustments and minor repairs to damaged cycles; repairs punctures; rents new parts; is usually also a retail dealer in cycles and accessories.

tricycle maker, as *for* cycle builder.

230.—DIE CUTTERS AND

SINKERS.

bookbinders' tool cutter, bookbinders' tool engraver; a die cutter *q.v.* who cuts, in brass, tools used by bookbinders for embossing purposes.

brand cutter, see mark cutter.

copper roller engraver; a die engraver who engraves lettering, monograms, etc., on copper rollers.

die cutter; cuts die in relief out of block of mild steel, using hammer and fine chisel, lathe and milling or routing machine and following a design shown in plan, elevation and section; *cf.* die sinker and die engraver.

die engraver; (1) a die cutter *q.v.* who cuts designs or letters in intaglio on metal dies with graving tools, for colour printing, stationary embossing, etc.; work is similar to that of the sinker *q.v.* (2) a die cutter who is not cut so deeply; (3) cuts designs or letters in relief for typefounding, printing wheels, etc., using hand graving tools or by operating an engraving or pantographing machine.

die sinker; (1) a die cutter *q.v.* who cuts die in intaglio in mild steel blocks; (2) engine die sinker; fixes steel block and plaster model or pattern of die to be sunk, in power-driven die sinking machine which works on principle of pantograph; guides pointer of machine over outlines of pattern; finishes die by removing rough edges, cleaning angles, etc., with fine chisel and hammer.

die sinker's machinist; (1) operates routing or milling machines to remove surplus metal from die; *cf.* milling machinist (200); (2) operates die sinking machine under direction of the sinker *q.v.* who sets block, tool and pattern.

engine die sinker, see die sinker.

heraldic chaser, heraldic engraver; a die engraver *q.v.* who engraves dies in reverse or relief, required in making heraldic devices, using hand tools.

letter cutter; a die cutter *q.v.* who specializes in cutting letters in dies by pantograph machine.

letter finisher; removes burrs and cleans corners, etc., in machine cut letters with hammer and fine chisel.

mark cutter, mark maker; stamp mark cutter, stamp mark engraver; brand cutter, stamp cutter, stamp maker; as *for* die cutter, cutting in reverse relief letters and other designs in steel and copper stamps for stamping or branding; uses non-routing machine to remove superfluous metal, if lettering or design is to be cut in high relief.

mould cutter, mould maker (artificial teeth); cuts brass or gunmetal tooth mould to shape of tooth required with grooves, fine chisel and hammer; smooths and polishes moulds by rubbing with a small stick of Arabian stone.

punch cutter, punch engraver (typefounding); a die cutter *q.v.* who cuts letters, figures, etc., in relief on steel punches, by hand tools or by use of electrically-driven proofing or pantograph machine tool; the punches are subsequently used to impress type matrices in brass, copper or phosphor bronze.

relief engraver; a die engraver *q.v.* who cuts only in relief with hand tools.

seal engraver; a die sinker *q.v.* who specializes in cutting in reverse intaglio designs or monograms for seals in gold, silver, stone, etc.

stamp designer; a mark cutter *q.v.* who designs and executes trade, proprietary or other marks, usually for use in making textiles; sometimes specifically designated, *e.g.*, blouse's stamp designer, copper stamp designer.

stamp cutter, stamp maker, see mark cutter, sometimes specifically designated, *e.g.*, blouse's stamp cutter, copper stamp cutter, endearing stamp maker, steel stamp cutter.

231.—DRILLERS (HAND, PNEUMATIC OR ELECTRIC).

bear puncher; a hydraulic driller *q.v.* who controls handles of hydraulic machine called a "bear" to punch holes in ship's frame, dock beams, channel bars, etc.; usually done by hole borer *q.v.*

borer, hole borer (shipbuilding); cutter, hole cutter; a hand driller *q.v.* who cuts with brace and drill, holes which it has not been possible to punch in previous stages; *cf.* bear puncher.

cutter, hole cutter (shipbuilding); see borer.

driller; general term to cover any worker cutting circular holes in metal, with a portable hand or machine tool, including hand driller, machine driller, *q.v.*; *cf.* driller, drafting machinist (200); sometimes specifically designated, according to kind of drilling machine used, *e.g.*, air driller (pneumatic), electric driller, hydraulic driller, pneumatic driller; or according to article worked upon, *e.g.*, anchor driller, body driller (vehicles), frame driller (ironing), shell driller (boiler making).

hand driller; marks points at which holes are to be drilled in metal, using rule, dividers, scribbling tools, etc., from blue prints; selects and fits drill in brace according to diameter of hole to be drilled; turns brace by hand, driving drill through metal by pressure of body against brace; for drilling small holes with accuracy, may use a bow drill.

machine driller; as *for* hand driller *q.v.* using a portable drilling machine driven by electric, hydraulic or pneumatic power; may fix and use a jig to determine points at which holes are to be drilled.

screw (small arm); a hand driller *q.v.* who reamers out screw holes in small arm parts and fits covers, using a belly brace, drill and reamer.

232.—FILE CUTTERS.—(HAND OR MACHINE).

edge cutter; a file cutter (hand) *q.v.* who cuts teeth on edges of files.

file cutter (hand); cuts teeth in annealed file blank by striking sharp slanting blow with a hammer and broad chisel, on an anvil or stock.

file cutter (machine); clamps annealed file blank on moving table of power-driven machine, which cuts file teeth; watches work of machine and makes necessary adjustments of reciprocating chisel.

file cutter; levels the edges of all except small saw files; either fixes file in vice and cuts bevel with another file, or holds edge of file against power driven emery grinding wheel.

rasp cutter; a file cutter (hand) *q.v.* who makes cutting edges on rasps with sharp pointed chisel and hammer, as distinct from broad chisel.

rib file cutter; (1) a file cutter (hand) *q.v.* who cuts files with small chisel in such a manner that a series of ribs extend along its length; (2) a file cutter (machine) *q.v.* who sets and uses machine to make rib file.

taker-again; a file cutter (hand) *q.v.* who fills up or completes, by hand cutting, any defective cuts or omissions in machine-cut files; works on hand file-cutter's stock.

tanger (razor); a file cutter (hand) *q.v.* who cuts file marks on back of tangs of razors; *cf.* tanger (cutlery) (70).

233.—FILERS.

edge tool finisher; a filer *q.v.* making smooth, rough edges or "fash" of edge tool forgings.

finisher; files and scrapes, with hand tools, surface of pipes, machine, engines, and parts needing rough finishing, where this is not done by machine; *cf.* facer (300).

filer; dresses, with appropriate files of various "cuts" and shapes, metal articles that have been cast, forged, pressed, stamped, wrought, etc., in order to remove rough edges (fins), cutting flares, the excess of metal after brazing, etc., to make smooth, or to prepare for buffing and polishing where those operations are necessary; works, usually at bench and vice, using both hands, except in case of small files, to drive file steadily in straight line, without "heaving"; in drawing-filing to finish surface, draws file evenly across surface of article; sometimes specifically designated by the article, *e.g.*, action filer, armature filer, axle filer, barrel filer, doctor filer (textile machinery), socket filer, etc., or by metal worked upon, *e.g.*, brass filer, copper filer, etc.

filer, file dresser; files off superfluous metal from needle stampings; breaks apart pairs of needles and smooths heads, holding work during operations in hand clamp.

filer, foundry filer; removes unevenness from castings by hand filing; files down rough castings, "runces" and "rises" left on casting after most of excess metal has been removed by breaker-off (183) *q.v.*; *cf.* fettler (183).

filer, key; files wards in blank of key according to specification.

filer, odd (cycles); see odd worker (cycles).

filer, saw; sharpens teeth of saw by hand, with file, immediately after setting.

filer, scroll; files and cleans surfaces of dies after they have been roughly cut by die sinker (230) *q.v.*

filer, tool; keeps profile and other tools used in pottery making, in good condition, using a hand file; often done by potter's fitter (210) *q.v.*

filer and float; a filer *q.v.* who roughs files brass, bronze, etc., castings to remove casting "frase", and then works over castings with a single cut file called a "float."

filer and scraper (brass musical instruments); a filer *q.v.* who files and scrapes, with knife, joints of brass musical instruments to make perfectly smooth; also files edges and scrapes metal to vary thickness in order to improve tone.

filer at notching machine (iron and steel rollers); a filer *q.v.* who files away rough edges of notches, cut in steel rolls by notching machine.

filer at planer; a filer *q.v.* who files away rough edges left on metal by planing machine.

finisher; a flier *q.v.* who smooths or finishes off parts of machinery, engines, etc., inaccessible to machine tools, by hand filing.

floater; a flier *q.v.* who works over surface with a dead smooth or dead file, to produce a smooth surface; sometimes specifically designated, *e.g.*, tube floater.

jointer (outlet); fixes two or more blades in a vice and files down edges till blades match one another; marks inside of each blade with corresponding numbers, and marks with a punch spot where screw hole is to be made *key cleaner*; a key flier *q.v.* who files smooth the barrel and wards of cast keys.

odd worker (cycles); odd flier; finishes parts of cycles, with file, etc., at a bench.

shankier (fish hooks); file, by hand, tapered shanks of fish hooks held in small vice at bench.

234.—GALVANISERS.

coater (wire); a dipper *q.v.* who dips coils of wire in zinc spelter; *cf.* wire galvaniser.

dipper (galvanized sheet); supervises feeding of galvanizing machine by feeder (279) *q.v.*; regulates heating of pots; cleans pots from time to time; may in small works himself feed sheets into machine.

dipper (hollow-ware, wire goods, etc.); *finisher*; takes metal articles to be galvanised in tanks and immerses in a bath of zinc spelter; twists it about to ensure equal coating; lifts out and shakes to remove excess of zinc; drops into bath of water.

galvaniser; (i) general term for any worker in galvanizing works, including dipper, pickler (280), feeder (279) *q.v.*; sometimes specifically designated, *e.g.*, pipe galvaniser, tube galvaniser, wire galvaniser, wire netting galvaniser; (ii) obsolete term for chemist hand responsible for both pickling and galvanizing shops.

tanker, *see* dipper (hollow-ware).

235.—GASFITTERS.

district fitter; a gas fitter *q.v.* who fits up customer's fittings and lays and connects up iron piping in houses, within a prescribed area of gas company.

fire fitter, *gas fire fitter*; a gas fitter *q.v.* fitting gas fire in consumer's premises.

gas and water engineer; a gas engineer *q.v.* who is also experienced in plumbing and installing water pipes.

gas engineer (hot gas works); lighting engineer; plans lay-out of pipes, jets, taps, etc., for supplying houses, shops, gas engines, etc., with gas and superintends erection of suction plant; is usually himself a gas fitter *q.v.*

gas fitter; cuts iron gas piping to required lengths with buckam, or special pipe cutting tool; taps ends of pipes for screwing into sockets for T-bends, joints, etc.; fixes piping in customer's premises, with staples; fits burners, taps, meters, stores, gas fires, etc.; lays storage and executes repairs; is sometimes also a plumber; *cf.* plumber and gas fitter (232); sometimes specifically designated, *e.g.*, gas lantern fitter.

gas lineman, *gas lineaman* (railway); a gas fitter *q.v.* installing, or repairing pipe lines for supplying gas to gas lighted signals, signal boxes, stations, etc.

lighting engineer (gas), *see* gas engineer.

meter fitter; a gas fitter *q.v.* who fits meters, as required, in gas system.

stove fitter, *stove fitter*, *gas stove fitter*; a gas fitter *q.v.* who puts in and connects up gas stove and makes necessary repairs.

stove maintenance fitter; a gas fitter *q.v.* employed in gas company's or local authority's workshop, who fits

together stoves, that have been returned for repair, after renovations have been made; may also repair stoves on customer's premises; usually done by gas fitter or stove fitter *q.v.*

236.—GAS FITTERS' LABOURERS.

fitter's mate, *gas fitter's mate*; assists gas fitter (235) *q.v.* in all semi-skilled work of gas fitting, *e.g.*, tapping of pipes, holding up work; also bands tools, fetches and carries material and tool bag, usually a youth in process of learning trade of gas fitter.

gas fitter's labourer; does labouring work for gas fitter (235) *q.v.* carrying pipes, gas fittings and tools, pushing truck with gas fire, stove, etc.; usually has no undertaking to be taught trade.

237.—GRINDERS.

comb mooter (textile machinery), *see* grinder, comb.
cutler, *titinrant*; travelling cutler, *see* grinder, travelling.
dresser, *how*; *how* grinder; removes roughness from or grinds outside of bows (rings for comb and fingers) of articles by holding against a fine emery grindstone; grinds inside of bows on a fine emery hand wheel as passed through bow.

dresser, *comb*; *comber dresser*; smooths and finishes off roughly cut combs for textile combing machines.

grinder, *holding*; against *emery wheel* and also against *glazing wheel*.
dresser, *plate dresser*, *plate mill dresser*; removes blemishes from surface of iron or steel plates or sheets by holding plate to power-driven emery wheel, or portable wheel to plate.

emery bobber (foundry), *see* grinder, castings.

emery steel polisher (cycles); removes or grinds off rough edges of cycle parts by holding against revolving emery wheel.

emery wheeler (foundry), *see* grinder, castings.

emery wheel worker (cycles); holds articles, usually castings and stampings, against emery or abrasive wheel, to grind it roughly to required shape.

glaser (foundry), *see* grinder, castings; *cf.* glazer (238).

grinder; trues up, shapes, or makes smooth; metal work, *e.g.*, castings, implements, tools, cutters, etc., by applying work to grind-stones variously compounded of emery, alundum, corundum, carborundum and other aluminous or siliceous carbide abrasives with a bond of shellol rubber, silicates or to grindstones wrought from natural sandstones or by applying motor-driven portable pendulum or swinging grindstone to work; holds work, at appropriate angle to sides or edge of wheel, which may be spherical, conical, cylindrical or other desired shape for special classes of work; grinds dry or wet as may be expedient; manipulates gears to control cutting speed and to avoid skidding; or operates grinding machine in which internal and external cylindrical surfaces and plain surfaces are trued or in which carra, cutters, taps, drills, etc., are ground; sometimes specifically designated, *e.g.*, the article ground, *e.g.*, *arvil grinder*, *axle grinder*, *cutler grinder*, *drill grinder*, *edge tool grinder*, *spindle grinder*, *tool grinder*; by type of grinding performed, *e.g.*, *cross grinder*, *plane grinder*, *straight grinder*; by kind of grinding machine used, *e.g.*, *cylindrical grinder*; or by manner of grinding, *e.g.*, *face grinder*, *B. & S.*; and a machine grinder *q.v.* who operates proprietary grinding machine, the initials of the maker of which are B. & S.

grinder, *how*, *see* dresser, *how*.

grinder, *burr* (needles); smooths off roughness round eyes of a group of double needles prepared by spitter (279) *q.v.* by holding against emery wheel; breaks wires so as to form two needles and grinds away roughness round heads.

grinder, *cam-howl*; a machine grinder *q.v.* who grinds and fits bolts to cam grooves.

grinder, *card clothing grinder*; *card needle pointer*, *needle pointer*; adjusts and operates grinding machine fitted with a plough guide followed by rotating emery discs which grind a point in wire needles or teeth of card clothing.

grinder, *castings grinder* (foundry); *emery bobber*, *emery wheeler*, *foundry grinder*, *glazer*; cleans up castings after sand has been brushed off, *see* brusher (183), by grinding them smooth on emery wheel or composition grindstones; (small castings) holds castings against revolving emery wheel, thus removing stamps of "gate," "runner," and leaves left on by spruing (183) *q.v.* and grinds down "fin" of metal formed between two halves of mould; (*large castings*) grinds off irregularities of castings using small portable electrically-driven emery or composition grinding wheel; switches on current and holds wheel against part of castings to be ground smooth.

grinder, *comb*; *comb mooter*; grinds, on emery wheel, flat and cylindrical combs for textile combing machines.

grinder, *cross* (steel pens); holds steel pen in grooved flange at right angles to both the emery wheel or carra across the point; sometimes done in automatic machine by machine grinder *q.v.*

grinder, *disc*; a grinder *q.v.* who grinds metal goods by holding against face of a revolving disc grinder.

grinder, *drill*; grinds edge tools, cutters, etc., on abrasive wheel, running dry, i.e., not moistened as it runs; grinds other articles on dry stone wherever it is expedient that the edge of wheel should be distinctly seen in order that particular spot may be reached or when grinding liquid cannot be easily controlled, as with work revolving in chuck or on lathe.

grinder, *edge tool* (babbings); a wet grinder *q.v.* working on his own account as an outworker for large emery works.

grinder, *face*; a machine grinder *q.v.* who operates special type of grinding machine in which grinding is performed by face of wheel and not by edge.

grinder, *flat*; a grinder *q.v.* who polishes, by grinding, flats (metal bars) on which card clothing (cloth, leather, etc., set with wire teeth) is to be fixed.

grinder, *foundry*, *see* grinder, castings.

grinder, *hole*; grinds holes by lapping with oil and emery powder; fixes work to be ground in lathe and fits up tool of lead lined steel; controls speed of lathe and feeds lapping rod with emery flour and oil.

grinder, *titinrant*; *jabbing grinder*, *see* grinder, travelling.

grinder, *knife*; (i) grinds, sharpens, and repairs odd knives; is usually a travelling grinder *q.v.*; (ii) a grinder *q.v.* usually an outworker, who grinds blades for odd kind of knife.

grinder, *machine*; *face*, *bolt* or *clamps* work on bed or table of machine; selects and fits revolving abrasive cutter or cutters; manipulates levers to bring cutters to bear on work and to control power drive; applies and removes abrasive powder to work as required; tests work at intervals by gauges or micrometer measurement.

grinder, *machine knife emery*; *apron-wheel grinder*, *Stalk's machine grinder*; a machine grinder *q.v.* who removes irregularities on rough

machine knife forgings in wet grinding machine (usually Slack's segmental grinder) in which faces, bevels and cutting edges are ground to correct dimensions.

grinder, plane; a machine grinder *q.v.* who operates grinding machine which grinds flat surfaces; work previously done on planing machines.

grinder, precision; a machine grinder *q.v.* who attends precision grinding machine which grinds to fine degree of accuracy; makes adjustments of grinding cutters by use of micrometer.

grinder, razor blade (machine); a machine grinder *q.v.* who grinds razor blades between two small stones, mechanically driven, revolving in opposite directions, which hollow out blades; sometimes repeats process on a succession of smaller and smaller stones, till desired fineness of edge is attained.

grinder, rough; a grinder *q.v.* who grinds castings, forgings, etc., roughly to shape on an abrasive wheel; sometimes specifically designated, *e.g.*, tool rough grinder.

grinder (saw); a grinder *q.v.* who grinds roughly shaped saws between two grindstones revolving in opposite directions and at different speeds to smooth faces of saw.

grinder, scissor blade; (1) a grinder *q.v.* who shanks and hamps forged scissors blades, *i.e.*, removes irregularities left from forging, on dry sandstone; (2) blade grinder, either forged or drop-stamped, on wet stone or on emery wheel.

grinder, segmental; see grinder, machine knife emery.

grinder, shaft shaft grinding machine *q.v.*

grinder, straight (steel pens); holds steel pen in grooved plate against a power-driven emery wheel so that the pen is ground straight or along its length and side.

grinder, travelling; itinerant cutter, itinerant grinder, jobbing grinder, travelling cutter; calls at customers' houses with grindstone and repair outfit mounted on a wheeled truck and grinds and repairs knives, scissors, etc., may also collect knives, tools, cutters, etc., from iron-workers to grind at home.

grinder, universal; a machine grinder *q.v.* who operates universal grinding machine, used for external, internal and other grinding operations and so constructed that a variety of grinding tools can be used and the work clamped in the best working position.

grinder, wet; a grinder *q.v.* who directs a stream of water from a pipe between the grinding and grinding surfaces; wet grinding permits of faster and heavier grinding than dry grinding.

grinder and glasser; a grinder *q.v.* who grinds articles on grindstone or abrasive wheel and then glasses them to produce smooth surface; *cf.* glasser (235).

pointer, drill; a grinder *q.v.* who sharpens ends of drills on emery wheel or grindstone, or in precision grinding machine.

pointer, needle; card needle pointer, *see* grinder, card clothing.

pointer (needles); sets carbonum wheel accurately in relation to feeding wheel; feeds, by hand, needle wire between two wheels so that points at each end are ground.

pointer, spindle; a grinder *q.v.* who grinds ends of textile spindles to points by means of emery or abrasive wheel.

scorcher, scorcher (cutlery); scorcher; holds cutlery blade against revolving grindstone to rough or smooth a place for application of firm's mark, after forging and before hardening; work usually done by elderly large workmen.

scorcher, *see* scorcher.

setter (cutlery); an edge tool setter *q.v.* who straightens and adjusts blades by filing and hammering, and sets cutting edge of scythes, sickles, and similar articles on whetstone or rubstone.

setter, edge tool; a grinder *q.v.* who sets or finishes cutting edges of tools, by holding tool on rest against revolving whetstone to grind edge at correct angle according to kind of tool.

setter (needles); holds a number of needles between finger and thumb against revolving emery bob to give final set or point to them; *cf.* pointer (needles).

setter, razor; razor whetter; puts keen edge on finished razors by drawing them on fine whetstone; also repairs worn razors by grinding them and whetting them on oil stone.

shaft grinding machine attendant; shaft grinding man, shaft grinding worker, *see* grinder, shaft.

sharpener, shavers; shavers whetter; a grinder *q.v.* who shaves cutting edge of large cutting shavers or scissors with emery or fine stone wheel and oil stone.

sharpener, tool; tool whetter; (1) a grinder *q.v.* who sharpens tools forced by tool smith (194) *q.v.* by grinding them on a carbonum or emery wheel and then finishing off on an oil stone; generally done by tool stores men (241) *q.v.*; (2) a tool reviver (278) *q.v.* who sharpens tools which have been blunted by use.

traser, *see* wheel traser.

wheel traser; traser; a grinder *q.v.* who trases or trases up grindstones which have become worn and ribbed; raises stone, to reduce it to its true shape, by applying to it, as it revolves, a steel or iron trasing tool, usually of chisel form.

whetter; whittener; whans or sharpens by rubbing on hard close grained stone, edge tools, articles of cutlery, etc., after the have been ground.

whetter, *see* whetter, cutlery whetter, shavers whetter, etc.

whetter, razor, *see* setter, razor.

whetter, shaver, *see* sharpener, shaver.

whetter, tool, *see* sharpener, tool.

whittener, *see* whetter.

238.—GLAZERS. POLISHERS, BUFFERS AND MOPPERS.

barrel smoother; polishes and buffs surfaces of barrels of rifles, pistols and sporting guns to produce dead smooth finishes, entirely by hand; fixes barrel, etc., in bench vice and works over surface with a smoothing iron, a block of steel with file cut form.

belt (forks and spades); edge tool bander; finishes and polishes corners or straps of edge tools, *e.g.*, forks and spades, by holding them against mechanically-driven belt dressed with emery powder and pumice.

bobber; bufer, buffing machinet, buffing machine worker, mopper (slump); removes surface irregularities and polishes metal articles by holding them against power-driven revolving wheel the edge of which is coated with cloth or leather and sprinkled with abrasive powder or polishing compound; sometimes further designated by the article polished, *e.g.*, buckle bobber, hams bobber, spur bobber.

bobber and polisher, spur; a bobber *q.v.* who removes surface irregularities from finished spurs on leather bob, dressed with fine emery powder, and gives them final point on rag mop or dolly, dressed with very fine abrasive powder.

brusher (needles); cleans eyes and grooves of sewing machine needles by holding them against revolving brush, dressed with oil and emery powder.

brusher (scissors); polishes scissor blades after they have been ground, by holding them singly to a revolving brush, dressed with oil and emery.

brusher, scratch; polisher, scratcher; removes scale, cleans and generally brightens surface of metal articles by holding them against circular wire brush revolving on special form of lathe.

buffer, *see* bobber; sometimes specifically designated, according to article, *e.g.*, bowl buffer, brass buffer, comb buffer, cutlery buffer, or according to abrasive used, *e.g.*, lime buffer, sand buffer.

buffer, blacksmith's; a buffer *q.v.* polishing blacksmith's work after it has been ground by grinder (237) *q.v.* on emery wheel.

buffer, blades; (1) a bobber *q.v.* who glasses, *i.e.*, smooths and rough polishes blades, and gives first buffing, after blade has been ground, and before parts are assembled into complete articles, using buff, bob, dolly or mop; sometimes also grinds blades; (2) puts final polish on blade shaft, after article has been assembled.

buffing machinet, buffing machine *q.v.*

burnisher, scissor bobber; sometimes specifically designated, *e.g.*, brass buffing machinet.

burnisher, hand; gives close grain to surface of metal by rubbing with steel or agate tool of flat oval section; draws work in vice and runs tool, using both hands, backwards and forwards on surface of article.

burnisher, lathe; fixes article in chuck of lathe and burnishes it by pressing rubbing tool against article as it revolves.

burnisher (needles); sets up a row of needles in a clamp or frame; threads them with cotton, and cleans burrs from eyes, by hand, by drawing cotton covered with oil and emery, to and fro.

card wire cleaner; card wire dresser; a wire polisher *q.v.* who dresses and polishes, in bulk, wire to be made into needles or into card clothing for carding machine.

cleaner (needles); holds a number of needles between finger and thumb and rolls them against power-driven polishing bob to clean them.

dresser, card wire, *see* card wire cleaner.

dresser, harness furniture; a burnisher *q.v.* who finishes buckles of harness etc., with burnishing tool.

dresser, scissors; a bobber *q.v.* who buffs neck and hove of scissors to make them smooth before passing to harness *q.v.*

edge tool bander, *see* belt.

finisher (cutlery); a bobber *q.v.* who finishes buffing and polishing of cutlery on soft rag dollys dressed with fine rouge or crocus powder (oxide of iron).

finisher (needles); (1) a bobber *q.v.* who polishes needles by holding several in a sagger against revolving leather bob; sometimes polishes by hand rubbing; (2) feeds needles into hopper of automatic polishing machine.

finisher (pocket knives); a bobber *q.v.* who puts final polish on pocket knife (ends, huffs and blades), after knife has passed through hands of cutter (228) *q.v.*, first on emery wheels of varying fineness, then on leather wheel and then on buff edged with felt, or other soft material, dressed with a polishing composition.

glazer; plating machine worker; removes grinding marks on articles after rough grinding and prepares them for final polishing; holds article against revolving wheel, the edge of which is coated with fine emery or other fine abrasive, or at a glazing belt to which abrasive is glued; sometimes specifically designated by the article glazed, *e.g.*, spade glazer, tool glazer; *cf.* grinder (237).

glazer (cutlery); glazes and polishes, with or without grease, ground blades, by holding them against emery wheels or on wooden wheels faced with leather and dressed with glue and fine emery powder.

glazer, edge tool raw; a grinder g.v. who performs first, or "roughing out" glazing on edge tool forgings at a dry rough emery wheel.

glazing machine worker, see glazer.

lapper; rubber; gives highly finished surface to work which has been accurately ground; holds article, e.g., steel bearing, against revolving disc or lap, in which is embedded abrasive; applies oil and emery flour to surface of disc as required.

lapper, axle bush; axle box lapper; left-hand; polishes and trues up axle box preparatory to fitting on axle; "laps" or grinds, inside of box on a lathe with rotating lead lap, oil and emery, to fit turned portion of axle, before axle is hardened; is usually also a wear-up g.v.

lapper, barrel lapper (small arms); polishes bore of barrel, after it has been rifled; fixes in lathe with tapping rod of lead cased steel, which as it rotates is drawn to and fro through bore; supplies lead with emery powder and oil; finishes bore by tapping, by hand.

lapper-up, flyer; a lapper g.v. who operates a lapping machine to grind, polish and make true circular running section of hose and spindles of flyers.

leatharer (ball bearings); grinds true and polishes ball bearings by rubbing them with fine emery paste between two leather covered discs.

letter-man, see lapper, axle bush.

mopper, grease mopper; a polisher g.v. who uses a mop of calico or other fabric, dressed with abrasive or polishing composition or grease.

polisher; (i) general term covering bobbers, glazers, polishers, buffers and moppers g.v.; (ii) sometimes specifically designated according to article polished, e.g., cup polisher (bearings), cutlery polisher, frame polisher (cycles), roller polisher (textile printing); according to abrasive used, e.g., crocus (oxide of iron) polisher, lime polisher; or otherwise, e.g., engraver's polisher (textile printing); (iii) see brusher, scratch.

polisher, axle, see wear-up-down.

polisher, brass (foundry); grinds off the frame and file marks on brass castings and rough polishes them on an emery wheel, finishing off on leather and rag dollys with crocus powder or other material as abrasive.

polisher (brass musical instruments); trims finished brass instruments; rids of excess of solder; puts in corks and springs, and finishes instruments, generally polishing them with a hard brush or with a buffing machine.

polisher, lathe; polishes metal articles on lathe, by holding against them, while rapidly revolving, a leather buff or rag dolly or mop to which sand, pumice, iron filings, emery or other polishing material has been applied, usually with admixture of grease.

polisher (saw); (i) places blade of hand saw or long saw between two power-driven wooden rollers faced with leather, with bees-wax dressing for holding emery, and draws it across to brighten or polish them; (ii) places circular saw by mounting it against face plate on horizontal axis and making plate rotate at high speed, while emery powder is applied to saw and block of wood pressed against it to bring its face in contact with plate.

polisher, wire; polishes dull-driven wire by drawing it through a roughing pad, polishing block or other polishing material and elated lime; mounts drum of wire on spindle, passes wire through pad and fastens to rotating drum, which is power-driven.

rubber, see lapper.

rubber, emery belt; a grinder g.v. who grinds or polishes castings or machine parts on an emery corf bed, usually passing over two revolving pulleys.

sander; a polisher g.v. using fine sand as abrasive.

sanding machine operator (sewing machines); holds parts of sewing machines against abrasive surface of sanding machines, which grinds down metal to reduce them to exact size required, and to polish them.

sat-in finisher (metal polishing); a bobber g.v. who polishes a metal surface by holding it against revolving belt in such a way that a satin-like effect is obtained.

scorcher (needles); lays long rows of tempered needles on sacking with abrasive paste; rolls up sacking and bends with hemp cord; places bundles on bed, rolling mill under heavy cabs of wood or stone which work them backwards and forwards by power for several hours; takes them out and washes them to remove scale.

scratcher, see brusher, scratch.

scratcher (files); scratches fine files with coconut husk and under dust to clean teeth and even up their cutting power.

scrubber (files), see scratcher (files).

slider, hard (needles); burnishes sides of sewing machine needles in the hard, i.e., after hardening on revolving bob with oil and emery, clamps needles in holder and holds against hob.

slider, soft (needles); as for slider, hard, but before hardening.

snapper (dangle), see bobber.

wear-up-down, wear-up (axles); (pocket knives) g.v. giving final polish to spring knives (pen and pocket) on rag dolly, with rouge or crocus powder.

wear-up-down, wear-up (axles); axle polisher; receives forged axle after it has been turned to size, and case-hardened; polishes it by hand with an emery cloth, in a lathe and file axle bush on it; usually lays axle back, before fitting it on axle, but sometimes receives it ready lapped from lapper g.v.

twira patent; operates machine in which steel wire is tempered, polished and finished; mounts drum of wire on spindle, passes wire through coal, gas or electric furnace and polishing pots and fastens to winding drum; controls heat of furnace according to length of wire.

230-GUN SMITHS AND GUN LOCK AND ACTION MAKERS.

action maker; (i) a gunsmith g.v. who specializes in making gun actions; (ii) see assembler, action.

armourer; looks after, cleans and does minor repairs to small arms in armoury of small arms factories; usually has had experience as a gunsmith g.v.

assembler, action; action maker; assembles forged and machined parts of action of rifles, guns, pistols, etc., and screws in barrel, ready for action fitter-up g.v.; works at bench using hand tools, i.e. screw driver, spanner, wrench, file.

assembler, gun, as for assembler, rifle.

assembler, rifle; assembles and roughly fits together component parts of rifles, e.g., action, barrel, slide, trigger, set, magazine, etc., ready for rifle fitter g.v.; works at bench using hand tools, i.e., screw driver, spanner, wrench, file.

breech maker; a gunsmith g.v. who makes breech blocks for rifles and sporting guns.

ejector maker; a gunsmith g.v. who specializes in making ejector mechanism of sporting guns, which automatically ejects cartridge case from chamber of barrel.

finisher (guns); receives assembled gun from gun fitter g.v., screws on trigger stock, and hand grips; sees that all parts of gun work smoothly

and that screws are flush and correct; makes any final adjustments necessary, oils gun to prevent rusting; cf. finisher (guns) 1989.

fitter, action; action fitter-up; action fitter; receives assembled actions from action assembler g.v.; tests them for smooth working, files them and makes any adjustments necessary; sometimes specifically designated, e.g., rifle fitter, cycle fitter.

fitter, break-off; files and fits break-offs of muzzle loading guns, i.e., reinforced portions of breech and barrel which carry percussion nipples and flash caps.

fitter, gun; fitter-up; receives assembled gun from gun assembler g.v. and makes any necessary adjustments, by filing, etc., to give smooth action.

fitter, rifle, as for fitter, gun.

fraser, action; gun lock fraser, lock fraser (gun); adjusts gun lock actions, after they have been fitted by action fitter g.v. filing them, where necessary, with a very fine smoothing file.

gun maker, machine; assembles and fits together component parts of machine guns; works at bench using vice, screwdriver, spanner, file, etc.; sometimes specifically designated, e.g., Lewis machine gun maker.

gunsmith; (i) general term applied to workers engaged in making, from bar or rod steel, any or all parts of action, lock barrels, trigger, set, sights or any other metal parts of guns (chiefly, rifles, pistols, revolvers); forges parts; gun work faster 1970, machines or files them to required shape and size, and fits together at bench; is frequently, in case of best class of sporting gun work, an outworker who works for one or more gunmaking firms; may specialise in making one part of weapon, or may even make weapon throughout; sometimes draws roughly machined parts from employer and assembles, admits and files them to produce finished arm; (ii) general term used to denote any worker who assembles, finishes or machines gun parts.

gunsmith, machine gun; machine gunsmith; a gunsmith g.v. who machines parts in gun or rifle factory.

hammer maker; a gunsmith g.v. who makes hammers for guns or revolvers.

lock maker, gun; gun lock maker, gun locksmith; a gunsmith g.v. who makes, assembles, and fits component springs and other parts of lock mechanism of gun.

percussioner; files and fits hammers of breech loading guns.

rifle maker, as for fitter, gun.

trigger maker, half trigger maker; (i) a gunsmith g.v. who specializes in making complete trigger sets comprising trigger, guard, trigger plate and trigger; (ii) operates machine for making triggers out of rod steel.

240-HEATING AND VENTILATING ENGINEERS (no returned)

engineer, heating; hot water engineer; (i) draws up specifications for installations to heat buildings by steam, hot water, hot air, etc.; often combines this with planning schemes of ventilation; (ii) at very fitter, draws up and connects pipes for conveyance of hot water, and installs small boilers and furnaces and other forms of heating appliances.

engineer, ventilating; visits premises where ventilation system is to be installed, and draws up schemes and working plans for same, according to nature of undertaking; may also execute plans, i.e. fit and install air shafts, ventilating gratings, electric fans, etc.

fitter, hot water; steam fitter; steam and hot water fitter; (i) cuts pipe with hack saw or file, screws ends with stock and die and fits pipes into sockets of joints, L-bends, etc.; caulks joints of cast iron pipes of large diameter intended for a low pressure system of heating, by ramming in a composition of iron rust, oil, ammoniac and yarn; cf. pipe fitter 2261; (ii) see engineer, heating.

241.-JAPANNERS, ENAMELLERS AND STOVERS.

aerograph, *see* sprayer, air.
blackener, a japanner *g.v.* who paints iron hollow-ware, parts of stoves, grates, ranges, etc., with black japan by a brush or air spray; or, applies black japan by dipping articles in bath of that liquid; puts articles aside to dry ready for storing may also perform duties of stover *g.v.* (*scientific instruments*).
lacquerer *g.v.* who applies coat of black lacquer by painting, spraying or dipping, to iron parts of scientific instruments.

bronzer, metal bronzer; (i) dipper (bronzer); colours steel and polished brass articles to resemble bronze by dipping them, by hand, in prepared acid or other metal-staining solution with, or without, subsequent beating on beaded metal plate; places articles in revolving cylinder with fluid and pieces of green-innocent felt to give them; (ii) puffer; bronzes metal articles, e.g. stamped and pressed metal ware, umbrella furniture, etc., by means of electro deposition suspending them by wire from bar comb, bath, and switching current on and off to start and stop process; removes bronzed articles from bath and allows to dry; (iii) (dust) pen; colourer; places steel pens in bath of black ink, dips in hollow steel cylinder which is made to revolve over lighted gas jets; adjusts temperature by regulating gas valve and removes pens when oxidation is complete.

brusher; (i) layer; applies enamel in liquid form by wrought iron articles, steel plates, etc., by hand with paint brush; (ii) brusher-off; brushes off ground enamel colour from steel plates using a hand brush and stencil to remove only that colour which is subsequently to be removed; or, *see* (iii) below; works on special table provided with holes and efficient exhaust to remove enamel dust brushed off; (iii) applies, with brush, coloured enamel to steel plates already covered by ground coat of white or other enamel, using stencil to form designs, letters, etc.; (iv) may combine all operations performed in (i), (ii) and (iii) above; places prepared plates aside to dry ready for firing or firing of enamel.

brusher-off, *see* brusher.
brusher, paint; painter (bedsteads); paints, by hand with brush, metal bedsteads with japan paint ready for storing.

burner, *see* muffle hand.

colourer, *see* bronzer.

decorator; decorates surface of enamelled goods by hand, painting with brush, designs or lines in gilt or colour.

dipper, dip hand; dips, by hand, small articles, e.g. by enamelled, japanned, or bronzed, into tub bath, or vat of suitable fluid, and sets them aside to drain and dry ready for storing (blackened or japanned articles) or fusing (enamelled articles).

dipper (bronzing), *see* bronzer.
dryer (revolver); puts freshly enamelled, japanned or lacquered parts of cycles in a stove to dry; opens doors of stove, runs in small trolley, or places trays on shelves in stove, enameller; applies coat of enamel to articles by (i) hand painting wrought iron articles with ordinary brush, *see* brusher; (ii) spraying with an aerograph, *see* sprayer, air; (iii) dipping wrought iron articles by hand in vat of enamel, *see* dip hand; (iv) dusting powdered enamel on to cast iron articles which have been previously placed in a stove to heat; withdraws heated article from furnace and sprinkles powdered enamel over it as evenly as possible, by hand, using a long-handled duster

or dredger; returns articles as soon as "dusted" to fuser *g.v.* to have enamel fused on in muffle furnace; sometimes specifically designated according to articles enamelled, e.g. black enamel, slip enameller, cycle enameller, hollow-ware enameller.

enameller, black; coats steel and iron work with non-vitreous black enamel by hand, with brush, or dust steel and iron work or other articles, e.g. electrical apparatus, in a vat of black enamel; in small works, does own storing, *see* stover.

finisher, paraded rib; umbrella rib finisher; a dip hand *g.v.* who puts coat of japan on parasol or umbrella ribs and bakes them in stove to harden.

faster, *see* polisher.

fuser, *see* muffle hand.

hot room attendant, *see* stover.

japanner; applies coat of black japan to articles by brushing, dipping or spraying (see brusher, dip hand and sprayer, air); places articles aside to drain and dry ready for storing; in small works, may do own storing, *see* stover; usually applies two successive coatings of japan (and sometimes more) to each article hardening each coat as applied, to give better "finish"; (storer) places screws through holes of perforated plate applies japan to heads of screws by hand with a brush, and takes plate and screws for hardening; frequently specifically designated according to nature of articles japanned, e.g. edge tool japanner, furniture japanner, harness japanner, plate lock japanner, stock lock japanner.
lacquerer, hot lacquerer; varnisher, lacquerer, woman; applies coat of lacquer to metallic surfaces (usually brass) by dipping articles in bath of specially prepared lacquer, or by means of a brush, or for large articles, by spraying lacquer on by air-spray, *see* sprayer, air; usually bakes articles in stove before lacquering and applies lacquer to them whilst still hot; *cf.* cold lacquerer (1925).

layer, *see* brusher.

liner; paints lines of colour in enamel, by hand, on enamelled or japanned metal articles, i.e. parts of cycles, sewing machines, etc., to serve as decoration; places articles on for storing to harden colour, or to fire enamel; sometimes specifically designated, e.g. colour liner, cycle liner, gold liner.

liquidiser, *see* swiller.

muffle hand; burner, fuser; tends muffle furnace in which are heated metal goods with coating of unfused enamel, so that enamel is fused on; regulates temperature by adjusting gas valves or fire dampers if coal heated; runs enamelled articles to be fused into furnace on grids or trays supported on small trolleys; watches progress of fusing through apertures; withdraws goods from furnace when operation is complete, and sets aside to cool, ready for further coat of enamel or for despatch to warehouse.
ornament worker; japanner's ornamentier; does coloured ornament work on japanned ware, by hand, with a brush, including lining, *see* liner; puts decorated ware aside to dry ready for hardening on in stove.

ovenman, *see* stover.

painter (bedsteads), *see* brusher.

paint.

painter, cycle; a brusher *g.v.* or an air sprayer, *g.v.* who applies coloured coat of japan or enamel to cycle parts; repairs process giving as cycle parts of colour as are required, allowing each coat to be stored (*see* stover) before applying next.

plater, *see* bronzer.

polisher; fluffer, rubber; rubs down, after storing, surfaces of metal ware that have been japanned or enamelled, by hand with panicle stone or powder to render them

smooth and remove all excess of japan or enamel; passes ware on for further coat of enamel, etc., and sufficient coats have been applied, stored and polished; sometimes specifically designated, e.g. black polisher, enameller's polisher, japan polisher.

rubber, *see* polisher.

sprayer, air; paint sprayer; aerograph; controls valves of aerograph, or spraying machine, by which a coating of enamel (or japan) in liquid form is blown on to metal articles in process of enamelling (or japanning); may use stencil to reproduce designs or lettering; sets articles aside to drain and dry ready for storing, *see* stover.

stover, stove attendant, stove man; hot room attendant, ovenman; places metal goods that have been coated with enamel or japan on trays or grids and places these in an oven (japanned ware); regulates heat of oven which is usually gas fired; watches ware to ensure complete hardening of japan; withdraws ware when process is complete and sets it aside to cool ready for polisher *g.v.*; sometimes specifically designated, e.g. black stover, colour stover, enameller's stover.

swiller, liquidiser; (i) a dip hand *g.v.* who dips "fat" ware, e.g. plates for advertisement stencils, in tub of liquid enamel; (ii) (dip) pours a small quantity of liquid enamel into hollow-ware, e.g. bowls, saucers, and swills it round to distribute enamel over surface and pours surplus back into vat; sets article to drain ready for firing.
tipper; a liner *g.v.* who puts a head-ling of colour by applying liquid enamel round top of enamelled metal hollow-ware.

varnisher, varnish woman, *see* lacquerer.

242.-LEAD BURNERS AND CHEMICAL PLUMBERS.

chemical plumber, *see* lead burner.

lead burner; chemical plumber; installs and repairs leaden tanks, stills, pipes, etc., and makes lead pipe connections in chemical works.

to exact size with knife and shears and lines tanks (intended for holding acids and other chemicals, whether in a chemical works or otherwise; uses edges of lead sheets, pipes, etc., after hot fusing together, adjoining surfaces with blow pipe, or by pouring molten lead round joint or hole.

243.-LOCK, LATCH AND MAKERS; LOCKSMITHS.

cutter, key; reverseth; files out and smooths edges of a set of key on key blank, and circular warding files and small circular cutters in milling machines; sometimes done by lock maker *g.v.*

key finisher (safe); (i) completes making of safe lock key, by hand filing keys which have been roughly cut by machine, or by hand by less skilled men or boys; (ii) finishes dressing of drop-forged key by hand filing or by smoothing edges on corner wheel.
key maker; (i) general term for any worker making keys, whether by cutting, forging, or stamping, or by filing blanks, including key master (1903), key cutter, key filer (1903), key forger (1909) *g.v.*; (ii) makes keys and files from blanks; sometimes also forges key blanks; cuts and finishes them.
keysmith, *see* cutter, key.

latch maker; assembles, fits together, rivets and makes up latches from cast, stamped or machined parts; sometimes specifically designated something to type of latch made, e.g. combination latch maker, flush latch maker, mortice latch maker, thumb latch maker.

latch maker, night; a lock maker *g.v.* who assembles cast, machined, and stamped parts of night latches, i.e. latches for outside doors operated from outside by latch keys and from inside by knobs.

lock maker; locksmith; general term for any man doing skilled and semi-skilled work in making, i.e., assembling, locks; assemblies, fits together, rivets, and generally makes up locks from cast, stamped, or machined parts; may also cut and shape parts by use of machine tools; frequently specifically designated according to the type of lock assembled, e.g. automatic lock maker, lock edge lock maker, brass case lock maker, cabinet lock maker, carpet bag lock maker, combination lock maker, dead lock maker, detector lock maker, drawback lock maker, escutcheon lock maker, flush lock maker, latch lock maker, letter roller lock maker, lever lock maker, machine made lock maker, mortice lock maker, permutation lock maker, railway carriage lock maker, safe lock maker, spring lock maker, stock lock maker.

locksmith; (i) see lock maker; (ii) a lock maker *g.v.* who performs work on locks and who has a high skill is required and in which greatest accuracy of workmanship is essential, e.g., safe locks, or locks for special purposes and of unusual sizes; cuts out parts of lock by hand from brass plate with high saw and forges other parts of unusual size or pattern; repairs locks that are damaged, making new parts or adjusting old parts by filing, cutting, etc., or giving instructions as to size and shape of parts required to be made; sometimes cuts keys for locks which he makes, or special master keys for a series of different locks; *cf.* key maker; is usually able to make any kind of lock throughout by hand, or to repair any lock. Sometimes specifically designated according to type of lock made, e.g. brass locksmith, cabinet locksmith, mortice locksmith, mortice locksmith, plate locksmith, stock locksmith.

padlock maker, padlock smith; a locksmith or locksmith *g.v.* who assembles, fits and rivets together by hand, prepared parts of padlocks; special padlocks being made and repaired by locksmith *g.v.*

244.—MECHANICAL ENGINEERS; ENGINEERS (not Engine Drivers).

engineer, butcher's; a fitter and erector (210) *g.v.* who fits together and builds up machinery and steel work for use in butcher's establishments, such as engines, motors, mining or chopping machines, stock yards, etc.

engineer, domestic machinery; a fitter and erector (210) *g.v.* who fits together and assembles in position, boilers, laundry machines, mangles and other domestic machines; effects repairs and maintains in good running order.

engineer, bull; *yard engineer*; is in charge of machinery in yard and is responsible for its upkeep; erects, e.g., machinery pertaining to bull department, i.e., clearing gear, windlasses, capstans, etc.; as for fitter and erector (210).

engineer, laundry; *stoker engineer*, *workhouse engineer*; as for domestic machinery engineer, working in large laundry; does ordinary running repairs to engines and is in charge of men driving engine engines; sometimes driver engine, *cf.* laundry engineer (250).

engineer, marine (in engineering works); is skilled in theory and construction of marine engines, and is capable of working in pattern shop, foundry, machine and erecting shops of marine engineering works, see

pattern maker (180), moulder (180), fitter (210); *cf.* marine engineer (seagoing) (734).

engineer, mechanical engineer; general term applied to skilled metal workers engaged on fitting, erecting, repairing and maintaining mechanical plant, e.g., engines, lathes, pumps, machines of all descriptions; fitters (210), erectors (210), millwright (212) *g.v.*, in addition to specific engineers contained under this code number.

engineer, pump; pump doctor (*slang*); a pump fitter (210) *g.v.* engaged on repair work to pumps for oil, water, etc.

engineer, rag engineer; a specialised mechanical engineer or fitter (210) *g.v.* engaged in repairs to paper making and pulping machines.

engineer, shafting; cuts from length and erects in position shafting, including machines, drive pulleys, blocks, pulleys, and stringers in proper alignment; sometimes done by millwright (212) *g.v.*

engineer, stoker; washhouse engineer, *see* engineer, laundry.

engineer, Trinity House; a mechanical engineer *g.v.* who specialises in the machinery necessary for light-houses, lighthouses, for signals, etc.

engineer, yard, *see* engineer, bull, hydraulic repainer; repairs hydraulic machinery and plant.

pump doctor (*slang*), *see* engineer, pump.

repainer, automatic machine; repairs mechanism of automatic machines by replacing or adjusting parts damaged by wear and tear; often travels from place to place regularly examining machines and doing necessary repairs.

repairer, brakes; fits adjusters and keeps in running order, brakes of rolling stock, renewing wearing parts, etc.; usually done by brake fitter (210) *g.v.*; sometimes specifically designated, e.g., vacuum brake repairer, Westinghouse brake repairer.

repairer, sewing machine; a sewing machine mechanic (245) *g.v.* who repairs sewing machines by resetting or re-adjusting worn or damaged parts.

repairer, tool; repairs pneumatic and hydraulic tools in shipbuilding yard; fits new parts, machining, turning and forging where necessary; usually done by toolsmith (190) or toolmaker (265) *g.v.*

245.—MECHANICS (so returned).

carbideising Hd attendant (*gas works*); a mechanic *g.v.* who goes round retort house and furnace retort and furnace feeds with a view to keeping them gas-tight, adjusts eccentric belt in centre of door lever and/or forges bar forming over which, together with belt, tightens door in position over retort mouth.

fume plant attendant; a mechanic *g.v.* who keeps in order apparatus used in separating dust from fume gases in lead extraction works.

machine minder (cardboard boxes); a mechanic *g.v.* who sets and supervises the running of all machinery for manufacture of card-board boxes, examines mechanism, makes necessary adjustments for accurate work, replaces worn parts.

mechanic; general term for fitters, or fitters and turners (210) *g.v.* who erect, trace faults, overhaul, and repair machinery running in factories and workshops or who supervise these operations; sometimes loosely applied to skilled engineers in the engineering industry; frequently specifically designated according to type of machinery, etc., tended, e.g., engine mechanic, line-tie mechanic, loom mechanic, potter's mechanic, sewing machine mechanic.

mechanic, air; aircraft mechanic, aviation mechanic; general terms for artisans repairing, overhauling and tracing engines and other metal parts of aircraft; *cf.* fitter, motor fitter (210).

mechanic, colliery, as for colliery fitter (210).

mechanic, farmer's; usually a fitter (210) *g.v.* skilled in repair and adjustment of agricultural machinery, e.g., tractors, reaping machines, threshing machines, elevators, dairy machinery.

mechanic, ironmonger's; employed by ironmongers (270) *g.v.* to do jobbing work and repairs for customers, such as repairing kettles or saucepans, fitting or repairing locks, etc.

mechanic, knitter; has charge of a number of hosiery machines, and is responsible for accurate working; alters and adjusts for changes in yarn used and length of loop, i.e., stitch knitted.

mechanic, loom; a maintenance man on staff of textile factory who executes minor repairs to machinery, not requiring its removal to textile machinery factory; is often done by tacker (356) *g.v.*

mechanic, mill; attends to shafting and gearing in mill and carries out small repairs to machinery and plant; usually done by millwright (212) *g.v.*

meter repairer; a skilled mechanic *g.v.* who repairs meters, usually a sheet metal worker (264) or scientific instrument maker (322) *g.v.* with special knowledge of internal mechanism of gas, electric and other meters.

246.—MECHANICAL ENGINEERS', ENGINEERS' AND MECHANICS' LABOURERS.

engineer's labourer, mechanic's labourer; does unskilled labouring work, e.g., lifting, carrying, in connection with maintenance of machinery and plant and assists engineer (244) or mechanic (245) *g.v.* generally, handling up, handling tools, rough filing, etc.

247.—METAL SPINNERS.

bell spinner (brass musical instruments); a metal spinner *g.v.* who takes bell, in rough form, as made by bell maker (304) *g.v.* and shapes it by spinning; may also turn edge over wire to form rim.

brass former, *see* spinner.

spinner, metal spinner; *brass former*; shapes sheet metal hollow-ware, of circular section such as bowls, dishes, covers, by pressing bluntly pointed polished steel tools of various shapes against metal, as it revolves at high speed in lathe, in contact with "former" or mould, fixes metal shape and mould in form of lathe; determines speed of lathe according to size of article to be spun and metal used, by adjustment of gear wheels; sometimes specifically designated, e.g., brass spinner, copper spinner.

248.—MOTOR MECHANICS.

motor cycle engineer; usually a motor mechanic *g.v.* who specialises on solo, hire and repair of motor cycles at a repair shop and/or garage.

motor engineer; general term for skilled workers in manufacture and repair of motor cars, motor cycles, including motor mechanic, motor fitter (210) *g.v.*; often denotes working proprietor or manager of motor repair shop and/or garage, when motor cars are repaired and garaged and also sold and let on hire.

motor mechanic; carries out all kinds of repairs to motor cars, motor cycles and stationary petrol engines; examines engine and chassis, if necessary, from inspection pit; dismantles engine, crank case, differential gear box, or lubricating or lighting system; replaces worn or broken parts, machining, fitting and adjusting them as required; refits and repairs tyres, using vulcanizing plant, if necessary; tools and operations as for fitter (210) *q.v.*; if employed by owner of racing cars, is responsible for tuning and upkeep of cars; may drive cars in races or ride as travelling mechanic with driver, motor repairer; a motor mechanic *q.v.* who works in motor repair workshop.

249.—OXY-ACETYLENE OR ELECTRIC WELDERS AND CUTTERS.

burner, acetylene burner, oxy-acetylene burner; cuts sheet metal, plates and cast iron by directing an oxy-acetylene flame along line to be cut and by melting the metal; burns away rivet heads in same manner.

burner and welder, acetylene; acetylene welder and cutter, welder and cutter; an acetylene burner *q.v.* who also does general welding, *see* acetylene welder.

patcher, patch worker; a welder *q.v.* who repairs breakages or flaws in machinery, *etc.*, by oxy-acetylene or electric welding.

welder, acetylene welder; gas welder, oxy-acetylene welder, oxygen welder; joins or welds iron, steel, *etc.*, using a blow-pipe or burner with an intensely hot flame produced by the burning of a mixture of acetylene and oxygen, uses rod of soft welding metal for melting under flame and running, with flux, between pieces to be welded; cuts or breaks up large pieces, *etc.*, for remelting by melting metal along line with flame; cuts large girders to required lengths; in scrap metal yards, cuts up old boilers for re-melting in steel and iron works.

welder, tank; (i) operates electric roller welding machine in which lapped edges of metal coils are fused and joined; passes metal coil over heated bar of machine and manipulates lever to cause electrically-heated roller to travel over seam or lapped joint; (ii) an acetylene welder *q.v.* who welds seams of metal tank with oxy-acetylene apparatus.

welder, electric welder; (i) operates welding machines of various types *e.g.*, spot welding, roller welding, scrap welding, in which the surfaces of edges of metal are heated to welding point by resistance to electric current and are pressed together mechanically; (ii) operates hand welding apparatus in which a metal electrode is fused by electric current and made to flow into cracks, holes, joints, *etc.*, in castings, or other metal articles; so applies electrode that surrounding metal is also melted and strongly welded joint is made.

welder, gas, see welder, acetylene.

welder, oxy-acetylene; oxygen welder, see welder, acetylene.

welder, rail; an electric welder *q.v.* who welds iron or steel tram rails by electric process.

welder, rim, see welder, wheel.

welder, spot; an electric welder *q.v.* who welds metal surfaces into contact at certain spots, using a spot welding machine.

welder, tube; an electric welder *q.v.* welding pipes and tubes into sockets and joints in boilers, ship's masts, machinery, cycle frames, *etc.*; *cf.* tube welder (256).

welder, wheel; wheel rim welder; rim welder; fuses and welds spliced joint of rim of vehicle wheel, using electric arc welder or oxy-acetylene blowpipe, *cf.* wheel welder (170).

welder and cutter, acetylene welder and cutter, see burner and welder, acetylene.

welder and cutter, electric welder and cutter; an electric welder *q.v.* who also cuts through bar or plate with electric torch.

250.—PICKLERS.

cleaner (cartridge cases); tank head; (i) dips brass cartridge cases in dilute sulphuric acid, by hand, or places cases in boiler on dipping machine, to remove oxide after annealing; washes in water and dries in saw dust; (ii) dips cartridge cases in alkali baths to remove grease and to clean ready for polishing.

cleaner (hollow-ware, iron enamelling, japanning, tinplate, *etc.*); scourer; cleans or scour, by dipping in acid baths and rubbing with tow, sheet metal articles in preparation for enamelling or japanning; *see* pickler, cleaner, sheet cleaner (galvanised sheet); (i) removes sheets singly by hand, or in cradle by hoist, from water bath, where they have been placed by pickler *q.v.*, and places them on platform adjacent to dipper (234) or loader (279) *q.v.*, at advancing machine; (ii) *see* pickler.

dipper, acid dipper, brass dipper; dips brass fittings of all kinds, *e.g.*, unions, taps, lampholders, in acid baths (nitric acid) in preparation for cleaning or polishing, or to give semi-bright finish; washes in water and dries, as for cleaner (cartridge cases).

dipper, link (chains); a pickler *q.v.* cleaning chain links in preparation for galvanising.

dipper (wire), see pickler (wire).
pickler; cleaner, scourer, sheet cleaner (galvanised sheet); removes oxide on surface of metal articles or sheet, in preparation for tinning, galvanising, electro-plating, enamelling, japanning, polishing, *etc.*, by immersing in acid baths and afterwards dipping in water baths to remove excess of acid.

pickler (galvanised sheet); (i) (machine process) dips cradle on which are arranged sheets of iron or steel (boast rack fashion) into a vat of hot dilute sulphuric acid by moving a lever; cradle is mechanically actuated in vat for a few minutes; raises cradle by moving lever and dips it in cold water bath, i.e., water bath, to remove excess of acid; (ii) (hand process) dips sheet into acid vat; agitator consists by means of rod for 10 to 15 minutes; lifts sheets with tongs from acid vat and drops into water bath.

pickler (hollow-ware, enamelling, *etc.*); immerses iron or steel articles, *e.g.*, bowls, cycle parts, taps, in vat or bath of dilute acid, and removes them, when cleaned of oxide, to water bath, using a pickling fork; sometimes also dries articles in sawdust and a vat of air.

pickler (tinplate); (i) as for pickler (galvanised sheet); may be a black pickler working at black pickling vats of stronger acid between hot mills and annealing furnace, to remove black oxide, or a white pickler working at white pickling vats where sheet is cleaned just prior to tinning; (ii) places tin plates on travelling belts which carry them into and through pickling baths, rinsing and drying apparatus; specifically designated first pickler; first hand pickler, if in charge of process and gang; or second pickler, second hand pickler, underhand pickler, if second in command.

pickler (wire); dipper (wire), scourer; dips coils of wire or wire rod, submerged in bath of small tank of overheat brine, into acid tank and rinses in water bath, in preparation for galvanising, coating, card clothing manufacture, *etc.*; if to be further drawn, plunges into lime solution after removal from water bath.

scaler; beats sheet metal with piece of flat iron (wood shaped), after annealing, to remove obnoxious scale, prior to pickling; now obsolescent owing to strength of acid used in pickling.

scaler, copper sheet; plunges red hot copper sheet into water to remove most of scale; where further cleaning is necessary, dips sheet into dilute sulphuric acid or other acid solution, or applies liquid to surface of sheet with a brush of tow; plunges sheet into clean water after it has been heated in a furnace; for special classes of work, plunges sheets cold in a bath of dilute sulphuric acid and washes in a bath of clean water.

scourer; (i) as cleaner (hollow-ware, tin-plate, *etc.*); (ii) *see* pickler, and pickler (wire).

tank head, see cleaner (cartridge cases).

251.—PIPE FITTERS.

coupling connector (waterworks, *etc.*); a pipe fitter *q.v.* who connects with main pipe, services pipes previously laid, repairs jointing by services laves (475) *q.v.*, and disconnects when necessary.

pipe bender, see pipe fitter (ship-building).

pipe doctor, see pipe fitter (blast furnace).

pipe fitter; tube fitter; (i) tube wrought or cast iron, or brass or copper pipes with harkaw, chisel, file or special pipe cutting tool, holding pipe in bench vice; bends pipes on bench with help of mandrel, *etc.*, so required and correct ends with stock and die and fits into position in joints, sockets, L-bends, Tee-pieces, *etc.*, for electric light, power, heating, gas, water, *etc.*, systems; joints by screwing together with caulking composition or flangeing in molten lead to make water tight; repairs and refits system; (ii) *see* pipe joiner (locomotives); sometimes specifically designated, *e.g.*, hot water pipe fitter.

pipe fitter (blast furnaces); pipe doctor; a pipe fitter *q.v.* who erects, repairs, *etc.*, pipes conveying hot air to and from blast furnace; also attends to water pipes, turbines, steam pipes, furnace fittings, *etc.*

pipe fitter (shipbuilding); pipe bender; a plumber (323), copper smith (327) or engineer (344) *q.v.*, according to class of pipes, fitting pipes in ships.

pipe fitter's mate; assists pipe fitter *q.v.* generally; helps in handling heavy tools and pipes, in cutting pipes with chisel, tank saw, or pipe cutting ratchet tool, screwing ends, holding up work, *etc.*

pipe joiner (locomotives); pipe fitter; a pipe fitter *q.v.* who scours, fits and braces various pipes built into railway locomotives; *cf.* tube smith (327).

pipe joiner, sprinkler; sprinkler fitter; a pipe fitter *q.v.* who erects pipes of sprinkler apparatus by which a room or factory is automatically flooded should fire occur.

sprinkler fitter, see pipe joiner, sprinkler.

tube fitter, see pipe fitter.

252.—PLUMBERS (not Chemical Plumbers).

meter fitter (water works); a plumber *q.v.* who fixes and joints all fittings, i.e., taps, meters, *etc.*, in connection with service.

plumber; works mainly in lead; fits, joints and repairs lead, iron or steel pipes for conveyance of water or drainage in buildings, ships, railway coaches; cuts piping with chisel or hacksaw; bends by inserting a flexible mandrel or by first filling lead pipe with resin or sand to prevent buckles; makes lead joint by wiping molten lead over joint; screws ends of iron piping with stocks

and dies and caulk joints with lead; inserts and sets traps and cools; installs flushing apparatus, automatic or lever; sometimes specifically designated, e.g. sanitary plumber, ship's plumber.

plumber and gas fitter (235) *q.v.*

three branch hand; a man who can undertake plumbing, painting and glazing.

water fitter; fixes and connects pipes for conveyance of water; usually combine duties of plumber and hot water fitter (245) *q.v.*

253.—PLUMBERS' LABOURERS.

lead burner's helper; assists lead burner (342) *q.v.*, cuts lead sheet with shears, hammer and chisel; holds up work; generally fetches and carries material and tools; is usually an apprenticed chemical plumber (247) *q.v.*

plumber's labourer, plumber's mate, assistant plumber (252) *q.v.*; carries tools and helps them when necessary; fills blow lamp with spirit, lights and prepares it for use by plumber, must know different kinds of pipes and names of pipes; gets material for gutters, etc., on to roofs.

water fitter's mate; assists water fitter (252) *q.v.*; holds tools, cuts and screws pipes, with hack saw, pipe cutting tool, stocks and dies.

254.—PRESS WORKERS AND STAMPERS (not Hot or Hydraulic); DRAWERS (not Wire or Tube).

armature die notch and stamper; a stamper *q.v.* who feeds various shapes of armature discs into automatic machine which stamps out notches; watches proper working of machine and places notched discs in a stack.

beader (tin boxes, etc.); a press hand *q.v.* who places machine folded body of tin (see former, body) on block of beading machine and operates lever to form a beaded edge for seaming on top or bottom, etc., or as finish to top; removes box after the bead or rim has been formed.

boot rivet maker, see **cutler**, **boot rivet**.

bottomer, see **seamer**, **double**.

brad maker; a nail maker *q.v.* making brads, thin small nails of some thickness but tapering in width from head to point.

bolt cap maker (fisher rods), a draw brad, thin small nails of some thickness of fishing rod sections.

candle maker; a drawer *q.v.* who presses out a candle heading called candle, used for candle edging, etc.

cap maker (electric lamps); a draw press hand *q.v.* making brass caps for electric lamps in a die press.

case maker (cartridges); a press hand *q.v.* operating a power press which stamps out metal cartridge cases.

caulker maker, see **clug iron maker**.

channeller; a stamper *q.v.* operating a power machine which stamps out channel sections from strip metal; may alternatively roll strip between flange rollers.

chipper (fish hooks); roughly forms points on fish hooks after they have been flattened, by holding under kick stamp.

circle hand, see **cutler**, **circle**.

clock key maker; a stamper *q.v.* operating a power machine which stamps out clock keys or their convenient parts.

clug iron maker; **caulker maker**, **clug iron maker**; a stamper *q.v.* stamping out clug iron, by operating a power stamping press.

coiler, coiling press operator, coil maker, see **stamper**, **coil**.

cracker (pens), see **piercer** (pens).

crosser (clang), see **squasher** (edge tools).

cut nail and spring maker; nail maker *q.v.* making cut nails and brads (springs) from sheet metal.

cutler; **cutter-out**; operates a press stamping machine, cut out from sheet or strip metal or rod, special shapes required for making clug iron, button centres, metal bedstead laths, pens, etc., inserts sheet metal between guides and moves lever with hand or foot to apply power; sometimes specifically designated, e.g., bar and pen cutler, clug iron cutler, leaf cutler, linen knives cutler, sucking cutler (bedstead laths), shoe tip cutler, tea pot cutter-out.

cutler, boot rivet; **boot rivet maker**; fixes cutting tools, dies and gauges, and adjusts and repairs automatic rivet cutting machine; supervises efficient running; may also make necessary dies for use in machine, cf. **die cutter** (252).

cutler, centre (pens), see **piercer** (pens).

cutler, circle; **circle hand**; a cutler *q.v.* pressing out circular shapes from sheet metal for lids, trays, etc.

cutler, nail, see **nail maker**.

cutler, nail blade; a stamper *q.v.* who cuts out pen knife and pocket knife blades with an indentation for the finger nail; may also grind edge in grinding machine.

cutler, shoe bill; **shoe bill maker**; a nail maker *q.v.* stamping out shoe bills, i.e. small brads used by shoemakers.

cutler, sparrow bill; **sparrow bill maker**; a nail maker *q.v.* stamping out sparrow bills, i.e., small brads used by book and shoe makers.

cutler-out, see **cutler**.

cutler-out (cutlers); cuts off by press or guillotine, fish or flange left on blades after forcing or stamping.

cutler-out, section (machine knife); marks out steel sheets from tenon plates; stamps, presses or files out blanks of knives for agricultural cutting implements; cf. **machine knife cutler-out** (278).

drawer (not wire or tube), **draw press hand**, **draw press worker**; operates power press which draws out through dies, presses and cuts off brass or other metal tube to form cartridges; carries electric lamp caps and holders, tubes, ferrules, etc.; inserts tube and moves lever with hand or foot to apply power; sometimes specifically designated, e.g., brass cartridge case drawer, envelope drawer (bullet), gas burner drawer, steel drawer, turbine blade drawer.

embosser; **ornamentor**; a press hand *q.v.* operating a power press which produces a raised design or ornamentation on metal articles.

expander; a press hand *q.v.* who expands or increases internal measurement of sheet metal article or annular forcing by placing it under machine press tool.

feeler maker; a press hand *q.v.* who feeds and stamps automatic machine making feelers from sheet brass.

flyer, **eye maker** (needles); **puncher**, **eye puncher**; sets up, feeds and controls fly press which pierces eye holes in double needle blank; **oboliscant** see **stamper**, **needle**.

fancy tin worker; a press hand *q.v.* who operates a power press which stamps and presses out articles of tin, e.g. tins or fancy cake tins, sold in small ware trades.

flanger; a press hand *q.v.* who stamps a flange on edge of sheet metal, e.g., one body of tin box or canister for seaming.

flyer, blade; **flyer-out**; a fly press worker *q.v.* stamping out blades of cutting tools and cutlery from sheet steel.

flyer (fishing tackle); a fly press worker *q.v.* stamping out metal parts of fishing tackle.

flyer-out (cutlery), see **flyer**, **blade**.

flyer tube blocker; a press hand *q.v.* who inserts lining or roving barrel into flyer and closes its hollow tubular arm or leg, by placing in a hand press.

former, body; **draw former**; a press hand *q.v.* who feeds and operates machine which rolls or presses bodies of tin boxes, canisters, etc., into required shapes; sometimes more specifically designated, e.g. automatic body former.

former, box; (i) see **former**, **body**; (ii) a press hand *q.v.* who feeds and operates a power press which stamps out seamless tin boxes, canisters, etc.; **former, brass former**; a press hand *q.v.* who operates a power press which forms from blanks, stamped or pressed brass metal parts, in readiness for further embossing, etc.; cf. **brass former** (247).

frame maker (cycles); a press hand *q.v.* who presses out frame of cycle frame, e.g., ball head lug, fork crown, seat lug, bottom bracket, back fork ends.

gas burner reducer; a drawer *q.v.* operating a power press which shapes reducing parts of gas burner.

hater (metal washers); a stamper or fly press worker *q.v.* who cuts metal washers out of sheet metal.

hook maker, **hook and eye maker**, see **stamper**, **hook and eye**.

klacker (die), **die klacker**, see **stamper**, **klacker**.

lagrella maker; a press hand *q.v.* who makes lagrella fasteners of steel for connector ends of machine belting.

lever worker; a fly press worker or general press hand *q.v.* operating press by pulling lever.

machine attendant, **machine hand**, **machine minder**, **machine operator**, **machinist**; general terms for workers on power-driven presses and stamps; duties vary according to machine, but operations usually consist of placing sheet metal or partially formed sheet metal article against gauges in bed of machine and releasing press or stamp by means of hand lever or foot treadle; removes article by hand, if not automatically ejected by machine; does not usually set or adjust machine, which work is done by machine tool setter (211) *q.v.*; sometimes specifically designated, e.g., canister maker, machinist, chain making machine, (cycle) circle machine attendant, nail machine minder, capcase making machinist, safety pin machine hand.

marker (pens); a stamper *q.v.* applying trade marks and other imprints to stamping pens.

medallist, **medal striker**, as for **stamper**, **coin**.

nail machine minder (stamped nails); **nail maker**, **nailer**; (i) a cutler *q.v.* who feeds cut nail making machine with strip iron or steel; (ii) **nail presser**; a press hand *q.v.* who feeds machine press with sheet metal or wire; sometimes specifically designated, e.g., wire nail machine minder, **nail maker**, **nailer** (stamped nails); **nail cutler**; (i) sets up cut nail making machine, making necessary hand adjustments of cutting tools, feed mechanism, etc.; (ii) supervises working of machine, if automatic, and nail machine feeders (279) and minders *q.v.*, if semi-automatic; (iii) see **nail machine minder**.

neckard-in; a press hand *q.v.* who attaches necks to tin boxes, bottles, canisters, etc., by machine seaming, see **neckard-in**, **neckard** (262).

notch maker (washers); a stamper *q.v.* who makes metal notch or disc into which ribs are fitted.

ornamentor, see **embosser**.

perforator; a press hand *q.v.* perforating metal rod, sheet, strip or articles.

petrol can maker; general term for press hands making petrol cans, including beader, cutter-out, former, flanger, seamer *q.v.*

piercer; a stamper *q.v.* operating press stamp which pierces holes or

holed design in metal, sometimes specifically designed, e.g., brass piercer, curly comb piercer, key piercer, sword hilt piercer.

piecer (pens): *centre cutter, cracker, side stiffer*; a press hand g.v. operating a semi-automatic power press which pierces holes in pens and also cuts side slits.

point splitter (pens), *see* **stiffer** (pens).

presser, **presser-out**, **press head**, **press operator**, **press worker**; **machine presser** (from *holder-up*): general terms for workers operating hand or power machine which presses sheet metal, rod or wire into shape in metal dies; usually feeds metal sheet or pieces of metals, previously cut to shape (see *cutter*), under press between guides and applies power by pulling or kicking lever or by pressing treadle; may simply feed automatic press by placing blanks in feed hopper or roll of sheet or strip metal on feed roller; otherwise pressed articles by hand if these are not automatically ejected by machine; in some cases acts up machine with appropriate dies; sometimes specifically designated, e.g., buckle presser, carriage presser-out (textile), comb presser-out (textile), detonator presser, key presser, nail presser, sinker press hand, steam press worker.

presser, machine (from *holder-up*), *see* **presser**.

presser, nail, *see* **nail machine**.

pressman, rim (motor); a press hand g.v. operating a power press to stamp out spoke holes on rim of wheel.

press stamp worker; a press hand g.v. operating a press stamp with cutting die which cuts out end of sheet and presses into shape in die.

press worker, **2y**; **hand press worker**; operates by press for pressing or punching small metal articles; sets sheet metal between guides on top of machine; power round wish hand overbed levered or heavy hand on horizontal arm to cause cutting die to descend on metal; may pull string or lever to operate press.

press worker, power; **power press hand**; a press hand g.v. operating a power press as distinct from a hand or 2y press.

puncher, **eye puncher** (needles), *see* **eye** (needles).

puncher, **press press worker**, *as for* **stamper**, sometimes specifically designated, e.g., machine knife puncher, scissor puncher.

puncher, spring; a press hand g.v. who pierces and punches steel springs for rolling stock; cf. **spring stinger** (200).

ralser, rounder (pens); a press hand g.v. feeding flat stamps into dies of semi-automatic power press which gives them a rounded shape.

seamer, **seaming machine operator**; a press hand g.v. who places tin boxes and iron hollow-ware, which have been previously flanged (see *flanger*), on holder of power press and operates press to form seams.

seamer, double; buttseamer; a seamer g.v. who operates a seaming machine which makes a double turned seam for greater tightness.

shaper (pens); a cutter g.v. making steel blanks from sheet metal.

shell cupper, *see* **stamper**, **shell**.

shoe bill maker, *see* **cutter**, **also **bill**.**

slitter (pens); **point splitter**; a press hand g.v. who splits points of steel pens with a fine precision press tool.

slitter, side (pens), *see* **piecer** (pens).

sparrow bill maker, *see* **cutter**, **sparrow** **bill**.

splitter (needles); splits heads of needles on kick stamp in process of making calyx-eyed needles, a special kind of sewing machine needle with eye at top.

spring case maker; a press hand g.v. who presses out from sheet metal, spring cases for pistols, rifles, etc.

squabber (edge tools); **resser** (slows); a drop stamper g.v. who crosses or strikes a rib on an edge tool, e.g., box.

squarer (needles); a stamper g.v. who stamps round section wires to triangular section on power stamp for glove maker's or nail maker's needles.

stamper (not hot or hydraulic), **die stamper**, **metal stamper**; **stamping press hand**; general terms for workers operating stamping machines, which cut out or press into shape, sheet metal, wire or rod, under a weighted cutting or shaping die which drops under gravity, or is thrust down sharply by power, as distinguished from the more slowly moving press; feeds sheet metal, etc., under stamp between guides and operates stamp by pressing foot treadle or pulling or kicking strap or lever; may also set up stamping machine by inserting appropriate cutting or shaping dies; sometimes specifically designated, e.g., buckle stamper, brass stamper, chair nail stamper, coin stamper, eye stamper (needles), ferrule stamper, gun metal stamper, hilt stamper, key stamper, needle stamper, oval stamper, split ring stamper, table blade stamper, zinc cash bar stamper.

stamper, coin; **coiner**, **coining press operator**, **coin maker**; a stamper g.v. who stamps and presses coins, medallions, or badges between engraved dies in a power stamping press.

stamper, drop; a stamper g.v. operating a drop of gravity stamp, as distinct from a machine in which the stamping die is thrust down by power, to stamp out disk covers, pan handles, ladles, etc.; cf. **drop stamper** (100).

stamper, eye, *see* **stamper**, **needle**.

stamper, hook and eye; **hook maker**, **hook and eye maker**; feeds with wire and strip or sheet metal on automatic press stamp which makes hook and eye.

stamper, kick; *the kicker, kicker*; a stamper g.v. operating a stamping machine by kicking a lever or pressing his foot against a strap.

stamper, needle; **eye stamper**; sets up, feeds and controls machine which automatically stamps out centre of wires (the length of two needles) and impresses two oval dents close together on both surfaces thus flattened, in preparation for eyeing, set eye, or completely shapes head and end of needle in one operation.

stamper, shell; **shell cupper**; a stamper g.v. who shapes brass sheet blank into cap or basin in first operation of forming brass shell cases up to 8 inches.

stamper and piercer, **die stamper and piercer**; a stamper g.v. operating a stamping press in which the die both punches and pierces the metal, e.g., badges.

stamping press hand, *see* **stamper**.

stamping, as for **nail maker.**

stitch maker; a nail maker g.v. who sets up and sometimes operates a power press which makes a cut nail called a tingle.

toothed, saw toothed; a press hand g.v. cutting out teeth from cast blanks; sometimes specifically designated, e.g., hand saw toothed.

turn over; a press hand g.v. who turns over edge or flange, usually of blank of a metal article.

watch key maker, *as for* **clock key** **maker**.

255.—RIVETERS.

eye riveter; a machine riveter g.v. who rivets stems to mudguards, lubricator clips over oiling holes, and other small accessories to wheels.

hand riveter; a riveter g.v. working with a hand hammer. usually works in dual spread either as right hand or in right or left hand, i.e., using hammer in right or left hand, and is assisted by holder-up and rivet catcher (250) g.v.

holder-up, holder-on, riveter's holder-up, **riveter's holder-on**; (i) inserts but rivets with tools into rivet hole, when this is not done by catcher (250) g.v., and presses heavy hammer or dolly against rivet head whilst other end of rivet is being hammered by riveter g.v.; (ii) manipulates apparatus of machine hammer for holding rivets in place and arranges gage to form a rigid backhold for them while they are being hammered.

hollow-ware moulder, hollow-ware riveter; a riveter, usually a machine riveter g.v., who operates a riveting machine or riveting press to fasten handles and other fittings to hollow-ware.

hydraulic riveter, hydraulic riveter attendant; a machine riveter g.v. operating head of riveting machine, the hammer of which is actuated by hydraulic power, and is applied to head through flexible pipes.

inside riveter; a riveter g.v. working on interior structure of a ship.

leverman riveter, *see* **steam riveter** **attendant**.

machine riveter, riveting machinist; a riveter g.v. who controls head of riveting machine; holds hammer against rivet end and applies power (hydraulic, pneumatic or steam) to hammer by pressing trigger lever; **pneumatic riveter, pump-pump riveter**; a machine riveter g.v. using riveting machine driven by compressed air, fed to hammer head through flexible pipes.

riveter; makes rivet (usually red hot, but sometimes cold) fast in position, by hitting it repeatedly and rapidly on end with a hand or power-driven hammer, in order to spread or "mushroom" the rivet end and so lock it tight in hole through plate or more plates; is assisted by holder-up and rivet catcher (250) g.v.; sometimes specifically designated according to tool used, article riveted, etc., e.g., hand riveter, hydraulic riveter, pump-pump riveter, bridge riveter, boiler shop riveter, boiler riveter, forcing riveter, girder riveter, iron wheel riveter, powder canister riveter, salt pan riveter, telegraph tubing riveter.

riveting machinist, *see* **machine riveter**.

shell riveter; a riveter g.v. working on outside or shell plates of a ship.

stay riveter, **stay hole riveter**; a riveter g.v. who rivets in position copper stays of locomotive boilers.

steam riveter attendant; **leverman riveter**; a machine riveter g.v. who operates a riveting machine driven by steam power.

256.—RIVETERS' LABOUREES.

assistant holder-up, *see* **hammer**, **hammer-up**; **assistant holder-up**, **assistant holder-up** (250) g.v. of riveting squad, where assistance is required on heavy work or in awkward places, by knocking up holding-up beginner with hammer.

catch boy, catcher, catcher boy, *see* **rivet catcher**.

heater, heater boy, *see* **rivet heater**.

rivet boy; (i) works bellows for rivet heater g.v. and throws or passes the rivets to riveter (250) or to rivet catcher g.v.; (ii) a boy employed as rivet carrier or as rivet heater g.v.

rivet carrier; **rivet heater**; carries hot rivets in shovel or tongs from fire to riveter or to holder-up (250) g.v. in riveting squad.

rivet catcher; **catch boy, catcher, catcher boy**; catches or picks up, in tongs, hot rivets thrown to him by rivet boy g.v. or by rivet heater g.v. and passes them to riveter or to holder-up (255) g.v. in riveting squad; sometimes also inserts them in rivet holes.

rivet counter; counts rivets, placed in position by riveters, for purpose of cost and wages calculations.

riveter's helper; **riveter's labourer**; general terms for workers assisting

fitter, beam; scale beam **fitter**, see beam maker.

fitter (scales and weighing machines), weighing machine **fitter**; makes up and fits together counter or stand weighing machine, beam balance, platform machines, and other heavy types of weighing machines, from castings and machined parts; operation as for **fitter** (260); sometimes specifically designated, e.g., dial weighing machine **fitter**, spring line weighing machine **fitter**, weighing **fitter**.

fitter, steady, see steady maker, repairer, scale repairer, weighing machine repairer; a **fitter** g.e. engaged in repair work, either in factory or repairs depot, of customers' premises; replaces worn knife edges or files them sharp again; adjusts proportional weights; may dismantle machine and replace broken or bent levers, etc.

scale maker, counter scale maker, counter scale and balance maker; makes up from machined and manufactured parts, scales, French balances, and other scales and counter weighing machines, such as are found in stores and retail shops; fits and adjusts bearings and tests balance with standard weights; uses vice, files, screwdriver, and various hand tools at bench.

scale pillar maker; makes up pillar and stand from cast and machined parts for scales and steelyards; fits parts together with bolts and screws and files where necessary, using hand tools at bench.

steady maker; **steady fitter**; or for beam maker; measures and marks divisions on yard and cuts marks and figures with file and steel punches; adjusts steady on pillars carrying them.

tester, weighing machine tester, see adjuster, weighing machine.

weighbridge maker; a **fitter** g.e. who specializes on fitting and erecting weighbridges.

weighing machine maker; a weighing machine **fitter** g.e. who is experienced in all types of weighing machines and also able to adjust them, see adjuster; sometimes specifically designated, e.g., automatic weighing machine maker, dial weighing machine maker, visible weighing machine maker.

woffler; slang term for a repairer g.e. engaged in adjusting and repairing scales and weighing machines on customer's premises, either working on own account or for manufacturer.

261.—SIGNAL LINEMEN.

chief linesman; working head of a gang of signal linemen g.e. for construction or maintenance of wiring for railway signal system throughout specified area; responsible for wiring, connections, etc., between signal box levers and signals, points, etc.; cf. signal chieftain, and chief linesman (railway telegraph) (211).

signal chieftain, see chief linesman, works under workshop conditions as distinct from Railway Conciliation Agreement conditions.

signal fitter, see signal linemen.

signal linemen; signed **fitter**; usually one of a gang engaged in periodic inspection and repair of lines of wire, etc., connecting signals with signal boxes, or on construction of new signal lines; is able to fit up, repair or replace all parts (wire, rods, joint castings, pulley wheels) between box levers and signals.

262.—SOLDERERS AND BRAKERS.

braker, brasher; **hard solderer**; joins together parts of steel, iron, brass or copper articles by brazing or hard soldering; cleans surfaces to be joined; heats parts with gas flame and blow pipe, applies a flux and finally brass filings or filings of another copper alloy appropriate to the article to be brazed; after jointing, smooths joint

with bit and when cold, with file or on an emery wheel; sometimes specifically designated according to metal or article to be brazed, e.g., barrel braker, copper braker, cycle braker, frame braker, brass braker, iron braker, tube braker, wire braker.

braker, chassis frame; a braker g.e. who brazes together parts of motor chassis frames; brazes on hubs, brackets, etc., and fills up blow holes and peckets in metal parts of frames; may also do odd tinmithing jobs on car accessories.

braker, frame (cycles); **cycle braker**; **heater**; heats frame, forks, etc., of cycles to red heat; pours on joints first powdered brass and then brass filings, which melt and fill up crevices, thereby welding parts together.

braker, iron; a braker g.e. who brazes or welds together joints or broken parts of iron or steel ware, using spelter or brass as a solder.

braker, wire; brazes ends of conductors in cables, which have already been correctly linked together by cable splicer (269) in preparation for covering them with insulating material, also welds steel tapes, used with some paper- or lead-covered cables; cf. wire welder (268).

braker, and plateworker, copper; cuts and shapes, with hand tools, sheet copper or brass accessories for cycles and motors, and brazes (see braker) or rivets, see riveter (263), component parts together.

braguer; a solderer g.e. who hermetically seals the ends of metal after covering process is complete, by soldering over leakage hole left for escape of air and steam while tube is in pressuring vessel.

bender (cycles), see braker, frame.

becker, necker-in; a solderer g.e. who puts together and solders bottles, etc., to bottles; cf. necker-in (254).

solderer; joins together component parts of metal goods by melting between the surfaces with a copper bit, using very hot, a metal alloy or a soft solder of lead and tin or brass; previously prepares the article to be soldered by filing or scouring to produce a clean surface and means on a chemical "flux"; works in most metal trades, and in other trades which involve working in tin, and consequent soldering of lids, in hermetic sealing, sometimes specifically designated, e.g., brass solderer, brass tube solderer, comb needle solderer, hard solderer, kettle solderer.

solderer, hard, see braker.

soldering machine minder; controls soldering machine minder; handles operating soldering machine which hermetically seals time containing food; regulates gas supply and maintains feed of solder and flux periodically; places tin in position by machine and removes when this is done; operates automatically by conveyor or revolving platform.

sweater, tinner; a solderer g.e. who unites two pieces of flat metal by coating them with tin, heating them to melt tin, and pressing surfaces together.

tinner, see sweater; cf. tinner (263).

263.—TINNERS.

binding band solderer, see coil tinner.

coiler (tinplate), see tinner.

coil tinner; dissolving band solderer; covers with a coating of tin, usually dissolving from band of wire round round armature coils.

copper tinner; a tinner g.e. who coats with tin, copper kettles, pans, and other cooking utensils, by dipping process; carefully cleans surface to be tinned; anneals with or dips in flux and then in pot of molten tin, if needed it is to be tinned only inside, while molten tin rapidly runs to cover interior of pan, and pours out excess tin.

grease tinner; a tinner g.e. who coats with tin pans used for catching grease in cooking stoves.

tinman, tinner, tinplater (tinplate manufacturer), **copper** (tinplater); stands in front of pole on tinning machine and feeds sheets one at a time, downwards, through flux and covering layer of palm oil into molten tin; is responsible for putting tinning materials in pots of machine, and for smooth running of plant.

tinner (bottle-ware goods); coats bottle-ware goods with pure tin, tin and lead mixture, or pure lead; prepares articles by passing them through both of these (sometimes preheating cleaning them with acid), dips them in vat of molten tin, etc., and then in bath of palm oil, in coating flask-locks, suspends books in an electrolytic bath, to avoid too thick a deposit of tin on the books; cf. tinner (265).

tinning machine driver; **wire tinner**; attends tinning bath and machine which tins wire for use in electric cable making; places coils or drums of wire on swift or spindles at side of tinning machine and of wire through tinning bath and fastens to rewinding drum or spindle; adds metal to tinning bath as required and regulates temperature of molten metal by gas valves.

264.—TINSMITHS; SHEET METAL WORKERS.

bender, bending maker; cuts and bends a length of brass or metal, by drawing through die on draw bench, file the tube or trough thus formed by pouring in molten lead; draws again through die on draw bench; drills and taps screw holes, if necessary.

beam maker; a sheet metal worker g.e. who makes burrles for brass toe lace machines from template or sheet metal, and finishes them to shaft; cf. band turner (486).

bender, panel bender; **panel maker**; shapes, by beating over a block with hand or machine hammer, sheet metal into various shapes according to pattern, e.g., panels for motor cars.

bell maker (brass musical instruments); cuts flat sheet of brass or copper to size and shape required, with hand or machine shears, and beats it out into shape for cornets, trumpets, etc., with a hammer on a mauler, if bell is not all in one piece, brass parts together, cf. braker (262).

board maker, bobbin (metal); top **creel board maker**; (1) a sheet metal worker g.e. who makes supports, or "boards" for bobbins and pins, for use in textile machinery; (2) a sheet metal worker g.e. who covers bobbin boards, pins, heads, and creel boards with sheet metal.

bonnet maker (motor car); a sheet metal worker g.e. who bends sheet metal to bonnets and patterns and sets by hand or machine; or by machine; solders wire to edges for stiffening purposes, also solders or rivets on hinges, handles, etc.

boxer-up (kegs, drums); assembles cylinders and heads of kegs or drums and fits iron hoops, using hand hammer; closes seams round top and bottom edges by passing between vertical revolving wheels of sewing machine.

brass shell maker (drums); bends brass shell metal into cylindrical form, braces joint, turns edges over wire, and smooths them with a small wheel machine called a **ponny**.

bucket maker; **bucket**; **poil maker**; a sheet metal worker g.e. who cuts out, makes up, rivets together and solders, brackets or rails from stamped sheet metal.

canister maker, tin canister maker; on bag maker; puts together stannum, dyed, or tinned or painted of canisters or tin boxes and solders joints to make them watertight; usually works

on tin boxes of large type and specially designated according to kind of article, e.g., grocer's canister maker, tea canister maker.

can maker; rolls into form, and rivets or solders, stamped parts of cans; sometimes specifically designated, e.g., beer can maker, milk can maker, oil can maker; riveting can maker, collar can maker, water can maker.

carriage roller maker (textile machinery); a tinsmith *q.v.* who makes, or builds up, "tin roller" or tinplate sections of rollers for carriage of a mule spinning machine.

case maker (metals); a tinplate worker *q.v.* who makes cases for gas or water meters.

case maker, tin, see *liner*.

dieter maker; a sheet metal worker *q.v.* who makes dieters from sheet metal; cuts sheets in shearing machine, bends them in bending machine, drills or punches holes for rivets; rivets sides to strengthen corners with riveting machine, see machine riveter (250).

coffee pot maker; a tinsmith *q.v.* who specializes in making coffee pots and similar utensils.

cooking utensil maker; makes cooking utensils by (i) assembling partly stamped component parts, and riveting, soldering, and making them up, (ii) spinning them on a lathe, from sheet iron or other metal, (iii) stamping and pressing them from sheet metal; cf. press hand, stamper (264).

cutler; cutter-out (sheet metal); cuts blanks from sheet brass or other metal under guillotine or power shears; sometimes specifically designated, e.g., tin cutler.

cutler, panel; panel maker; cuts and shapes by machine, sheet steel panels for railway carriage doors, sides, etc.; measures and marks sheet for cutting; places sheet under knife of power-driven cutting machine; passes electric between rollers of shaping machine; marks out and drills or punches holes for screws in drilling machine.

cylinder end maker; a sheet metal worker *q.v.* who makes ends of cylinders (either than those which are cast) used in textile machinery.

cymbal maker; spins and turns sheet metal on lathe to form common varieties of cymbals, drills out hole in centre.

dairy utensil maker; a sheet metal worker *q.v.* who cuts out, rolls, bends, and shapes tin or zinc plate and so makes utensils, for use in dairies, etc., by riveting and soldering with cast parts, e.g., pail bases, handles.

drawer maker (saws), see *fittings maker*.

drum maker, drum and keg maker; key maker; (i) a sheet metal worker *q.v.* who cuts out, rolls and shapes sheet metal, rivets seams and fits brass and end flange, punches, and lugs; (ii) (where work is specialized) general term for semi-skilled workers engaged on drum and keg making, including cutter, solder (270), roller (270), groover (270), press hand (264), heater, and tapper (270), mender (262), tryer (273) *q.v.*

drum maker, see *pipe maker, air*.

fittings maker (saws); drawer maker, *sofe fitter*, a sheet metal worker *q.v.* making internal fittings of saws throughout, e.g., drawers, cupboards, shelves, may also fit drawers, etc., in place in saw.

iron and tin plate worker; a sheet metal worker *q.v.* who can work both in iron plate and tin plate.

iron plate worker; plater, sheet iron stretcher (textile machinery), sheet iron worker; cuts and drills, or bends into shape, with machine shears, drills, bending machine, punches, and rollers, thick ironplate for boilers, ovens, doors, walls, etc.; for workers in thin metal plate, see *sheet metal worker*.

leg maker, see *drum maker*.

kettle maker; a tinplate worker *q.v.* who assembles, by riveting, seaming, or soldering, various stamped, spun, and pressed metal parts to make a kettle.

lamp maker; a sheet metal worker *q.v.* who assembles and solders together component parts of motor, cycle, carriage, etc., lamps; sometimes specifically designated according to kind of lamp made, e.g., carriage lamp maker, cycle lamp maker, motor car lamp maker.

lining, packing; case liner, lining maker; tin case maker, tinman; cuts sheet tin, zinc or lead to fit, as lining for wood or metal boxes, by means of treadle guillotine or hand shears; joins sides by soldering, and drops lining into box or case; turns flange over top edge of box or case; sometimes also solders on lid of tin or zinc, when box is packed.

meter maker, gas; a tinplate worker *q.v.* engaged in making bodies of gas meters; sometimes specifically designated, e.g., wet gas meter maker.

meter repairer, gas; a gas meter maker *q.v.* engaged in repairing bodies of meters; repair of recording and checking mechanism is done by gas fitter (236) *q.v.*

panel maker, metallic pail maker, see *tin worker*.

panel maker; (i) see *baster*; (ii) see *center, panel*.

powterer; makes pots, dishes and other vessels from sheet pewter (mixture of tin and lead, tin predominating), by the processes of a sheet metal worker *q.v.*; may also shape pewter articles by spinning on a lathe; may fix pewter trays and spirit pipes in a public house.

pipe maker, air; sheet worker; a sheet metal worker *q.v.* who makes air shafts from sheet iron or steel by bending it into circular, square, or other cross-sectional form, and riveting seams, erects section of pipe in position and joins it to sections of pipe shaft already erected by riveting.

pipe maker (organ); (i) casts a metal alloy of tin, lead and zinc, mixed in prescribed proportions; casts out pieces of metal to scale and flat of pipe required; (ii) rounds cast metal on a mandrel, and solders edges and other parts together.

planisher; operates high-speed, power-driven, planishing moulder, which removes all dents, creases, and irregularities, polishes and puts fine finish on metal articles; turns metal about on table of machine as necessary, also, with hammer or wheel, perforates, raises, presses, bevells, mixes, and performs other similar operations in sheet metal.

plater, see *iron plate worker*.

plater, last; boot last plater; cuts out metal plate with hand shears; moulds on sole-moulding machine; grinds edge on anvil; fits to last of last with nail or screw.

scale pan maker, scoop maker, scale; scoop maker; cuts, bends, and rivets, by hand, or stamps out under a power press, pans and scoops for counter scales; bends and solders edge over wire for rim strengthening purposes.

sheeter, steel; zinc sheeter; a sheet metal worker *q.v.* cutting and preparing steel or zinc sheets for use in covering boiler clothing.

sheet iron smith; a sheet iron worker *q.v.* who shapes pipes, ducts, etc., with hand tools on an anvil; welds and rivets seams and joints.

sheet iron stretcher (textile machinery), sheet iron worker, see *iron plate worker*.

sheet metal worker; general term for a skilled craftsman who works in thin sheet metal, i.e., zinc, tinplate, galvanized iron; marks out metal from template or dimensioned sketch and cuts it by hand or power shears, or treads guillotine; shapes it, by

hand with hammer, mallet and forming blocks or rolls, or by pressing in pressing or stamping machine, see pressman (266); sometimes shapes by pressing sheet between appropriately shaped power-driven rollers or by bending in bending machine; makes joints by various methods according to article produced; may bend and hand edges of seam in seaming machine, or rivet overlapped joint by first drilling or punching holes in drilling or punching machine and then riveting in riveting machine or by hand with hammer; may weld or solder joint, see welder (190) and (249) or solderer (249); attaches handles and other cast or machined fittings by riveting, soldering, etc., to make required articles, e.g., domestic and culinary utensils, motor body parts; for worker in thick sheet metal, see *iron plate worker*.

sheet worker (metal); a sheet metal worker *q.v.* working on sheet metal work of carriages, etc.

spout maker (cannon); a sheet metal worker *q.v.* making spouts of sheet iron for conveying cement into bins in warehouse, cf. spout maker (474).

tin box maker, see *canister maker*.

tin hollow-ware maker; a tinplate worker *q.v.* who makes up from tinplate or sheet tin, articles of hollow-ware, e.g., water cans, coffee pots, spoons, kettles, cooking utensils.

tinker, travelling tinker; (i) a tinsmith *q.v.* engaged upon repairing household utensils, and in sharpening cutlery; solicits work from house to house, travelling with a large assortment of goods, soldering, soldering pot, etc., or, in country districts, to a caravan, which often also carries miscellaneous articles, such as tinware, brushes, baskets for sale; (ii) a tinsmith *q.v.* on board ship.

tinker, brass; a tinker *q.v.* who specializes in work on and repair of brass and copper articles.

tinman; a tinplate worker; (i) see *liner*.

tinplate worker, tinsmith, tin worker; tinman; a sheet metal worker *q.v.* who works in tinplate, i.e., sheet steel coated with tin, cutting, rolling, raising, hollowing and shaping tinplate, and closing rims, soldering, seaming, or riveting joints of articles, e.g., domestic utensils, and cans for food preserving.

tray maker, tin tray maker; a sheet metal worker *q.v.* cutting, bending, soldering, or riveting metal trays.

trunk maker, iron; tin trunk maker; a sheet metal worker or a tinplate worker *q.v.* making travelling trunks from sheet iron, or tinplate, by cutting, shaping, riveting, etc.; fits hinges, locks, and other fittings.

tube maker (brass musical instruments); cuts flat sheet of brass or copper into strips of required size and shape; forms the strips into a straight or tapered tube by lapping metal strip over a steel mandrel, and joining seams with spelter solder.

urn maker; a sheet metal worker *q.v.* who assembles, spins, pressed, and turned metal parts of an urn, by riveting, soldering, or brazing; works in copper, brass, or tinplate; for copper urns made by hand planishing, see coppermith (227).

wheeler (brass finishing); a planisher *q.v.* using a machine in which component parts of sheet brass articles are planished or turned upon a wheel in a lathe.

whitesmith; a jobbing tinsmith *q.v.* working for an ironmonger (770) on repairs to plated sheet metal and hollow-ware goods.

wing maker; a sheet metal worker *q.v.* who specializes in making wing parts of motor bodies, such as mudguards.

zinc goods maker, zinc plate worker, zinc worker; or for tinplate worker, making zinc goods such as trays, guttering, ridges, pails, etc.

265.—TOOL MAKERS.

die sinker (tool maker); a highly skilled tool maker *q.v.* specializing in manufacture of dies, chiefly for use in ornamental metal work, such as chandeliers, lamps, etc.; turns to shape on lathe, grinds or mills in milling machine and finishes with hand tools at bench; *cf.* die sinker (230).

gauge maker, gauge plate maker; a highly skilled craftsman draws from grades of turner (230), fitter (210) or scientific instrument maker (229) *q.v.* who has specialised in accurate work; shapes a piece of hard steel to rough size of gauge or template by means of lathe or other machine tool; grinds gauge to approximate dimensions required, on a precision grinding machine and, with great care, finishes to exact dimensions by delicate hand tools; always works to very definite sizes and passes his work by use of micrometer, or with even finer gauges than those which he is engaged in making; sometimes specially designated, *e.g.*, tyre gauge maker.

jig maker; a tool maker *q.v.* who specialises in jigs, *i.e.* tool guides or templates for repetition work; cuts steel plate, according to blue print, with guillotine, shears and hack saw; drills and punches jig as required after accurate measurement; assembles and screws together parts, if jig made in parts, sometimes case hardens bench of each hole and all edges, *see* case hardener (224).

jig and gauge maker; a gauge maker *q.v.* making both jigs and gauges.

tool fitter; a tool maker *q.v.* in smaller engineering shops, cutting tools for lathes from tool blanks; may also set up lathes.

tool maker, engineers' tool maker; (i) makes dies, punches, etc., for press tools, or lathe tools, drills, reamers, etc., throughout, from tool blanks, by forging, dry grinding, hardening, tempering, and wet grinding, turning, milling, etc.; (ii) fitting; turns, mills, and grinds jigs and gauges, sharpens edges of tools bought from other firms; (iii) designs tools, and passes blanks to tool smith (100) *q.v.* for forging; superheats (200) *q.v.* grinder (237), turner (200), hardener (220), tinsmith (220), etc., and tests accuracy of their work; (iv) fits and erects lathes and other machine tools; (v) general term for any specialised mechanic making lathes, tools, jigs and fixtures, gauges, etc., in engineers' tool making shop, including miller (200), turner (200), hardener (220), grinder (237) *q.v.* (v) *cf.* machine tool maker, press tool maker, jig and gauge maker, die sinker.

tool maker, machine; general term for any worker, *e.g.*, boiler (209), grinder (237), gear cutter (200), miller (200), planer (200), fitter (210), turner (230) *q.v.*, specially engaged in manufacture of machine tools, such as lathes, drilling machines, shapers, grinders, etc.

tool maker, press; (i) is employed, usually in sheet metal workshops, to make press tools or dies for use in conjunction with power-driven or hand-operated presses; (ii) superintends work of turners (200), grinders (237), etc., *q.v.* engaged in manufacture of such tools.

266.—TUBE DRAWERS AND WELDERS.

barrel roller (gun); a tube drawer *q.v.* who draws tubes, for re-etching barrels of machine guns, in a tube drawing machine through a series of dies, to bring them to required size; *cf.* barrel roller (178).

becher (lathe); general term for any man employed at a draw bench, on which tubes are drawn; includes drawer, pier minder, lepper, welder.

brass tube former, *see* tube drawer, brass.

drawer, *see* tube drawer.

lepper, *see* welder, tube.

planner, *see* squencer; *cf.* piercer (279).

plier minder; grips end of copper or brass tube protruding through die, with special pliers and attaches pliers to dog or grips on chain on draw bench used for drawing copper or brass tube.

rollman; straightens finished tube by rolling under pressure between two plates; passes larger tubes through rotary roller mill which manipulates them straight; in both cases adjusts screws to control pressure between plates or rollers.

skelper, skelp turner; withdraws iron strip from heating furnace, and pushes one end through a die fixed to draw bench; grips end with dog and, by means of levers, draws strip through die, which rounds or turns strip into shape of tube, but does not rise joint.

speller, spell welder; (Scottish term) a welder *q.v.* working in intense heat, and therefore in short spells of alternate work and rest.

squencer; piercer; places red-hot solid steel blooms in hydraulic mould and applies power to drive a hard steel rod or glander through bloom in preparation for making solid-drawn tubes on draw bench, *see* tube drawer.

tube drawer; drawer; places rough tube in position for seamless drawing on draw bench, pushes and through die and grips it with temp, catches hook of grip on travelling chain and sets chain in motion, so that tube is drawn through die, in some works, places cold steel or other metal tube over mandrel and inserts tag (hammered end of tube) in die for dog to grip and draw, in other works, uses hot-drawn tube, fixes strip mill instead of rough tube in position on draw bench, and draws through special die as above; sometimes specially designated, *e.g.* copper tube drawer, cycle tube drawer, zinc tube drawer.

tube drawer, brass; brass tube former; a tube drawer *q.v.* making brass or bronze tubes.

tube drawer, cased; brass cased tube maker; places end of a cold piece of iron or steel tube, encased with brass or copper, through a die fixed at head of drawbench, grips tube in a wagon, or "dog," which is drawn by an endless chain along draw bench, causing outside case to adhere tightly to inner tube.

tube drawer, dring; operates drop stamp, which draws copper strip into tube form through die, for use in encasing high explosive detonators; pulls drop stamp up, by hand, after each stamping, and releases stamp by knocking a lever with the knee.

tube maker, brass cased, *see* tube drawer, cased.

tube maker, pipe; a tube drawer *q.v.* making solid-drawn aluminium tubes for tobacco pipes.

tube welder; (i) closes joints of tubes by butt or lap-welding edges together with a blowpipe by acetylene process; (ii) lepper, is in charge of furnace in which rings of metal are heated to welding heat; fixes hot strip through a bell, tongue or die on a draw bench (*see* tube drawer), or through roller (according to processes of manufacture), whereby the edges are squeezed and welded together.

aligner (typewriters); a typewriter mechanic *q.v.* who specialises in adjusting the type bars so as to obtain correct alignment in type-writing.

typewriter mechanic, typewriter maker, typewriter raparator; assembles and fits together parts of typewriters; repairs typewriters by renewal of parts, such as lathes and various hand tools and vice at a bench.

268.—WIRE DRAWERS AND MAKERS.

breaker-down (wire works); feeds wire rods into a machine roller which prepares them for final drawing.

drawer, *see* wire drawer.

drawer, wire rod; removes wire rod from furnace with tongs, and inserts end in die on draw bench; proceeds as for wire drawer.

flattener, wire flattener; wire roller (reed making); flattens or draws wire, with hand hammer or in machine roller press, for making "rods" (part of textile machinery).

ripper, *see* rougher-down.

rougher-down; ripper; a wire drawer *q.v.* who roughs-down wire, which is then further drawn by wire finisher *q.v.*

stripper; a wire drawer *q.v.* who does wire drawing only, and does not set his own dies or plates.

wire blocker, *see* wire drawer.

wire drawer; drawer, wire blocker; (i) set wire drawer, automatic; (ii) (hand operation) makes wire on a draw bench; sets dies or plates; hammers, files and rolls end of rod to push through die, engages end with pinions and draws rod through dies of decreasing diameter until required size is obtained; sometimes specially designated according to wire drawn, *e.g.*, brass wire drawer, bronze wire drawer, copper wire drawer, card wire drawer.

wire drawer, automatic, wire blocker, wire drawer; (i) sets up dies in draw plates of machine; hammers, files and rolls end of rod to push through draw plate; grip ends with pinions attached to chain wound round drum; starts machine and pulls enough wire through to wind two or three times round drum; stops machine, disengages pinions and chain and secures end of wire to drum with small screw clamp at vice; re-starts machine; repeats operation till required gauge is obtained; (ii) operates continuous drawing machine in same way; prepares machine by stringing up, *i.e.*, sets up the series of dies in draw plates, pulls through first length of wire, along and hammering end at each draw plate and feeling round successive blocks till end of wire is through last die and secured to winding drum, controls instant starting or stopping of automatic wire drawing machine by a lever (sometimes specially designated, *e.g.* auto wire drawer (hand steel wire for planes, etc.), pinion wire drawer, reed wire drawer (textile machinery), stem wire drawer (electric bulbs), tungsten wire drawer (tungsten wires).

wire drawer, electrical; a wire drawer *q.v.* who makes wire of copper, aluminium, German silver, or alloy, for electrical trade.

wire drawer, fine; an automatic wire drawer *q.v.* who makes wires of diameter below 20 standard wire gauge, on automatic machine, with diamond dies.

wire finisher; a wire drawer *q.v.* who draws wire to a final gauge, by passing it over a pulling die, by hand, through last or finishing die.

wire maker; general term for any worker engaged on actual production of wire, *e.g.*, wire drawer, wire flattener, wire finisher *q.v.*

267.—TYPEWRITER, ETC., REPAIRS.

adding machine inspector; examines adding machines, and, if necessary, accuracy; carries out adjustments and repairs.

adding machine mechanic; or for typewriter mechanic.

wire maker, eye; a wire drawer *q.v.* who, using a special die, makes wire of V-shaped section for use in making spectacle rims.
wire roller (reed making), *see* flat-roller.
twire welder; welds together lengths of wire during drawing process, using electric or acetylene hot lamp; *cf.* welder (2459).

268.—WIRE WEAVERS AND WIRE ROPE MAKERS.

barb wire maker, barb maker, barb spinner; attends one or more machines, according to type of barb wire being manufactured, in which previously galvanized wire is spun with barbs, and is then spooled, sets measurement gauge and feeds wire from drum through machine; fixes end of wire to rewinding drum; watches machine for proper working; replaces drums when empty or full; closes; a wire rope maker *q.v.* who specializes in operating a closing machine.
diamond mesh worker, *see* mattress maker, link.
gauze maker, wire; metal gauze maker; cloth weaver; at for weaver (245); winds thin wire iron spools on to warp beam; sets beam in machine and fixes warp wires through reeds; fits up shuttle and sets machine in motion by means of levers; watches machine for any faulty working.
layer, *see* rope maker.

matt screen maker; a wire gauze maker *q.v.* who makes wire gauze screen used in screening malt.
mattress maker, link; diamond mesh worker; assembles iron mesh-work and springs of combination and hospital beds; secures mesh work by link and spanner to frame and twists wire ends at edge through holes in frame with pliers.

mattress maker, spring; weaves wire spring mattress maker; spring cutters; secures wire mattress weavers, wire mattress worker; weaves in a machine, spring mattresses for bedsheets, from steel wire; sets, by hand, various gauges and feeds wire into machine from spools; may also fit wire mattresses to frames.
netter, wire netter, *see* wire netting maker.

rigger (wire rope); (Electricist distinct) a wire splicer *q.v.* who makes wire rope parts of steel, by splicing, fixing turnbuckles, etc.; *cf.* rigger (Dunedin district) (238).

rope maker, steel rope maker, wire rope maker, rope spinner; layer, steel rope strander, wire cable maker, wire rope layer, wire strander; fits bobbins in position on wire rope stranding machine and feeds ends of wire through guides; watches machine for proper working; also sets dies of closing machine through which wire rope is drawn to tighten up the strands; fixes end of rope to winding drum.
splicer, cable splicer; a splicer *q.v.* who joins cable ends by separating strands and then interlacing (and in some cases soldering) one strand with the corresponding strand, placed end to end with it.
splicer, wire rope splicer; joins two wire ropes or cables together by hand by opening or unravelling the strands and interweaving them; also splices eyes or turnbuckles into ends of rope; *cf.* rope splicer (326).

steel making maker; a wire weaver *q.v.* who weaves steel wire into mats either by hand or by machine.
steel rope strander, *see* rope maker.
weaver, cloth, *see* gauze maker, wire weaver, spring mattress; wire mattress weaver, *see* mattress maker, spring mattress.

weaver (wire), wire weaver; weaves wire into mesh or other forms, usually by machine, places bobbins of wire on spindles and feeds wire from

bobbins through guides in machine; sets gauges and changes gears of machine, as required, according to nature of mesh; watches machine for faulty working, and repairs broken wires.

winder, wire mattress, *see* mattress maker, spring.

wire, wire mattress selvage; wire selvage or edging for wire mattresses from steel wire; sets gauges and bobbins of wire in machine and watches for any faulty working.

wire cable maker, *see* rope maker.

wire netting maker; netter, wire netter; a wire weaver *q.v.* who operates and feeds machine which weaves wire netting.

wire rope layer, wire strander, *see* rope maker.

278.—OTHER SKILLED WORKERS.

alloy man (copper smelting); takes samples of copper during refining process and alloys them, i.e. melts them in a crucible with various metals, e.g. zinc, tin, to test suitability of copper for alloying purposes.

aluminum granulator; feeds molten aluminum into hopper of granulating machine where it solidifies; sets machine in motion, which crushes or cuts the metal into small granules (for explosive manufacture); fixes sieves of requisite fineness, through which granules are sifted into receivers or bins.
assembler (bedstead), *see* fitter, bedstead.

assembler (cutlery), *see* putter-together (cutlery).

assembler (shoes), *see* fitter, remount assembler (galvanized sheets); head sorter, inspector, inspector of sheets, look-over, pick-over, sorter; sorts out finished sheets to various sizes and gauges, for despatch to particular markets; rejects any defective sheets.

assessor (tin boxes); checker, examiner, looker, sorter, tin sorter; (i) sorts tin plates according to gauge, cleanliness and fitness of surface; (ii) inspects finished boxes, etc., and rejects any that are defective.

assessor (tinplate); inspector, sorter, tin sorter; examines sheets at one of several stages in tinplate manufacture, e.g. after cold rolling and annealing, when sheets with special blemishes or blisters are rejected, and sheets partly welded together are opened by hitting with a wooden mallet, or after picking, to reject sheets imperfectly cleaned of oxide, or after tinning to reject sheets not properly coated.

barrel maker (small arms); general term for any worker engaged in machining barrels for rifles, guns and pistols, including barrel fitter (200), barrel turner (200), barrel borer (200), barrel layer (238), rifler (209), barrel layer (238), barrel smoother (238), barrel borer (278) *q.v.*

betterer, *see* flattener (fish hooks).
beader, bearding machine man (fish hooks); feeds, by hand, metal rod into slot in bed of bearding machine, which cuts barbs, or "beards" on fish-hooks; controls cutting tool by hand lever; sometimes sets machine, otherwise set by machine tool setter (211) *q.v.*

bell-hanger; bangs finished bell or re-bangs renovated bell in position on bell or clock tower; adjusts trunnions and bearings, as required, by means of engineer's hand tools; may also fit and adjust bell-ringing ropes or mechanical bell striking apparatus; sometimes specifically designated, e.g. church bell hanger.
bell man, bell maker; furnace ganger (blast furnace); lowers materials into blast furnace from a

kind of funnel, called a bell; works levers to lift and drop bell; "digs" or measures depth of charge in furnace by dropping a rod, attached to hand lever, into furnace; sometimes done by charger *q.v.*; obsolete, *cf.* bousmann (189).

bench hand (wire works), *see* wire worker.

bender (hoof and shoe plates, dog iron); places out lengths of second steel rod in a bending machine, where they are bent into shape required for heel or toe tips, sometimes sets machine; sometimes specifically designated, e.g. dog iron bender, shoe tip bender.

bender, copper (generators, etc.); copper turner; bends and fuses base copper bar or strap for starters of large generators or motors, switch-board connections, etc., by hammering it over a jig former by hand; may sometimes file formed bar to shape, usually done by copper filer (235) *q.v.*

bender, fish hook bender, *see* bowser (fish hooks).
bender, iron; bends, by heating and hammering over die former or anvil, or by pressing or rolling in a machine, iron sheets, rods, tubes, bars or strips for iron fences, railings, etc.; commonly done by blacksmith (190) *q.v.*

bender, rail bender (metallic header pipe); inserts pipe or tube between turning wheels of pipe bending machine in the forming of bedstead rails, tubes, etc.; controls machine by hand lever and amount of bend against a mould or template; often done by pipe fitter (235) *q.v.*

bender, rim; wheel rim bender; feeds out lengths of rolled wheel rim into bending machine to bend it into circular shape for cycle or perambulator wheels.
bender, second (dog iron); a bender *q.v.* specializing in bending shaped dog irons in a roller machine to fit curve of dog from heel to toe.

bender, swirl; feeds metal rod into semi-circular machine, which bends and cuts it to form various kinds of swirls, e.g. gun or rifle swirls; watches machine for correct working; may set machine.

bender (tubs), tube bender; bends metal, usually flanged tubes to required shape either by heating in a large and bending by hand, if large and heavy, or, if small, by means of dies under hydraulic power or hand press; sometimes specifically designated, e.g. handle bar bender.

bender, wire (textile machinery), *see* wire worker (textile machinery).
bending machine attendant (text house, iron works); clamps sections of iron or steel rails, rods, etc., into a roller machine and bends sections under a descending roll actuated by a hand lever; passes bent section to test room superintendent for examination.

bend maker, *see* bender (tubs).
beveler (fishes); sawyer; feeds, operates and controls by levers, machine which bevels edges of steel strip preparatory to rolling, in lap welding process of tube manufacture.

blade gilder (swords); (i) gilds blades of swords either by applying gold leaf or by electro-gilding; (ii) hues and gilds blades of swords with mercurial gold, *cf.* gilder (282).
blank maker (screws), *see* bender (screws).

blast furnace band; general term for any worker employed about a blast furnace or cupola, including charger (279), feeder (279), cupola man (111), lip man, wheeler (279), *q.v.*
blast furnace potter (copper); wheels iron pots into position at base of copper blast furnace or cupola; replaces flow of slag or metal into pots by opening or closing plug; wheels full pots away and tips them on slag bank, if slag, or into moulds, if metal.

blooker (saw), see **hammerer (saw)**.
blower for burner (lead extraction); **blow** **man;** operates **blast** and **acetylene**, by a lever, the **blast** which is blown or drawn through revolving furnaces for calcining lead ore and otherwise attends to working of furnace.

blow lamp worker (shipbuilding); **closer,** **bents** with **blow lamp**, or **oxy-acetylene flame** and **acetylene**, plate seams, bars, etc., which require to be closed after plates, etc., have been placed in position; **blowers** heated metal with a hammer to close up gaps.

bluer (metal); prepares bath by melting together saltpetre and pyrites; dips steel articles in basket into kettle and maintains at constant temperature for few minutes; removes and washes in hot water, dips in oil and leaves to drain.

bluer (small arms); an oxidizer **g.p.** who heats barrels of pistols and certain guns in charcoal or a hot plate, or in an exhausted potash, until they take a blue colour, and then allows them to cool, washes in cold water, dips in oil and sets to drain.

bobbin and carriage band (lace); see **carriage and bobbin band**.
bowyer, fish hook bowyer, bowing machine man; bender, fish hook bender, rigger, fish hook rigger; sets, rods and operates small fly press which bends fish hooks and forms ringer at end; cf. **press worker (254)**.

brass chain maker; attends and feeds semi-automatic machine with brass wire or rod according to brass chain to be made, sometimes sets machine usually done by machine tool setter (211) g.v.

brass mould maker (dental machinery); takes up, i.e. cleans and polishes, rough brass casting of mould used for moulding teeth, in special milling machine; finishes by filing at bench.

brass worker; general term for any operative working in brass, usually, but not exclusively, a hand worker, includes all metal worker (brass) (221), church brass worker (221), brass finisher and turner (224), brass fitter (233), buffer (brass) (238), grinder (brass) (237), brass solderer (232), brass engraver (278) g.v.; sometimes specifically designated, e.g. camera brass worker.

bridge stocker (blast furnace); (Scott's Staff) feeds and instructs fillers as to rotation of charges, i.e. coke, "sue" or ore and limestone; also helps on loading bridge of boat and helps charger **g.v.** to fill furnace.
bright worker (needles); see **sorter (needles)**.

browner; self-fitter; prepares bath of distilled water, potassium permanganate and other articles, e.g. parts of small arms, cycles, in bath, washes and scrubs in running bath and sets on oven to dry quickly; dips in oil and leaves to drain; sometimes specifically designated, e.g. barrel browner, bayonet browner.

buckle tongue fitter and roller, buckle tongue; hoes cast as pressed buckle tongue to buckles, by hand or by stamping machine; usually also fits roller on buckle by bending on strip of metal with pliers or in special machine.

bulger (tubes), see **expander, tube**.

bundler (wire works); **galer;** makes up coils of wire or steel into bundles for transport; checks gauge and length of wire and labels accordingly.
bur examiner (dental instruments); makes a visual examination of bur or dental drills, after they have been machined, to ensure that sharp and cutting edges are to specification.

burner, drop burner (blast furnace), slag burner; roasts tap cinder from puddling or blast furnace to make bol-dog, a refractory slag for setting puddling furnace; assessor, thurmer (slag iron); fires kiln in which briquettes of iron ore dust and steel

scale are made for use in blast furnace, cf. waste burner (171).

cap maker (barren); cuts and shapes sheet steel; grooves and channels it, and bends it to shape by hammering over and round moulds and patterns; welds in place and closes it, thus making shell for lamp.

carriage and bobbin hand (lace); **bobbin and carriage hand; assemblers, fitters, finishers and trues up carriage and bobbins for use in lace-making machines, using small lathe and hand tools at bench.**

carriage springer (textile); fits springs on to rollers, of mule spinning machine, which control winding and twisting of yarn on machine, drilling, screwing and riveting with various hand tools.

caster, lead (not foundry); see **tapping man; cf. lead caster (foundry) (161).**

caster, printer's lead; type metal

caster, see mixer, metal (type-founding).

caster, tin; pours refined tin, in molten state, from ladle into mould where it cools into blocks or ingots.
caster, type caster, lead caster (type), **caster at machine; inner matrix, from which type or characters are cast, into steel mould; fits mould into machine with accurate hand adjustment; fills pot with molten type metal and regulates gas heating pot; watches temperature of metal, adding fat, if necessary, to give correct consistency, manipulates controlling levers of casting machine and examines with gauge, type as it is automatically delivered from nozzle; adjusts machine to ensure accurate working.**

caster driver (blast furnace); controls levers of gas casting machine, which is fitted with ladle, and revolves to tip contents into a series of moulds.
caulker (band), caulker (iron), band caulker, iron caulker; smooths off rivets with hand hammer; tightens up plate seams by forcing edges close together with caulking tool; may also drill hole in plate when necessary and inspect rods by turning screw-plunger apparatus; work sometimes done by riveter (253) g.v.

caulker (marine), machine caulker, pneumatic caulker; uses pneumatic or hydraulic hammer and caulking tool to smooth off rivets and tighten plates; sometimes specifically designated, e.g., boiler caulker.
caulker (pipes); **jointer, main jointer, pipe jointer (waterworks), pours molten lead, or other caulking material, into joints of pipes and runs it home with hammer and caulking chisel.**

charge putter up (steel); determines quantities and prepares charge for conversion or furnaces in steel works from specification prepared by chemist; usually done by superintendent of rolling shop.

charger, hydraulic (puddling furnace); operates, by levers, hydraulic gear for charging puddling furnace.

charger, hydraulic (rolling mill); **charger operator; controls valves of hydraulic gear for gripping rollers with tongs and pushing them through re-heating furnaces or for charging them into furnaces; often done by roller man (178) g.v. and gang.**

charge (puddling furnace); Stokes furnaces with coal and pigs in rap pug iron, scrap iron or steel billets, etc., as case may be, by hand, with shovel or by use of hoists; usually done by puddler or underhand (172) g.v.

charger (slag and slag wool), see **turnman (slag and slag wool).**
charger, charger driver (steel); controls various hand levers of "charger" or machine by means of which box loaded with charge is pushed into furnace in steel works

and inverted.
charger operator (rolling mill), see **charger, hydraulic (rolling mill).**

chaser (brass); executes design on brass work by cutting away parts of the surface to varying depths with hand chasing tools; sometimes specifically designated, e.g., coffin plate chaser, harness furniture chaser.

chaser (carriage building); coach engraver; a chaser (brass) g.v. who chases or engraves, by hand, special name plates or other decorative metal work for high class carriages or coaches.

chaser (general engineering); finishes cast metal work by removing seams and other irregularities with chisel and hammer.

chaser, hilt (sword); sword hilt chaser; hilt engraver; raises a design on sword guards or hilts with graver and chisel and hammer; is for chaser (brass), but may work in steel; sometimes also works in gold and silver—much lighter work.

chaser, lead, see modeller, lead.

checker; (1) checks finished work for accuracy and soundness of material, using rule, micrometer and gauges; where necessary, checks amount of piecework pay earned; (2) checker, sample (steel manufacturer); (3) checker, checks and records weights and quantities of material entering and leaving tube mills or departments of mills.

checker, gauge; checks accuracy of gauges used by examiners, by comparison with standard gauge or by measurement with micrometer.

checker, piecework; keeps record of output of metal workers on piecework, for purpose of calculating amount of pay earned; sometimes done by shop clerk (353) g.v.

checker, sample (steel manufacturer); checks and numbers samples of steel; keeps records of chemical analyses and of tests made.

chipper, chipper and scraper; a caulker g.v. who chips, usually with pneumatic tool, scrapes or cuts off excess metal until they are even and in line.

circle (textile machinery); circle pin filler, circle setter; builds up circular combs of textile combing machines by inserting and fixing steel comb pins in the circles (or cylinders), or sets in new pins of combs; cf. circle setter (226).

clammer (dies, seals, etc.), feeds and operates a clam or machine in which soft dies are impressed by hardened steel die for repetition purposes.
clammer, roller (roller engraving); raises and strikes metal (design in relief) on annealed steel roller from hardened steel die; places cylinder and die in machine and brings die to bear by control of levers; starts machine and watches proper working.

cleanser (musical instruments), see scraper.

closer, flyer slot; closes slot in arm of flyer for flyer spinning machines, after brass hammer has been inserted, using hammer and hand tools on bench.

closer (shipbuilding, etc.), see blow lamp worker.

closer (tube); closes joints of tubes, after drawing process, but before brazing process (if any), by bringing edges together with a special hammer and other hand tools.

copper strip worker, see drawer, copper strip.

copper tape worker, as for drawer, copper strip.

corrugator, sine corrugator (galvanized sheet); has charge of corrugating press and directs men employed about it; sets machine for size of corrugation required and adjusts pressure by means of screws; feeds sheets into it.

corrugator (other pressed ware), as for corrugator, zinc.
coilsetter, see brunner.

crapper (needles); turns over ends of hosiery machine needles, by feeding

them by hand into magazine of automatic cramping machine;
 crammer (wrought nails); feeds iron sheet, strip or wire at black heat into cramping machine to make wrought iron nails; runs machine in motion and controls it by levers; does not usually set dies and gauges.
 cross rolls man (lubes); manganonion, mangle, roller; guides with an iron bar, tubes, as they emerge from rolling process, between rollers of cross rolls; while the bars are straightened and rounded while still hot; adequate rollers by means of screws.

crystallizer (lead extraction); leader, leader (lead extraction); Pattison lead (lead extraction); wire up molten lead in large pot, in which Pattison process of desilverization is conducted, and as it cools, removes in perforated ladle, solid crystals of pure lead, which sink to bottom of pot; when critical temperature is reached, ladles remaining liquid into another pot, and by repeating process increases concentration of silver in lead.

cutter, bloom; bloom shearer, cutters, slab cutter, slab shear driver, slab shear operator; slings and clamps steel blooms or ingots in shearing machine, which divides them into suitable lengths for rolling; applies length gauge to ensure that correct lengths are being sheared.

cutter, ingot; slicer; slings and clamps steel ingots in a machine saw which cuts them into slabs for re-heating and rolling into wheels and tyres.

cutter, nail, see machine minder (nail).

cutter, paragon frame (umbrella); places strips of tempered grooved steel, out of which umbrella ribs are made, in a guillotine; sets various gauges and operates machine by hand levers, to cut steel into lengths.

cutter, rail, see hot bar man.

cutter (shipbuilding); a caulker (hand) g.v. who cuts apertures in ships' plates.

cutter, slab, see cutter, bloom.

cutter, stencil plate; cuts from sheet copper, zinc or brass, by hand with mallet and steel punches and chisels, stencils of lettering, designs, etc.; machine cut stencils are stamped out by press hand (254) g.v.

cutter-down (rolling mill), see cutter, bloom.

cutter-out, joint (steel manufacture); cuts through bolts with hammer and chisel, at joints round bottom of Bessemer converter; assists in removing bottom by means of a crane; may plaster bottom with ganister and take bottom into drying stove; usually done by bottom runner.

cutter-out, machine knoll; section cutter-out; cuts blanks for heavy shear blooms or machine blooms to size from thick section steel with hook saw of section cutter-out (254).

dandy roll maker, see mould maker, dandy roll.

desilverizer; separator, silverizer (lead extraction); general term for any worker who carry out operations in either Pattison or Parkes process of separation of silver from lead; includes crystallizer, slinger man, and lead re-heating turnman (171).

die caster, decanting machine operator; attends machine which casts into metal dies, various alloys of aluminium, antimony, etc., and metals of low melting point, is responsible for temperatures of melting pot and proper working of automatic or semi-automatic machine.

discher, discher (slag iron), see day-way worker.

doctor maker (textile); shapes, in metal, doctors (scrappers) used on textile printing machines to scrape colour from rollers; cuts metal in power shears and works upon it in

planing, grinding, glazing and drilling machine; fixes doctor between two thick plates of doctor holder and secures by riveting or with bolts and nuts.

drawer, copper strip; copper strip worker; feeds copper rod, etc., into rolling mill to make copper strip; feeds copper strip into tube drawing machine, in which it is drawn through die to make copper tube.

drawer, copper tape, or for drawer, copper strip.

drawer (puddling); draws out, with tongs, a pile of iron from heating furnace for re-working, e.g., rolling, may help to feed furnace, if coal fired, or to regulate gas valves; sometimes specifically designated according to article for which iron is being worked, e.g., chain drawer.

drawer, sample; sample catcher; takes small portions of molten steel from furnace during process of engraving; small ladle and tips into small mould, or "spoon," for test purposes; carries to sample passer g.v.; usually done by furnaceman (171) g.v. or by one of his helpers.

drawer (slab extraction); taper; taper roller (171) g.v. to draw out metallic zinc from clay containers with small tapping rabbie; takes off and replaces protrusions or nozzles, cleans out oxides and powdered zinc from them, by tapping on floor; skims and runs molten metal into moulds, using long-handled tool or skimmer.

dresser, axle; removes uneven surfaces of rough forged axle with hammer and chisel, may also use file, e.g., slider (238); often also acts as axle polisher (238) g.v.

dresser, ore (charge band, sine extraction); is in charge of workers on any of various screening, crushing, washing and flotation machines used for dressing, i.e., preparing for smelting, zinc ore (chests or calcines), adjuvants machines and watches proper working.

dresser, residue (zinc); washes residues, after it has been crushed between rollers to separate materials from dress, on washing table; regulates feed of crushed ore to table, also speed of table and supply of water by means of levers.

dresser, type dresser; letter finisher; type finisher; (1) cuts grooves at bottom of lines of type and sees that they are all true as to height and alignment and that faces are good; (2) in large works, where machinery has been introduced, feeds, operates and controls machines which break, smooth, set and groove cast type; picks out from line any type that is defective.

drill twister; twists, whilst hot, steel drills and bits for boring wood, brass, etc.; grips steel bar or rod in tongs or drivers from furnace; fixes it in grips of twisting machine; turns handle of machine to obtain desired amount of twist and, at same time, tempers wire by pouring on water from a kettle.

driver, arbor; fixes or drives steel arbors or shafts into centre of wooden rollers used in wringing machines; fixes arbor and roller in chucks of machine and controls machine by hand levers, so that roller and arbor are evenly forced together.

driver, pusher; controls levers of machine, pusher, which pushes ingots through a re-heating furnace prior to rolling.

driver, slab shear, see cutter, bloom.

dropman, gentry dropman (blast furnace); a gentryman g.v. operating a trap door or dropping platform over ironstone kiln.

dropper maker, drop pin maker (textile); makes detector wires for test motions on warping machine; cuts steel wire to required lengths, shapes it and drills hole for warp thread with hand tools and small presses and machines.

edge worker (scientific instruments, etc.); performs several operations, e.g., turning, drilling, tempering, polishing, of those scientific instruments that have sharp cutting edge, e.g., scalpels, knives, scissors.

electro-blast; electro-blast grider (screw); effects electrolytic deposition of brass on better types of finished screws, by dipping screws in basket into tank; maintains proper quantity and strength of solution in tank; adds anodes as required; switches electric current on and off, cf. electro plater (232).

engine stripper; dismantles an engine in preparation for cleaning, re-fitting or removal, usually done by engine fitter (210) g.v.

engraver, bell; an engraver (hand) g.v. who cuts designs and lettering on bell by means of hand tools.

engraver, coach, see chaser (carriage building).

engraver, copper (process engraving); touches up copper process plate with hand engraving tools, looking at work through a magnifying glass.

engraver (hand); chalks lettering or design on brass plates or other metal goods and cuts out design with hand tools, or gravers; sometimes specifically designated, e.g., brass engraver, hilt engraver; cf. chaser.

engraver, hilt, see chaser, hilt.

engraver (machine); engraving machine worker; uses machine engraving tool or pantograph engraving machine to cut inscriptions, designs, etc., on metal plate; inserts pattern into slide guide, traces arm upon it and controls cutting tool.

engraver (photogravure); retoucher; a copper engraver (process engraving) g.v. who improves richness and beauty of photogravure plate or cylinder by working on the surface with hand engraving tools.

engraving machine worker, see engraver (machine).

etcher (cutlery, saws, etc.); cleanses oil from blade and attaches transfer of brass lines to blade, etc.; applies varnish with brush to blade not covered by transfer; applies acid to bite through unprotecting parts of transfer into surface of metal, using dolly sticks, i.e., rag attached to wooden handle and dipped in acid; dips blade in water and thoroughly cleans away varnish and transfer with emery polish; sometimes specifically designated, e.g., cutlery etcher.

examiner; gauger inspector, slider; (1) examines engineering products at various stages of manufacture to detect faulty material or bad workmanship; makes visual examination and tests parts with gauge, when necessary, for accuracy; may also examine materials and accessories prior to manufacture; in some cases, e.g., gas and water taps, tests only finished article; sometimes specifically designated, e.g., bullet examiner, edge tool examiner, ring examiner (textile machinery), wheel disc examiner, (2) (tin boxes), see assayer (tin boxes).

examiner (chain testing house); tester (chain testing house); an examiner g.v. in charge of a testing house where chains are tested under tension, direct operation of test house labourers in fixing chains in testing machine, controls power levers and supervises reading of dials and record of test.

examiner (cycles); tester; (1) fixes cycle frame in testing frame and examines it visually to detect inequalities or weakness of frame; tests bearings, brakes, etc.; (2) fruster; tests track of wheels by running; takes up, if necessary, with spanner, etc.

examiner (files); tester; examines file for straightness; rings or sounds it, by striking on metal block; tests for

hardness and to detect any defective teeth by rubbing over piece of steel.
 Examiner, oil pad (railway); makes visual inspection of oil pads in axle lubrication system of engines; may rise in new cotton pads or report defects for oil pad (279).

Examiner, spring (axles), see tester, spring.

Examiner, stay; stay inspector; examines all parts before stay, i.e. various supporting rods or plates which strengthen boiler or condenser and prevent bulging or collapsing.
 Examiner (steel pens), see book-over (steel pens).

Examiner (wheels), see viewer (wheels).
 Examiner, wheel (railway wagon works); examines wheels and tests them by tapping with a hand hammer; decides, by sound given, whether they are in good condition.

Expander, tube expander; bulger; (i) clamps end of hot tube in vice and operates machine which expands end of hot tube or pipe by forcing in a die or mandrel, in preparation for jointing; (ii) expands cold tubes in similar manner by passing tube between rollers, mandrel being forced in, in preparation for high pressure steam or water injection.

Extractor (metal); feeds crushed ore or workshop sweepings into hopper of machine, in which metal is collected on poles of electro magnet; controls levers and switches of machine and watches for proper working.

Faller maker; any worker engaged in one or more operations of making or assembling parts or mechanism, e.g. faller wire, shaft rod, needles, guides, of faller motions of male spinning or other textile machines; includes faller finisher, faller setter.

Fun man (lead extraction); see blower via burner.

Getter (steel manufacture); repairs hearth of open hearth furnace as soon as tapped; rakes over bellows in hearth with long-handled metal rattle scraping out residual molten steel; then shovels in powdered dolomite with short or long-handled shovels to fill up depressions in hearth; rakes all smooth with rattle.

Fettler, tool; tool repairer; repairs tools by hand, see tool maker (265), by beating out points on an anvil, by riveting, welding, etc.

Filer, circle pin (textile machinery), see circle.

Filer, pin (textile machinery); inserts steel pins, riveting or otherwise fastening them into bars or beds of combs; sometimes specifically designated, e.g. circle pin filer, gill pin filer, buckle pin filer.

Filer, plug (steel); plug runner; blocks up pouring holes of furnace (Simons Martin process) with fire-clay plug after each "heat" is run; fresh plug into position ready for next "heat" often done by furnace-men's helper (279) q.v.

Filer, perspective; a pin filer q.v. inserting pins in buckle combs.

Finisher, axle box; axle bush finisher; removes irregularities from castings or more perfectly from forgings of axle boxes using hammer and chisel.

Finisher, cart hame (wood hames); punches holes with power press or punch in steel shell; rivets or brass on fittings, i.e. draw and top and bottom ends; after wood has been inserted into shell, finishes by buffing and polishing on bobbing and polishing wheels.

Finisher, circle; finishes off circle combs used in textile spinning or carding machines, i.e. adjusts wire teeth or pins, file smooth, burnishes and polishes them.

Finisher, coach spring; files edges of spring plates, where necessary, and bolts plates together.

Finisher, faller; file and generally finishes, in preparation for setting, "fallers" or wire contrivances by which textile spinning machinery is stepped when a thread breaks.

Finisher, fork; iron fork finisher; fork *four-ap; removes* *lash, i.e. rough edge or surface, from, and grinds* *toughly, shaped agricultural* *forks by hand filing or by emery grinding on glazers or endless bands, coated with powdered emery and glue, to make them bright and smooth,* *sharpens prong-ends and sometimes* *also file on wooden handles.*

Finisher, gill; as *for finisher, circle*, working on gill box and bars of combing and straightening machines.

Finisher, handle; as *for finisher, circle*, working on handle combs.

Finisher, letter (type), see dresser, type.

Finisher (musical instruments); polishes parts of musical instruments, before they are plated, by fixing in lathe driven by electric or other power and holding polishing mop against revolving part; may also put together parts of brass instruments, and make any necessary minor adjustments.

Finisher, reed finisher (textile reeds); (i) blades round top and bottom points of staves of reed with turned wire to keep wires apart and each pair of reeds close together; (ii) see straightener, wire (reed making).

Finisher, saw finisher, see hammer (saw); cf. back fixer (269).

Finisher, stay; stay finisher (textile machinery); stay maker, stay maker; assembles and builds up, metal parts of lathe or sley of loom, into which reed works at a bench and vice and makes any minor adjustments with file, etc.

Finisher, spade and shovel; shovel and spade finisher; spade and shovel handler; spade and shovel shaffer; turns shafts (hafts) of spades and shovels with a spokehorse to fit socket and fixes and rivets into sockets, with hand hammer.

Finisher, spanner; wrench finisher; finishes of drop forgings of spanners and wrenches or parts thereof by emery-buff grinding, lathe polishing or hand filing; fits together parts by riveting or with screws.

Finisher, spring hook; files, fits and polishes, on bobbing wheel, drop forgings of spring hooks for use in harness gear.

Finisher, type, see dresser, type.

Finisher, wrench, see finisher, spanner.

Firer and dogger (rodding furnace); a firer (rodding) (279) q.v. who also acts as dogger (279) q.v.

Fitter; general term for workers assembling and fitting together metal articles from component parts or erecting simple metal apparatus in its place; usually works at bench with vice, screwdriver, file, hammer and other hand tools; in some cases may use small riveting machine to fixate parts together; or may weld frames joints; is usually a specialist in fitting together one kind of article and rarely has to alter or add; parts to say extent: cf. fitter (210); often specifically designated, e.g. anchor fitter, base frame fitter, cement fitter, chandelier fitter, cot fitter, grip fitter, iron cabinet fitter, mattress fitter, metal cement fitter, musical bell fitter, saddle fitter, speedometer fitter, tank fitter.

Fitter, bath; erects baths in bath-rooms, etc.; fixes base to floor with taps, etc.; connects up with water supply and waste pipe; usually done by plumber (265) q.v.

Fitter, bedstead; assembler, fitter-up, maker-up, putter-together; fits together parts of metallic bedsteads, adjusting them where necessary and preparing for despatch; cf. rail fitter (210) q.v.

Fitter, edge tool; tool fitter; fits together finished parts of edge tools, sometimes by hand riveting; adjusts parts, where necessary, by hand filing; reamering, etc.; cf. tool fitter (211).

Fitter, gate (iron); iron gate fitter; bends iron rods or bars to shape and fits together with necessary cast parts, to form iron gates; finishes off by filing with hand file; often also makes iron hurdles, palisades, fencing, etc., frequently done by blacksmith (190) q.v.

Fitter, gate and railings (iron); erects iron railings in position where required; cuts iron with hack saw; cuts sockets in stone, etc.; fills in joints with molten lead; erects gate standards in same way and hangs gates.

Fitter, grindstone; inserts metal spindle in centre hole of grindstone and clamps steel side plates with bolts and nuts on to spindle so that plates fit tightly against grindstone; sets spindle in bearings and adapts side plates with bearings till stone spins true; may also wedge spindle into stand with wooden and metal wedges and set fast by pouring in molten lead.

Fitter, hame; hame maker; welds on D piece, draft and top and bottom eyes to hame, forged from mild steel by house forger (245) q.v.; finishes with file and buffing wheel.

Fitter (house lead books); rivets metal fittings to loose leaf ledger covers, etc., under direction of bookbinder (332) q.v.; usually done by bookbinder as part of ledger binding work.

Fitter, optical; optician's fitter, see frame maker, optical.

Fitter, palisade, as *for fitter, gate and railings*.

Fitter, plumber's; a plumber's mate (238) q.v. who is experienced in hot water fitting (see hot water fitter, 240), but who is not fully skilled as a plumber (232).

Fitter, rail (bedsteads); roller; cuts with hack saw or power-driven circular saw, drills and fits together parts of metal bedsteads; a frame; surveys joints and together with oxy-acetylene apparatus, screws and assembles fittings of bedstead rails; may also brace certain parts of brass bedsteads.

Fitter, range fitter, stove fitter; assembler (stove), fitter up; assembles parts of stoves, grates and ranges and fits them together by drilling and filing where necessary; taps and drives screws.

Fitter, rough (bedstead); a bedstead fitter q.v. who examines component parts of metal bedsteads; drills necessary joints and performs other finishing operations; roughly fits bedstead together before it is passed to joiner's department.

Fitter, sewers, see putter-together, sewers.

Fitter, scythe; cuts patent back to scythe in power shears, files to fit; drills pins in back and scythe in drilling machine; rivets back into position with hand hammer.

Fitter, spur buckle; spur buckle; fits rowels, knobs, chains, rings and chapes to spurs, hammering, riveting, filing, bracing, where necessary.

Fitter-up (bedstead), see fitter, bedstead.

Fitter-up (stoves, etc.), see fitter, range.

Flat spring maker; passes strips of steel under head of press which forms small flat springs to required shape; may bend other small flat springs to shape round a former by hitting with a hammer.

Flattener (shab blocks); flattener; flattens reverse ends of shab blocks with hammer on hand anvil or in power press.

Flawyer worker (dog iron); disker, diskerer; performs second shaping operation on dog iron; places partially shaped iron on bed plate against two rollers and starts machine by hand lever, so that iron passes between forming rolls.

Fluer, see slinger (mine extraction).

flyer balancer; adjusts flyers (earn twisting and reving mechanism) of spinning machines to ensure that both arms are balanced and of equal weight; places flyer on revolving spindle and taps with hammer as it revolves; also bends arm with pliers and flies arms, as necessary, to get correct balance.

flyer maker (textile machinery); **fly maker**; assembles and fits together component parts of flyers and finishes whole article, using file, drill, screw-driver and other hand tools at a bench; cf. **flyer maker** (190).

flyer man, flyer mender; a maintenance man in flax and hemp mill, who repairs spinning frame flyers; pulls out or unsolders old eye at end of flyer and inserts and solders in new eye which is formed by bending brass wire.

flyer weigher; weighs, on balance, each flyer several times during process of making and file it, if necessary, to ensure it is exactly of required weight.

fly maker, see **flyer maker** (textile machinery).

forger (screws), see **header** (screws).

fork tractor-up (agricultural), see **fisher**, fork.

fork maker, iron (textile machinery); **welt fork maker**; assembles, fits together and finishes with file, etc. parts of mechanism which stops loom if welt thread breaks or gets slack.

former, copper, see **bender, copper** (generators, etc.).

founder (copper smelting), see **lador** (copper).

founder (iron), see **type founder**.

frame maker, eye, see **frame maker**, spectacle.

frame maker, hood; **perambulator hood frame maker**; **frame smith**, **perambulator frame smith**; a perambulator hood smith, i.e., who bends light steel rod, round or flat, round patterns, for hood frames of perambulators, etc.; fits ends to blaise pins.

frame maker, optical; **optical fitter**, **optician's fitter**; a lens maker (322) q.v. or a spectacle frame maker q.v., who makes any metal mounting or frame for optical glasses.

frame maker, spectacle; **eye frame maker**; cuts off lengths of certain steel or rolled gold wire, adjusts them accurately to shape and sizes and solders them together, by silver soldering; screws parts together and trues them in readiness for polishing and glazing.

frame maker, wire; a wire worker q.v. who makes wire frames by cutting, bending and joining lengths of wire; joins by soldering in case of single strands or by plaiting in or twisting one in case of twisted wire.

frame smith, **perambulator frame smith**, see **frame maker, hood**.

furmanman (slag and slag wool); **charger** (slag and slag wool); stokes cupola, charges it with slag by shovelling in broken lumps and watches making; reads pyrometers and advises blower (279) q.v. when to adjust steam.

gandyman (blast furnace); stands on gantry or platform at top of ironstone kiln and superintends calcining of ironstone; feeds small coal with shovel into kiln, using judgment to maintain kiln at proper heat, cf. **gandyman** (380).

gauger; (i) see **examiner**; (ii) see **tester**; sometimes specifically designated, e.g. friction tube gauger, spindle gauger, spring gauger (nicks), strip steel gauger (pens).

gauger, furnace (blast furnace), see **bell man**.

gauger, plate mill (rolling mill); inspects and measures thickness of iron and steel sheets and plates, with standard gauges, as they pass on rolling table between passes through rolling mills.

gauger, tin bar; gauges, weighs and checks finished tin bars or ingots.

gauger, tyre (rolling mill); checks thickness and diameter of steel tyre either hot, at tyre mill, or cold after turning.

gear man (rolling mill), **gear manipulator**; moves levers controlling apparatus which turns hot iron or steel bar or shaft into position suitable for rolling.

getter-up (cutlery); prepares sets of components of material and appoints quantities for cutlery (228) q.v.

gig maker (textile machinery); assembles and builds up gigs or teams, made in cylindrical form and covered or studded with wire teeth or fibrous material, used in teasing machinery to raise a nap on woollen cloth.

gilder (screws), see **electro-brasser**.

gill bar maker (textile machinery); prepares iron bars or flats for gill boxes, i.e., base surface on which gill combs or steel pins are fixed, by shaping them in planing or shaping machines.

gill stock maker; general term covering workers engaged in making gill stocks, including **grinder** (200) **gill pin setter** q.v.

grip (iron and steel); **pig selector**; classifies pig iron according to grade or quality; sometimes done by foreman of pig litters or stockers.

gripper (cutlery); nuts wooden grip on bayonet; fixes steel with screws or rivets and smooths and polishes grip when it is mounted.

guarder (fork); puts on guard of carving forks, fits and files and pins it to forks, with rivet and hammer.

guide maker (textile machinery); feeds with wire from spool and controls machine which makes metal guides for guiding yarn in textile machinery.

gun inlayer; cuts recesses in surface of gun or pistol barrel with hammer and chisel; inlays brass, copper, silver or gold in fancy design, by hammering into recess.

gun wire winder; sets, feeds and operates lathe which winds wire from bobbins round barrels of wire-wound guns.

hackle maker (textile machinery); general term for any workman seeking hackle combs used in textile machines, including **driller** (200), **hackle pin setter** q.v.

hackle attendant, **hackle pin man**; a setter q.v. who sets and repairs hackles.

hama maker (bamboo furniture), see **fitter**, hama.

hammer, saw hammer; **blocker**, **finisher** (iron), see **finisher**, saw smith, smith; (i) flattens saw blades, after hardening and before grinding, by placing on flat steel table or anvil and striking any curved part with hammer, (ii) receives back saw for light smithing and general adjustment after glazing; cf. **saw doctor**, **hammerman** (tubeless manufacture); trues cigarette machine knives with hammer, by hand, and supervises sharpening performed by grinder (237) q.v.

header (bolts, rivets); **header-up**, **header machine** (saw); feeds and operates an Oliver hammer to put heads on wrought nails.

header, pin (artificial teeth), see **pin man** (artificial teeth).

header (screws); **blast maker**, **forgier** (screws); passes metal strip by hand into semi-automatic machine which cuts screws to required length and forms their heads; watches machine for any faulty work.

header-up, **header machine man**, see **header** (bolts, rivets), sometimes specifically designated, e.g., **bolt**

header machine man, **rivet header machine man**.

belver (tools); fixes helve or handle into heads of hammers, axes, choppers, axes, etc., by cutting handles to fit eye of tool and driving in metal or hard wood wedge.

hilt embosser, **sword hilt embosser**; makes design of sword hilt with hammer and punch; cf. **embosser** (254).

hilt piercer (sawed); pierces designs on sword guard with small fret saw.

hinge maker; assembles parts of hinges by fitting and planing, clinching and burring over joint pins; may be done by hand with assistance of machine tools, or entirely on automatic machines.

hook maker, Blake; **hoot hook maker**; see **needle maker**, hook.

hook maker, bonnas; **embroidery hook maker**; a needle maker q.v. making, by hand, embroidery needles, which are hooked and have screwed shanks.

hot air man (blast furnace), **hot blast man**; controls valve to regulate passage of hot air to tuyeres of blast furnace; sometimes done by stove minder (171) q.v.

hot saw man, **hot saw worker**, **hot sawyer**; tool cutter, wall sawer, and surger; operates and controls circular saw which saws hot rails, etc., to required size, after they leave finishing rolls; cf. **cold sawyer** (279).

ingot maker; general term for any man who makes or casts metal ingots, including mould setter (steel), pitman, trimmer q.v.

inlay machinist (small arms); an engraver (machine) q.v. who recesses design for inlaying purposes.

inspector, see **examiner**; sometimes specifically designated, e.g. **gun inspector**, **bench inspector** (rolling mill), **fish plate inspector**, **shop inspector**, **staple inspector** (bolts).

inspector, inspector of sheets (galvanized sheets); term rarely used; see **assessor** (galvanized sheets).

inspector (iron foundry), see **passer** (foundry).

inspector, sheet mill, see **assessor** (tinplate).

inspector (tinplate), see **assessor** (tinplate).

inspector (tools); examines tools at various stages of manufacture and when completed, for faulty material or workmanship or other imperfections and tests accuracy of precision tools with limit gauges.

inspector (tubal), see **viewer** (tubal).

inspector in field (rolling mill); makes final inspection before despatch of materials from works, where not done by customer's representative.

iron worker; general term covering various workers engaged in manufacture of iron, including **puddler** (172), **bar roller** (178) q.v., cf. **iron worker** (constructional iron) (236).

joiner, gun wire; joins together, by scarfing, drilling, riveting, soldering or brazing, ends of successive lengths of wire used for winding round barrels of wire wound guns.

joiner, hydraulic; a caulker (pipes) q.v. making waterproof joints in pipes, etc., of hydraulic machinery.

joiner, main joiner, **pipe joiner** (waterworks and hydraulic power), see **caulker** (pipes).

justifier (typefoundry), see **matrix maker** (typefoundry).

karser (typefoundry); cuts away with hand tool body or shank of such type as is faced with overhanging letters, to enable them to lie close to letters on either side.

lace carriage maker; assembles parts, which have been blanked out of sheet metal, of carriage used to coat bobbins in lace machines; fits them together; finishes them and trues them up.

ladar, ladler (copper); fowder (copper smelting); ladles molten metal from refining furnace and pours it into moulds, using either small ladles (from 25 to 40 lbs.) or large ladles carried on bogies, which may hold several hundredweight.

lader, ladler (lead extraction); see crystallizer

ladle lining; patches and, when necessary, re-lines ladles into which molten metal from furnaces is run in steel manufacture; when patching, duties as for ladle dander (279), (refining, or extensive repairs, allows ladle to cool and removes it, builds a wall of fire brick round entire inside; makes bottom lining by tamping down moist refractory clay, covers sides with fire clay and runs it into all cavities to form a smooth surface; sometimes conveys a gas tube to ladle and connects with gas flame; three gas and so dries ladle; alternately, dries ladle by lighting a fire inside it; is usually a skilled bricklayer (363) g.v., but also knows properties of various refractories, especially their behaviour under high temperatures.

latches (needles); fits latches to hoisting handles; inserts latch in slot of handle and hinges with pin, which is screwed or riveted fast; adjusts latch for easy working.

lead caster (printer's); ladles out from melting pot, molten lead, mixed by metal mixer g.v., and pours in ingot moulds for use in type casting machine, stereotyping, etc.; sometimes done by metal mixer; *see* *caster* (188).

lead pipe maker, lead pipe press man; lead press driver; attends and feeds press in which lead pipes are made; fits die into ram and runs into container of pipe press; molts lead in large pot and stokes fire or regulates gas under pot; controls lever of mechanical worm which allows molten lead to run down trough into container of pipe press; molts lead to cool to point of solidification and then applies hydraulic pressure by turning wheel; directs winding of lead pipe as it emerges from press on to receiving drum.

lead press driver, *see* lead pipe maker.

lead squirter (cartridge); attends hydraulic press which squirts molten lead through small hole in die to form lead rod for bullet cores; feeds lead ingots into large melting pot over furnace and taps off molten lead through connecting trough to container of press, allows lead to cool to certain temperature and then gives signal to valve man (279) g.v. to start press.

letter founder, *see* typesetter.

leveller, plate (boilers and tanks, rolling stock); leveller and straightener (rolling stock); levelling plate (boilers and tanks); hammers out and straightens on levelling block or anvil, by hand, light metal plates or sheets used in coach body making, tank or boiler making.

leveller (saw); (1) rolls, flattens and straightens in machine, steel plates from which saws are made; (2) pommel, plate setter; straightens or planishes plate for making saws, under steam hammer, or by hand on anvil.

liner (shipbuilding), *see* pecker (shipbuilding).

ling maker, linga maker (textile); shapes round wire or lead to be used for lingoes, weights attached to each harness coupling to keep it taut; flattens and punches hole in one end to allow lower loop of loom harness coupling to pass through.

lip man (lead extraction); taps crude lead from lip of blast furnace into cast iron pans, by opening hole in clay plug with iron bar, may then ladle by hand into moulds; usually done by furnaceman (171) g.v.

looker (tin boxes), *see* assembler (tin boxes).

looker-over (galvanized sheet), *see* assembler (galvanized sheet).

looker-over (steel pens); examiner (steel pens); examines steel pens after a process has been completed, to detect faulty nibs, which are thrown out.

machine minder (nails, nail machine minder; nail cutter, nail maker); receives roughly forged machine tool which he grinds and sharpens, and sets it in nail-making machine, has charge of a number of machines (from 12 to 15), supervises working of machines, regrinds tools and resets them, as required; also feeds machines with sheet iron or iron wire, according to type of nail made, is assisted in feeding of machines by nail machine feeder (279) g.v.; may help to repair machine when necessary; sometimes specifically designated, e.g., close nail maker; *see* nail maker (stamped) (254), nail machine minder (254).

machinist (reed making), *see* reed maker.

maker-up (bras spinning, etc.); refers together (boomer); assembles and puts together spun or towed parts, to form finished articles, at a bench with hand tools; in doing so, may perform some wiring, soldering or brazing.

maker-up (metallic bedsteads), *see* fitter, bedstead.

maker-up (pressed and stamped work); putter - together (pressed work); general term for worker who makes up or assembles parts of any article which have been prepared by machines, roll or stamp work, at bench, using hand tools; works in some cases, solder joints or rivets parts together with hand hammer.

mangle man, mangle (tubes), *see* screw rolls man.

mangle operator, *see* straightener, plate.

mark (files); applies firm's name or trade mark by drop stamp or by hand with hammer and die.

marker-out (iron fencing); measures and marks out with chalk, according to blue print or specification, iron bars, etc., for casting, drilling, etc., in making of sections of iron fencing.

matrix maker (typesetting); putter; (1) sinks matrix of type character by hand hammering punch (engraved by punch engraver (230) g.v.) into soft bar of copper or brass alloy; (2) matrix presser, matrix stamper; inserts punch in hand-manipulated press and screws down punch into bar; (3) suspends punch in glass box in electrolytic bath; removes matrix, in form of metal skin, from surface of punch, fills it with backing metal and makes up bar.

matrix presser, matrix stamper, *see* matrix maker.

measurer (rolling mill); measures or checks length or other dimensions of rails, rods, sheets, etc.; in sheet mill, done by roller (178) g.v.

measurer, steel; takes measurements of steel pipes, angles, channels, etc., produced in steel works, and checks against specifications.

mender (iron tank); repairs iron tanks by cutting metal away round hole; cuts fresh patch; drills holes round edges of hole and plate and rivets patch in place.

metal splitter (tubes); sets gauges in metal shears and feeds metal sheets into machine to be cut into strips of required width.

metal smith (gas meters); assembles and unites together parts of wet gas meter drums.

mill man, miscal millman (Mond process); shovels ore into ball crusher machine; controls levers of

machine and watches steady discharge of powdered ore on to conveyor.

mixer, Bessemer weigher's; mixes various kinds of scrap metal preparatory to passing it forward to weigher (279) g.v.; usually done by metal mixer (steel) g.v.

mixer, metal mixer (steel); is in charge of metal mixer (a tilting furnace holding up to 400 tons of metal) and superintends workers attached thereto, tipping in molten metal, etc.; sometimes also operates lever, which tilts mixer and pours steel into ladles; *see* teemer at mixer.

mixer, metal (typesetting); putter's lead cutter, putter's lead maker, type metal sorter; melts metals forming type metal, e.g. lead, antimony and tin, in pan; mixes them together and casts into bars, suitable for handling by typefounders.

mixer, nickel; roughly weighs out quantities of crushed ore, silica sulphur and fines and shovels into hopper of mixing machine; shovels mixture into barrows for conveyance to furnace ready for calcining in preparation of matte; obsolescent.

mixer, ore (copper extraction); weighs and mixes various copper ores in correct proportions and shovels into barrows for charging into furnaces or cupolas; obsolescent.

modeller, model maker; (1) makes model in wax or plaster of Paris, casts principal model, usually in brass; finishes model and chases with hand tools; passes model to pattern-makers to serve as standard, usually makes and repairs his own tools, may also do the necessary preliminary drawing; (2) makes small scale models of ships, engines, machines, etc.; is often a pattern-maker (189) g.v.

modeller, lead; (1) lead chaser; cuts, from block or sheet lead, models and designs with rounded tools and chasers; (2) pattern maker (doves and grates); makes lead or pewter patterns of stores and ranges; cuts sheet and block lead to shape of various parts and with grooving and repoussé tools cuts designs and lettering, smooths and finishes each model or pattern ready for matrix maker (189) g.v. mould coverer (cardboard making); covers moulds or rolls, which are used in wet end of board machine and pressing machine, with fine copper mesh and stitches mesh on with copper wire.

mould maker, dandy roll; dandy roll maker; makes up a dandy roll (part of a paper making machine) by soldering wire mesh to metal rings fitted to a spindle; works fine plate wire into suitable design to form watermarks in paper, by weaving, bending and plaiting, and solders his work under cover of dandy roll.

mould man (glass); assembles and fits together cast parts of cast-iron moulds, used in blowing bottles or in pressing flat glass; cuts designs, trade marks, etc., on moulds, sometimes done by fitter (201) g.v.

mould man (steel); moulds man; shuffles sand; pours molten aluminium or other material into mould while molten steel is being poured, to prevent it boiling; screws cap (an iron plate) on top of mould after pouring; sometimes sprays cap with water to hasten cooling and, when steel has partially cooled, removes cap and knocks out ingot; usually done by pit man or mould setter g.v. or by pitman's helper (279) g.v.

mould tier, *see* setter, mould (typesetting).

mounter (boilers and tanks); fits various cocks, fittings or mountings to boilers or engines; drills holes for bolts and screws, makes gasket joint with asbestos packing and screws bolts up tightly.

mounter, dagger shaft; attaches steel or brass parts, tips, etc., to leather case, by riveting and use of hand press.

mounter, kettle (bottle-ware); assembles and rivets handles on kettles, either by hand riveting or by means of power-driven vibrating hammer.

mounter, pillar mounter (metallic bedsteads); sets and pins various cast, spun or pressed embellishments or mounts on to pillars or other parts of metal bedstead, using vice, drill and hand tools at bench.

mounter (saddlery, harness); mounts nickel, brass and silver fittings and bands on whips, lung reins, etc., employing resin and plaster of Paris as cement, and hand riveting where necessary; sometimes specifically designated, e.g. whip mounter.

mounter, scabbard; fits various ornamental fittings on scabbards of swords, daggers, bayonets, etc., by filing and riveting; may also make and fit mounts of sheet brass and attach steel parts, tips, etc., to leather cases.

mounter, wheel and axle; wheel presser; mounts wheels of railway vehicles on axles or dismounts them by hydraulic press, using wheel and axle in chair and pushes into position in hydraulic press; controls levers and valves of press and watches pressure gauge or hydraulic graph.

naill maker, see machine minder (naill).

needle maker; general term for workmen employed in any process of making needles, including needle stamper (254), eye stamper (254), eye (256), eye filer (283), pointer (needle) (287) *q.v.*; sometimes specifically designated, e.g. bleacher's needle maker, holder needle maker, and snapper's needle maker.

needle maker, boot; Blake hook maker, boot hook maker; (i) makes throughout, needles for leather closing and Blake hooks; (ii) general term for persons engaged in various stamping processes of making boot needles when work is sectioned, including pointer (287) *q.v.*

needle maker, machine; sets up, with accurate adjustment, various automatic machines which punch and eye needle heads; may also feed machines with drums of steel wire or direct machine minders.

nickel cupola man; nickel refiner; general term for any workman engaged in charging, tapping, etc., cupola in which nickel is reduced, including nickel cupola charger (279), charger's helper (nickel) (279) *q.v.*

nickel cupola potman; guides pot or ladle (suspended by crane) to tapping hole of cupola when nickel or slag is to be tapped; when pot is filled, supervises removal of pot and lifts it to pour nickel into steel moulds.

nickel tap room man; operates plant for dissolving by hydrochloric acid and precipitating nickel oxide from material, after reducing process.

nipper, see wheel lace.

nozzler (tubes), see tapper (tubes).

ornamentor (metallic bedsteads); ornaments japanned metal bedsteads with metal or pressed embellishments by transfer (279), also by painting gold and coloured lines with a fine brush, oxidiser (metal); heats and immerses metal articles in acid baths to oxidise surface of metal; dries off acid in saw dust and applies lacquer with a brush or by dipping to give bright finish, if required, e.g. however, blue.

packer, asbestos; inserts, with various steel tools, asbestos packing into fittings on steam plant required to be steam tight, e.g., blow-off cocks, water gauge cocks, engine glands, etc.

packer, gland; inserts, with various tools, metallic, rubber, hemp, leather or asbestos packing into glands or stuffing boxes of steam engines, pumps, etc., through which moving parts reciprocate to prevent leakage of steam, water or compressed air; sometimes specifically designated, e.g. railway engine packer, hydraulic packer.

packer, matrix; machines two sides of matrix to be used in type setting to width of type to be cast; makes up slabs with packing pieces, riveting whole together to form complete matrix.

packer (shipbuilding), ship's packer and liner; liner, slipper; adjusts in position or puts plates, beams, frames, etc., on ship's structure to ensure fairness and to obtain close work, in preparation for riveting; fits taper and parallel slips or liners, where necessary, to fill in spaces between plates, frames, etc. and bolts temporarily in position to prevent drooping; often does his plates (222) or riveters (266), or their apprentices (266), or by iron caulking *q.v.*

painter, blotch painter (roller engraving); paints out with brush and acid resisting paint, portions of roller surface not to be etched.

pan man (copper extraction), see shot cooperator.

para runner (pig iron); under direction of blast furnace keeper (171) *q.v.*, brings up into position (usually by means of locomotive) large ladle mounted on wheels when ladle is filled with molten metal, tapped from furnace, runs ladle on to weighbridge for gross weight to be taken by weighman (279) *q.v.*

parer, edge tool; pares off or trims down cutting edge of tools, either by filing them while the tool is held in a vice or by milling or grinding; cf. parer (290).

parser (rolling mill); sets gauge on mechanical abutment and, starting lead rollers, places sheets of metal to pass away edges, operating sheets usually by foot lever.

passer (ironfoundry), castings passer; inspector (ironfoundry), viewer of castings; makes visual inspection of, and tests by tapping with hammer, castings for blow-holes or other faults, such as curvature, irregularities in pipes, excrencences of metals, or scale, and rejects those which are too bad for use.

passer, sample (steel manufacture); is responsible for deciding, on results of chemical and physical tests and from general appearance of charge, when conversion process is complete; then gives order for tapping and pouring potman, metal potman; maker; (i) makes moulds (patterners) of aluminium, cast iron, etc., for use of moulder (180) *q.v.* in forming sand moulds; casts patterns from a master mould of wood, pattern of Paris clay, etc., see coster (183); finishes pattern with hand and machine tools according to dimensional drawings. (ii) (stoves, grates), see modeller, lead.

patition hand (lead extraction), see crystalliser.

pedal feet maker (pinna); makes piano pedals, by hand or stamping machine, from brass strip; may also assemble stamped parts and rivet in riveting machine.

peeler (puddling furnace); places piles, or pieces of wrought iron to be welded into bars, on a peel, a tool for charging piles into reheating furnace of finishing mill of wrought iron or puddling works; sometimes designated by underhand (172) *q.v.*

perambulator cold smith, perambulator smith; bends cold steel or iron to form springs, parts of undercarriages of perambulators, etc.; may use vice, bench and hand tools for bending by hand; bends to given

specification or according to template; cf. perambulator fire smith (193).

picker (needles); examines needles, which are spread out on a level stone and picks out, for hammer straightener *q.v.* any that are bent; picketst, see asseter (galvanised sheets).

picker's assistant (galvanised sheet); receives sheets from feeder (279) or tanker (284) *q.v.*; sorts out defective sheets and returns them to picker (279) for further treatment; sets aside faulty sheets.

pig selector, see grader.

plier (wire works), see bandler.

pin maker; sets up pin-making machines, inserts dies, and is responsible for their running and the quality of work done; may sometimes make dies, see die sinker (290).

pin maker (artificial teeth); pin feeder; feeds wire from spool through dies in a machine; sets gauges and controls levers of machine which cuts pins to length and heads or double-ends them.

pin maker (piano); cuts steel rod with hack or machine saw, in making wreck pins for pianos; turns it in lathe and shapes in shaping machine; drills hole and finishes with file.

pistol inlayer, or for gun inlayer.

pitman (steel); general term for workers around casting pits, where ingots in a machine; sets gauges and moulds metal *q.v.*; also assists in pouring molten metal into moulds, allowing ingots when cool.

pitman, valve (steel manufacture); assists valve man *q.v.*; attends to gas valves underneath steel melting furnaces.

planisher (saw), see leveler (saw).

plate mangle, see straightener, plate.

plater, close (carriages, harness, etc.); brass plater, harness plater; covers ornamental and bright metal parts of carriages, harness, handles, etc., with close coat of silver or nickel foil; cuts foil to shape with shears, then surface of metal part to be covered by dipping in molten tin, places foil over tinned surface and applies hot soldering iron to cause it to adhere; trims and finishes with file.

plate, levelling (boilers and tanks), see leveler, plate (boilers and tanks rolling stock).

plater, saddle tree; saddle tree riveter; attaches metal plates to saddle trees to strengthen them; drills necessary holes and fastens by hand riveting.

plate strengthener, see straightener, plate.

platform man (steel), see mould man (steel).

pointer, set; forges nail pointers; shapes or forges point on wrought iron nails by machine or Oliver hammer, while cold.

pourer, see teemer, ladle.

printer's lead maker, see mixer, metal (typefoundry).

prover (gun fittings); tests finished articles, such as gun or water tape, with pressure gauge or compressed air, to detect leakages, and indicates, by mark, that they have been tested.

prover, gas meter; meter prover, see tester, meter.

prover (tubes), see tester, tube.

puncher, punching machine; sets and supervises working of punching machine for making holes in plates used in boilermaking, shipbuilding, when more expensive drilling is unnecessary; aligns plate on to bed of machine, directs punching machine worker (279) or assistant in operation of punch, and changes position of plate as each hole is punched as marked.

putter-together (bedsteads), see fitter, bedstead.

putter-together (brass ware, pressed metal), see maker-up (brass spinning, pressed and stamped ware).

putter-together (cutlery); *assembleur, work board hand*; general term for workmen who put parts together, including laymen, setter, cutter (229), drill buffer (225), grillet-up, *g.*.

putter-together, scissors putter-together; *scissors fitter*; assembles blades of scissors; finishes them with buff and emery wheel and, after fitting and beveling slightly, divides or screws in fulcrum; may also punch hole for rivet in each blade.

radiator man (motor car); a tinmith (264) *g.*, or a coopersmith (221) *g.*, or a sheet metal worker (264) *g.* who assembles and fits or repairs component parts to make up radiator; may also assemble repairs.

radiator man (textile); a taylor *g.* who immerses radiator in water bath and tests with compressed air.

roller (metallic bedsteads), see fitter, rail.

roll answer, roll sawyer, see hot saw man.

runner, bottom (Bessemer steel); runs into furnace with long iron running tool and takes refractory material, *e.g.*, dolomite or ganister, to form lining or "plug" at bottom of Bessemer converter in furnace.

runner, ear (Bessemer steel); (i) prepares a surface or bed on ear, on which mould is carried away on rails when teeming ladle, in refractory material into space provided to accommodate mould; (ii) operates hydraulic ram which moves mould cars under ladle.

runner, joint (steel manufacture); runs up joint between movable bottom of converter in bottom of Bessemer converter, by packing in refractory material with long-handled ramming tool; usually done by bottom runner *g.*.

runner, lead (steel manufacture); a rough metal block which moulds to contain feeding lead in ladle, i.e., temporary extension of mould to contain molten metal which runs down to mould proper as metal contracts (this prevents formation of pipe or cavities in spot when it cools); *cf.* moulder (184).

runner, plug (steel), see filler, plug.

runner, recrosser; *recrosser*, by hand, with saw or by machine, in setting fag-ends, etc., to give clearance for cutting tools, etc.

reed maker; *machinist (reed making)*; *setter (reed making)*, makes reed, a frame of parallel vertical iron wires, secured at their extremities by wooden staves; feeds specially prepared wire to machine that automatically cuts them to required lengths, inserts each wire in position between wooden staves and finishes off by binding with tarred twine round both top and bottom pairs of staves to keep wires apart, and binds each pair of staves together; *cf.* finisher (textile reeds).

reeler, bar reeler (rolling mill); (*Lonsdale*) removes scale, palisades and straightens round steel bars by passing them through hard rollers in a reeling machine.

refiner, refiner man (copper); (*electrolytic process*) a charge is placed used in refining copper by electrolytic process; superintends charging of depositing tanks; adjusts electric current passing through system by reading meters and adjusting switchboard; makes usual examinations of copper deposited in cathodes and directs operations generally; *cf.* refiner (copper) (171).

refiner, dirt; sorts, washes and sifts sweepings of workshops to recover valuable scrap dust, *e.g.*, brass, copper, tin, lead or other metal filings.

refiner, metal; general term for any worker engaged in any process of refining metals, including refining furnacemen (171) *g.*.

refiner, nickel, see nickel cupola man,

repairer, chain (harness); repairs chains by cutting out worn or broken links and by welding or bracing in new ones.

repairer, plough (team car); repairs, by hammering, smithing, bolting, etc. broken or bent parts of plough which attached to underframe of car, picks up current in conduit system.

repairer, syphon; repairs mechanism at top of syphon bottles used for aerated waters, using pliers, files, sandpaper, and other hand tools at bench; usually crimps syphon top on bottle.

repairer, ticket punch; repairs worn ticket punches by filing and grinding jaws or refitting new cutting edges when they are available.

repairer, tool, see fitter, tool; *cf.* tool sharpener (237).

re-rater (gas works); readjusts automatic apparatus in slot gas meters, as price of gas varies, to increase or decrease amount of gas supplied for every coin inserted.

retoucher (photography), see engraver (photography).

rigger (aeroplane, etc.); fixes wire stays on aeroplane or airship and is responsible for their proper tautness, alignment and position; is responsible for condition and, where necessary, for repair of all parts of machine except engine, propeller and instruments.

ringer, fish hook ringer, see bower.

ring maker (textile machinery); general term for any person engaged in making metal rings for ring spinning frames, including ring forger (190), ring hardener (220), polisher (238), ring turner (209) *g.*.

ring spindle maker, *as for* spindle maker.

riveter (brass bobbins); rivets parts of brass bobbins together by holding in riveting machine; usually done by bobbins maker (224) *g.*.

riveter, bank riveter (corsets); assembles parts of corset bones, rivets steel strip together, and rivets a studs and eyes, using hammer and machine riveter.

riveter, saddle tree; (i) see phaser, saddle tree; (ii) forms iron fittings for saddle tree, and rivets them on to wooden or wooden framework.

rod locker; an examiner *g.*, examining rods in rod mill visually and with gauges.

rod ring maker; twists, by hand, with pliers round mandrel, or by machine, wire rings used on fishing rods in order for line to be secured; roller changer; takes down worn rolls and fits new or freshly turned rolls in their place, under supervision of roller (179) *g.*, using chains and overhead tackle.

roller coupler (textile machinery); turner-*is* (York); fits and couples together short lengths of rollers, to form one long roller, for preparing, smoothing, twisting or doubling machines.

roller stretcher; straightens out fluted steel rollers, such as those used in cotton trade, which have become cracked; places roller in chucks of lathe and sets truth against a block; taps roller with copper hammer or wooden mallet, according to hardness of roller to correct irregularities.

rounder (tobacco), see cross rolls man.

rubber (film); runs finished film over piece of steel to detect any defective spots; usually done by examiner *g.*.

sample catcher, see drawer, sample.

sampler (blast furnace); takes samples of ore, coke, limestone, etc. off gas-trunk, hearth, etc. and takes samples of slag or pig iron and prepares them for examination by analyst or other expert.

sampler (copper smelting); inserts small ladle into metal to take a button or small round sample of copper during process of refining; allows to cool and breaks with

hammer; usually done by refiner (copper) (171) *g.*, who examines sample visually and so determines stage of refinement reached.

sampler, mineral; see sampler; breaks up, sieves, weighs and makes top portions of ore for laboratory analysis in such a way as to give a fair average sample of composition and hence of its metallic contents; sometimes specifically designated, *e.g.*, nickel sampler, zinc sampler.

sampler (textile); draws a sample from bobbins, finished spools, or bobbins, examines visually for finish and size, takes thickness with gauge and tests for ductility and strength.

saw doctor; (i) sharpens saws, hand or power-driven, with power-driven grinding machine, and sets teeth of saws at proper angle for cutting; sawyers often sharpen and set their own saws by hand; *cf.* saw sharpener; "lancers" or restores rigidity and true-ness of surfaces to saws, damaged by careless use or strained by heavy work by hammering and rolling, and generally keeps them in good order; *cf.* hammerer.

saw maker; general term for workers engaged in any process in saw making, including hammerer, blocker, smother, paver (279), setter, filer (233), hardener (230), saw backer (269) *g.*; in large works, processes are generally thus subdivided, but most of the men are capable of doing any of the processes, and apprentices learn them all; sometimes specifically designated, *e.g.*, hand saw maker, back saw maker.

saw smith, see hammerer (saw).

sawyer; directs sawing operations in iron and steel rolling mills and is responsible that saw drivers (209) *g.* cut materials to required dimensions; *cf.* sawyer (279).

scuffer (chains); makes links from hot blank by hammering edges of blanks and twisting them together (scuffing), using a hammer or drop press and die.

scraper (musical instruments); cleaner; reduces brazing marks and other irregularities on brass musical instruments, by filing and by scraping with a steel scraper.

separator (lead extraction), see desilverizer.

setter, barrel (small arms); (i) detects faults in barrels, either finished or unfinished, of guns, rifles, etc., by looking down the bore; sets or trues them by hammering with a copper or wooden-headed hammer on a block; (ii) fits gun barrels in a machine which detects faults by means of optical devices; operates machine so that pressure is brought to bear on barrel in required place and continues making adjustments, until barrel is found to be true.

setter, bayonet; tempers blade by heating it in a fire and cooling in oil and in water; sets or straightens it, by working it backwards and forwards between two steel supports on bench.

setter, circles, see circle (textile machinery).

setter, die (wire drawing); plate setter (*wire work*); sets and fits in machine, dies or plates, through which wire is drawn; *cf.* die setter (211); may also draw wire, see wire drawer.

setter, faller setter; fits, secures in position with screws and adjusts mechanism of fallers on mule spinning machine.

setter, frame setter (metallic bedsteads); fixes rail, base, etc. of bedstead into suitable position with necessary moulds at joints, in readiness for pouring metal; is responsible for distance and alignment.

setter, heading machine (bolts, rivets); fits and secures dies in heading machine, i.e. machine which

punches head on bolts or rivets; does minor repairs to machine and instructs helper. *s. v.*

setter, mould (steel); is in charge of operations of setting and stripping casting pits, i.e. placing moulds on pits ready for casting and removing them afterwards; may also assist beside cranesmen (260) *s. v.*; setting ingots and moulds; usually done by pitman *s. v.*

setter, mould (typefoundry); mould fier; inserts and fixes moulds in casting machines, and makes all necessary adjustments for accurate working; obsolete; work usually done by type caster *s. v.*

setter, needle setter, pin setter (textile machinery); hammers in pins, splices, pegs, or needles in component parts of textile machinery, i.e. combs, gills, hackles, lattice rollers, and other combing machinery; sets, i.e., bends or trues pins or needles using hammer, in case of hack saws; *s. v.* combwright (210); often specifically designated, *s. v.* comb setter, comb setter, gill pin setter, hackle pin setter.

setter, plate (scales), *see* leveller (scales).

setter, plate (wire works), *see* settler, die (wire drawing).

setter (reed making), *see* reed maker.

setter (saws), *see* saw setter; sets, i.e. bends teeth of saws with hammer on anvil so that they project slightly alternately to left and to right of central line of saw; in case of hack saws, uses a small power tooth setter, usually also sharpens teeth, *see* sharpener.

setter, spring; adjusts spiral springs to required length or shape; closes up or pulls apart each coil with long or pliers, working against a frame or mandrel or gauge; heats large springs before setting; sets small springs cold.

setter, tool; edge tool setter; sets or finishes cutting edges of tools by filing or by hammering; sometimes whets them on oilstone; sometimes also hardens, *s. v.* edge tool hardener (230), tool setter (211).

testers (cutlery); fixes cutlery blades in huffs, grips or scales, hores holes, drills for pins or rivets with hand or small machine drill, screws with rivets and if necessary, with with cement.

setter-up (spectacles); finally adjusts frames of spectacles, with hand tools at bench, according to prescription or specification.

shaft stretchers; stretchers and straightens shafts which are being turned; places between chucks of lathe, so as to revolve in long V-shaped bed; manipulates levers to cause press to bear on parts out of straight and adjusts holding chucks as shaft, during straightening process, lengthens.

shanker (barren furniture); solders shanks into brass or nickel harness furniture, and files joint smooth.

shanker, wrought nail shanker; cuts off required length of iron rod, for making wrought nail, either with cutter on anvil or with power shears *shaper (slag iron),* *slag iron shaper;* places iron strips in furnace, removes a strip with pincers and beads over mould or pattern, using other pincers; flattens iron under drop hammer, worked by lever; *s. v.* beader.

sharpener, shaper, saw sharpener; (i) sets up, feeds and controls grinding machine which sharpens teeth of saws; (ii) sharpens teeth of saw by hand, with file, immediately after setting, to definite angle and pitch; usually also sets saws, *see* saw setter; *s. v.* saw doctor.

sharpener and settler, saw; a saw setter *s. v.* who also sharpens saws, *see* sharpener.

shearer, bloom, *see* cutter bloom.

shot copper man; pos man (copper extraction); produces "bean shot" by granulation of copper; runs molten copper through perforated ladle into a perforated pan, which is immersed in hot water for "bean shot" or in cold water for "feathered shot."

shuttle spring maker; cuts steel strip to length for weaving shuttle springs; bends strip to shape and drills holes for screws.

shovel on one side of nickle blade, either by hand chisel and hammer or by holding in special file tooth cutting machine.

sight tube maker; cuts from length of tube, and turns in an automatic machine, a small portion used in making sights for rifles, etc.; obsolete.

silverizer (lead extraction), *see* desilverizer.

skate mechanic; does minor repairs to ice and roller skates; fits new screws, adjusts slides and grip; adjusts ball bearings of roller skates; usually works in workshop attached to rink.

slab shear operator, *see* cutter, bloom.

slagger, blast furnace (copper); runs off slag from copper blast furnace or cupola, or from "settlers"; when flow is not continuous, breaks clay plug with bar and replays when flow ceases; runs slag into wagons to be conveyed to dump, or into water where it is granulated; in some works, superheated running off of slag by semi-skilled workers.

slagger, furnace slag (iron and steel manufacture); a superior grade of furnace slag (379) *s. v.* sort under furnace helper (171) *s. v.*; separates flowing off and removal of slag, using trough preparer and bogies or ladles; *s. v.* slag (379).

slagger (zinc extraction); fluxes; draws out molten slag from flux below zinc smelting furnace, with a long rake on to floor; slides slag into iron basons for conveyance to slag pit.

slag trier (copper extraction), *see* tester, slag.

slay maker, slay maker, *see* finisher, slay.

slizer, *see* cutter, ingot.

slipper, *see* packer (shipbuilding).

smith (saw), *see* hammer.

sorter, hand sorter (galvanized sheets), *see* sorter (galvanized sheets)

sorter (needles); bright worker (needles); spreads out needles, after glazing, on table; rolls them about with fingers and flicks out any that are crooked, marked, broken or otherwise defective; *s. v.* sorter (needles) (279).

slag; slag; sets out slag, containing a high percentage of metal, for remelting; slagging heavily by colour.

sorter, tin sorter (tin boxes), *see* sorter (tin boxes).

sorter, tin sorter (tinplate), *see* sorter, wire tooth (card clothing); sorts out wire teeth according to size and gauge, preparatory to setting them in cloth or leather foundation of card clothing.

spade and shovel handler, spade and shovel shaker, *see* finisher, spade and shovel.

spelterman, spelter worker (zinc extraction); general terms applied to workers in zinc extracting and refining works, includes divider (17), residue dresser (278) under (17), residue furnaceman (171), zinc recovery hand (379) *s. v.*

spindle flinger, *see* tester, spindle.

spindle maker; general term for any person engaged in making steel spindles for textile machines, including spindle forger (180), spindle grinder (334), spindle painter (237).

spindle setter (210), spindle roller (250), spindle straightener *s. v.*; sometimes specifically designated, *s. v.*, flyer spindle maker.

springer (tubes); straightener (tubes); slips tube through a loop of rigid iron fixed in vice, and removes slight bends in finished last-welded or lap-welded tubes by springing or pulling tube against sides of loop.

spring maker; makes springs throughout; (i) makes leaves of laminated springs or heavy spiral springs for vehicles, rolling stock, generators, etc., *see* spring smith (180); sometimes hardens and tempers them, *see* hardener (230); bolts and fits leaves together and fits springs; (ii) stamps out flat springs and hardens and tempers them for weighing machines, small arms, textile machinery, etc.

spring maker, carriage (textile); a spring maker *s. v.* who makes springs for carriages of mule spinning machines.

spring scrapper, *see* tester, spring.

spur tackler, *see* fitter, spur tackle.

squarer, hinge squarer (iron hinges); (i) cuts, drills, hatches ball of iron into a hinge, and squares to gauge, rings of hinges, using saw, hand or machine drill and emery or carborundum wheels or files; (ii) operates power press which squares hinges made of mild steel.

squeaser man (pneumatic furnaces); puts, with tongs, heated ball of iron into a boiler or squencer, worked by chain on roller, which exercises a continuous pressure on it; obsolete; term to be distinguished from shinder (174), who hammers it under a steam hammer.

staver (tubes); fixes end of tube into a punching machine which compresses the end or thickens it for strengthening purposes; may also expand tube, *see* expander (tubes).

stayer; fits boiler stays in position, screws them up and cuts off superfluous metal, with hand tools, by machine, *see* staving machine worker.

staying machine worker; operates staying machine which drives and taps holes, screws up boiler stays and cuts off superfluous metal; *s. v.* stayer (259).

steel bar maker, steel shaft maker (textile machinery); shapes and makes steel bars and shafts either by forging, or from block or ingot steel, *see* forger (180), or by shaping with turning, milling or other cutting machinery, *see* turner (200).

steel worker (steel manufacture); general term for persons engaged in manufacture or rolling of steel, including changer (177), bloomer (170), furnaceman (171), roller (178) *s. v.*

straightener, comb (textile combs); a needle setter *s. v.* who mechanical in bending tube, with hand pliers and a gauge, pins or needles in textile combs out of alignment, etc.

straightener, guide reeling, *see* straightener, rod mill.

straightener, hammer (needles); hammers crooked needles on small anvil to straighten them.

straightener, hand; a hammer straightener *s. v.* who straightens needles after hardening.

straightener, iron plate, *see* straightener (saw).

straightener, plate straightener; simple operator, plate straightener, plate straightener, straightener; operates levers which control rollers or mangle used for straightening steel plates after rolling, or in boiler and tank making; uses a bed of heavy steel plates for use in making boilers, tanks, etc.; sets gauges and adjusts space between rollers by means of screws; directs work of labourers in slugging plates into position on bed of machine.

straightener, rail straightener; with assistance from labourers, swings from crane, finished steel

rolls on to bed of "gag press"; sights along head of rail from one end towards a light at other end, to detect bending; moves rail so that crest of curve is immediately under press and then gives instructions to man (179) g.v. straightener, rod mill; gauge rolling straightener; straightens rod, while hot after rolling, on mill floor, by hitting with hammer (usually wooden hammer).

straightener (bars), saw straightener, saw plate straightener; iron plate straightener; straightens or flattens stone cutting saws bent in use, by hammering on an anvil or iron plate.

straightener, soft (needles); a hammer straightener g.v. who straightens needles in the soft, i.e., before hardening, on anvil, with hand hammer.

straightener, spindle; spindle stretcher; (i) a straightener g.v. employed in a mill where spindles are produced; operations similar to those of rod mill straightener g.v.; (ii) for small spindles used in textile machinery; a tool with a hand hammer on a steel plate to reduce irregularities.

straightener (tubes) tube stretcher (rod); (i) straightens flattened tubes by placing them between plates, the upper of which is moved rapidly backwards and forwards by machinery, by feeding them into specially constructed straightening rolls, or for heavy tubes, by manipulating them under a sledge hammer; (ii) see springer.

straightener, wire (reed making); straightener, reed; a tool for straightening reeds; examines flattened wire ends or teeth in reeds made by reed maker g.v. (for textile looms); withdraws ends that are faulty, substituting good ones by hand; bends wire, where necessary, to make distance between teeth uniform; cf. wire straightener (179).

straightener, wire straightener, plate stretcher, see straightener; sometimes specifically designated, e.g. spindle stretcher, tube stretcher.

straddle (metallic bedsteads), angle iron straddle; fits studs, to which laths are attached, into punched holes in angle-iron of bedsteads by power or hand press.

sweaver (tubes), see beveller (tubes).

swivel maker (sporting rifles); cuts loops from rod steel on shearing machine, bends to shape on bending machine, drills and rivets loop to swivel on riveting machine or by hand riveting.

tackledman (steel manufacture); erects, and is in charge of, lifting tackle, chains, blocks, slings, etc., used for lifting and moving plant and material about works; maintains tackle in good repair.

tagger (tubes); a tool for drawing tubes ends of iron or steel tubes in tufile furnace and reduces diameter of end by hammering by hand on an anvil or under a power hammer with aid of squaring dies, to enable end of tube to be pushed through bell or die and so form grip for drag on draw bench; sometimes feeds tubes to welding rolls or merely passes to tube drawer or tube welder (206) g.v.

Talbot furnace worker; a steel worker g.v., working at Talbot furnace, to charge (239) g.v.

tapper (foundry); taster; breaks clay plug in tapping hole of cupola with a pointed steel bar, so releasing molten metal, which falls into ladle; periodically taps slag at slag holes; usually done by furnaceman (171) g.v.

emptied, drills or hammers out clay with which tapping holes are closed, and keeps molten steel flowing by means of a long bar.

tapper (rolling mill); taps steel plates with hammer, to detect flaws by ring of metal; cf. chiseller.

tapper (sine extraction); see drawer (sine extraction).

tapping man (lead extraction); lead taster (not foundry); (i) opens iron plug by turning worm screw and so taps from lead from "perchway kettle," i.e., vessel in which lead is collected after zinc has been expelled, in process of delivering, and runs it into cast iron pig moulds; in this form it is "merchant" or commercially pure lead; (ii) runs off molten metal from reverberatory furnace, after impurities have been skimmed off, into cast iron pot or kettle, which is placed below tap hole; usually done by furnace man (171) g.v.

tester, see tapper (foundry).

teemer, ladle teemer (steel manufacture); power; (i) pours steel from converter or tilting furnace into ladles by turning wheel controlling angle of converter; (ii) moves lever raising stopper of steel ladle, thus allowing molten steel to run out into moulds prepared by pitman g.v.; closes pouring hole in similar way when mould is full, and repeats operation till all steel has been poured into moulds.

teemer, spigot (steel manufacture); taps cupola by breaking through clay plug in tap hole with iron rammers and sperrines tamping or pouring of spigot holes from spigot cupola into ladles and from ladles into converter.

teemer at mixer, metal teemer at mixer (blast furnace); a ladle teemer g.v. pouring molten iron into mixer (tilting furnace) in which up to 400 tons of molten metal are mixed and stored from ladles and from mixer into ladles.

teeth maker (card clothing); sets up machine which cuts, bends and points wire teeth for card clothing; cf. card setting machine (183).

tester; gauger; general term for workers testing pipes, boilers, motor cars, finished machines, engines, etc. for strength, water tightness, steam running, power, efficiency, etc., operations vary considerably according to article tested and method or machine used; nearly always use gauges and templates, takes readings of dial, etc., and records results in text book; sometimes specifically designated, e.g. fuse tester, hollow-ware tester, sewing machine tester, rail tester, stove tester, wire tester.

tester, bench (motors, motor cycles); see taster, engine (bench).

tester (boilers and tanks), boiler tester; tests boilers by filling with water and connecting up with hydraulic pressure pump; takes care of a string of coaches connected up with engine; with brakes on, reads all pressure gauges and in event of any leakage or faulty working, eliminates coaches one at a time, till fault is traced.

tester, car; engine tester (road); a test man, road tester (motor); drives finished chassis to test it under road conditions and reports behaviour; if necessary, makes minor adjustments during trial; frequently done by engine or chassis fitter (235) g.v.

tester, carbon; makes rough chemical tests of samples of steel, taken as steel "buttons" from furnace, to ascertain carbon content; usually done by shift chemist and his assistants.

tester (chain testing house); see examiner (chain testing house).

tester (cycles); see examiner (cycles).

tester, engine (bench); bench tester, motor tester, tuner (rehearsal); runs engine on a bench under artificial conditions approximating to strain imposed upon it under road conditions, usually by applying a measurable braking force to fly wheel; takes revolutions per minute; may take indicator diagrams and calculates indicated horse power; reports behaviour and, if necessary, tunes up or makes minor adjustments.

tester, engine (road); see taster, car.

tester (files); see examiner (files).

tester, heat (blast furnace); takes temperature of furnaces and steves and of heat entering furnace, by reading pyrometer; now generally done by stove minder (171), foreman or chemist, or by manager.

tester, matrix; tests brass matrices, to be used in type casting by linotype process, by taking a trial cast, comparing with a standard letter and measuring for depth of strike, truth of alignment, etc.; machine matrix or shapes it by hand tools at bench, if alteration is required.

tester, meter (gas and water meters); per meter prover, meter prover; tests gas or water meter by passing measured quantities of gas (or air) or water through them and checking readings; also tests meters to ascertain that they are gas-tight or water-tight, by connecting up with compressed air pump and immersing in water.

tester, motor, see taster, engine (bench).

tester, pipe, see tester, tube.

tester, rivet; hits heads of rivets of boilers, etc., with a small testing hammer to ascertain by sound whether the rivet is tight or loose; applies steel searchers in plate seams, etc., to detect gaps; sometimes done by riveter (205) g.v.

tester, road (motors); see taster, car.

tester (rolling mill); see test house machine attendant.

tester, slag (copper); flows from blast furnace or cupola or refining furnace; granulates them by dropping or pouring into water and tests granules for their copper content by cracking them and making visual examination; may pass to chemist for chemical analysis.

tester, spindle (textile machinery); (i) spindle gauger; tests, with measurements, gauges, spindles for textile machines, to ascertain if dimensions are correct; (ii) spindle fitter; places and connects spindle in a gut driving belt, to revolve shaft; watches spindle as it revolves (1,000 r.p.m.) and feels with finger for any roughness; rejects spindles not running true; sometimes roughness with energy cloth; sometimes specifically designated, e.g. ring spindle tester, spindle and flyer tester.

tester, spring; spring examiner, spring stragger; (i) tests spiral springs placed spring in holder and moves lever to bring controlled weight to bear on spring; reads length of spring and pressure upon it from gauge and pressure dial; may also measure length of spring before and after test (ii) heavy spiral and tension and laminated springs places spring on bed of hydraulic press or strapping machine; controls valves and levers to bring pressure to bear on spring, takes readings of dial; then releases pressure gauge and pressure dial; releases pressure and again measures length or area of spring on gauge.

tester, tank; fills tanks with water and attaches water pressure pump; controls pump valve, takes readings from gauge and watches for water leaks; certifies tank as tested at given pressure per square inch.

tester, tube tester; pipe *tester*, prover (tube); tests tensile strength of finished iron and steel tubes, generally by means of internal hydrostatic pressure; connects pipe to hydraulic pressure pump, controls valve and takes readings of pressure gauge; also applies compression tests in testing machine, see test house machine attendant.

tester, wet and dry (chipbuilding); a caulker (hand) *q.v.* who does caulking, injecting, etc., in preparation for and during testing for watertightness.

test house machine attendant, test house machine man; tester (rolling mill); places test piece of metal, *e.g.*, iron bars, steel rails, in different types of hydraulic or electric testing machines, which measure flexibility, tensile strength, etc.; controls valves and levers to apply pressure and bending moments; reads dials and gauges, indicating pressure, deflection, etc., and makes records in test book.

test man, final, see tester, *car*.

tongaman (steel forging); guides steel forging, iron or steel bar or sheet while being worked upon by power hammer, press or rolling mill, with tongs suspended from travelling trolley by a chain; sometimes specifically designated according to work, *e.g.*, front tongaman, tongaman at clogging, tongaman at finishing, tongaman at roughing.

tracker (cycles), see examiner (cycles).

triangle maker; bends over, by forging, one end of special steel rod; bends rod to red heat, secures it in a vice, and bends it by hand to shape of triangle; grinds to give bright finish.

trass, spring maker; bends steel strip, either by hand over a former or by machine in a press; punches holes at each end in punching machine; may also harden and temper springs, *i.e.*, by heating in fire and quenching in water or oil.

trayer (drums, legs); a tester *q.v.* who inserts rubber bung into drum (or leg) and connects with compressed air cylinder; examines drum in tank of water, turns on cock of air cylinder and watches for air bubbles; marks position of any leak and returns faulty drums for re-soldering or dipping.

trayer (gas fittings), see prover and tester.

tube manipulator (tubes); expands, bends, flanges, crushes or shapes tubes to section, and performs other similar operations, by hand or with machine tools; *cf.* bender, expander, tube presser; sometimes fits tube with resin or pitch to prevent belting.

tube presser; fits dies into power press and inserts tube against gauge, to be shaped or pressed, *e.g.*, cycle forks, ends of which are pressed flat to take nuts.

tube shoulderer; prepares one end of solid drawn copper or brass tube for draw bench, by reducing or tapering it; places end in power-driven hammering machine, moves starting lever and turns tube, by hand, in machine.

tube stemmer, see tapper.

tuner, bell; cuts and trims with chisel and file, bell, preparing to quench size of formation in order that note shall be correct.

tuner (vehicles), see tester, engine (bench).

tungsten former (wireless valves); (i) feeds pure tungsten in powdered form into bath of molten iron or iron black; (ii) hammers heated blocks of tungsten into rods on an anvil by hand.

tungsten plate cutter, tungsten plate former, tungsten plate maker (wireless valves); cuts plates from sheet tungsten in shearing machine; forms or bends cut plates for anodes in a press fitted with heated dies and pig (or former).

tungsten wire worker; general term for workers engaged in making tungsten wire for wireless valves, including tungsten former, wire drawer (268) *q.v.*

tuning fork maker; receives tuning fork after it has been hand tuned, secures it in vice and shapes length of arms and body of fork with special file; till desired note is obtained; judges note by ear and compares with standard forks tested by National Physical Laboratory.

turner (gig iron); feeds straight strips of iron into mangle machine, against a pattern or mould, to be pressed into shape of load iron or of front iron, after they have been cut to length by cutter (270) *q.v.*; changes moulds in machine, as required.

turner-in (textile machinery); (Yorkshire), see roller coupler.

type founder; founder (type), letter founder; a thoroughly skilled man, capable of making type throughout, performing the work of matrix maker and caster *q.v.* and either doing the finishing himself or superintending the various workers engaged in finishing cast type, *i.e.*, dummies, finisher, learner, breaker (279), pager (279) *q.v.*

type dropper-on, tyre farnaceeman, tyre heater (rolling stock); wheel dropper-on, wheel keeper; beats tyre in furnace to red heat to expand it; places it on wheel centre, where it contracts in cooling and grips wheel centre and disc or spindles with strong pressure; may also hammer tyre under special axle hammer.

umbrella notcher; fixes notch, *i.e.*, notched ring to which ribs are hinged, in steel tube or wooden stick by drilling and riveting in a pin with hand hammer.

umbrella rib bender, umbrella rib curver; fits special dies into hand or power press; places rib in press by hand and manipulates hand lever to cause press to descend and bend rib to shape.

umbrella rib maker; fixes various dies and gauges on semi-automatic machine; places spool of grooved wire on spindle and feeds end of wire through tempering gas-heated furnace and through straightening plates into machine which cuts and bends the wire, presses end together in joints and punches rivet holes in ribs; watches machine for proper working.

umbrella riveter; assembles stretcher and rib and rivets pin through hinge with hand hammer at a bench.

umbrella springer; fits spring in position on steel tube or wooden stick and secures by riveting pin with hand hammer.

valve distributor, valve man (steel manufacture); attends to gas valves (burners and turners) and keeps in working order; sees that water used in reversing levers, as in order; repairs defective parts, using hand tools; usually done by fitter (219) *q.v.*

vessel man (steel manufacture); inspects Bessemer converter, after each heat, looking through blue glass, repairs bottom and patches lining with fireclay; if necessary, uncovers and removes bottom for more extensive repair; also removes with hammer and chisel, solidified steel on lip of converter.

viewer, see examiner; sometimes specifically designated, *e.g.*, action viewer (small arms).

viewer, ball bearing; tests with gauge and by visual examination, for size and perfection, balls for ball bearings; rejects faulty balls; if viewer (cycles) scrutinizes each part of cycle at each stage of manufacture to detect faulty material and errors of size.

viewer (tubes), examiner, inspector (tubes); carefully examines tubes at various stages of manufacture for defects in material; also checks dimensions with gauges.

viewer of castings, see passer (iron-foundry).

washer, hand; a dirt runner *q.v.* who finishes workshop sweepings by hand.

washer, pan mill; a dirt refiner *q.v.* who washes shop sweepings in a pan mill.

washing tables attendant; a dirt runner *q.v.* who attends washing tables operated by power; brushes, crashed ore or dirt on to tables and controls water supply and speed of tables.

watcher, slag watcher (steel manufacture); notes colour and viscosity of slag, which indicates condition of charge in furnace; sometimes done by furnace watcher (171) *q.v.*

wheel blocker and setter (railway coach); blocks and sets up train, composition wheels of railway passenger coaches, *i.e.*, wheels with steel tyres and centres of wooden or compressed paper discs; cuts wooden blocks to V-shape on circular saw, weighs each piece on scales and matches up; fits pieces into circular iron band and tightens up with bolts; cuts out centre for boss with hand saw; drills holes in wheel blocks with jig and multiple drilling machine.

wheel builder, cycle wheel builder; wheel maker; loses a few spokes through flanges of hub; attaches them to rim of wheel and tightens them up until hub is approximately in centre; places remaining spokes in position; roughly adjusts wheel, sets it on spindle in a jig and trues it up.

wheel builder (perambulators); wheel maker, perambulator wheel maker; makes wheels for perambulators, mail carts, etc., either by threading spokes through holes in hub and riveting free end through corresponding holes in rim; or by passing headed spools through holes in rim and screwing them into hub; trues up wheel in vice, by bending rim and adjusting lengths of spokes.

wheel dropper-on, see tyre dropper-on.

wheeler; puts wheels, after they are built, on to axles of bicycles, chains, portable engines, etc., inserts balls in ball race, if any, screws on adjustment cone or collar, dust ring, oil bar, etc., according to type of wheel; sometimes done by wheel builder *q.v.*

wheel hooper, see tyre dropper-on.

wheel lacer (cycles); nipper, wireman; makes a few spokes through holes in rim and hub and screws on nipples ready for wheel truer *q.v.*

wheel lacer and drillers; a wheel lacer *q.v.* who previously drills holes in rims in drilling machine with jig or diamond plate as guide, sometimes done by wheel truer *q.v.*

wheel maker (cycles), see wheel builder (cycles).

wheel maker (perambulators, etc.), perambulator wheel maker; (i) see wheel builder (perambulators); (ii) general term for workers engaged in any one of a number of different operations which work of wheel-making is sectionalised *e.g.*, hub driller (300), hub maker (209), rim welder (249), rim worker (279), wheel lacer *q.v.*; sometimes specifically designated, *e.g.*, basinette wheel.

wheel presser, see assembler, wheel and axle.

wheel truer (cycles), cycle wheel truer; (i) places wheel on a spindle or a jig and trues it up by tightening or slackening spoke nipples and, if necessary, adjusting rim in vice; (ii) adjusts fork attachment and bearing hub to set wheel to run true between forks.

wheel truer, wheel truer-up (perambulator, etc., for wheel trueness); usually done by wheel builder *q.v.*

willow tooth maker; woolley tooth maker; cuts teeth or spikes from steel rod with hack or machine saw; forges them to correct shape and finishes them with file, etc., ready to be set in rollers of willowing machines, used for operating wool and other textile materials, to remove dust, etc.

which fitting maker (fishing rod); assembles and adjusts metal and wooden parts of fishing machines, using hand tools at bench.

wireman (cycles); see wheel lacer.

wireman and truer-up; combines work of wheel lacer and wheel truer *q.v.*

wire turner (textile machinery); see wire worker (textile machinery).

wire worker (branch hand); general term for any person who makes wire goods, wholly or in part by hand, by straightening, cutting, bending, carving, etc., wire to required shapes.

wire worker (foundry); shapes wire, for use in core making, on a handlathe, using hammer and pliers.

wire worker (pianos, etc.); cuts, bends, points and threads wires for piano or organ actions with a wiring machine.

wire worker (textile machinery); wire leader, wire turner; makes screws, gauges, and other wire appliances for textile machinery, turns or bends wire over a pattern using hammer and hand pliers.

woolley tooth maker, see willow tooth maker.

work board hand (outfitter), see putter together (outfitter).

wrought nail maker; forges wrought iron nails, by hand, on "Oliver" hammer; *cf.* crammer.

zincage man; carries out operations as Parke's process of desilverization of lead, by means of direct action of metallic zinc; carries out one or more of such duties as running molten lead into cast iron pots, skimming molten lead with special skimming tool, adding metallic zinc (either solid or molten), stirring mixture, skimming off triple alloy of lead, silver and zinc as it solidifies, etc.

zinc fixer; cuts sheet zinc and fits and fixes it with zinc nails, screws or rivets in sinks, on roofs, etc.; *cf.* zinc roofer (278).

279—OTHER WORKERS.

accessories worker (sewing machines); obtains from store a supply of sewing machine accessories, e.g., oil can, screw driver, spanner, extra spools, bobbins, ticking, etc., fittings; has or tries them on machine and if satisfactory, wraps accessories in paper ready for despatch with machine (tailoring mill); *see* lift-up (rolling mill).

angle chopper, see cropper, angle.

angle mill worker; general term for any unskilled worker employed in any capacity in rolling mills where angles are rolled, lifting, pushing, dragging, etc.

ashes man, ashes wheeler, ashman; takes out ashes from fires, e.g., boilers, puddling furnaces and conveys ashes on wheelbarrow to ashes dump; ashes are sometimes removed by coal wheeler or by coal and ashes wheeler *q.v.*

assembler; in engaged in various metal trades in fitting together component parts of machines, metal articles, etc., e.g., chains, chassis, cycles, fuses, scales, sewing machines, stationary engines, does not alter or adapt parts by filing, scraping, etc., but merely fits parts in place; sometimes specifically designated, e.g., bottle cap assembler, brake assembler, cycle brake assembler, duplicating machine assembler, motor assembler,

motor-cycle assembler, sewing machine assembler, *cf.* cycle assembler (269), assembler (bedstead) (278).

assembler, axle; (i) assembles, or puts together without altering or adjusting, parts of axles for horse-drawn road vehicles; (ii) fits front and rear axle assemblies on carriages, coaches, etc.

assembler, ball bearings; assembles steel balls into races, and packs assembled bearings into cases.

assembler, bell, *see* bell maker.

assembler, bottle cap; crown cork assembler; controls levers of machine which fits discs of paper and cork into metal caps; feeds boppers with caps and paper and cork discs.

assistant at mandrel (iron and steel tubes); places mandrels in position in roll grove in course of long steel bar during process of tube rolling.

assistant gas man, assistant stove minder; assists stove minder (171) *q.v.* by operating valves, shovelling fine dust into barrows and doing any odd job.

assistant glazer, *see* glazer's assistant.

assistant grinder, *see* grinder's assistant.

attacher (sewing machines); an assembler *q.v.* who specializes in attaching one special part to sewing machine in course of building; works at bench, usually with screw-driver, spanner, file, etc.

auto attendant, automatic attendant, automatic machine attendant, automatic machine feeder, automatic machine hand, automatic machine minder, automatic machine operator, automatic mechanist; general terms for operatives who feed and operate automatic machines used in various metal trades, e.g., manufacture of cycle parts, motor and cycle accessories, trams, screws, etc.; work consists mainly in wrenching, cleaning and oiling machine under instructions of tool setter or foreman; stops machine if any fault develops.

automatic screw machine hand, auto screw machine operator; auto screw attendant; feeds and operates machine automatically making screws throughout from hexagon bars, or prepared headed blanks.

axle crammer; works chains of hand crane, and places hot forging in position under hammer for working.

axle lagger; assembles over finished bearing parts of large axles, in process of making or fitting, by nailing round bearings pieces of wood and hoop iron, to prevent damage.

axle plinner; fits and drives lynch pin into slotted hole near end of axle, often done by axle slotter (269) *q.v.*

backbitter, *see* metallist.

backer (sawmaking); (i) *see* glazer's assistant; (ii) *see* grinder's assistant.

backer-up; see turner-up (iron and steel tubes).

back fixer, saw back fixer; saw backer; forges saw in steel or brass hack used to stiffen certain saws; adjusts it and takes out any resultant twist in saw, by counteracting it between two iron supports on bench.

backhauder, angle iron smith's backhauder; angle iron smith's helper, helper (forging); assists angle iron smith (193) *q.v.* by lifting, moving and handling bars of iron or steel on which smith is working; sometimes acts as striker (193) *q.v.*; *cf.* angle iron smith's striker (193).

back hole stopper; lock stopper; pushes skip (but metal strip) through small door in back of heating furnace or muffle in preparation for tube welding; closes door with door plate or stopper.

back maker, saw back maker; operates levers to double over steel or brass blank in power-press to form stiffener for certain saws.

back sawer, back sawman, back

sawyer; assists sawyer, by holding tail end of bar against guides and following it down to saw, to keep it straight; takes last scrap piece of bar in tongs and throws on scrap heap.

back stopper, see back hole stopper.

bag frame riveter; rivets together, by hand, frames of travelling bags, portmanteaus, etc.; sometimes uses riveting machine.

baghouse man (lead extraction); attends to cooling apparatus and bag funnel filters made for separation and collection of fume or fine dust from gases leaving furnaces; removes clogged bags from time to time and hangs up fresh ones.

ball boy; puts balls on iron rods used as mandrels for tubes, in tube making, to keep tube perfectly round; dismantles balls from rods and sorts balls away according to sizes.

ball man (blast furnace), *see* tipper, slag (blast furnace).

bankman, bar bank man (iron and steel rolling); general terms for any workers on a hot or cold "bank," i.e., stack of bars before rolling, or rails, or other materials after rolling; where only light articles are handled, lifts, stacks, loads, or otherwise moves them, by hand; terms include bar discharger, bar loader; in heavy mills, assists crane driver (350); sometimes specifically designated, e.g., rail bank man.

bankman, bar bank man (puddling); bar lifter; lifts, carries, stacks, etc., finished bars of wrought iron, and is responsible for their safe storage; sometimes does work of bar dragger *q.v.*

bankman hot; hot bench man, hot piler; a bar bankman (iron and steel rolling) *q.v.* working on hot bank, stacking hot billets, rails, bars, etc.

bankman, slag, *see* tipper, slag (blast furnace).

bankman, *see* tipper slag (blast furnace).

bar bank boy; (i) (iron and steel rolling); greaser; assists bankman *q.v.* by greasing conveyor slides, etc.; (ii) (puddling) assists bar bank man *q.v.* in handling small bars.

bar dragger; (i) (galvanized sheet) bar drawer, dragger-out; charges rough bars into roughing furnace and draws them thenceforth with tongs, attends to firing of furnace and assists catcher (178) *q.v.*; (ii) (puddling), bar carrier (puddling); drags with tongs or pushes on trolley, wrought iron or bars from rolls to bar bank, or to rolling mill, and often also weighs them; sometimes done by bar bank man *q.v.*; (iii) (tinplate, sheet mills), bar drawer (tinplate); charges furnace with bars; draws them with tongs when heated and passes them to breaking down rolls.

barman, billet wheler; works on bar bank of iron and steel tube mills, unloading, stacking and issuing supplies, and loading trucks for conveyance into rolling mills.

bar minder (pins), *see* machine minder (pins).

barreller, shaking barreller; barrel shaker (does and shoe plate, iron and steel hollow-ware), brightener, polisher, sear, shaker, shaking barrel rumber, tumbler (boot and shoe plate), rumber (brass spinning and finishing); places abrasive articles cleaning material and oiling, in revolving cylinder (shaking barrel), in requiring cleaning or polishing, sometimes also mixes abrasive ingredients.

barrel polishing attendant; assists in pin plating shop, by filling and emptying revolving cylinders in which pins are shaken together with molten tin and flux, to ensure that they are completely tin coated; *cf.* barreller.

barrel prover; *gun prover*, *proof gun*, *test*, in gun proof house, soundness of gun barrel, and functioning of action by firing a cartridge of maximum charge allowed by law, marks gas passing test with punch and hammer.

barrier-rod; feeds automatic and semi-automatic machines used in making bright steel and bolts with metal bar; stops machine if not working correctly.

barrow man, *barrow runner*, *see wheeler*; sometimes specifically designated, e.g., clay barrowman.

batter, *plate*, *betterer*, *plate betterer* (steel rolling), (*Storeport term*) *see plate refiner*.

thayman (steel works); *Loamshire term* sweeps up floor around furnace in steel works and generally keeps it clean.

hammer; winds soft wire for weaving or braiding on beam of old textile loom used for purpose; places coil of soft wire on spindle and fixes beam in chucks of power-driven lathe; fixes wire to beam and starts lathe.

bedman (blast furnace); prepares, with shovel and runner, and beam in which molten metal, for making pig iron is run; sprays water on metal to hasten cooling it in readiness for handling.

behinder (tube and pipe making); *see turner-up* (iron and steel tubes).

bell lowerer (blast furnaces); raises and lowers bell top to blast furnace, by means of a lever, at signals from furnace keeper (171) *q.v.*

bell maker; *bell assembler*; an assembler *q.v.* engaged in fitting together component parts of cyclic bell.

bellows man; blows bellows on hand forge, used in shipbuilding and marine engineering, by working treadle with foot or by hand lever.

bench hand, *see vice hand*.

bliss man, *see harman*.

blinker, *see jumper* (pins).

blackener, *roller*, *sprayer*; Berlin black on coat, stove, etc., from paint spraying machine; sets articles in stove to dry.

bleaster, *see breaker*, *hear*.

blast furnace band, *blast furnace belp*; *blast helper*, *Acipser*, *keeper's helper*; does unskilled work about blast furnace; carries charges, breaks pigs, assists in laying out pig bed, during tapping and stopping of furnace; cleans out dust catchers and stoves, wheels away pig iron; attends conveyer which removes slag in ladles; assists furnaceman or keeper (171) *q.v.* generally.

blende conveyor; *shovels blende* (zinc sulphide) into hearth, where iron placed to place as required, in zinc extraction works.

blende worker; general term applied to unskilled workers in zinc extraction works, who handle blende (zinc sulphide), includes blende cleaner, blende conveyor *q.v.*

blocklayer (cinder tip, blast furnace); loads wheels of cinder wagons, before they are tipped, at cinder tip of blast furnace; sometimes done by shunter (704) *q.v.*

block minder (wire works); attends to and unwinds reels or blocks round which wire is wound after passing through galvanizing tank or annealing furnace; replaces full reels with empty core for fresh winding.

blower (bolts, nuts, and rivets); (i) opens and shuts valves of blowing machine which forces air or blast into coal furnace for heating hot blanks; (ii) controls valves of oil pump which sprays oil into oil furnace used for heating hot blanks.

blower (general engineering, including boiler and tank making); blows bellows of smith's hearth by working hand or foot lever; controls levers of blowing machine, which is used, under smith's instructions, to

blower (slag and slag wool); *scander*; regulates slag run, and turns on and regulates steam jets with which slag is treated in manufacture of steel wool; cleans out slag troughs ready for next "run."

blue billyer; *jetifier* (padding); grinds various forms of steel oxide (purple ore, pottery shine, hammer scale and tap (cinder) in an edge runner or mortar mill, mixes it with water to consistency of mortar, and puts it on floor near furnaces for use of furnacemen (171) or puddler (172) *q.v.* in repairing or re-lining furnaces.

blue sloner (watches and clocks); stains metal surfaces with "blue stone" by dipping parts in a solution of copper sulphate or by rubbing the surfaces with a rag dipped in the solution.

bobbin hooper (textile machinery); tube and hoop cleaner; feeds wooden bobbins into chutes of spinning machine which draw metal hoops on bobbins; watches machine to ensure smooth running.

bobbin riveter; (i) rivets together component parts of special textile condenser bobbins made from sheet metal, (ii) rivets ends or flange to wire shaft of small bobbins used in certain lace machines, and in ordinary sewing machine, *cf. brass bobbin maker* (226), *riveter* (brass bobbins) (208).

bobbin stepler; pricks ends of bobbin with hand tool, pieces staple in loop in position and places on mechanical "hammer" operated by hand lever, to fix loops of metal or shields on leveled flange ends of wooden spool bobbins used in textile trades.

bogey, *bogeyer*, *bogeyman*; *bogeyman*, *troller*, *troller*; (i) bogeyman, rolls or shunts from re-ingo or plate to furnaces to rolls, or from rolling mill to shearing machine, on a two-wheeled truck, or "bogey" (ii) supports end of very large and heavy steel plates on bogey, as they pass through rolls; sometimes specially designated according to rolling mill, e.g., sheet mill bogeyman, or according to duties, e.g., bogeyer to haul (rolls to stock bank), bogeyer to rolls (rolls to furnace), bogeyer to shears (rolls to shears).

bogie boy; *assists bogeyman* *q.v.* and *bogie boy* under his instructions. *bogie man* (i) *see bogeyman*; (ii) an older *q.v.* oiling or greasing axles etc. of bogey cars.

bolt boy; *assists shell plate's tackle man* (223) *q.v.* by pushing bolts through holes indicated by tackle man, in fixing plates.

bolter, *bolter-up*; temporarily fixes plates in position with bolts before riveting, or bolts flanges of pipes together, or generally assembling various parts of any large article with bolts and nuts.

bolter, *wheel*; screws up nuts on bolts which hold together centres or wheels of railway stock, with spanner.

bolt machine worker, *bolt machine*, *bolt maker*; feeds iron or steel rod in to semi-automatic machine used in manufacture of bolts; controls motion of machine by levers; sometimes specifically designated, e.g., wagon bolt maker.

bolt screwer; screws threads on bolts or nuts in screwing or tapping machine; clamps work in position and controls by hand levers machine which actuates cutting tool.

bender (electrical); assembles and bolts together, armature discs to form electrical armatures and stators.

boer, *ingot boer*; drills holes in steel ingots on horizontal drilling machine for insertion of mandrel when rolling into tubes.

boher; *underfoot man*; catches sheets from soaking bath, in galvanised sheet works, and sheets them in water-bath, to wash off acid box folder; *edger* (tin boxes); places sheet of tin on bottom bar of iron box, and pulls down lever to cause top bar to descend and fold over edges of tin boxes, *assists*, *etc.*, before forming of box former (204).

bohmman (blast furnace), *see weicher* (blast furnace).

brake block maker; puts together sections of metal for carrying brake blocks of motor vehicles, and rivets them by hand with hammer, *cf. brake block maker* (448) and (504).

breakman (blast furnace); applies brakes to bogies, *etc.*, carrying materials along incline from lime kiln to bottom of furnace house, slag tip, to and from furnace, *etc.*

brander (galvanised sheet); brands galvanised sheets, with brush and pencil, showing maker's name or mark.

brander (sewing machines); *number stamper*; marks wooden part of sewing machine with numbering iron giving number of machine, with number and size of parables.

brander (tinplate), *see stamper* (tinplate).

branner; a timmer's belp *q.v.* attending branning furnace, which cleans pins out from timed plate by means of revolving lathes covered with bran, or with a mixture of lime and sawdust; places sheets by hand between rollers of machine; *cf. cleaner* and *roller*; sometimes specially designated according to whether black or white plates are being cleaned, e.g., black branner, white branner.

brass threader (perambulators); cuts threads on inside of brass caps attached to ends of wheel axles of perambulators, *etc.*, secures cap in vice on bench and screws in tapping die and wrench.

breaker, *beer*; *boxer*; one of a contractor's gang who first and then breaks with dynamite, hard slag which forms at bottom of blast furnace.

breaker, *billet*, *see cutler*, *hillet* (rolling mill, puddling).

breaker (blast furnace); *blast breaker*, *pig breaker*, *pig iron breaker*; breaks off "pigs" from "sows" (secondary channels between pigs in bed) by hitting with sledge hammer; breaks sows and runners (main channels from furnace) into convenient pieces which metal is still in bed and hot; sometimes also removes pigs from bed; breaking is usually done by machinery, if done when metal is cold.

breaker, *cinder* (blast furnace); (i) breaks up slag, with hammer, on bench, so that it is to be sold as a by-product; (ii) shovels slag into hopper of crushing machine.

breaker, *dross*; *cleanser* (pig iron), *breaker-up*; breaks slag on to sow (iron in secondary channel between pigs) and knocks off sand with hammer, or saw swings on sling and after iron has cooled.

breaker, *ironstone*, *see breaker*, *mine*.

breaker, *limestone* (blast furnace); (i) shovels limestone into hopper of machine which breaks up limestone for blast furnace; (ii) (older method) breaks limestone by hand with hammer.

breaker, *manganese*; breaks up manganese with a hammer into pieces of suitable size for use in manganese steel manufacture.

breaker, *mine*; *ironstone breaker*; breaks ironstone, before it goes to roasting kiln or heating furnace, with sledge hammer.

breaker, *ore*; *iron ore breaker*, *see stamper*, *ore*.

breaker (padding), *metal breaker*, *pig breaker*, *pig iron breaker*; breaks pig iron and scrap iron for

chain maker (cycle): an assembler q.v. who puts together hubs and studs of cycle chains, using riveting machine operated by foot treadle.
chain puller: pulls forward four short chains hanging from crane over casting pit, and places them in position ready for pitman (278).
chisel setter (278), or for setter (278) q.v.
chain worker (cycle), **cycle chain worker**: general terms for workers operating various machines producing rollers driving chains for cycles, includes chain making machine (254), chain maker (cycle), stud reamer, stretcher, slackener q.v.
charcoal sifter: sifts and prepares charcoal for cementation process in puddling, by throwing with shovel against screen.

char filler (iron mine, iron works): fills wagons, trucks, etc., with calcined ironstone, using shovel.

charge man (copper smelting): *feeder (copper smelting)*; charges calcined furnace, or cupola, by shovelling in copper ore, coke and flux (lime, etc.) under direction of cupola furnaceman (copper smelting) (171) q.v.

charge man (steel): fluxes converter, flux dust discharger; charges calcined zinc ore or concentrates into retorts for smelting; draws out residues from retorts, and prepares them for re-charging; usually there are four or five charge men in each furnace; in some zinc smelting works, charging is now done mechanically.

charge mixer (sine): weighs charges (binder, calcine, anthracite, salt, etc.) and loads into mixer machine and tips in contents; controls levers of machine which thoroughly mixes materials ready for distilling furnace, and passes charge out on to conveyor.

charge putter-up: piles up near heating furnace puddled bars ready to be rolled into finished bars.

charger, blast furnace charger: furnace charger; furnace sifter, shaker, tap filter, tap man; works on gantry at top of blast furnace, receives trucks of coke, iron ore and limestone on lift, pushes them to edge of bell top of blast furnace on rails laid for this purpose and tips contents on to bell; lowers bell by moving lever to discharge mixed coke, ore and lime into furnace, and is responsible for keeping bell clear; *blastmaster*; cf. *blastman* (160).

charger, flux dust, see *charge man* (zinc).

charger, ore, see *carrier* (lead ore).

charger, second hand, see *helper, charger*.

charger, spare (blast furnace): acts as charger q.v. in absence of regular charger; usually a settler or filler q.v. and so employed when not acting for charger.

charge tube: brass tube charger; *runner*; this groove along butt joints of tubes, used for molten lead, made with a mixture of borax and resin, ready for brazing, using a small scoop.

charge taker (iron and steel rolling): (i) wheels material prepared by charge putter-up (278) q.v. to furnace platform; this is done mechanically in big modern works.

(ii) see *weigher*.
charge taker (puddling): pushes barrow or trolley laden with pig iron, scrap, and coal to puddling furnace; sometimes done by coal wheeler, metal wheeler, or metal breaker q.v.
charge taker (steel works): weighs charges on weighing platform before being charged into furnace; counts number of ingots poured from furnace and records weight, etc., in a book which is taken to works office; sometimes done by weighman q.v.

checker (cartridges), see *gauger*.

checker (cycle making), see *counter (cycles)*.

checker (tinplate), see *counter (tinplate)*.

checkweigher, checkweighman (iron and steel rolling), verifies weights of bars, sheets, plates, etc., produced at various stages of manufacture of galvannead sheet, tinplate or iron and steel rolling, for information of firm, or, where earnings depend on tonnage produced, for protection of workpeople; in this latter case, is paid by the man.

checkweighman (iron foundry): *scaleman, weight jester*; weighs on scales or weighbridge, checks, and reports weights of raw materials for entering works of charges for cupolas, and of finished castings, etc.; a dresser (183) or clerk (162) q.v. frequently does this work.

chiller, see *mould cooler*.

chipper: chips scales and roughnesses from blooms, billets, rolled iron and steel, sleepers, rolled tyres, metal parts of railways and tramway rolling stock, etc., using either a hand hammer and chisel, or a pneumatic hammer; cf. *chipper* (183); sometimes specifically designated, e.g. tyre chipper.

chipper, ingots: chips out with hand or pneumatic chisel, cracks or flaws in ingots, before they are rolled or hammered, in manufacture of steel.

chipper, ladle: ladle cleaner; chips slag from sides and lip of ladle, after previous charging of molten metal in smelting, with hammer and chisel.

chipper, pot: chips off, with a hammer, the inner lining of fireclay in a ladle, called a skull, after casting; cf. *skull breaker*.

chipper (rolling mill): a chipper q.v. chipping rough ends on rails with hammer and chisel.

cladman: (i) see *picker, clader*; (ii) in South Shropshire, see *slagger*.

clad thrower, see *tipper, slag* (blast furnace).

circle room worker: is employed in carrying, arranging, etc., in shed where finished tinplates are cut to circular shape.

clay boy (iron and steel): tempers, i.e., soaks up clay and water with hands and brings it in tin pan to ladle dauter q.v.

clay man (copper smelting): plugs up with clay, tap holes of copper blast furnace, or cupola, and drives iron bar through clay plug, when molten metal, slag, etc., is to be drawn off; usually done by furnaceman or one of the furnace helpers q.v.

cleaner: (general engineering) general term for any worker engaged in cleaning engines, machines, work-shops, etc.; sometimes specifically designated, according to kind of machine, etc., e.g. drill cleaner, hydraulic cleaner, press cleaner, rail drill cleaner, steam cleaner, stove cleaner (blast furnace), tung cleaner (tube drawing); (japanizing) cleans dirt from metal with pumice stone and sand paper in preparation for japanizing; (fin bar making) cleans and straightens up finished tin bars, cast-iron, etc.

cleaner, bench: removes scale, shavings, etc., from benches at rolling mill, and sweeps up generally; sometimes specifically designated, e.g. *band's bench cleaner*, *straightener bench cleaner*.

cleaner, blende, see *dresser, ore* (sine extraction).

cleaner, brass: (i) cleans brass articles by freeing them from grease, etc., by rubbing or beating, preparatory to finishing and decorative process; (ii) separates iron and steel from brass scrap by means of magnet, or attends machine which does this work.

cleaner (cycle making), **cycle cleaner**: cleans machines preparatory to their being wrapped for despatch.

cleaner, flux; **flux cleaner**: cleans flux which convey gases from blast furnaces, by pushing flux brush through tubes.

cleaner, frame; **dips cycle frame**, after polishing, in paraffin or turpentine, and hangs it in a large oven to "evaporate" grease from pores of metal, preparatory to enamelling.

cleaner, ladle, see *chipper, ladle*.

cleaner, mould (steel manufacture): removes dross and scrap from moulds after use.

cleaner, nickel shed decomposer (Mond process): strips off nickel, deposited on sides of decomposer, with hammer and chisel; discharges stripped nickel into barrow and wheels it to furnace, for re-melting.

cleaner (pig iron): (i) see *cleaner and greaser*; (ii) see *breaker, dross*.

cleaner, pit: assists pitman or mould setter (278) q.v.; cleans up and some times wheels slag from casting pits in slag works; sometimes done by *slagger* (278) q.v.

cleaner, road (blast furnace): a yard labourer who cleans up rubbish or slag which has fallen from trucks or bogies.

cleaner, scale: (i) (iron and steel rolling), see *pryer*; (ii) (puddling) removes with pneumatic chipper or with hand tools, various impurities on surface of wrought iron, after hammering and rolling processes.

cleaner, scrap: removes grease, dirt, rust, etc., from scrap metal, by washing it in tanks of soda, acid, etc., and finally in clean water.

cleaner, cleaner-up (steel manufacture): *scavenger*; rakes and scrapes up slag and steel that spills on floor of steel works, and shovels into barrow.

cleaner, tube, see *cleaner, flue*.

cleaner (wire, wire netting, wire rope): dresser (*wire setting, etc.*); dips by means of hand- or wheel-work, coils of wire in bath of hot water and lime; admits steam through valve to maintain temperature; then removes coils and dips in acid bath; removes and allows to dry in preparation for drawing.

cleaner and greaser: *cleaner (pig iron)*, assists blast engineman (300) q.v. by cleaning and helping to grease engines, etc., in iron works.

cleaner and helper (ladle): polisher (tinplate), rubber (tinplate), is employed about furnaces and tubs of tinplate works; takes greasy tinplate sheet, still hot, from racks, passes it through layer of cleaning material, and cleans and polishes three with pad of sheepskin; hand cleaning is still carried on in a few works for production of better quality tin plates, cf. *dauter*; for machine cleaning, see *cleaning machine attendant, branner*.

cleaner-up (puddling furnace), see *scupper* (blast furnace).

cleaning machine attendant: attends to and feeds machine which pushes tinplate plate through cleaning material ("pink mud") with slow revolving arms; press work usually done by rigger or tinman's helper q.v. where automatic rigger are not used; *cleaning rod maker*, *removal maker*; makes rods for cleaning small areas, from cut lengths of steel wire or rod, fits thereto steel brushes, already machine made, forming a brush.

cleanser, tyre bottom: opens dust traps at bottom of tyres and clears them out.

climber (steel works): assists girder and steel erector (264) q.v. by climbing about scaffolding and girders already erected to support and guide to position ends of girders in course of erection; secures and manipulates hoisting tackle; carries and holds tools for erector.

clipper (slag iron), see *scavenger* (slag iron).

clipper, clipping press man (iron and steel stamping and drop forging): places stampings and forgings on bed of press, press and controls lever to trip the hammer and other superfluous metal.

coaster and wheeler (rolling mill), see wheeler-in (rolling mill).

coal and ashes man, cinder (puddling); general terms applied to men loading and discharging coals and removing ashes, including ashes man, coal discharger (puddling furnace), coal wheeler (puddling furnace) *q.v.* **coaster**; coats articles with composition, preparatory to enamelling, japanning or varnishing.

coil bender, see coil maker.

collar (lead extraction); coils lead wire, rod, or pipe, on drums by hand.

coller (wire making); attends machine which rolls finished wire into coils; replaces lost drums by empty ones on spindle.

collar (wire rod mill); guides thin metal rod, as it comes from last pair of hot rolls, into power-driven coiling machine, where it is coiled for subsequent easy handling; pulls each coil of rod off machine when coiled.

coiling drum driver (wire rod mill); attends to and repairs the speed of coiling drums, used in wire drawing process, by hand levers; also cleans and oils machinery.

coil maker, coilsmith; coil bender; makes finished iron and steel tubes into coils, as used in tank boilers, condensers, etc. on tubes with assistance of mandrel; draws heated tube from furnace with tongs; inserts end of tube in hole in mandrel and causes mandrel to revolve on lathe by hand lever.

coke man (copper smelting); fills Bessemer converter, used to smelt copper, with glowing coke, to heat converter before charge is introduced.

coke man, coker (galvanized sheet); unloads and wheels coke to galvanizing pots or buns; tends fire.

coke man, coker (rolling mill); breaks up coke in coke breaking machine and wheels it in a barrow to furnace pits.

coke wheeler (chain and anchor forging), see filler, hearth.

cold bench man; a leader *q.v.* who pushes rails, bars, etc., on skids to trucks, and loads trucks in iron and steel rolling mill.

cold coatcher (iron and steel rolling), see wheeler, cold roll (iron and steel rolling and tinplate mills).

cold roll attendant (iron and steel rolling or tinplate mills); cold roll boy, cold roll catcher, cold roll girl, cold roll feeder (iron and steel rolling); sits in front of pair of rolls (handled train of rolls) with pack of steel sheets resting partly on his knees, and partly on a guide fixed between standards, and feeds plates, one by one, to rolls, in quick succession; when employed on single train of rolls, carries plates from back to front of the train to ensure that plates pass through rolls three times; mechanical conveyors are sometimes used to convey plates from back of one pair of rolls to front of another pair; (steel works) also greases necks of rolls where they tend to get hot.

cold roll behinder, cold roll coatcher (galvanized sheet), a coatcher (178) *q.v.* who receives sheets as they come from cold rolls and either passes them back to rollerman (178) *q.v.*, or when not to be re-coiled, piles them on floor or on stand.

cold roll boy (iron and steel rolling); (i) see cold roll attendant; (ii) see cold roll catcher (iron and steel rolling).

cold roll catcher (iron and steel rolling); cold roll boy, cold roll picker-off, picker-up; catches plates as they are ejected from cold rolls and passes them on to next line or rolls, or places them on "hogies" or trucks for removal.

cold roll catcher, cold roll girl (tinplate), see cold roll attendant.

cold roll rougher, cold roll temper (iron and steel rolling), see cold roll attendant.

cold roll worker; general term for workers in a cold rolling mill, *q.v.* cold roll attendant, greaser, rougher, wheeler *q.v.*

collector of parts; collects finished parts of machines, *e.g.*, sewing machines, for transmission to store, or marks quantities of parts for use *q.v.*; work is sometimes done by storekeeper (341) *q.v.*

colourer (metal capsules), capsule colourer; places capsule in chuck of lathe, starts lathe and applies colour with a brush to outside of revolving capsule.

colourer (steel pens); colours ground and out pen nibs by heating them in a rotating cylindrical vessel, placed over a furnace; removes nibs when desired blue tint has been reached.

colourer, tin foil; (i) applies coloured lacquer to tin foil with a brush by hand; (ii) (machine process) places spool of tin foil on holder of machine and guides end of foil through rollers; keeps lacquer tank filled; controls speed of machine by levers; removes lacquered foil from rewinding spindle.

compo man, composition mixer, see grinder, compo.

concretor's steel man; assists concretor (379) *q.v.*, in fixing into position steel foundations on which concreting is to be done.

contractor (iron stone burning, mine burning); contracts with iron making firm or with furnace keeper (171) *q.v.* to produce definite quantity of castings from stone for charging into blast furnace; is in charge of kilns in which iron stone is burnt, and of men engaged thereon, *i.e.*, mine filler, hoist man, charger *q.v.*; assists in charging or firing as required.

cooler (copper rolling); pulls copper sheet away from roll by hand with tongs, along floor and slides it into tank of cold water; pulls sheet out again and piles on trolley.

copper rivet maker; feeds copper wire or rod to automatic rivet making machine.

copper cutting machinist, copper cutting operator, see lead coremaker; cf. bullet machinist.

cornerer (log iron); clipper; feeds log belt bars into semi-automatic machine which cuts corners off, shapes them; each locality has its traditional shape of heel iron.

cornerer (tin boxes, etc.), see notcher (tin boxes, etc.).

corrugator lad; assists hold-up and corrugator's helper *q.v.* at corrugating press of galvanne sheet mill, by holding other side of sheet.

counter (cycles); checker (cycle making); checks number of bolts, rivets and similar small cycle parts before distribution for use in cycle building.

counter, piecework counter (ship-building); keeps record of amount of work done on piecework, *e.g.*, rivets put in by riveters, holes drilled or cut by drillers or hole borers, length of seams caulked by caulkers, etc.

counter, counter-out (tinplate manufacture); checker, reckoner; counts arrangements in separate packs the number of tinplates to be packed in each box.

counter's paint boy, piecework counter's paint boy; works with and under direction of rivet counter (256) *q.v.*, and marks, with paint, work recorded by counter.

cover mounter; mounts fittings, *i.e.*, handles, locks, catches, etc., on covers of sewing machines, by screwing up nuts with spanner, boring holes with Bradawl and driving screws, etc.

crane boy, crane lad; (i) controls levers of small auxiliary power-driven cranes used for simple lifting in steel works, *e.g.*, lifting scrap, slag, coal, barries; (ii) (puddling) assists crane older *q.v.* or crane-man (304) *q.v.* by cleaning crane with cotton waste, signalling to crane-man, etc.

crewer; *straw*; operates crewer machine that curves the part of tongue which is fixed to spring clips and harness buckles, feeds tongue into notches of revolving disc which brings tongue under automatic hammer.

crop lad; drags hot crop end, *i.e.*, short piece left after measured lengths have been cut from bar, of non and steel bars away from shears, or hot saw, with tongs.

crop man, see scrap man (iron and steel rolling).

cropper, angle; angle chopper; places angle-irons, used in making boilers and tanks, against guide on bed of a cropping or chipping machine; cuts off measured lengths by depressing lever of machine.

cropper (bolts, nuts and rivets); cutter-off, shaver, shavers, cuts off end of bolt to length, shearing or cropping in machine, before end is pointed; sets gauge to length required and operates machine with foot or hand lever.

cropper (files), see snapper.

cropper, forge, see cropper (iron and steel rolling).

cropper (general engineering), see shaver.

cropper (iron and steel rolling); *large cropper*, multi cropper and shaver; a shaver *q.v.* or a sawyer (238) *q.v.* who cuts off badly shaped ends of finished bars of iron or steel after rolling.

crush, see crower.

crusher, blende; controls levers of bell mill for crushing and grinding blende (zinc sulphide) in process of zinc extracting; watches that automatic feed does not get choked and that conveyor is working smoothly.

crusher, salamine, see for crusher, blende.

crusher, crusher man (copper smelting); shovels copper ore and limestone into hopper of machine which crushes it preparatory to grinding and recharging; sometimes crushes slag in same way.

cupola charger (Bessemer steel); wheels fuel, raw material and scrap from bust and tips them on to platform, whence they are shovelled into cupola, *i.e.*, furnace in which iron is melted; more usually operates levers of machinery which automatically charges cupolas with materials from boppers; sometimes specifically designated, *e.g.*, spiced cupola charger, spiced charger.

cupola charger, nickel; tips or shovels melted ore or nickel matte (partially refined ore), coke and limestone into cupola through charging door.

cupola man (steel works); general term for one who does any unskilled work round cupola, such as loading bust, charging cupola, tapping slag, etc.; includes cupola charger, leader, wheeler *q.v.*

curry comb maker, curry comb riveter, an assembler *q.v.* who assembles stampings, rivets and fits parts together to form complete curry combs.

curry comb varnisher; varnishes, paints, or japans curry combs by means of hand brush, or by dipping them in varnish or other covering medium; sometimes also stoves them in oven to fix and harden varnish, etc.

curver; passes corrugated sheets backward and forward between rollers of machine in which they are curved to a specific radius, according as they are required, for example, for barn or shed roofs, or for other purposes, usually works to given curve specified by foreman.

curver's assistant; assists curver *q.v.* in building up sheets to machine and stacking when bent.

cutter, cutter-off; (i) attends guillotine, power press, power shears, or other machine for cutting metal, e.g., cutlery blades from sheet steel, steel tubes for cycles, bars for use in tinplate trade, etc.; feeds work into machine; sets gauge against which work is pushed or held; operates machine by foot pedal or hand lever, cf. cutting machine worker shearer; (ii) (saw-ware), see shearer; (iii) (rolling mill), see shearer; (iv) (tin boxes), sets guillotine hand; sometimes specifically designated, e.g., tube cutter (cycles), brass rule cutter, norm cutter (rule), rule cutter, pin cutter (rule), rail cutter, cutter-off (belts), gas tube cutter, cutter-off, steel sheet cutter (pen), tin foil cutter, wire cutter (needles).

cutter, bar; bar and pin cutter (rail and tack making), cold bar cutter (iron and steel rolling); bar shearer (iron and steel rolling, tinplate), bar shearer, cutter-off (puddling); passes metal into shearing machine, in which they are cut into short lengths; sets adjustable measuring gauge against which work is held; operation performed in galvanised sheet manufacture, iron and steel rolling, rail and tack making, puddling, tinplate.

cutter, billet; billet breaker (iron and steel rolling, puddling), cutter (wire netting), cutter-down (rolling mill); a cutter g.v. who cuts billets. In shearing machine, into suitable sizes for re-rolling into bars in iron and steel rolling, for rolling into bars and rods in wire making, etc. and in puddling, for convenience in handling, transport, etc.; in rolling mills, work usually done by gullotine engineers g.v.

cutter, link; a shearer g.v. who cuts from rod steel or iron, on shearing or other similar machine; links which are to be made into links; in large coil chain works, cutting is done by link bender (190) g.v.

cutter, rivet; a shearer g.v. who cuts hot steel bars into lengths in automatic machine.

cutter, scrap; scrap metal cutter; (i) a shearer g.v. who cuts scrap metal into sizes convenient for handling; (ii) (iron and steel rolling) scrapper (Scotland, sheet); assists shearer g.v. in cutting up scrap; in tin plate trade, work is usually done by scrap handler g.v.

cutter, side (tinplate); a shearer g.v. engaged at double shears, which cut edges of folded sheets in rolling of tin plate.

cutter, split shot; feeds lead shot into hopper of automatic splitting machine; watches machine for proper working.

cutter, tea lead; cuts lead sheet into measured sizes with hot shears for lining tea chests; usually done by packing case liner (364) g.v.

cutter, teal; cuts teal pieces from iron, steel or other metal, in test room, using either planing machine or saw, both power-driven.

cutter (wire netting, rope, etc.), see cutter, billet.

cutter-down, see cutter, billet.

cutter girl (sorens), see nlekor.

cutter-off (bolts, nuts and rivets), see cropper (bolts, nuts and rivets).

cutter-off (slag iron); a shearer g.v. who cuts bar iron to length required for front or heel slag iron.

cutter-off (puddling), see enter, bar.
cutter-out, edge tool; a shearer g.v. who feeds and operates shearing machine which cuts out blanks of edge tools, ready for forging (190) g.v.; sometimes specifically designated, e.g., hot cutter-out, scribble cutter-out, speed and shovel cutter-out.

cutter-up, holler cutter-up; a scrap breaker g.v. who uses hammer and chisel, or in some cases oxy-acetylene apparatus to cut or break up old hollers.

cutter-up (files); steel manager; a shearer g.v. who cuts steel bars into lengths or multiples of file blanks. With power-driven shearing machine.

cutting machine attendant, cutting machine worker (general engineering); operates a gullotine or a machine which cuts material into lengths by means of cutting tool or hot saw; fixes work in machine; sets gauge against which work is pushed or fixed, manipulates foot treadle or hand lever; sometimes specifically designated, e.g., pin cutting machine attendant,

cycle hand, cycle worker; general terms for unskilled and semi-skilled workers in cycle factories, including assembler, canneller (211), polisher (241) g.v.

dampier, bill damper (blast furnace); puts bile hilly, i.e. flat over, round ball (a kind of funnel covering top of furnace) between charging shifts to prevent escape of gas from furnace; also done by charger or by top sweeper g.v.

denter (enamel sign), see bruiser.

depot man, see hunkermann.

dipper, bolt; bolt offer; dips bolts in oil after last finishing operation in bolt making, to prevent rusting; sets them in sieve to drain.

dipper (general engineering); immerses castings (usually brass) in hot acid solution to remove grease, scale, sand and discoloration, and then sets them in hot water.

dipper (sleeper mill), sleeper mill dipper; immerses sleeper, after it has been pressed and punched, and while still hot, in a mixture of tar oils, as a preservative against rust; work now done largely by power-driven endless chain.

dipper (tin boxes, cansisters, etc.); dips side seams and ends of this in a solution of hydrochloric acid and then in small bath of molten solder; wipes plates clean with piece of tow.

dipper-in (reed making); dips top and bottom staves of textile reed in tub of molten pitch, after reed leaves reed maker (278) g.v.

dipper in tar, iron huddle dipper, or for dipper (sleeper mill).

discharger, bar; (i) (iron and steel rolling) bar unloader; a bar bank man g.v. who unloads bars from truck in railway siding; often also loads, see bar loader (iron and steel rolling),

(ii) (tinplate) bar carrier (tinplate); unloads bars from trucks, in railway siding of tinplate works, and carries them to bar shears or from shears to furnace; is attached to bar cutter's gang; cf. bar cutter's helper.

discharger, coal and ashes (copper smelting); unloads coal, by hand shovels, from trucks or barges in yard of copper extracting and refining works, and loads trucks or barges with ashes, slag, etc.

discharger, coal; coal unloader; unloads coal with shovel from railway trucks or barges, for use in puddling furnaces or steel works.

discharger, flux dust, see charge man (zinc).

discharger, iron, see iron checker's assistant.

discharger, ore; raw material discharger; unloads, by hand, raw material, i.e., ore, coke, coal, flux, etc., used in lead or copper extraction and refining works.

discharger (tinplate), see wholser.

discharge man (copper works); empties wagons or does any odd job about copper works.

distillery hand (lead manufacture); scrubs distiller (171) g.v. in handling alloy of lead, also and silver; attends to graphic furnace under direction of distiller, and assists in holding of residual alloy for casting.

divider, divider of fonts; separates type received from casting machine and classifies into fonts, ready for use.

dogger, dogger-on; stoker (blast furnace, puddle furnace); groups material with pair of long-handled tongs or dogs suspended from overhead travelling crane; guides dogs into soaking pit, placing ingots there and removing them therefrom; picks up top ends sheared off blooms in rolling mill, and arranges, bars, blooms, etc., into furnaces; sometimes specifically designated, e.g., dogger-on ingots.

dogger-up, steel tube drawer's dogger-up; hook worker (tubes), unscorer; adjusts teeth or hooks of wagon (or dog) to endless chain on draw bench, by which tube is drawn through die; follows wagon as it moves and brings it back to tube drawer (260) g.v., who is in charge of draw bench.

door boy (puddling mill, rolling mill, tube mill, steel works); door boy (puddling tube mill); dogger-up (rolling mill), pull-up (steel works, sheet); pulls levers or chains which open and close furnace doors for charging, drawing or inspection of furnace; watches under direction of furnaceman (171) g.v.

door lad (chain making); draws out from furnace chain links for welder (180) g.v. and stokes forge fire.

doorman (farrier's); assists farrier (190) g.v. by removing old horseshoes, trimming hoofs, may act as strapper; puts fresh studs in shoes in winter time.

door man, furnace door man; feeds fire, in forging mill; heats iron, and draws it from fire with tongs, in state fit for welding.

double holder (rolling mill); assists double (178) g.v. by gripping shafts or chains with double holder, to hold steadily while double completes doubling.

double marker (Stafs. term); assists plate marker g.v. when handling large sheets, and marks with scribe or chalk under his direction; helps to support sheets afterwards for shearer g.v.

double's holder (galvanised sheets), see for double holder (rolling mill).

dragger-down, see hooker-out.

dragger-out (sheet mills), see bar dragger.

dragger, bar (galvanised sheet, tinplate), see bar dragger.

dragger, bar (iron and steel rolling); dragger-out, puller-out (iron and steel rolling), runner-out; a furnace man's helper g.v. in sheet rolling mill, attends to bars from furnace; draws bars from furnace and packs of sheets from sheet furnace to rolls, with tongs.

dragger, door (plate mill), see for door man.

dragger-down (rolling mill); holds; puts down to rolls with tongs, hot billets from soaking pit or furnace.

dragger-out, see dragger, bar (iron and steel rolling).

dresser, bob; cleans and prepares bob, or polishing pads for use by buffers and polishers (238) g.v.; scrapes off old paste and smears on fresh paste.

dresser, and see notcher (tubes).

dresser (files); (i) see layer-on (files); (ii) see stripper (files).

dresser (metal trades); (i) see fraser; (ii) removes roughness from castings, rolled rails, steel plates, etc. by shipping with hammer and chisel (see chipper) or by holding against emery wheel or by grinding with portable wheel; sometimes specifically designated, e.g., centre dresser, rail dresser, tyre dresser, wheel centre dresser, wheel dresser.

dresser, ore (lead extraction); feeds, by hand shovelling, and attends to plant which crushes and screens lead ore, preparatory to calcining and smelting.

dresser ore (zinc extraction); blends cleaner, blends screener, calcine screener, zinc picker; stands by revolving table at side of travelling belt containing sump ore (blende or calumne) and picks out waste material.

dresser, tube; (i) dresses, or files, joints of brazed tubes, to remove superfluous solder, before tube is drawn to required size; (ii) corrects minor defects in tubes, by filing or otherwise, on completed manufacture; sometimes specially designated, e.g., brass tube dresser.

dresser (wire netting, rope, etc.), see cleaner (wire).

dresser and sizer, stamp (tubes); dresses or cleans bells (after hole in top has been stamped or pressed out) by removing scum adhering thereto, with a file; measures hole (through which tube passes) with micrometer and hand file to size required.

drier, blende; shovels blende (zinc sulphide ore) on to conveyor and attends to furnace which dries it after dressing, preparatory to crushing and grinding.

drier, calumne, as for drier, blende.

drier (hollow-ware), see brusher-off (hollow-ware).

drier-down, see take-down.

drifter; places hollow rollers on projecting pins of cycle chains.

dresser, dress mill, dress miller; recovers spelter (zinc) from dress and from zinc oxide by resmelting; shovels charge in furnace, and taps off molten metal.

dryer; controls and operates drying stove, or hot blast, at finishing and of galvanizing machine in which sheets are dried before the finish on conveyor or on plate in bagasse.

dryer, sand, see sand calciner.

duster (unbake, canisters etc.), see wiper, box.

duster, dusting machine attendant (tinplate manufacture); smelter in firehouse, wiper; controls levers of machine which automatically dries and cleans tinplate received from water bath; shovels dusting powder, composed partly of sand, into hopper of machine; may clean and polish tinplate by hand with a shapkin.

sager (tin boxes); (i) see box folder; (ii) see tinplate (tin box) edgeway maker; feeds front clog iron into machine, which automatically shapes them; usually done by turner (clog iron) (278) g.v.

electric tinner, see pin plater.

endar (screws), see pointer (bolts, screws).

ender-up, ending mechanist (bolts); passes bolts by hand into receiving chuck of an automatic machine which chambers ends of bolts; controls machine by means of foot or hand levers; cf. chamierer (200).

evener-up (needles), see hander (needles).

extractor man (iron and steel tubes); extracts manure from sockets of welding machine; usually done by fitter (210) g.v.

eye maker, steel eye maker (pinnae); looper; makes small eyes, or loops, of steel wire and of wire strings to hold there on to rest pins, using pair of pincers and a small machine.

faggotter, faggot maker (metal trades); iron binder, bandler (iron and steel rolling, tinplate), pier (puddling), scrap box (polishing steel), scrap pier (rolling), steel manufacturer; is employed in different metal trades, e.g., puddling, rolling, steel manufacture, tinplate and galvanizing sheet trades, in making-up sheathing and other scrap metal into bundles, piles, or "faggots," which he binds with

wire in preparation for the melting down and melting of such scrap; cf. bandler, sheet.

farrier's mate; horse shoe's mate; acts as ironer, g.v. to a farrier or booter (189) g.v.; may also act as striker (189) g.v.

fasher (groffed blade); removes rough edges or surplus metal of stamped or pressed parts of cutlery, either by hand, with file, by holding against revolving emery wheel, or by passing under shunting disc of power press.

feeder, ball mill (copper rolling); shovels casting shop ashes into ball mill, in process of recovering metal; shovels crushed ashes into harrows or watches smooth working of conveyor.

feeder, bar feeder (bolts, nuts and rivets); puts bars or short lengths of prepared metal into automatic or semi-automatic machine, which turns or threads them into bolts or nuts.

feeder, coke; shovels coke fuel into blast furnace; work usually done by charge men.

feeder (copper smelting), see charge men (copper smelting).

feeder, drill; rail drill feeder (rail mill); lifts rail on to table of multiple or ordinary drilling machine and feeds it into machine, ready for hole holes to be drilled; generally done by rail hand men g.v.

feeder, furnace, see fireman.

feeder (galvanizing); (i) (sheet) putter-in; feeds sheets one by one into rolls of galvanizing pot under supervision of dipper (234) g.v.; (ii) (tin) metal goods carrier or pushes goods on track from water bath to dipper's table.

feeder (iron and steel tubes), see guider.

feeder, muffle (iron and steel stamping and drop forging), as for muffle-man (iron foundry).

feeder, nail; machine feeder (nails). nail machine feeder; assists nail machine tender (275) g.v. by feeding a hand or self fed automatic nail making machine with sheet iron and iron wire; either places strip of metal between jaws of gripping device on long wooden handle, and turns strip over each time cutter descends, so that tapered nails are cut economically, or fits long strip of metal (as wide as length of nail being produced) into self-adjusting barrel; starts machine by hand lever and watches smooth working of barrel as it feeds and reverses strip under cutting knife; refits barrel as strip is cut up; sometimes specially designated, e.g., hand feeder, self feeder, cut nail machine feeder.

feeder, nickel shed (Mond process); shovels or otherwise calcined nickel ore into reducing towers, where it is reduced by water gas to finely divided nickel.

feeder, rail planer; lifts rails, after rolling, on to table of planing machine, and generally assists rail planer (200) g.v.

feeder, straightener (rolling mill); passes and guides iron and steel sheets or plates into straightening machine, or lifts steel rails, etc., on to bed of gag press; sometimes specially designated, e.g., rail straightener feeder.

feeder, tack; tacker, tack mender; watches machine which makes tackers automatically and stops it when necessary; replaces empty by full spools of iron wire, cleans and oils working parts of machine.

fettler (metal trades), see framer.

fettler (puddling), see blow billyer.

filler; shovels raw material for metal furnaces, etc., into trucks, tubs, hoppers or wheelbarrows for conveyance from wharf, damp crusher, etc., to furnace or kiln, weighing machines or tables, etc.; sometimes specifically designated, e.g., harrow filler, bottom filler, box filler (colored iron), iron filler, cinder filler, coal filler, coke filler, cradle filler (tinplate), damping filler, fillet filler (card

clothing), furnace filler, basomite filler, lime filler, limestone filler, mmo filler (ironworks), ore filler, raw material filler, small filler (iron and steel), slag filler, tank filler (pig iron), stone filler (ironworks), top filler.

filler, coke (pig iron); coke runner; shovels coke from coke depot into harrows, and wheels in to weighing machines; usually done by coke wheelers (see iron, g.v.).

filler, furnace (blast furnace), see charger (blast furnace).

filler, hearth; coke wheeler (boilers and anchor forging); a labourer g.v. in chain making shop, who heats metal in fire tanks and malleable, manipulating it with tongs.

filler, pig; metal carrier, pig bed metal carrier; loads pigs into trucks, for removal from mould, with help of hook.

filler, rack (tinplate); fitter; places plates in racks after tinning in brassing process; work now done by rizer g.v.

filler, spere; acts as ore filler g.v. in absence of regular filler; usually an experienced furnace labourer, lime filler or coke runner g.v. and employed when not acting as ore filler.

filler, top, see charger (blast furnace).

finer; metal separator; runs or pumps oil, used in hardening or tempering shops, from oil baths into filter vat; opens and closes valve by which filtered oil runs in reservoir, cleans out oil bath.

finisher (steel); general term for worker who cleans and finishes plate after hardening, including taker again (232), scrover (209), or other g.v.

finisher (harness furniture); assembles and fits together component parts of harness furniture; files parts, if necessary; sometimes specifically designated, e.g., bit finisher, buckle finisher, spur finisher, stirrup finisher.

finisher, rail; a sawyer g.v. who cuts ends of rails square, in machine saw finisher (saw), as for harreller.

finisher (wire netting, rope, etc.); cleans and polishes wire after it has passed through but reducing die, by drawing wire by hand through emery cloth and black lead; cf. wire finisher (208).

finer, finishing hand, see framer.

fireboy; replenishes furnace fires of steel rolling mill with fuel.

fireman, fire, furnace fireman; furnace feeder, furnace stoker, stoker; feeds with fuel, by shovelling, etc., furnaces, e.g., steel furnaces, rolling mill furnaces, annealing, galvanizing and lead extracting furnaces, and other furnaces employed in various metal trades, as distinct from boiler and locomotive furnaces (cf. fireman (701) and (661)); usually works under direction of furnaceman (171) g.v.; sometimes specifically designated, e.g., stoker, fireman, annealing furnace fireman, malleable iron oven fireman, sleeper mill fireman.

fireman (forging); keeps smithy fire replenished; heats metal on fire; manipulates it with tongs on anvil, under blows of forger (149) g.v. or of forger (189) g.v., until it assumes shape required; sometimes also does hammering, cf. striker (189).

fireman, oven; stoker (general iron-works); stokes fires heating ovens in which dry sand moulds and cores are baked; cf. muffle-man.

fireman (shipbuilding); stoker (shipbuilding); attends to furnaces used by frame turners, plate benders (222) g.v. in shipyard.

firer (puddling); acts as assistant or underhand to puddler or to ball furnace man (172) g.v. where furnace is of coal fired; also gets furnace heated at week-end ready for re-start; cf. underhand ball furnace man.

flrer, hall furnace, see furnaceman, underhand hall.

fitter, syphon; fits spring inside syphon cap and puts valve in position, using hand tools at bench.

fitter-up (sheet metal goods); fits rings and bottoms of tin canisters for seamer (254) g.v.

flogger's assistant; assists in unskilled part of work of flogger (190) g.v., such as holding one end of tube while other end is being expanded.

flossener (slag iron); see flattener.

flattener (slag iron); see flattener.

flattener (slag iron); see flattener.

flattener (slag iron); see flattener.

flattener (slag iron); see flattener.

flattener (slag iron); see flattener.

flattener (slag iron); see flattener.

flattener (slag iron); see flattener.

flattener (slag iron); see flattener.

flattener (slag iron); see flattener.

flattener (slag iron); see flattener.

flattener (slag iron); see flattener.

flattener (slag iron); see flattener.

flattener (slag iron); see flattener.

flattener (slag iron); see flattener.

flattener (slag iron); see flattener.

a gag press for straightening rails, by operating lever of power press under his directions.

galvanizer's assistant; places articles near galvanizing tank in readiness for galvanizing (234) g.v.

gauge, operator gauge; checker (cartridge); tests accuracy of machine work on cartridge cases by passing cartridge through one or more hand or machine gauges; cf. viewer (199); sometimes specifically designates, e.g., bullet gauge, cartridge clip gauge.

getter-off (puddling furnace); assists puddler (179) g.v. to remove slag from ladle to iron truck after puddling, by means of dog grips or tongs.

glider (motor radiator); assembles radiator block by threading brass tubes through holes in iron cross pieces; adjusts the whole, ready for fitting by dipper.

glazer's assistant; assistant glazer, backer (saw); stands behind and receives hand or long saw as it comes from glazer, in saw making.

glazier's turner-out (rolling stock); pulls glazier's wheel, see glazier (190), with tongs from furnace, and bows it along, while hot, to press; also does any striking that may be required.

grainman, grater (steel works); cleans fire grates of gas producers, with rake, hammer and chipping tools.

grease boiler; (i) (in finetooth) melts down palm oil, ready for tinning pots; (ii) (in tin sheet mill) melts down waste grease from roll necks of mills and cold rolls, and drains away from dirt and particles of metal so that grease can be used again.

greaser; aids or greases moving parts of machinery, shafting, gearing, etc., and replenishes oil and grease cups, and lubricators.

greaser, cold roll greaser (iron and steel rolling, tinplate); greases cold rolls, particularly at necks, where they get very hot; in steel sheet works, usually done by cold roll attendant g.v.

greaser (galvanized sheet), see oiler (general engineering).

greaser (iron and steel rolling), see hot bank boy.

greaser (tinbox, canister, etc., making); (i) smears grease over decorated tin plates before they are stamped out; (ii) see axle hammer lad.

greaseless machinist; hand feeds and manipulates levers of automatic or semi-automatic machines which shape, polish, drill, etc., grenade castings.

greaseless turner; a greaseless machinist g.v. working at an automatic machine used for turning and boring hand and rifle grenades, bombs, etc.; work usually done by capstan lathe hand (200) g.v.

grinder, compo; composition grinder; compo man, composition mixer; feeds and attends pug mill, or other grinding machine, which grinds and mixes refractory materials, i.e., ganister, silica, dolomite, moulder's composition, to form composition or "compo" used for lining furnaces, anamorphs or moulds. cf. grinder, sand.

grinder, dolomite, as for grinder, compo.

grinder, sand (steel works); feeds, operates and controls machine which grinds sand after it has been calcined, see sand calciner; usually done by composition grinder g.v.

gripper (edge tool), edge tool gripper; edge tool handler, lifter, handler; (i) (knives, etc.) prepares scales and bits of wood, horn, etc., by sawing slit or otherwise shaping them for edge tool handles or grips, and rivets them to tang; (ii) (chisel, etc.) bores hole in wooden or horn handle, inserts tang, and fixes it with resin or cement.

gripper's assistant, see matcher-on.

groover (wooden); feeds and operates a kick stamp or rolling machine, which makes hollow part on sides of sewing machine needles.

groover (tinbox, canister, etc., making); loader, places cut and folded sheet tin on block of grooving machine; operates lever to cause machine to groove edges and join up seam of body.

guide; feeder (iron and steel tubes), putter-in (iron and steel rolling); guides blooms and tubes into various rolling mills by means of long steel rods and tongs.

gullotine engineman (rolling mill), gullotine man; shear driver; controls levers of gullotine shears, normally motor-driven, which cut up steel sheets.

gullotine hand, gullotine worker gullotine driver (fin cores, knife and; cuts tinplate, steel brass, etc., to size required by means of gullotine; sets gauge and guides, places work against guides under knife and actuates knife by foot or hand lever; sometimes specifically designated, e.g. lead plate gullotine.

gun prover, see barrel prover.

haffer, see gripper (edge tool).

hair pin machinist; attends and feeds with spools of wire, automatic bending and finishing machine which makes hair pins from thin steel wire.

hammer boy, hammer lad; pulls lever to operate power hammer, under direction of forge hammer driver (190) g.v.; sometimes specifically designated, e.g. axle hammer lad.

hammerman's assistant; assists forge hammer man (190) g.v. by heating metal in fire to forging temperature, withdrawing with tongs and/or crane, handling special tools, moving forging about, etc.

handler (needles); ever-up; sorts, according to length, needles that have been mixed up together in processes of scouring and glazing; arranges heap of finished needles in rows; holds one end of needles with palm of left hand; presses piece of rag, held on forefinger of right hand, on other end of needles, and withdraws all needles having points projecting into rag; alternatively arranges needles in rows on glass slide and, using a square section ruler, pushes longer needles over edge into receiving trays.

handler (agricultural tools); shaves down handles with spearsaw to fit tool, hovers hole in wood and rivets face with hand hammer, fits tang of tool into wooden handle and hammers home; sometimes specifically designated, e.g. bill hook handler, sickle handler.

handler (edge tool), edge tool handler, see gripper (edge tool).

handler (tinbox, saw handlers); punches holes in saw, corresponding with holes in handle, with hand fly press, and secures handle to blade with screws.

hand machinist; operates small hand power machine sometimes used for cutting or stamping metal.

hand reamer; uses a hand reamer to clean out bore, holes, etc., from castings or other parts of sewing machines; work generally done by fitter (216), by turner (200), or by assembler g.v.

hauler, bumper tip; tips wagons on slag heap; levels off heap with shovel.

hanker (rolling mill), see lifter-up (rolling mill).

hardener's assistant (cutlery); puller-out, rubber; assists hardener (1220) g.v. by removing cutlery, e.g. bayonet blades, from quenching bath of oil; rubs blades in sawdust to remove adhering oil.

hayband maker, stretcher (hayband making); cuts wire to convenient lengths for making haybands with hand pliers or in machine cutter; straightens or stretches it between fixed vices.

healer, cold, see rivet machine minder.

header, needle header; passes needles by hand into automatic machine which grinds smooth any roughness round head after stamping process.

heater's assistant; assists heater (171) g.v. in wire making, by charging furnace with billets, and keeping it at correct temperature, where this is not done by heater.

heaver-out, heaver-over (puddling furnace); assists puddler (173) g.v. by drawing out from puddling furnace, with tongs, a ball of iron twisted on a metal bar by puddler. heaver-out, wheel; assists tyre furnaceman (278) g.v. by withdrawing heated tyre from furnace with long iron bar and tongs.

heaver-over (galvanised sheet); assists inspector (278) g.v. in examination of heavy sheets, after they have been galvanised, by turning and lifting them.

helper, annealer's; feeds and cleans out fire and assists annealer (220) g.v. in charging annealing furnace, in flintplate and galvanised sheet manufacture, also places sand round pots and boxes used to protect plates in annealing, and puts clay on top for same purpose.

helper, assorter's; assists assorter or inspector (278) g.v. in examination of heavy sheets, after galvanising, by turning and lifting them about.

helper, ball furnace, see furnaceman, underball ball.

helper, bar cutter's (galvanised sheet); assists bar cutter g.v. in attending or feeding, shearing machine; fetches bars, removes cut lengths, etc.; see underbar, bar, or wheeler, bar.

helper, blacksmith's; assists blacksmith (150) g.v. by performing manual labouring work, holding up, carrying, soaking fire, working bellows, etc.; sometimes also acts as blacksmith's striker (190) g.v.

helper, blast helper, see blast furnace hand.

helper (boiler yard); assists boiler maker (222) g.v. generally; brings boiler plates to maker, by carrying or pushing on truck; removes finished boilers on truck or by means of chains and tackle of overhead crane; wheels up in barrow fuel for rivet heater's forge, etc.

helper, charger's (iron, steel, copper, nickel); second hand charger; a wheeler g.v. wheeling ore in barrow from dump to furnace; generally assists charger or charge putter-up g.v.

helper, clay mixer's; assists clay mixer (104) g.v.; shovels materials into machine and discharges finished clay, in zinc extracting works.

helper, corrugator's; takes-out; stands behind corrugating machine and receives sheets as they come from machine; piles them by side of machine, in readiness for removal to warehouse.

helper, forge; does general labouring work in forge, as for blacksmith's helper; is often a spare hand worker, able to take place of any regular man who is absent, e.g., hammerman's assistant, slinger g.v.

helper (forging), angle iron smith's helper, see backhand.

helper, furnace; furnaceman's helper; furnace attendant, slinger's helper (furnacework); assists furnaceman (171) g.v. in charging, firing,

discharging, etc., furnace; is employed on blast furnace (see blast furnace hand), in copper extracting, lead extracting, steel manufacture, tube and pipe making, and in zinc extracting; cf. charge man (216).

helper, keeper's, see blast furnace hand.

helper, ladle (steel manufacture); (i) helps ladle man g.v. to move ladle about works by means of overhead crane; (ii) tempers and settles steel for ladle dealer g.v.

helper, picker's; (i) aids picker (250) g.v. generally and takes charge of picking operations during picker's absence; (ii) picking girl; an unskilled labourer who assists picker by loading and unloading sheets from cradles.

helper, pit; pitman's helper; helps pitman or mould setter (274) g.v. to secure cap or iron plate on top of mould, to spray cap with water to keep it cooling, and to adjust crane chains for lifting ingot, etc.

helper, potman's (nickel cupola); assists nickel cupola potman (275) g.v. in moving pot or ladle, usually on an overhead runway, and empties filled moulds in readiness for fresh supply.

helper (rolling mill), heater's helper; assists heater or furnaceman (171) g.v. by firing and regulating re-heating furnaces, in sheet mills, this is done by bar drawer g.v.

helper, slagger's; (i) assists slagger (278) g.v. in tapping and removing slag from furnace or pit, in case may be, of blast furnace, puddling furnace, or steel works; cleans-up and sometimes removes slag and cinders from pits, etc.; (ii) (in iron-works), see helper, furnace.

helper, straightener's, see gagger (rolling mill).

helper, tinman's; helper (flintplate), putter; general term for workers making tinman (263) g.v. and includes branner, cleaning machine attendant, water boy, and cleaner and helper (band) g.v.

helper (flintplate); (i) (in mills) assists furnaceman (171) g.v. in firing and regulating furnace and in heating plates; also assists roller (178), doubler (178), in rotation of duties according to shift; usually specially designated according to responsibility, e.g., first helper, second helper, third helper; (ii) (in tin-works) see helper, tinman's.

helper, vertical plate furnace; assists vertical man (180) g.v. with crane by which plates are placed in and removed from vertical furnace, also tends furnace fire.

hinge builder; assembles two wings of hinge, inserts pin and places hinge in hand - manipulated clamping machine to fix pin.

hinge varnisher; varnishes hinges, either by applying varnish with a brush, by dipping in a vat, or by lacquering while hot.

holder-up (i) (galvanised sheet); places blank sheets of galvanised iron or steel on table of corrugating press, adjusts each sheet so that it is corrugated properly, and holds up sheet until corrugation is complete.

(ii) (sharles) assists forger (100) g.v., forging heavy chains, by holding links or shackles firmly, with tongs; (iii) (rolling and mill shop, etc.) assists skilled machinist by holding up heavy rails, plates, etc., to drilling machine, planing machine, punching machine, etc.; sometimes specially designated, e.g., holder at drill, holder-up at plates, holder-up at punch, holder-up at shears.

holder; wet drill; operates machine which drills or punches holes in nut blanks; work now generally done by nut cutter (190) g.v.

holder-maker (tyre mill); (Orres term) assists furnaceman (171) g.v. manipulating tyre with tongs; tends furnace fire.

hooker (wire rod mill), rod hooker, wire rod mill hooker; keeps loops of wire rod, which drop into a pit between sets of rolls, straight and running freely, by means of long steel rods hooked at ends.

hooker-on, see pig bar-car.

hooker-out (wire works); dropper-down, tenger; draws out heated billets from furnace, in wire works, and passes them to wire rod roller (178) g.v. for rolling into rod, for wire drawing.

hooker-up, see breaker, dress.

hooking boy, see pulling-up boy.

hook worker (cables); (i) removes tubes of heavy cables from rolls, after welding, with a hook; (ii) see dropper-up.

hoop ironman; sorts, straightens, punches and rivets old hoop iron for re-use.

horse worker; helps forgerman (100) g.v. to manipulate heavy forgings, in forging chais and anchors, with levers, tongs and overhead chain tackle.

horse shoe's mate, see farrier's mate.

hot bench man, see bank man, hot.

hot metal guard; holds a plate or guard, when cradle and cast steel is being temed, or poured, to prevent heat and sparks from molten metal injuring workers engaged in teming or casting operations.

hub maker, cycle hub maker; spindle; assembles at bench component parts of hubs or of free wheels, i.e., spindle, hub, ball bearings, cone, filing them where necessary to make them fit; tightens up cone with spanner.

infactor; makes assemblies and fits together component parts of cycle and motor tyre inflators.

ingot man; is in charge of stock of steel ingots; weighs and checks them; paints identification marks on them, and gets them ready for heating in preparation for rolling.

ingot setter; sets or stacks steel ingots in readiness for next operation, e.g. reheating, or for transit.

inspector (chains); tests measurements of cycle links against standard gauge, and measurements of holes in links, against standard rod; usually done by operators at successive stages of cycle chain making.

iron binder, see faggoter.

iron checker's assistant, iron fighter; iron charger, iron shifter, iron sorter (Clyde) iron shifter; assists iron checker (182) g.v. in receiving and moving material about in yard.

iron shifter, iron stower, see iron checker's assistant.

japanner (pint); checks lampers paint in pans of black enamel; drains off surplus enamel, shakes pint about to induce even coating, and dries them in stoves.

jamper, jamper-over (rolling mill); is one of gang of crane men, in rolling mill, who catch hot rail in tongs and who together jump over rail, as it lies on floor, to turn it over into required position.

kettlemaker (blast furnace); (Stg.-M) charges kettle, used in acid melting. Essener persons with coke and ingredients for making-up steel, using shovel.

kicker, stamp kicker; operates old type of drop stamp with a foot trip, and makes drop stamp (190) g.v. generally; cf. stamper's mate.

kin acorter, see scortman.

knife hand, see guillotine hand.

knobber (rolling mill), see drawer-down.

labourer, general labourer; performs unskilled manual work, e.g. cleans workshops and machines, wheels materials, ore, coke, etc., to furnace, removes ash from furnace to ash-dump, lifts, carries or otherwise handles heavy metal, i.e., pig head, bars, castings, etc.; brings up raw material and carries away finished

work from machines; does odd jobs about works; often specifically designated according to duties, e.g., back side labourer, front side labourer, etc., or according to industry e.g., blast furnace labourer, boiler yard labourer, bronze labourer, machine labourer, machine shop labourer, mill labourer, mine labourer, scrap labourer, rolling mill labourer, scrap works labourer, strip mill labourer, wheel labourer, wire mill labourer, zinc labourer, or according to worker assisted, e.g., billet cutter's labourer, brass finisher's labourer, brass roller's labourer, chemical plant's labourer, constructional steel works' labourer, pewterer's labourer, wheel maker's labourer.

labourer, back side; a blast furnace hand g.v. working on charging side of furnace only.

labourer, calciner (sine); shovels zinc ores into oven of calciner, and performs other unskilled manual work in process of calcining.

labourer, front; front side labourer; casting men in blast furnace hand g.v. employed on casting side of pig iron furnace and on pig casting beds. Flabourer, sailor gang; sailor labourer; informants (metal trades); a labourer g.v. with seafaring experience employed as a slinger (188) g.v. and in piloting ropes, etc.

labourer, sand blast; assists sand blaster (250) g.v. by bringing castings to be cleaned and by removing clean castings and keeping sand blast machine supplied with finely ground sand.

labourer, steel press; assists hot straightener (300) g.v. to manipulate hot steel rails under straightening rolls or press; sweeps up floor and does various odd jobs.

labourer, thinner; assists thinner (263) g.v. by putting articles in, and taking them out of vats.

labourer, zinc; coal and ash wheeler (zinc extraction); a labourer g.v. in zinc smelting works; performs odd manual work, e.g. wheeling coal, ashes, ore, etc.

ladle dambor, hot metal ladle dambor (steel manufacture); patches hot ladles, into which molten metal from furnaces is run, by throwing damp clay on defective spots, and tamping it into place; or repairs ladles by applying a wash of ganister, patching is sometimes done by ladle liner (278) g.v., especially in small works.

ladle man (blast furnace); direct ladleman; assists ladler (278) g.v. and reports on quality of metal in works where molten metal is conveyed direct to steel melting furnaces.

ladle man (copper smelting); assists ladler (278) g.v. with manipulation and moving of slides by travelling hoist or by wheeling on bogies.

ladle man (steel manufacture); brings ladle (large clay and firebrick-lined steel vessel) into position by operating powerful overhead cranes, or to receive molten steel from tilted Bessemer converter, or from open hearth furnace; when filled, moves ladle along to casting pit where steel is run out by teemer (278) g.v.

ladler (lead extraction); conveys or pours molten lead, by means of hand ladle, or ladle supported by overhead crane.

lappet maker (textile machinery); drills holes, at regular intervals in metal discs, to take lappet needles, the whole former part of lappet loom on which an extra (whip) warp ambulatory thread is inserted in pattern.

layer-on; dresser (files); covers file with charcoal, or with strips (heat middlings) and sets file in banding, to protect teeth in lead bath; passes file to hardener and generally assists him.

lead coremaker; (1) buffer maker, bulled machinery, core casting machinery, core cutting machinery and operates machine which cuts

lead core of bullets from rod stock, face coil or drum of rod lead, on spindle and passes end of rod into machine; reports any faulty work to foreman; (2) casts cores in dies, as for lead caster (188).

lead press man, see potman, lead press.

lead worker (cartridge); general term for workers handling lead in cartridge and small arms factory, including lead squitter (278), lead coremaker and valveness. Laver boy, lavager, laver man (rolling mill, steel foundry); operates levers attached to hydraulic or other machinery, used for movement of cars, bogies, wagons, lifts, elevators, etc.

lifter, bar, see bank man (puddling).

Lifter, carriage; After (railway coach); prepares rail layer carriage for use by crane or derricks and sets springs and axle boxes into position thereunder, ready for lifter (210) g.v. Lifter, dog (puddling mills, tube mills), see dog boy.

Lifter, ladger; operates machine or crane which lifts and removes ingots from casting pits or moulds, or from cars where car casting process is adopted; may also be an ingot stripper, see stripper.

Lifter (iron and steel tube rolling); lifts tube as it is ejected from rolls and places it on truck for conveyance to another part of works, or assists in lifting tubes on to banch, preparatory to rolling.

Lifter, pig; pig iron lifter, pig lifter-out (blast furnace); metal carrier, pig bed metal carrier; lifts pigs of iron cast in pig beds, sometimes also carries them to trucks; cf. filler, pig.

Lifter, pig (steel works); attends to hoist for lifting pig iron on to cupola charging platform.

Lifter (railway coach), see lifter, carriage.

Lifter, scrap (blast works); operates and controls hoist or crane which lifts scrap to scrap platform.

Lifter, wagon, see lifter, carriage.

Lifter-up, rod mill; lifts rods with tongs from grove to grove in rolls, or over top of rolls of wire rod mill.

Lifter-up (rolling mill); (1) anchorer, hooker; grips bar with cross tongs swung from overhead rail by chains and pushes it towards a set of rolls for rolling; (2) controls valves and levers of hydraulic lifting-up table at back of rolls, under direction of rollerman (178) g.v.

Liftman; operates lifts for elevating material to furnace platform or stage.

Limer; assists filer g.v. in filling barrows with limestone and ore in ironworks.

Lister, see filer, rack (tinplate).

live roller and skid lad, see roller gear boy.

loader; (1) blast furnace, iron and steel works, loads iron, scrap, etc., from stock into trucks or barrows, to be sent to steel converters or furnaces of steel works; receives loaded barrows of iron ore from ore fillers g.v. and places them on table of hoist, whence they are conveyed by steam or water power, to charger at top of blast furnace; (2) barrows with slag ejected from furnace; sometimes done by slogger (278) g.v.; loads blooms on trucks for conveyance from hammer to shears, etc., sometimes specifically designated, e.g. bloom loader, bridge loader, slag loader, hot loader, ironstone loader, lift loader, metal loader, mine loader, slag loader; (3) (rolling mill), loads wagons, lorries, railway trucks, etc., with finished bars, plates, rails, sheets, casted metal goods, etc., or with metal for transport; when loading heavy articles such as galvanised sheets, uses small crane;

sometimes specifically designated, e.g. bar loader, bar mill loader, plate and scrap loader, rail loader; (4) (other metal trades) places cut lengths of metal on trucks for movement about works, or on stand near furnace ready for heating, or loads cases of finished goods into wagons, etc., sometimes specifically designated, e.g. wheel loader.

loader, swift (wire works); bobbin winder, swift minder, winder, wire spooler; (1) attaches end of finished wire to large set bobbins or swifts; starts winding machine by lever and removes full swift when wound; (2) loads coils of wire on machine swifts as required for machine weaving or stranding.

loader and unloader; combines work of loader and unloader g.v.

locker, see groover (tinbox, enamel, etc., making).

looper (hayband making), hayband looper; inserts ends of lengths of wire cut by hayband maker g.v., into machine which makes a loop on end.

looper (pianos), see eye maker (pianos).

lubricator (gun making), see oiler of arms.

lumper, see yard man, metal.

machine attendant, machine hand, machine minder, machine tender, machinist; general term for any operative feeding and attending automatic or semi-automatic machines; does not set up machines, but under supervision of machine tool setter (211) g.v. or foreman, feeds blanks into machine, keeps feed hopper full, pushes sheet, bar, strip metal or wire against guides, etc.; cleans machine with oil waste; watches for proper working, reports faults to setter or foreman.

machine boy; assists at tinning machine in tinplate works; attends to fire, greases machine and does any odd jobs.

machine chipper man, machine chipper man; operates portable machine tool for removing rough edges from castings, or for trimming steel plates, etc., when in position; cf. chipper (183) framer, and chipper.

machine minder, machine tender (pins), bar minder, pin cutting machine attendant, pin machinist; watches pin cutting machine in operation, cleans it, and stops it if producing faulty work.

machinery dismantler; dismantles, takes down, or break-up old machinery which is to be scrapped, using spanners, heavy hammers, or oxy-acetylene burners; usually employed by a machinery scrap dealer.

magnetar; shovels away metal turnings, etc., into hopper lead of magnetic separator machine; collects ferrous metal from plates of revolving drum and non-ferrous from pan.

malleable iron oven packer; places castings in annealing oven so that as many as possible can be annealed at same time.

mark boy, plater's mark boy, see marker, plater's.

marker (dog iron); a cutter g.v. who cuts strips of iron into required length for pair of front dog irons, and who also indents a mark across to denote middle.

marker, cutlery; punches with a die and mallet, or operates a machine stamp, to mark knife of fork blades, shoulders of pocket knives, etc., with maker's name, or with such words as "stainless," "best steel," etc., in cases where article (190) g.v. does not mark cutlery.

marker (galvanised sheets); marks finished galvanised sheets with stencil of firm's name, etc.; sometimes done by packer (349) g.v.

marker (needles & hooks, etc.): stamps maker's name on fish hooks, large needles, etc., using hand or power press and stamping dies.

marker, plater's; mark boy, marker boy, plater's; mark boy, template boy, mangle plater (222) g.v. to mark with chalk or slate, lines or rings where plate is to be sheared, or punched for rivet holes; uses template to fix shape, and position of holes.

marker (rolling mill): (1) marks head numbers, weights, etc., on blooms, billets, or slabs; (2) to shear slabs, is second assistant to abler g.v.; marks packs of sheets with a template, for size.

marker (saw): numbers, or otherwise marks, saws with power press, hand press, or with hand mark and hammer.

marker (scales, weighing machines), see notcher.

marker, spring; marks axle springs with chalk for drilling or slotting; stamps them, when finished, with distinguishing marks, by means of hammer and stamps.

marker (tinplate), plate marker, plate mill marker; marks iron and steel plates with chalk, using templates, to indicate where ends and edges are to be sheared, and lengths to which they are to be cut.

marker boy (shipbuilding), see marker, plater's.

marker-off (tubes): (1) measures, examines, compares with plan or sketch, and marks-off with chalk, tubes which are made to special design or sketch; (2) measures, examines, and marks-off defects in tubes, for correction or rejection.

matcher (tinplate); match plates from roughing or breaking down rolls for size, gauge, etc., ready for finishing rolls; usually done by breaker-down (178) g.v.

matcher-on; matcher's assistant; bares and countersinks cutlery handles in lath and fits grips thereto.

matrix block (foundry); brushes surfaces of moulds, before casting, with a coating of black lead (plumbago or graphite) to prevent casting adhering to mould.

metaller, white metalliser; belt/runner, bearing runner (lecor); maintains proper head under white metal pots and pours or runs white metal into bearings and bushes of locomotives, rolling stock axles, motor cars and similar road vehicles.

moulder (rolling mill); plasterman; works at mangle set of rolls, where there are three or more sets in a train of rolls in sheet mills; catches hot sheet in tongs from furnaceman, knocks it on floor to remove scale, and passes it through rolls to roller-man (178) g.v.

iron and steel roller, see cropper mill cropper and roller.

mill band (galvanised sheet); general term in galvanising works for men standing at rolls in corrugating steel sheets or rolling-off excess of zinc from dipped sheets; includes bolder up, taker out g.v.

mill men (rolling mills); a labourer g.v. engaged in or about a mill, on work such as cleaning-up, carrying material, etc.

mixer man, see tar mixer.

monkey man, monkey runner (rolling mill); operates overhead runway to convey hot billets from furnace to squener or rolls.

mould cooler (steel works); chiller; sprays moulds with water after use, to cool them, and sometimes whilst in use in order to hasten cooling of steel ingot.

moulder casting pit (iron works); shapes moulds in sand, in casting pit, with assistance of patterns, shovel and ramming tool, ready for teeming of molten iron from ladle.

moulder, pig bed moulder; prepares pig bed in sand with wooden moulds, shovel, rake and rammer; cuts channels in sand, connecting pig

moulds; guides flow of metal, when furnace is tapped by opening new channels with spade as required; work often done by furnace helper (171) or slagger's helper g.v.

moulder, spare hand; a blast furnace hand g.v. who acts as pig bed moulder, when necessary through sickness of regular worker or other causes.

mould gronter; fills up bad places in moulds with a paste of refractory materials; also brushes inside of mould with wash of plumbago and water or tar or other composition, to prevent sticking.

muffelman (iron foundry); overseer, oven packer; feeds and tends fire of muffle furnace; usually also charges or packs ore, metal, etc., in furnace.

nailer-on (wire mattress), see tacker-on (wire mattress).

needer (temple); night temple maker (210) g.v. and keeps him supplied with steel pins or needles.

needle winder (wire weaving); feeds coil of wire on spindle of winding machine, feeds end of wire into needle (combined bobbin and shuttle), used in wire weaving loom, and starts machine; snips wire with pliers when needle is full.

nibber, nibhar-in (buckles); pronger; fits metal strip containing prongs on to middle bar of brass buckle; hammers fast by hand or places in automatic machine which fastens the prongs to bar.

nickel plater (safety pins); a pin plater g.v. specializing in safety pins; cf. nickel plater (232).

nickel rondelle maker (nickel extruder); mixes nickel oxide with a binding material and roughly shapes small circular blocks by hand; places block or rondelle in hand or power press, moves lever to press block, and removes rondelle.

nickel rondelle maker's assistant; carries rondelles on trays to drying racks and generally assists nickel rondelle maker g.v. to mix oxide, clean machine, etc.

nickel shed return conveyor (Mond process), wheels tracks of undecomposed nickel matte and scrapings from decomposers to cupels and melting furnaces for further treatment.

nickler (screws); cutter girl; places screw in slot or holder of machine, pulls down revolving cutting wheel on to head of screw by lever; regulates supply of lubricating solution.

nipper (vehicles), see wire tender (vehicles); cf. nippler (178).

notcher (scales); marker; measures and marks, by use of calipers and scribbling tool, divisions on stockyard of weighing machine; cuts lines on front and notches on top of steel-ward with fine files in vice on bench.

notcher (tin boxes), body notcher, hex notcher; corner; places sheet steel in tin boxes, caulkers, etc., against guides in cutting machine, which cuts out corners or notches; controls machine by lever; for specially shaped boxes, may cut out corners with hand shears.

notcher (tubes); end dresser; (steel-band) twists the overlap of hot metal with pinners at ends of lap-welded tubes so that lap at end is cross-rolled.

notcher, notching machine worker (rolling mill); pulls lever which causes work to be lifted up and carried forward to power-driven revolving cutter, which cuts a notch or slot; sometimes places work in grip or holder of machine, is put-ter-on.

number snatcher, see number taker.

number stamper, see brander (sawing machines).

number taker (iron and steel works); number snatcher; records and checks steel ingots from open hearth and other furnaces in large works; cf. number taker (705).

nut drilller, see borer.

nutter, nutter-up; butter-up; screws flattened put on end of bolt, when nut and bolt are supplied as one product.

oilier, or for greaser.

oilier, bolt, see dipper, bolt.

oilier (files); oiler file, after hardening of file and softening of tang, by dipping them in oil to prevent rusting whilst in store; often done by brusher (files) or finisher (files) g.v.

oilier (general engineering); greaser; fills oil or lubricating cups of machinery with oil from oil can under direction of engineer or machine driver; cleans and oils or greases working parts with oily waste; sometimes specifically designated, e.g. baggie (baggy) oilier, car oilier, shear oilier; (iron and steel rolling) oils bearing of, and cleans with oily waste, various driving engines and gear for driving mills and handling metal in rolling mill; sometimes also oils, greases and cleans mills, usually specifically designated according to duties, e.g., coming mill oilier, finishing mill oilier, gear oilier, mill engine oilier, roller gear and crane oilier.

oilier (saws); oilier (saws); oilier finished saw and wipes off excess oil before packing.

oilier (shipbuilding), etc., for oilier and beltman.

oilier (tubes, iron and steel); seaper; cold steel tubes preparatory to cold drawing, and oilier finished tubes for their preservation.

oilier and beltman; an oilier or greaser g.v. employed in shipbuilding, who also repairs driving belts.

oilier and greaser; an oilier (iron and steel rolling) g.v. who also greases rolls, especially at neck.

oilier of arms (gunsmith's); lubricator; lubricates movable parts of small arms, and covers metal surfaces with oil, as a protection against rust.

oil extractor; places oily waste in hydro extractor or centrifugal machine; starts and stops machine, removes clean waste and empties oil container, into which oil has been expressed.

oil padder, patent oil padder; rivets into frame of patent oiler, a thick cotton pad which sucks up and applies oil to tops of engines.

oil separator, see filterman.

Oliver assistant, Oliver hammer assistant; works handle which operates Oliver hammer, whilst Oliver smith (195) g.v. manipulates hot metal under blows of hammer; also brings material, and takes away finished work.

oneater (blast furnace); setter-on; a loader g.v. who pushes trucks, etc., on to hoists and lifts around blast furnaces.

opener, opener-out, plate opener (tinplate, galvanised sheet manufacture), opens, or separates, with a knife or cleaver, after shearing, sheets which have stuck together in rolling process.

operative (Royal Mint); passes, by hand, metal blanks into a coin producing machine; controls power by hand levers.

ovenman (bottle-ware), see scaler (bottle-ware).

ovenman, oven packer (ironfoundry), see millman.

pager; type pager-up; lifts type from sticks with a paging-up iron as it is received from type finisher and makes it up into rectangular packages, i.e. pages, containing definite number and assortment of letters, etc., dependent upon size of type and of page.

paperer, see sticker (pins).

parer (card setting), card parer; operates a cutting machine which trims cloth edges of fillets of card clothing, strips of leather, cloth, etc., set with wire tooth.

parer (saws); places marked steel sheets in a shearing machine, or against circular saw, to cut or pare it to shape of new blank.

parer, wheel; trims wheel with hand hammer and chisel, to balance it about its centre of rotation.

passer-out; checks, counts, examines and passes or rejects newly made tin boxes or tin boxes which have been repaired by straightener (tin boxes) *q.v.*

passer to bench (iron and steel rolling); carries bars, strip, etc., from shearing machine to bending machine.

potter's secker; foundry router; looks out potteries in store required for use in foundry, and stores them when not in use.

pegman (rolling mill); adjusts peg or block of steel to stop power hammer of forge from striking too heavy a blow; work usually done by stamper (174) or forger's helper (190) *q.v.*

picker, piercer-out; sorter, thrower-out, reuter; sorts over small finished articles, e.g. bolts, nuts and rivets, screws, nails, locks, printing type, etc., and throws away defective ones; sometimes specifically designated, e.g., nut picker.

picker, bat (blast furnace); sorts good from useless silica bricks or hat.

picker, cylinder (cobalt); cobalt cylinder picker; cylinder; picks out grades of cobalt glass formed when cobalt ore is reduced and residue fused with quartz and potash.

picker, scrap picker; sorts over scrap metal and separates it into different grades, metals, sizes, etc., as required.

picker, zinc, *see* dresser, *see* (zinc extraction).

picker-off, cold rolls; (i) (iron and steel rolling); *see* cold roll catcher; (ii) (tin sheet mill) picks up sheets as they emerge from rolls and piles them on trolley.

picker-up (galvanized sheets), cold roll picker-up; picks up sheets from floor or stand, in galvanized sheet works, and carries them in trolley to picker (250) *q.v.* or to warehouse as required.

picker-up (iron and steel rolling); (i) *see* cold roll catcher; (ii) an announcing man (230) *q.v.* or a labourer, who collects sheets from mill floor.

picking stick, *see* helper, picker's.

pierser; pushes solid steel bloom along in charge up to rolls containing piercing tool which pierces hole through it, whilst hot, in production of seamless steel tubes; *cf.* piercer (256).

1246 hanger-on; hooker-on; slings pups for attachment to hook of overhead crane for removal from blast furnace; sometimes done by breaker (blast furnace) *q.v.*

pig heaver, pig iron heaver, *see* tipper (pig iron).

piger, billet; keeps iron yard in order, in wire netting, rope, etc., works and piles pig iron or steel billets into stacks.

piler (blast furnace); stacker (blast furnace); a pig lifter (blast furnace) *q.v.* who lifts pigs and piles them ready for slinger (985) *q.v.*

piler (chain making), *see* floorman.

piler, hot, *see* bank man, hot.

piler (puddling furnace); (i) stacker (puddling furnace); stacks finished wrought iron bars ready for bending and rolling; work usually done by bar weigher or bar carrier *q.v.*; (ii) *see* faggoter.

piler, scrap (iron and steel rolling, steelworks), *see* faggoter.

pilar (steel furnace); nonloads from truck, carries and stacks piles of scrap for charging steel furnace.

pincher; moves cast or hot in steel works, by applying crowbar, called a pinch bar, to wheels.

pin knocker; attends treadle-driven machine which puts heads on shank of pins; *see* knocker.

pin knocker-out (Bessemer); knocker-out which dislodges gun (part of converter stopper) used to form tuyere (or blast) holes in bottom of Bessemer converter (pin knocker-out type), *cf.* stopper man.

pin machinist, *see* machine minder (pin).

pin maker (guns); drop-forges in press, or turns in automatic machine, pins used in building small arms.

pin placer (bolt, nut and rivet making); stuffer; a loader *q.v.* who piles out lengths of iron and steel on stand near furnace ready for heater (171) *q.v.*

pin plater; electric tinner; makes up solution, according to formula, in vat; loads vat with pins to be plated, using hand fork or bowl; switches on electric current and leaves for given time; removes pins to drain.

pin presser; *see* stuffer (pins).

pipe bender's assistant; acts as mate or labourer to pipe bender (228) *q.v.* on pipe bending machine.

pipe man (coke ovens), stand pipe man; opens valve, slides down pipe cover and so connects pipe with collecting main; also clears out carbon from sides of pipe with long metal bar.

pipe press man; rollman; passes cut plate between power-driven triple rolls; manipulates lever control to increase pressure of top roll on plate; carries curved plate to furnace and again passes through rolls to complete curving into pipe.

pit hand (tubes), *see* welder.

placer (rolling mill); lifts and places rolled bars in any position required, with assistance of overhead tackle, rollers and crow bar.

plater and roller lad, *see* roller gear boy.

plateholder; (i) arranges and sets plates upon which moulds rest in steel casting pits; (ii) places stopper plates in position for stoppering tops of moulds after metal has been run into them; usually done by pitman's helper *q.v.*

plateman (rolling mill), *see* middle. plate repulper; butterer, plate butter (Stockport); plate butterer; places heat drawing plates under automatic hammer, through which wire is drawn, and restores to shape by moving plate under blow of hammer (buttering); sometimes done by wire drawer (268) *q.v.*

platform boy; marks moulds used in steel casting, with chalk, to show length of ingot, and cleans scrap from moulds; usually done by pitman (278) or mould setter (278) *q.v.* under direction of tinner (276) *q.v.*

plugger (gas fittings, etc.); sprinkles emery powder and water on plug and seat of water, steam or gas tap, valve, etc.; turn or grind plug in socket to grind down irregularities until plug fits tightly to render it water or gas tight.

plugger (stove gates); lifts blow in surface of cast stove gates, by welding with oxy-acetylene apparatus.

pointer (bolts, screws); ender; feeds and guides automatic machine which puts points on bolt or screw blank; pointing sometimes done automatically in screwing or worming machine; *cf.* wormer (209), chanferer (260).

pointer (slag iron); hammers both end and mid strip, after it machine drawn, to form points of slag iron.

pointer (wire works), rod pointer; tonguer; prepares rods for wire drawer (208) *q.v.* by hammering out point on anvil by hand.

polisher; (i) float and shoe plate, steel pen; *see* barreller; (ii) (displate) *see* dresser and helper (hand).

post-pom worker; a chipper *q.v.*, using a pneumatic hammer.

potman, sand press, feed press man; assists lead press driver (279) *q.v.*, by feeding fire under lead melting pot, keeps heating machine and pipe with metal at proper temperatures.

potman (steel); prepares pots or crucibles for casting, turns out steel ingots when cool and removes slag and dross from crucibles with hammer and chisel.

potter (slag extraction); slagman; receives slag as it flows from blast furnace or cupola into cast iron pot, supported on wheels; wheels pot into yard to cool.

preparer (roller chains); threads links on studs for assembly to rivet, preparer, mould; sweeps, scrapes, and turns or sweeps moulds to prevent steel ingots from sticking; often done by mould grinder, mould man (278), pitman (278), or mould setter (278) *q.v.*

presser; places blocks of light cast iron, pressing machine and operates machine to punch or press out holes; usually done hot, *cf.* nut cutter, machine nut maker (190).

press tender (rolling mill); a cleaner *q.v.* working around power presses in rolling mill.

pronger (huckles), *see* rubber (huckles).

proofer (safes); safe stuffer; packs spaces between walls of safe with sand, asbestos, slag wool and other material, to make it fireproof.

proof man (gms), *see* barrel prover.

pryer, pryler (sheet rolling mill), breaker (iron and steel rolling), scale cleaner, scaler, steel mill sweeper, sweeper, sweepers, tableman; sweeps scale from bars and sheets with a broom; may also double over rolls, and sometimes for its being re-heated, and re-rolled into thinner gauges; sometimes done by doubler (178) *q.v.*

puller, stamper's; stamp puller, pull-up (steam locomotives), *see* stamper's helper.

puller-down (galvanized sheet); takes steel sheet from pot, after galvanizing, by hand with tongs or by crane.

puller-off (galvanized sheet); pulls with tongs galvanized sheets from rolls, which excess of zinc is scraped-off.

puller-out (cutlery), *see* hardener's assistant.

puller-out (iron and steel rolling), *see* drawer, bar.

puller-out (puddling); reserves half of puddled iron, weighing about 80 lb., from puddling furnace, by means of tongs; places half on iron harrow, and wheels it to shingler (174) *q.v.*

puller-out (steel manufacture); pulls crucibles, with their gates contents, from melting hole of crucible steel furnace, and places them on furnace floor ready to be removed by taker-off *q.v.*; returns empty crucibles into furnace ready for next melting; sometimes responsible for firing of furnaces and for regulating temperature; often does work of collarman *q.v.*

puller-up, fuser; assists fuser (241) *q.v.* in putting metal goods, after they have been enamelled, in a muffle furnace.

puller-up (rolling mills), *see* door boy.

pulling-up boy (wire works); looking boy; pulls up and arranges loads of wire on rolling mill floor and so keeps wire from spreading about after rolling process.

pull-up (slag), *see* door boy.

pull-up boy (anchor chain making); pulls-up lengths of chain in course of forging; also keeps chain maker (190) or welder (190) *q.v.* supplied with material; keeps floor clear by pulling away finished chain.

punch attendant, *see* punch tender.

puncher, punching machine worker (forges, ship building); moves lever under direction of puncher (228) g.v. of hydraulic press or power punching machine which punches holes in hot or cold ingots, strips, plates, steel bars, steel plates, girders, boat and sheet piles, chug iron, angle iron, saw blades, etc.; may assist in placing work on bed of machine by lifting with or without crane; often specially designated, e.g., angle iron puncher, ingot puncher, rail puncher, sleeper mill puncher, steel bar puncher, etc., as follows; usually also does work of shearer, e.g., (1) cutters (metal trades) places work on bed of machine against gauge, and operates machine by moving hand lever or foot treadle to punch holes for bolts, rivets, screws, etc.; may set gauge or fit new punches; usually done by puncher (278) g.v.; sometimes specially designated, e.g., bobbin puncher, lath puncher, chug iron puncher, shoe tip puncher.

puncher, machine knife; section puncher; marks and slots, or pierces holes in agricultural machine knives or sections, by machine or hand press; usually done by section cutter-out (254) g.v.

puncher, section (tools); see puncher, machine knife.

puncher and shearer (rolling stock, boiler-making, shipbuilding); attends machine which punches holes in metal plates and also shears them to size and shape required; in shipbuilding, usually done by lister (223) g.v., cf. puncher, punching machine worker.

punching machine attendant (forging); clears, oils and greases punching machine; also changes punches and dies when necessary; similarly attends to shearing machine and adjusts shear blades thereon, where combined punching and shearing machines are used.

punch center; puncher attendant; cleans, oils, and greases punching machines, in iron and steel rolling mill.

pusher (wire rod); draws billet from furnace with long pusher at end of pusher (220) first pair of rod rollers.

putcher (tinplate); see helper, tinman's.

putter-in (bolts, nuts, rivets), as for heater's assistant.

putter-in (galvanized sheet); see feeder (galvanized sheet).

putter-in (iron and steel rolling); see guide.

putter-out (notching machine); places metal to be notched or slotted on holder or grip of machine, with or without help of crane or chains.

putter-together (axles); an assembler g.v. who assembles, or puts together, parts of axles for horse-drawn vehicles.

pyrometer attendant (foundry); checks temperature maintained in crucibles of ironfoundry, by watching readings of the pyrometer, an instrument which measures high temperatures; records temperatures in book; cf. temperature taker (steel works).

rack driver (shipplate mill); see roller gear boy.

racker; places decorated and varnished tinplates into drying racks as they come from litho and varnishing machines.

rail putcher (iron and steel rolling); a framer g.v. who removes from rails, themselves and rough edges left by rolls.

raiser; (i) (tin plate); see riser; (ii) (copper rolling) see riser, mill.

ramrod maker, see cleaning rod maker.

rattler (rivets), as for barrel.

raw material trammer (copper); pushes trucks laden with raw materials, ore, coke, coal, flux, etc., about a copper extraction and refining works.

receiver man (blast furnace); (Weld term); drives loco which propels receiver, or receiving ladle, into which molten metal is run from Bessemer furnace, to ingot bed.

recoiler (tinplate); see counter (tinplate).

reducer; reduces wire, intended for setting machine needles, bolt needles, or crochot hooks, on small automatic lathe or swaging machine; places needle in chuck of lathe or holder of swaging machine and brings tool to bear by lever.

reducing furnace head; assists reducer (771) g.v. in firing and cleaning furnaces, moulds and floors of lead extraction works.

replacer (tin boxes); see straightener (tin boxes).

re-shearer; a shearer g.v. who re-shears defective sheared galvanized sheets to smaller sizes or for scrap.

re-shearer's assistant; helps re-shearer g.v. to carry and adjust large sheets at re-shearing machines.

re-shearer's boy; assists at re-shearing machine when extra large galvanized sheets are being cut; or acts as re-shearer's assistant g.v.

rest driver; controls motion of a rest, a type of conveyor on which rails rest in a rail mill; operates levers under direction of rail roller (178) g.v.

rim worker, wheel rim worker; general terms covering workers for drilling and preparing wheels for perambulators, etc., and including wheel rim bender (278), wheel rim drill (200), wheel rim roller (178), wheel rim welder (242) g.v.

ring maker (lag making); feeds wire from a spool into a ring making machine which automatically cuts wire section and bends it into a ring, called a lag ring, used in connection with dolly beams; controls machine by hand levers.

riser; risers; stands at grease pot end of tinning machine, receiving plates as they emerge coated with tin, and transfers to racks, or more usually, to branning machine direct; modern practice is to use a machine called a "patent riser" or "auto-riser," in which sheets are branned up automatically from tinning bath and passed to branning machine.

Riser, mill (copper rolling); riser; stands behind mill or rolls and returns sheets over rolls to rollerman (178) g.v.; uses tongs, if sheet is hot; if cold, uses leather gloves; sometimes done by boilerer (178) g.v.

rivet machine minder, rivet machine tender rivet maker; (i) (cold method) cold header; operates automatic machine which makes rivets for bolting or for the sheet metal work from coil wire; feeds coil of wire on swift or coil holder and feeds end of wire into machine; controls levers and watches for any faults work; (ii) (hot or red) makes rivets for use in shipbuilding, boiler-making, and general engineering from rod or bar metal on semi-automatic machine; feels hot metal rod, bar or strip from furnace, using tongs, into receiving end of machine; applies power by hand levers.

rivet recesser, see stud recesser.

rockar (roller engraving); places hardened steel mill engraved with raised design in contact with copper roller to be engraved in special machine; turns wheel of machine, so that as mill and roller rock or bump backwards and forwards, the two are brought closer and closer together, thus forming mill deeper into copper to obtain better impression.

rod winder (wire works); a swift loader g.v. who winds rod, or thick wire, into a coil on power-driven swift.

roller (drums, logs); passes sheets of metal (edges already folded over by folder), between receiving rollers, which roll sheets into cylindrical form; interlocks folds made by folder g.v.

roller gear boy; line roller and skid lad, guide and roller lad, rack driver, skid boy, skid and line roller lad; (i) works handle, and assists roller (185) g.v. which controls passing of series of rollers, on which white hot metal is conveyed to and from mill; by means of rod, clears obstructions on sideways; (ii) rollers; in iron and steel rolling mill where rollers are not mechanically driven, places loose rollers in favourable positions to receive bar from rolls for next pass.

roller lad; (i) attends on roller (178) g.v., as messenger; (ii) see roller gear boy.

roller-over (brass); (i) covers iron rod or tube with a coating of brass sheet, by a rolling process; passes iron rod, core or tube, together with brass strip, between power-driven trip rollers; (ii) covers end of top rail by hand screw till strip is completely turned around core or tube; usually done by roller (178) g.v.; (iii) feeds and operates roll to which he passes brass strip for bending to semi-circular or angular section bending.

rollman (pipe); see pipe press man.

rotary cutting machine hand; feeds and operates rotary machine which cuts tin plate into strips and also trims-off corners of sheets.

rough machine man; general term for men operating machines performing first or rough machining operations:

Rubber; (i) rubs off, or removes, scale with wire brush, emery cloth, etc., from steel articles after hardening in oil bath; (ii) (cutlery) see hardener's assistant; (iii) (smoking) does final polishing of saws with fine emery powder to remove scratches and process marks; (iv) (steering machines) see stamper; (v) (typography) smooths cast type on a stone or by means of filing; (vi) (shoe) see cleaner and balper (hand).

rubber-up (reed making); rubs surface of pitch smooth on staves of reed that have been dipped by dypper in g.v. and allowed to dry and harden (trubish sampler (steel works); collects refuse, wheels it away and empties it on rubbish heap.

rucker (blast furnace); ironmaster rucker; breaks up with a sledge hammer, ironstone into small pieces and rakes into a heap or rack.

rumbler (barra spinning and finishing), shaking frame rumbler (boots and shoe plates) see hameller.

runner, bar, see runner, stem (tubes), runner, bearing, see installer.

runner, bogie; pushes up bogie or truck at furnace of rolling mill, to receive pieces of hot metal or billets, and wheels them to first rolls.

runner, coke; (i) see filler, coke; (ii) (pig iron) a wheeler g.v. who conveys coke in barrows from hoppers to furnace table.

runner, pile (rolling mill); conveys hot piles, ingots or bundles of pieces of wrought iron, from furnace to rolls, usually on overhead runways from which they are usually sling in a crane.

runner, pot (steel works); takes-off; raises crucibles from furnace floor by levering up on wheeled tongs and wheels or runs them to heater (376) g.v.; wheels back to furnace empty crucibles; often done by puller-out g.v.

runner (sawmills), nicker and turner's runner; assists nicker and turner's filler (231), or filler (231) in worming filler (231) g.v. by fetching and carrying materials, tools, etc.

runner, stem runner (tube, iron and steel); bar runner; keeps mandrel, oval, which tubes are drawn, in position against rolls, by hammering on end or stem during welding process; withdraws stem from tube after operation is completed, and runs back with it ready for use in another tube.

runner, tool; fetches and carries tool between tool shop or store and machines as instructed by foreman or tool setter (211) *g.v.*

runner, wagon (blast furnace); pushes, or runs, wagons, small cars, or barge of material about works.

runner-down (rolling mill); trawler-down; conveys hot metal bar from heating furnace to rolls, by means of tongs suspended from an overhead trolley by a chain.

runner-in, see charger, tube.

runner, maker (steel manufacture); makes and sets channel, I-beam or runner, through which molten metal runs from furnace to molds or ladles; lines a sand trough with bricks and gasifier, lights fire under trough to dry gasifier and sets trough in place; usually done by melter (second hand) (217) *g.v.*

runner, runner man (steel works); operates overhead trolley, which carries iron ladle from converter to converter vessel, in Bessemer process, and also dumps iron into vessels with hydraulic machine; when metal is not directly poured into converter vessel, adjusts position of movable clay-lined runner, or channel, for pouring into vessel, on side of runner-up (iron and steel rolling); (1) (in sheet mill) see drawer, bar; (2) conveys finished strip on to mill floor.

runner-round, runner-through (wire rod mill); picks up with tongs end of hot rod coming from finishing rolls, puts it through guide, and backs it over stand on coiling reel.

tailorman (metal trades), see labourer, sailor gang.

sand calciner, sand furnace (steel works); sand dryer; calcines, or bakes in furnace, sand used for making hearth of a Siemens Martin or other open hearth furnace.

sander in tinhouse (tinplate manufacture), see duster (tinplate).

saw backer, see back filler.

saw bench hand; a sawyer *g.v.* who cuts-up bars of lead with circular saw into suitable form, or cleans up chips by trimming cutting wheels from bars or other lead sections.

saw driver, saw engineer, sawman (iron and steel rolling); saws bars and sections of steel to required lengths and widths on power-driven circular saw; controls and adjusts metal to be cut on bed of machine; controls machine by means of levers.

saw girl, see for nicker.

sawman, sawyer, sawing machine worker, sawyer machinist; saws metal, in form of bar, tube, strip, etc., into lengths, using a machine saw; sets gauges, and clamps work against saw or controls automatic feed to saw by lever or wheel; controls power levers of machine, when not done by saw driver *g.v.*; sometimes specifically designated, *e.g.* brass rule sawyer, copper tube sawyer, iron sawyer, steel sawyer, tube sawman, tube sawyer.

sawyer, cold; a sawyer *g.v.* who cuts steel rails, billets, etc., when cold; *cf.* hot sawman (278).

scale cleaner (iron and steel rolling); scaleman; a labourer who removes scale from floor of rolls, or places it in skips, trucks or barrows, and sometimes wheels it away, *see* scale wheeler.

scaleman (iron and steel rolling); may be either scale cleaner or scale wheeler *g.v.*, or combine duties of both.

scaleman (ironfoundry), *see* checkweighman (ironfoundry).

scaler, copper sheet, *see* scraper (copper rolling).

scaler, enamelled sign; places iron sheets before enamelling, in furnace; when heated, removes them with tongs, and scrapes off loosened scale.

scaler (bellow - wire); *see* scumman (bellow-wire); removes scale, rust, dirt, etc., from sheet metal articles, by placing them in a furnace, and brushing off loosened scale, on removal.

scaler (iron and steel rolling), *see* pryler.

scaler (steel manufacture); trims scale and slag, formed at mouth of converters or ladles, either by hand with hammer and chisel, or by hydraulic chipping machine.

scamman, scarer; kids scarer; removes scale or lumps of fused clinker from sides of calcining kilns in iron-works with rake, hammer and chisel.

sawenger, *see* cleaner (steel manufacture).

scander (boot and shoe plates), *see* barreller.

scourer (press goods); rubs over tinned or galvanized surfaces with sandst, immediately after tinning or galvanizing; obsolescent.

scourer (steel pens), *see* barreller.

scraper (copper rolling); copper sheet scaper; scrapes off, by means of a steel tool, any adhering oxide not removed by heating copper sheet and subsequent rolling in water; also removes any surface cracks by scraping through until clean metal is reached.

scrap gatherer (shipbuilding, etc.); scrap collector; collects scrap steel lying about shops and yard and wheels it to scrap heap.

scrap gatherer (tin boxes, etc.); collects scrap tinplate as it falls from various cutting machines, and takes it to bandler *g.v.*

scrap lad (galvanized sheet), *see* faggetter.

scrap man (iron and steel rolling); copperman group remover; collects scrap iron and steel about hot saws and shears; loads it into trucks or barrows, and sometimes wheels it away to scrap heap.

scrap man, scraper (blast furnace) a wheeler *g.v.* who pushes trucks laden with iron and steel scrap to blast furnaces to be remelted.

scraper (steel manufacture); shovels steel scrap into mouth of Bessemer converter at signal from blower (170) *g.v.* to reduce temperature of molten steel.

scrappis (slang, Scotland), *see* cutter, scrap.

scrap remover, *see* scrap man (iron and steel rolling).

screeamer, blends; calamine screeamer, *see* dresser, ore (slime extraction).

screen tester; looks after and feeds machinery which screens or sifts slag, to experience and skill is known as first shifter or second shifter; (ii) sits on blocks of, and controls with knee, three or four scythes, and wraps them in brown paper, straw, and straw rope, in readiness for despatch.

salvage twister; attends automatic machine which twists wire to form a sledge of wire netting.

setter-on, *see* onsetter (blast furnace).

setter, setting-up boy (typefoundry); places type secured from cutting machine face side up in loose lines on bench, ready for dresser (278) *g.v.*

shaker, barrel shaker (iron and steel hollow-ware, boat shoe plates), *see* barreller; in nail and screw making, *see* sawdust as cleaning medium; sometimes specifically designated, *e.g.* forged shaker, turnoil shaker, wormed shaker.

shaver driver, *see* guillotine engine-man.

shearer, shear hand, shearsman, shearsman, shearing machine attendant, shearing machine worker, shearing machinist; copper cutter (bellow-wire, rolling mill); cuts bar material to length, or sheet metal to length, shape, or size, trims ragged ends, etc., by power or hand shearing or cropping machine; sets gauge or fixes template on work to guide cutting edge, or moves lever to bring work under cutting edge so that clearance takes place along chalked line; is shearing, usually done by puncher and shearer *g.v.*; often further designated, *e.g.* sleeper mill shearer, bloom shearer, circle copper shearer, fish plate shearer, iron shearer, scrap shearer, short link shearer (chains).

shearer, bar; bar shearsman (iron and steel rolling, tinplate), *see* cutter, bar.

shearer (boiler and tank making); a puncher and shearer *g.v.* working on plates for boilers and tanks.

shearer, shearsman (bolts, nuts and rivets), *see* cropper (bolts, nuts and rivets).

shearer's assistant, shearer's helper; holder-up at shears; helps shearer *g.v.* by placing iron and steel sheets on shear table, removing them when sheared, and removing also scrap metal from shears; *cf.* double marker.

shearer's marker; marks galvanized sheets to size with chalk and assists shearer *g.v.* generally.

shears worker, hydraulic; a shearer *g.v.* attending hydraulic shearing machine.

shearling attendant; lifts by means of shearlegs (a two-legged derrick), heavy fittings, such as engine parts, boilers, funnels, armour plating, etc., from jetty to ship, in shipbuilding and marine engineering; adjusts shearlegs with blocks and fall; controls winding engine by levers.

sheeter's mate; performs general unskilled duties for sheeter and erector (corrugated roofing) (208) *g.v.*

sheet mill worker; general term for any person employed in an iron and steel sheet rolling mill, *e.g.*, bar dragger, cold roll catcher, sheet bandler.

sheet shearer, wheeler, *see* turn-over (galvanized sheet).

shear-ready; places metal articles already cleaned and dipped in acid bath, to be sherardized (coated), in airtight retort and surrounds them with blue powder (zinc dust); watches temperature of retort during process of heating to 800-900° F.; removes from retort and sets aside to cool.

shifter (iron and steel rolling); (i) one of a gang of men assisting erector or driller (200) *g.v.* in shifting rails and putting them into position for drilling or turning according to experience and skill is known as first shifter or second shifter; (ii) is engaged in general lifting and carrying of ingots, bars, scrap, etc., about iron and steel works.

shifter boy, *see* for shifter.

shipper (tinplate); a loader *g.v.* who moves cans of finished tinplate by means of small crane or hoist, or stacks in trucks, etc., for transport from works.

shooter; fires a gun, charged with gun powder, in bottom of hot blast stove, to dislodge fine dust adhering to brickwork; rakes out dust and shovels into barrow for conveyance to slip; in small works, work is done by man (353) *g.v.*

shop tender, shop tenderer (small arms); a labourer who assists in factory wherever required; cleans and looks after work-shop; keeps keys and attends to lights.

snake wrapper-up, *see* for scythe wrapper-up.

sinter operator (blast furnace); feeds small or powdered iron ore to kiln or furnace, with a flux, and fuel, and controls furnace, thus causing ore dust to fuse together; takes out fused ore into hoppers, etc.

sizer (brass bobbins); sorts brass bobbins into sizes, for pecking and despatch.

skid boy, skid and live roller lad, see roller gear boy.

skimmer (blast furnace); holds with tongs, or axes, piece of pure steel iron over molten iron as it flows along channel to divert slag from pig bed into side channel.

skimmer (needles); feeds needle wires by hand between guide wheel and emery wheel of a machine which removes scale from middle of wires, preparatory to eye-making.

slackener; tools eye chains by hand to see if link joints are pliant; loosens stiff links or rivets, by tapping them with a hammer on steel block.

slag contractor; contracts to remove slag from furnaces or ladles; is in charge of men who tap slag from blast furnace or steel furnace, collect slag in ladle, remove ladle to slag heap and tip it; usually disposes of slag to artificial manure manufacturers; contractor does work of slagger (278) g.e.

slagger (puddling furnace); *clayey iron (R. Smith)*; loads slag into ladles and also wheels it to dump; are also slag leader, slag wheeler; cf. slagger (278).

slag men; any worker drawing-out, filling or wheeling slag, at blast furnace; cf. slagger (278).

slagman (lead extraction). see potter (lead extraction).

slitter (wire works); feeds sheets or strips of metal into slitting machine, which cuts them into narrow ribbons for use, e.g., as band or edging to wire mesh.

smithy, see smith's shop assistant.

smith's assistant; (i) see smith's shop assistant; (ii) in small iron factories, assists smith (190) g.e. by holding forcing on anvil or under drop hammer; heats forcing in furnace; cf. heater (171) and smith's striker (190).

smith's fireman; feeds, attends, and blows blacksmith's fire.

smith's scale attendant; removes scale from anvil and forcing during forging process, by scraping or brushing, to keep it clean for forging (190) g.e.; also removes collections of scale from floor round anvil.

smith's shop assistant, smithy, smithy labourer - *smithy*, smithy's assistant; does all lifting, carrying, cleaning-up and general labouring work necessary in blacksmith's forge.

snapper (filed); cropper; a shaver g.e. who trims or shears end of files on power-clearing machine, and squares ends by grinding on emery wheel.

snapper; *caster, feeder, feeder*; leads molten iron into various channels of pig beds; opens out or blocks channels in sand with a special tool or snipe; assists furnace keeper g.e. with repairs to moulds and does general labouring work round blast furnace; usually done by filler, furnace helper, or labourer g.e.

snouter, see blower (slag and slag wheel).

sooper, see roller (tubes, iron and steel).

sorter (bolts, nuts and rivets, screws, nails and tacks), see picker.

sorter (boot and shoe plates); sorts boot and shoe protectors after casting, rejecting defective castings and foreign bodies.

sorter, metal. sorter (general engineering); (i) see sorter, scrap. (ii) operates machine which separates iron or steel filings, turnings, etc.,

by means of rotating or travelling magnets; (iii) separates copper from same, lead and other metals by hand picking.

sorter, iron (Clyde District). see iron wheel's assistant.

sorter (needles); feeds hopper of, and operates machine which automatically sorts needles by length, cf. sorter (needles) (278).

sorter, scrap sorter; generally sorts and grades scrap metal, sometimes breaks-up and sorts scrap metal for smelting down; sometimes breaks it up with hammer and shears; sometimes specifically designated, e.g. sea lead sorter, tin sorter, tin foil sorter, waste sorter (tin boxes).

sorter, shale (blast furnace); sorts shale into various qualities; usually done by filler g.e.

sorter (steel manufacture); (i) sorts out various qualities of scrap steel or other material, for melting furnaces; (ii) feeds iron ore into washer, at bottom of which is running water, still separates constituents according to specific gravity; (iii) (in cementation process) sorts-out converted, or blistered, bars, and returns those not satisfactory, for further treatment.

sorter and wrier (slag iron); a wrier g.e. who also sorts finished slag iron into sizes.

spenman (iron and steel works); walks round various departments tightening-up nuts, etc.

spindlar, see hub maker.

splitter (needles); *threeder*; *threeds* by hand, double needles, after siving, in groups of several hundreds, on two wires passed through needle eyes, ready for filer (225) or grinder (237) g.e.

splitter (copper rolling); lays several sheets of rolled copper on floor and hits them with a sub-stitcher a kind of roller, to flatten them and remove wrinkles.

split pin maker; attends and feeds automatic machine which makes and finishes split pins, from wire coil; fixes coil of wire on holder, controls levers and reports faulty work to machine setter (211) g.e.

split ring maker, as for split pin maker.

spout man; lines and repairs with special clay, hot metal spouts, or pouring channels, of furnaces, in steel works; usually done by meller (second hand) (171) g.e.; if spent has to be brick lined, is usually done by bricklayer (650) g.e.

spring buckler, see spring hooper.

spring coiler; a spring maker g.e. who uses a jigging machine, on which small coil springs are made; when spring is coiled on mandrel to required length, cuts wire with pliers.

springer; fits springs in doors of stoves, grates, and ranges.

spring hooper; spring buckler; fixes metal band or buckle round leaves of a laminated spring to keep them together; inserts screws or bolts and tightens up with screw driver or hammer.

spring maker; fixes drum of wire to holder of machine and feeds end of wire between rollers which twist wire into coil springs for use in furniture and upholstery making; as spring is automatically cut off, slips coil from rollers by operating foot lever.

spring unhooper, see *splitter*, spring.

stacker (blast furnace); (i) see piler (blast furnace); (ii) see dogger.

stacker (bolts, nuts and rivets), see tin placer.

stacker, pig iron stacker; a metal yarder g.e. who is in charge of piles of pig iron in foundry yard; moves and stacks them as necessary.

stacker (iron and steel rolling); makes stacks of finished bars, sheets, plates, etc., for storage purposes in stock yard or elsewhere; often does work of loader, g.e.; sometimes specifically designated, e.g. shipplate stacker, rail stacker.

stacker (puddling furnace); (i) see piler (puddling furnace); (ii) see dogger.

stamper (galvanised sheet); operates small press which stamps plates with customer's private brand or mark.

stamper, ore; iron ore breaker, ore breaker; attends to mill in which blocks of iron ore are crushed; controls levers and watches smooth working of conveyor belts.

stamper, rail; operates small press which stamps finished rails with customer's or roller's mark or name; sometimes stamps by hand with hammer and dies.

stamper (tinplates); *brander* (tinplate); *gun point*, *brush* and *stamps* to mark wooden boxes with makers' brand, and with size and quality of tinplates.

stamper's helper, stamper's mate; *puller*, *stamper's puller*, *stamp puller*; assists stamper (254) g.e. by pulling or kicking bars or strap which causes stamp to fall; carries metal to be stamped and does any other unskilled work.

staple maker; operates by means of levers, and attends to machine which cuts, bends, and finishes wire staples; fixes coil of wire on holder and reports faulty work to machine setter (211) g.e.

stayer (bailer); screws long thread stay bolts into hoiler stays by means of low gear machine controlled by hand lever; if necessary, snails and of bolts with hand or pneumatic hammer and chisel; cf. stayer (278).

telem crane boy; operates hand and foot levers to control simpler and smaller cranes used in steel works for lifting iron, steel, *scrap*, etc., in yard; feeds and stacks furnace.

steam hammer boy; moves lever to cause steam hammer to drop, on instructions of smith (190) g.e. steel bander (concrete shipbuilding); bends steel rails and girders in hand-operated or power press, into required shape, to form framework for concrete.

steel manager, see cutter-up (file).

sticker (needles, pins); *ponner*, *pin shorer*; (i) feeds pins or needles into hopper head of machine; passes strip of paper into machine and works foot lever to cause row of pins or needles to stick into rope; (ii) sticks needles or safety pins on card, by hand.

stirrup jigger; *rough*; (lines) leads bottom of stirrup with hammer and punch.

stitcher (wire works); joins together sections of woven wire mesh, or netting, by hand, sewing with wire and needle, or by stitching in a wire sewing machine.

stocker, iron; pig iron stocker, pig stocker; stock metal man; a metal carrier or pig lifter g.e. who places pig iron in stock and removes it when required for loading into wagons; generally also keeps account of iron entered or removed.

stockman (pig iron); general term for any man employed in pig iron stock yard; includes stock metal carrier, pig lifter, pig loader, pig tipper.

stock metal man, see stocker, iron.

stoker (blast furnace), see charger (blast furnace).

stoker, furnace stoker, see fireman.

stoker for annealing ovens (rolling stock); a fireman g.e. who feeds and keeps clean, fire under annealing ovens, in annealing of metal used in making rolling stock.

stoker (general ironfoundry), see fireman, oven.

stoker (shipbuilding), see fireman (shipbuilding).

stone; rubber (sawing machines); runs down metal parts of sawing machines, after jacking, with fine pumice stone and water.

stop bay (rolling mill); sets stop or gauge and pulls lever which operates shears, under direction of shearer *q.v.*, in a continuous rolling mill, to shear or cut blooms or rods to required lengths.

stopper man, **stopper setter**; removes old fireclay stoppers from ladles, and selects and places in position new ones, in steel works; makes new stoppers or repairs old ones by shaping lumps of fire-clay by hand about steel core, so that when lowered into pouring hole of ladle, flow of metal is stopped; *cf.* stopper maker (213).

straightener (aeroplane stays), **wire straightener**; straightens coil wires, used for stays in aircraft manufacture, by passing between rollers of straightening machine.

straightener, **coil-rolling mill**, **straightener** (iron and steel rolling mill).

straightener (general engineering); straightens iron or steel bars, rods, angles, channels, etc., by passing them through a pair of slightly conical rollers.

straightener (iron and steel rolling mills); (i) takes rods and bars of small section, while still hot, after delivery from rolling mill, with wooden mallets, to straighten them; (ii) straightens rods of round section, with tongs while hot, as they are being reeled on drum or machine; (iii) cold straightener; makes round sections dead-straight, in cold state, in a bright-drawn steel rod works, by twisting motion in and through a machine; (iv) straightens shafting, in cold state, by a rotary or twisting motion in and through a machine.

straightener (stone castings); heats slightly bent stove castings in oven; fixes by hand in vice and attaches heavy weight to bend metal to required extent.

straightener (tin boxes); **repaire** (tin boxes); places damaged, i.e. bent, tin boxes on mandrel and hammers them with wooden mallet to take out dents, etc.

straightener (wire works); straightens rods, or strip metal, either with hand hammer, or by passing them through a train of mechanical rollers.

straightener, **wire** (pins); helps pin maker (258) *q.v.* by passing coil of wire on wire or spindle of machine and guiding end of wire through steel pegs up to feed of pin making machine, straightening it by moving pegs as coil unwinds.

straightener at machine (drawn rods); straightens drawn steel and brass rods by passing them through mechanical rolls.

stretch, **stretch bar**, **stretching**; **stretch**, **potent**, **stretching**; places sheet to be flattened before galvanizing, in machine; turns lever to clamp sheet at both ends and applies hydraulic power to stretch it.

stretch (steel chains); puts cycle chain on hooks and moves lever to stretch it; taps it with a mallet against a block of wood to bring links into alignment.

stretch (bayband making), *see* bay-band maker.

striking board man; assists loan moulder (180) *q.v.*, in making large casting moulds by use of striking board, or template; sets guides and/or spindles under direction of moulder; draws striking board laterally along guide ax or rotates it about spindle to form inner or outer surfaces of moulds.

stripper (bolts, etc.), **bolt stripper**, *see* fraser.

stripper, **brake**; strips brake gear from rolling stock before repair or renewal, by undoing bolts and nuts with hand tools; usually done by brake fitter (210) *q.v.*

stripper (copper); separates laminated slabs or ingots of copper into thin plates, after they have been withdrawn from casting moulds.

stripper (files); **dresser** (files); strips, i.e. levels or smooths surface of file-blank in readiness for cutting, by filing, (hand or machine) or by scraping.

stripper, **ironwork**; dismantles and breaks out structural iron or steel work, from old buildings, and other works of construction.

stripper, **spring**; **spring** **unloader**; operates hydraulic machine, by which hands or bodies round leaves of steam locomotive springs sent in for repair, are removed.

stripper (steel manufacture), **ingot** **stripper**; strips ingots from moulds, i.e. operates and controls, by means of levers in cab of overhead crane, apparatus for removing steel ingots from moulds in which they have been cast.

stud maker (pieces); feeds metal rod in automatic machine which makes studs used to guide piston strikes on frame; watches machine for faulty work and stops it, if necessary.

stud **recesser**; **reed** **recesser**; puts small studs, used in eye chain making, in a hopper of automatic machine and stops it if not working properly.

stuffer (steel forging); at cementation furnace, lays charcoal in large fireclay boxes, places layer of iron bars thereon, another layer of charcoal on bars, and so on until box is filled or stuffed, ready for process; usually done by furnacemen (171) *q.v.*

stuffer, **safe**, *see* proof (safe).

stuffer (tubes); fills tubes with sand, to prevent their collapsing or flattening in process of bending, when bent; runs sand tight with ramming iron stumper; releases or fixes into position, mandrel on tube welding machine; sometimes does by hook bolt stopper *q.v.*

studsman (tube drawing); fills tanks with soapy water and maintains supply of lubricant to drawing plates on tube drawing bench.

sweeper, **sweeper** **lad** (blast furnace); **cleaner-up** (puddling furnace); sweeps up with beam, clinders, coils, fine dust, etc., from inside of, from around furnaces, iron runways, dust boxes, stores, etc., or top of gasholder, also removes coke fallen from barrow; sometimes specifically designated, e.g. one sweeper, bottom sweeper, top sweeper, work some times done by one filler or charger *q.v.*

sweeper, **sweeper-up**, **sheet** **mill** **sweeper** (iron and steel rolling), *see* pryler (iron and steel rolling).

sweeper, **ship** (shipyard); sweeps and cleans up vessels in later stages of construction or repair, in shipyard.

swift, **minder** (wire works), *see* loader, **swift**.

swiller (metallic bedsteads); washes brass portions of metal bedsteads in hot water, after they have been dipped in acid bath.

swiller (tinplate); **washer**, **white** **washer**; washes tinplates in water, after pickling; obsolescent; pickling machine now does this work.

table driver (rolling mill); **transporter driver**; controls levers of movable table which transfers steel billets from one set of rolls to another, at steel works.

tableman (iron and steel rolling), *see* pryler.

tacker, **tack** **minder**, *see* feeder, **tack**, **tack** **on** (wire mattress); **soiler-on**; fastens wire mattresses to wooden frames by nailing on with staples.

taken-down, **drier-down**; removes galvanised sheets from cooling racks, for sorting and despatch.

taken-off (galvanised sheets); removes galvanised sheets from warehouse trucks after inspection.

taken-off (steel manufacture), *see* runner, pot.

taken-off (tinplate), *see* catcher, bar.

taken-off (wire and mill); (i) takes off hot coils of wire rod from hot rolls, and stacks them to cool; (ii) removes bundles of wire rod from hooks of cooling, conveyor, and places them on trucks, using a long hook, suspended from a chain.

taken-out, *see* helper, corrector's.

tallier (wire works); keeps stock and labels goods at various stages of manufacture, from rod to finished wire, with particulars of cast, number or quality, to prevent mixing of different qualities.

tamper, **saw** **tamper**; places saw blade against gauge in semi-automatic machine, which marks and punches long hole in blade and rivets on tang.

tank excavator (copper extraction); (i) excavates residue from tank after copper has been dissolved out from roasted copper ore by agitation with sulphuric acid; copper solution is run off and residues stirred up with water before removal of insoluble portion; (ii) shovels out copper "mud" from bottom of tank in which copper sulphate solution has been stirred up with pig iron, scrap iron, iron borings, etc., in production of deposited copper; after iron solution has been run off.

tar mixer; **mixer** **iron**; attends machine which mixes tar with slag, in slag and slag wool making.

tenser, **tenser**, *see* snipe.

temperature taker (steel works); reads and records temperatures of furnaces in steel works, by means of a pyrometer; *cf.* pyrometer attendant (160) *q.v.*

template boy, *see* marker, plate's.

test boy (rolling mill); stamps or stencils, by hand, date, weight and length on finished bars of wrought iron.

tester, **can**; **patrol** **can** **tester**, *as* for **tester** (tin boxes, etc.).

tester's **made** (motor cars, etc.); assists car tester (278) *q.v.* in testing chassis, etc.; attends trials and assists in making minor adjustments.

tester (tin boxes, etc.); tests finished tin boxes, canisters, etc., by air pressure, in water, or by means of a vacuum, to ensure that they are airtight, sometimes also wipes and scours.

test marker (steel works); marks cast ingots of steel, when cold, with brush and paint or chalk, to show quality of steel according to test.

threader, *see* spitter (needles).

thread roller (screws); feeds with screw blanks, hopper head of screw thread rolling machine; empties tray of finished screws from time to time, and reports any faulty work to machine setter (211) *q.v.*

thrower-out, *see* picker.

thrower-up (galvanised sheet); passes steel sheets from pickling shed up to platform for galvanizing, using tongs.

tilter, **tipper** (steel manufacture); operates levers which tilt Bessemer converter or tilting furnace, under direction of blower (179) or melter (173) *q.v.*, *cf.* tilter (174) and (180).

tinhouse man; general term, covering workpeople employed in tinhouse, e.g. tinner (263), riser, helper, waterboy, brasser, duster, carrier-down, and wheeler *q.v.*

tipman, **slag** **tipman**, *see* tipper, **slag** (blast furnace).

tipper, **cinder** (blast furnace), *see* tipper, **slag**.

tipper (slag iron), **heel tipper**; tends a machine which hammers front of heel iron, forming a small flat top at each side, to grip front of slag heel when attached.

tipper, coke; carries coke trucks into bunkers of stock, for use in pig iron manufacture.

tipper (foundries), as for tilter (steel works).

tipper, metal (steel manufacture); operates crane or machine which tips up molten metal from blast furnaces into mixer.

tipper (pig iron); **metal wheeler**, pig **hoover**, pig iron **header**, pig iron **unloader**, pig iron **wheel**; (i) (puddling) conveys pig iron and scrap, as required, in barrows and mixes different quantities; usually also unloads pig iron and scrap in yard, and breaks it with sledge hammer or in machine; (ii) (foundries) tips molten slag from trucks into stock for rolling mill; is often a scrap wheeler *s.v.*

tipper, slag (blast furnace); tallman, lunation, under thrower, under **tipper**, slag back men, slag tipman, tipman; tips ladles of cold or molten slag at slag top or down chute into ladges; often done by general locomotive man (704) *s.v.*

tipper, slag (steel manufacture); operates and controls crane or bogie handling or conveying slag and under to dump.

tipper (steel manufacture); see **tilter**.

tongue (wire), see **hooker-out**.

tongue, see **peeler** (wire works).

tool grinder's assistant; assists tool grinder (287) *s.v.* by doing first grinding of tool on grinding wheel; usually also does work of tool carrier and tool runner *s.v.*

top man (blast furnace); see **changer** (blast furnace).

trailer, bar; drags bars over rollers with tongue from cold bank to bar straightener and thence to finishing bench.

trailer, iron; drags rolled puddled bars to cold bank over rollers with hand tongs.

trailer, trailer-out (rolling mill); removes finished steel bars from rolling mill to dump, grips them with a pair of hooks, and drags them along floor.

trailer-down (rolling mill); see **runner-down**.

transferer, transfer (ax); imprints trade marks, gilding, or other ornamental designs on japanned portions of boatheads, sewing machines, etc., or on engines, cars, cycles, etc., by free encasing, by means of transfer; stamps transfer and applies it to work by hand with a pad; cf. **ornamentor** (278).

transporter driver (rolling mill); see **table driver** (rolling mill).

trimmer; files and trims up stamped, cast or forged metal parts, *e.g.* of cycles, small arms, engine **trimmer** and chisel file, glazing tool, emery wheel or file machine saw.

trimmer, bullet; bullet **trimming operator**; feeds bullet blanks into hopper of trimming machine, which cuts or trims them to correct length and shape, controls machine by means of levers.

trimmer, cold; a trimmer *s.v.* cutting superfluous iron from forgings, etc., when cold.

trimmer, engine; a trimmer *s.v.* using a power-driven machine press or saw.

trimmer, hot; warm **trimmer**; a trimmer *s.v.* trimming forgings while still hot, by placing them, with tongs, in machine press; operates foot treadle to cause casting plate to descend and trim forgings.

trimmer, lead plate; trims excess of lead from accumulator plates, after they have been cast, sawn and cut to size, using a shave-block.

trimmer (tin boxes, etc.); **edger** (tin boxes); cuts away rough edges of tin boxes, canisters, etc., on semi- or fully-automatic machine, after they have been stamped out; places tin box on steel holder in machine and moves levers to bring a cutter to bear on each tin.

trimmer (sawed tubes); trims or cuts end pieces of tube or of casing after they have been drawn on draw bench, with back saw or circular saw; *cf.* tube sawyer.

trimmer, warm, see **trimmer, hot**.

trolley, trolleyer, see **bogeyman**.

trolley man (tinplate); see **wheeler**.

truckman; a pig loader *s.v.* who sees that trucks are brought exactly under chute, at pig breaking machine; or sees that railway trucks are properly loaded with pig iron from pig bins.

trumpet man; (i) makes runner, or channel shape, in a truncheon, down which molten steel flows to ingot moulds, in multiple casting; sets up steel sheets for bottom and sides, and lines runner with refractory bricks and special clay; sometimes also prepares base plates, upon which moulds are placed for runner man *s.v.*; sometimes done by runner man *s.v.*; (ii) (*Reverber* process) stands by blower (170) *s.v.* and calls out his instructions to men working under him through a megaphone.

tube and hoop cleaner (textile machinery); see **bobbin hopper**.

tumbler (boot and shoe plates); see **barrel**.

tipper, **tipper** at **stripper** and **winch**; by means of tackle, swings load, tap, or tipper, a heavy piece of iron suspended from a chain, and releases it, so that tap is brought down with great force on end of stocker (steel ingot which has got set stuck); ingot is thus knocked from the mould; sometimes done by **stripper** or **peelman** (278) *s.v.*

turner-out (brass bobbins); (i) runs-out, i.e. enlarges, centres or spindles holes in solid brass bobbins, by turning a hand reaming tool or by reaming out in a lathe; (ii) sets out or sets holes in metal standards for wippen bobbins by similar methods.

turner-over (galvanized sheet); **sheet turner**; turns over alternate sheets and arranges them for pickler (280) *s.v.*, in such manner that concave or convex surfaces of the sheets face each other, and are thus kept apart, so as to allow acid to get between them in pickling.

turner-up (iron and steel rolling); (i) turns over bars, rods, etc., from one pair to another in rolls to be re-rolled; usually is employed at strip or wide mill rolls; (ii) operates lifting gear in plate mills, to turn over plate for inspection of under side before shearing; (iii) see **forker**.

turner-up (iron and steel rolling); (i) (in bar mills) turns up or turns over heavy bars with long steel rod or lever, during course of rolling; (ii) (in tube mill) backer-up; backer; works at back of lap or butt welding furnaces, assisting chaper (278) *s.v.* to adjust strips or sheets to proper position in furnace; (iii) draws strip or hoop, when hot, with tongs, through die, then turns up edges of strip to form rough tube or sheaf.

turner-up man; (i) turns up spot or ladder by means of long bar after metal has filled ladle, and allows remaining slag in steel furnace or converter to run into slag pot; is usually done by melder (second or third hand) (171) *s.v.*, at open-hearth furnaces, or by pigman (173) *s.v.*, at Bessemer plant; (ii) (*Reverber* process) is in

charge of apparatus for turning vessel up into position after blast has been turned on.

turning-tilt, as for **nocker**.

twist drill, porter-off; cuts bar steel into lengths for making twist drills, by means of semi-automatic lathe; turns wheel to bring parting or cutting tool to bear.

type page-set, see **pager**.

type bewilder; cut in; or steel types from one part of rolling mill to another, as required.

umbrella lock hitter; places lock bit in position at rib and stretcher joint of umbrella frame, inserts pin and rivets at fastenings; handles also; unloader; discharges coal, *see* pig iron, timber, sand, etc. from railway trucks in yard of works, or from barges, or ships or barges at canal or dock; carries material by hand, in baskets on shoulder, or empties out with shovel; work usually done in rolling mills unloads bars, rails, etc. in metal or stock yard as received on bogies from rolls, etc.; sometimes specifically designated, *e.g.* bar unloader, coal unloader, iron unloader, ore unloader, pig iron unloader, rail unloader, scrap unloader, unloader of raw material (steel work); work sometimes done by filler, wheeler; *cf.* discharger, tipper.

unloader, rack (tinplate); removes plates, still hot, from racks to be annealed; work usually done by riser or by tinman's helper *s.v.*

valve-man (cartridges); moves levers at signal from lead squarer (278) *s.v.* to activate squirting press, which extrudes a continuous rod of lead.

vice band, viceman; **bench hand**; finishes in vice, with file and other hand tools, parts of brass goods, machine and engine parts, small forgings, or forged ironwork for coaches, cars, etc.

vice band, nail box; a vice band *s.v.* who files and chips, by hand, axle box castings, which are held in a vice, to remove rough edges and projections before the casting is machined.

viceman, body; a vice band *s.v.* who works at bench or vice, filing, chipping and generally finishing and fitting up, rough forged metal parts for bodies of carts, carriages, or flower (280) *s.v.*; *see* **picker**.

viewer, barrel; tests gun barrels for correct bore, riding or set with a gauge and by visual examination; discards those that are faulty.

wagoner, see **dogger-up**.

washer, black (tinplate); **wasterbush** (saw); places plates, brought on barrows from picking shed, in holder of washing machine; removes plates when washed.

washer, brass; shovels ashes and scrap from brass foundry into washing machine, which separates pure brass scrap from ashes and dirt.

washer, brasses; **glaze washer** (Stourbridge district); takes ashes and cinders from brass furnace and washes them in large tub of water; collects light substance which floats on top for use as fuel in forges of nail and chain makers.

washer (tea lead); a tea lead sorter *s.v.* who washes tea from scraps lead and rejects them when lead is required for further use, *e.g.* in lead pipe making.

washer (tinplate), **white washer**, see **swiller**; *cf.* **wishman** (tinplate).

washman (tinplate); (*And* *tin-roller*) brushes off surplus tin on plates placed in stand from tin pot by tinman (282) *s.v.*, and dips them one by one into wash pot to remove marks left by brush; *cf.* **washer** (tinplate).

wasterbush man; (i) see **washer, black**; (ii) see **picker**.

water boy; **water dog**; assists tinman (283) *s.v.* at water bath (14th) by helping to remove sheets, etc., brings in coal or fire; clears up ashes.

waterer; sprinkles water on pig bed to keep it moist in preparation for moulding; also cools pig iron after turning by directing water on it from a hose; usually done by furnace keeper (171) g.v. or one of his assistants.

water turner-on (at rolls); turns on water taps as required to cool iron and steel rolls; usually done by roller (178) g.v.

weigher; general weighman (pud-dling); weighing machine man, weigh-man; (i) weighs, checks and records weights of raw material, e.g., coal, ore, limestone, sheets, plates, etc.; (ii) weighs finished products of works; (iii) weighs and checks amount of material used in manufacture, e.g., but sine used in making galvanne sheets; (iv) weighs and records work turned out at intermediate stages of manufacture for purpose of calculating piecework pay; cf. checkweigh-man; often specifically designated, e.g., bar weigher, blackplate weigher, coke weigher, furnace weigher, metal weigher, mineral weigher, nickel weigher, ore weigher, pig iron weigher, pig weigher (puddling furnace), rail weigher, sheet mill weigher.

weigher, bar; (i) (puddling) weighs bars of malleable wrought iron and sometimes acts as bar carrier g.v.; (ii) (sheet mill) weighs iron and steel bars and makes up into suitable lots in readiness for final rolling; in Wolverhampton, work done by cutter-down or shearer g.v.

weigher (blast furnace); doorman; a weigher g.v. who has charge of men material charged; weighs and records amount, as directed, is charged; often further designated, e.g., charge weigher, furnace weigher, mine weigher, pig weigher.

weigher, engine; controls levers of turn-table and weighs machine in locomotive haulage works.

weigher, ingot (iron and steel rolling); charge taker (iron and steel rolling); a weigher g.v. who weighs steel ingots as admitted to mill.

weigher, pig (blast furnace); weighs pigs of iron, sometimes breaking off cross before weighing, see breaker, cross.

weigher-off (wore works); weighs gross and net weight of spoiled bath wire.

weigher-out; takes finished rolls from machines to warehouse.

weigher-up (general); weighs screw blanks for record and weighs purposes.

weighing machine man, weighman, see weigher.

weighman, general; (i) (puddling) see weigher; sometimes specifically designated, e.g., barrow weighman, furnace weighman, blast furnace, iron ore weighman; (ii) (shipbuilding and marine engineering) weighs and records weights of materials delivered into works or placed on ships in construction or under repair, is often also a gateman (952) g.v.

weight loader, see checkweighman (iron foundry).

welder (bath); pit hand (Scotland); assists welder (266) g.v. in pushing tubes out of furnace.

wheeler; barrow man, barrow runner, discharger (tinplate), frodley man (tinplate); wheels, or pushes or drags, material, fuel, stores, etc., in barrows, trucks, etc.; (ii) (shipbuilding and marine engineering) works, e.g., from storage dumps to blast furnace, from furnace to cinder dump, from coke hoppers to furnace table, from sand dump to puddling furnaces, from furnace, pit, or cupola to slag pit or dump; sometimes specifically designated, e.g., ashes wheeler, blackplate wheeler, blast furnace wheeler, charge wheeler, cinder wheeler, coal wheeler, coke wheeler, crop wheeler, (from shears), fettling wheeler (puddling furnace), metal wheeler, mine wheeler, ore wheeler, pig wheeler, pig iron wheeler, rail

wheeler, sand wheeler, scrap wheeler, slag wheeler, nickel cupola slag wheeler, stone wheeler (ironstone), spigal wheeler, tap wheeler (furnace cinder), work wheeler; (iii) (general) wheeler, bar; (i) (galvanizing sheet) a bar cutter's helper g.v. who wheels or strolls cut bars to furnace; (ii) (iron and steel rolling, tinplate) propels trucks laden with bars from stack or railway siding to shears or iron shears to furnace; (iii) (tinplate) wheeler, ballast; (i) (tubes) see bar-man; (ii) (wire netting, etc.) wheels in truck or barrow as required, billets used in making wire netting, wire rope, etc.

wheeler, clay; transports to furnace, in barrow, clay used in sealing tap hole of blast furnace; in Scotland, usually done by assistant furnace keeper (171) g.v.

wheeler, coal; conveys coal in barrows from coal dump to puddling or tinplate furnaces, also often performs duties of ash-man, coal discharger, or coal filter g.v.

wheeler, coal and ashes; (i) (copper extraction) wheels barrows or trucks of coal to furnaces and takes away ashes, (ii) (zinc extraction) see labourer, zinc.

wheeler, cold roll (iron and steel rolling, tinplate); cold coiler (iron and steel rolling); wheels trucks of rolled plates from cold rolls to annealing furnaces; usually done by machinery in modern rolling mills; in teapole trade, generally done by annealer's helper g.v.

wheeler, slab cover; holds up to wheeling machine, slab covers after stamping, to remove blemishes.

wheeler, engine (locomotives); one of a gang who fits and bolts wheels on to axles, under direction of fitter (419) g.v.; places winch and axle on rails under engine suspended by crane, assists in lowering engine on to wheels; fastens axles to engine by bolts and nuts through metal plate.

wheeler, scale; (i) (iron and steel rolling) scalesman; pushes truck or barrow laden with scale, from whence scale is removed from iron or steel ingots; cf. scale clearer; (ii) (puddling) conveys scale from vicinity of hammers in barrows, see scale clearer (puddling); usually done by cold wheeler g.v.

wheeler, wet; wheels tinplates on barrow from white pickling machine, and deposits them in tumbler's water "bath" (bath).

wheeler and piler; a wheeler g.v. in iron and steel rolling mill, who also stacks and piles rails, plates, etc.

wheeler-in (rolling mill); coiler and wheeler (rolling mill); wheels material, prepared by charge put-ter-up (278) g.v., to furnace platform in big modern works.

wheeler-in (tinplate); a wheeler g.v. transporting cut bars from siding to furnace, or tinplates from mills to tinhouse, from tinhouse to assorting rooms, etc.

wheel packer; packs pieces of iron between spokes, before process of "boxing."

wheel palmer; matches or pairs wheels, to ensure that each pair of wheels on same axle are of same diameter.

wheeler; coils brass pins with tin by boiling them in steam kettles with tin and oxalic acid; dries pins in heated revolving drum; (iii) (tinplate), cf. pin plater.

winder, bobbin winder, see loader, swift.

wiper, box; duster (tin box), wiper-off; wipes grease from tin boxes, castings, etc., during and after process of manufacture; also wipes off water after water tests.

wiper (cutlery), whetter's wiper; cleans and dries, and afterwards cups, if necessary, finished cutlery, ready for wrapping-up in paper.

wiper (sawn), see oiler (sawn).

wiper (tinplate), see dusting machine attendant.

wiper-off, see wiper, box.

wire bender (screwplains); bends wire as required for insertion in screwplains fittings, using vice at bench with pliers.

wire bender (vehicles); nippler; cuts, adjusts, shapes or threads wire spokes of motor car, etc., wheels, prior to fitting spokes into rims or hubs.

wire card maker; operates machine which weaves wire on to felt, iron, etc., base, to be cut up into wire for weaving castings, etc.; fixes spool of wire on swift of machine and feeds in cloth from roll; watches machine for faulty work.

wire clip maker; attends automatic machine which cuts up and shapes fine steel wire into paper clips; places spool of wire on holder, feeds and into machine and watches for faulty work.

wire giver-out; issues wire to card setter (226) g.v.

wireman; cuts and bends steel wire or rod and makes it up into various shapes for reinforcing articles made of reinforced concrete; uses vice at bench, pliers and hammer; bands joints with thin wire.

wirer (for pickling, tanning); strings small articles, to be pickled or tanned, on wire for convenience in handling.

wirer (rivets); fixes drum of wire at side of machine, feeds end into stamping die which shapes or forms wire rivets; watches machine for correct working.

wirer, box wirer (tin boxes, canisters); fixes wire through hinges of tin boxes, canisters, etc., and flattens hinges in a press.

wire spooler, see loader, swift.

worrier-round; a casual labourer employed in ash iron and steel rolling mill; does any unskilled manual work in mill.

yardman; is engaged in general labouring work in yard of metal or engineering works; looks after disposition of stacks of metal, fuel, scrap, etc.

yardman, iron (end); does heavy manual work in yard of sawfanning works, e.g., unloading metal sheets and loading finished safes.

yardman, metal; loader, pig iron loader; is in charge of metal yard or place where pig iron and scrap are kept; sometimes also performs heavy manual labouring duties in metal yard, i.e., unloading raw iron from railway trucks, stacking finished bars, loading bars into trucks, etc.

yardman (blast furnace); regulates traffic inside works, directs shunting, etc.; sometimes also acts as number taker g.v.

zinc recovery hand; melts and casts zinc ingots, zinc recovered from distilling retorts, cf. distiller (171) g.v.

ORDER VIII.—WORKERS IN PRECIOUS METALS AND ELECTRO PLATE.

Sub-Order 1.—Workers in Precious Metals and Electro Plate.

281.—FOREMEN AND OVER-LOOKERS.

foreman plater; is in charge of process of plating metals by electro-deposition, i.e., covering of Britannia metal, alabaster, white metal, etc., with a coating of gold, silver, nickel or copper; operates dynamo used in connection with plating vats or drums; mixes solutions used in plating, or superintends their mixing; superintends

work of platers (282), vat hands (229) finishers (249), polishers (285) g.v., and laborers employed in connection with plating processes; keeps time and output records of these workers; sometimes personally performs more difficult plating and electroplating work; is usually a skilled plater (282) and/or glider (283) g.v.

282.—ELECTRO PLATERS, NICKEL PLATERS

depositor; a plater g.v. who applies a coat of powdered blacklead, i.e., graphite, with a brush, to wax, plaster, wood or metal casts or models, and, by electro-deposition process, deposits a coating of copper, silver or other metal on casts or models so treated; sometimes specifically designated, e.g., copper plater, electro depositor, silver depositor.

depositor, electro plaque, as for depositor.

glider; a highly skilled plater g.v. who specializes in covering base metals with a coating of gold by (i) electro-deposition process, or (ii) (mercurial amalgam or fire gilding process) prepares amalgam by pouring mercury on gold which has been heated to a certain temperature, and quenching mixture through a filter bag of chamois leather until it is of correct consistency known as a "gold butter"; paints article with amalgam, with a brush, and disperses mercury by heating in a furnace or over a charcoal burner.

glider, heat; a glider g.v. who by fire gilding process, or more rarely by electro-deposition process, puts a thick coating of gold upon better class work, and gilds jewelry and things of silver ware and fine jewelry.

glider, parcel; a glider or plater g.v. who, by electro-deposition process, gilds articles, and sometimes plates with other metals, in such a way that only part of surface is covered, by "stopping-out," with brush and bituminous paint or lacquer, parts not to be gilded or plated.

glider and plater; plater and glider; combines functions of glider and of plater g.v.

gold anode man; gold machine man; anode glider g.v. who, by electro-deposition process by sending to hand or automatic rocking of connection rods and anodes of plating bath.

gold changer (electrolysis); gold fitter; replenishes electrolytic bath with fresh electrolyte, adds waste, cleans, etc., in electro gilding process.

gold fitter (electrolysis), see gold changer.

gold machine man, see gold anode man.

gold painter; a glider g.v. using the firing process.

nickel worker; a plater g.v. plating articles with nickel.

plater, electro-plater; carries articles of Britannia metal, albrass, silver, white metal or other base metal, with a coating of other metal by (i) dipping them in coating solution, by hand, (ii) (more usually) electro-deposition process, mixes coating solutions himself or receives them ready mixed from storage vats; superintends work of scratch brushers (285), cleaners (269), scourers (269) g.v. or other operations preliminary to, or forming part of, plating process; sometimes performs these operations himself; superintends their cleaning, by wires fastened on rods, in electrolytic bath or vats containing coating solution, i.e., acids and metal salts, through which a current of electricity is passed, causing coating metal (in form of an anode plate, also suspended in solution) to disintegrate and to be deposited on articles to be plated, sometimes places large quantities of small articles in revolving drums containing coating solution, where they are similarly treated by electro-deposition process; operates switches to increase

or reduce amperage of electric current; in small or less well equipped plants, rocks bath containing articles to be plated or superintends rocking; recovers residues of precious metals from baths, vats or drums which are fitted with special apparatus for this purpose; puts fresh anode plates into baths, vats or drums, as required; judges, by experience, length of time required for plating each type of article, amount of gold or other metal required in solution, amperage of current required, etc.; passes article, when plated, to finisher (283) g.v.; sometimes specifically designated, e.g., albrass plater, lock plater, nickel plater, silver plater, white metal plater.

plater, edge tool; a plater g.v. who covers high class edge tools, e.g., surgical instruments, with a coating of nickel.

plater, potter's electro; a plater g.v. who specializes in the plating of fittings and mountings for pottery and ceramics, e.g., crust stands, biscuit barrel tops, handles, but water jug covers, etc.

plater, silver, see plater; cf. silver plater (283) g.v.

plater and glider, see glider and plater.

silverer, as for plater.

283.—ENGRAVERS AND CHASERS

carver, gold and silver; (i) carves or sculptures statuettes and similar articles in gold and silver; (ii) carves designs on articles of precious metal, e.g., rings, etc., with hand tools called "gravers" and small chisels, from designs or models; sometimes also engraves designs.

case turner (watches); turns, on power lathe, rough edges of cases of watches or clocks which have been stamped, pressed or cast, finishing with various cutters, as required; may snap fastening or enlarges interior of case to suit movement.

chaser, cast work chaser, plate work chaser; sketches original design, or sketches from designs supplied to him, with pencil, on front of article (either cast work or solid plate of precious metal) to be chased; outlines design with hand scriber tool, and further develops it with small punch and chaser's hammer; then takes various small punches and chisels, works on front and/or back of article as required by design, thereby obtaining an intaglio effect; if necessary, fills hollow work temporarily with molten pitch, which, when solidified, forms solid base for punching operations.

embosser; sketches, in pencil, original design, or sketches from working drawing or design supplied to him, on front of article to be embossed; outlines design with hand scriber tool; fixes one end of a snarling iron, i.e., S-shaped piece of iron, in a bench vice, and puts article to be embossed in contact with other end, which is hooked, taps vice and snarling iron with a hammer, causing snarling iron to vibrate and thus knock out protuberances in article, by repeated blows from free end, thus obtaining embossed or recessed effect; finishes article with small chisels, files and sometimes gravers; does work of damascener (284) g.v., i.e., inlays work with gold or silver; fills hollow work temporarily with molten pitch which, when solidified, forms solid base for finishing operations.

engine turner, rose engine turner; operates, by hand, a machine consisting principally of a lathe, in chuck of which work is held, and a wheel attachment containing a cutter or cutters, so constructed as to cut either straight lines or dots, or conventional rose designs; fits cutters into machine, manipulates lathe with one hand and

wheel attachment containing cutters with other; sometimes also originates designs.

engraver, turbar, case; an engine turner g.v. decorating watch cases.

engraver; cuts patterns, heraldic designs, monograms, etc., on gold, silver or Britannia ware, by hand, using hand tools called gravers, or for cheaper work by machine of pantograph type, by electric cutter, or on a lathe; sometimes specifically designated according to kind of work or material, e.g., case engraver, cutlery engraver, dial engraver, gold and silver engraver, pen engraver, engraver, machine; an engraver g.v. operating a power-driven engraving machine, usually fitted with an attachment for holding copy from which he works (commonly a deeply engraved plate) and a pantograph; guides pantograph, by hand, over copy, and at same time brings to bear a revolving cutter over work to be engraved, varying pressure, as required, with a foot treadle; clamps various cutters into machine as required; sometimes also does small hand engraving work, see engraver.

etcher, who inscribes maker's name, trade mark, etc., on metal articles by "bitting" metal with nitric acid; cleans work, by hand, with carbon black, using turpentine or petrol as solvent, which he afterwards washes off with cloth; warms work over gas burner, and applies small quantity of white wax; uses scriber to outline, in wax, design or lettering, which may be original or supplied to him; when work is done, pours small quantity of dilute nitric acid over it; after specified time, during which acid bites into exposed metal, warms wax, and cleans it off by rubbing.

ring maker, carved; carves designs on plain gold rings with hand gravers, for cheaper work, with an electric tool.

284.—GOLDENITHE AND GEM SETTERS

bangle maker, see bracelet maker, stiff, har maker (gold and silver chains); makes base for watch chain and similar beider; and ring for attachment thereto, from gold or silver wire; draws wire himself or receives supplies of ready-drawn wire, if the former, uses a draw bench and draw plate, having a number of boxes of diminishing size, similar to those for ordinary wire drawing, cf. wire drawer (265), but worked by hand winch; winds wire on a steel rod, called a spit, either by hand or on a lathe; cuts wire, so wound, with a hand saw, or a small power-driven circular saw, then making a number of links; cuts bar with hand plan or other cutters; assembles bar, bangle and ring, using, for better class work, a gas flow pipe, solder, anodes for flux, etc., in these works merely closes parts together with pliers.

head maker (gold and silver); makes heads from gold or silver wire rod by (i) heating it with a hammer into steel dies placed on an anvil, (ii) passing gold or silver wire rod between rollers of a hand-operated roller machine, producing strips of beaded wire; drills strips in a machine drill and cuts them with pliers, piercing saw or other cutters into individual beads, (iii) passing wire rod into automatic stamping machine, adjusted to shape and cut beads to required size.

helt clasp and chainlink maker; makes belt clasps and chainlinks by (i) passing metal into automatic stamping machine, for repetition work; (ii) cutting sheet metal with hand shearing saw, and shaping it, by hand, with punches, hammer, etc., usually on a lead cake, i.e., a dome-shaped or other block of lead; sometimes also shapes wire with pliers and

ring maker, *gem*; a ringmaker *g.v.* who makes rings in which gems are afterwards set by gem setter *g.v.*
 ring maker, *jump*; makes "jump" rings for attachment to chains, bracelets, etc., to facilitate fastening on at arrival, ornamental, etc., draws gold or silver wire or sheet through draw-plates, to required thickness; winds wire or sheet on "spools," by hand or in a lathe to correct shape, cuts round metal by hand or with machine saw, into individual "jump" rings which are then ready for polishing, sometimes done by chain maker *g.v.*

set maker (gold or silver); assembles gold or silver component parts, which have been cut and shaped in hand press by pressworkers (280) *g.v.*, to form complete set, *e.g.*, tea set, coffee set; solders parts together, by hand, using blow pipe and solder or makes set entirely by hand, using hand tools.

setter, *gem*; jewel setter; makes setting, on mount received from gem mounter *g.v.*, by cutting, filing, drilling, etc., with hand tools, ready for reception of gem, prepares bearing, *i.e.*, raises a small portion of metal in mount to hold stone and places gem in position; raises "grains," *i.e.*, small portions of metal from mount, to fix gem in position; type of setting, *e.g.*, claw, milgrain, flush, cup varies according to requirements; sometimes specifically designated, *e.g.*, diamond setter, emerald setter, pearl setter.

setter, *jewellery*; a gem setter *g.v.*, employed as an outworker by large firms or factories.

sleeve link maker; *soffine* maker; (1) makes sleeve links throughout by hand, stamps parts out in a press, or hammers them to shape and size required with a hand hammer, draws gold, silver, or other wire (*cf.* drawer) and winds it on a steel rod, called a *spit*, cuts wire so wound, forming a number of separate links, and solders parts together with blow-pipe and solder; (2) takes component parts made by pressworkers (280), stampers (280) *g.v.*, or other workers, and assembles them together, with blow-pipe and solder, to make complete sleeve links.

snap maker, *see* *snivel* maker (gold and silver).

soffine maker, *see* *sleeve* link maker.
 sovereign purse maker; assembles gold or silver parts, which have been cut and shaped by gold and silver stampers (280) *g.v.*, solders and rivets them with blow pipe and solder and various small hand tools; does snap, catch and spring.

stud maker (gold or silver); assembles gold or silver component parts, which have been cut and shaped in hand press by pressworkers (280) *g.v.*, to form complete studs, soldering parts together by hand.

swivel maker (gold and silver); *snip* hooks; makes swivels or *snip* hooks; used as terminals for chain charms and other jewellery, from gold or silver wire, settings, or tubes, on a squille and lathe.

thimble maker, *gold*; makes gold thimbles by heating sheet gold into a series of diminishing holes in a steel die; solders on rim and any ornamentation required by hand, using blow pipe and solder.

285.—POLISHERS AND SCRATCH BRUSHERS.

brusher, *scratch*; *scratcher*; polishes articles, *e.g.*, plate or fork, during and after process of plating or gilding, by holding them against a fine wire brush revolving on a lathe, while a stream of lubricant, *e.g.*, soap and water, rise and spray over, etc., automatically supplied, keeps brush moist.

brusher, *wire*; a scratch brusher *g.v.* who polishes plated parts of machines, *e.g.*, sewing machines, cycles and

motors, using water as a lubricant, and a coarse wire brush.

brusher-in, *scratch*; a scratch brusher *g.v.* who removes scratches from surface of jewellery, or gold, silver or plated articles.

buffer; *sander*; prepares gold and silver articles for polishing *g.v.*, removes surface marks from jewellery, and polishes metal articles ready for plating, by holding articles against a leather or felt-lace wheel revolving on a lathe, the wheel being sprinkled with fine sand or other abrasive, mixed with oil or grease, sometimes specifically designated according to abrasive used, *e.g.*, sand buffer, or, according to article buffed, *e.g.*, hollow-ware buffer, spoon and fork buffer.

burnisher, *gold and silver burnisher*; rule, by hand, gold and silver articles, and imitation jewellery with a burnisher, a tool of polished steel (or agate and other stone) lubricated with soap solution, thereby closing pores of metal and producing polished surface.

cutting-out's assistant, *see* *rubber*.

doller (silversmith's); a lathe polisher *g.v.* who polishes the inside of silver or electroplate hollow-ware by means of a revolving dolly, *i.e.*, a wooden tool covered with sawdust or woolen and silken threads.

finisher; (1) removes blemishes from surface of plated articles and polishes, using a machine lathe fitted with a revolving buff, dolly or soap, which is greased with lime, whiting, rouge or other abrasive, (2) gives final polish to jewellery to remove marks, scratches or blemishes and to improve colour by using a buffing lathe or by rubbing article, by hand, with rouge, washing it in warm water, and finally drying it, and polishing it with a leather; sometimes specifically designated according to material used or article worked upon, *e.g.*, silver finisher, plater's finisher, spoon and fork finisher.

mopper, *see* *polisher*, *lathe*.

mopper, *grease*; a lathe polisher *g.v.* who polishes articles on a "bob" or may of brass or other material, on which is rubbed an abrasive composition over grease powder.

polisher, *band*; (1) rubs colouring polish or rouge on silver plate, etc., and after polishing, wipes off rouge with a wash leather; washes article in warm water, and dries it with a leather; (2) polishes gold and silver settings for jewellery, by hand, with sandpaper, rough stone, and buff; washes article in hot water with soap, and dries it in boxwood or hot sawdust; for finer settings works with setting third soaked in paste; sometimes specifically designated, *e.g.*, gold polisher, jewellery polisher, plater's polisher, silver polisher, spoon and fork hand polisher; *cf.* *lathe* polisher.

polisher, *lathe*; mopper; polishes articles of gold, silver, and electroplate with a buff mounted on a lathe, using such abrasives as sand, lime, pumice, emery or rouge; removes the maximum amount of metal in the process; sometimes specifically designated, *e.g.*, case polisher, gold polisher, hollow-ware polisher, jeweller's polisher, plater's polisher, silver polisher, spoon and fork polisher.

rubber; *cutting-out's assistant*, *silverer's assistant*; assists cutting-out (287) *g.v.* or press worker (280) *g.v.* by removing "lash" or uneven surfaces, with a file, or by rubbing on a file bed.

rubber-down; rule down, by hand, on a piece of specially prepared leather, stone, gold or silver metal parts which have been cut or stamped in a press, thereby removing roughness and producing a smooth surface in preparation for soldering.

sander, *see* *buffer*.

scratcher, *see* *brusher*, *scratch*.

silverer's assistant, *see* *rubber*.

286.—PRESSERS, SAW PIERCERS, AND STAMPERS.

blank cutter (spoon and fork); a pressworker *g.v.* who operates a power-driven press fitted with cutting dies, to cut out spoon or fork blanks; says sheet metal on bottom die, and operates treadle to cause top die to cut blank, sometimes also files top and bottom dies in press.

marker, *trade marker*; stamp manufacturer's registered initials or trade mark on finished articles, either by hand stamp, or by power-driven press; sometimes marks blanks with hand tools.

piercer, *piece worker*; (1) lays plate of silver or white metal in die of a hand-press piece, or power press, bringing down a cutting tool which pierces holes or designs in plate; (2) *see* *piercer*, *saw*.

piercer, *saw*; *piercer*, *piece worker*; cuts out designs, letters, etc., on plate and jewellery, with a fret saw, working to paper design passed on the metal; sometimes specifically designated, *e.g.*, gold and silver saw piercer.

pressworker, *press girl*, *press hand*, *presser*; bench *stamper*, *gold and silver stamper*, *pusher*, *drawer*; feeds a hand, screw, or power press, used for cutting out or piercing, shaping and pressing sheet or plate metal to form component parts of electroplated ware, gold or silver or imitation jewellery; sets press in motion by moving lever or pressing treadle; sometimes also changes dies in press; sometimes specifically designated, *e.g.*, gold and silver pressworker, pressworker (imitation jewellery); a pressworker *g.v.* employed in imitation jewellery trade.

ponger; a pressworker *g.v.* who cuts out punge of tork in a press.

puncher, *see* *pressworker*.

stamper, *benob* stamper, *gold and silver stamper*, *see* *pressworker*.

stamper, *bolster*; stamps, with press and dies, hollow metal bolsters used in making fish knives, forks, servers, etc.

stamper, *drop*; lays sheet metal on bottom die of stamping press; pulls a rope, drawing other die, which is weighted, to top of vertical steel runners, between which it runs; releases rope, allowing weighted die to fall, and strike with force, metal frag on bottom die, replaces die, as required.

stamp worker, *kick*; a pressworker *g.v.* using a press which is set in motion by kicking a leather strap with the foot.

287.—SILVER AND WHITE METAL SMITHS.

alibaba worker; a silversmith *g.v.* working in alibaba, *i.e.*, a white metal, assembler, *see* *maker-up*.

brassier; joins together by process of brazing or soldering with a brass solder or spelter, component parts of goods which are to be electro-plated. Britannia metal article maker, britannia metal smith, or *for* silver-smith.

British plateworker; general term for persons working in British plate, *i.e.*, pewter, and includes stamper (286), spinner, mounter (288), chaser (289) *g.v.*

casting dresser, *see* *filer*.

cropper, *see* *cutting-out*.

crust band, *crust stand* maker; *jelly band*; general term for any operator engaged in mounting or fitting together crust stands; may be a silversmith *g.v.* or a mounter (288) *g.v.* or a piercer worker (286) *g.v.*
 crust top maker; pieces hinges and knobs on spun or stamped rims and covers of pokers and snuff boxes, cigar drawers, salt cellars, etc., using blow pipe and solder and small hand tools.

cutler, silver; a silversmith *q.v.* who specializes in assembling blades and handles of silver knives, which have been stamped out by pressworker (286) *q.v.*, using blow pipe and solder and hand tools; sometimes also stamps out blades and handles.

cutler-out; *cropper, cleaver*; cuts metal from which electro-plated articles are to be made, with hand or power-driven shears, or under dies.

dish cover maker; (i) a spinner *q.v.* engaged in shaping bodies of dish covers; (ii) a miter and fits bending, handle, or knob stamped or spun body to make dish cover, using hand tools, blow pipe and solder, etc.

filer; *cutting dresser, grinder*; removes with a file, by hand, or in an emery wheel, rough edges and surface irregularities from cast, blanked out, or stamped articles, such as cutlery or jewelry; sometimes specially designated according to material used, or article worked upon, *e.g.*, silver filer, spoon and fork filer, etc.

fitter, see maker-up.

flat hammer; *hammerer, planisher, raiser*, silver-raiser; shapes articles from sheet metal by beating them with a hammer or mallet on an anvil, or shaping bench, and various stakes and hammers.

fluter; *raiser, silver raiser*; (i) fits teapot or other article with special "chasing" tools and attaches to pitch block; allows pitch to set firmly, and makes fluting in article by gently tapping a steel chasing tool along set lines; (where fluting is raised, article is made so that whole back to be fluted; if raised, arched, and flutings are obtained by making regular indentations over this area); (ii) flutes sides of teapot or other article by gently tapping snarling iron, one end of which is fixed in vice and the other held against inside of pot.

grinder, see filer.

hammerman, see flat hammerer.

handle maker; fits, and brazes or solders together, stamped embossed parts of handles of teapots, coffee pots, etc., and files and cleans the handles ready for fitting, sometimes specially designated according to material used, *e.g.*, German silver handle maker, nickel silver handle maker, silver handle maker.

handler; fixes, pins with wire, and cements handles on teapots, coffee pots, etc.

hollow-ware maker (electro-plate); a silversmith *q.v.* engaged in making electro-plated hollow-ware.

jolly hand, see cruet hand.

jobber and repainer, as for jobber and repainer (284) *q.v.*

maker-up; *jeweller's maker-up, silver maker-up; assembler, fitter, putter - together, silver putter-together, wireworker*; a silversmith *q.v.* who solders, on wire, or rivets together bodies and parts of silver or other white metal articles after they have been cast or shaped by hand, by spinning, or by stamping; *cf.* mounter (288).

modeller; *pattern maker*; a goldsmith (284) or silversmith *q.v.* who makes models, by hand, in plaster, wax, or metal, *i.e.*, gold, or silver or other white metal, from his own or from other designs, drawings or figures, or from plaster casts, to be used as patterns for the sinkers and tool makers in fashioning dies or cutting and piercing tools for medals; *cf.* designer (289).

mount maker, silver; cuts out from silver plate, with hand cutting tools, mounts for articles such as pipes or walking sticks; spins them to shape on a spinning lathe, or bends them to shape by hand solders together ends of mounts after they have been bent, using blow pipe and solder, and sometimes fits them on article; sometimes further designated according to article made, *e.g.*, pipe mount maker, stick mount maker.

nevada silver worker; a silversmith *q.v.* working in composite metal known as nevada silver.

nickel worker, nickel silver worker; a silversmith *q.v.* working in nickel silver.

pattern maker, see modeller.

planisher; (i) see flat hammerer; (ii) see wheeler.

putter-together, silver putter-together, see maker-up.

raiser, silver-raiser; (i) see flat hammerer; (ii) see fitter.

repainer; a silversmith *q.v.* engaged on repair of articles of jewellery, plate, etc.

set worker; a maker-up *q.v.* who specializes in production of articles in sets, *e.g.*, teapot, sugar basin, cream jug, etc.

shearer, see cutter-out.

silversmith; makes articles of silver, or of various white metals, *e.g.*, britannia metal, alhata, nevada silver, etc., by hand, either by beating them out from sheet metal, or by assembling and soldering together cast or stamped parts; uses some of all of a great variety of large and small tools, including blow pipe and solder, files, hammer and anvil, moulds, lead cakes and similar devices for obtaining various shapes, piercing saw and bench vice, etc.

smith, silver; as for silversmith; *cf.* tinmith (286).

smith, german silver; white metal smith, as for silversmith.

solderer, hard; solders together component parts of jewellery, plate, etc., made of gold or other precious metals using a silver or brass solder, *i.e.*, one which is as hard as the metal on which it is used, and obtaining the necessary heat by means of a blowpipe or a muffle furnace; *cf.* braiser.

solderer, soft; solders together component parts of cheaper goods, usually made of nickel silver or copper, using a softening alloy of lead, or of lead and zinc, which fuses at a low temperature.

spinner; shapes sheet metal articles, such as bowls, dish covers, etc., by pressing a bluntly pointed polished steel tool against sheet metal so it revolves in a lathe, and so forces it to take shape of a revolving mould or pattern.

spoon and fork worker; stamps out blanks of spoons and forks in a power-driven or hand press, *cf.* press worker (286); hammers blanks to shape by hand, on special moulds.

thimble maker, silver; receives thimble in the rough, after it has been pressed into shape, by machine, by pressworker (286) *q.v.*; cuts it to required size out a little and finishes off by boring, skimming, and turning.

wheeler; *planisher*; smooths metal surfaces on a hand-operated or power-driven wheeling machine, consisting of two revolving wheels, between which metal is passed to rub and other pieces of irregular shape that are left after stamping.

white metal worker, as for silversmith.

wireworker, see maker-up.

riveting, soldering, etc., using various small hand tools and blow pipe and solder.

mounter, brist; a pipe mounter *q.v.* who mounts pipes made of brist (bruyere) rust.

mounter, electro, as for mounter, silver.

mounter, gold and/or silver, see mounter.

mounter, hollow-ware (earthenware), as for mounter, silver.

mounter, jobbing; an outerworker employed by jewellers (retailers), jewellers manufacturers, or factors, as a mounter *q.v.*

mounter, oak; fixes mounts of brass, britannia metal, nickel silver, or silver plate, to oak chandeliers, candelabra boxes, trays, liquor frames, etc.; burs holes in wood and drives in small screws or rivets.

mounter, pipe; pipe mount fier; a mounter *q.v.* who cements silver mount on to stem of pipe.

mounter, set; a mounter *q.v.* who fills in with soft or hard solder back of beaded or other design which forms ornament on box and coffee service sets, enters dishes or other work; mounts pressed or stamped parts in position, and gets article ready for polishing.

mounter, silver; fits silver mounts on to metal, wood, earthenware, and glass articles by means of plaster of Paris or by small rivets, nails, etc., and/or soldering.

mounter, stick; cuts out, on machine cutter or with hand shears, gold and silver bands or other ornaments and fits them by hand, on to umbrellas or sticks with cement, rivets, etc.

pipe mount fier, see mounter, pipe.

298.—OTHER SKILLED WORKERS.

annealer; *softener*; anneals precious metal during or after milling process, by heating in a reverberatory furnace; uses hand tongs to charge and discharge furnace with metal, and times also feeds furnace with coke to maintain necessary heat.

assay assistant, assayer's assistant (not assay office); assists assayer in analysing purity of precious metals or composition of alloys thereof.

baster, gold and/or silver; takes thin sheets of gold or silver and leaves them with sheets of parchment, to form a "back" *q.v.*

bayer; takes thin sheets of gold or silver and leaves them with sheets of parchment, to form a "back" *q.v.*

bender; takes thin sheets of gold or silver and leaves them with sheets of parchment, to form a "back" *q.v.*

bender; takes thin sheets of gold or silver and leaves them with sheets of parchment, to form a "back" *q.v.*

bender; takes thin sheets of gold or silver and leaves them with sheets of parchment, to form a "back" *q.v.*

bender; takes thin sheets of gold or silver and leaves them with sheets of parchment, to form a "back" *q.v.*

bender; takes thin sheets of gold or silver and leaves them with sheets of parchment, to form a "back" *q.v.*

bender; takes thin sheets of gold or silver and leaves them with sheets of parchment, to form a "back" *q.v.*

bender; takes thin sheets of gold or silver and leaves them with sheets of parchment, to form a "back" *q.v.*

bender; takes thin sheets of gold or silver and leaves them with sheets of parchment, to form a "back" *q.v.*

bender; takes thin sheets of gold or silver and leaves them with sheets of parchment, to form a "back" *q.v.*

bender; takes thin sheets of gold or silver and leaves them with sheets of parchment, to form a "back" *q.v.*

bender; takes thin sheets of gold or silver and leaves them with sheets of parchment, to form a "back" *q.v.*

presses model (made of plaster, lead, or other less metal) of article to be cast into sand; in case of hollow articles, makes core in same way in a smaller mould, and places it in position in large mould; smokes surface of sand in mould (in flame of candle or otherwise) to prevent it sticking; by other half of mould, prepares other half of mould in same way, and clamps two halves together with screws or clamps; melts gold, silver, or other metal in crucible or furnace; pours molten metal through hole in top of frame, through which it flows into hollow made by model in sand; when metal has cooled, removes moulded article from mould, sometimes specifically designated, e.g., gold and silver custer.

caster, britannia metal; a custer g.e. who makes britannia metal castings, using brass moulds.

caster, coarse; a custer g.e. who executes common or rough work.

caster, figure; a custer g.e. who specializes in casting solid figures, mountings, or ornaments in precious metal; uses sand moulds and previously made models, which he presses into sand before making cast; is sometimes also a designer g.e.

caster, fine; a custer g.e. engaged upon lighter or more delicate work, which is cast in prepared fine sand, makes sand moulds and cores, by hand.

caster, ingot; see **caster, strip-caster, nickel silver;** nickel silver-ingot custer; a custer g.e. who weighs out accurate weighing scales required quantities of various metals for making nickel silver; melts metals, so mixed, in crucible over furnace, and pours it into cast-iron moulds to form strips or ingots.

caster, strip, skillet custer; ingot custer; a custer g.e. who casts gold or silver into strips or skillets, i.e., long thin bars of metal, in ingot moulds.

chain maker (machine); fixes between spindles of machine guides end of wire through various shaping and cutting tools in machine; switches on power-drive of machine, which forms links of chain and automatically slides them; adjusts machine; sets multiple tools with which machine is fitted, and replaces with new tools, when necessary; removes faulty links, if any.

colobound art worker; cuts or stamps from sheet copper, brass, silver, etc., shape to be worked upon; solders brass or silver wire to surface of sheet to produce outlines of design; fills in spaces with vitreous enamel of various colours according to design, blending where necessary, fires enamel in oven, grinds and polishes surface to a high polish.

coluber (gold) appendix; by means of wire gold jewellery or plate containing alloy, in vat or tank containing an acid solution which removes alloy from surface, leaving a skin of pure gold.

damaeaser in gold and silver on steel; (1) outlines portions of article to be inlaid, or damascened, and roughens portion outlined with a file, called a raffle, beats into this roughened base, with a hammer, a fine strip of precious metal, which adheres thereto; (2) lays, or inserts, gold or silver design; (3) places the portion of steel by electro-deposition; "steps out" portion to be left unplated by painting it with brush and bituminous paint; dips article in plating vat, where gold or silver design is deposited on unplated portion of steel by action of electric current on metal in suspension in plating compound, e.g., parcel gilder (287).

depositor's assistant; see **dipper.**

depositor's fitter; assembles by hand and fits together, using hand tools and blow-pipe and solder, gilded, plated or silver articles or parts, silver-plated articles or parts have been gilded, usually re-assembles parts of articles

which have been taken to pieces for purpose of plating.

designer, gem designer, jewellery designer; designs and makes drawings of original patterns for jewellery or electro-plated goods; makes patterns for use by caster g.e. in making headpins, knobs, sockets, etc.; often also models in plaster of Paris original from which article is moulded, and afterwards casts in silver or other white metal; c.f. modeller (287).

dipper; depositor's assistant, picker; removes tartrate or oxide from surface of articles to be plated by dipping them in acid, or by immersing them, for a longer time, in a solution of acid; takes articles out of dip or pickle, and rinses them in clean water; soaks them in dilute acid with handle brushes, and dries, by rubbing them in hot sawdust.

drawer, draws articles into required shape, from gold or silver sheet, or wire, on a lathe or draw plate.

drawer, gold and/or silver wire; threads filed end of wire through hole in die, and fixes it, by hand, on power-driven or on a draw-bench, which may be power-driven or worked by hand, with a wheel; draws wire through a series of diminishing holes in a die made of steel or, for fine wire, of pierced diamonds, until it is reduced to diameter required.

drawer, platinum wire, or for drawer, gold and/or silver wire.

draw-standmarker; scrapes minute quantity of precious metal with hand tools of article to be assayed, for purposes of analysis; also stamps hall-mark and assay sign on articles, using hand stamp and hammer, and hand-manipulated press containing dies.

dresser, gold and/or silver wire, see trimmer.

enameller, jeweller's enameller; grinds, by hand, into fine powder, crushed vitreous enamel, used for enamel; mixes powder with water to fluid consistency, with small hand tools, places small quantity of enamel on silver or gold sleeve link or other article to be enamelled; withdraws superfluous water from enamel with a cloth or blotting paper; places work on piece of firebrick and transfers it, with hand tongs, to small gas-heated muffle furnace, in which he leaves it for specified time; withdraws article from furnace and allows it to cool; files it with carbon or emery file, and finally polishes or finishes it by holding it against power-driven abrasive wheel or dolly revolving on a lathe.

finer, see trimmer.

flattener, gold and/or silver; gold and/or silver flatter; see roller, gold and/or silver.

furnaceman; charges with metal, precious metal, used for annealing, precious metal, and discharges it when annealing process is complete; also stocks furnace, if furnace is coke-fired.

gilt jewellery maker, see jeweller, imitation.

gold nib maker, gold nib pen maker; gold pen maker; general terms for all workers engaged in any process of making gold nibs from gold sheet, including gold nib grinder, sweeter, polisher (283), splitter and preparator g.e.

gold nib roller; raises or shapes blanks for gold nibs to required curvature, with hand hammer or under power stamp or press fitted with special hammer-banded dies.

gold nib splitter; places gold nib in holder, close to copper wheel revolving at high speed on a power-driven lathe; presses nib on revolving wheel, which makes a slit therein, running from point to hole previously pierced in nib by gold nib preparator g.e.; applies wet emery to revolving wheel with a brush, as required.

gold nib stamper; blonker (gold nib); stamps blanks for gold nibs out of sheet gold with special press.

gold nib sweeter; iridium pointer; lays a number of gold nib blanks on porous stone block; puts a small quantity of iridium or semi-iridium oil point of each blank with hand tongs; uses a small brush to direct gas jet from a mechanical blow lamp on each point, melting gold and causing it to amalgamate with iridium; nib is then ready for gold nib grinder g.e.

gold pen maker, see gold nib maker, grinder, gold nib; plater, gold nib holder, and holds point, which is made of iridium or semi-iridium, against emery wheels revolving on a power-driven lathe; applies emery powder to emery wheels with a brush, as work proceeds.

grinder (precious metal refuse); feeds bepper head of grinding mill with dies or sweepings of jewellery workshop, using a small shovel; removes sweepings, after grinding, for recovery of valuable material therefrom; cleans machine carefully, so as to preserve particles of precious metal entering the crevices.

hall marker, ball mark stamper; stampor (Assay Office); stamps ball mark and assay sign on gold and silver articles, using small lead press fitted with dies, or power press, replaces dies as required; also done by drawer and marker g.e.

heat weigher; weighs out correct proportions of metals to be used in each "beat" (casting operation), e.g., copper, nickel, and spelter, for nickel silver, and so on.

iridium pointer, see gold nib sweeter.

jeweller, imitation; fancy jeweller; gilt jewellery maker; general terms for any worker engaged in making jewellery from base metals, including custer, burnisher (285), stamper (286) etc.

jeweller, working; keeps a retail jeweller's shop and repairs jewellery, watches and clocks in attached work's shop.

jewellery and plate repairer; a goldsmith (284), a silversmith or white metal smith (287) g.e. who repairs jewellery and silver or plated goods.

lapper, jeweller's lapper; cuts small facets on links of chains by vertical fast-running pewter wheels coated with emery paste; also cuts flat surfaces on brooches, etc.

leaf cutter, gold and/or silver; cuts to required size, beaten gold or silver leaf, used in embossing leather, gold and silver blocking, gold and silver lettering etc., using a waggon, i.e., a wooden or cane tool with cutting edges; interleaves out pieces of gold or silver leaf with tissue paper to form books of twenty-five pages.

melter, see custer (gold or silver).

meter, hullion; gold and/or silver meter, melter (Royal Mint); bullion smelter, gold and/or silver smelter, smelter; places refined gold and silver in crucible, and melts in reverberatory or cupola furnace; casts into skillets, i.e., flat slabs, or ingots for use of rollers, wire drawers g.e., etc.; attends to fire of furnace, or, if furnace is gas-fired, regulates heat by means of taps, etc.

meter, platinum, or for meter, bulion.

mixer, metal mixer; mixes copper, nickel, and spelter in correct proportions for nickel silver; mixes copper, tin, regulus, zinc, or antimony, for britannia metal; lead and tin for soft solders; silver and copper or brass wire for silver and copper and tin for brass solders; places wire in a crucible, heats them until they melt, stirs them with a metal stick to mix them roughly, and pours them into ingot moulds.

smelterman; a farmaceuton g.o. in charge of a smelter furnace, charges and discharges furnace with metal, and maintains temperature at required level; if furnace is coke fired, also feeds it with fuel.

pickler, see dipper.

plate maker, gold and/or silver; polishes and levels base metal, which is to receive plating of gold or silver, by holding it against revolving mop, on which plates sheets or strips of gold or silver thereon; puts whole into heating furnace in which metals are "sweated," i.e., heated to point of fusion; maintains correct temperature in furnace by regulating gas flame; at point of fusion transfers metal, using hand tongs, from furnace to hydraulic press; manipulates press to press metals and cause gold or silver to adhere to base metal.

platinum capsula maker; shapes capsules or "trays" for use in incubation in quantities of 100,000, electrolytically by hand, using hand tools and moulds; feeds machine press with metal, by hand, and operates press by means of levers.

preparer; puts together links, etc., of flexible bracelets with wire, using small hand tools; links are then ready for soldering.

preparer, gold nib; general term for workers engaged in any process of gold nib making, other than gold nib grinder, sweater, polisher (285) and sifter g.o.; may perform one or more of following operations: stamping out blanks from rolling sheet gold in a hand press; passing blanks between small power-driven steel rollers, to harden them; placing them in a power-driven tumbling machine, for further hardening; placing nib in socket of shaping press, which gives slight curvature to lower portion of nib, placing nib in socket of piercing press, to pierce hole in nib; placing nib in stamping press to stamp name of maker and trade mark thereon, annealing nib, by holding it with pliers in gas flame; raising nib, by putting it in socket of dropping stamp press, pulling weighted drop stamp to top of press with a rope or strap, and releasing drop stamp, which falls on nib and gives final curvature thereto; placing nib in small container attached to wire, and dipping it in small vat of acid to remove oxide, and finally rinsing it in clean running water.

refiner, albata; a white metal refiner (278) g.o. engaged in alloying metal by special formula to produce "albata."

refiner, bullion; gold and/or silver refiner; refines gold or silver by treating it, by hand, with various acids in succession, in porcelain containers; after each process, takes residue, from which impurities have been partially removed by acids, out of container with a ladle, repeats process until required degree of purity, or fineness, has been attained.

refiner, platinum; as for refiner, bullion.

ring maker (not gold or silver); makes rings by beating into shape with hand tools on tribble, see ring maker (284), guiding metal, in compound consisting largely of brass, and brazing ends together with blow pipe and solder.

roller, gold and/or silver roller; gold and/or silver plater; gold and/or silver sifter; passes sheets, i.e., long flat moulds about one inch thick, of gold or silver, between power-driven revolving steel rollers many times, to reduce them to strips or sheets; sometimes also anneals metal after each rolling but usually passes to annealer g.o., sometimes also rolls or draws gold or silver wire, see gold and/or silver wire drawer.

roller (gold nib), gold nib roller; a roller g.o. who rolls out small piece of gold, intended for nib, after it has been blanked, in order to harden it;

takes care to feed blank so that iridium point is protected by slot in rollers.

roller, ease metal (precious metals); a roller g.o. who rolls gold or silver for watch cases.

roller, cross; spreads or flattens out, in a heavy cross rolling machine, end of a spoon or fork blank, in preparation for shaping of bowl or cutting of prongs.

sand blaster; removes rough surface and edges from white and bronzite metal coating by sand blasting, i.e., by projection of a fine stream of sand through a nozzle by a forced draught of air or steam usually within an enclosed machine or chamber.

smaller, bullion smelter, gold and/or silver smelter, or smelter, bullion, smaller, see smelter.

stamper (Assay Office), see ball marker.

stripper, gold; strips gold from worn articles, in preparation for re-plating, or from newly manufactured articles, before polishing, to remove dust, or to remove "fire" caused by heat in soldering; immerses articles for a few seconds in a pickling vat, filled with a solution of hydrochloric acid and sulphuric acids, until action ceases; then swirls them under a tap of running cold water.

stripper, silver, as for stripper, gold sweep sampler; prepares by hand screening and sifting samples of sweepings from gold and silver workshops, ready for assayer (886) g.o. sweep smelter (not employer); charges furnace with "wreap," i.e., filings, etc., from gold or silver workshop; removes slag, as may be necessary, with hand-manipulated scoop; ladles out metal at end of operation.

theoretical jewellery maker; an imitation jeweller g.o. who specialises in jewellery for use in theatrical production.

trimmer; fier, gold and/or silver wire dresser; files, by hand, rough edges of gold or silver strip or wire, after it has been drawn, in preparation for its use in jewellery manufacture.

turner; operates treadle or power lathe, and turns knobs, joints, etc., out of precious metals.

watch chain maker (not gold or silver); makes links of brass, copper, or other wire, by winding wire on coils, by hand or on a lathe, and cutting wire as wound with hand piercing threads link together by hand to make chain, and solders joints with blow pipe and solder.

wire filer; makes rolled gold wire by rolling or drawing, by machines, thin coating of gold over wire of base metal.

289.—OTHER WORKERS.

backer; roller's assistant; assists roller (284) g.o. at back of rolling mill; lifts and handles heavy bars and sheets.

boiler, see cleaner.

cleaner; boiler, potasher, washer-out; cleans out, in vitriol, stamper's and silversmith's tools; swirls articles in a solution of potash preparatory to plating them, and dries them in a sundry after heating.

glider's assistant; assists glider (282) g.o., duties similar to those of plater's assistant.

plater's assistant, plating assistant, electro-plating assistant; attaches pieces of wire to articles to be plated, and hangs them in electrolytic bath; assists plater (282) g.o. generally.

potasher, see cleaner.

roller's assistant, see backer, scourer; holds articles to be cleaned, after pickling process, against a power-driven scouring brush made of horse wire; may increase scouring action by dipping article into solution of caustic potash; may sometimes perform operation by hand, using hand brushes; cf. cleaner.

set mounter's assistant; helps generally at set mounter's bench (289), keeps solder pots hot; performs simple mounting operations, in process of learning trade.

stickler-out; connects metal rims, etc., on glass articles, with plaster of Paris or other cement.

vat hand; (1) assists plater (282) g.o. in process of dipping metal articles, to coat them with silver, etc.; (2) general work in workshop employed in process of electro-plating, e.g., cleaner, scourer, potasher, dipper.

washer, gold (electrolysis); washes and cleans plated articles, by hand, with brushes and clean water, after dipping process.

washer-out, see cleaner.

wire and dryer-out; a plater's assistant g.o. who threads small articles to be plated on wire for plater (282) g.o. to hang from electrodes in plating vat; after articles are plated and washed, dries them in vessels containing boxwood sawdust.

ORDER IX.—ELECTRICAL APPARATUS MAKERS AND FITTERS (NOT ELSEWHERE ENUMERATED) AND ELECTRICIANS.

Sub-Order 1.—Electrical Apparatus Makers and Fitters (not elsewhere enumerated) and Electricians.

300.—EMPLOYERS AND MANAGERS.

assistant staff engineer (G.P.O.); assists staff engineer g.o. and is in charge of a section of the engineering work in connection with one of the services or headquarters divisions of the Post Office Engineering Department.

assistant superintending engineer (G.P.O.); assists superintending engineer g.o. and relieves him when necessary; is second in charge of the engineering work in one of 15 main territorial divisions of Post Office Engineering Department.

cable engineer (cable ship); in general control of operations on cable ship, or in connection with raising and lowering of cable from and to ocean bed; supervises manipulation of cable on dock, and testing and re-pairing of cable; directs captain of cable ship (733) g.o. as to moving of ship from point to point; in small cable ships duties often assumed by captain.

chief wireless engineer (aerodrome); in general control of staff of wireless engineers (345) g.o. and wireless operators (754) g.o. at aerodrome; responsible for installation, maintenance and repair of wireless apparatus in flying machines and in wireless offices at aerodromes; tests new installations to make sure that they are in good working order, carries out experiments in wireless telegraphy and telephony.

electrician-in-charge (cable ship), see submarine superintendent.

principal power engineer (G.P.O.); is responsible, under engineer in chief, for design, installation and control of plant for generation, transmission and use of electricity for lighting and power services in Post Office; also responsible for pneumatic tubes, heating and ventilation, etc., and for P.O. London railway.

staff engineer (G.P.O.); a headquarters officer responsible under engineer in chief for the direction and control of whole of civil, electrical and mechanical engineering work in connection with one of the services or main divisions in Post Office Engineering Department.

submarine superintendent (cable ship); electrician-in-chief; is responsible on shore under chief engineer for laying, maintenance and testing of submarine cables; has general responsibility for efficiency of cable ships and depots; receives testing reports from depots; issues orders to explain (733) g.v. or cable engineer g.v. for examination and repair of old cables and for laying of new cables.

superintending engineer (G.P.O.); is immediately responsible, under engineer in chief, for administration and control of Post Office engineering works in one of 15 main territorial divisions of Great Britain.

301.—FOREMEN AND OVER-LOOKERS.

assistant engineer (G.P.O.); (i) at headquarters and in technical sections in superintending engineers' districts, performs in executive detail, work carried out by executive engineers, g.v.; (ii) in territorial sections, assists executive engineer g.v. and relieves him when necessary.

chief electrician; in charge of men employed as electricians (307) g.v., or as wiremen (311) g.v.; inspects work in progress; issues instructions; under direction of engineer is responsible for efficient carrying out of work on job.

chief electrician (cable ship); carries out at sea electrical tests of submarine cables, by means of electrical apparatus, either as sea bottom or when hoisted on to deck of cable ship for repair; furnishes reports of tests to submarine superintendent (300) g.v.; supervises 2nd, 3rd and 4th electricians, etc., and jointers and assistant jointers carried on cable ship.

chief inspector (Post Office Engineering Dept.); commands under executive engineer g.v., a group of inspectors and workmen; prepares estimates for new works and renewals; supervises works in progress, whether carried out by contract or by direct labour; decides important bye-laws and contracts; prepares development schemes; carries out maintenance, testing and inspection duties; is also employed at headquarters.

executive engineer (G.P.O.); (i) at headquarters, is responsible under staff engineer (300) g.v. for research, design, standardization, testing, etc., in connection with civil, electrical and mechanical engineering works of G.P.O.; (ii) in superintending engineers' districts is either in control of technical section of superintending engineer's office, or is employed as a technical engineer in control of a territorial division and is responsible to superintending engineer (300) g.v. for whole of engineering work on a territory.

inspector (Post Office Engineering Dept.); makes surveys for minor works, and assists engineers and chief inspectors in surveys for more important works; performs testing duties; assists generally in supervision of minor staff employed on construction and maintenance work both indoors and outdoors; checks and directs running of motor transport vehicles; takes charge of a shift as power station; assists in education of youths in training; may also be employed at headquarters.

302.—ACCUMULATOR MAKERS AND PASTER.

accumulator assembler; places positive and negative plates in proper position in a jar or cell; inserts between web part of plates a wooden or rubber partition, known as a separator, to keep plates from touching; fills up jar or cell with sulphuric acid of correct specific gravity; if jar or cell is made of hard rubber, glass or lid by pouring a melted compound of pitch round edges of lid.

accumulator erector, accumulator installer, see battery fitter.

accumulator maker; battery maker, storage battery maker; general term for workers who make electric accumulators by putting together and building from components; includes plate caster (183), leader burner (242), assembler, paster, former g.v.

accumulator repairer; repairs plates or containers of electrical accumulators, by replacement of parts, or by lead burning; in latter case, molten lead with oxy-hydrogen or oxy-gas flame into mould or former, or fuses together broken parts, or attaches lugs (handles) to plates by some means.

battery fitter; accumulator erector, accumulator installer; selects or installs series of accumulators, such as lighting batteries, power batteries, on site; places cells in proper position on appropriate stands, e.g., trestle; connects cells either by burning a lead strip in an oxy-gas or oxy-hydrogen flame from positive to negative bars of adjoining cells or by a lead-cored belt, which is secured from lug to lug by nuts; fills cells with sulphuric acid from a drum and connects up terminals of battery to a dynamo or switchboard; superimposes first charge, i.e., connects battery to charging terminals and to voltmeter and hydrometer to test specific gravity of acid; records specific gravities and voltages from time to time during charge; examines conditions of plates and makes all necessary adjustments to ensure that battery can take full load for which it is built.

battery maker, see accumulator maker.

former, plate; storage battery former; places plates, as received from paster g.v. in correct sequence (alternately positive and negative) in a forming tank a lead-lined wooden container filled with sulphuric acid; joins plates in sequence by fusing strips of lead on to lugs with oxy-hydrogen or oxy-gas flame, so as to form complete circuit; when all plates have been duly connected up, connects terminals to switchboard; switches on electric current, thereby charging plates; removes plates from forming tank and examines them before passing them to washer g.v.

lead worker (accumulators); general term for any person, engaged in making or pasting accumulators, who works in lead, e.g., a worker casting or burning lugs together, or making or repairing accumulators and storage batteries, including accumulator erector, accumulator maker, accumulator repairer g.v.

maintenance man (accumulators); a battery fitter g.v. employed by accumulator manufacturers to make periodical visits to places where they have installed batteries; examines accumulators to see that sulphuric acid is at correct level in cells; repairs or replaces, if necessary, any broken cells; fuses broken parts together, or fuses new parts on to battery, by lead-burning process, using oxy-hydrogen or oxy-gas flame.

paster; (i) takes grids of accumulator cells and fills them with paste (a mixture of lead compounds), by pressing or rubbing paste into the big and small spaces, passes grids under a press to put as much paste into interstices as possible, or bands to paster's trimmer g.v. for pressing process; (ii) passes grids into or under a machine, which automatically presses paste into them by operation of a lever; feeds machine with paste unless this also is done automatically; often specially designated e.g., accumulator paster, secondary battery paster, storage battery paster.

paster's trimmer; cleans plates as they come from paster g.v. of superfluous

paste by hand; places plates on racks in drying room; if drying room is heated by stove, attends to fire; sometimes places alkali plates under a press before cleaning, although this is more often done by paster.

secondary battery maker, secondary cell maker, as for accumulator maker, storage battery former, see former, plate.

storage battery maker, see accumulator maker.

washer; receives plates from former g.v.; scrubs them with scrubbing brush and water to remove surplus acid; places them on a drying rack to dry.

303.—COIL WINDERS.

armature bander, armature bender; secures coils in position by bending with tape or string, and binds structure of finished armature with wire, or otherwise, to give mechanical strength; also secures band thus produced by soldering.

coil finisher; coil trimmer; cuts off lugs and ends of finished coils, by hand with snippers to give a neat finish.

coil former, coil maker, see winder, coil.

coil presser; presses into shape between two plates, coils for dynamos and motors, in a specially constructed press actuated by a hand or foot lever; coil regulator; shapes coils; examines parts and does any repairs (by re-winding of damaged parts or otherwise) that may be required.

coil trimmer, see coil finisher.

winder, armature; dynamo winder; places coils in symmetrical position on armature structure, and connects to commutator or slip rings by end rises soldered or bolted in position.

winder, armature disc; armature coil winder, see winder, coil.

winder, bobbin; spool winder; winds on bobbins of wood or other material, insulated wire in several layers as required for use in electrical apparatus; work done on lathe or spindle.

winder, coil; armature coil winder, armature disc winder, coil former, coil maker; sets bobbins of coil wire in grips of coil winding apparatus, hand or electrically driven; attaches end of wire to porcelain bobbin; starts motor; guides wire as it is wound on bobbin; solder and connects coils.

winder, dynamo, see winder, armature.

winder, field coil, as for winder, bobbin.

winder, field magnet, as for winder, bobbin.

winder, induction motor; an armature winder g.v. engaged in winding induction motors.

winder, magnet; wind coils of wire which are put round magnet cores used in magnetos and small electric mechanical apparatus, either by hand or by machinery; in latter case feeds automatic machine with wire, and controls machine by lever.

winder, magnet; magnet armature winder; winds wire by hand or machine on finished armature core; binds finished armature with tape; solders thickens connecting wires to end of windings, and varnishes armature.

winder, mesh; an armature coil winder g.v. who winds by hand type of armature known as mesh armature.

winder, rotor; an armature winder g.v. engaged in winding "rotors," i.e., revolving parts of alternating current machines.

winder, solenoid; a coil winder g.v. who winds coils of wire for use in solenoids.

winder, spool, see winder, bobbin.

winder, stator; an armature winder g.v. engaged in winding stators.

winder, transformer; a coil winder g.v. who winds wire coils on formers for fitting into transformers.

winder, tube; a coil winder *q.v.* engaged in winding wire round a tubular insulator.

winder, turbo-alternator; turbo winder; an armature winder *q.v.* engaged in winding stators and rotors of alternators.

304.—COIL INSULATORS.

coil insulator; coil taper, coil taperer; binds coils with tape; sometimes places bound coil in an oven or drying chamber or dries it by vacuum process (usually done by labourer); dips it in a tank containing insulating varnish. Impregnator (coils): dips coils in varnish or other like preparation, or paints them therewith.

insulator; general term for any weaker insulating coils by varnishing, wrapping with tape or impregnated paper, etc.

micra cutter; (i) cuts up small coil (not flaked) mica for commutator segments, etc., using a small belt-driven circular saw with very fine teeth; (ii) as for micranite cutter.

micra dabbler, see micranite builder.

micranite builder; also dabbler micra painter; covers an oil-lined sheet which is laid on a flat-topped table with a layer of adhesive varnish and a second layer of flaked mica, and so on until required thickness is attained.

micranite cutter; cuts up built-up sheets of "micranite" (an insulating material made of crushed mica and asbestos) in a power press or a fly press; work similar to that of mica cutter *q.v.*

micranite moulder; builds up flaked mica, together with adhesive shellac varnish, in a mould, and presses them together in a press, for use in making commutator ends, rings, etc.

micranite tube maker micranite tube worker; bends micranite into tubes; cuts and trims it, and cements it together to retain its formation.

micra painter, see micranite builder.

micra pressman; works a press which compresses sheet or other forms of mica built up by other workers.

micra worker; micranite worker;

general terms for any operative working in mica or micranite, including micranite builder, micranite moulder, micranite tube worker *q.v.*

taper, coil; coil taperer, see coil insulator.

tape winder (insulating tape); winds insulating tapes on lath into small coils.

varnisher, insulation varnisher; paints and varnishes electrical gear with insulating material, by hand with a brush.

305-8.7.—ELECTRICAL ENGINEERS, FITTERS AND ELECTRICIANS (NOT OTHERWISE DESCRIBED).

assistant electrician (theatres, music halls); assists electrician (theatres, music halls) *q.v.*

bell man (mines); an electrician who attends to repair and maintenance of electric bell lines, pushes and batteries in mines.

chief electrician (film producing); sets in position and maintains electric lamps used in cinema studios; manipulates switch-board during production, and is generally in charge of preparation of lighting effects in scenes.

controller fitter and repairer; an electrical fitter *q.v.* who fits up, and erects in position, controllers used in connection with electrical machinery, especially of electric cars in tramway or railway depot; also repairs controllers by adjusting, or renewing, working parts, using pulleys, screw-drivers, spanners, etc.

electrical engineer; (i) a trained and qualified technical man, either employed in design and construction of electrical plant and apparatus, or (in a supervisory capacity) in control and operation of electrical plant and apparatus in service; (ii) (francophone) superintends and controls electrical work in connection with tramway rolling stock, permanent way, cables and overhead trolley wires, and electric power supply machinery.

electrical fitter, electrical engineering fitter, electrical mechanic; an engineering fitter (210) *q.v.* engaged in making, adjusting, erecting, or repairing electrical appliances, apparatus, or machinery; more particularly heavy machinery, such as dynamos, alternators, switchboards, etc.

electrician (factory), a maintenance man, who keeps lighting and power circuits and plant in working order; attends immediately to any breakdown in electric lighting or power circuit, *e.g.*, repairs blown fuses, replaces worn brushes on motors.

electrician (Post Office); term not officially recognised in Post Office classification; a man so describing himself might be an electrical fitter *q.v.* a wireman (311) *q.v.*, a "skilled workman" (311) *q.v.*, etc.

electrician (rolling stock); installs wires, cables, generators, batteries, and other electrical fittings for lighting railway carriages; also fits telephones and electric bells in saloon carriages and compartments.

electrician (theatres, music halls, etc.); is responsible for care of electrical plant by which a theatre, music hall, etc., is lighted, including special lighting of stage; carries out wiring, repairs, etc.

electrician (tramways); examines electrical systems of tramways to detect faults, which he repairs; sometimes (but rarely) does armature winding and repair of controllers.

erector, erector-fitter, fitter-erector; (i) an electrical fitter *q.v.* sent out by a firm of electrical manufacturers to erect electrical plant of all descriptions on customer's premises; (ii) assembles switch boards, motors, dynamos, electric cranes, etc., in factory where made, for testing purposes.

fitter driver; carries out repairs, in addition to performing duties of engine driver (350) *q.v.*

fitter-erector, see erector.

gas and candle fittings adapter; aligns and adapts, with hobs, screwing in tools, and hand tools, gas and candle fittings to suit electric light.

wireless engineer; an electrical engineer *q.v.* skilled in installation, maintenance and repair of wireless apparatus; erects aerials; tests in installation for faults, and carries out any necessary adjustments and repairs; instructs wireless operators (754) *q.v.* in mechanical side of their work, *e.g.*, tuning in and operating instruments; (at aerodrome) installs wireless apparatus in flying machines and in wireless offices.

306.—INSPECTORS, VIEWERS AND TESTERS.

ager, flash ager; examines electric incandescent lamps, before and after cap is fitted on; inserts lamps in holders in a circular table (or conical table) or on terminals on outside of table and as table slowly revolves, observes lamps through a blue screen, meanwhile increasing and decreasing current through lamp; rejects lamps with imperfect filaments; puts sound lamps in tray to be taken away for next operation.

examiner; viewer; examines articles on completion of its process of manufacture, to ascertain if measurements are correct, using check rules, gauges,

etc., and to detect faulty materials or workmanship by minute visual examination; usually an electrical mechanic (306) *q.v.*, either set apart for this work or occasionally employed in it; often further distinguished according to class of article examined, *e.g.*, coil, magneto, motor examiner; see also other special classes of examiners defined below.

*examiner (Post Office Engineering Dept.); compares pieces with specification laid down by G.P.O., and approves or rejects delivery.

examiner, motor (elect. railways); a skilled electrical fitter or electrician who examines electrical equipment of electric train motor before or after journey to ensure that it is in running order; overhauls dust gear, control gear, fuses, etc., and oils, adjusts and renews parts where defects are not sufficiently serious to justify withdrawal of car from service to workshop for repair.

examiner, motor (francophone), see inspector, motor (francophone).

examiner, wire; wire overlooker; examines cables, wires, etc., during and after manufacture, to detect bad materials or workmanship, by simple scrutiny or by using a gauge, calipers, micrometer, etc.

*examining mechanic (Post Office Engineering Dept.); in testing department makes a visual examination of electrical apparatus received into test room; also carries out electric tests on articles with galvanometer, ohmmeter, ammeter, ohmmeter and other instruments.

fault finder (electrical cables); in test room makes various tests (for carrying capacity, insulation, resistance, etc.) on cable to ensure that it reaches standard specification, using galvanometer, etc.

inspector, electrical inspector; inspects, and reports upon, goods intended for use in electrical industry or products of that industry, either on completion or in course of manufacture, sometimes also tests such goods or products by use of galvanometer, voltmeter, etc.; inspects electrical installations of all kinds.

either at regular intervals or on special occasions, as required; often further distinguished according to class of goods inspected, *e.g.*, coil, installation, lamp, telegraph cable inspector; see also other special classes of inspectors defined below.

inspector, installation; see fitter, installation.

inspector, motor (tramways); motor examiner (francophone); patrols tramway service routes and carries out minor running repairs, when possible, to car trolley brads, controllers and bells, controls, motor brushes, etc., to enable car to return to depot; at depot, electricians (305) *q.v.* carries out more permanent repairs.

inspector of fuse boxes; makes periodical examinations of fuse boxes, either on consumers' premises or at distribution boxes.

inspector, test room; test room supervisor; in charge of test room and responsible for efficiency of tests; supervises work of testers *q.v.*; examines test sheets and other records received from testers; deals with correspondence of testing department; mica gauger; measures thickness of mica (or micranite) plate, using micrometer, vernier or plate gauge; usually spends part of time in cutting or making sheet micranite.

*test clerk (Post Office Engineering Dept.); receives report of existence of telephone line fault from testing office *q.v.*; tests line by voltmeter to locate fault inside or outside telephone exchange; submits report to engineer to arrange for necessary repairs; keeps record of all faults.

* Term officially obsolete. Used by the Post Office Engineering Department as a skilled workman (311).

tester; tests electrical machinery or apparatus, or articles used in or produced by electrical industry, either in ordinary working conditions or by applying certain recognized standard tests to detect faults, e.g., vibration tests, resistance tests, capacity tests, insulation tests, etc.; uses various instruments according to article and nature of test, e.g., verniers, plate groups, galvanometers, speed counters, resistance tests may be made either at works (before articles are delivered to customer), or on customers' premises, often further distinguished according to article tested, e.g., are lamp, coil, dynamo, rheostat, thermostat, telephone, wire tester, etc. also other special classes of testers defined below.

tester, chemical (cable manufacture); makes routine tests of materials used in manufacture of electrical cables, working under direction of chemist.

***tester, electrical apparatus (G.P.O.)**; an examiner (Post Office Engineering Department) *q.v.* who tests, by comparison with standards, or with fine measuring instruments, electrical apparatus used in telegraphy or telephony.

tester, insulation tester (electric cables and wires); tests insulation resistance of electric cables by applying a high electrical pressure or voltage; also measures insulation resistance, copper resistance, and capacity, using instruments of precision.

tester, insulation tester (electric plant and apparatus); tests insulation resistance by application of high electrical pressure or voltage and by precision measurements; also tests efficiency and performance of plant and apparatus.

tester, installation; installation inspector; inspects new work installed on customers' premises before connecting with main supply and tests it by connecting wires to instrument known as "megger," which causes a high voltage current (sufficient to blow up any faulty material or workmanship) to pass through wires.

tester, insulation; (i) see tester (electric cables and wires); (ii) see tester (electric plant and apparatus).

tester, meter; electric meter tester; connects electrical meters to test switchboards, either at works (before dispatch to consumer), or in testing room, to which meters are returned for periodical examination and test, or (very occasionally) on consumers' premises; observes dials and indicators and adjusts meters according to test results, using pliers, screwdrivers, files and occasionally lathes.

tester, motor (trunways); tests efficiency of motors for trunways, either new or under repair, with help of other instruments; applies insulation test by passing heavy charge of electricity through motor with a megger.

tester, submarine cable, as for tester (electric cables and wires).

tester, submarine cable, as for tester (electric cables and wires).

***testing officer (telegraphs and telephones)**; makes tests along a faulty telegraph or telephone line to locate fault, using various instruments; when fault is located, gives instructions for repairs or removal of line.

viewer, test room.

wire overhauler, test examiner, wire.

309-INSTRUMENT MAKERS AND ASSEMBLERS.

accessories assembler, accessories mounter; makes up or assembles from parts (which are supplied already stamped, turned, pressed, etc.) such articles as wall plugs, switches, lamp-holders, ceiling roses, etc., using screwdriver, files, pliers, etc.

ammeter assembler, as for instrument maker.

are lamp maker, are lamp fitter; assembles by hand, repetition parts are lamps, using pliers, files, screwdrivers, etc.; fits, adjusts, and regulates are lamps to insure correct working; repairs, when necessary, clockwork or internal mechanism of lamps.

assembler, putter-together; general name for operative who assembles, or fits together, parts (previously made by other workers) of any electrical appliance, fitting, or piece of apparatus; often further designated according to article assembled, e.g., accessories assembler, brush assembler, rheostat assembler.

bell indicator maker, see electric indicator maker.

bell maker, see electric bell maker.

bell push maker; an accessories assembler *q.v.* engaged in making bell pushes, if a leading hand, also superintends girls engaged in assembling these parts into complete articles.

brush assembler; puts together body springs, and brushes, with bolts and screws.

calibrator, instrument calibrator; instrument adjuster; tests, and adjusts to standard, electrical measuring or indicating instruments before delivery to customer, or when they have been returned for repair, using voltmeter, ammeter, potentiometer, megger or other testing instruments; sometimes also connects to switchboard and passes electrical current through instrument to be calibrated; *cf.* tester (308).

clock assembler (meters); puts together clock mechanism forming part of electric meters.

clock band, clock man, clock maker (electric meters); clockmaker (323) *q.v.* who specializes in attending to clockwork mechanism of electrical meters; replaces worn or defective parts with new parts, using hand tools, turn and re-bushes parts of mechanism, if necessary, on a lathe; cleans mechanism with petrol, etc., and overhauls it generally.

condenser builder; condenser hand; builds up condenser with mica, insulating paper, tinfoil, asbestos, or glass, usually by arranging strips of two of these substances (e.g., tinned and mica) in alternate layers until desired capacity is attained; fits brass connecting terminals; encloses whole in a container.

condenser builder, variable; assembles plates, received already prepared, on spindle to form a variable condenser, using small bolts and pliers, screwdriver and other hand tools.

condenser band, see condenser builder.

electric bell maker; bell maker; assembles repetition parts of electric bells into complete units; adjusts them to fit and to ring properly; repairs electric bells by renewing worn or damaged parts, etc.

electric fan maker; fan fitter; assembles blades, frames and other component parts, received ready pressed or cast; builds them up into complete electric fans and adjusts them to run correctly using pliers, screwdriver and other hand tools.

electric ignition maker, see magneto maker.

electric indicator maker; bell indicator maker; assembles parts of electric bell indicators into complete units; adjusts them, and fits them in cases.

electric bell; (i) fits up apparatus and wires for electric signals or indicators in internal work, and does simple electric bell repairs; (ii) fits wires, pushes, switches, bells, and batteries; cleans batteries and repairs wires and bells when necessary.

fitter, fan, see electric fan maker.

fitter, galvanic apparatus, as for instrument maker.

***fitter, instrument**; (i) see instrument maker; (ii) (G.P.O.) fits telephone instruments and small switchboards on subscribers' premises.

fitter, rheostat; rheostat builder; makes parts for rheostat starting switches used in connection with electrical machinery; assembles resistances, usually made by other workers (though in small works, may wind own coils); sets up rheostats complete and adjusts for proper working.

fitter, switchgear; an electrical fitter (300) *q.v.* who assembles made up parts by hand, using screwdriver, spanner, pliers, etc. to form switches, circuit breakers, and instruments for control of electrical plant.

***fitter, telegraph instrument**; (i) (G.P.O.) see telegraph instrument assembler; (ii) in some factories, does more highly skilled work of making fine adjustments.

galvanic apparatus maker, as for instrument maker.

galvanometer assembler; potentiometer maker; fits and screws together component parts of galvanometers.

galvanometer maker, as for instrument maker.

instrument adjuster, see calibrator.

instrument assembler, as for assembler.

instrument maker, electrical instrument maker; instrument fitter, assembles components, usually made by other workers, into complete electrical instruments; but sometimes makes, assembles and fits instrument cases himself; after also repairs worn or defective instruments, by renewing parts and by re-adjusting.

instrument maker (Post Office Engineering Dept.); builds up or repairs telegraph or telephone instruments or apparatus.

instrument repairer; an instrument maker *q.v.* wholly or mainly engaged in repairs.

magneto assembler, as for assembler.

magneto components maker, magneto parts maker; files, shapes, or turns on lathe, gear wheels, handles, insulators, contact bushes, and other parts of magnetos.

magneto condenser maker, as for condenser builder.

magneto maker; electric ignition maker, motor ignition maker; assembles parts of magnetos, treadle coils, commutators, switches, plugs, etc., received ready machined, into complete articles, using screwdriver, pliers and other hand tools.

magneto repairer; strips magnetos; examines them to detect faults in winding or in internal mechanism; repairs worn or defective parts; re-assembles parts into complete units.

meter assembler, meter band, electric meter assembler; general terms for any operative engaged in assembling, fitting, making, calibrating, repairing, or otherwise working upon, electric meters.

meter maker, meter fitter, electric meter maker, electric meter fitter; as instrument maker *q.v.* who assembles, calibrates and fits together component parts of electric meters, using screwdrivers, files, pliers, spanners, soldering bits and varnish brushes; repairs faulty meters by replacing worn or defective parts.

meter repairer; electric meter repairer; a meter maker *q.v.* wholly or mainly engaged in repairs.

microphone maker; assembles parts already machined, to form complete microphones, using pliers, screwdriver and other hand tools; makes final adjustments to articles when completed.

motor ignition maker, see magneto maker.

motor starter maker, motor starter fitter; makes parts for motor starters, fits and assembles them.

* Terms officially obsolete. Classified by the Post Office Engineering Department as a skilled workman (311).

wireman, electrical wireman, *see* electrician.

wireman, indoor; an electrician *q.v.* usually engaged in indoor work *e.g.* wiring interiors of houses, as distinguished from outdoor wireman or lineman.

*wireman, telegraph or telephone; a member of a gang engaged in erecting or repair of overhead telegraph or telephone wires and wiring work, and in splicing, regulating, binding, and terminating of these wires.

*wireman (telephone exchanges); stripes, forms, and loose end cables, and connect these to taps on apparatus racks and switchboards.

wireman, telephone switchboard; does routine erecting and wiring up of telephone switchboards.

*wireman, wire (electrical lamps); welder; (i) joins and welds short ends of connecting wire to filament before mounting in bulb; (ii) joins together wires making up leading-in wire of lamp.

wire repeller, *see* for linemen.

wire worker (electric cables), *see* cable joiner.

018—OTHER SKILLED WORKERS.

armature assembler, armature builder; assembles wound coils, commutator bars, cores, etc., on central shaft of armature by hand; tests them up, and some of the ends of coils to commutator bars, using hand tools only, *e.g.* pliers, screwdriver, spanner, soldering bit, with nails, bolts, screws, etc.

armourer, armouring machine worker (cables), cable armourer; wire armouring machine worker; one of a gang of men working under supervision of cable machine driver *q.v.* on a machine which puts a protective covering of iron or steel wire together with tape or jute, round insulated cables; loads spools of wire or sheins of steel tapes on to machine by means of a hand lift; loads spools of tape or jute on to machine by hand; fixes cable on to receiving drum with strands of wire; coats cable, which it passes through machine in contact with tar or bitumen (for weatherproofing purposes), with a mixture of chalk and water, by hand with a brush, to prevent cable sticking; guides armoured cable on to drum by hand; joins up any wires broken in process of armouring with a blow lamp.

battery maker, electric; *see* primary battery maker; *cf.* accumulator maker (303).

bench hand; general term for any person (*e.g.*, assembler, fitter) who works at bench, making, or helping to make, parts of electrical apparatus.

bulb worker (lamps); (i) *see* waler; (ii) *see* piecer.

thourner-in (lamps), *see* waler.

cable core maker; (i) attends machine which makes up cores for a three-core or for a multiple cable; (ii) operates machine by hand with sheins of paper tape, raw cotton, hemp, or other material, and with stranded copper wire from a drum; fixes copper wire on to receiving drum by hand, and stops or starts machine by means of lever; repairs broken paper, etc., by joining ends together with paste or by tying; (iii) moves usually in a strander (319) *q.v.* who makes cores for cables by twisting wires together in a stranding machine.

cable machine driver, cable machine minder; a leading hand in charge of a team of from two to four workers, employed on certain machines used in cable making, *e.g.*, armouring, lead sheathing machines; responsible for proper working of machine and sees that it is fed with wire, insulating

or sheathing material workers working under him; starts wire stops machine by means of hand lever; may carry out minor repairs to machine.

cable sheather, *see* lead coverer.

cap fixer, capder (electric lamp); collarer, stuffer; inserts leading-in wires of lamps through holes in cap; fills cap by hand with shellac or plaster of Paris; fits cap on bulb; puts bulb and cap on rack and allows plaster to harden naturally or places them in drying chamber, or sometimes (always with shellac filling) heats with a gas flame or electric heat; with a gentle cut of leading-in wires flush with top of cap by hand with knife; sometimes also solders top of each wire, using solder, flux and bit.

*cap solderer (electric lamps); cuts off leading-in wires flush with top of lamp by hand, with a knife, and a spot of solder on top of each wire, using solder, flux and bit.

cell maker (primary or undefined), *see* primary battery maker.

circuit breaker maker, circuit breaker fitter; (i) assembles connection parts to form complete circuit breaker, using pliers, screwdrivers, spanner and other hand tools; (ii) makes brass and copper fittings for circuit breakers, by hand, using hack saw, file, chisels, etc.; (iii) fits coils, carbons, blades, etc., and finally adjusts complete article.

classifier (lamps); fabulator; classifies finished lamps according to their (a) efficiency and (b) consumption of current, and assigns them to their proper grades; is often a photometer hand *q.v.*

oscillator, *see* cap fixer.

commutator builder, commutator fitter, commutator hand, commutator maker; builds up copper bars and mica slips on armature shaft of dynamo or motor, then trues on both so as to give perfect surface for bearing of brushes.

commutator part maker; files, mills, or otherwise shapes, copper commutator bars, or cuts mica to required size and thickness, ready to be fitted together by commutator builder *q.v.*

contact maker; (i) moves and attends automatic stamping machine which cuts and shapes copper contact pieces for use as components in controllers, switches, etc.; feeds machine with copper sheet by hand; (ii) lets often cuts and shapes copper contact pieces by hand, using saw, file, emery wheel, or other abrasive.

controller fitter; assembles and fits together small component parts of controllers (multiple switches, used for admitting current to electric motors or cutting it off therefrom) or repairs such controllers.

controller man (electric car); cleans and oils controllers of electric cars in tramway or electric railway depot; inspects and reports defects.

controller restorer (electric car); repairs controllers in an electrical tramway or electric railway repair shop, by replacing worn or damaged parts with new parts.

core assembler, core builder; builds together incisions of soft iron and castings, which are fed wound by hand with wire to make cores for use in electrical machinery, *e.g.*, dynamos, motors, transformers.

diameter fuse cutter; makes fuses in which wire is surrounded by asbestos, oil, or other damping (non-conducting) agents.

electric sign fixer; fixes electric advertising signs and connects them to cables in position.

electric sign maker; builds up component parts of wood, glass, brass, sheet steel, etc., to form electric advertising signs.

exhauster (electric lamps); spanner; places lamps, to bottom of each of which has been fused a glass tube (sealing off tube), in gas-heated furnaces; connects tubes by means of

rubber or of thick glass tubes to an automatic vacuum pump; closes furnace door; removes lamps when they have been exhausted and sealed (exhausting and sealing being automatic) and places in trays.

filament former, filament shaper; controls, by means of a lever, machine which forms filament (filament passing into it automatically from filament drawing machine, operated by filament maker *q.v.*), and cuts it to size with automatic guillotine as it leaves machine.

filament winder; (i) (carbon filaments) puts carbon mixed with paste in bowl of automatic machine; moves lever to start and stop machine, which draws this mixture into a filament, which then passes automatically to filament former *q.v.*; (ii) (tungsten filaments) feeds machine with tungsten wire from a spool, sets machine in motion, causing wire to pass through a gas-heated furnace where it is heated by small burners to extreme fineness and drawn through a diamond die; if filament breaks, usually winds filament on to reel and spins by hand; (iii) (tungsten filaments) general term to cover all workers on tungsten filament machines, including filament former, filament moulder, filament winder.

filament moulder; (i) fits formed filament on its supports in a lamp bulb by hand, using fine tweezers and electric welding machine; (ii) attends machine which moulds filament on lamp stand automatically; feeds machine by hand with stem and tungsten and operates machine by means of levers; removes moulded stand by hand and rack.

filament solderer, *see* waler.

filament winder; starts and stops by means of levers, machine which winds cable filament on a spool; feeds machine with filament.

flash light bulb maker; flows lamp seals; feeds automatic machine with small pieces of glass and cement; moves levers, setting in motion machine which mounts, exhausts, seals and delivers bulb completed.

gauge (lamps); weighs a measured length of filament to be used in making electric lamps on a delicate balance and so calculates gauge from mathematical tables.

generator maker; makes small electric generators by hand, i.e., builds armatures from stamped parts, and sometimes also winds coils though this is more usually done by coil winder (303) *q.v.*

glow lamp maker; *see* flash light bulb maker.

grid maker; supporter, support maker, wire fastener, wire former, wire worker; makes, from wire, a grid-like formation for fitting into electric light bulbs as supports for filaments or grids or wire in thermionic valves. Impregnating pump driver (cables); places cables, which are fitted on drums, in impregnating tanks or ovens, with help of hand lifts, hoists, etc.; secures door of tank or oven; keeps up supply of oil to tank or oven by means of levers controlling pump, watching gauges showing supply and amount of oil.

lamp fitter; an electrical fitter or electrician (303) *q.v.* who installs lamp holders, using hammer, chisel, screwdriver, pliers, and other hand tools.

lead coverer, lead sheather (cables); cable sheather; a cable machine driver who is in charge of a gang of two or more men on a machine which covers cable with lead by means of dies and a plunger; starts and stops machine by means of levers; supervises feeding of machine with cable from drum and with molten lead, which runs into a machine through a trough from a furnace close at hand, and winding of covered cable on receiving drum.

motor assembler; an electrical fitter (303) *q.v.* whose special component

* Terms officially obsolete. Chained by the Post Office Engineering Department as a "skilled workman." O.E.L.

parts by hand to form complete motor, using spanner, pliers, screwdriver and other hand tools.

motor fitter; an electrical fitter (306) g.v. engaged in making, adjusting, erecting, or repairing electrical motors.

paste mixer; (i) weighs out (dev) on a scale and mixes (generally wet) in a mortar, by hand, lead compounds used by painters (302) g.v. in pasting accumulator plates; (ii) weighs out ingredients of paste and shovels them into a mixing machine, which he operates with levers.

photometer hand, photometer operator; measures, with photometer, candle power of electric lamps.

plumber; bulb worker (lamp); setter-up, stemmer, tubulator; places electric lamp bulbs and small glass stems in an automatic stemming machine, in which gas jets play on bulbs and stems, and stems are fused on to bottom of bulbs, to facilitate process of exhausting bulbs; starts and stops machine by means of levers; removes stemmed bulbs from machine to tray.

pillar fitter; assembles and erects in position in street a complete pillar, which is fitted with switchgear and fuses, in connection with electric trolley and lighting services and fire alarm systems.

*pole fitter; fits cross-arms and insulators in position on poles for telegraphs or telephones or for power transmission, by hand, using brace and bit, spanners, bolts, nuts, screw-driver, saw, etc.

primary battery maker, primary cell maker; cell maker, electric battery maker; puts together component parts of electric primary cells and, when necessary, groups them to form a battery.

pumper (electric lamp); see exhauster, pump man (railways); keeps electrical drainage pumps on permanent way of railway in good running order, i.e., repairs glands with asbestos, tightens bearings and makes any general adjustments with spanner, screw-driver, etc.; cleans with engine waste and fills oil cups.

repairer (lamps); (i) renovates old lamp bulbs by opening them by means of blow pipe and gas flame which melts glass near cap; removes filament, exhausts air, and seals them up again; (ii) repairs any portion of a lamp during process of manufacture, e.g., if wire supports are not properly fixed in position owing to defect in machine, melts stem with gas jet, and places wire in position in soft glass of stem with tweezers.

rotor maker; makes "rotors," i.e., revolving parts of alternating current electric generating machines; work similar to that of armature assembler g.v.

sample maker (cables); cuts cables into convenient short lengths for use as samples, with and without wire saw; polishes them at ends with file and emery cloth, to show perfect section; then "whips" ends by binding with twine or wire and lacquers entire sample by hand with brush; sometimes mounts samples in paper weights, etc., by hand.

teaser, solder-in (lamps); bulb worker, burner-in, filament solderer; moves levers to start and stop sealing machine; feeds machine with bulbs and with studs on which filament has been mounted; watches machine to ensure that it properly seals stud in bulb and seals it on to bulb by action of gas flames; removes bulbs from machine to tray when studs have been fused in.

teaser-off; places lamp bulbs in which filaments have been fused (see teaser) and a sealing stud (stud already fixed to bottom of lamp) in machine, where a vacuum is created in lamps by a system of pumps; moves

levers causing lamps to revolve slowly inside machine, while gas flames fuse sealing-off tube; as each sealed lamp comes round, lifts it off machine with a pair of tweezers, and places it on a tray.

tessler-on (lamps); seals glass tube on to exhaust stem of bulb by means of blow flame; term and method now obsolete.

tester-up; (i) (lamps), see pincer; (ii) sets up and adjusts automatic or semi-automatic machines used in electrical works, using gauges and micrometer; usually a skilled turner (200) or (234) g.v.; more rarely an electrical fitter (308) g.v. test maker; (i) builds up, by hand, using screw-driver, pliers, drills, soldering bit and other hand tools, shunts or strip metal pieces between terminals for use with ammeters, etc.; (ii) winds small coils of high resistance wire by means of small automatic machine to make shunt for use in resistances.

tapsuper (lamps); stamps on lamp bulb, after completion, trade mark of maker, candle power, and voltage, using stamp or stencil and a pad dipped in acid.

stator maker, as for armature assembler. *see pincer.*

stud fixer, as cap fixer, supporter, support maker, see grid maker.

surface contact equipment repairer; third rail repairer; renews, replaces, and repairs wires, springs, contact fingers, etc. on surface-contact electric railway or tramway system.

switchboard fitter, switchboard maker, switchboard assembler, switchboard constructor, switchboard erector, switchboard hand, switchboard mounter (electric power); marks out for drilling, erects framing (usually of iron or steel), and attaches slate or marble slab thereto; connects switches, fuses, circuit breakers, and instruments in front, and other connections at back; often done by electrical fitter (306) g.v. switch fitter, switchgear fitter, switch hand; assembles component parts to make complete switch, using screwdriver, pliers, hammer and other hand tools.

tubulator (lamps), see classifier, third rail repairer, see surface contact equipment repairer.

transformer assembler, transformer builder, transformer fitter, transformer hand, transformer maker, transformer mounter; fits coils over core in a transformer and secures them in position with clamps and iron angle plates; places in position laminations of iron, castings, and insulation, and builds them up to form complete transformers, using pliers, screwdriver, spanner, etc.; puts in terminal gears and makes necessary connections; sometimes also fits coils into iron tank used as receptacle for oil, as transformer commonly runs in oil.

trimmer, lamp trimmer (electric arc lamps); cleans arc lamps and replaces burnt-out carbons.

tubulator, see pincer.

twine (lamps); wire joiner; welds two wires together in a gas flame or by process known as spot welding or by welding; leads wires in fingers and manipulates with tweezers.

wire armouring machine worker, see armourer (cables).

wire tester, wire former, see grid maker.

wire fitter, see welder (lamps); cf. wire joiner (311).

wire worker (lamps), see grid maker.

SIX-OTHER WORKERS.

accumulator sawyer, see plate sawyer.

*battery man, battery attendant; employed, usually as power station,

also in G.P.O., to examine condition of electrolyte and plates in cells of an electric battery; keeps cells topped up with electrolyte, removes short circuits caused by positive and negative plates touching, by inserting new separators; cuts out and replaces faulty plates; takes readings of voltages, current, and specific gravity, by means of voltmeter, ammeter and hydrometer; "boosts up" low cells, i.e., gives an extra charge of current to under-charged cells to bring them up to normal; maintains secondary batteries generally.

bitumen insulator; one of a gang of two or three men employed under a cable machine driver (318) g.v. on a machine which coats cable with vulcanised bitumen; feeds machine, by hand, with cable, already sheathed with tape, cotton or other material, from a drum; puts small pieces of rolled bitumen, by hand, in a worm-fitted feeder, which passes bitumen into a small steam-heated chamber, through which cable passes and in which rolled bitumen is forced round cable as it passes through a die; fits end of cable on a receiving drum as it emerges through water trough where bitumen is cooled and hardened.

bitumen layer (cables), see taper (cables).

bitumen roller; feeds vulcanised bitumen compound, for insulation of cables, between a pair of heavy rollers; starts and stops machine by means of levers.

braider, winding machine tender (cables); as for cable machinist.

cable hand, cable man; (i) (in electric supply undertaking), see joiner's mate; (ii) (on cable ship) secures cable hand; handles cables on cable ship engaged in laying or repairing submarine cables, and assists in general upkeep of ship; *obsolescent term.*

cable hand, gutta percha, as for cable hand.

cable joiner's mate, see joiner's mate.

cable machinist, cable former, cable laminator, cable sheather, cable whippers; moves levers to start and stop automatic machine which is fed with wire from a drum and with tape, cotton, hemp, rubber and/or other insulating material, usually from spools; replaces empty spools with full ones as required; guides wire and insulating material into machine at commencement of operation, watches correct working; regulates speed of machine by means of levers; repairs broken material when necessary.

cable tank's assistant; cable tank attendant, tank man; one of a gang of men employed in tank rooms; hares end of cable with a knife, lifts cable on drum into water tank with a hand lift; connects ends of cable which are close of the water with wire to switchboard switches on current to test cable for insulation and pressure; removes drum holding cable by hand lift after test.

cleanser (cables), see end finisher, cleaner (lamps); (i) see washer; (ii) cleanses finished lamps, by hand, with cloth and pumice powder before name is etched on.

coiler (cables), see measurer.

compounder, compound maker, compound mixer; maker, toner, mixer, testing man, dunkman; (i) loads boiler, which is built over a gas, coal or oil furnace, with bitumen, gutta percha and other ingredients, by hand, to make insulating material for electric cables; operates, by means of lever, machine and sprayer, attends to supply of fuel to furnace, and opens ball-cock which allows molten compound to discharge into tank; (ii) (in small works) mixes compound, by hand, over fire, stirring it with a rod as it boils.

* Term officially obsolete. Classified by the Post Office Engineering Department as a "skilled workman." (311).

* Term officially obsolete. Classified by the Post Office Engineering Department as a "skilled workman." (311).

copperer, carbon brush copperer; removes carbon brushes (used in electric motors and dynamos) from mould after they have been cast; places them in grill-shaped frame, and inserts in a pocking vat containing a copper solution; removes when process complete.

cord binder, telephone; telephone cord finisher; binds, whips, and finishes into convenient lengths, using small spindle lathe, cords which conduct telephone receivers to instruments.

cord boy; assists cord examiner or cord repairer (311) g.p.

cord finisher, telephone; see cord binder, telephone.

cord worker, telephone; moves levers to start and stop machine which forms telephone cords and laps them with cotton; feeds machine with spools of cotton and with wire from a drum; guides cotton and wire through machine at start; regulates speed of machine; repairs broken cotton when necessary by tying ends together.

cotton covering machine tender; see corrector, cotton.

cotton lapper; operates, by means of levers, machine which covers bell wire or other wire with cotton; replaces empty cotton spools with full ones; guides cotton from spool and wire from drum through machine at start; repairs broken cotton, when necessary, by tying ends together.

coverer (cables, electric wires); see coverer, cotton; coverer, silk; coverer, wire.

coverer, cotton; cotton covering machine tender, *coverer (cables, electric wires);* as for cable machinist.

coverer, silk; *coverer (cables, electric wires);* silk machinist; as for cable machinist.

coverer, wire; *coverer (cables, electric wires);* (1) operates machine which binds or laps cotton, with or without rubber strip, as an insulating cover for electric wire, e.g., bell wire, light flex; feeds machine with coils of wire and spools of cotton, rubber, tape, etc.; repairs broken cotton, and joins ends of cotton or rubber tape on two spools; (2) operates, by means of levers, machine which covers fine wire with an endless rubber tube; replaces empty spool of rubber band with full spool; watches correct working of machine.

coverer, wire (gutta percha); gutta percha wire coverer; a wire coverer g.p. operating a machine which covers wire with gutta percha; feeds machine with hot gutta percha and wire; regulates pressure of gutta percha to die through which wire passes; attends water trough in which covered wire is cooled (and gutta percha hardened) and drains on which it is wound.

coverer, wire (india rubber); india rubber wire coverer; a wire coverer g.p. who operates a machine which covers wire with india rubber.

cover-up (cables); see measurer.

depositor; makes platinum joint in carbon filament lamp, by heating it electrically under oil.

***desiccator hand;** attends to running and cleaning of desiccator, used for drying-out lead-covered cables.

dryer-out (lamps); sorts washed bulbs (see washer, bulb) on spindles through which hot dry air is blown, so that interior of bulb is thoroughly dried; removes dry bulbs to tray.

drying cupboard attendant (cables); see oven man.

drying oven attendant (accumulators); places plates of electrical accumulators in drying oven, and removes them when dry.

electrician's assistant, electrician's labourer, electrician's mate; wireman's assistant, wireman's labourer,

wireman's mate; assists electrician (307 or 311) g.p. or electrical wireman (317) g.p. by holding material, passing tools, and doing other unskilled auxiliary work; sometimes screws takes, drills walls, fits wooden plugs for securing tubes, wires, etc., and does other similar work with tools, under supervision of skilled man.

electrician's assistant (film processing); removes electric lamps, re-changes them with carbons, and keeps them trimmed; is usually in charge of "spot" lights when film is being taken.

enameller (cables); forquerer; operates, by means of levers, machine which enameles wires, by running them through a tank of quick-drying enamel and then on to receiving drum; guides wire from drum through machine to receiving drum at start; watches machine for correct working; refills enamel tank when necessary.

end finisher, and copper, end sealer (cables); cuts ends of cable after final tests to keep out moisture, either by dipping ends in a tank of cement or bitumen compound, or by pouring cement or compound on ends with a tello, or by fastening lead or rubber caps, fitted with compound, by hand, on cable ends; lead caps are soldered on lead-covered cables and rubber caps are fitted on rubber insulated cables and securely fastened with wire by hand.

erasp hot boy; attends to portable fan used by linemen (311) g.p. for heating soldering irons, carries fire-pot about, and waits upon linemen generally.

fitter's mate; carries tools and materials for fitter; cleans surfaces of work, and does work involving use of spanners, lifting tackle, and other simple tools and apparatus, under direction of fitter; assists fitter generally.

floor man (cables); labourer (cables); sweepers floor; "lags" (drains) carries raw material and finished or semi-manufactured products; does other unskilled jobs in electrical cable works.

gang hand, gang man (telegraphs and telephones); a member of a gang of men engaged in fitting wires or poles, digging trenches, laying pipes and conduits; (in Post Office service) may be either a "skilled workman" (311) or a labourer.

guillotine hand; cuts up this metal plates or mica sheets, to dimensions required, by guillotine (hand, treadle or power).

insulation hand; general term applicable to any worker engaged in insulating electric wires, coils, cables, etc.

joiner's mate, joiner's assistant, joiner's learner; cable hand, cable joiner's mate, cable span, plumber, and joiner's mate; holds work and tools for cable joiner (311) g.p.; lights fire, heats metal and box compounds, helps in excavating (if necessary), and assists cable joiner generally.

labourer (cables); see floor man, labourer (G.P.O.); (1) cleans and prepares cables, dips trolleys, assists in drawing cable into conduit, lays trolleys, and does other heavy work in connection with laying of telegraph or telephone cables; (2) overhead wires and cables, fixes poles, and assists skilled workmen in erection of overhead wires and cables generally.

labourer, telegraph; a labourer (G.P.O.) g.p. employed in telegraph work.

labourer, telephone; a labourer (G.P.O.) g.p. employed in telephone services.

laquerer (cables); see enameller.

lineman's mate; assists linemen (311) g.p. work similar to that of electrician's assistant g.p.

log brusher, log trimmer (accumulators); cleans logs of accumulator plates with a rotary brush, or by hand.

measurer (cables), cable measurer; coiler, cutter; a machine attendant (or one of a pair of machine attendants, working together) who pass thin cable, or wire, from one drum, through an automatic measuring instrument, on to another drum set in motion by machinery; watches indicator, and, when enough cable or wire has been wound, cuts wire or cable; takes coil so wound off drum, and binds it round with tape, string, or wire; re-connects drum, replaces it on frame, and repeats process; keeps record of number of coils wound.

meter room assistant; assists meter tester (305) g.p. in meters repairs and testing, and works under his supervision.

obscurer; (1) covers electric lamps with a coating of paint or varnish, (2) dips them in acid to produce an obscuring effect thereon.

oven man (cables); drying cupboard attendant; one of a gang of men who place cables, previously wound on a drum, in a steam-heated drying oven, using hand lifts; replaces discs of oven by means of hand lifts and clamps it in place; watches instruments which indicate steam pressure in oven jacket or pipes; winds cables from oven when dry.

pointer (lamps); see painter.

paper lapper, as for cable machinist.

painter (lamps); pointer; paints binding material over joint between filament and leading wire of carbon filament lamps.

planner (lamps); starts and stops, by means of levers, machine in which studs are heated by gas jets as they revolve in machine, and in which pins forming filament support are automatically inserted; feeds machine with glow studs and with wire; removes studs, with pins inserted, and puts them in a tray.

plate dryer (accumulators); attends to work of drying accumulator plates after they have been passed.

plate guillotine (accumulators), plate trimmer; trims accumulator plates in a guillotine.

plate sawyer (accumulators); accumulator sawyer; operates circular saw, which cuts lead castings or other material, as required, in making parts of accumulators.

plumber-and-joiner's mate, see joiner's mate.

preparer (electrical apparatus); takes various component parts from store to assembler's or mounter's bench for assembling; may also prepare small parts or components by filing, varnishing, or otherwise, in readiness for assembly; sometimes specifically designated, e.g., accessories preparer, telegraph instrument preparer.

sample maker's assistant (cables); assists sample maker (318) g.p. in simple operations.

seaman cable hand, see cable hand (on cable ships).

silk machinist (cables, etc.), see coverer, silk.

sorter (lamps); sorts lamps according to their rated consumption and pressure.

stranding machine driver; operates, by means of levers, machine, fitted with several pairs of rollers and a spreader, which coats paper or fabric (to be used for protecting cables) with waterproof material; feeds machine with paper or fabric from a reel and regulates supply of waterproof material from a feeder; removes roll of paper or fabric when waterproofed.

strander, wire strander; wire runner; (1) feeds an automatic stranding machine with spools of copper wire, either by hand or with hand lift, passes wires through a die in machine

* Term officially obsolete. Chased by the Post Office Engineering Department as a "skilled workman." (313)

and makes fast to receiving drum; operates machine, by means of levers, which automatically twists several wires together; if wire breaks, stops machine and joins broken ends with blow flame; (ii) one of a gang of three or four men attending a stranding machine (as described above) where thirty or more wires are being stranded.

tank attendant, cable, see cable tester's assistant.

tanker, tankerman, man, tanking man, tankman (cables): (i) see cable tester's assistant; (ii) see compounder.

taper, outer taper (cables): bitumen lapper; starts and stops, by means of levers, machine which is fed with impregnated bituminous tape from spools and with cable from a drum and which automatically covers cable with tape; replaces empty by full spools of tape; fits end of tape-covered cable on to receiving drum, by hand; if tape breaks, joins ends together.

tar boiling man; boils tar in a tank over a fire for coating armoured cables.

telephone track boy, as for freight boy.

test room assistant, test room boy: in training to become a tester (306) g.e., and engaged in simple tests, e.g., tests rubber, composition, metals or other materials by chemical tests or by applying heat or by passing current through material to test resistance.

washer, bulb washer (lamps): cleanser (dumps); places bulbs on trays in tanks of hot water before they are made up into lamps; removes trays and allows bulbs to dry naturally or passes to dryer-out.

winder (cables): supervises winding of cable round a mechanically-driven wooden drum or, if cable is light, sometimes revolves drum by hand; watches to see that cable is winding evenly; signals to driver of engine supplying power for winding process to stop when enough cable has been wound; helps in removal of drum from frame when filled and in inserting empty drum by hand lifts.

winder, copper; wire hauler; places a coil of copper wire on a loose cone or capstan and allows wire to pass through his hand to metal bobbin or small drum, which is made to revolve mechanically; regulates position of wire passing through his hand so that bobbin is evenly wound; stops machine when required, by means of foot lever; replaces full by empty drum or bobbin, sometimes also feeds and operates a copper stranding machine.

winder, cotton; winds cotton on to machine spools for use in cable covering.

winder, jute; a machine winder g.e. who winds jute on to machine spools for use in cable covering.

winder, machine; winds wires, cottons, silks, etc., from a drum on to spools of an automatic machine, for use in manufacture of cables, electric wires, etc.; stops and starts machine by means of levers; replaces full spools by empty ones.

winder, silk (electric cables); winds a machine which winds silk on to spools, for use in covering electric wires.

winder, wire; a machine winder g.e. who winds wire on to bobbins or spools, to facilitate banding in further processes; joins lengths of wire together by means of electric welding tool.

winder, yarn (cables); a machine winder g.e., who winds cotton, jute, silk, or other yarns on to spools, for use in cable covering.

wire band (cables), see winder, copper.

wireman's assistant, wireman's labourer, wireman's mate, see electrician's assistant.

wire runner, see strander.

ORDER X - MAKERS OF WATCHES, CLOCKS AND SCIENTIFIC INSTRUMENTS.

321—FOREMEN AND OVER-LOOKERS.

charge hand; adjusts, starts, stops and keeps in running repair automatic machines which make parts for watches and clocks, e.g., screws, supervises machine attendants, e.g., screw maker (309) (q.v.); usually a machine tool setter (311) (q.v.).

322—SCIENTIFIC INSTRUMENT MAKERS AND REPAIRERS.

air speed indicator maker; fits and assembles, by filing, screwing, etc., with hand tools, component parts of air speed indicators; usually done by revolution indicator maker.

barometer assembler, aneroid; aneroid barometer mounter; barometer mounter; mounts on wooden or other frame, movements and dial of aneroid barometer, and fits-on bevel and glass covering of dial by hand, using small hand tools. May also clamp to frame a small thermometer, when such is required to be fitted; cf. movement maker, aneroid barometer.

barometer assembler, mercurial; mercurial barometer mounter; mercurial barometer; (i) fits stock barometer tubes three or four feet full with mercury, places tubes on sloping iron racks over a charcoal fire to drive moisture from mercury; screws "cistern," mercury receptacle, to bottom of barometer frame, with screwdriver; fits a tube of mercury into cistern and mounts tube, with clamps, on wooden or metal frame; screws into position barometer scales, etc.; tests barometer with standard mercurial barometer, and, if incorrect, corrects by adding or withdrawing mercury to or from cistern; (ii) draws from stock metal or wooden barometer parts, including glass tubes, already filled with mercury and fused at ends by a glass blower (124) (q.v.), and mounts tube, to wooden or iron frame, with screwdriver and clamps; screws into position, scales, etc.; tests assembled barometer, and, if incorrect, bores hole through glass tube, adds or withdraws mercury as necessary and seals tube; cf. barometer maker, mercurial.

barometer maker, mercurial; makes any part of mercurial barometer, by hand; where barometers are to be fitted in a metal tube, turns length of tube to required size in a mechanically-driven lathe; fills tube with mercury, and, after testing quantity of mercury in tube, seals up tube in blow flame; sometimes also makes screws, used in assembling barometer, in an automatic screw-making machine; assembles barometer parts; cf. barometer assembler, mercurial.

barometer mounter; (i) see barometer assembler, aneroid; (ii) see barometer assembler, mercurial.

bencher, bench worker (scientific instruments); general terms for workers at a bench with vice and hand tools, fitting and assembling scientific instruments, e.g., microscopes, telescopes.

binoocular adjuster; field glass adjuster; a lens adjuster (q.v.) who eliminates errors of alignment in binoocular or field glasses.

binoocular assembler; field glass assembler; assembles, by hand, finished parts of binoocular or field glasses, using file, screwdriver, turn, etc., and fits lenses into position using a hand burnisher.

binoocular framer; field glass framer; a framer (q.v.) who finishes machined parts of frames for binoocular or field glasses by fitting, filing and polishing.

binoocular maker; field glass maker; an all round man who can make any part of a binoocular, i.e., can make any of the cells, mount lenses therein and fit them into the body of binoocular.

calibrator, see graduated.

camera assembler; (i) engaged, in firms working on mass production system, solely in assembling components to form a particular part, or section, of a camera, e.g., shutter, screwing, riveting, etc., with small hand tools as necessary; or, is engaged in assembling similarly, the already completely assembled sections to form finished camera; (ii) see camera finisher.

camera finisher; (i) camera assembler; fits metal parts of camera to body and baseboard, e.g., struts, focus pinion rollers, by screwing, riveting, etc., with small hand tools; glues-in bellows, fits-in lens and shutter and, after trial by focussing, indicates with pointing knife, distances on focussing scale; practices duties vary according to workshop practice and type of camera upon which engaged, cf. camera assembler, camera fitter; (ii) an instrument maker (q.v.) who makes very delicate adjustments, with small hand tools, to shutters of expensive cameras.

camera fitter; bores holes for screws in wooden camera bodies, cuts wooden surface to receive hinges, plates, and other fittings; fits together wooden parts and adds metal hinges, corners and other brass work; sometimes done by camera finisher or by camera maker (q.v.).

camera maker; makes wooden or metal camera bodies; cuts wood to size by hand-operated fretwork machine or with hand saw; planes, dovetails and sandpapers end pieces of wood with hand tools; for metal bodies, usually aluminium, stamps-out parts, using stamping press, drills with hand or machine drill, and polishes by hand; machine tool workers (204) and press workers and stampers (254) (q.v.) usually employed for mass production work; cf. camera cabinet maker (473).

chemical apparatus maker; general term for any person engaged in any process in manufacture of chemical apparatus, e.g., glass grinder, graduated, or divider, thermometer; but usually refers to a glass blower, e.g., clinical thermometer blower (q.v.).

clinical thermometer blower; a thermometer tube blower (q.v.) who specialises in clinical thermometers; cuts with file short lengths of special glass tubing to form stem and bulb; fuses ends in blow flame, draws out and seals in stem and bulb; draws out surplus glass with tweezers; loads with mercury either by placing open end of stem while hot in pot of mercury, or by placing in vacuum jar where by operating valves mercury is forced into tubes; seals open end with wax; softens stem in flame near bulb and forms constriction in capillary; tests scale in water bath against standard thermometer; if correct completes by closing end in blow flame.

clinical thermometer divider; a thermometer divider (q.v.) engaged on some or all processes of dividing, etc., clinical thermometers.

compass adjuster, ship's compass adjuster; adjusts balance of compass points by filing or otherwise; in case of compasses having fluid support for floating pointer, also adjusts level of compass.

compass maker, ship's compass maker; makes up compasses from stamped, pressed or turned parts; adapts parts as necessary, in fitting, with small hand tools or on small lathe; adjusts the parts, as for compass adjuster, and finishes by polishing or other finishing process.

curve cutter; cuts standard curves, using patterns, for use of draughtsmen, from thin sheet hardwood or celluloid by means of a framework machine, which he works either by switching on and off power-drive, or by foot treadle; polishes curves by hand, using various polishing materials.

cyclometer maker; assembles and fits together stamped, pressed, or die cast standard repetition parts of cyclometers, using small hand tools; files cuts, etc., parts as necessary in fitting.

dialist; draws, on paper, plan of proposed sun dial, having first ascertained latitude of place of its erection, and, for vertical dials, also bearing of wall on which to be fixed; sometimes also makes, by hand, model of proposed dial in cardboard; works out hour, minute, month and day markings by mathematical calculation.

divider, mathematical instrument; divider; marks fine measuring degree lines on rules or indicator scales, either (1) by hand with a marker or graver, using standard scales as patterns, or (2) by machine, under a rule in engine dividing machine and, measuring against various mathematical divisions shown on machine, operates, by hand, a swivel device governing cutting edge which marks divisions, circles, etc.; sometimes specifically designated, e.g., engine divider, hand divider.

divider, thermometer; thermometer graduator; is engaged on some or all processes of pointing, dividing and marking thermometer tubes; in pointing, places racks of filled tubes in heated water container, and, checking from a standard thermometer, marks tubes with a pointing knife at certain temperatures now reached; in dividing, dips tubes in beawax, or, receives them already coated; clips a coated tube under needles of dividing engine, and sets engine to mark required number of divisions between points; then pulls a hand wheel so that engine needles cut divisions in wax coating; as figure, works pantograph to trace figures, maker's name, etc., in wax; in marking tube, dips tube in bath of lacquer which marks tube where wax is cut; soaks tubes in paraffin to remove wax and acid, wipes tubes dry and rubs asphaltic black, or similar preparation, into divisions, figuring, etc.; cf. clinical thermometer divider, thermometer graver, thermometer pointer.

drawing instrument maker; dresses metal castings by hand, using files, etc., and finishes off with emery wheel or, machine, polishes them by hand, using fine polishing paper and then a buff stick; drills and screws together, if necessary, dressed castings to make drawing instruments.

field glass adjuster, see binocular adjuster.

field glass assembler, see binocular assembler.

field glass framer, see binocular framer.

field glass maker, see binocular maker.

framer (optical instruments), optician; turns on lathe parts of frames which have not been cast, for use in microscopes, etc.; feeds lathe with material and operates machine by means of hand levers; may also finish off by hand, thing etc.; cf. binocular framer, iris mount maker, graduator; collimator; (4) by comparison with standard instruments or by direct experiment under standard conditions, marks positions of graduations on measuring instruments for use in laboratory work; tests positions when scales require adjustment or readjustment; (5) from temporary marks so made, etches permanent indications.

trigradator, thermometer, see thermometer divider.

hand engraver (mathematical instruments); see mathematical instrument engraver.

heliograph maker; assembles machined parts of heliographs, i.e., apparatus for signalling by reflecting flashes of sunlight, and finishes them by means of small wheel, rag doll, file, or sand bath, as required.

hour glass maker; time glass maker; puts into a double glass bulb, having small hole at one end, a quantity of very fine sand sufficient to run from one bulb to the other in time required to be indicated; stops hole with finger and checks time taken for sand to fall into bottom bulb; adds or removes same sand if necessary; after testing, seals bulb in flame of blow-lamp and mounts it, by screwing, in metal or wooden holder.

hydrometer maker; makes hydrometers, instruments for measuring specific gravity of liquids or for ascertaining directly, by an adjusted scale, alcoholic content of fermented liquors; recovers blown hydrometer, cf. blower (134), and fills lower bulb with accuracy of shot, by hand; dips hydrometer into water having specific gravity of 1.00, and marks, with pointing knife, water level on stem; wipes instrument dry and repeats operation in fluid of 1.10 specific gravity; divides distance between two points, and marks, in degrees on paper or ivory, by means of dividing engine, cf. divider, thermometer, inserts scale inside hydrometer stem and tests to see if correct; seals junction between two bulbs by paring wax through hydrometer stem and fuses open end of stem in blow flame.

inclinator maker; makes levelling tubes of inclinometers, carved spirit levels, by heating pieces of glass tubing in hot lamp and forming to shape required; fills tube with spirit and seals off; mounts tubes so formed in a cast metal frame, marked with necessary graduation.

instrument maker (not electrical or scientific); generally, a term for a worker employed in making parts of scientific instruments, or fitting parts together; term also applied to precursors of one-man businesses who do their own making and assembling; jobber; does minor repairs to broken stamped-out spectacle frames, chiefly imported, by soldering; cf. spectacle frame maker.

lens adjuster; assembles lenses in mounts in correct position; collimates and eliminates errors of parallel in single optical systems; by throwing image of light on a screen and by altering thread of screw, obtains best defined image; tests alignment in binocular systems by throwing image of light on a screen.

lens assembler; takes an optical system in its elements, and mounts these, at a given separation, in a series of metal tubes or cells by screwing sections together upon lens, taking care to maintain optical alignment.

lens mount maker, lens setting maker; an optical turner (q.v.) engaged in turning settings or cells of lens mounts by means of an automatic lathe; turns to required thickness parts of cells which have been cast or stamped, pressed, or otherwise formed from sheet metal or tube (brass, aluminum, etc.); chooses screw threads on metal parts, either with a hand, or, with an automatic screw cutting machine; polishes parts by hand with a buff, or, with automatic polishing machine; smooths uneven movements, traces-up any parts bent or "out of true," assembles mount and fits iris, shutter, etc., in photographic lens settings, etc.; by hand; assembles same maker; makes throughout painted and graduated wooden levelling staves, used in surveying work, saws wood to length, by hand; removes roughness by sandpapering and, etc.; caps body with brass caps and bands slide, wad-bush, with strengthening ferrule; paints and

finishes stave, by hand, including painting of divisions and letters thereon.

machine engraver (mathematical instruments); see mathematical instrument engraver.

mathematical instrument engraver; (a) hand engraver (mathematical instruments); sketches on metal work of instruments design, etc., to be engraved, usually working from a blue print; engraves lettering or graduation marks by hand, using a graver; (ii) machine engraver (mathematical instruments); fixes in pantograph machine work to be engraved, and template engraved by hand engraver; by tracing over template reproduces, by means of automatic pantograph cutting tool, engraved pattern on metal; regulates pressure of cutter on material; removes engraved metal from machine.

mathematical instrument maker; general term for any worker engaged in any process of making mathematical instruments.

mathematical rule maker; makes mathematical rules in metal, wood or ivory; cuts to size with hand saw, plane, and file, or, by machine, by hand or machines; smooths and finishes off rule by hand, using file, sandpaper or other abrasive; sometimes also divides rule in dividing machine, cf. divider, thermometer, or, by hand, using marking tool, set square and scale; rules sometimes made by drawing instrument maker or by mathematical instrument maker (q.v.).

mechanical scientific instrument maker; an instrument maker (q.v.) who assembles and fits parts of various patent devices in which motive power is provided by clock-work.

meteorological instrument maker; general term for any worker engaged in making barometers, rain gauges, or other meteorological instruments; cf. aneroid barometer assembler, barometer assembler, mercurial thermometer tube blower, divider, thermometer, etc.

micrometer maker; an instrument maker (q.v.) who sets and operates machines in which micrometers are machined or dressed, ground, and, or, divided, or marked in degrees; accuracy of setting machines and in manipulating micrometers in working, etc., essential.

microscope maker, microscope constructor; an optical instrument maker (q.v.) who dresses, with hand file, and parts of microscope; turns other parts on automatic lathe and polishes all parts by hand or machine; drills, with hand or power drills, holes in frame parts for threads by hand with screw cutting machine or automatic machine; completely assembles parts, including lenses and iris, using small hand tools, and adjusts microscope to proper vision, by focusing; sometimes also grinds microscope lenses on small spindle lathe, either receiving roughly ground lenses or commencing with block glass; passes lenses through series of revolving moulds of increasing curvature on lathe, and proceeds as for hand finisher (138) (q.v.).

movement maker, aneroid barometer; fits plate, on which are fitted movements of barometer, by hand to correct size; makes vacuum regulator, pulley, pointer, etc., either with hand tools, or, by means of automatic machines, e.g., stamping, spinning, turning, screwing, drilling machines; polishes parts by hand with buff, or, machines; assembles parts with small hand tools and screws movements on plate; tests range, i.e., distance traversed by pointer, on dial, and reading of barometer by placing it in vacuum pump; if reading incorrect, adjusts barometer by means of screw fitted on the tension.

nautical instrument maker; general term embracing several occupations concerned with making instruments for use on board ship, e.g., compass maker, ship's log maker, sextant (brass) maker (q.v.), etc.

object glass cell maker; a lens mount maker (q.v.) who makes mounts for object glasses and optical instruments.

opera glass maker, or for lunular maker.

optical engineer, or optical instrument maker.

optical instrument maker, optical mechanic; optical engineer; general term for persons engaged in making optical instruments, including microscope maker, telescope maker (q.v.).

optical turner; turns, spins, polishes, and chases brass or aluminum parts of photographic lens mounts, telescopes, microscopes, etc.

optical instruments by means of automatic machines; feeds machines with material; sometimes polishes parts by hand, using polishing materials; sometimes assembles parts to form complete mounts and locates brass mortars.

parallel rule maker; makes parallel rules; for rolling rules, cuts strip brass to length by hand punch or machine; planes brass with hammer and planes smooth with hand of machine plane; levels one or both edges in leveling machine and drills brass with hand drill to receive screws; turns out rollers for rule and lifting knobs, on automatic lathe; makes decorative saw cuts on rollers by machine, and stamps, by machine, supports on which rollers are fitted; polishes finished rule by hand, using polishing materials; sometimes makes roller wheels on a wheel cutting machine; fits spindles through each roller and assembles parts by hand, using screws, screwdriver, etc., in making glass rules, cuts wood, ivory, or metal strips to size, hand or machine, levels edges by machine and polishes by hand; cuts and shapes strip brass with hand tools or stamps it out by machine, fits brass bars so formed, across to wood, etc., strips, with screws, to complete parallel rule; work sometimes done by drawing or mathematical instrument maker (q.v.).

pendulum maker; assembles and adjusts machine-made parts of pendulum, and fits them in metal case.

pressure gauge maker; makes steam, water or air pressure gauges; (i) turns or cuts, on automatic lathe, from blanks or castings, various parts, e.g., plungers, quadrants, etc., by power machine; pressure tube of gauge, and bends same by hand, using blow flame; polishes parts by hand or machine, and assembles, by hand, using hand tools; tests complete gauge by means of a pressure pump; (ii) less skilled, assembles, by hand, using small hand tools, machined parts of pressure gauge; fits by filing, etc., and tests finished gauge by means of pressure pump.

revolution indicator maker; speedometer maker; assembles and fits together turned parts of revolution indicators, speedometers, etc., together with hair spring, clockwork, indicator, dial, etc., using small hand tools; polishes up indicator by hand with polishing materials, and tests, by attaching it to an electrically-driven standard revolution indicator; alters tension of springs on dial if indicator not up to standard; often also does similar work in making, e.g., air speed indicators; cf. air speed indicator maker.

rimless fitter; drills holes in lenses with power driven diamond drill; fixes lenses in mounts and secures with small screws, using hand tools.

saccharometer maker, or for hydrometer maker.

sextant frame maker, sextant maker; turns castings of automatic lathe to form sextant frames; mills certain parts on lathe; finishes by

hand, using files, etc., and polishes by hand.

ship's log maker; makes parts of ship's log in copper or brass, by turning, machining and filing, and assembles, and adjusts them.

spectacle maker, spectacle frame maker; makes up frames or mountings of spectacles, eye-glasses, pince-nez, etc., in steel, nickel, rolled gold, gold, or other metals; if necessary, first draws his own wire through dies; fashions frames with small hand tools, and solders joints using soldering iron, etc.; fixes in position, with screws or solder, supports which hold "sides"; if necessary, cuts tension springs, with hand pliers, and solders same on support bar of eye-glasses by hand; sometimes, although seldom, makes own screws, using screwing machine; cf. jobber.

speedometer maker, see revolution indicator maker.

spirit level maker; (i) cuts wood or sheet metal to size, by hand, to form case of spirit level, using saw or hack saw, and polishes-up case by hand; fits level in case and screws with clamps into position; silver- or metal cases, and covers; sometimes puts spirit into level from a container, and fuses open end of level in blow flame; (ii) assembles spirit level in a finished case, and fixes in position cover for levels and scales, with screws.

steam gauge maker; a pressure gauge maker (q.v.) engaged in making steam gauges.

sun dial maker, an instrument maker (q.v.) who cuts and smooths surface of brass sheet for sun dial, by mechanically driven machines or by hand; also does to polished, with hand, marks hour, minute, month and day divisions on dial with sharp edged tool and straight edge, from plan supplied by dialist (q.v.); screws noses into position on dial, with screwing tools, by hand.

surveying instrument maker; general term for any person engaged in making surveying instruments, e.g., levels, alidades, etc.

tape measure maker (steel); takes steel tape of tape measure after it has been marked; polishes rivets in end to winding axle; winds in leather, metal, or fibre case, and rivets on loop by which it is drawn from case; sometimes cuts, and screws into position, actuating spring; in small factories, may also perform duties of tape measure maker (q.v.).

tape measure maker (steel); passes lengths of steel tape through a marking machine, in which measuring rollers, engraved in relief, mark or cut through a fine coating of acid to be etched on the tape; or, similarly, marks where spaces between lines are to be etched in a subsequent bath of acid, so as to leave a raised series of marks and figures.

taximeter fitter, taximeter maker; assembles, fits by filing, drilling, screwing, polishing, etc., and generally polishes machine-made parts of taximeter.

telescope maker; an optical instrument maker (q.v.) who draws from stock, builds-up by hand, and screws into position, component parts of telescope; screws in position lenses, mirrors, already mounted in necessary, adjusts telescope by focussing; sometimes makes his various mounts by turning same on automatic lathe, and polishing them by hand with polishing materials.

thermometer fitter; figures thermometer; is engaged in works where operations of pointing, dividing, etc., thermometers are subdivided among different classes of workers; cf. divider, thermometer.

thermometer pointer; points thermometers; is engaged in works where operations of pointing, dividing, etc., thermometers are subdivided among different classes of workers; cf. divider, thermometer.

thermometer maker; general term covering thermometer tube blower, thermometer divider, thermometer mounter (q.v.).

thermometer mounter, thermometer maker-up; mounts thermometer in a wooden, metal, ivory or glass frame by hand, using small hand tools; screws thermometer into position on mount with clamps and screwdriver; sometimes cuts special mounts from thin sheet brass, by hand, and may also mark divisions of thermometer scale on lacquered or brass mounts, by sliding a gauge along mount and marking divisions with knife; sometimes draws, using dies.

thermometer tube blower; blows thermometer tubes from glass cane, according to particular type of thermometer, e.g., small bore tubing, lens fronted, opaque barked, and ordinary glass thermometer; files and shapes tubing into required length; forms bulb, loads tube with mercury, as for clinical thermometer blower; bends tube or otherwise shapes to form particular kinds of thermometers.

time glass maker, or hour glass maker.

323.—WATCH, CLOCK AND CHRONOMETER MAKER AND REPAIRER.

adjuster, watch and clock adjuster; *springer, springer and tour, time;* receives watch or clock from assembler (q.v.); cuts through the balance with a file or on machine lathe to allow for expansion of metal; adjusts and finishes, with small hand tools, hair spring on collet, i.e., bed for jewel; sprouts, and sets up, by means of vibrator, i.e., marker, balance; inserts balance and spring into watch and finally regulates, ready for use.

assembler; finisher, putter-together; assembles or puts together works of watchmaker and clockmaker; or mounts internal parts in case, or "carcass," after adjusting them.

chronometer maker; makes up chronometer from standard parts, assembling and adjusting fine intricate movements of chronometer by means of hand tools; sometimes subjects chronometer to hot and cold tests, and adjusts its regulator accordingly.

clock cleaner, see watch and clock cleaner.

clock dresser, clock fitter; a clock maker and repairer (q.v.) engaged in cleaning or repairing clocks.

clock fitter, fitter; a person in position large clocks used in towers of churches, town halls, etc., from parts which have been assembled and adjusted in workshop; fixes dials and movement in frame; connects pendulum, weights and bolts; starts clock and sets it to time.

clock jobber, or for watch jobber.

clock jobber and winder; a clock maker and repairer (q.v.) who contrives to keep clocks wound and in good order.

clock maker; (i) general term for a person engaged in any process in clock making; **(ii)** see clock maker and repairer.

clock maker, automatic; a clock maker (q.v.) engaged in making automatic clocks.

clock maker, time recording; assembles, fits together, and adjusts parts of time recorders; sometimes also cuts, dresses, and finishes the metal or wooden parts before assembling.

clock maker, turret; builds up and makes parts of turret clocks from stock parts; or makes to drawings detailed parts of such clocks; files and cuts clock parts, and drills holes for pinions; cuts and turns pinions in pinion cutting machine; cuts wheels from blanks in wheel cutting machine; fits up the whole assembly in frame; polishes all parts on buffing machine; may have turning work done by turret clock turner q.v.

clock maker and repairer, clock repairer, clock maker, watch and clock maker, watch and clock repairer; (i) a skilled man, familiar with all processes of clock making, and principally engaged in repairing and cleaning clocks; (ii) a shopkeeper or assistant selling clocks and watches and undertaking repairs to customers' clocks or watches, *cf.* clock maker, and watch maker.

clock turner, turret; turns on lathe parts of turret clock; or turns up and cuts, on special gear cutting machine, wheels, pinions, etc., of large clocks; usually done by turret clock maker (*q.v.*).

examiner; examines and tests watches or clocks or, sometimes, chronometers, after any one process, or after completion of making; is transferred, as required, from one department of works to another, hence method of testing varies accordingly; in general, works with small hand tools, *e.g.*, examining wheels to revolve in order to inspect action of watch, and ensures that parts are properly made and fitted.

finisher, see assembler.

horologist; designs mechanism of time keeping movements and improves them by scientific research; usually an authority on the history and practice of watch and clock making.

putter-together, see assembler.

springer, springer and timer, timer, see adjuster.

time recorder repairer; a clock maker (*q.v.*) who visits factories and workshops and keeps time recorders in good repair; replaces broken parts such as springs, screws, rivets; cleans and repairs clock movements as required to maintain clock in going order.

watch cleaner, watch and clock cleaner; clock cleaner; a clock maker and repairer (*q.v.*) principally engaged in cleaning watches and clocks; dismantles movements, cleans parts, removing and replacing them where defective, and re-assembles.

watch and clock jobber, or for watch jobber.

watch and clock maker, watch and clock repairer, see clock maker and repairer.

watch jobber; watch repairer; repairs watches for the trade; and makes parts required for renewal, when necessary.

watch maker, watch maker and repairer; watch repairer; (i) general terms for any person engaged in making watches, now usually done almost entirely by machinery, on the sixty divisional system; (ii) a skilled workman, familiar with all processes of watch making and principally engaged in repairs; (iii) a shopkeeper or assistant selling watches and clocks, and undertaking repairs to customers' watches; *cf.* clock maker and repairer. **watch repairer;** (i) see watch jobber; (ii) see watch maker.

324.—WATCH AND CLOCK MOVEMENT MAKERS.

arbor maker; makes on semi-automatic machine or on lathe, hollow spindles or cranks used in watch and clock making.

balance maker, rim balance maker, compensation balance maker; turns and polishes on a small lathe, from blanks, balance wheels of clocks and watches; drills rims to take on screws and fits screws to balance wheels.

balance screw maker; makes, in precision lathe and automatic device, steel or brass screws used in balances of clock and watch.

balance spring maker; maker, winds and forms, from bulk lengths, fine springs used on balances of clocks and watches; coils up on special contrivance, by hand, coil springs of balances.

barrel maker, barrel and fusee maker; makes brass cylinder cases, in which main springs of watches and clocks are housed, by stamping in

power presses or by turning in lathe, or by a combination of these operations.

bolt maker, bolt and joint maker; watch motioner; turns, in automatic lathe, bolts or pins used in clock and watch making.

bore-drill; attaches keyless movement to case, using small hand tools, and corrects badly fitting parts of keyless motioner, keyless work maker.

bridge maker; stamps or presses from sheet brass, or cuts from bar into required form, bridges used in clock and watch making.

cap maker; stamps or presses from sheet metal, caps used in watch and clock making by means of hand press; fits dies in press, positions sheet metal, operates press by lever, and removes stamped caps.

chronometer escapement maker; an escapement maker (*q.v.*) making escapements for chronometers.

chronometer movement maker; a clock movement maker, or a watch movement maker (*q.v.*) who specialises in making movements of chronometers, from stamped or pressed blanks, by means of files and small hand tools and watchmaker's lathe.

click maker, see detent maker.

clock chain-maker; makes up chains for use in clocks, by turning links, assembling them and brazing them.

clock material maker, clock movement maker; movement maker; stamps, cuts, or turns parts of clocks in a press, on a lathe, or on a wheel-cutting machine.

cock maker; makes bridges for balances or pallets of watches and clocks; work usually done by movement maker (*q.v.*).

cog maker, see wheel cutter.

detent maker, chronometer detent maker; click maker; makes detents actuating on ratchet, for maintaining power during winding of chronometer or fusee clocks and watches; files detent from solid steel and screws fine gold spring theron.

dial maker, enamel; or for dial maker.

dial maker, dial plate maker; cuts dial of watches or clocks from sheet metal, brass, gold, silver, etc., by press or guillotine, after which dial is engraved by dial engraver (253) (*q.v.*), fits "legs," *i.e.*, brass lugs at edge of clock, sometimes specially designated, *e.g.*, gold dial maker, silver dial maker.

escapement maker; makes escapement of watches or clocks; stamps-out wheel, by means of hand press, from blanks, and cuts-out teeth by means of revolving sapphire cutter; bores wheel in centre; stamps-out pallet and lever and bare lever, *cf.* pallet maker; turns roller on lathe, and pierces it for prepeg pin, introduces metal crescent and polishes it on lathe; *cf.* escapement mateber, escapement pitcher.

escapement mateber; machine with rotating, watches wheel and pallet, also lever and roller, to fit watch so that it functions correctly, *cf.* escapement maker, escapement pitcher.

escapement pitcher; fits wheel and roller on arbor, *cf.* arbor maker, also roller and lever; adjusts correct depth by means of depth tool and inscribes position of above parts on pillar plate of movement; "banks" pillar plate by drilling holes and fitting banking pins to pillar plate; *cf.* escapement maker, escapement mateber.

escape wheel cutter; a wheel cutter (*q.v.*) engaged in cutting escape fins on escape levers, "banks" first hand door and pivoter, *see* pivot maker.

frame maker; makes frames for support of movements in watches, clocks, etc.; stamps-out top plate by means of hand press, drills pillar holes on

treadle lathe, turns sink for hand; stamps-out pillar plates, turns sink for wheels, and drills holes for screws; fits screws in pillars to both plates, and fits a top plate and a pillar plate together loosely.

fusee arbor maker, fusee cutter, fusee maker, fusee cap maker; makes on a lathe, sometimes from castings, part of chronometers known as fusee arbor, *i.e.*, spirally stepped wheel, mounted on an arbor, *cf.* arbor maker, designed to equalise pull of mainspring, which is wound round; obsolete in watch and clock trade.

fusee chain cutter; cuts clock lengths of wire into suitable sizes with wire cutting hand tool, for fusee chains of time mechanisms, *cf.* fusee arbor maker.

fusee chain finisher; finishes and prepares ends of fusee chains, with hand tools, in readiness for insertion into movements.

fusee chain hook maker; fusee chain wire passer; makes hooks of special pattern to be attached to ends of fusee chains; takes stock lengths of wire, shapes with hand tools and points ends in lathe.

fusee chain link maker, fusee chain maker, fusee chain riveter; makes links, by stamping on press, assembling and riveting links, and adjusting to form fusee chains used in time movements.

fusee chain wire pointer, see fusee chain hook maker.

hander; fits hands, hour and minute wheels and cannon pinions to movement, using small hand tools.

hand maker, watch hand maker; stamps hands of watches or clocks from sheet metal, in fly or pour press and dresses and cleans them by polishing and by bluing or lacquering.

index maker, see regulator maker.

jewel hole maker; drills holes in which jewels are set to act as bearings in watches or clocks, using jigs and precision tools.

jewel setter; roller pin maker, ruby pin maker, watch jeweller, setter; sets and mounts jewels such as pinions in watch or clock mechanism; selects suitable jewel; often cuts trace rough and polishes it, by means of small trundle lathe, cuts suitable hole in metal bed of watch, leaving a small overhanging edge; inserts jewel, and bonds over edge to retain jewel in position.

keyless adjuster; adjusts, with small hand tools, hairs and screws to cause the negative set watches, *i.e.*, requiring withdrawal of wheel for setting; fits bar attached to winding knob, by filing, and similarly fits and adjusts sleeves, *i.e.*, parts holding wider in position.

keyless button maker; forms, by stamping or turning in special machines, corrugated winding buttons of keyless watches; turns brass foundation and drills hole through on a lathe; turns fused porting on a turning machine, and sweats it on brass foundation.

keyless motioner, keyless work assembler; screws work of keyless watches on to movement and adjusts, with hand tools, the depths, *i.e.*, distances of parts from upper, or pillar, plates; *cf.* boxer-in, keyless work maker.

keyless work maker; cuts keyless wheels, winding pinion and rocking bar for keyless watches on either power-driven or foot lathe; sometimes also does work of boxer-in and of keyless motioner (*q.v.*).

lever and roller maker, lever escapement maker, see pallet maker.

mainspring maker, spring maker; (i) stamps machine making clock springs; feeding strip steel into machine; (ii) makes main springs for clocks in small lots by hand, placing several

thickness together and winding them into a tight coil on a small lathe; heats coil after winding and hardens spring in oil.

motiflower; makes and fits, by means of file and hand drill, point to movement, and fits bolt in watch where movement can be swung-out on joint clear of case.

motion maker; makes the toothed wheels, directly controlling minute and hour hands, by stamping in press or by cutting in a wheel cutting machine.

movement maker (clock making) see clock material maker.

movement maker (watch making); watch movement maker; general terms for arbor maker, barrel maker, bridge maker, cock maker, detent maker, frame maker, etc. (q.v.); the same worker may be engaged in making more than one of the articles named.

pallet maker; *lever escapement maker*, *lever and roller maker*, *watch pallets*, i.e., part of escapement of watches or clocks conveying impulse from train wheel to balance or pendulum; presses-out steel pallet by means of hand press, slots it to take jewels, using circular cutting machine; fits rough jewels and polishes surface to correct shape and depth to suit mounting of pallet.

pendulum spring maker; cuts, drills and prepares from strip steel or brass, or lathe or by special cutting and drilling machines, springs used in suspension of pendulums, cf. main-spring maker.

pillar maker; turns from brass or steel rod, an index or automatic machine, dial, or piece or pillars used in ironing of timing movements.

pinion maker; makes pinion wheels used in watches, clocks, etc.; inserts length of steel in automatic lathe, when cutting tool automatically traverses steel and shapes pinion; hardens and tempers shaped steel, and polishes it on revolving wooden dials.

pinion pivoter; see pivot maker.

pin maker; cuts, from wire, with hand cutting tool, and prepares, pins used in frames of watches, clocks, etc., by pointing them in a lathe; normally done by watch maker (328) (q.v.).

pivot maker, *pivoter*; *first half deer and pivoter*, *pinion pivoter*; turns points, or "pivots," or pivots, or "pivots," of centre, third and fourth wheels of watch, on a lathe, and adjusts, by means of small hand tools, barrel of watch, i.e., makes it work freely upon its own arbor, cf. arbor maker, and to fit the mounting; engaged only on hand made watches.

ratchet maker, see spring and click maker.

regulator maker; *index maker*; makes, by stamping in hand or machine press, from sheet metal, pointers which engage with balance springs for regulation purposes.

roller pin maker, *ruky pin maker*, see jewel setter.

seconds hands maker; a hand maker (q.v.) engaged in making second hands.

setter, see jewel setter.

spring and click maker; *ratchet maker*; stamps and presses springs by hand, by or machine press, from sheet steel and hardens them by heating and then immersing in oil; also makes clicks, used as stop ratchets in spring winding, in same way; sometimes done by watch maker (328) (q.v.).

spring maker, see main spring maker.

verge maker; makes, by hand, odd fashioned escapement movements of verge watches, obsolete.

watch and clock material maker, see for clock material maker, and movement maker.

watch jeweller, see jewel setter.

watch motioner, see bolt maker.

wheel setter, *wheel maker*; *rog wheel*; (i) drills hole in centre of wheel blank in drilling machine; fits blank on pinion in wheel cutting

machine, sets cutters and arranges gears of machine according to number of teeth to be cut; controls machine by levers and watches for any faulty work; (ii) allows and feeds with blanks an automatic machine making one class of wheel only.

wheel mounter; fits wheels to pinions and rivets them on.

325.—WATCH CASE MAKERS.

case joint finisher; case solderer and joiner; finishes and adjusts joints of hinges and snaps of watch cases, with small files and fine tools; solders on pins and joints of watch and clock cases.

case maker, *chronometer case maker*, *watch case maker*; makes cases of metal for watches or for clocks; for the former, by stamping or pressing from sheet metal in hand or power press; and the latter, by cutting and brazing together parts and ornaments to form clock cases or "cassocks"; often further designated according to metal used, or to type of case made, e.g., silver case maker, gold case maker, filed gold case maker, pocket chronometer case maker.

case pendant and bow maker; forms, from wire, with a special tool, rings of silver and other metal used for attaching watches or clocks to chains.

case plinner; cuts pins from wire, and inserts into case joints; pins end of joints with silver, gold, etc., and trims off end.

case solderer and joiner, see case joint finisher.

case springer, *case secret springer*; *secret springer*, *secret spring maker*; fits and files or secures into position, in hand of watch case, two springs, one under plunger and other connected with hinge, which enable face or back of watch to be closed, or, on pressure, to spring open.

secret springer, *secret spring maker*, see case springer.

silversmith (watch cases); a case maker (q.v.) making silver cases.

328.—OTHER SKILLED WORKERS.

dial embellisher; cleans surface of dials of watches, clocks, etc., with emery cloth or with damask and turpentine, covers one side of dial with white or other coloured enamel, by hand, with camel hair brush, places enamelled dial in stove and heats for several hours; on removal, rubs down enamelled dial with brick dust and flannel and finally polishes dial by hand with damp cloth and rotten stone; attends stove fire by feeding with coal when necessary.

dial painter; paints dials of watches and clocks with a group of figures, which figures are laid by dial writer (q.v.).

dial writer; prepares watch or clock dial by marking hour, minute and second markings, using drawing instruments, scales, etc., and ruling point; also marks figures on dial with tracing point; paints in figures and markings with enamel, with hand brush; if necessary, applies transfer figures to dials from a sheet, by hand, using an adhesive; sometimes, only letters and galleys-in figures, etc., engraved on dial by dial engraver (283) (q.v.).

drymaker, *jumbler*; makes chronometer fittings on a lathe and finishes them with hand tools; screws them into box or case, including gymbals, i.e., two metal circles on which chronometer rests and balances itself.

pendulum maker; fills with lead and solders together moulded or pressed sheets received from stock; paints one half of weight with lacquer when hot and brings up brilliant polish on buffing machine when dry; cuts rod to length from strip metal with hacksaw; cuts notch in top and rivets in tempered steel strip.

329.—OTHER WORKERS.

finisher; carries material, sweeps up, runs messages, and does other unskilled work in watch and clock works.

screw maker, *watch screw maker*; inserts steel or brass rod into automatic machine which cuts and shapes it into screws for use in watches or clocks; also machine when necessary, and occasionally separates out waste from delivery through; supervised by charge hand (321) (q.v.).

ORDER XI.—WORKERS IN SKINS AND LEATHER AND MAKERS OF LEATHER OR LEATHER SUBSTITUTE GOODS (NOT BOOTS OR SHOES).

Sub-Order I.—Furriers, Skinners, Tanners and Leather Dressers.

331.—FOREMEN (INCLUDING HEAD WAREHOUSEMEN AND CHIEF SORTERS).

chamber master; an workover or middleman who obtains fur skins from wholesale manufacturers and makes them up at home or on own premises, frequently employing other labour.

chief drum man; *drum head gangster*; in charge of process of leathering hides and skins in drum tumbler, i.e., revolving cylinders; supervises drum staffs (334) and drum lasequers (332), skins and emptying drum tumbler; responsible for output; usually also directs labourers who bail various grades to make stuffing mixture used in leathering process.

chief pumper and liquor blender (leather); responsible for correct mixing of lime, tallow and tanning liquor, see liquor blender (338), also in charge of pump circulating liquor in pits, see pumper (340).

chief rounder; supervises work of rounders (394) (q.v.) engaged in cutting up raw hides and skins or leather into specified sections; when dealing with hides and skins sometimes also supervises classifiers, sorters and measurers (335) (q.v.); checks output and keeps record of attendance and time keeping; responsible for engagement and discharge of rounders.

chief sorter; head of sorters; receives daily list of orders from office; responsible for dispatch of correct quantities and qualities of leather; must know various grades of leather and their uses in different trades; (ii) supervises sorters (336) (q.v.) and warehousemen (340) engaged in sorting and grading leather; checks output; may also supervise rounders (338) (q.v.).

chief splitter; supervises work of splitters (339) (q.v.).

drum house ganger, see chief drum man, *foreman mill hand*; *millman*, *mill room foreman* (for skins); supervises sorters (332), millmen (334), and drum staffs (334) (q.v.) in mill room; knows correct duration of process for each class of skins; examines skins on arrival and gives directions as required for damping, liquoring or pickling of furs; responsible for engaging and discharging of mill hands; *line foreman*; in charge of line pits; responsible for operations of soaking and liming hides and skins; instructs labourers filling pits with lime, regulates water supply in pits; sometimes also supervises finishers (335), unharers (333) and baters (333) (q.v.).

millman, *mill room foreman* (for skins), see foreman mill hand.

shed foreman; in charge of drying sheds in which raw skins are being dried after tanning process, and directs and supervises labourers employed therein; is responsible for maintaining correct temperature in sheds; keeps records of quantities of skins or hides received into and passing from sheds; sometimes also responsible for workers engaged in filling certain classes of leather.

setting machine operator; a water-rod (q.v.) who passes leather between rollers or under rollers, cylinders, or machines, whereas it is stretched and stretched to its utmost extent.

shoaner; one who skins on cloth, and passes it through shaving machines, to remove hair in layers to thickness required; usually performed on fur skins, e.g., rabbit, marmoset.

skinman, other; puts size on leather by hand dipping, or spreads it by hand.

skinner; (1) removes excess of oil and grease after currying or stuffing, with hand tool called "skinner"; usually done by corner (q.v.); (2) stretches hide by hand; stretches or "lags" down both sides of hide in semi-dry state by hand or machine.

smeerer; after, skin color; applies oil or grease to surface of leather, by hand, to preserve and soften it; usually a table hand (q.v.).

softener, leather; skin softener, see skinner.

staker; leather stuffer, skin stuffer; picks and stretches dressed skins or pelts, or leather after drying, on a staking machine, or by hand with special staking knife, to render them soft and pliable, and to cut any fibre on flesh side, e.g., staking machine operator.

staking machine operator; a staker (q.v.) who passes leather into machine which grips and dries it, thereby softening leather; accurate power-drive of machine.

stocker, stockman, stockman, see millman.

stuffer, hand; applies grease to leather with brush or by hand, carefully judging probable effects of different degrees of humidity in leather and atmosphere.

stuffer, drum; drum carrier; supervises drum laborers (339) who fill with hides drums containing stuffing mixture, and remove them when impregnated; keeps drum tumbler supplied with grease, regulates hot air supply to drum tumbler; sometimes mixes ingredients of stuffing mixture.

table band, table man, carrier's table band, carrier's table man, see carrier, table.

trusser, trusser; paints dressing of surface of hide on flesh side of skin, which is stretched over tumbler for purpose, to facilitate subsequent removal of wool.

waxer, waxman; (1) dips fully dried chromed hides in warm wax; (2) a staker (q.v.) who applies black wax side to flesh side of leather for back uppers.

wholier, wholier; who skins (hides and skins); a wholier (q.v.) who whitens hides and skins, i.e., passes fine shaving from surface, by pushing hide under revolving wheel, covered with coarse emery paper, of whitening machine; e.g., wholier (pelt) (338).

whitener; (1) shaves to fine surface, by hand, flesh side of hides or skins, with slicker, i.e., metal or emery tool, which is passed through hide or skin; (2) (machine whitening) see wholier.

335.—ENAMELLERS, JAPANNERS, DYERS, STAINERS, AND FINISHERS.

blacker, see fanner and seasoner.

brusher (fur dressing); brushes, by hand, tanned fur after pelt has been leached.

brusher, glove; applies dye to material used for use in glove making, with hand brush.

brusher (tanning, etc.); brush polisher, leather polisher, polisher; passes tanned leather under revolving brush, to clean and polish in colour black; weighs out various dyes in powder or crystallized form, by hand, on small scales; adds water, usually working according to formula; when matching a particular colour, tries various combinations until desired result is obtained.

dry boiler; alkaline dye pan, in which certain dyes are boiled up with water in readiness for dyeing.

dye, skin dye, skin rug dye, vat dye; weighs out dyes according to formula; knows properties of various dyes and their action on different skins; gives instructions to laborers as to amount of water to be added and filling of vats

or drum tumbler; either immerses skins in vats or applies dyes with brush; or gives directions to laborers as to immersing skins in vats and their removal therefrom or as to filling drum tumbler with skins and length of time tumbler should be in motion, or as to applying dye to fur skins by hand with slicker; sometimes specially designated, e.g., skin dye, glove dye, hat leather dye, vat dye.

dye, blue vat; immerses skins in vat containing blue-black dye, to produce black leather.

embosser; printer; (1) closes roller of type required for particular class of grain or design and fits it into power-driven roller press; switches on or off power, passes leather, by hand, between revolving roller and bed of machine; (2) in same way operates a plate embossing machine.

enameller, leather enameller; japanner, leather japanner, leather storer; gives a hard coloured surface to leather by coating it with varnish or colloidal spread thickly by hand, brush or slicker, i.e., a small hand tool; dries leather in heated chamber.

facter; (1) applies, by hand with a brush, a solution to small skins to fix dye; (2) applies solution to larger drum of drum with skins; switches on or off power which causes drum to revolve; releases drum when drying operation is complete.

finisher, leather finisher; general term for workers engaged in any finishing process in leather manufactures, e.g., embosser, leaver (q.v.).

finisher, levator, see levator dresser.

fanner and seasoner; blower; applies glutinous or albuminous mixture to back leather, etc., by hand with brush, to impart a gloss or finish.

gilder, leather gilder; (1) applies albumen composition to leather with brush; lays gold leaf on surface so prepared with knife or pad; heats metal tool in gas flame and presses it on gold leaf; wipes off surplus gold with a pad; (2) applies gold size to leather with a brush; paints surface so prepared with gilding composition.

grinder; dyes or colors sheet fur nearest to skin, by "stinking" it with a special brush dipped in dye.

hat leather solutioner; spreads solution on skin intended for hat leather with a brush; polishes skin by hand with brush or pad, to give a finish or gloss.

ironer; (1) irons hide leathers by hand or machine, to give finish; (2) passes leather into hand or machine press fitted with heated plates; manipulates hand levers to regulate pressure.

japanner, leather japanner, see enameller.

leger; applies dyes or pigment, by hand, to surface of leather, the quantity depending on condition of leather; passes it beneath oscillating bar or brush of lever machine, which gives leather a glazed surface.

leather storer, see enameller.

levator dresser, levator; levator japanner;

(1) works up natural grain of goat skin by hand, after it has been dyed, using a board called a "cock," which he rubs on back of skin; (2) produces an imitation goat grain on skins by passing through a machine fitted with pattern rollers; e.g., printing machine feeder (335) and grainer (334).

oil; a smearer (334) (q.v.) who applies oil to leather, by pad or with a brush; e.g., millman (334).

padder; applies a surface dye to fancy leather by passing leather between rollers, one of which is polished with slicker with dye, adjust rollers; controls power-drive of machine by lever.

polisher, brush polisher, leather polisher, see brusher (tanning, etc.).

printer, see embosser.

printing machine feeder; passes skins under roller of rotary machine or places them under piece of plate machine, to give imitation grain to surface; e.g., levator dresser (335) and grainer (334).

Spanish leather dresser, Spanish leather roller; (1) supervises various workers, e.g., finisher (335), rollers (335), polisher, dyer or skinner (q.v.),

engaged in preparing Spanish leather, i.e., leather with special antiqued finish; (2) runs machine for worker engaged in any operation, e.g., roller, printer, dyer or staining, incidental to production of Spanish leather.

sprayer, pistol; sprays leather with dye, using a reciprocating machine, to give a special gloss or coloring; regulates pressure of air which expels dye from sprayer.

stainer; prepares and mixes dye or stain according to formula; applies it to surface of leather by hand, with brush or pad; e.g., dyer; sometimes specially designated, e.g., glove stainer.

table band, table man; stretches skins after drying on table; works in a top color to make colour uniform on skins blotchy owing to uneven dyeing; e.g., carrier's table hand (334).

tipper, topser; applies dye or stain to upper layer of cheap fur with brush to give it the appearance of rarer kind; imitates natural markings of the latter by varying stain.

338.—OTHER SKILLED WORKERS.

beam man, beamman; (tanneries) general terms for any worker, e.g., baze staver, leather fitter, sculler, skinner (q.v.), who works at a wooden beam over which skin is stretched, scrapes flesh, hair, etc., from hides and skins, by hand, with knife.

bearer (fur skins); bears fur with care under supervision of tanner (q.v.), after fur has been leached and cleaned, to make fur skin give its fully appearance.

belly roller; a roller (q.v.) who passes belly leather, i.e., belly part of tanned hide, between rollers of machine to make it firm and smooth.

blabber, see blabberer.

bloomer, see seamer (leather).

blower (rabbit fur); like rabbit fur, by hand, into hopper head of blowing machine, which blows it by compressed air over picking beds, thereby removing dust and separating fur into fine and coarse qualities.

blubberer, blubberman; blubber; stretches and skin on leather or beam, and scrapes both sides of hide, by hand, with a two-handed knife.

brusher; (1) (fur skins) brushes tanned fur of pelt with hand brush, after they have been leached; (2) (rabbit skins) brushes fur of rabbit skins with hand brush before operations of cutting, opening and pulling to dispersion, fur.

buffer, roller; like lever from grain surface of hide, by hand or on emery wheel machine; e.g., wholier.

burrer; burer; removes vegetable hairs and other foreign matter from wool or fur of skins, by passing them between rollers of a machine.

buzzer (skin yard), see harner.

carrotter, fur carrotter; (1) applies mercury nitrate to fur side of rabbit skin with a brush to dissolve natural grease of fur, and thereby cause minute fibres in fur to stand out separately; (2) fills trough of extracting machine with mercury nitrate, which drips on revolving brush of machine; removes rabbit skins into this revolving brush, in preparation for gabberer (q.v.).

classer, classifier; classifier, class sorter, leather sorter, skin sorter, sorter, warehouse sorter; examines hides and skins after overgreasing and drying, and grades them according to quality; stamps them with metal die for purposes of identification; usually measures them, as measurer; checks grades and weights with invoice; sometimes also in charge of sack stretch and repacker (336) (q.v.); also examines hides and skins on a factory, grading according to quality; ties up skins in bundles or directs laborers who bundle hides and skins; sometimes specially designated, e.g., hide classer, skin classer, leather classer.

classer (follomany); skin selector; sorts skins into grades and grades according to quality and length of wool or fur.

cleanser (follomany); grease seamer, washer; washes skins (with wool on) with soap and water, by hand, or in mangle rolling machine, for rug making; usually works in tank and draws skins through water by hand or with long-handled hook,

cleanser (for dressing); tends revolving drums in which fur skins are cleaned with sawdust.

cleaver, *see* fletcher.

clipper, *see* trimmer.

conditioner, *see* danner.

conditioner and pincer, combines work of danner and pincer (q.v.).

curer (skins); *procurer*; preserves skins by dressing with salt, alum, etc.

cutting, concave, *see* enter, rabbit skin.

cutting, rabbit skin (fur felt); *convey* enter; passes rabbit skin by hand under power-driven revolving blades of cylinders of machine, which cuts fur from skin; cuts fur and skins in separate operators and passes fur to carrier (q.v.).

cutting (tanning); *see* rounder (leather).

danner; *conditioner*, *softener*; maintains leather to ensure even drying, in preparation for currying, shaving, or splitting.

dehairer, *see* unhairer.

doler (glove leather); passes flesh side of tanned glove leather with a special tool on a flat table.

dryer; *leather drier*, *skin drier* (leather); *skinner*; stretches skins on hanks with nail or iron clips on frames; hangs it on poles in drying room or places it on moving rack which carries it through drying rooms; controls power-drive of rack.

dryer (not drying sheds); (1) tends revolving drums, in which washed or dyed skins are dried by expelling water centrifugally; (2) *see* washer.

eager and tender, *see* tawer.

emery wheel buffer; a buffer (q.v.) using an emery wheel machine.

examiner, *see* classifier.

fellmonger; general term for any person employed in fellmongery trade, e.g., washing sheep skins, pulling pelt side of skins with chemicals to facilitate subsequent pulling, pulling wool from skins, sorting wool into grades, dressing skins, i.e., removing flesh and fat, drying the wool after pulling.

flesher (for skins); hand fletcher; *cleaver*; uses single-edged knife having two projections, which is driven into an upright post; sets blade post, drawing fur, by hand, across blade of knife, thus removing superficial flesh and fat; or (heavy skins) throws skin over short heavy iron or beam scrapes flesh and fat with a two-handled knife; sometimes dangles (hangs) skin with a wet cloth to facilitate operation of fleshing.

fletcher, machine; fleshing machine operator; dresser; by hand, over exposed portion of power-driven revolving circular knife, to remove superficial flesh and fat; dangles skins as above; sometimes does work of machine shaver (q.v.); of beam man.

fletcher; smooths flesh side and raises nap on grain side of hide with emery wheel machine; of wheel.

framer; stretches sheepskins, intended for pelts or rugs, on wooden frame, by tying joints with cord at intervals round sheep while drying.

fronter; a beam man (q.v.) who scrapes or pushes same from certain kinds of leather, by hand, with a two-handled knife.

fur dresser; general term for workers engaged in process of preparing fur skins, ready for subsequent manufacture into rugs, garments, etc., including beater, cleaner, curer, flesher, roller, puller, stretcher, tumbler (q.v.).

fur dresser; (1) collects loads of fur, i.e., fur skins from each separate rabbit skin; rolls up each load separately, and packs them into separate bags.

grease scourer, *see* cleaner (fellmongery). grinder; hangs sheepskin on a pole or perch; scrapes flesh side of skin with a special knife, i.e., circular knife with wooden handle, to reduce to an even surface; brushes it all over with scourer, i.e., wooden tool coated with coarse emery; or, to remove roughness after scouring; of perch.

hooper; stretches cords to skins, chiefly around edge; ties them to hoops or frames larger than the skins, stretching them to fullest extent; removes skins when stretched.

layer-out, layer man; lays skin of chosen leather on bench; places heavy weights on it, pulls edges to get skin to approximately square shape; in case of tougher skins first stretches them over a stake, i.e., short wooden trestle, in which is fixed vertically a thin steel blade; puts stretched skins in bundles of 30, coiled lips, and ties up with tape, of layer-out (333).

locker (felt hat), *see* gatherer.

machine hand, machine man, machinist; general term for any person operating a machine, e.g., roller, splinter, shaver, striker (q.v.).

measurer; (1) passes skin or hide, by hand, between teeth of measuring machine which automatically records area on indicating dial; (2) grades position of an avometer round edge of skin or hide, notes area automatically recorded on indicating dial; work usually done by classifier or sorter (q.v.).

moist maker, gold beater's; prepares, from skin of animal skin, small square mould for interleaving sheets of gold for beating, of gold beater (238); washes skin in water; scrapes smooth with hand knife; again washes; cuts to shape by hand.

roller, leather; *puller*; on; *striker*; and *striker* blades or skins on stretching boards or frames; hangs boards or frames in heated chamber to dry.

offal roller, offal finisher; a roller (q.v.) who passes offal, i.e., low grade parts of hide, such as belly, shanks, tail, etc., through pulling machine to harden and polish.

opener and puller (rabbit skins); shaves rabbit skin with hand knife; removes fat with another knife; turns skin; skin side stretches them by hand and either lays them, fur upwards, on bench and scrapes off down, i.e., long top hair with sharp knife, or passes skins into pulling machine which removes down.

parer; passes works on surface of skins, in preparation for shaving or splitting; usually done by hand fletcher (q.v.).

pelt mover (sheepskins); places skins in large pit for dressing; withdraws skins with long-handled hook and sorts out into grades for tanning process.

percher; scrapes hides or skins with moon knife (see grinder), or more usually with stretched stake, i.e., long-handled stretching tool; works on heavier leather than grinder.

pincer, pincer-in; strokes leather, while partly dry, with wooden tool to correct any tendency to dry hard; dangles dry parts with wash if leather is not in correct state of humidity.

pinner; passes hides and skins into a pinning machine, having blades of cylinder which flanges and stretches them.

pit shedman; general term for workers in drying sheds; includes dryer, and laborer (339) (q.v.).

preserver, *see* curer (skins).

puller (fellmongery), wool puller; pinches out wool, by hand or machine, from sheepskins, which have been painted with depilatory to loosen wool, and sorts wool into different qualities.

puller (for dressing), fur puller, skin puller; removes old patches of hair with a rubber, seal, nutria, beaver, etc., by pulling against hair, wearing thumb nail and using tucker, i.e., small knife, removes pieces of bone from tails, etc.

puller-over (fur skins); pulls pelt side of certain fur skins over flesh side to raise skin to facilitate process of fleshing.

roller, roller man, roller; of; *roller*; adjusts space between rollers by means of screw; stretches on power-drive of machine; passes leather between rollers for smoothing and strengthening.

roller and squarer (bad leather); passes, by hand, skin between roller and squarer, through rolling machine, and trims or "squares" them with hand shaver.

roller, butt; a roller (q.v.) who rolls back leather, i.e., heavy leather from prime parts of hides; uses heavier type of machine than belly roller (q.v.).

rounder (fellmongery); trims off shanks and ragged pieces from sides of sheep skins, after drying and drying, in preparation for manufacture into rugs.

rounder (leather); *cutting*; turns hides or skins, by hand, with knife, at any point in manufacture; usually also cuts them into various parts, e.g., cheeks, flaps, shoulders, bellies, leaving belt or thickest section, which may be subdivided into sections called belts.

rounder, warehouse; a trimmer (q.v.) trimming finished hides in warehouse.

scourer (leather); *see* cleaner.

scourer (leather); *blower*, *stener*; works leather by hand with slicker, i.e., small steel hand tool, removing bloom developed during vegetable tanning process.

scourer, machine; a sorter (q.v.) who removes bloom by passing leather through scouring machine.

scraper, skin scraper; scrapes leather, or skin side of pelt, web drier, i.e., small hand tool, to remove superficial moisture after scouring.

scrubber; scrubs hides with brush after they have been soaked, preparatory to washing.

skinner; (1) a beam man (q.v.) who scrapes skins by hand with two-handled knife after peeling, or basting, to remove dirt, pigment, hair undergrowth and roots; (2) passes skins under revolving brush of skinner, between rollers of machine, or skinned blades of revolving bladed cylinder; switches on or off power-drive of machine.

shaver; smooths flesh side of leather or skin by shaving by hand or with machine rotary knife.

shaver, bulk; a shaver or beam man (q.v.) who removes major inequalities from flesh side of hides and skins, by hand, with shaving knife; sometimes removes superficial flaws from hides and skins by same process.

shaver, machine; shaves layer from thick skins or from part of skins, e.g., bears' heads and shankskins, holding them against revolving power-driven circular machine knife; sometimes done by machine fletcher (q.v.).

shedman, shed worker; general term for skilled and unskilled workers in drying sheds and warehouses, e.g., dryer, dryer (339) (q.v.).

sheep skin salt maker; soaks pelt side of skins, rubbing in alum and salt water, by hand; places skins in revolving drum containing grease solvent to degrease them; washes them by hand, with brush, soap and soda water; places skins in hydro extractor to drive out excess of water by centrifugal force; hangs them in drying chamber ready for framer (q.v.).

skin dresser; passes skin, alum, or other preservative on flesh side of hides or skins before leaving slaughterhouse for tannery.

skinner; general term to denote a worker skilled in the curing and dressing of fur skins.

skin selector, *see* classifier (fellmongery). skinner; (1) shaver or skinner (leather), by hand, with knife, reducing to an even thickness; (2) passes leather beneath bladed cylinder or under emery wheel of shaving machine.

slubber; passes hides or skins into machine having bladed cylinder to scour them.

slucker; passes hides or skins into a slugging machine, having bladed cylinder, which stretches and flattens them.

sorter; hides sorter; leather sorter, skin sorter, warehouse sorter, *see* classifier.

splitter, splitting machine feeder; passes leather into splitting machine, which splits leather into two portions, i.e., flesh side and hair side; uses roller.

superman of chief splitter (331) (q.v.); sometimes specifically designated, e.g., hide splitter, of; splitter, pelt.

splitter, pelt; passes hides and skins in wet flaked state into splitting machine, using great care; a lubricant brings knife into contact with emery wheel grinder in machine to sharpen blade.

sticker, *see* scourer.

stover, leather stover, *see* dryer.

stove hand (leather), *see* dryer.

stretcher, *see* roller, leather.

stretchor; stretches fur skins, by hand, on table or bench, across a rope or across a frame, to remove wrinkles, extending skins with great care to fullest extent, and to bring up fat in preparation for fleshing, *see* flesher.

striker, *striker-out*; (3) lays wet hide or skin on a slate or marble slab or table, and rubs it with a hand "licker," tool, of stone or steel, to stretch it, drive out excess of moisture, smooth it, and to clean grain; (4) sets rollers of a machine (resembling a mangle) in motion by working a treadle or by attaching to power-drive, and passes skin or hide between revolving rollers, to stretch and smooth them; sometimes specifically designated, e.g., belt striker, belly striker; cf. official striker.

striker, *official*; passes off leather, i.e., made from bellies and shoulders of hides, into power-driven striking-out machine, fitted with blades or cylinders which revolve and smooth out wrinkles developed during tanning.

table band, *table man*; general term for worker on hides and skins on a table, including dumper, *off* (335), *striker* (q.v.).

tan worker; general term to cover skilled and unskilled workers in tan yard.

taper; *off* and *under*; *installing* with skins, by hand, to produce soft, white leather for gloves, etc.

trimmer; *cover*; removes ragged edges of hides or skins, by hand, with strong shears in limpage, tawp, or in wash-basin.

tubber; works in tub and treads small skins, smeared with tano, to soften and "leather" them.

turner; *dryer*; turns over rabbit and other skins that are drying in open air, to hasten their drying.

unbinder (*flint*); loosens certain kinds of skins, e.g., seal, beaver, astrak, with a wet cloth; beats before fire to open pores of skin; places covered put on a support and pushes the hair out, causing loose source hairs to fall out; then pushes small knife over fur to level and smooth surface.

unbinder (*lantern*); *deslayer*; (1) a beam man (q.v.) who spreads hides or skins on wooden beams; sweeps hair, by hand, with two-handed knife; (2) passes hair from skins from line belt, between unbinding machine, removing hairs.

washer (*fillmongery*), *see* cleaner (*fillmongery*).

weather-in, *see* dumper.

wheeler, *emery wheeler* (*polier*); finishes flesh surfaces of dressed skins on emery-covered wheel, of duffel; may also remove thin layer from grain side, e.g., butter; cf. whitener and whinner (bols and skins) (334).

wheeler, *colour*; *an* emery wheeler (q.v.) who makes up an emery leather with emery wheel, generally wheeling behind and after colouring.

wheeler, *wet*; grinds hides or skins, while wet, on emery wheel or other high speed wheel to remove unevenness from flesh side.

wool dryer; dries wool, after washing, in heat of warm air, or by laying out on floor of heated kiln.

wool washer; washes wool by hand in series of troughs containing soap, alkali, and warm soft water, or in washing machine.

330.—OTHER WORKERS.

bark grinder, *barkder*, *bark mill feeder*; *mill feeder*, *grinder*; shovels bark into hopper head of power-driven machine, shredding, splitting, and grinding it in preparation for use in tanning; sometimes also controls power drive of machine.

boarding machine operator; passes harness leather, after greasing, into boarding machine, i.e., fitted with rollers or blades, which roll it softer down it flows, to soften leather.

cutter, *see* labourer, *drum* (*for dressing*).

dipper; combes out fur after leathering.

dipper; *dyer's* labourer; finishes and carries skins or leather; dips or suspends them in dye liquid; removes them as directed; loads and unloads drum tumblers; assists *dyer* (335) (q.v.) generally and usually works under his direction.

drum and cage hand, *see* labourer, *drum* (*for dressing*).

drummer, *see* labourer, *drum*.

drying shed worker; assists *dryer* (336) (q.v.).

dye tray boy; assists *dyer* (335) (q.v.); draws skins through dye tray.

grinder, *see* bark grinder.

hair washer; washes dirt, blood, etc., from hair and wool skins as received from slaughterhouse by agitating them in large tubs of water called jakes, in which he stands.

horseman; hangs chrome hides on horse or frame to drain after tanning.

hydro attendant; loads with hides, skins, hair, etc., hydro extractor which extracts grease, liquor or water from them by centrifugal action; switches on or off power-driven machine; supplies hydro when process is complete.

labourer, *currier's*; assists *currier* (334) (q.v.) by lifting skins and hides, and preparing belting.

labourer, *drum* (*for dressing*); *drum worker*; *oager*, *drum* and *cage hand*, *drummer*; loads and unloads drums and cages used in connection with cleaning and leathering of fur skins; finishes and carries fur skins; works under direction of foreman (331) (q.v.).

labourer, *drum* (*leather*); *drummer*, *tumbler*, *tumbler man*; fills drum tumblers with hides and skins, and empties them when process is completed; finishes and carries loads of hides or skins; works under direction of foreman (331) (q.v.).

labourer, *dyer's*; *see* dipper.

labourer, *lime yard*; *pit labourer*, *yard man*; assists in handling hides and skins in process of retanning hides; cf. lime jobber and pitman (335).

labourer, *pit*; (1) *see* labourer, *lime yard*; (2) *see* labourer, *tan yard*.

labourer, *skin yard*; helps generally in foreman's yard, loading, carrying, washing skins in water tubs, putting dipping liquor substance on skin, etc.; cf. lime jobber (334).

labourer, *tawp*; *tanner's* labourer; *put labourer*, *tan worker*; helps generally in leather tanning process in tan yard; lifting hides or racks of skins, stocking and dressing.

leather, *leath* center, *leathman*, *leathman*, *leathman*, *see* liquor man; cf. leathman (335).

liquor man, *liquor runner*; *leath center*, *leathman*, *leathman*, *leathman*; puts back, series of vats where they are infused with water to make tanning liquors, under direction of liquor blender (335) (q.v.); turns on valves, opens, etc., to admit water to vats and to set going automatic pumps which draw liquor from vat to vat for liquor blending; empties spent bark from vats with shovel; cf. liquor blender (335).

loader; loads finished or semi-finished goods into lorries or railway wagons.

mill hand (*fur skin*); one of a gang who, under supervision of foreman millhand, (331) (q.v.) greases fur skins, place them in tanning machines for tanning purposes, put skins in drum tumblers for cleaning with mudst, and remove them when clean.

mill tender, *see* bark grinder.

opener (*fillmongery*); makes holes of main skin, spots down set and stretches them in readiness for carrying.

paddingman; (*fillmongery*) puts sheepskins in padding machine, i.e. large wooden cylinders fitted with revolving paddles; turns valve, admitting water to machine; switches on power-drive of machine; carries skins after spotted; period; (2) assists in filling pots with hides and skins; operates levers to start or stop mechanical paddles for agitating liquor in lime, bark or tanning pits, or in washing or deliming vats; changes gear of paddles to increase or reduce number of working paddles; removes hides or skins, when process is complete, with long-handled hook or pole.

pumper, *see* liquor man.

rabbit down worker; (1) general term for worker preparing rabbit fur for felt making, including open, *carrier* (334), *gatherer* (335); (2) works on the shaven fur or down to soften it before despatch to felt hat maker.

stamper; marks leather with stamp, either by hand or machine.

strapping boy; assists *seller-on* (336) (q.v.), *finishes* leather on to frames for drying.

tan worker, *see* labourer, *tawp*; cf. tan worker (330).

tumbler, *tumbler man*, *see* labourer, *drum* (*leather*).

vacuum band; places hides and skins in vats of vacuum leaching machine under direction of tawp/foreman (331) (q.v.); removes them when process is complete.

washer (*leather*); washes leather by hand, after tanning, to remove extraneous matter, washer, bend; a washer (q.v.) who is engaged in washing head leather, i.e., crute section of hide which is prime quality.

yardman, *see* labourer, *lime yard*.

Sub-Order 2.—Makers of Leather and Leather Substitute Goods (not Boots and Shoes).

342.—CUTTERS-OUT.

clicker, *see* cutter; sometimes specifically designated, e.g., *accoutrement clicker*, *leath clicker*.

clicker, *accoutrement*; a round knife outer, or straight knife outer (q.v.) who cuts leather by hand, using either round or straight knife, for the purpose of making accoutrements.

cutter, *outer*, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*; a round knife outer, or straight knife outer (q.v.) who cuts leather by hand, using either round or straight knife, for the purpose of making accoutrements.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*; a round knife outer, or straight knife outer (q.v.) who cuts leather by hand, using either round or straight knife, for the purpose of making accoutrements.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cutter, *outer-out*, *outer-out*; *clicker*; sorts leather, and examines each piece for grain, noting weak sections, and skins pieces for various uses; cuts leather into pieces for making bags, belting, harness, etc., usually by hand, with knife, using also templates, patterns and measuring gauge.

cornerer; (1) applies cement to joints of leather belting, by hand, with brush; folds belts by hand; lays belts in a box screw press, so that twenty or thirty connected joints lie on top of one another under press, then screws press down, by hand; (2) applies cement as above; lays belts in hydraulic press, moving lever, outside press to come down on joints of belting.

finisher; polishes edges of belts or belt leathers by hand, with a spokebrush, or cuts belting into polishing machines; applies size to surface of leather with a brush and "glazes," i.e., finishes with glass hand tool on revolving table.

fitter, fitter-up; makes up; trims and squares; (1) and bevils off squared ends with gutliner knife; passes end of strip into power-driven sewing machine to sew or braid them; squares them again with knife; finishes with spokebrush and passes strip to order (q.v.); sometimes cards or roughens end himself.

jobber, see repairer.

leather band maker; mill band maker; general term for operative who makes leather belting throughout, as distinguished from one who performs only one operation; splices and joins, stitches and machines, prepared leather bands as received from leather band order (342) (q.v.); sometimes also cuts them.

maker-up; see fitter.

mill band maker, see leather band maker.

preparer; *sawtooth*; prepares or sorts strips of leather for splicing machines; often does by splicer (q.v.).

repairer; jobber; repairs or remakes parts of broken or worn belting; of belt-maker, riveter (leather belting); punches holes in leather strip, by hand, with punch and mallet; inserts copper rivets and harness ends etc.

rougher, see carder.

sawtooth, see preparer.

sewer; *stitcher*; (1) makes holes in belting with hand tool, inserts lace in holes, by hand or machine; (2) when leather lace is used, trims edge of lace, by paring with a knife; trims ends after machine work with belt surface, by hand, with a knife.

sewer, laced; trims laces and stitches laced belt joints, by hand.

sewer, wire; keeps hand on wheel of power-driven wire-sewing machine, thus controlling pressure of foot of machine to sink various leather belting which passes automatically through wire-stitching machine.

splicer; one gauge of machines, by hand, to required length of splice; draws strip of leather firmly in position by using a saw; turns wheel or pulls lever of machine, thereby bringing strip of leather in contact with knife of machine, which cuts a tapered sort of splice; sometimes also does preparatory sorting, see preparer; sometimes also does fitting, see fitter.

squarer, squarer-up; straightener; places leather under frame, with steel straight edge, cuts it by hand, with half round knife, or passes leather into cutting machine, hand-manipulated but having cutter attachments.

stitcher, see sewer.

straightener, see squarer.

strap man, strap mender, strap piecer (machine belt), *as for* belt maker, working on small straps for machinery.

strapper (trawlers); removes hanging straps of trawlers, which have been repaired as defective by our examiner (314), and replaces them with new ones; rivets feet with small riveting machine hammer.

344.—SADDLERS AND HARNESS MAKERS.

bride machinist; a *brille* stitcher (q.v.) stitching bridles by machine.

brille maker; stitches together parts of leathers and reins, by hand, using awl for boring holes and waxed thread for stitching; *as for* brille order (342).

brille coverer; *covered brille* maker; covers brilles with damp leather, stitching by hand or machine.

carriage strap maker; cuts and stitches carriage straps; usually does by harness stitcher (q.v.).

collar machinist, horse collar machinist; stitches together parts of collar, by machine.

collar maker, horse collar maker; cuts out and shapes roughly cut leather and other materials, with knife and template; stuffs with straw, hair, etc. stitches up—by hand, principally—and finishes order by polishing with composition and cloth.

covered brille maker, *see* brille coverer.

curb maker; makes bridle curb of leather, by cutting and stitching or plaiting; learns now nearly obsolete; work usually done by brille maker (q.v.) or harness maker (q.v.).

Devershire slipper maker; a brown saddler (q.v.) who makes the fitting known as a slipper for one type of lady's side saddle; cuts out leather and sews pieces together and finishes, i.e., trims edges, and polishes, all by hand.

dumb jockey maker; a saddler (q.v.) who makes, i.e., assembles and fits together, "dumb jockeys," dummies made of leather, wood and iron and placed on back of horse during training.

fellock boot maker, *see* horse boot maker.

fore-wale fitter; a collar maker (q.v.) who makes wale of horse collar.

front maker, bridle front maker; cuts out leather piece on front of harness or bridle by hand with knife; examines fancy stitching and embossing by hand, with beaded embossing tool; if working on painted leather may be called painted front maker; usually made by brille order (342) (q.v.).

girth maker; general term for makers of girths; sometimes specially designated, *e.g.*, leather girth maker and web girth maker (q.v.).

halter eyeletter, *see* headstall eyeletter.

hame coverer; covers hame of horse collar with leather; occupation practically extinct; where necessary, work is done by harness maker (q.v.).

harness furniture coverer; a harness maker (q.v.) who cuts out and stitches covers for harness furniture (bookies, etc.).

harness maker; one leather, with knife, into pieces for making harness, except for the brille order; picks holes with a punch for stitches; sews holes with awl in preparation for taking; trims and polishes edges with spokebrush, glass paper, and glass; dyes edges black or brown with composition; lines or crapes parts of harness with beaded cramping iron; punches holes, where required, with punch and hammer or mallet; sometimes also stitches certain parts by hand; usually passes on to harness stitcher or to machinist (346) (q.v.) for sewing by machine.

harness ornament maker (leather); inserts ornament tie in power of head press; lays leather on bed of press and moves lever causing die to stamp out pieces of leather to required shape; assembles pieces and stitches them together by hand to form rosettes and other leather ornaments for decorating harness.

harness preparer; when work of harness making is sectionalized, does by hand, some or all of operations of harness maker (q.v.), except cutting and hand stitching.

headstall eyeletter; halter eyeletter; cuts or punches holes in headstalls or halters and inserts eyelets therein.

horse boot maker; fellock boot maker; inserts dies in power-driven or treadle press; lays material on bed of press and moves lever causing die to stamp out leather and felt parts of horse boots (fellock boots) or of knee caps; cuts pieces together, by hand, and passes to machinist (346) (q.v.) for stitching; sometimes also polishes and dyes edges and polishes leather parts with composition.

knee-cap maker; a horse boot maker (q.v.) engaged in making knee caps.

leash maker (leather); cuts long strips of leather; stitches or plaits them to make dogs' leashes or leads.

leather girth maker; a brille order (342) (q.v.) making leather girths.

pad blinder; receives pads, cut out and tacked up, from pad maker (q.v.); binds edges with thin leather strips or webbing usually by hand but sometimes by machine; sews pads to saddle, by hand or machine.

pad maker; a leather worker in saddlery trade who makes saddle pads of leather and cloth by hand and stuffs with hair, etc., sews by hand or machine; also does work of pad blinder (q.v.) where work is not sectionalized.

painted front maker; a front maker (q.v.) who makes bridles of painted leather; may paint leather.

pannel maker; cuts out and shapes pieces of leather; stitches them to black them with composition; brushes on polish and applies dye to edges; all done by hand.

rein maker; cuts out leather with knife, by hand, using measuring gauge; smoothes and polishes edges with glass paper and glass; applies black composition or brown dye to edges with a brush and pad; does sewing, where required, by hand; lines or crapes reins with beaded cramping iron.

rosette maker, *as for* harness ornament maker.

saddle maker; *saddler*, *saddle worker*; makes saddles throughout; stretches webbing and covers across saddle tree, warps and covers with leather, which he cuts to proper shapes, *see* brown saddle.

saddle maker, riding, *see* saddle brown, saddler; (1) *as* saddle maker; (2) general term for any worker employed in saddlery and harness trade; usually a man having knowledge of several occupations in one or more of which he is a specialist.

saddler, black; *harrows* saddler; cuts out leather by hand on cutting band with knife, for driving harness, using templates or patterns; applies black composition with brush; polishes by hand; applies dye to edges with brush and pad; also sews and stitches by hand or passes to machinist (346) (q.v.).

saddler, brown; *riding saddle* maker; makes riding saddles; cuts out leather, by hand, and builds up on saddle tree, shaping, setting, padding and stitching, all by hand; *cf.* saddle black.

saddler, rig; *black* saddler (q.v.) who makes small driving saddles for gigs, traps, etc.

saddler, harness, *see* saddler, black, saddlery and harness repairer; a *saddler* (q.v.) who does repairs to saddlery and harness by hand or by machine.

saddle repairer; *as* saddle maker, by hand or machine, passes finishing saddle.

saddle worker, *see* saddle maker, splicer; sorts or tapes two ends of rein, trace, etc., with a knife; pierces holes with an awl; sews ends together with waxed thread to make a splice.

spur leather; *as* saddle, stitches and makes leathers for spur attachments by hand; usually done by brille order (342) (q.v.).

stitcher, bridle; stitches bridles and reins, usually by hand but sometimes, for cheaper work, by machine.

stitcher, collar; stitches together part of collar, by hand.

stitcher, harness; stitches harness, under direction of harness maker (q.v.).

stitcher, saddle; stitches saddle by hand, after has been made up by brown saddler (q.v.); usually in training to become brown saddler.

web girth maker; stitches leather parts or attachments, by hand, to girths made of textile material; also cuts leather into pieces, by hand, for making parts or attachments.

345.—MAKERS OF BAGS AND TRUNKS.

attached case maker; a case maker (q.v.) who makes attached cases throughout.

bag liner; fastens or glues machined linings into leather bags, by hand, or glues lining material to cardboard frames, places them on bags or attaches linings with strap fasteners, which are sewn on by hand.

bag machinist; sews pieces of leather together with sewing machine to make bags; also machines linings for bag liner (q.v.) to fit into bags.

bag maker, travelling bag maker; general terms for any worker able to stitch and finish throughout any kind of leather bag.

bag stitcher; (1) stitches Gladstone bags round top by hand after frame has been prepared by bag framer (q.v.); (2) stitches bags of certain types by power-driven machinery.

bag worker; general term for worker engaged in any process in making bags (other than ladies' hand bags, which are made by fancy leather workers).

case maker, brush; a case maker (q.v.) who makes brush cases of leather; work generally similar to applied case maker (q.v.), but less accuracy is required and cases are not blocked.

case maker, hat; a case maker (q.v.) specializing in leather cases for hats.

case maker, leather case maker; makes leather cases throughout, almost entirely by hand, combining the duties of case maker (812) and bag framer (q.v.), and sometimes other workers also, among whom work is now more usually sectionalized; cuts out leather by hand with a knife, using templates or patterns; glues pieces of leather to one to stiffening boards; pricks holes in leather, either by hand, with a steel punch and a mallet, or by guiding leather over a plate or bed under a power-driven pricking wheel; then stitches, either by hand or on a power-driven sewing machine; sometimes also makes and/or finishes, as described under handle maker, bag liner, and finisher (q.v.).

cleaver, see stitcher.

cleaver, case; (1) guides case, by hand, into power-driven sewing machine, which sews corners, ends and "lengths" into cases; (2) for high-class fitted bags or cases, scribbles line or guide with hand scriber and stitches above this line by hand.

cricket bag maker; a bag maker (q.v.) making leather cricket bags; turns bag after moulding, stiffens it and fits frame ready for lining.

dressing case maker; a case maker (q.v.) making leather dressing cases, usually fitted for moustache sets and hair brushes.

draw out case binder; adjusts screws on binding machine, so that it will take required thickness of draw sheet; passes sheet against gauge into machine, where it is bent at right angles; starts and stops machine by pulley lever, switch, etc.

finisher; (1) puts trimmings in portmanteaux, satchels, cases, and similar articles; cf. bag liner; marks positions for locks, handles, etc., with a hand-manipulated and hand-adjusted machine called a "positioner," and fixes tools, handles, etc., in positions marked; (2) ornaments case in various ways, e.g., puts embossed work on cases, by means of a hand-manipulated and hand-adjusted machine called a "combining plate," or paints surface of leather with aluminum composition, lays on gold leaf (in form of lines, etc.), and trims it in with a heated crossing iron, or trims in plain lines in some way with a heated crossing iron; (3) letter cases, edges of cases, bags, etc., either by hand with a trimming knife, or by holding edge against revolving glassplate-covered roller of a power-driven grinding machine; sometimes also dyes edges, by applying staining composition by hand with a pad; cf. framer (345), framer, bag framer, cover set frame as top of bag with handle, by hand, using pliers; if a "stitched" bag, fits and partly stitches leather to frame ready for bag stuffer (q.v.); in making certain types of ladies' hand bags, sometimes cuts leather completely to bag with needle and thread through hole in metal frame; if a "riveted" bag, prepares for bag riveter (q.v.) or once usually himself rivets leather to frame by hand or with riveting machine.

handle maker; (1) makes "rider," i.e., a fitting of sheet and paper; covers it with handle leather, which has been roughly cut by clicker; stitches leather with machine or by hand; shapes and seals handles by hand; (2) makes solid leather handles; shapes stamped-out parts; glass pieces together ends and trims; covers with this leather, stitches and finishes.

kit bag maker; a bag maker (q.v.) who specializes in making kit bags.

ladies' bag maker, as for dressing case maker.

leather trunk maker; portmanteau maker, travelling bag maker, trunk maker; makes leather trunk throughout, (1) entirely or mainly by hand; cf. case maker, except that leather is riveted to frame, either by hammering in by hand hand-riveted rivets, or by guiding work by hand into machine which automatically

inserts rivets and stamps them in position; (2) by use of machinery where manufacture is sectionalized in two or more processes, i.e., cutting out leather, stiffening and building it, riveting, stitching, lining and finishing.

marking; (1) leather bags and trunks; receives leather from preparer (345) (q.v.), who has marked lines to which machinist is to work; guides work by hand on plate or bed under needle of power-driven sewing machine, ready for framer (q.v.).

muslin case stitcher; a stitcher (q.v.) or assisted maker (q.v.) who sews leather muslin cases; usually sews other fancy leather goods also.

optional case maker; a case maker (q.v.) who receives leather parts, rivets and other lining, cut to size and shape required; sews leather parts together and attaches straps and loops, using an awl to prick holes for needles and sewing with needle and thread in each hand; shapes and stiffens case by blocking, i.e., spreads glue on a thin strip of steam softened wood and binds strips round inside case; inserts a block of wood or paper machinist carved to required shape of case; gives tension by inserting wedges between block and strips; blocks lid in same way; glues in velvet or other lining; crosses leather parts (body, straps, and loops) by pressing a heated cross-rod along required line; rolls edge of case smooth with hand tool; if required glues in velvet covered wooden and other fittings.

portmanteau maker, see leather trunk maker.

riveter, bag riveter, riveted bag framer; rivets leather to frame of bags, trunks, etc., by hand or with riveting machine; cf. bag framer.

roller maker; binds a roll of paper, by hand, tightly with string, sometimes adding glue for strengthening purposes; see mangle roller, i.e., internal filling of leather handles for bags.

stitcher maker; a fancy leather worker (345) (q.v.) stitching and finishing satchels; usually also makes other fancy leather goods.

small case maker; a leather case maker (q.v.) who makes small cases, such as cases for binoculars, flasks, periscopes, telescopes, etc.

stitcher; *cleaver*; sews bags, cases or other leather goods, by hand.

strapper; attaches straps to bags, trunks, etc., by hand or machine stitching or by riveting.

suit case maker, as for attached case maker.

travelling box maker, see leather trunk maker.

trunk maker (not wood or metal), see leather trunk maker.

trunk packer (fitted up); fits pockets and linings to dress suit cases or fits trunks in trunks.

violin case maker, as for attached case maker.

348.—OTHER SKILLED WORKERS.

army accoutrement maker; general term for maker of leather accoutrements, including leather requirements for horses and guns, as well as for men; sometimes specifically designated, e.g., scabbard maker, hand-doller maker; an army accoutrement maker (q.v.) specializing in cutting and stitching leather for hand-dollers; work usually sectionalized, in which case men cuts and women stitches.

boot, lace maker (leather); cuts leather laces by hand with a knife or by machine plough and gauge, or by holding knife stationary on circular piece of leather with one hand, turning leather round with the other, cutting a spiral strip.

boxing glove maker; cuts leather and/or canvas roughly to shape with a knife by hand; pulls with pincers to make supple and even; then cuts to exact shape with knife and templates; passes to sewer (q.v.) who stuffs by hand and returns to sewer for closing.

boxing glove sewer, boxing glove stitcher; stitches together, by hand or machine, pieces of leather or canvas, cut out by boxing glove maker (q.v.); returns glove to maker for stuffing; afterwards closes it by final sewing.

cleaver, see sewer.

compressed leather maker; leather sheet maker; mixes leather shavings, by hand, with glue; places mixture in heated mould in hydraulic press; moves lever, causing press to compress mixture, which becomes after specified period of pressure, sheets of compressed leather; removes sheets from press.

diaphragm maker (gas meters); leather diaphragm maker; *gas meter*; *diaphragm maker*; *leather type*; selects die outline of required size and patterns; inserts leather in press under cutter, moves handle, causing cutter to stamp out leather diaphragms for gas meters, etc.; changes dies as required.

dog collar maker; a strap maker (q.v.) who specializes in making leather dog collars.

fancy leather goods maker, fancy leather goods worker, fancy leather worker; general term for any worker engaged in any process of fancy leather goods making, e.g., cutting, pressing, stitching, etc.; includes makers of book, hand-bags, cigar cases, etc.; sometimes specifically designated, e.g., ladies' hand-bag maker, leather pouch maker, leather purse maker.

finisher; adds various small fittings to bags and other leather goods; gives final polish with solution of bees' wax and turpentine; cf. finisher (345) and polisher (349).

finisher (whip); assembles whip fittings, mounts, etc.; affixes thong with waxed thread; performs other necessary operations, varying with type of whip, varnishes.

football examiner; examines footballs before and after they have been inflated, to see that all sections are of good shape and stitched together; rejects defective covers.

football finisher; fashions seams with a hammer, after they have been machine stitched by football stitcher or sewer (q.v.); cuts holes for laces with hand punch and inserts handles.

football maker; roughs out leather, by hand, with knife, or power clicking press; stretches with pincers and cuts to required shape by pattern; or gets together sections in readiness for football stitcher or sewer (q.v.).

football sewer, football stitcher; stitches together, by hand, sections of football case on inside with waxed hemp; stitches round opening by hand or machine. **football worker**; sorts cases or outside covers of footballs, after manufacture, according to size and quality.

gutter maker, gutter maker and/or cloth by hand with knife, or by placing leather on bed plate of power-driven cutting machine, moving lever and causing cutter to cut leather to required shape; stitches parts of gutter together, by hand or power-driven sewing machine; sews on buttons and works button holes by hand.

gas meter bellows maker, see diaphragm maker.

hoidnall maker; cuts leather and canvas by hand with knife, using patterns; directs machinists in sewing; finishes and adds fittings.

hose maker, leather hose maker; makes leather hoses, bending elbed leather sheets into tubular form, riveting overlapping edges; joins tubular sections by riveting.

lace and/or strap maker; cuts narrow strips from raw or cured hides, by hand with knife, using small gauge, to make boot laces, ropes, etc.; looms for engine belt, cut from tough hides.

leather belt maker; cuts belts by hand; prepares them by pricking with hand, pricking tool and mallet, or by passing into pricking machine; inserts eyelets, by hand or by passing belt into eyeletting machine; ornaments with lines, using hand-dressing iron; stitches by hand or machine; finishes by hand dyeing and polishing; work often done by saddle or bridle maker (346) (q.v.).

leather bridle maker; (1) cuts out by hand or by cutting machine; pricks holes and inserts eyelets, by hand or machine; and stitches by hand or machine; (2) in the case of webbing braces, attaches leather parts.

leather bucket maker; makes leather buckets by cutting out leather by hand, using knife, compass and cutting board; stitches and rivets by hand or by stitching and riveting machines.

leather buffer maker, *see* picker maker.

leather leggings maker; (1) makes leather leggings throughout, i.e., cuts out, or rounds and sets leather by hand, using hand knife and patterns; blocks leather by wetting and shaping by hand on a wooden block; stitches by hand or machine; crosses or indicates with heated cramping iron; attaches fluting by hand; polishes edges with bone hand tool and pad; (2) where work is sectionalized, performs one or more of above operations.

leather machinist; general term for expert in using hand or mechanically-driven machines for stitching one piece of leather to another.

leather pouch liner; stitches by hand or machine into pouches, lining of sheet rubber, silk, etc.

leather sheet maker, *see* compressed leather maker.

leather typer, *see* diaphragm maker.

leather worker (artificial limbs); cuts leather and webbing with hand knife, and fits it on plaster or other mould; blocks leather, wetting and shaping it by hand over plaster or metal mould; stitches leather and webbing by hand or machine; indicates lines as straps with heated cramping iron; finishes work with hand tools.

leather worker (leather goods); general term for any worker, usually machinist, engaged in the making of purses, bags and other leather goods.

leather worker, orthopaedic; cuts out, stitches and fashions leather parts of leg irons, leg supports and other similar appliances.

machinist, sewing machinist; uses treadle or power machine to stitch leather goods and linings, usually under direction of cutter or maker.

photo frame maker; a fancy leather worker (q.v.) engaged in covering photograph frames with leather, by hand.

picker maker, picker and buffer maker; leather buffer maker; cuts by hand with a knife leather or raw hide, blocks or rounds it to shape in hand manipulated hydraulic press, to make picker (part of loom which throws shuttle across warp through shed); sometimes specifically designated, e.g., buffalo picker maker.

plaster and finisher (whip), *see* thong maker.

preparer; (1) selects leather according to grain and colour; indicates lines, along which stitching is to be done, by scribbling with hand scriber or pricking holes by hand punch or machine pricker; skives edges of leather, to fit well together, holding them against power-driven rotary knife of skiving machine; (2) applies stitching composition to edges by hand with pad; tanners, i.e., smooths edges by hand, with retreating knife or by holding against revolving power-driven emery or grinding wheel; sometimes also polishes with wax composition, by hand.

pricker, pricer or perforator, leather goods to mark out lines, along which stitching has to be done, either by hand with pricking punch or by guiding leather over bed of power-driven machine fitted with revolving pricking tool; sometimes also does other work of preparer (q.v.).

repairer; repairs any class of leather goods.

riveter; operates riveting machine to fasten army accoutrements, belts, etc.

roller coverer, leather roller coverer, roller coverer and cleaner; cuts out leather and cloth by hand with knife, for covering rollers of textile machine; punches holes in leather at ends with awl; grades leather or cloth over rollers; threads laces through holes, draws taut and fastens or ties them.

sailor's palm maker; cuts out leather, by hand knife, portion of sailor's palm used by sail-makers to protect palm while sewing and save on backle and metal palm piece by machine.

seaboard maker; an army accoutrements maker (q.v.) specialising in cutting leather and stitching covers for seaboards.

sewer, hand sewer; sewer, stitcher, sealer; sews or stitches leather or leather goods, light or heavy, by hand.

stitcher, *see* sewer.

strap maker; cuts out leather to gauge by hand with knife or by machine, preparer, i.e., cuts ends by hand to shape for buckle and loop; sews them by hand; punches holes in strap with hammer and punch or in punching machine; vests or lines edges with hot cramping iron; polishes edges with glass paper and polishing composition.

strap maker; a worker engaged in one or more of the following operations found in making of razor straps; e.g., cutting-out leather, by hand, with knife or cutting machine; preparing, i.e., cutting ready to shape, cutting and waxing backs stitching backs to handles by hand or machine.

thong maker, whip thong maker; preparer and sewer (whip); cuts leather by hand, photo over whalebone, to make thong of whip; rolls thong by hand in chalk for whitening.

tool roll maker; cuts, prepares and stitches together leather to form a tool roll or case for holding tools, such as his, etc.

welter, *see* sewer.

whip handle coverer; (1) cuts leather to size by hand, with knife; damps or wets leather to soften it; fits it to handle; sews same by hand or machine; (2) glazes leather strands on to handle to form cover.

whip handle stitcher; (cheaper goods) cuts strips of leather by hand with knife for handle and makes up sewing machine; slips leather strips over stock and glazes into position.

349.—OTHER WORKERS.

glazer and dresser (leather laces); hangs a number of laces on a peg, and rubs in dressing of tallow and other greases by hand.

harness polisher for saddler; applies composition to harness with brush or pad, brushes until polish appears.

moppler; a polisher (q.v.) who uses a revolving mop or brush, on a lathe, to polish leather goods.

polisher, leather goods; polishes made-up leather goods by rubbing with a solution of bees' wax in turpentine; cf. finisher (342) and (343).

preparer, different names, etc., in leather goods by using hammer or hand press.

roller (leather laces); knots one lace loosely round another; rubs it up and down the other to get a round-section effect.

tanner and roller (whips); spreads side over whip stock with brush, after larding; passes iron hand roller over stock to remove roughness.

ORDER XII.—TEXTILE WORKERS.

Sub-Order 1.—Textile Workers.

351.—FOREMEN AND OVER-LOOKERS.—BLOWING ROOM.

blower major, blowing foreman, blowing room gaffer, blow major, blow room major (slang), scutcher forman, scutcher gaffer (slang); is in charge of blowing room operatives (352) q.v. and is responsible for the proper running of machines under general direction of carder (353) q.v.

352.—FOREMEN AND OVER-LOOKERS.—SORTING AND BLENDING.

foreman wool sorter; wool foreman; directs distribution of wool to sorters (364) q.v., opening of bales, and removal of wool after sorting; must understand technique of wool sorting, and sometimes sorts fleece himself.

inspector, wool inspector (wool sorting); examines sorted wool, to ensure uniformity in sorting and exclusion of waste and dirty wool; may also value damaged wool under buyer's authority.

overlooker; is responsible for running and efficiency of wool sorting department; superintends work of foremen; sometimes also does work of foreman.

wool foreman, *see* foreman wool sorter.

353.—FOREMEN AND OVER-LOOKERS.—CARDING, COMBING AND DRAWING.

carder, carding engineer, carding master, card master; (1) (notion) card overlooker, card room gaffer (slang); superintends all operations in card room of cotton mill, and usually also all other processes preparatory to spinning, including scutching, dirtying, shubbing and turning; is responsible for running of machinery and for quality of carded cotton turned out; (2) (in silk trade) is in charge of silk waste card room; supervises operations of carding and combing; (3) (in sort of combing) an overlooker q.v. in carding section of a wool combing establishment or department; cf. carder (353).

carding master (flax and hemp), *see* for carder (cotton).

carding overlooker (wool); an overlooker q.v. in carding department of woollen mill, or in carding section of a wool combing establishment or department.

card overmaster (flax and hemp), *see* for carder (cotton).

card room gaffer (slang), *see* carder (cotton).

foreman, *see* for overlooker.

foreman carder (felt); an overlooker q.v. in charge of card room where wool or hair is opened out; advances carding machines.

foreman card grinder; a foreman in charge of card grinders (354) q.v.

frame overlooker (card room); an overlooker q.v. in charge of carding department where work is done upon frames, of which there are many varieties.

gill setter, gilling box overlooker (wool and worsted); an overlooker q.v. in charge of gilling section, preliminary to drawing, specially ensures that there is even admixture of worsted fibre passing through gill boxes.

head carder (cotton); the principal carder where an under-carder q.v. is employed, or where there are several carders; is in control of whole carding department.

overlooker; is in charge of a carding, combing, drawing or preparing department of a textile factory, or of some section thereof; is responsible for setting and running of machines, and often himself adjusts them and carries out necessary repairs; also is responsible for quantity and quality of output of machines in his department or section; usually engages and discharges workers; often further distinguished according to department e.g. card overlooker, combing or scutcher overlooker, drawing overlooker.

preparing master (flax); is in charge of preparers (359) q.v. and is responsible for keeping preparing machines in efficient working order.

scribbling engineer, scribbling overlooker (wool); an overlooker or carding engineer q.v. who is in charge of several sets of scribbling machines, i.e. first of three carding engines in series; sees that machines are running properly and is responsible for work turned out; adjusts rate of feed and supervises general working of machines.

speed carder, speed frame overlooker; an overlooker q.v. responsible for working of speed frames or fly frames, i.e., particular kinds of carding machines.

under-carder (cotton); assists carder g.v. in superintending operations in card room, and generally also operation of combing, slubbing, roving, etc.; adjusts machines and does minor repairs to them.

354.-FOREMEN AND OVER-LOOKERS...SPINNING AND DOUBLING (NOT SILK DOUBLING).

doffing mistress, doffing overmaster; is in charge of doffers (350) g.v. and directs their transfer to different frames on work demands.

doubling overmaster (cotton); is in charge of doubling room, and responsible for regularity, quantity, and quality of output, for condition of machinery, etc.

head twister (wool); twisting overmaster; is in charge of twisting department; directs and controls twisters (305); adjusts roller speeds of twisting machines; is responsible for efficient working of twisting frames, and for quality and quantity of output.

mule overmaster, mule tuner, mule gaffer (slang); spinning mule head man; is responsible for efficiency of mule spinning departments; directs and controls minders (305) g.v. and other operatives employed therein; adjusts and repairs machines, and regulates speed of rollers; sometimes specifically designated, e.g. spinning mule overmaster, spinning mule tuner.

overmaster (doubling, spinning); as for overmaster (353), but in charge of doubling or spinning departments.

ring major; (i) see ring overmaster; (ii) supervises working of a section of ring frames under direction of ring overmaster g.v.

ring overmaster, ring major; is in charge of ring spinning department; corresponds to mule overmaster g.v. in mule spinning department.

spinning master; (i) spinning overmaster; (ii) directs and controls spinning overmasters g.v. in large mills where several are employed.

spinning mill steward (silk); a spinning overmaster g.v. in silk spinning department.

spinning mule head man, see mule overmaster.

spinning overmaster; spinning master; is either a mule overmaster or a ring overmaster g.v.

twisting overmaster, see head twister, mule-master (mule spinning); assists spinning master g.v.'s works under his direction, and takes his place when he is absent.

wheel charger; an overmaster g.v. in wool spinning department, so called from work of charging gears and rollers in setting spinning machines.

355.-FOREMEN AND OVER-LOOKERS...WINDING, WARPING, SLABBING, OR SIZING; SILK DOUBLING.

danter (slang); a woman overmaster g.v. in silk throwing department.

doubling overmaster (silk); is in charge of silk doubling department; directs and controls silk doublers (371) g.v. and other operatives in that department.

reelers' overmaster, reeling overmaster; is in charge of department where yarn is reeled into skeins; directs and controls operatives; repairs and adjusts reeling frames, and regulates speed of rollers.

warping overmaster; is in charge of warping room, including beams, mill and section warping; is responsible for condition and running of machinery, and for despatch of yarn after warping.

winders' overmaster, winding overmaster; an overmaster in charge of winding department, or of a section thereof; supervises winders (367), running of winding machines and weighing of full bobbins, cops, etc.;

sometimes specifically designated, e.g., bobbins winders' overmaster, bottle winders' overmaster, cop winders' overmaster.

winding master; a winding overmaster g.v. in charge of entire winding department.

356.-FOREMEN AND OVER-LOOKERS...WEAVING.

fettler, machine fettler (silk weaving), see tuner.

head tuner (weaving); a tuner g.v. who, in small factories, may also act as overmaster (weaving) g.v.

jacquard machine gaiter, jacquard tackler, jacque man; an overmaster (weaving) g.v. adjusting jacquard machines, and supervising operatives engaged on them.

loom gaiter, see overmaster (weaving).

loom master, see overmaster (weaving room).

overmaster (dressing room); loom master; superintends operations of dressing, drawing, reeking, and twisting, in preparation for cotton weaving, including correct setting of heads and selection of coloured yarns, upon which correct weaving of set patterns depends.

overmaster, loom overmaster (weaving); loom gaiter, weaving master, weaving mistress, weaving overmaster; is responsible for efficient running of output of power looms, or of a section thereof; directs and controls weavers and other workers in weaving department; repairs minor breakdowns in looms; sometimes also sets them up, or assists in setting them up; often further distinguished according to type of loom, or class of goods woven, e.g. cotton tappet overmaster, power loom overmaster.

tackler, loom tackler, see tuner; often further designated according to class of loom, e.g. dobby tackler, jacquard tackler, etc.

tuner (linen, hemp and jute trades), see tuner.

tuner, loom tuner, power loom tuner; fettler, machine fettler (silk weaving), tackler, loom tackler, tester (linen, hemp and jute); is responsible for output of a section of looms; usually a weaving overmaster g.v. but is sometimes distinguished as being (a) in charge of a smaller number of looms, and (b) more concerned with manual work of setting up and adjusting looms, putting in bents, and doing minor repairs; a weaving master, weaving mistress, weaving overmaster, see overmaster (weaving).

357.-FOREMEN AND OVER-LOOKERS...OTHER AND UNDEFINED.

colour foreman (carpet manufacture); supervises setting-up (dressing) of looms, and is responsible for correct weaving of coloured yarns selected by colourists (303) g.v.

cotton cloth overmaster, as for taker-in.

dyer; see dyer, foreman, or dyer, master; sometimes specifically designated according to material dyed, e.g., calico, coir yarn, fibre, hair, velvet, dyer; or according to dyestuffs used or colour materials are dyed, e.g., black, madder, Turkey red, etc.; (i) dyer, (358), dyer, foreman dyer; (ii) see dyer, master; (iii) is in charge of a section of men engaged in any dyeing process.

dyer, head, see dyer, master.

dyer, master dyer; foreman dyer, head dyer; directs and controls dyeing processes, specifies colours and mordants to be used in dyeing, and proportions in which ingredients are to be mixed; determines strength and temperature of dyes; matches colours; generally supervises dyers and dye mixers (361); makes visual examination of materials when dyed.

examiner (linen and hemp), see foreman.

foreman; examiner (linen and hemp); is in charge of a department, or of a section thereof; directs and controls operatives in that department or section; is responsible for quantity and quality of output, and for maintaining machinery and plant in good order; often further distinguished according to department, e.g. foreman beater, foreman buckler, foreman peager, foreman stiffener.

foreman finisher; directs operations in textile finishing departments, and is in charge of finishes (384), i.e., colenders, mangles, scorers, millers, tenterers, etc.

foreman rougher; roughing master; a foreman g.v. in charge of roughers (302) g.v.

fustian master, see knifeman.

gasers' overmaster; is in charge of room in which yarns are gassed, i.e., passed rapidly through burner gas flame to remove projecting fibres; is responsible for quantity and quality of gassed yarn produced, and for proper running of machines.

grey man, grey warehouseman; receiver; is foreman of grey room, in which grey (unbleached) cloth is received; receives cloth, marks it according to finishing operations to be performed on it, and passes it to grey cloth weavers and other workers with directions for treatment.

hacking machine man; machine master; a foreman g.v. in charge of hacking machine attendants (362) g.v. and responsible for output of hacking machines; reports to superintendent, etc., to manager or to mechanic.

knifeman (fustian, velvet); fustian master, feeder, toolman (fustian, velvet); prepares guides and knives by which fustian is cut; superintends a number of fustian cutters or velvet cutters (368) g.v. (about 30, as a rule), each engaged on a separate machine; is responsible for regularity of cut pile.

loft man; (North of Ireland linen trade) a foreman g.v. or man in charge of finishing department in a linen bleaching works.

machine master, see hacking machine man.

making-up room man, see white room man.

mill walker, see overmaster.

overmaster, overseer (finishing); mill walker, steward (silk); is in charge of a room or of a department in a textile finishing factory; is responsible for quantity and quality of output of his room or department; adjusts machines, and either repairs them, or gives directions for their repair, and is responsible for their being kept in good running order; sometimes also erects machines; sometimes has sectional overmasters under him.

place overmaster, see taker-in.

receiver, see grey man; cf. receiver (309).

roughing master, see foreman rougher, stenter man; is in charge of stenters (384) g.v. and responsible for efficient working of stentering machines, starching mangles, sizing cylinders, etc.

steward (silk trade), see overmaster.

taker-in; piece overmaster; is in charge of piece takers-in (369) g.v. and responsible for their work; checks amount of cloth received and inspects for faults.

tooler, toolman (fustian, velvet), see knifeman; sometimes specifically designated, e.g., velvet tooler.

white room man; making-up room man; is in charge of workers in making-up room, and in white room where bleached cloth is prepared for finishing; cf. white room man (369); passes cloth, with instructions, to workers concerned, e.g., hooker, maker-up (345), silker (bleacher's) (379) g.v.

300.—WOOL SORTERS.

dayman (wool sorting); general term for any man employed in wool sorting and paid by time, and not at piece rates.

looker-over (wool sorting). wool looker-over; wool taker-off; examines and checks wool already sorted by wool sorter or wool classer, *q. v.*

merino sorter; a wool sorter, *q. v.*, who sorts merino wool, a fine long stapled wool, suitable for combing.

mobair sorter, *as for wool sorter.*

new clip sorter, *as for wool sorter.*

wool classer; sorts whole fleeces, keeping coarse fleeces apart from fine, long-wooled from short-wooled, heavy from light, and dirty from secured; *cf.* wool sorter.

wool sorter, wool stapler; breaks up fleeces into various qualities, according to length, soundness and fineness of fibre; also sorts band-pulled skin wool.

wool sorter's apprentice; assists wool sorter, *q. v.*, works under his direction, and learns trade from him.

wool taker-off, *as looker-over.*

361.—RAG AND WOOL CARBONISERS AND WASHERS.

acid bath tender, *see carboniser (felt).*
carboniser, cloth (wool fabric); piece carboniser; carbonises woollen fabrics in the piece, i. e. destroys vegetable impurities therein; *as for carboniser (rag).*

carboniser (felt, not woven); acid bath tender; feeds and tends acid tanks through which felt is passed to destroy, by carbonisation, impurities of vegetable origin.

carboniser (rag), rag carboniser; destroys vegetable matter in woollen rags by one of two processes: (a) saturates rags in dilute sulphuric acid; dries them in special heated chamber and washes them in water to remove traces of acid; more usually (b) places rags, slightly moistened, in cylindrical revolving cage, in which they are treated with dry fumes of hydro-chloric or sulphuric acid gas; the vegetable fibre, converted into carbon dust, is then removed by shaking or scouring, *see scourer, rag.*

carboniser (wool), wool carboniser; extractor, picker, steeper, wool extractor; treats wool, after scouring, with dilute sulphuric acid; then beats wool, converting vegetable matter into carbon powder, which is removed by further shaking and scouring, *see extractor, wool, wool extractor, see carboniser (wool).*

pickler, *see carboniser (wool).*

scourer, rag; shoddy scourer; flock washer, rag washer, shoddy washer; prepares scouring solution and runs it into scouring machines; places rags in machines, where they are carried along from one bowl to another by rollers and swing robes, to cleanse them and remove carbonised and other foreign matter.

scourer (raw wool), wool scourer; wash-house man, wool washer, wool wash-house man; *as for scourer, rag.*

feeds wool into scouring machines.

steeper, *see carboniser (wool).*

washer, flock; rag washer, shoddy washer, *see scourer, rag.*

washer, wool; wash-house man, wool wash-house man, *see scourer (raw wool).*

362.—BREAKERS, RAG GRINDERS, NEEDLES, AND WILLOWERS.

bale breaker, bale breaker feeder; bale opener, bale feeder; unfastens covering of bales of raw material; lifts material from opened bale, and spreads it on lattice feed of bale breaker machine; also watches proper working of lattices conveying material from machine to mixing stacks and to openers.

beater (flax); maintains supply of waste silk, by hand feeding, to a

beating machine, further to remove dust from silk received from scouter (silk) *q. v.*

bleeder, rag; mixes rags, to get blend of required quality or shade, by spreading layers of different materials on floor of mixing room; gathers-up material and throws it into a machine, revolving scouter, *cf.* scouter feeder (flax or hemp), which completes blending.

blender, wool; gaiter, puller-and-winner, wool mixer; mixes several different kinds of wool, under direction; pulls wool after blending, in preparation for scouring and willoying; in felt manufacture, pulls wool into "blends," and mixes them in a shaker (willey).

blower, blower-up; feeds and operates flax machine, which opens material in preparation for subsequent processes, and removes dirt therefrom; often further distinguished according to material opened, *e. g.*, hair blower; *cf.* blower (369).

blowing engine man, blowing engine tender, (also tender), *see blower room operative.*

blowing room operative, blowing room hand, blow room operative;

Moving engine man, blowing engine tender (also tender); general terms for operative employed in blowing room, where cotton is opened and scutched; includes bale breaker, blower, breaker feeder, finisher minder, hopper feeder, lap carrier, opener feeder, opener tender, scouter, *q. v.*

breaker feeder, breaker tender (cotton blowing room); takes cotton, in loose masses, partly cleaned, from opening machine and passes it into scouter *q. v.*

breaker, bald, *as for willoyer.*

breaker, hard waste; hard waste feeder; feeds and operates machine which opens out hard cotton waste (waste from ring frames and from reeling and winding machines, cop bobbins and other already waste) in preparation for re-spinning, or for use in manufacture of gun cotton.

breaker, hemp; (i) feeds hopper and turns handle of a hand machine, in which hemp is broken into short lengths for convenience in handling; (ii) feeds hopper and watches proper working of power-driven machine; sometimes specifically designated, *e. g.* hand hemp breaker.

breaker, waste, *see garnet machine operator.*

breaker, wool; breaker-up (wool), *see willoyer.*

buffer (flax); feeds hopper and attends to machine which buffs, rubs and removes refuse and course tow from flax, in preparation for scutching process.

bumble worker, *see willoyer.*

cleaner, rag; rag shaker, shaker; minds machine which cleans rags, in preparation for grinding; carries bales of rags to and from cleaning machine.

cleanser, waste; cleans dry waste (sweepings, etc.) by placing it in a sieving or shaking machine; or cleans waste from wet spinning room by putting it under a press to extrude moisture, then into a willoying or teasing machine, and then hanging it on racks to dry; after cleansing, packs it in bales; *cf.* shaker, waste; willoyer.

comber (flax, hair); (i) *see huckler, fibre*; (ii) *see huckler, hair.*

cotton chamber man, cotton room man, cotton room worker; general terms for any worker employed in cotton mixing room, including bale breaker, cotton mixer, etc., *q. v.*

crusher, asbestos; crushing machine; feeds and operates machine which breaks up asbestos and prepares it for opening.

crusher attendant, jute; (i) *see opener catcher, jute*; (ii) *see opener feeder, jute.*

crusher hand (tender), *see opener catcher, jute.*

crusher hand (feeder), *see opener feeder, jute.*

crushing machine man, *see crusher, waste.*

cutter, hemp; minds a machine which divides hemp fibre into convenient lengths; adjusts handful of hemp, and pushes it between gripping rollers, which carry it into contact with blade.

devil (cotton); devil tender; (i)

(hard waste spinning) feeds and operates a waste breaker or devil, which reduces spoiled cotton roves (waste from gule spinning) from hard, or twisted condition to soft condition suitable for spinning; (ii) in some districts, *see willoyer tender* (cotton waste); (iii) in old mills spinning low counts of yarn, *see scutcher (cotton).*

devil (hair), *see scutcher (hair).*

devil, waste, *see garnet machine operator.*

devil minder, devil worker, *see willoyer.*

devil tender, *see devil (cotton).*

double (cotton blowing or scutching); (i) *see finisher minder*, (ii) *see finisher minder, doubler*; *cf.* doubler (360).

doubler finisher tender, *see finisher minder, doubler.*

dresser, fibre, *see backler, fibre.*

dresser, flax; dresses flax, after it has been retted, by passing it by hand over a series of finely graded bales and switches, which complete combing out and splitting of fibres.

dresser hand (flax, hemp); hard backler; combines work of rougher *q. v.* and of sorter (368) *q. v.* process is in substitution for roughing and machine backing.

dresser, hemp; hemp hand dresser, *as for dresser, flax.*

duler, *see willoyer.*

duster, wool, *see willoyer.*

dust shaker attendant, *see shaker, waste.*

ender (flax scutching); straightener; puts dry flax, after it has been retted, on a shaking, which loosens ends and straightens straw in readiness for flax roller *q. v.*

ender (flax spinning); (*E. Scotland*) receives flax from machine backler *q. v.* and combs ends by hand on small fine backler.

feeder, bale, *see bale breaker.*

feeder (cotton blowing and scutching room), *see machine feeder.*

feeder (jute), *see opener feeder, jute.*

finisher (flax or hemp), *see scutcher (flax or hemp).*

finisher minder, finisher tender, finisher machine minder, finisher machine tender; doubler (cotton blowing or scutching) (also tender).

finisher scutcher (cotton blowing room); a scutcher tender *q. v.* who minds last of series of opening and scutching machines; keeps machine supplied with laps of cotton; sometimes to get more uniform substance, partially unrolls silk or tow laps and straightens them on machine feed lattice, takes off finished laps which are now ready for carding.

finisher minder, doubler; doubler (cotton blowing or scutching).

doubler finisher tender; a finisher minder *q. v.* working at a machine manned by a double set of minders.

finisher scutcher, *see finisher minder.*

garnet machine operator, rag garnet worker, garnetter; waste breaker, waste dresser, waste opener; keeps foot sheet replenished and controls by levers a garnet machine, which opens hard twisted woollen, worsted, cotton and silk waste, in preparation for carding.

goods machine minder (rope and twine), *as for backler, machine.*

grinder, asbestos; feeds and operates machine of the needle and marker or centrifugal type which disintegrates asbestos to threads.

grinder, rag; shoddy grinder; rag puller, shoddy puller; feeds and operates machine (devil) which grinds rags to powder; carries rags to and from grinding machine.

hackler, hull, *as for hackler, machine.*
hackler, fibre; *fibre dresser, fibre heckler* *comber (fibre)*; *hackles or combs fibre*, by passing it over a long-toothed hackle, or card, of coarsely set wire teeth, to remove impurities and tangles.

hackler, hair; *comber (hair)*; *as for heckler, fibre*; sometimes also cleanses hair with soap and water, before hackling.

hackler, hand; (i) *see dresser, hand*; (ii) *see rougher.*

hackler, horsehair dry; takes handful of hair, holding one end in his hand, and drawing other and several times through hackle, a comb with coarsely set steel teeth, to loosen hair and open it out, and to remove tangles and impurities; then places hair between two combs, so arranged as to hold it steady, and together forming a "cord," for further combing; sometimes also washes and dries hair before hackling.

hackler, horsehair wet; *as for hackler, horsehair dry*, except that hackling is done while hair is still wet.

hackler, machine; *hackling machine attendant*; minds machine in which short and weak fibres are removed by action of steel pins; controls power-drive of machine, and clamps fibre into holders.

hackler, Manila hemp; places Manila hemp on feed sheet of a combined hacking and drawing machine, which straightens and attenuates it, i.e. draws it out and converts the long coarse fibres into sliver, i.e., loose roving form, guides sliver into cans or baskets ready for preparing department.

hard waste tenter, *see breaker, hard waste.*

hatchellor, *see rougher.*

heckler, fibre heckler; (i) *see hackler, fibre*; (ii) *see rougher.*

hopper feeder, hopper filler, hopper minder, hopper machine hand; places raw cotton in hopper feed of first in series of opening machines in cotton blowing room.

lap carrier; *lapper (blowing and scutching room)*; carries cotton laps from one machine to next in order of process, generally from scutcher room to cards.

lap feeder (on scutcher), *see scutcher feeder (cotton).*

lap machine minder, lap machine tenter, *see scutcher (cotton).*

lapper (blowing and scutching room), *see lap carrier.*

lap springer; *lap thrower-on*; places or "springs in" to position; lap rollers taken off opener scutching machine, opposite feeds of finisher scutching machine, last in series of opening and scutching machines.

lap tenter, lapper tenter, *see scutcher (cotton).*

lattice feeder (cotton blowing room), *as for machine feeder.*

machine feeder, machine feeder-on (cotton blowing and scutching room); *feeder*; general terms for any operative who feeds, by throwing cotton on to the lattice, any machine in blowing and scutching room, i.e., hule breaker, cotton mixer, opener feeder, scutcher *q.v.*

machine hand (hair); general term covering workers attending hair preparing machines; includes opener (hair), teaser (hair), unwister (hair), wileyer *q.v.*

millor, shoddy; *see grinder, rag.*

mixer, cotton; directs and supervises mixing of different blends of cotton in fixed proportions, forming a mixing, or stock, which is conveyed to opening machine.

mixer, tow; mixes grades of tow in correct proportions, and takes mixture to carding machines.

mixer, wool, *see blender, wool.*

opener, asbestos; attends and feeds machine which loosens and cleans asbestos fibre, in preparation for carding; collects opened fibre in bags or trucks.

opener, bale, *see hule breaker.*

opener (cotton), *see opener tenter.*

opener (hair); (i) *see unwister (hair)*; (ii) opens out untwisted hair rope, loosening fibres which are more or less matted together, in preparation for carding or teasing; if using a machine, is sometimes designated machine opener; (iii) (flax, hemp and jute), opens bales of hemp with hatchet, and loosens material, in preparation for hatching and machine heckling, entirely by hand, with a rake, with hand hammer and by forcing to steam hammer, or to crusher machine, according to density of fibre and plant installed; *cf. opener catcher, jute; opener feeder, jute*; sometimes also does work of hatcher (308) *q.v.*

opener, waste (machine), *see garnet machine operator.*

opener, wool (felt manufacture); places wool on bedstead of machine which opens it out for use in manufacture of felt.

opener catcher, jute; crusher hand (ender), jute crusher attendant; removes crushed fibre as it issues from jute opener machine; usually also assists in opening bales of jute.

opener feeder, opener machine feeder, opener tender (cotton); opener (cotton), *opener minder, opening machine hand*; lays loose cotton on lattice feed of machine which opens and cleans it; sometimes specifically designated according to type of machine used, e.g., Crighton opener feeder, Crighton opener machine feeder, Crighton opener tender.

opener feeder, jute; crusher hand (feeder), feeder (jute), jute crusher attendant; opens bales of jute, and puts or feeds heads into machine which crushes fibre, ready for batcher (248) *q.v.*

opener minder, *see opener tenter.*

opener scutcher tenter; an opener feeder *q.v.* who minds an opening machine with which is combined the lap-forming part of a scutcher.

opening machine hand, *see opener tenter.*

parter (silk); opens bundles of raw silk, and separates them into smaller bundles.

picker, cotton; cotton teaser; (i) passes dried raw cotton or cotton waste through a series of machines which tease and pick it, separating fragments of foreign matter, breaking up lumps and removing dust, in preparation for manufacture of gun cotton; (ii) picks and teases cotton by hand.

preparer, preparing hand (flax or hemp); general terms covering all operatives engaged in preparing flax or hemp for carding, drawing, and spinning, including breaker, dresser, machine heckler, rougher, softener *q.v.*; *cf. preparer (silk).*

puller, rag, *see grinder, rag.*

puller (wool), puller-and-runner, *see blender, wool.*

rester, flax rester; places sheaves of flax straw in water in a pit or tank, until central stems have rotted and slough down enough to set free flax fibre, which grows up outside stalk; removes sheaves when process is complete and opens them out, to be dried.

ripper (shoddy), *see teaser, shoddy.*

roller, flax; crimper; passes flax straw through fluted rollers of machine, which break up core of stalk in preparation for strikings *q.v.*

roller, hemp; hand hemp roller, *see softener.*

rougher (flax, hemp, hemp rougher; fibre heckler, hand heckler, hatchellor, heckler); draws flax or hemp, by hand, through a set of hackle pins, arranged in a wooden block, called a rougher's tool, to comb out short and irregular fibres and to level cords, in preparation for dressing or machine heckling.

sack hand, *see unwister (hair).*

screeener (wool); feeds and operates machine which cleans dirty wool, dirt falling through grid (screen) and being carried away by suction.

scutcher, lap scutcher (cotton); devil (cotton) (old mill), *lapper tenter, lap feeder, lap machine minder, lap machine tenter, scutcher minder, scutcher tender*; minds a scutching machine, which cleans cotton and draws it in form of laps, i.e., smooth rolls resembling wadding; sets in motion guide controlling width of lap and causing it to wind on to roller; takes off lap roller when full and starts fresh one; clears away obstructions in machine.

scutcher, scutcher tender (flax or hemp), finisher (flax or hemp); lays together what is left of two handfolds of flax treated by huffer *q.v.*; thrusts this partially treated mass over top edge of a vertical iron plate, and moves it to and fro, exposing it to beating action of revolving hammers or blades, which run close against face of plate, and which complete separation of straw from fibre; turns handfold of flax end for end, and opens it so as to expose all parts to huffer; then folds finished mass and puts it aside to be weighed and packed.

scutcher (hair); devil (hair); feeds hopper and controls by levers a scutching machine (devil) which opens out hair fibre in preparation for carding.

scutcher (silk); operates and attends machine in which loose, broken and straightened short fibres of silk waste, i.e., noils, and partially cleans ready for tenter (silk) *q.v.*; feeds machine, by hand, and removes laps, i.e., smooth rolls of fibre resembling wadding, of scutched silk.

scutcher feeder (cotton); lap feeder (on scutcher); feeds "laps" to scutching machine (*see scutcher*), or places by side of scutcher *q.v.* in charge of that machine; may also remove full laps from finisher scutcher and place aside for removal to carding machine.

scutcher minder, scutcher tenter (cotton), *see scutcher (cotton).*

shaker, rag, *see cleaner, rag.*

shaker, waste (flax, hemp); dust shaker attendant; shakes sweepings in a sieve, or in a rotary sifting machine, to remove dust and dirt; puts clean sweepings into bales or bags.

shaker, shaker-up (wool), *see wileyer.*

softener, hemp softener; hand hemp roller, hemp roller; softens hemp fibre in preparation for treatment by hemp breaker *q.v.*, by passing it through fluted rollers of a machine; controls power-drive of machine, and feeds it with hemp stalks.

straightener (flax), *see ender (flax scutching).*

striker (flax); receives flax straw as it issues from rollers, divides it up into convenient handfuls (stricks), and gives them a slight twist to make material hold together; passes striks to scutcher *q.v.*

tearer, shoddy; ripper (shoddy); tears seams, collars, etc., from old garments, to facilitate passage of cloth through blending, grinding, etc. machines in shoddy manufacture; *cf. blender, rag grinder, rag.*

teaser, cotton, *see picker, cotton.*

teaser, taker man, *see wileyer.*

teaser, shoddy, *see wileyer, rag.*

thrower-on, lap, *see lap springer.*

tow feeder; (i) feeds, by hand, travelling band apron of breaker card, with tow; *as for breaker feeder (363)*; (ii) feeds carding engine, or mixing machine attached thereto.

trapper, wool; a wool blender *q.v.* who throws wool from one mixing room to another through trap doors in floor.

unwister (hair); opener (hair), *see hule breaker, hair*; hand, untwists hair rope made by curler (308) *q.v.* in preparation for carding or teasing.

weigher and feeder (cotton); (i) weighs loose cotton when first rolled to form lap in lap machine, and passes it to scotcher; *q.v.* (ii) (in cotton washing frame) weighs out material and passes it to carding engine.

whimseyer, *see cleaner, rag.*

willayer, willay girl, willayman, willier, willier, willower, willow-er, willow tender, willow machine; breaker-up (wool), bumble worker, devil minder, devil worker, dater, shaker, shaker-up, feeder tender, wool breaker, wool dater, wooler, throws handful of wool or hair, hemp or flax, etc., on to brattice of other feed apparatus of willaying machine, which separates fibres, and breaks up their natural matted state, and shakes out dirt and foreign matter therefrom, in preparation for carding; sometimes also blends materials together in process of willaying.

willayer, rag; sloddy tender; minds and feeds willy machine, which prepares rags for grinding or garnetting. willow, willowyer, willow tender (cotton waste); devilier (cotton) (some districts); feeds willowing or willaying machine, *see willayer*, sometimes also keeps it in running order, and is responsible for its efficiency.

woolifier, *see willayer*.

363.—CARD, COMB, AND FRAME TESTERS (NOT RING OR CAP FRAMES); BOX MINDEES.

back end minder, *see card minder* (wool).

backwasher, backwasher minder, backwasher tender, backwash minder; passes wool slivers through backwashing machine, which recombeds them, by addition of oil, cleanses them, and improves their colour.

balling finisher minder, *see finisher* (wool combing).

baller, balling head minder, balling machine minder (wool combing); makes up comber wool into balls, or tops, in readiness for spinning; attends to balling head of a gill box; stationed at back of machine, removes sliver when formed into a ball in gill box, carries balls to next machine, *e.g.*, drawing frame; sometimes specifically designated, *e.g.*, sliver baller (juto).

balling punch minder, *see puncher*.

ball machine minder (juto); *see for baller*; attends machine which winds sliver (from breaker card) into chess-shaped balls, ready for running into finisher cards.

ball maker for combs, *see puncher*.

bank minder (Scotland); bank waster (woollen carding); watches second or third machine in series of wool carding machines; reports faulty work to carding engineer (333); oils machine and keeps it clean.

bank waster; (i) (cotton) places cotton waste in heaps; (ii) places end of one drawing frame and feeding end of another; breaks off sliver as can becomes full; carries can to feeding end of second machine and passes end of sliver through guides.

big tender; is principal attendant on a frame or machine, where more than one is employed; starts and stops machine; assisted by little tender (309) *q.v.* mends or pieces broken rovings; creels bobbins, oils machine and keeps it clean by removing pieces of fluff; takes away full bobbins; general term, covering jack tender, slab frame tender, fly frame tender, etc.

hilly tender; attends to front of finisher or condenser carding engine, taking off condenser bobbins, and converting them to make spinning frame; *cf.* hilly tender (365) hobble and fly frame tender, *see fly frame tender*.

box and Derby tender (cotton waste); is employed in waste spinning, minding and attending both on draw box (in draw frame) and on Derby dobber; mends slivers on draw frame when broken in drawing process, and feeds dobber with these slivers, which are combined therein to form a lap. box tender (wool combing); *see tender* (wool combing); watches one of a series of machines, called boxes, used in combing wool, or in preparatory processes, either a strong box, a preparing box, or a gill box, reports faulty work, bent pens, variations in speed, etc., to comber overlooker (333); sometimes specifically designated, *e.g.*, preparing box minder.

box tender (cotton); (i) card box tender; attends to back part of carding engine, *i.e.*, box part, between dobber and comber, and keeps it clear of fly (waste fibre thrown off in carding) and grease; (ii) *see draw frame tender*.

box tender, card; (i) *see box tender* (cotton); (ii) attends to delivery of sliver from cards, and to feeding of draw frames or draw boxes therewith; breaks off sliver as can becomes full and inserts end of sliver in guide of draw frame.

box tender, intermediate (draw frame); intermediate draw box tender; a draw frame tender *q.v.* minding second of series of draw frames or draw boxes.

box tender, intermediate (fly frame); removes empty bobbins from boxes at back of intermediate frame, second in series of fly frame or speed frame machines, and supplies full bobbins to be inserted in frame by crutch (369) *q.v.*

box tender (wool combing); *see box minder* (wool combing).

breaker, can, *see breaker-off* (cotton).

breaker feeder; card end boy, carder, card tender, card feeder (jute), card hand, feeder; takes hatched jute from barrows (in which it has been allowed to stand, still retaining oil from softening process, to condition), or takes from dollap weigher (369) *q.v.*, where weight of roving is governed from output of breaker card; spreads jute upon feed apron of carding machine and, when feeding weighed dibbles, watches weight indicator to regulate amount fed.

breaker-off (cotton); *see breaker*; a card tender (cotton) *q.v.*, who breaks off sliver from card at delivery end of carding engine, when sliver-can is full, and starts fresh can.

breaker-off, breaker-up (wool combing); lap breaker-off; wool take-off; sees to removal and transference of wool from one preparing box to another; when sufficient sliver is wound round roller in box, breaker-off sliver and transfers to another box.

bunshar, *see drawer, hair*.

can box minder (wool combing); *see minder*; attends any one of several machines which deliver sliver into a can or draw is therefore, *i.e.*, back-washer, strong boxes, first gill boxes, flaxer boxes, or combing machines; replaces, at front of machine empty cans with full ones, and, at back, substitutes empty cans for full ones, breaking off sliver as can becomes full.

can finishing minder, *see gill box minder*.

can minder, *see can box minder*.

can tender, *see card tender* (cotton).

card and drawing band (juto); attends feed of firm drawing frame; also takes cans of sliver from finisher carding machine, and places them at feed end of drawing machine, when this is not done by can filler (369) *q.v.*

card attendant, *see card minder* (flax and hemp).

card end boy, card tender (flax, hemp and jute); (i) *see breaker feeder*; (ii) (more usual) *see finisher card tender*.

*carder, asbestos; attends to delivery end of machine in which asbestos is carded; (i) slivers are spaced out, and arranged approximately parallel, knots and foreign matter being removed; watches machine for proper working; breaks off sliver as can becomes full and places end in empty can.

*carder (female); (i) (cotton) *see card tender*; (ii) (wool) *see card minder*.

*carder, fibre; card millhand; supplies carding, or opening out machine, with matted fibre obtained from bales of coco-nuts, and watches machine during carding process; keeps working parts clear of grease and waste fibre.

*carder (flax and hemp); (i) *see card minder*; (ii) in Dundee and Belfast, sometimes used in sense of carder (333) *q.v.*

*carder, hair; (i) *see carder feeder* (felt); (ii) *see carder* (hand, hair curling) (iii) (wool) *see specifically designated*, *e.g.*, horse hair carder.

*carder (hand, hair curling); hair carder; hackles or combs curled hair after it has been opened by copier (332) *q.v.*, and passes it over in card of fatty set wire teeth, which loosen or tease out hair into individual strands; (machine hair curling), *see tanner, hair*.

*carder (juto), *see breaker feeder*.

*carder, rolling, *see card minder* (wool).

*carder, tow, *see first card hand*.

*carder (wool), wool carder; (i) a woman or girl employed as a card minder *q.v.*; (ii) in a felt hat factory, combines duties of card feeder card minder, grinder (364) and stripper (364) *q.v.*

carder, carder (felt); feeder (felt); hair carder, scribbler (felt); spreads wool or hair evenly over brattice, or frame, of carding machine; and lifts off hat or lap as it is formed on machine.

carder feeder (wool) *see card feeder* (wool).

card feeder (cotton), *see lap feeder* (on cards).

card feeder (juto), *see breaker feeder*.

card feeder, card filler (wool); carder feeder (wool), engine feeder, feed box minder (Scottish).

(wool), leveron, ingger-on, scribble filler, scribbler, feeder, scribbler feeder, server (wool), wooden feeder; puts blended wool into automatic hopper feed, or, more rarely, spreads it on lattice feed, of carding engine set, which combines processes of scribbling (course carding), carding (opening out strands, arranging them parallel and extracting foreign matter) and condensing (lap into sliver).

card front tender (cotton); places cotton lap on feed roller, and guides it into carding engine, so that lap is in proper condition as it enters machine.

card hand (flax, hemp and jute); (i) *see finisher card tender*; (ii) *see breaker feeder*.

carding engine attendant; general term for any worker attending to carding engine, *e.g.*, feeding it with laps or removing slivers therefrom; includes carder feeder, lap feeder, card minder *q.v.*

carding engine condenser feeder; a card feeder (wool) *q.v.*, who lays lap on feed roller of condensing engine; usually done automatically.

carding engine tender, *see card minder* (wool).

carding machine attendant (bedding); passes flock into carding machine; takes it out when it is carded, and puts it into mattress cases.

* *Card tender* (male) in sense of carding tender—this term is used in textile trades, and commonly in other textile industries *see Code No. 303*.

carding minder, *see* card minder (wool).

card minder (flax and hemp); (i) *card attendant*, *carder*; watches proper working of carding machine, which converts tow into sliver; breaks sliver at delivery end as cans become full; (ii) (*juste*) *see* *finisher card ender*.

card minder (wool); back end minder, *carder* (*female*), *card tender* (wool), *carding minder*, *carding engine tender*, *condenser minder* (wool), *engine head tender*, *machine minder*, *minder*, *rolling carder*, (*scribbler* wool); watches machine which performs combined processes of carding, card feeding, and condensing wool (*see* card feeder); is stationed at back of machine; guides sliver ends into cans or on to bobbins, breaks sliver and removes filled bobbins or cans and replaces with empty ones.

card tender (cotton); *carder* (*female*) (*cotton*), *can tender*, *engine head tender*; attends to doiler or delivery end of carding engine, mending slivers broken in carding, and removing cans full of sliver.

card tender (wool), *see* card minder (wool).

comber, brush fibre, *see* hackler, brush fibre.

comber (cotton); *comb minder*, *comber tender*; operates combing machine, which combs out short fibres in preparation of fine cotton yarns; guides cotton laps on to rollers, starts machine, receives combed cotton, in form of slivers, in boxes or cans, and removes cans as they are filled.

comber, comb minder (ramie); puts up cans of gilled sliver at back of combing machine, which combines eight or more slivers into one, and renders fibres more nearly parallel; takes away cans of sliver at delivery end, after combing, in readiness for next process; keeps working part of combing machine free from fly or waste.

comber (silk), *see* dresser (silk).

comber (wool), wool comber; (i) general terms for any person employed in wool combing department; (ii) *comb minder*, *comb tender*, *comber tender*, *combing finisher*, *combing machine minder*, *minds combing machine*, which separates short fibres of wool (mels) from long fibres (tops).

comber tender; (i) *see* comber (cotton); (ii) *see* comber (wool).

combing finisher, *see* comber (wool).

combing machine attendant (flax and hemp); tends combing machine, which doubles, attenuates, and further straightens sliver, as received from tow carding process, in preparation for further processes of drawing and preparing; breaks off sliver as cans become full at delivery end; feeds end of sliver into guides at feed end; reports faulty work to preparing master (353) *g. s.*

combing machine minder, *see* comber (wool).

comb minder; (i) (silk) feeds with silk waste, machine for combing short fibre silk waste, after carding; (ii) (*other textiles*) *see* comber (cotton), comber (wool), comber (ramie).

comb tender, *see* comber (wool).

condenser, condenser minder, *condenser tender* (silk); attends a machine which combines several silk slubbings into one; feeds ends of slubbings into guides at feed end; breaks off slubbing as can becomes full at delivery end.

condenser minder, *see* card feeder.

condenser minder (flax and hemp); feeds and controls condensing machine, or finisher card, a final carding machine used in preparation for spinning of tow, waste flax, and hemp; or for card minder (flax and hemp).

condenser minder (wool), *see* card minder (wool).

dandy minder, dandy tender, *see* rover, dandy.

Derby tender, Derby minder; *Derby dobler*, *doubling tender*, *lap piercer*, *lap tender* (*cotton*), *sliver upper*, *sliver lap tender*, *sliver tender*; watches Derby doubling or sliver lap machine, which unites several slivers into a sheet, and winds them on a cylinder; feeds ends of slivers into guides at feed end, removes lap rollers at delivery end.

rodger, can; can taker-out; removes full sliver cans from machine, and substitutes empty ones.

doubler, Derby, *see* Derby tender.

doubler, sliver doubler (flax, hemp); attends special drawing frame, in which two or more slivers, and drawing them out into one more even sliver in preparation for spinning; feeds ends of sliver into guides and breaks off sliver at delivery end as cans become full.

doubling tender, *see* Derby tender.

draw box minder, draw box tender, *see* draw frame tender.

drawer, botany; a drawer (wool combing) *g. s.* engaged in drawing botany wool, fine quality wool used in worsted trade.

drawer (cotton), *see* draw frame tender.

drawer (flax and hemp); drawing frame attendant, drawing frame minder; minds a drawing frame, which draws and attenuates sliver; passes sliver into feeding rollers, and watches delivery of drawn slivers into sliver cans.

drawer, hair; butcher, drawing hand (hair); secures a bunch of hair after (hair) has been balled between folding boards, like covers of a book; draws it over finely set wire teeth, called cards, to remove short lengths of hair; draws out hairs of approximately equal length, either by above method or by drawing hair between thumb and a rough razor, and makes them up into lumps, which he also sorts hair into grades, according to fineness, condition and colour; often also acts as backler (352) *g. s.* before drawing.

drawer, horsehair, *as for* drawer, hair.

drawer, long wool, *as for* drawer (wool combing).

drawer, *see* drawer (silk spinning); drawing box minder (silk); drawing box tender, drawing tender, *re-drawer*; minds machine which combines several slivers and draws or attenuates them into one spun silk sliver; *as for* draw frame tender (cotton).

drawer (wool combing); drawing box minder, drawing box tender, reducer, reducer minder, reducing box minder, slubber, slubbing frame tender, slub frame tender; minds machine, called a reducer or reducing box, which attenuates combed and prepared wool to thickness and weights required for rearing frame; watches to ensure that there is continuous flow of wool passed through machine; joins up broken sliver, loose rope of fibre, first stopping machine if necessary.

draw frame tender (cotton); box tender, drawer (cotton), draw tender, drawing tender, drawing frame tender, draw box tender, draw box minder, drawing box minder, drawing box tender, drawing frame attendant, drawing frame minder; feeds into guides of machine, called a draw or drawing frame, or draw box, ends of cotton slivers; mends slivers broken in process of combing and drawing out the sliver; attends to draft rollers and clearers of drawing frame, keeping them clear of loose particles.

draw frame tender, front, *see* front minder (cotton draw frame).

drawing box minder, drawing box tender, *see* draw frame tender (cotton).

drawer (silk spinning), or drawer (wool combing).

drawing ender (jute); front of drawing hand; stands at front of machine, which draws out and attenuates sliver and delivers it in form

of sliver; sees that sliver issues evenly into sliver cans; replaces cans, as they become filled, with empty ones, drawing ender (wool combing); stands at back of drawing frame, and unites ends of sliver, and passes them in to feed rollers of frame.

drawing feeder; feeder (jute), keeps drawing machine supplied with full cans of sliver, and removes empty cans.

drawing frame attendant, drawing frame minder; (i) *see* drawer (flax and hemp); (ii) *see* draw frame tender (cotton).

drawing hand, double, *see* between-drawings attendant.

drawing hand (hair), *see* drawer, hair.

drawing hand (rope and twine), *as for* drawer (flax and hemp).

drawing hand (wool combing); general term for any person employed in drawing department of a wool combing establishment.

drawing hand (other textile materials), *see* drawer (under appropriate sub-heading, according to material), (*juste*) *as for* card and drawing hand; for subsequent drawings, *as for* drawer (flax and hemp).

drawing machine minder, *see* drawer (under appropriate heading, according to material).

drawing tender, draw tender, drawing frame tender (cotton), *see* draw frame tender.

drawing tender (silk), *see* drawer (silk spinning).

dresser, hair; fat dressing machine minder; a dresser (silk) *g. s.* who minds a fat dressing machine, requiring hand setting, as distinguished from patent dresser *g. s.*

dresser, hair; is capable of treating horsehair and similar hair from first to final stage; is usually a hair dresser *g. s.*; sometimes specifically designated, *e. g.* horse hair dresser.

dresser, jelter frame; jelter; is one of a pair of silk dressers *g. s.* who are jointly responsible for working of two dressing frames, who share wages jointly earned after paying wages of filler *g. s.*, and who also do work of dresser's assistant *g. s.*

dresser, line; dresses line or flax, a stage in manufacture of linen; for processes, *see* dresser, machine.

dresser, Manila; clamps undressed fibres of Manila hemp between folding boards, and combs out short protruding fibres; reverses fibres in boards, and repeats combing process.

dresser, patent; patent dressing machine minder; dresses, *i. e.*, removes the staple ends or short lengths from spun silk on a machine which, unlike ordinary flat dressing machine, is automatic, and does not require to be set by dressers.

dresser (silk), frame dresser, silk dresser; roller (silk), *frame*; directs dresser's assistant and filler *g. s.* in opening-out degummed silk waste and placing it between in-boards; sets a number of such boards in one of a series of dressing frames with protruding fringe upperside, and reverses and straightens fibres by bringing into contact with revolving steel comb; reverses fringe and repeats process; usually a flat dresser *g. s.*; sometimes specifically designated, *e. g.* first frame dresser, second frame dresser, third frame dresser (according to position of dressing frame in series), machine dresser, nodler frame dresser, short frame dresser (short lengths of silk fibre).

dresser, waste (silk), *as for* dresser (silk).

dresser's assistant; filler, filler boy, dresser's filler, filler of sliver; fills, turns, and empties in-boards, *i. e.*, sliding book-boards, used by silk dresser, in facturing; here dressing process is sectionalised.

engine feeder, *see* card feeder (wool), engine head taster; (i) *see* card minder (wool); (ii) *see* card tender (cotton).

feed box minder (Scottish term) *see* card feeder (wool).

feeder, machine feeder; general terms for any worker engaged on a card, comb, gill box, back washer, or scouring machine; includes back-washer minder, breaker feeder, card feeder, condenser minder, draw frame tender, finisher card tender, gill box feeder, lap feeder, silk rover, rover, scribbler feeder, spreader, g.v. feeder (felt), *see* carder feeder (felt), feeder (flax and hemp); (i) feeds travelling hand upon of breaker card with tow; (ii) feeds drawing or roving frame with sliver.

feeder (flax waste), *see* for condenser minder (flax and hemp).

feeder (jute); (i) *see* breaker feeder (jute); (ii) *see* drawing tender.

feeder (wool); (i) (felt making) *see* wool feeder; (ii) (wool carding) *see* card feeder.

filler, filer boy, dresser's filler; (i) *see* dresser's assistant; (ii) attends filling engine, which opens-up delinted silk waste for re-drawing of dressing frame; puts silk on feed sheets, or creper, and afterwards takes it from engine combs, *cf.* dresser (silk spinning), dresser's assistant.

filer of shute, *see* dresser's assistant. finisher card tender, finisher card minder; card end boy, card tender, card hand, card minder; feeds, by hand, two finisher card machines with bails or bands of sliver received from breaker card machine.

finisher (wool combing), finishing box minder, finishing gill box minder; *bolting finisher minder, giller and finisher*; minds a finisher gill box, which delivers tops in condition ready for spinner; feeds machine with sliver, i.e., loose tops of fibre, and removes as delivered from machine.

finishing box tender; (i) a draw frame tender *g.v.* who minds third, and final, set in series of drawing frames; (ii) minds back, (box) portion of breaker and finishing dressing engines in cotton waste card rooms.

first bobbin and fly frame tender; slubber, slubbing frame tender, slubbing tender, slub tender; a fly frame tender *g.v.* who minds dubbing frame, first in series of fly frame or speed frame machines.

first card band (rope and twine); *low carder*; minds first in series of carding engines; passes hemp or tow into feed rollers, and controls power-drive of machine.

first dressing machine minder, *see* dresser, flat.

fly (fyer) frame tender, fly (fyer) tender; bobbin and fly frame tender, speed frame tender, speed tender; general terms for a woman or girl minding a fly, fyer, or speed frame, which by action of fyers attenuates and twists cotton and winds it on to bobbins; inserts bobbins containing cotton, mends threads broken in drawing process, and takes away bobbins full of twisted cotton.

fourth bobbin and fly frame tender; jack tender, jack frame tender; a fly frame tender *g.v.* who minds jack frame, fourth, and last, in series, of fly frame machines.

framer, *see* dresser (silk spinning); sometimes specifically designated according to dressing frame series, *e.g.* first framer, second framer, third framer.

frame tender; general terms for any operative minding a machine, called a frame, used for attenuating, i.e. drawing, textile materials, including fly (fyer) or speed frame, draw frames, etc., includes high tender, draw frame tender, silk dresser, finishing box tender, fly frame tender, intermediate frame tender, rover *g.v.*

front minder, front tender (cotton draw frame); front draw frame tender; pushes cotton sliver as it issues from first drawing process, into silver can.

front minder (jute); front of roving attendant (jute), rover, front rover; stands at front of jute roving

machine, and mends threads broken in roving process by splicing, i.e. wrapping together, ends, starts end stops machine, as necessary, by hand lever; is assisted by shifter (jute preparator) *g.v.*

front of drawing hand (jute), *see* drawing tender (jute).

front of roving attendant (jute), *see* front minder (jute).

gill boxer, gill box feeder; giller, gilling machine minder (silk); general terms for an operative minding any machine furnished with gills, and used in dressing or preparing silk, *e.g.*, a spreading, roving or setting frame, *cf.* spreader (silk), gill, rover; *see* box minder (silk).

gill box feeder (other materials), *see* giller (not silk).

gill box minder, gill drawer; *see* finishing minder, gill tender; minds a gill box which treats several wool tops collectively in such a way as to produce a sliver of uniform weight and density, in preparation for drawing process; feeds ends of sliver from top into guides of machine, raises up broken neps and generally watches proper working of machine.

giller, gilling machine minder (silk), *see* gill boxer.

giller (not silk); gill box feeder; keeps gilling machine (which unites several slivers into one, for greater uniformity of substance) supplied with sliver in silver cans.

giller and finisher, *see* finisher, gill tender, *see* gill box minder.

hopper, truck fibre; brush fibre comb; huckles and combs coco-unt fibre by hand; draws a hazzel of fibre across pins of a series of huckles and combs to remove short and irregular fibres, and to straighten out and level the ends of longer fibres.

hopper feeder, hopper minder; places material in hopper of carding, drawing, or other machine.

huck mill hand, *see* carder, fibre.

inter frame tender, intermediate frame tender, intermediate minder, inter intermediate machine minder, inter tender, second bobbin and fly frame tender; a fly frame tender *g.v.* who minds intermediate frame, i.e. second in series of fly (fyer) or speed frames.

intermediate machine minder; (i) (cotton) *see* jack frame tender; (ii) (wool) minds intermediate carding machine between scribbler and condenser; pieces up broken rovings; oils machine and keeps it clean of flax.

inter tender, *see* inter frame tender.

jack tender, jack frame tender, *see* fourth bobbin and fly frame tender.

jagger; a strong box minder *g.v.* in charge of first, or preliminary, combing machine, after passing through which wool is usually dyed and then re-combed.

joiner, *see* dresser, joiner framer.

joiner tender; is one of a pair of operatives who share work of minding draw frames, fyer frames, or other machines, and divide their joint earnings equally or in agreed proportions.

lap feeder (cotton); card feeder (cotton); places cotton lap from scouring machine on feeding end of carding machine.

lapper, lap framer, *see* spreader (silk).

lap pincer; (i) *see* Derby tender; (ii) connects new lap with end of old lap, already in machine.

lap tender (cotton), *see* Derby tender.

lap tender, ribbon, *see* ribbon tender.

lap tender (silk), *see* spreader (silk).

lap tender (wool); takes lap from carding engine, and either folds it or guides it on to winding beam; carries wound or folded lap to next machine in order of process.

lattice feeder; puts material on lattice feed attachment of any machine.

layer, *see* spreader (flax); *cf.* layer (silk).

layer-on, ligger-on, *see* card feeder (wool).

machine minder, *see* card minder (wool).

maker-up, wool maker-up; keeps carding and preparing machines supplied with wool.

minder (carding), *see* card minder (wool).

patent dressing machine minder, *see* dresser, patent.

preparer, preparing hand (flax, hemp, jute); general terms for worker tending any machine which prepares fibre for spinning, including spreader, drawer, roter, *g.v.*; *cf.* preparer (silk).

preparer, line, *as* for preparer (flax, hemp, jute).

preparer, preparing machine minder (silk); places long-lived silk waste in position at back of preparing machine, and passes it between rollers, from which it is usually taken through machine and wound upon an endless apron.

puncher; bolting punch minder, ball maker for combs, punch minder, punch tender, punch box minder (wool combing); punches or pulls wool slivers, from first gill box, after backwashing process, by colling or rolling them on a special punch box, in preparation for combing.

puncher, minder, punch box minder, *see* puncher.

re-drawer, *see* drawer (silk spinning).

redgiver, reducer minder, reducing box minder, *see* drawer (wool combing).

relapper; takes silk after it has been formed into a lap by spreader *g.v.*, and passes it through another machine, similar to spreading machine, called a re-lapping box, to level up lap.

ribbon tender; ribbon lap tender; guides cotton between rollers of ribbon lap machine, which produces uniform lap for combing machine; starts machine, using pressure rod for making first turn of lap.

rover, asbestos; guides asbestos fibre through roving frame, which twists and attenuates it in preparation for spinning; attaches it to roving bobbin, controls power-drive of machine, and mends fibres broken in roving process.

rover (cotton); rover tender, roving tender, roving frame tender (cotton), small speed tender, third bobbin and fly frame tender; a fly frame tender *g.v.* who minds roving frame, being third in series of fly frame or speed frame machines.

rover, dandy; dandy minder, dandy tender, first framer, first framer dresser, rover (silk); minds dandy roving frame, which further attenuates and twists slubbing from gill roving frame, and winds re-combed rovings on to bobbins, places bobbins on roter, feeds machine and takes off full bobbins.

rover (flax and hemp); minds a roving machine, which twists and attenuates line or tow in readiness for spinning process.

rover, gill; roter (silk); feeds gill roving frame with sliver from drawing boxes which is converted into slubbing by further attenuating it and superposing it.

rover, gill, on to bobbins, ready for dandy roter *g.v.*

rover, front roter (jute), *see* front minder (jute).

rover (silk); (i) *see* rover, dandy; (ii) *see* roter, gill.

rover (wool); rover minder, rover tender, roving tender, roving box minder (wool), sliver minder, sliver roter (wool); mends roving frame, lost in drawing series, immediately preceding spinning, which advances wool to condition of roving, or loosely twisted cord of wool; inserts full bobbins, from draw (wool combing) *g.v.*, into frame; guides sliver end through machine and attaches to roving

bobbin; start-up and stops frame as necessary; mends broken roving ends, does full roving bobbins and replaces with empty.

rover minder, rover tenter, roving minder, roving box minder, roving frame minder, roving tenter, roving frame tenter; *see* rover, according to material.

run-over box minder, *see* set box minder.

scribble filler, scribbler, scribbler feeder, scribbling feeder; a card feeder (wool) *g.v.* who spreads wool latwise of scribbling machine, the first of a series of three carding machines.

second bobbin and fly frame tenter, *see* inter frame tenter.

server (wool), *see* card feeder (wool); *cf.* server (felt) (366).

set box minder (felt); run-over box minder; mends set or run-over box, which converts lap, after passing through spreading and re-lapping boxes, into a sliver.

shifter (quite common), rove shifter; replaces full bobbins by empty ones on carriage of roving machine and gives ends of rove a twist round bobbin.

silver breaker; a card tenter or can tenter *g.v.* who breaks off sliver from carding engines or drawing frames when silver can is full; removes silver can and starts fresh can; *cf.* can boy (369).

silverer, *see* rover (wool).

silver lapper, silver lap tenter, *see* Derby tenter.

silver minder (wool combing), *see* rover (wool).

silver tenter, *see* Derby tenter.

slubber, slab tenter, slubbing tenter, slubbing frame tenter (cotton), *see* first bobbin and fly frame tenter.

slubber, slab frame tenter, slubbing frame tenter (wool combing), *see* drawer (wool combing).

small speed tenter, *see* rover (cotton).

sorter, horse hair, *as* for carder, hair.

spare tenter; a fly frame tenter *g.v.* able to take place of any fly frame tenter absent through sickness, &c.

speed tenter, speed frame tenter, *see* fly frame tenter.

spindle box minder, spindle gill box minder; a gill box minder *g.v.* in charge of a spindle gill box, which, besides drawing, winds wool upon bobbins.

spreadboard attendant, *see* spreader (flax and hemp).

spreader (cotton); (i) lays several laps formed from different kinds of waste taken from bobbins, on lattice of blending machine in process of making blend, or "mixing" of cotton waste; (ii) spreads cotton on feeding apparatus in blowing and scutching room.

spreader (double); *as* for spreader (single), but performs whole series of operations without assistance.

spreader, spreader machine minder (flax and hemp); spreadboard attendant; layer; spreads fibre on one of parallel sections of travelling band which feeds spreading machine; overlaps fibre and thus forming continuous ribbon of fibre.

spreader, line, *as* for spreader (flax and hemp).

spreader (silk); lap former, lapper, lap tenter (silk); converts doved fringes of spun silk into a continuous rope; pieces fringe ends together, and passes them between rollers, which wind them, in form of a lap, round a drum.

spreader (single); covers a long board with pieces of flax or hemp, each piece overlapping piece before it; holds material thus arranged in position on board, while another spreader draws or attenuates it, forming it into one continuous thread, or sliver.

taker-off, wool, *see* breaker-off (wool combing).

taker-out, can, *see* dodger, can.

tenser, hair; carder (machine, hair carding); feeds carding machine with hair which has been opened by opener

(362) *g.v.* and controls carding machine during operation of carding or teasing.

tenser, horse hair, *as* for tenser, hair.

third bobbin and fly frame tenter, *see* rover (cotton).

tumner feeder; lays handfuls of wool on feed plate of opener carding machine in manufacture of felt.

wadding maker; passes cotton waste through willowing and carding machines, which open out fibres to form lap plates; lap rollers in gum with machine and watches gumming and drying process on creper or lay conveyor through drying chamber.

waste pleaser (wadding mill); mends and feeds machine extra card; dirt, hard ends, or other impurities from cotton waste.

weigh box minder (wool); watches weigh box drawing machine, which stops automatically when a certain length of slubbing has been delivered; may guide ends of slubbing into machine and break off slubbing and remove full bobbins at delivery end.

winder, punch, *see* puncher.

wool feeder, wool fly gatherer; feeder (wool); puts wool into carding machine, in manufacture of felt for coats.

woollen feeder, *see* card feeder (wool).

364. STRIPPERS AND GRINDERS; CARD GRINDERS, CARD ROOM JOBBERS.

burr man, burr taker-out; removes burrs and other vegetable material from burr trays of carding machine.

card cleaner (Scotland), *see* fettler.

dresser, card dresser (felt); engine dresser; strips card clothing from rollers of carding machine, removes fluff, etc., from teeth; re-grinds teeth to uniform height, on an emery wheel or on a grindstone.

engine dresser, *see* dresser.

fettler, card fettler; card cleaner (Scotland); removes accumulated waste, short threads, fly, etc., from carding or other machines with a brush or with cleaning waste, sometimes also does minor repairs to machines; *cf.* card stripper.

grinder, back; back jobber; grinds card wire at back of main cylinder on roller-and-clearer carding machine with emery-covered roller; works under direction of another grinder, who is called front grinder *g.v.*

grinder, card; card room grinder; cylinder grinder; roller grinder; grinds wire teeth of card clothing, i.e., leather, webbing, or other material set with wire teeth, and used to cover rollers of carding machine, or of brushes (also made of wire, and used in raising nap of cloth) either by emery-covered or other grinding rollers placed on the machines, or by removing the cards or brushes and grinding them in a separate machine to restore sharpness, which they may have become worn and irregular, and to make them uniform in height; generally also cleans wire teeth, removing waste, fluff, etc., therefrom.

grinder, doffer; operates a grinding roller which corrects irregularities in teeth of doffer (revolving cylinder or vibrating bar with teeth, which strips fibre from teeth of card clothing) of carding machine arising from wear and tear.

grinder, flat; sharpens wire teeth on card clothing covering flat, i.e., metal base, of carding machine, with flat grinding apparatus.

grinder, front; is leading hand of pair of grinders—the other being back grinder—who grinds card wire at front of roller-and-clearer carding machine, with emery-covered roller.

grinder, roller, *see* grinder, card.

grinder, shoddy; a stripper-and-grinder *g.v.* in a cotton waste spinning mill, sometimes called a shoddy mill; *cf.* shoddy grinder (362).

grinder, spare; takes place of any regular card grinder, or stripper-and-grinder, who may be absent through illness, etc.

jobber, back; (i) *see* grinder, back; (ii) (more rarely) attends to small repairs and replacements, oiling, etc., at back, i.e., delivery end, of carding machine.

jobber, card; earthing jobber, card worsted (cotton), woolen (cotton); (i) *see* jobber (cotton); (ii) *see* jobber (woollen and worsted).

jobber, comb; combing jobber; cleans wool from teeth of combs in combing machines.

jobber (cotton); card jobber, carding jobber, card room jobber (cotton); formerly a stripper-and-grinder *g.v.* also required to do other jobs, e.g., small repairs, replacements, oiling, in card room; obsolete.

jobber, front; a front grinder *g.v.* who also attends to small repairs and replacements, oiling, and similar jobs at front, i.e., feeding side, of carding machine.

jobber, scribbling; an under over-looker (366) *g.v.* who assists scribbling engineer (353) in woollen scribbling department; sees that machine is in good working order; adjusts machine and carries out any necessary minor repairs; watches smooth passage of material through machine.

jobber (woollen and worsted); card jobber, carding jobber, card room jobber (woollen and worsted), sliver carding machine (Yorkshire) (Scotland), removes waste or fly from frame and running parts of carding machines; repairs and adjusts machines, and is responsible generally, under the over-looker (363) *g.v.* for their running.

scribbling miller, *as* for grinder, card.

sliver on carding machine (Scotland), *see* jobber (woollen and worsted).

stripper, stripper; (i) *see* stripper, card; (ii) *see* stripper, wool.

stripper, card; stripper, stripper; cleans wire clothing of carding machines, in preparation for grinding; is often also a card grinder, *g.v.*; *cf.* card fettler.

stripper, flat; strips, from carding machine flats, worn card clothing for grinding; *cf.* grinder, flat.

stripper, wool; wool stripper; stripper, stripper; cleans teeth of carding or combing machines of neps, short comings, etc.; if working on a carding machine, *see* card stripper.

stripper-and-grinder; cleans, or strips, wire clothing of carding machines, cylinders, and grinds wire teeth of cards and doffers on surface of these cylinders.

365. SPINNERS AND PIECERS (MULE, RING, CAP, AND FLYER).

assistant driver, assistant shifting mistress; assists shifting mistress *g.v.*

bilby tenter, *see* pieceer bilby; *cf.* bilby tenter (363).

cap frame tenter, *see* spinner, cap.

crawler (woollen and worsted) (i) collects and transfers bobbins from card room, and takes them to mule room; (ii) places full bobbins in position on worsted spinning frame, and removes empty bobbins therefrom.

curler, *cf.* spinner, hair; *cf.* hair curler (368).

dodger, *see* pieceer, cross.

doffer, patent; patent doffing frame spinner; a spinner *g.v.* minding a spinning frame fitted with an automatic doffing arrangement to remove full bobbins.

driver, shifting driver, *see* shifting driver.

end lapper; assists spinner, attaches loose ends of yarn to bobbins.

framer (wool spinning); a spinner *g.v.* who minds one whose wool spinning frame, as distinct from one who minds a frame and a half or a short side frame.

head spinner; *wale head minder*; in leading hand of a pair of spinners, who jointly and one or more spinning machines, engages and pays under spinner and piecer *q.v.*

horsehair curler, *as for spinner, hair*.

improver (wool spinning); a promoted piecer *q.v.* working as a minder or spinner *q.v.* under instruction of another spinner, period of improvement depends upon vacancies at frames then on experience.

joiner, joiner minder; *joiner-spinner*, *partner - minder*, *partner - spinner*; a spinner *q.v.* who joins with another operative in minding a pair, or more, of spinning mules, and shares joint earnings with partner in agreed proportions.

joiner-piecer; one of a pair of piecers *q.v.* who share between them duties of "big" and of "little" piecer, and who divide joint earnings in agreed proportions.

joiner-spinner, *see joiner*.

layer; attaches yarn to bobbins of several spinning frames, and assists in restarting frames after spools have been removed by doffer (359) *q.v.*; when yarn breaks in spinning, lays end of spun yarn over end of that from roving bobbin, so that, in rewinding, ends may be neatly knotted; *cf.* layer (353).

looper (wool); a spinner *q.v.* who tends a frame which spins a special kind of yarn which has a loop spun into one of its strands; feeds machine and watches accurate working of looping mechanism, reporting maladjustments to foreman; ties up broken ends.

middle minder, *see spinner, under*.

minder, *see spinner*.

Mrs. Shifter (slang), *see shifting mistress*.

male head minder, *see head spinner*.

male man, male minder, *see spinner, male*.

partner-minder, partner-spinner, *see joiner*.

patent doffer frame spinner, *see doffer, patent*.

piecer, piecener; *wale piecer*, *spinner's piecer*, *spinning piecer*, *spinning wale piecer*, *spinning wale piecer*; piecer, or joins together, by hand, threads broken in spinning; keeps male clear of waste; sometimes adjusts temper weights, collects full cops of yarn from spinners, and assists spinner *q.v.* usually.

piecer, big; chief assistant to spinner *q.v.*, usually in coarse spinning districts; *as for piecer*; *cf.* little piecer (359).

piecer, billy; billy tender; a piecer *q.v.* on self-acting mules for cotton waste spinning, or in some country districts on spinning mules generally.

piecer, cross; *doffer*; a piecer *q.v.*, additional to big piecer and to little piecer, found only in fine cotton spinning, or in spinning on long mules.

piecer, extra; a supernumerary piecer *q.v.* either supplying place of piecer absent through illness, etc., or employed where local material causes additional work.

piecer, male, *see piecer*.

piecer, ring; ring frame piecer; either a spinner *q.v.* minding a ring spinning frame or an assistant to a ring spinner *q.v.* who mends threads broken in spinning, and sometimes doffs, *see doffer* (359).

piecer, side; chief assistant to spinner *q.v.* usually in centres where fine cotton is spun; *as for piecer*.

piecer, spinner's; spinning piecer, spinning male piecer, *see piecer*.

piecer - minder, piecer - spinner; a piecer *q.v.* who also performs some of duties of spinner or minder *q.v.* in assisting in adjusting spinning machine.

ring frame tender, *see spinner, ring*.

self-actor joiner, *as for joiner*.

self-actor minder, *as for spinner, male*.

shifter (jute spinning); is engaged on one spinning frame carriage consisting of seven or eight bobbins, presses empty bobbins on spinning frame spindles; loops yarn through flyer and leaves frame in running order for spinner *q.v.*; doffs full bobbins and replaces with empty bobbins.

shifter-piecer, shifting-piecer; combines duties of shifter and of piecer *q.v.*

shifting mistress; Mrs. Shifter (slang), driver, shifting driver; is in charge of spinning bobbin shifters, responsible for proper, quick, and systematic shifting of a set of frames.

short side minder (silk spinning); a spinner (spun silk) *q.v.* who attends frame having fewer spindles than usual type.

side minder, *as for spinner, male*; sometimes specifically designated, *e.g.* fly (flyer) side minder.

spinner; minder, yarn spinner; minds spinning machine, which attenuates and twists fibre into yarn; keeps machine supplied with material, controls power drive of machine, and clears faults, *e.g.* knots, tangles, breakages, which interrupt even and continuous production of yarn; sometimes also joins broken threads, adjusts temper weights, superintends taking off of bobbins, etc., usually assisted by piecers *q.v.* or other assistants, whom he/she commonly engages and pays; precise duties vary with type of machine and fibre used; often further distinguished according to fibre spun, *e.g.*, asbestos spinner, cotton spinner, jute spinner; or according to type of machine used, *e.g.*, hand spinner, fly spinner, flyer spinner, mule spinner, ring spinner; or according to method employed, *e.g.*, dry spinner, wet spinner.

spinner, big; senior of two male spinners jointly minding a pair of spinning mules.

spinner, billy; (i) a spinner *q.v.* who minds self-acting mules for cotton waste spinning; sometimes also tends carding machines, and supply his mules with reving; (ii) in certain country districts minds spinning mules generally.

spinner, bump mill (cotton waste); spins candle wick yarn from coarse cotton waste; guides loosely twisted yarn from previous machine through rollers on to spindles, where it is wound after receiving slightly more attenuation; operates special roving frame upon which such yarn is spun.

spinner, cap; cap frame tender; minds a spinning frame in which guides over spindle is in form of a cap, *as for spinner*.

spinner, double; (i) a female spinner *q.v.* who minds two spinning frames. (ii) hand-spins rope yarn with both hands at same time, on two bobbins.

spinner, dry (flax and hemp); minds a frame in which yarn is spun dry, as distinguished from wet spinner *q.v.*

spinner, French; a spinner *q.v.* who minds spinning frame on which degreased wool is spun.

spinner, free; attends machine which spins yarn on to bobbins in form suitable for use in manufacturing of uniforms and safety truses; places on machine bobbins of yarn to be spun; starts and stops machine by pulley lever, mends breakages to yarn, removes bobbins holding spun fusc.

spinner, gill; a spinner *q.v.* who minds a gill spinning frame, guides yarn through gills or combs, to drawing rollers, and thence through flyers on to bobbins.

spinner, hair; hair line spinner; hair curlier; spins or curls horsehair or other hair or fibre into rope, by drawing it from a hank and spinning it to a hank in an upright frame, controls engine which draws frame along rails and rotates hook, strands being curled thereby into a rope; sometimes specifically designated, *e.g.* horse hair spinner.

spinner, hand (mule); hand mule spinner; (i) uses a small spinning mule, turned by hand; spins cops, in domestic manufacture, for hand looms; (ii) operates a spinning mule, traversing carriage of which runs outward by mechanical means, and is pushed inward by hand.

spinner, mule; *wale mule*, *wale minder*; a spinner *q.v.* who minds a pair of spinning mules, arranged facing each other, i.e. spinning machines with intermittent action, which simultaneously draw and twist cotton, wool, etc. into yarn, or thread, and wind it into cops.

spinner, ring; ring frame spinner; ring frame tender; a spinner *q.v.* who minds a spinning frame in which the twist given to the yarn by a revolving bobbin is regulated by the drag of a small metal loop sliding on a ring around the bobbin.

spinner, rope; rope yarn spinner; (i) (machine process) minds spinning frames, usually from two to four, on which rope yarn is spun; *as for spinner*; (ii) (hand process) feeds yarn with fibre which he keeps wrapped round his waist; removes bobbins when full, and replaces them by empty ones.

spinner, self-actor, *as for spinner, male*.

spinner (spun silk); a spinner *q.v.* who minds a spinning frame in which roving, i.e. silk in roving form, is attenuated and twisted; *cf.* spinner (thrown silk) (372).

spinner, safety; (i) (machine process) spins and safety frame, *as for spinner, free*.

spinner, threefold; threefold frame spinner; threefold tender; a spinner *q.v.* who minds a threefold spinning frame, i.e., any continuous acting spinning frame, having twisting apparatus stationary so distinguished from a mangle, *cf.* spinner, mangle.

spinner, under; middle minder; is subordinate of a pair of spinners, who jointly mind one or more spinning machines; works under direction of head spinner *q.v.* and superintends work of two piecers.

spinner, wet (flax or hemp); a spinner *q.v.* who places rove bobbins in creel above spinning machine; guides rove end through water trough and through reach rollers and flyer on to bobbin.

spinner, yarn, *see spinner*.

string maker, *see twine maker*.

throstle tender, *see spinner, throistle*.

twine maker, twine spinner; string maker; a highly skilled operative who twists best quality twines by hand; winds threads round his waist, and pays-out as he twists them.

twister (spun silk); attends frame used also in manufacturing of uniforms and safety truses; places on machine silk or for doubling; puts bobbins on creel and passes end through rollers and so to another bobbin; *cf.* spinner (spun silk) and doubler (355).

wheel minder; a mule spinner *q.v.* in wool spinning department.

365—DOUBLERS AND DOUFLING FRAME TENDERS (NOT SILK).

blind line maker, *as for plaited line maker*.

button bolt twist maker; a twister (cotton) *q.v.* making twist for sewing round button holes.

cable, *see twister, double*.

candlewick maker; watches a machine which makes candle wick from several single yarns, by drawing them together; replaces empty bobbins with full ones in creel; guides end of yarn through machinery; stops machine and joins up broken yarns.

cordier; fancy cord maker, fancy cord spinner, fancy cord twister; draws threads of yarn through holes of a register plate on a cord twisting machine, a kind of doubling machine, and passes them between drawing

rollers; thence attaches them to bobbins, and places them on spindles; controls drive to machine, which rotates spindles and applies twist to yarn; yarn is then wound, in cord form, on to bobbins automatically; cord spinner, see plaited line maker; cf. jack minder (3753).

double-doubler, see **twister**, **double**.

doubler, **double minder**, **frame doubler**; doubling frame *tester*, **doubling spinner**; is responsible for quality and quantity of doubled yarns produced on doubling frames; guides yarns from reel through guides and rollers to winding-on bobbin; may or may not pass yarn under roller in water trough; starts and stops machine as necessary; supervises work of lapper-on (369) g.v. and of creeler (369) g.v. and himself/over self pieces broken threads, or creels bobbins, if necessary; often further distinguished according to type of machine, e.g., ring doubler, ring frame doubler, flyer doubler, or according to process, e.g., dry doubler, wet doubler, or according to nature of product or stage, in manufacture, e.g., asbestos doubler, cop doubler, finishing doubler.

doubler, fancy, see **twister** (cotton).

doubler, finishing; **finisher doubler**; **finisher** (doubling); (i) see **twister** (cotton); (ii) minds a frame on which final twisting or doubling of corded yarns is done; these are doubled twice, like crested cotton or sewing thread.

doubler, single, see **twister**, **single**.

doubler, spare; a doubler g.v. who takes place on a worker as doubling frame about through illness, etc.

doubler (wool), see **twister** (wool).

doubling frame tester, see **doubler**.

doubling hand, (i) see **twister**, **single**; (ii) see **twister**, **double**.

doubling machine minder, see **twister** (wool).

doubling spinner, see **doubler**.

fancy cord maker, **fancy cord spinner**, **fancy cord twister**, see **corder**.

finisher (doubling), see **doubler**, **finishing**.

frame worker (rope); general term for worker mending house machine as which twine and small rope are made; cf. plaited line maker, **twine twister** (3655).

piecer, doubler; **piecer**, or **joiner**, yarn broken in process of doubling; cleans machine, and assists doubler g.v. generally; for duties, cf. **piecer** (3655).

piecer, twiner; **piecer**, or **joiner**, yarn broken in process of twisting; cleans machine, and assists twiner g.v. generally; for duties, cf. **piecer** (3655).

plaited line maker; **cord spinner**; (i) minds cord plaiting machine; passes yarn ends from bobbins through a central guide, switches on power-drive, and attaches plaited cord to overhead winch, which draws and winds up cord as it is made; (ii) (finishing hand) twists and plaits silk and horsehair into convenient lengths for use as fishing lines and casts.

re-doubler, a doubler g.v. who minds a frame on which two or more threads of twofold yarn are twisted together.

self-trimer minder (doubling), see **trimer**.

twine maker; general term for workers engaged in twine manufacture, e.g., yarn warper (rope and twine) (367), twine twister, twine reeler (367) g.v.; sometimes more specifically designated, e.g., shep twine maker.

twiner (cotton), **twiner minder**, **twiner spinner**; **self-actor minder** (doubling); operates machinery which controls working of twisting frame, and adjusts it as required; supervises twiner piecer g.v. and twiner spooler (367) g.v.

twiner (wool), see **twister** (wool).

twister, yarn twister, **twist hand** (cotton); **fancy doubler**, **finisher doubler**, **finishing doubler**; takes several strands of cotton yarn, which have already been doubled, and threads them through guides and to bobbins of twisting frame, where they are twisted together in a direction opposite to that of doubling process; controls power-drive of twisting frame, cleans flanks and tangs, and winds yarn broken in (twine), sometimes specifically designated, according to type of twisting machine, e.g. cap twister (cap covered bobbins), fly twister, flyer twister, ring twister.

twister, double; **cobler**, **double-doubler**; **doubling hand**; minds frame which twists together yarns that have already been doubled once; cf. **single twister**.

twister, doubling (flax or hemp); guides flax or hemp yarns through doubling or twisting frame and through water trough to winding-on spindles.

twister, patent; a twister (cotton) g.v. attending newer, patent, type of twisting frame, having special stopping, etc., devices and rendering supervisory assistance, attends two or more frames.

twister, single; **doubling hand**, **single doubler**; a doubler g.v. who twists, by twisting together, yarns that have not already been doubled; cf. **double twister**.

twister, twine; guides ends of yarn through drawing rollers of a twine twisting machine, and thence to spindles and flyers; adjusts yarn tension device, controls power-drive of machine, mends yarn broken in twisting, and deals filled bobbins assisted by doffer (368) g.v.; cf. **line maker** (3753).

twister (wool), **twister minder**, **twisting frame tester**, **twisting machine minder**; **doubler** (wool), **doubling machine minder** (wool); **twiner** (wool); minds twisting frames, or triners, which twist together two or more woolsen or worsted yarns to strengthen them, or to produce fancy effect; for duties, see **doubler**.

367—WINDERS (NOT SILK), REELERS (NOT SILK), DRAWERS, WARPERS.

baller (cotton yarn or thread), **cotton baller**; yarn baller (cotton), **ball winder** (thread); attaches cotton yarn or thread to cap of baling machine, round which ball is to be wound; starts machine; takes off ball when it is finished.

baller, warp; **warp folder**; twists yarn, as received from mill warping machine, into balls, winding round the hand and tucking in any loose ends; balls are then sent to be spun.

baller, yarn (cotton), see **baller** (cotton yarn or thread).

baller, yarn (woollen); **woollen yarn baller**; minds a balling frame, which winds woollen yarn for hosiery, etc., into balls; guides yarn through frame to flyer and spindle, which wind up yarn; frame stops automatically when balls reach required weight.

ball maker-up, **cotton**; a section beamer g.v. who, after winding, removes yarn and makes it up into ball or ball warp.

balloonier, **balloon minder**; a warper g.v. who winds threads on a drum, called a balloon.

beamer; **beaming machine minder**, **beam warper**, **beam winder**, **notchbeamer** (silk), **warper-doff**, **warp folder**, **warping machine minder**, **warping minder**; minds beaming machine, which winds warp yarns from bobbins on to reeling beams, i.e. larger bobbins, in preparation for warp dressing process.

from one set of beams, or from sectional or chain warps, on to weaver's beam, in preparation for weaving or for lace making; places

one or more beams in supports of machine; guides each separate thread through guide eyes, or through a comb or reed, to keep it in position while it is being wound on to beam, sets machine in motion; stops machine when beams are full, and removes full beams; sometimes also keeps creels attached to machine supplied with bobbins full of yarn.

beamer, chain; a beamer g.v. who winds yarn in chain form (like a loose rope) on to beams.

beamer, lace; **machine lace beamer**, or **for beamer**; cf. **warper** (lace).

beamer, Scotch; **Scotch dresser**; winds coloured yarns on to beams, which are afterwards placed on reeds for dry lapping machine and combined together, or, if united, on weaver's beam.

beamer, section; places bobbins of yarn in frame; guides yarn to circular blocks of wood called cheeses, very narrow beams, round which it is wound, and then intended for running off on to weaver's beam.

beamer, warp, see **beamer**.

beaming machine minder, see **beamer**.

beam setter; **draw lifter**; places beams, wooden rollers with tooth flanged ends, upon a truck fitted with an elevator, which raises them and swings them into position on beaming machine.

bit maker, see **winder**, **bit** (carpets).

bobbiner, **bobbin machine attendant**, **bobbin machine minder**, see **winder**.

carpet filler; supervises automatic winding of yarn intended for carpet weaving, from bobbins on to a dress.

chainier, see **warper**, **ball**.

chain maker, see **linker**.

cheeser, **wool cheeser**, see **winder**, **cheese**.

clearer, **clearing frame tester**; **clearer winder**, **clearing frame winder**, **clear winder**; places bobbins of doubled cotton yarn on spindle of clearing frame or clearing machine, which removes bad ends, thick, soft places, dirty or badly made knots, or other imperfections from yarn, in preparation for gassing; cf. **gasser** (yarn) (368); guides yarn through vertical slots or between adjustable brackets to winding-on spindles, starts machine, and joins broken ends of yarn, as required, with mechanical yarn knitter or splicer; takes baskets of full bobbins from clearing frame to weighing machine; sometimes specifically designated, e.g. **warp clearer**.

cop filler, **copper**; minds a copping machine, which winds yarn, thread or twine in cops, cones, cylindrical or cheese-shaped masses, formed upon a paper tube or cardboard centre, places cardboard centres on spindles, and removes cops when filled.

copper, **cop yarn**, or **cop filler**.

cotton filer (carpets); a winder g.v. winding cotton warp yarn for use in carpet manufacture.

cotton plucker, as for winder.

dresser, **Scotch**, see **beamer**, **Scotch dresser** (not silk), see **winder**, **cheese**.

fur filler (carpets); a cop winder g.v. winding sensitive fur, for use in weaving chenille cloth.

hank buncher (not wool warshouses); (i) see **winder**, **hank**; (ii) see **reeler** (not silk).

hanker; (i) see **reeler**; (ii) see **winder**, **hank**.

lifter, **beam**, see **beam setter**.

linker; **chain maker**; watches proper working of a linking machine, which draws long lengths of warp yarns from bobbins set in a bank, or frame, and automatically links it into a chain; yarn is then wound on to weaver's beam, or sent out as chain warp; guides yarn from bobbins into machine, joins broken threads.

pattern dresser (winding); a warp dresser g.v. who specializes on pattern warping; arranges and alters bobbins of different coloured yarn

winder, *slip*; (i) (tape trade) winds tape, by machinery, in lengths of 2½ yds, into a hank, ready for bleachers; (ii) places skein (or slip) of yarn on a skeleton reel (swift) of winding frame, and winds it therefrom on to bobbins.

winder, *spool*; *spooler*, *twist reeler*; a winder *q.v.* who winds a machine which winds yarn or thread on to spools.

winder, *thread*; (thread spooler); (i) a winder *q.v.* who winds thread on small reels or spools by hand or by machine; (ii) adjusts layers of thread, cuts and locks end of thread in neck of spool, and polishes surface of filled spool; (iii) winds hanks of thread into skeins, hanks, etc.

winder, *throstle*; a winder *q.v.* who operates machine which winds yarn from throstle, or flyer, frame bobbins, spinning or doubling, on to larger bobbins.

winder (twine), *see* skinner (twine).

winder, *warp*; a winder *q.v.* who attends a draw-winding frame, which winds yarn from hanks on to large spools, in readiness for warper *q.v.*; places hanks on swift (skeleton reel) or type, and guides yarn on through machine to winding spools.

winder, *welt*; *wolf winder*; a winder *q.v.* who winds welt yarn into cops, or other form convenient for insertion in weaving shuttle of loom; sometimes a specialist in thread, according to description of welt, *s.g.* black welt winder, white welt winder.

winder, *weight*; a winder *q.v.* who winds a machine on which each spindle stops automatically when a certain weight of yarn has been wound.

winder, *wool*, *see* winder, *welt*.

winder, *worsted*, *see* worsted filer (carpets).

winder-on; *re-banner*; operates a machine which unwinds dyed yarn from dyer's beam, and winds it on to weaver's beam.

winding machine minder, *see* winder (not talk).

worsted filer (carpets); *worsted sizer*; a winder *q.v.* engaged in winding worsted yarns.

368.—DRAWERS-IN AND TWISTERS-IN

drawer, *drawer-in*, *drawer-in* of heads, *warp drawer-in*, drawing frame attendant, *enterer*, *gutter-in*, *gear drawer*, *harness drawer*, *hender*, *in-taker*; *looser*, *reeler*, *reader-in*, *slayer*, *slayer*, *taker-in*, *warp drawer* (unusual), *warp loomer*, *warp slayer*, *warp taker-in*; attaches weaving beams to drawing-in frame, and draws each warp yarn, separately, with a hook, through eye (or loop) of lead, and through dent of reed in loom.

loomer, *warp loomer*; *see* drawer; sometimes also does work of twister *q.v.*

loomer and twister; combines work of drawer *q.v.* and twister *q.v.*

loom machine operator; *loomer* or *drawer* *q.v.* operating a machine for mechanically threading warp threads through lead; lays warp on machine in level sheet and moves levers causing machine to pick-out threads and to lay them through heads.

reader, *reader-in*, *see* drawer.

slayer, *slayer*, *warp slayer*, *see* drawer.

springer, *head springer* (cotton); assists machine minder in drawing-in room of weaving departments; does work (or part of work) elsewhere done by drawing frame attendant *q.v.*

taker-in, *warp taker-in*, *see* drawer.

tier-in, *tier-on*, *warp tier-in*; a twister *q.v.* who ties ends of new warp to those of old warp, when pattern is unchanged.

twirler, *see* twister.

twister, *warp twister*, *twister-in*, *twister-on*, *twisterer*; *twister*, *warp dresser* (unusual); (i) (*head process*) selects one thread of old warp and corresponding thread of new warp, and twists them together between thumb and forefinger; (ii) (*machine process*) clamps old and new warps in two parallel sheets, the old uppermost; controls mechanism of twisting machine which picks up individual threads from each sheet of warp and twists them together.

twister, *patent*; a twister (machine process) *q.v.* who tends a patent twisting machine composed of reeds, etc.; places warp in position in machine and controls machine by levers.

twister, *warp*; (i) *see* twister; (ii) twists, generally, by machine, two threads of different colours; or twists, on warps, single threads of yarn into two-ply or three-ply strands.

twister-and-drawer; combines occupation of twister and of drawer *q.v.*, usually in a small mill.

warp dresser; (i) (unusual) *see* drawer; (ii) (unusual) *see* twister; *cf.* warp dresser (367) and (369).

369.—SIZERS, SLANERS, AND TAPERS.

assistant dresser; assists warp dresser *q.v.* on waste dressing machine.

dresser, *Bradford*; coloured dresser (wool); Yorkshire dresser; guides threads from separate half's (*see* baler (367)) of each coloured yarn, in correct sequence to pair of grooved rollers on warped dressing machine, which arranges threads in correct position for winding on beams.

dresser, *warp dresser* (not wool); winds a warp-dressing machine, which dresses or prepares warp threads for warp beam in readiness for weaving; may be either (i) a Yorkshire dresser, or (ii) one who prepares delicate and fine yarns by passing them through sizers or slaying frame; or (iii) an ordinary sizer or slasher *q.v.*; sometimes specifically designated, *s.g.* cotton warp dresser.

dresser, *yarn*; *storcker*; minds a yarn-dressing machine, which starches yarn for use in weaving; guides yarn ends through machine and steadily to stop machine in event of irregular passage of yarn during dressing.

dresser, *Yorkshire*, *see* dresser, *Bradford*.

looser; crosses warp threads, after weaving, alternately above and below lease reeds at one end of warp and in groups at the other, to keep them in position during heating and warping.

size mixer, *warp size mixer*; dissolves ingredients of size in water, and boils solution in cylinders; regulates heat and steam pressure of cylinders, and solution strength of mixtures.

sizer, *yarn sizer*, *sizing machine minder*; *slasher*, *slasher-sizer*, *taper*, *warp slasher*; (i) places beams of yarn in position at back of sizing machine; gathers thread ends into sheet-like form and guides them through rough rollers; buyers rollers into troughs of hot size, and starts machine; guides yarn from size trough on to drying cylinders; (ii) (*except trade*) passes dyed yarn through trough containing size, and through steam-heated drying cylinders or pipes, and attaches it to a beam; controls mechanism which causes beam to revolve and wind yarn round itself; (iii) dips yarn in form of hanks, etc., into vats of sizing solution, and squeezes out between mangling rollers of winches; sometimes specifically

designated, according to form in which yarn is made up, *s.g.* cop sizer, hank sizer, skein sizer, tape sizer, warp sizer.

slasher, *warp slasher*, *see* sizer.

slasher, *dry*, *see* taper, *dry*.

slasher-sizer, *see* sizer.

starcher, *see* dresser.

taper; (i) *see* taper, *dry*; (ii) *see* sizer.

taper, *dry*; *dry slasher*, *taper*, *winder-on*; minds dry taping machine, chiefly used for coloured cotton goods, which takes threads, wound from several other beams, and winds them on to weaver's beam to make one complete warp; gathers threads from beams into one sheet of ends and places on weaver's beam; starts and stops winding mechanism as necessary.

taper's finisher; attends to drying and beaming of sized yarn on sizing machine, under direction of taper or sizer *q.v.*

warp applier; minds a warp winding frame run in conjunction with drying cylinder of sizing machine; yarn, after being wound on to warp bobbins, is beamed in usual way.

warp stretcher; minds a hank (or skein) stretching machine which, by sizes stretching yarn, also opens out stinky patches from sizing; places hanks or skeins over stretching rollers, switches on power-drive, and removes hanks or skeins on completion of operation.

winder-on, *see* taper, *dry*.

370.—WEAVERS.

alabar loom worker, *as for* weaver.

hand maker, *hand maker*; minds a narrow, quick-speed loom for weaving hand and webbing; for processes, *cf.* weaver.

hit maker (carpets); a power loom weaver *q.v.* who minds a loom on which waste carpets, having no design, are woven, from bits of yarn left over from other goods.

hit maker (carpets) *designer*; *cf.* bit maker (carpets) (367).

hraid speeder; a weaver *q.v.* minding two, three, or four looms on which hraid, and other similar narrow woven fabrics, are woven.

gold and/or silver; a gold and/or silver weaver *q.v.* who weaves gold or silver cord.

glimper, *glimp maker*, *glimp spinner*; minds a narrow, quick-speed loom, an occasional handloom, often with a wire or coarse cord running through it; places bobbins of yarn and of wire in correct sequence in frames, and guides and attaches warp and wire to a feed which conducts them into machine; controls power-drive of machine; sometimes specifically designated, *s.g.* hraid glimper.

hair slave maker; *hair slave weaver*; a hair weaver on hand loom or power loom; *q.v.* weaving material for hair slave.

hanger maker, *woven hanger maker*; a power loom weaver *q.v.* who weaves a narrow web, often having the name of tailor in woven, as an advertisement, intended to be used in making loops for hanging up coats.

helper; a spare weaver *q.v.* who goes from loom to loom helping other weavers in case of sickness, disability, etc., engaged on Northrop looms, hings web, fills batteries and doffs bobbins, *cf.* helper (369), *tentor* (weaving).

jacquard frame tender; a tender *q.v.* minding jacquard weaver *q.v.* loom tender, *loft tender*, *power loom tender*; (i) *see* tender; (ii) *see* weaver, *power loom*.

orris spinner, *orris weaver* (gold and/or silver); a gold and/or silver weaver *q.v.* weaving a novelty of gold or silver lace or hraid called orris.

rag maker; *rag weaver*; a power loom weaver *q.v.* who weaves rugs; sometimes works on a hand loom, *see* hand loom weaver; *cf.* rag maker (368).

server (hair weaving); assists hair weaver *q.v.* by putting hair on to shuttle for drawing through warp. tender (weaving); *loom tender*, *loom tender*, *power loom tender*, *weaver's helper*, *weaver's tender*, *weaver's assistant*, *weaver's piler*, *weaver's helper*, *weaver's tender*, *weaver's assistant* *q.v.* by cleaning looms and replacing empty warp bobbins with full ones; *looms weaving*.

tinzel lace maker; *see* weaver, gold and/or silver.

twarp loom knitter; attends a horizontal knitting machine, i.e. warp loom, for knitting artificial silk scarves, etc., having all its threads on warp beam, and having no guide; guides thread ends through machine, starts-up machine and keeps it going, repairing broken threads when necessary; *cf.* warp loom knitter (368).

weaver, loom weaver; forms cloth or other textile material by interlacing, entwining, etc., a series of parallel threads, or warps, by a crossing thread or weft, which moves backwards and forwards across the warp threads on a loom, which may be either a hand loom or power-driven; *see* hand loom weaver, power loom weaver; often further distinguished according to material used *q.v.* alpaca, jute, asbestos weaver; or according to type of loom, *q.v.* box loom, dobby, Northrops weaver; or according to class of article produced *q.v.* braid, dress goods, blankets, hosiery weaver.

weaver, automatic loom; a power loom weaver *q.v.* who minds a number of looms which replace their own weft.

weaver, carpet (hand loom), *see* weaver, hand loom (carpets).

weaver, carriage trimming, *as for* weaver, coach lace, except that trimmings are usually over 14 inches wide.

weaver, chenille setting; setting weaver; sets chenille fur into carpet on loom; lightly combs up each row of chenille fur, by hand, so that it beds up against previous row with which it must be matched.

weaver, chenille weft; *see* weaver; a power loom weaver *q.v.* who makes chenille fur to be used as weft (pile) for chenille carpets; works from a design-paper plotted into squares, showing order and colour of yarn, inserted by hand across loom, whilst carrying required colour to match square or squares of design-paper; stops loom, changes shuttle, and re-starts loom.

weaver, coach lace; *see* weaver, carriage trimming; a power loom weaver *q.v.* who weaves bands of trimming, usually under 1 inch in width, for railway carriages, motor cars, and carriages, in silk, cotton, or worsted, using a small-power loom with worm shaft and a rearward attachment.

weaver, cocoa fibre mat; *coir* mat weaver; *see* weaver (cocoa fibre, *coir*); weaves *coir* mat fabric, usually on a hand loom.

weaver, embroidery; a hand or power loom weaver *q.v.* who minds a weaving loom on which ornamental fabric, ribbons, etc., are woven with a plain or coloured repetition pattern, to imitate hand embroidery.

weaver, felt; a power loom weaver *q.v.* who minds a loom, wearing idles for use in paper-matting or other machinery; weaver may be from ten to forty feet in width; *cf.* balter (375).

weaver, gold and/or silver; gold and/or silver lace or braid weaver; *finzel* lace maker; (i) a power loom weaver *q.v.* tending a machine in which gold, silver, or plated tinzel wire or thread is woven with cotton or silk to form braid, lace or cloth; (ii) a hand loom weaver *q.v.* working with gold, silver or plated tinzel thread or wire in shuttle to weave braid, lace or cloth.

weaver, hair; hair cloth weaver; weaves hair cloth, having a warp of cotton or linen, and a weft of horse or other hair; may be either a hand loom or a power loom weaver *q.v.*

weaver, hair seating, *as for* weaver, hair.

weaver, hair sleeve, *see* hair sleeve maker.

weaver, halter; a hand loom weaver *q.v.* who weaves special webbing for halter or headstalls in one piece; *cf.* halter maker (368).

weaver, hand loom; stretches warp threads, in proper order, across a frame, which is then placed in loom, process levers, usually worked by treadles, which cause certain warp threads to rise; pushes or jerks shuttle containing weft to and fro through openings or sheds thus made in warp; beats each row of weft close up against previous row, by pulling up sley and reed; winds cloth, as it is completed, on a beam roller.

weaver, hand loom (carpets); *carpet* weaver (hand loom); stretches warp threads between two beam rollers; inserts and knots pile, according to pattern, tuft by tuft, sound warp threads; inserts weft at intervals, varying with type of carpet; beats down weft and pile with large comb beater.

weaver, harden; harding weaver; a power loom weaver *q.v.* who weaves harden, a cloth woven from hard or tow yarn (re-spun flax or hemp waste).

weaver, harness loom weaver; *see* weaver, jacquard.

weaver, headstall, *as for* weaver, halter.

weaver, horse hair; horse hair seating weaver, *as for* weaver, hair.

weaver, hose pipe; a power loom weaver *q.v.* who minds a special loom for weaving canvas hose pipe.

weaver, inkle; a power loom weaver *q.v.* who weaves inkle, i.e. linen tape or braid.

weaver, jacquard; harness weaver; harness loom weaver; a power loom weaver *q.v.* who weaves on a loom having a jacquard attachment, for figured or fancy fabrics.

weaver, mat (cocoa fibre, *coir*), *see* weaver, *coir* (cocoa fibre mat).

weaver, patterns and taggings, *see* weaver, coach lace.

weaver, pattern; range weaver; a hand loom weaver *q.v.* who weaves patterns, lengths of cloth sufficient for a garment, sometimes to a special or new design; usually done on a hand loom even where similar material, in bulk, would only be woven on a power loom.

weaver, power loom; power weaver; loom tender, loom tender, power loom tender; minds one or more power-driven weaving looms, which usually stop automatically when a thread breaks; starts loom by means of levers, and restarts it after stoppages; keeps warp shuttles and, on power looms, picks warp bobbins supplied with yarn; mends breakages to warp or to weft threads by switching-in, and repairs, to overlooker (weaving) (365) *q.v.*, accidents to loom.

weaver, range; *see* weaver, pattern.

weaver, rug, *see* rug maker.

weaver, scroll; a power loom weaver *q.v.* who weaves scroll trimming, a kind of gimp.

weaver, setting, *see* weaver, chenille setting.

weaver, tassel; (i) covers wooden wheel with threads of cotton, silk, etc., or with a tassar band, using a weaving or plaiting machine; sets bobbins on spindles in machine; places moulds in holder; controls mechanism by levers; (ii) a power loom weaver *q.v.* who weaves material to be made up into tassel or ball fringe.

weaver, tinzel; a power loom weaver *q.v.* who minds a loom, or looms, weaving tinzel in form of braid.

weaver, twill; weaves twill carpets, a ribbed weave produced by weft passing over two or more warp threads at a time.

weaver, weft, *see* weaver, chenille weft.

weaver's assistant, weaver's filler, weaver's helper, weaver's tender, *see* balter.

371.—SILK WINDERS, CLEANERS, AND DOUBLERS.

balter, twist; warp balter; makes warp on a circular frame, and winds it on in ball form for convenience in handling; places yarn bobbins in creel, guides each through frame and attaches to balling device; starts and stops frame by hand lever, etc.

bottle bobbin worker; adds cone or bottle bobbin, as filled during silk winding and replaces with empty cone; joins broken threads; *cf.* doiler (367).

cheeser; cheesing frame mender; cheesing frame tender; a winder *q.v.* who mends a winding frame which winds silk on conical or cheese-shaped bobbins.

cleaner, cleaner (throwing); cleaner piece, drawer (mill department); winds raw silk from bobbins, through cleaning or clearing knives, on to fresh bobbins, to remove dirt, lumps, etc.; clears obstructive, tangled threads, etc., from knives, joins broken threads and re-starts machine.

copper, topping frame mender, topping frame tender; tube machinist; a winder *q.v.* who mends a machine in which silk yarn is wound in conical form or on to small paper tube.

doubler, frame, *see* doubler (spun silk).

doubler (gun silk); minds a doubling machine or frame in which two or more threads of raw silk, in gummy state, are wound together, on a bobbin, with no twist; guides thread ends through fallers, etc., to winding-cones; keeps machine running; guides, i.e., adds broken threads, adds fall bobbins and replaces with empty.

doubler (spun silk); doubler piece, frame doubler, spooler (spun silk doubling), tender (doubling), winder (spun silk doubling), *see* doubler (gun silk).

doubler machine or frame which twists two or more yards of spun silk together to form a heavier and stronger yarn; guides yarn ends through machine to winding-cones; breaks broken threads, adds fall bobbins; sometimes, specifically designated according to type of machine, *q.v.*

double doubler, trap doubler.

doubler (thrown silk); doubler piece, doubler tender; minds a doubling machine or frame in which two or more threads of thrown silk are wound together, on a bobbin, with little or no twist.

doubler of shute; a doubler (spun silk) *q.v.* who doubles spun silk weft for use in weaving.

drawer (mill department), *see* cleaner (throwing).

drummer, silk drummer; a winder *q.v.* winding silk threads, for lace or on a drum.

filler, braid; a winder *q.v.* attending machine winding silk threads from bobbins to quills for braid weaving; may wind single, two or more threads into each quill; may attend machine having automatic stops operating when specific amounts, *e.g.* 100 yards, are wound.

filler, hand; a filler or winder *q.v.* using hand-controlled winding frame.

filler (silk rearing), *see* winder; sometimes specifically designated, *e.g.*, quill filler.

filler of shute; a winder *q.v.* of silk weft.

lazer, reel; laces or threads ends of silk strands into laced through guides to bobbin on winding machine.

lazer, silk lazer; inserts fork-like hand tool between strands of skin and pushes through a lace of spun silk, laces strands and forwards to keep strands in position in skin for dyeing or re-winding.

piecer, cleaner, *see* cleaner (throwing).

knitter, gaa mantle; attends automatic seamless machine which knits tubular fabric for use in gaa mantle making; tends machine with bobbins, guides yarn from bobbins to needles, mends broken threads, starts and stops machine as necessary.

knitter, girawold; see girawold hand. knitter, lia; (i) a frame hand g.v. who minds a small circular frame on which ties are knitted; for duties, cf. circular hand; (ii) tends a straight bar frame, on which ties are knitted.

knitter, frame work knitter, machine knitter, knitting frame worker, knitting machine worker, see frame hand; sometimes specifically designated, e.g. stocking machine knitter, woollen knitter.

latch needle hand; attends to a set of four latch needle machines, which knit circular (tubular) web fabric for knitted underwear; guides yarn ends from bobbins, and threads yarn through latch self-setting knitting needles; keeps machines running, mends breakage to threads.

lagger (nose); a Cotton's patent frame hand g.v. engaged in knitting hose legs.

linker (hoesery); joiner, runner-off; operates linking machine, which joins two portions of other knitted goods; places two fabrics to be joined, side by side and loop by loop on a circle of needle points which travel slowly round and finally pass into stitching zone where loops are connected by chain stitching.

loop worker, loop wheel machine hand, loop wheel machine worker, loop wheel worker; a circular hand g.v. operating a particular kind of machine, called a loop machine, which knits tubular knitted fabric for underwear; sets up yarn in machine, keeps machine going, and joins broken threads.

machine hand, automatic seamless; seamless hand (plain); seamless machine hand, seamless machine minder; attends automatic machine for making seamless hose and half hose; guides yarn from bobbins to needles, and controls power driving machine; this machine produces plain hose, complete with heels and toes, which only require closing and finishing off.

machinist, George (hoesery); attends "George" type machine; hose knitting machine, not commonly used, cf. seamless machine hand.

machinist, stocking machinist, knitting machinist, see frame hand.

Maxine hand (hoesery); an automatic seamless machine hand g.v. who attends a Maxine frame which knits seamless stockings.

patent hand, see rib top maker, patent.

rib top hand, rib top maker, rib top worker; circular rib top maker; attends rib top machine, which knits ribbed tubular fabric for cutting up and attaching to legs of seamless half hose; guides yarn from bobbins to knitting needles, sets machine running, mends broken yarn.

rib top maker, patent; patent hand; a Cotton's patent frame hand g.v. engaged on a Cotton's frame adapted to knit rib tops for hose.

rotary fingerer (gloves); a rotary frame hand g.v. working at a glove finger knitting machine.

rotary hand, see frame hand, rotary. runner-off (hoesery), see linker (hoesery).

runner-on (hoesery); hoesery transferer, hoesery worker; threads complete row (or whole) of stitches of knitted fabric upon needles or upon metal points of a loose bar, by placing fabric upon the points, stitch by stitch, at a distance of three or four rows from the end; starts and ends knitting from end to bar; places loose bar in knitting machine and transfers stitches on to needles in machine.

seamless hand (plain), see machine hand, automatic seamless.

seamless hand (ribbed), see XL hand. seamless machine hand, seamless machine minder; (i) a frame machine hand, automatic seamless; (ii) see XL hand.

sox hand (hoesery); general term for workers engaged on sock knitting frames, e.g., Cotton's patent frame hand, automatic seamless machine hand, XL hand g.v.

stockinger, as for sox hand.

warp hand (knitted fabrics), as for warp hand (sock) (376) g.v., knitting artificial silk fabrics, etc. XL hand; seamless hand (ribbed), seamless machine hand, seamless machine minder; attends automatic hose machines, known as XL machines, which produce seamless ribbed hose; threads yarn through guides to knitting needles from bobbins, and keeps machine running by mending broken yarn; inserts new needles when necessary.

375.—HAND KNITTERS.

coat maker (hand knitted coats); a hand frame work knitter g.v. who makes knitted coats; cf. coat maker (machine knitted coats) (374).

crochet worker; crocheter worker; (i) makes shawls, d'oyers, lace, trimming, etc., by looping wool, silk or cotton thread with a hooked (crochet) needle by hand, according to pattern; (ii) operates a crocheting machine to make lace for hoesery garments, etc., as for hand frame worker.

hand frame work knitter, hand frame worker, hand knitting machine worker; hand knitter, stockinger; sets up yarn in hand frame, by inserting bobbins and threading thread through guide, and operates it by turning a handle, or with treadles.

hand knitter; (i) knits by hand; (ii) see hand frame work knitter. hand splicer; inserts extra bobbin into machine, so that knitting is strengthened at point where splice is required.

jumper knitter; knits ladies' jumpers by hand, or on a hand frame stockinger, see hand frame work knitter.

376.—LACE MAKING MACHINISTS AND WARP HANDS.

hack girl (Swiss embroidery), hack and girl; shuttle girl; crafts shuttle and mends broken threads at back of Swiss embroidery machine, either pantograph or jacquard frame, under direction of front girl (Swiss embroidery) g.v.

fourteen knitter, see overlocker.

embroiderer, machine (lace); general term covering machine lace embroidery makers, e.g., Bonnas machinist, corseily hand (407), pantographer g.v.

front girl (Swiss embroidery); Swiss lace machinist (an embroidery maker); repairs broken threads at front of machine, and is responsible for work done by machine under direction of pantographer g.v.; directs hack girl (Swiss embroidery) g.v. on jacquard frame, has similar hand skilled duties; mends frame under control of shop foreman.

lace embroidery maker; general term covering machine embroiderer (lace) and hand lace workers (377) g.v. lace machine tender; general term for lacemaking machinist; not in general use; includes all terms under this code No. 376.

lace machinist, Swiss; (i) (on jacquard frame), see front girl (Swiss embroidery) (ii) mends Swiss embroidery, sold in tambour for the purpose, on sewing machine; usually done by repairer (embroidery) (379) g.v.

lace maker, lace worker, see twist hand; sometimes specifically designated, according to kind of lace made, e.g. blind lace maker, blind lace worker, curtain lace maker,

fancy lace maker, fancy lace worker, plain net lace maker, pusher (blind) lace maker, tordion lace maker; or according to type of machine used, e.g. Lever lace maker.

lace maker, tordion; (i) a twist hand g.v. who works on a Lever's machine adapted to produce imitation tordion lace; real tordion lace being made by a hand process, cf. tordion lace maker (377); (ii) tends a Barmes machine, which produces lace known as real imitation tordion.

lace maker, warp (lace), see warp hand.

laceman, see twist hand. overlocker, overlocking machinist; cardon knitter; stitches round scalloped edge of finish lace curtain with overlocking machine.

pantographer; follows point by point, with a flexible metal arm, an enlarged vertical diagram placed at end of pantograph machine, to embroider designs on net or lace; cf. pantographer (407); supervises back and front girls g.v.

shuttle girl, see hack girl (Swiss embroidery).

spotted net maker; a twist hand g.v. in charge of a plain net machine fitted with a jacquard attachment for making spotted net.

spring maker, spring twister, spring worker; a twist hand g.v. who operates a machine, generally a Lever machine, which makes spring lace; cf. spring maker (band worker) (377).

tattooing maker, tattooing worker; a warp hand g.v. whose machine is adapted to make tattooing, a kind of knitted lace; cf. tattooing worker (band worker) (378).

twist hand, twister; lace maker, lace man, lace worker; tends lace machine, Lever's, plain net or curtain, and mends or pieces threads, starts and stops machine, or by using aprigs for broken threads as net is made, and joins them up, replaces empty bobbins by full ones, etc.; sometimes specifically designated, e.g. fancy lace worker.

warp and (lace); warp lace maker; minds a warp lace machine, guiding threads from bobbins to needles, watching knitting, and stopping machine, when necessary, to join broken threads; sometimes specifically designated, e.g. silk warp hand.

377.—HAND LACE WORKERS.

Hendon maker, Hendon worker; a pillow lace maker g.v. who makes, on a gillow, springs or aprigs of lace and joins them by bars of other lace work, Hendon gillows, or attaches them by hand needs work to a plain net ground (see ground applique). for lace maker, lace worker; makes lace by hand on a pillow; uses pins in pillow or cushion, and works design, which is drawn on strip of card attached to pillow, by manipulation of twisting thread, or by using aprigs; needles on a parchment pattern, and separately manipulated bobbins of thread; sometimes specifically designated, e.g. blind lace maker, blind lace worker, pillow lace maker, point lace maker, point lace worker, tordion lace maker.

lace maker, tambour; tambour worker, tambour worker; embroiders on lace net which is stretched over a tambour frame.

spring maker, spring worker; a pillow lace maker g.v. who makes springs and aprigs of lacework to be subsequently joined up to make other lace or attached to plain net ground (see ground applique) (376).

tambour maker, tambour worker, see lace maker, tambour.

tattooing maker, tattooing worker; makes tattooing (a kind of twisted lace) by hand, using a shuttle, in which the thread is wound, to make loops and knot them according to design; cf. tattooing maker (machine worker) (376).

378.—FELT FORMERS, BATTERS, AND HARDENERS (NOT HATS).

batter, hat engine attendant, felt bather; attends hat machine, which takes silver, fibre in form of ropes or ribbons, from scribbling machine, and places one layer on another until required thickness has been obtained; material is then wound on rollers and transferred to hardening machine.

felt former, felt maker, felt worker; general terms for any worker engaged in felt manufacture, including the workers under this code No. 378, also miller (384).

felt hardener tenter; felt hardener, hardener; places laps, i.e. soft loose masses of wool or hair, on flat hardener machine, which hardens and felts them by steaming.

hair felt maker, hair felt sheet maker; a hardener *q.v.* using hair only for felting.

hardener, felt hardener; (i) see flat hardener tenter; (ii) see roller hardener tenter.

roller hardener tenter; felt hardener, hardener; places laps, i.e. loose masses of wool or hair, in automatic feed of roller hardening machine, which hardens and felts them, by steaming, and then pressing between oscillating rollers.

379.—LOOKERS & EXAMINERS; BURLERS & MENDERS.

burler, piece burler, dressed cloth burler; knitter, knitter, nipper, piece knipper, piece knitter, piece knitter (woolens and worsted), piece trimmer, spicer, stamper, stamper, straw fibres, burs, etc., from back of cloth; draws out thick threads of warp and weft, and opens knots by cutting or loosening them by hand with needle or burning iron; sometimes also looks over face of cloth, and pushes loose ends and curls to back.

burler-and-mender; curer, serrapper; combines duties of burler *q.v.* and of mender *q.v.*

coat finisher (knitted coats); a finisher (hosiery garments) *q.v.* who specializes in finishing knitted coats, coat fitter (knitted coats); fits coats upon dummies, to examine quality of work, and fit; marks, pins and/or cuts coat, to correct minor, and repairs with needle and thread or returns coat to dress maker *q.v.*

curer, see burler-and-mender.

drawer, cloth; fine drawers; mends rents and tears requiring more delicate work than can be done by mender *q.v.*; may draw threads in around tear and remove threads into the cloth with needle, exactly following the weave pattern.

dresser, cloth dresser; see knot clipper (dyer's).

dresser, pattern (mending); stitcher (patterns); corrects errors in pattern of coloured goods, without sewing threads and inserting sound threads of desired colour with needle; cf. pattern dresser (winding) (337), pattern dresser (making-up) (943), ender (velvet, fustian, etc.), velvet ender; mender (velvet, fustian, etc.), velvet mender, velvet mender; darn by hand, sits in ground of velvet, fustian, or other similar material, caused by pile-cutting knife.

examiner, cloth; piece examiner, see looker (cloth).

examiner, hosiery; examines finished hosiery goods for any faults in knitting, finishing or trimming; marks faults and returns garment or piece for repair; reports apparent adjustments required in machine.

examiner, lace; as for examiner (not). examiner, net; examines bleached or unbleached net over black surface to detect faults, broken or missing

threads; passes net in to be mended, where necessary, to white mender or to brown mender *q.v.*

examiner, yarn; (i) examines samples of yarn received from spinners to detect thinness of thread, faulty placement, or surface markings; notes defects and returns breaking strains of yarn (ii) see yarn center.

finisher, carpet; general term covering knot clipper, picker, fringer (417) *q.v.* and other workers who receive carpet from shearing and brushing machine, examine for defects, clip out knots, make gapes in pile with needle and wool, sew on fringe to rug, etc.; in some factories one skilled worker performs all these operations.

finisher (hosiery garments); inspects knitted garments, remedies minor defects with needle and thread, clips off loose threads, etc., and sews on buttons, tags and bells.

fitter in ladies' room (knitted goods), as for coat fitter.

grafter (lace finishing); a white mender *q.v.* who works a patch of net into a damaged place, to cover defect.

grainer; examines printed cloth for defective work, to guard against subsequent claims for faulty printing.

inspector, cloth, see looker (cloth).

knipper, piece, see burler.

knot clipper (carpets); a carpet finisher *q.v.* who cuts, with scissors, knots appearing on surface of finished carpets, caused by knotting together of yarns which have broken in weave; sometimes also fills in gaps found in pile.

knot clipper (dyer's); cloth dresser, dresser; operates a machine like a shearing machine, but with knives more closely set, which removes irregularities from surface of cloth before dyeing.

knitter, piece knitter, see burler.

looker, piece (woolens and worsted), see burler.

looker, see burler.

looker (cloth); looker-over, cloth looker, cut looker, piece looker, piece looker-over; cloth examiner, cloth inspector, cloth overlooker, cloth passer, overlooker, passer, percher, piece examiner, piece passer, piece percher, piece passer, etc. (East of Scotland linen trade); searcher (woolens cloth), skter (East of Scotland linen trade); examines cloth, as received from weaver, or from bleaching, dyeing, printing, or finishing departments, to detect flaws or imperfections, usually by pulling it over a pillar placed above, and facing a well-lighted window; reports flaws, etc., to warehouseman, or makes other arrangements for flaws to be rectified, e.g. by instructions to mender, dyer, printer; sometimes also notes faults against wage sheet of weaver concerned.

looker (finishing); finished percher; examines cloth before it leaves finishing department, to ensure that it meets satisfactory as regards colour, width, length, and weight per yard.

looker, piece looker (grey cloth); examines cloth as received in bleaching, printing, etc., department, to detect faults which might interfere with high-speed printing, etc., or might give rise to claims for faulty cloth.

looker (hosiery), see corrector (hosiery).

looker, piece (fustian, velvet, etc.); examines fustian, velvet, or other goods after pile has been cut, and, if gashes or holes are found in body of fabric, passes such faulty pieces to ender *q.v.* for repair.

looker, yarn, see sorter, yarn.

mender, piece mender; darns, repairs; inspects cloth as it comes from loom; remedies or orders, threads of warp or of weft dropped by weaver; puts in with needle and thread, threads that are broken or missing, and repairs rents.

mender, brown; a net mender or a lace mender *q.v.* who repairs faults in unbleached plain net or lace, by joining up broken parts with sewing needle; cf. white mender.

mender (carpet), see picker, carpet.

mender, dress; finisher mender (hosiery); hosiery mender; repairs by hand, with needle and thread, defects in knitted fabrics returned from trimming or from coat fitter (knitted coats) *q.v.*

mender, embroidery, see repairer (embroidery).

mender, finished; a mender *q.v.* who mends cloth after it has been through all finishing processes.

mender, hosiery; (i) see mender, dress; (ii) see mender, rough.

mender, lace mender; repairs imperfect lace; often further distinguished according to kind of lace mended, e.g. blond, fancy, point lace mender; sometimes does work of lace examiner *q.v.*; sometimes specifically designated, e.g. Honiton mender, spring mender.

mender, net; mends, by darning or patching, holes or flaws in net; sometimes also does work of examiner (net) *q.v.*; cf. brown mender, white mender.

mender, rough (hosiery); hosiery mender; repairs by hand, with needle and thread, defects in knitted fabrics before they are trimmed, as distinguished from dress mender, who mends hosiery after trimming.

mender, stiff net, see mender, white.

mender (velvet, fustian, etc.), velvet mender, see ender (velvet, fustian, etc.).

mender, white; stiff net mender; a net mender or a lace mender *q.v.* who repairs by hand, flaws in net or lace after bleaching, cf. brown mender, grafter (lace finishing).

nipper (wool weaving), see burler.

overlooker, cloth overlooker, see looker (cloth).

passer, cloth passer, piece passer, see looker (cloth).

passer (carpet); supervises and checks work of carpet picker *q.v.*

percher, piece percher, see looker (cloth).

percher, finished; (i) examines cloth after it has come back from dyeing or other finishing departments, to detect irregularities in shade or faults in weave; (ii) see looker (finishing).

percher, greasy; (i) looks over cloth after it leaves loom, as before it has gone through any finishing process; (ii) examines cloth specially to detect greasy marks.

percher, mending; examines cloth for defects, which he marks with chalk; cloth picker, piece picker (carpet); a carpet finisher *q.v.* who examines face of carpet after it has been shorn, and remedies defects with needle and cotton; also clips out knots in yarn.

picker (cord, fustian, velvet); picker-up (velvet); examines cloth after it has been cut and dressed, to see if any weft threads in pile have been missed in cutting process; cuts any such missed threads by hand.

picker, loose; examines cloth after it has been dyed, and removes impurities, harsh fibres, etc., which have not properly taken dye.

picker, thread picker, yarn picker; (i) (yarn) picks out from silk, moths and other impurities which have not been removed in dressing, in preparation for spinning and drawing; (ii) (cotton doubling) see sorter (cotton doubling).

picker, web, as for picker.

picker-up (velvet), see picker (cord, fustian, velvet).

repairer (embroidery); embroidery mender; overlooks and repairs damages and missed stitches in embroidery by hand or by machine; cf. Swiss lace machinist (376).

scraper, see burler and mender.
screamer (linen trade of East of Scotland), see looker (cloth).
searcher (woollen cloth), piece searcher, see looker (cloth).
sewer, see mender.
skier (linen trade of East of Scotland), see looker (cloth).
sorter (cotton doubling); thread picker, yarn picker (cotton doubling); examines finished yarn, and picks out faults, sorting according to quality, etc.
sorter (delivery room—finishing); sorts finished cloth for despatch according to colour, design, etc., and keeps account of cloth passing through his hands.
sorter, hosiery; (i) set corrector (heelers); (ii) separates hose of like quality, size and colour, and rejects faulty hose, which is reserved for repair.
sorter, piece; piece sorter-out; examines and sorts textile piece goods, either in warehouse before they are sent to be bleached, dyed, printed, or finished, or in bleaching, dyeing, etc. departments, after they have been bleached, dyed, printed, or finished.
sorter, yarn; yarn looker; examines finished yarn, and picks out faults.
sorter-out, piece, see sorter, piece.
splitter, see burler.
stitcher (pattern), see dresser, pattern (mending).
stumper; (i) set burler; (ii) set picker, trimmer, piece, see burler.
velvet doctor, see ender (velvet, fustian, etc.).
yarn counter; yarn examiner; examines samples of yarn as received from reeling process; hangs hanks of yarn over a back at bars; notes breaking and checks counts, as a guide to work done by reellers (307) q.v.; notes names of defectives; sometimes also keeps record of work done.

380.—CROFT WORKERS (NOT LABOURERS).

becher, hatch roller; beamer (grey cloth); guides cloth from singeing machine, or from sewing room, on to a beam, generally by means of an attachment to extend mangle or other machine.
beamer (grey cloth), see becher.
becker; (i) attends a beck, or vat containing either scouring or bleaching liquor, which he prepares; submerges yarn in liquor, and withdraws it when operation is complete; (ii) attends a beck, or vat, attached to any machine in bleach croft.
bleacher; foreman bleacher (ecclesiastical use), whiter; in charge of bleaching and allied processes, and is responsible for adjustment of machines and for their good condition, also for quality of work turned out in all departments prior to finishing; supervises work of machine men engaged in scouring, chemicking, liming, boiling, bleaching, and other processes in bleach croft, and acts generally as foreman in bleach croft.
bleacher, piece; a bleacher q.v. engaged in bleaching piece goods, as distinguished from yarn.
bleacher, yarn, see reeler (yarn bleaching).
blue; (i) blue mangle; passes cloth or yarn, after bleaching, through a solution of laundry blue, to neutralise slight creamy tint left by bleaching, usually works by hand; (ii) is in charge of bleaching operations, whether done by hand or by line mangles.
boiler, see kier man.
boiler, cloth (linen finishing); minds a boiling machine, which gives white linen cloth a permanent finish; winds cloth upon a perforated copper roller; covers with a trapper, and securely ties ends; puts whole in a cistern, where cloth is boiled by forcing steam or boiling water through it.
boiler man, see kier man; cf. boiler man (351).

bowker, bowker; takes up a scoopful of lime or caustic solution, and distributes it over yarn or cloth in kier as yarn or cloth is packed therein; repeats process until kier is full.
chemicker, chemicking machine minder; minds a kind of mangle, through which contains chemicking (bleaching) solution, places material in solution and removes it when process is complete; is sometimes also responsible for scouring process, cf. scourer.
chemic mixer; Newson man; mixes bleaching powder with water, in readiness for use in kier.
cleanser, bleach order; rub board man; cleans specially dirty parts of grey (unbleached) cloth, by rubbing or scrubbing on a board with soap and water; cf. bleach craft cleanser (359).
dash wheel man, dash wheel minder, see wash mill man.
dumper, dumping machine man, see finisher, yarn.
field man; spreads cloth, usually linen, on grass, to expose it to bleaching action of sunlight; keeps it well sprinkled with water.
finisher, yarn; dumps, dumping machine man; feeds and minds a machine in which hanks of yarn, made up into a chain, are passed through a bleaching or tinting solution, and between two squeezing rollers covered with cotton rope upper of which has a dumping or jumping motion; replenishing tinting solution in trough as necessary.
foreman bleacher, see bleacher.
kier man, kier minder; boiler, boiler man, pan man, ponde man, pot man, steamer, steamer man (dyeing); is in charge of kiers, either closed or open, in which cloth or yarn is boiled in an alkaline solution; determines length of operation, and regulates circulation of liquor and its temperature in kiers by means of steam corks, pump valves, etc.; runs yarn or cloth, and solution, in kiers, and empties kiers when process is complete.
limer, liming machine minder; attends to liming machine, having a trough filled with lime solution through which cloth is passed to prepare it for kiers; works under supervision of kier man q.v., threading and regulating eyes, rollers, liming trough and winch to kier at start of operation, and controlling flow of lime solution to trough by means of valve.
liquor man, see chemic mixer.
loft hand; (North of Ireland linen trade) general term for any worker in finishing department of linen bleaching works, including scourer, scouring machine minder, washer, washing machine man q.v.
machine man in croft; general term for a man minding any machine in any department of bleach croft, including blue, chemicking machine minder, yarn finisher, liming machine minder, mangle, reeler, scouring machine man, sorting machine minder, squeezer, washing machine minder, etc.
mangle, blue, see bluer.
pan man, ponde man, see kier man.
pot man, see kier man.
reeler (yarn bleaching); yarn looker; attends a machine which keeps hanks of yarn revolving in bleaching solution; places yarn on roller when yarn is sufficiently impregnated, places it on wagon for removal.
rub board man, see cleanser, bleach craft.
scourer (fustian, cord, and velvet); fustian scourer, velvet scourer; wincer, wincher (velvet); passes fustian, velvet, etc., through a solution to remove stiffening in preparation for dyeing, using a inch to pull it through trough machine.
scourer, cloth scourer, scouring machine man (wool); attends a scouring machine, which removes size and other impurities from cloth; passes cloth between squeezing rollers and sews ends together to make

endless band; fills trough with scouring liquor or sad and heats to proper temperature by means of steam; controls machine by levers and removes cloth when cleaned.
sourer; (i) is in charge of scouring process, i.e. treatment of cloth with dilute acid before and after chemicking, cf. chemicker, supervises work of scouring machine minder q.v.; often takes charge of bleaching (chemicking) department in absence of bleacher q.v. and acts as his assistant generally; (ii) see scouring machine minder.
souring machine minder; sourer; (i) (cloth in case of a scouring machine or scouring system in which cloth is treated with dilute acid in preparation for chemicking, i.e. bleaching process proper, and again after chemicking; operations as for washing machine and; (ii) (yarn) washer yarn after dyeing, in a scouring solution.
squeezer, squeezer attendant, squeezing machine minder; attends to squeezing machine, which extracts as much water as possible from cloth before it goes to mangle; passes end of cloth piece or yarn chain between rollers; controls machine by levers; adjusts pressure of rollers by means of levers or springs.
steepier; a washing machine man q.v. who runs cloth through hot water, and allows it to lie for some hours or overnight to loosen and so assist in removal of superfluous size from warp, in preparation for bleaching.
steakier, steakier man (diacet), see kier man.
washer, washer-out, cloth washer, washing machine man, washing machine minder, washing-off machine man; attends a washing machine, of any type, used for washing cloth before or after any bleaching process; passes rope of cloth through pot eye and through nip of rollers, down through water trough and up over guide roller to nip again; repeatedly passing, so that cloth passes along rollers in a spiral form, being alternately run through water and squeezed between rollers, leaving machine through a second pot eye; controls machine by levers and water supply by cocks.
washer, washing a washer q.v. attending a machine in which cloth, or other waste, waste yarn, settings, etc., are washed.
wash mill man, wash wheel man; dash wheel man, dash wheel minder; attends a wash mill or wheel, a perforated wooden drum, which is made to revolve, and in which cloth is washed in cold water; packs cloth loosely in wash wheel, sets wheel in motion and takes cloth out when finished.
whitener, see bleacher.
winer, wincher (velvet), see scourer (fustian, cord, and velvet).

381.—DYE MIXERS AND DYERS.

becker (dye), see dyer, beck.
colourer, colourist, colour maker, colour mixer (dye's); dye mixer; (i) a master dyer (350) or technical chemist or foreman dyer (359) who specifies colours to be used; (ii) sometimes also does work of drug room man q.v.
colourer, print colourer, colourist, colour maker, colour mixer (for textile printing); reduces, shades (for textile printing); determines strength and mixture of colours to be used, also mordants and auxiliaries required, and either himself mixes colours, mordants, thickenings (gum or starch, etc.), in correct proportions or has them mixed under his supervision.
colourer, piece, see dyer, piece.
colour mixer, colour mixer (carpets and rugs); makes up colours used in printing carpet yarns, adds thickening agents, and boils in pans.
colour mixer's assistant; assists drug room man q.v. in mixing colours for use in dyeing processes.

decolorer (dyeing); combines, for convenience in dyeing, two or more vats which are afterwards separated again by splitter (367) *q.v.*; gets dyes, colorants, by hand, and puts them into machine to dye to shade, operates machine by hand or foot lever.

drug room man; weighs out colour ingredients for use in dyeing processes, under direction of colour mixer, master dyer, foreman dyer, or chemist, and performs other duties in drug room, *e.g.* mixing, dissolving, dye boiler, kettle, pans, etc.; a colour mixer's assistant *q.v.* who boils dyes in cylinders to strength and down by dye *q.v.*, regulating temperature as required.

dye grinder; feeds, and operates, by foot lever, a grinding machine which powders natural indigo dye with revolving stone wheels or a drum grinder on a metal basin.

dye mixer, *see* colour mixer (dyer's).

dye, operative dyer; skilled worker in charge of a dyeing machine, usually assisted by other workers; runs material to be dyed through pot area or between feeding rollers, through vat, through of dye solution, and out through squeezing rollers; or superintends its being run through by his assistants; regulates heat of dye solution, and time for which material is to remain therein; sometimes also mixes dye solution, *cf.* dye (359) and *see* specific definitions following.

dyer, aniline black; a dyer *q.v.* who mixes a machine, usually a padding mangle, (*see* padding) used for dyeing materials with black aniline dye.

dyer, back; back dyer, *dyer's*; a dyer *q.v.* who mixes a dyeing bath, or rectangular box containing dye liquor, through which yarn, or cloth in rope form, is passed by means of rollers and winches, so distinguished from jig dyer *q.v.*

dyer, blue, *see* dyer, indigo.

dyer, burli; a dyer *q.v.* who mixes a machine used for re-dyeing herbs, *e.g.* patches that have not taken dye at first time of dyeing.

dyer, cop; a dyer *q.v.* who places cylinders of yarn, skewered on perforated metal tubes in dye cylinders, fastens down lid of cylinders, and forces dye liquor through yarn under pressure from a pump and other appliances; removes cylinder when operation is complete.

dyer, hank; hank dyer, *skinner*; a dyer *q.v.* who places yarn in position in a dyeing machine, and regulates movement of yarn and dye liquor; (ii) in conjunction with another hank dyer, lets yarn, hanging on poles, sink into dye liquor; raises each skein and turns it a few inches to immerse any yarn that has remained uncoloured, and repeats process until dyeing is complete.

dyer, indigo; indigo vat dyer; blue dyer, vat dyer, vat man, and more (blue dyer); a dyer *q.v.* who immerses cloth over a series of rollers submerged in indigo dye liquor, then through squeezing rollers, and so along other rollers or a travelling band.

dyer, jig; *dyer* (jigger), *jigger* (padding) machine operator; a dyer *q.v.* who dyes cloth in a jig, a dye vat fitted with guide rollers which draw cloth through dye solution; passes cloth several times over guide rollers, in open or full-width form, as distinguished from back dyer *q.v.*

dyer, piece; piece colourer; a dyer *q.v.* dyeing piece goods, as distinguished from raw material, tops, shubbing, yarns, etc.

dyer, skein, *see* dyer, hank.

dyer, slab, *see* dyer's labourer.

dyer, shubbing; top dyer; dyes wool tops or slivers, (intermediate stage in spinning of a yarn) on perforated tubes, as for cop dyer.

dyer, vat, *see* dyer, indigo.

dyer, warp, as for dyer, hank.

dyer, yarn; a general term for a dyer *q.v.* who specializes in dyeing yarn,

includes back dyer, cop dyer, hank dyer, skein dyer, warp dyer *q.v.*

dyer's labourer; shabber (slang), slab dyer, shab maker and tubs of dye stuffs; mixes ingredients of dye baths in prescribed proportions, as directed by dyer *q.v.*; transfers dyed textiles from machine to draining slabs or from one vat or machine to another, *e.g.* from dyeing to rinsing liquor, and shifts dyer constantly.

dye stainer; a dyer *q.v.* who sets up under instructions of foreman dyer *q.v.*, prepares exact shade of colour when alteration is required, and passes cloth through vat.

feather boiler; a colourer *q.v.* engaged in mixing and boiling tint, a yellow dyestuff.

finger, guiding machine attendant, *see* dyer, jig.

indigo clipper; mounts cloth or yarn on frames, which he lowers into dye vat; shifts and exposes material to atmosphere for oxidation.

jigger, jiggering machine attendant, jig tender, *see* dyer, jig.

kettler, *see* dye boiler.

mordant maker; prepares mordants by heating them in copper pans under high steam pressure, and diluting them to necessary strength; is usually a colourer *q.v.*

padding (dyer's), padding mangle, padding tender, padding machine tender; dyes yarn or cloth in a padding machine, similar to a jig, but equipped with squeezing rollers; guides cloth (full width), or yarn, over rollers, and so through dye liquor, and thence through squeezing rollers.

padding man; in charge of pads in which thickening, used for raising colours, are boiled; under instructions from foreman dyer *q.v.* prepares and boils thickenings.

panside man, *see* dye boiler.

reducer, *see* colourer (for textile printing).

reeler (yarn dyeing); a yarn dyer *q.v.* who winds a machine which keeps hanks of yarn revolving in dyeing solution.

shader (dyeing); (i) cuts customer's shades, and hands them to dyer *q.v.* keeps firm's record of all shades; is responsible for correct instructions being given to dyers; (ii) tests shade by cutting small piece from hank of wet cloth in solution, drying it at small steam pipe, if necessary, dilutes dye solution or adds colour; directs removal of cloth from vats when dyed to required shade.

shader (for textile printing), *see* colourer (for textile printing).

skinner, *see* dyer, hank.

slabber (slang), *see* dyer's labourer.

tinter; a dyer *q.v.* who passes through a tinting bath to be tinted, *i.e.* dyed in very delicate shades, material which has usually been through a preliminary bleaching process; sometimes tints by hand, using a pad.

vatman (blue dyer), *see* dyer, indigo.

382.—BLOCK PRINTERS AND AEROGRAPHERS.

aerographer (textile); places stencil over textile fabrics, and sprays, by hand, colours thereon with aerograph, an apparatus for spraying colours, under pressure.

block printer; (i) prints pattern on fabric by hand, pressing on it an engraved block coated with colour; (ii) flat press printer; attends to block printing machine; sets cloth in position, and moves hand levers which swing blocks alternately from colour troughs to fabric and back, *cf.* machine printer (383).

flat press printer, *see* block printer.

tapestry printer (block printing); a block printer *q.v.* who prints patterns on tapestry with hand blocks

383.—MACHINE PRINTERS (TEXTILE).

carpet dyer, *see* carpet printer.

carpet printer, carpet yarn printer; carpet dyer; sets out a design board, and reading from that, sets machine to print colours on warp yarns which are to form pile of tapestry carpets.

colour printer, *see* machine printer.

melanger, melanger machine minder; winds a melanging machine, which prints colours upon tops (combed wool) or upon worsted yarn; guides tops or yarn to rollers, which carry them through machine and print colours upon them.

printer, printing machine man, machine printer; colour printer, adjusts and controls printing machine, which impresses a pattern on textile yarns or fabrics by passing them between rollers, as distinct from a dye bath, *cf.* dyer (381); is in charge of substituting materials for making blankets and for drying cloth after printing, is responsible for correctness of impression and for accurate fitting together of colours to form design; is assisted by back tender, colour carrier, and roller changer (389) *q.v.* whom he supervises in their work; sometimes specifically designated according to material printed, *e.g.* calico printer, cotton yarn printer, hosiery printer, silk printer, tapestry printer.

velvet printer; (i) as for machine printer, *q.v.* operating a single-colour printing machine, like a calico printing machine, which coats velvet with a paint consisting of colour, *e.g.*, Prussian blue and luscid oil; (ii) tells covers or paints back of velvet with luscid colours, on a back-roll mangle; feeds velvet into machine and lifts off at back end, whence painted velvet is carried to drying room.

384.—COLOURERS (WOOLLEN, WORSTED, AND HOBIERY); CALENDERS & FINISHERS.

backer, fasten backer; back filler; attends machine which straightens back of fasten, after it has been stiffened with size and tallow, thereby raising fibres at back of material and softening it; passes material over mangle rollers and withdraws it as delivered.

batter (milk), batter-up, plush batter-up, silk plush batter-up; beats silk material with a stick, to raise pile; then combs it with a card wire.

beamer (wool finishing), *see* winder-on.

beater, dry beater (wool finishing); a miller *q.v.* who uses no liquid felting agents, such as oil, in milling process.

beater, cloth beater, beating machine tender; tends mangle and takes cloth off, beating machine, which beats cloth with a succession of wooden hammers while it is wound round an iron beam, thereby consolidating its fibres and giving softness and lustre to the surface.

blender (wool finishing), or for blanket edger.

blanket edger; binds edges of blankets by hand, with a stitch known as blanket stitch.

blower (wool finishing); decat machine minder, decatting machine minder; winds machine which subjects cloth to action of dry steam, to give it a permanent lustre; wraps cloth round perforated copper rollers, and clears away moisture as steam condenses on cloth.

boiler (snapping); woad boiler; bleaches and softens yarn by placing it in a boiling scouring solution.

boiler (wool finishing); winds cloth on a permanent mangle; covers it with a wrapper, and ties ends; puts whole into a cistern, where cloth is boiled by forcing steam or boiling water through it; *cf.* boiler (380).

heller, yarn, *see* boiler (scraping).
 boiler-out; *see* man; *see* mangle; a bar, or vessel in which yarn is boiled out in preparation for dyeing; as for scourer *q.v.* except that boiling is done in plain water.

bol and minder; stands between two scouring cylinders, or bowls; keeps a constant flow of wool between bowls, and prevents wool from jamming in rollers and racks.

bol feeder; spreads wool evenly upon a travelling lattice, which conveys it to scouring bowls or cylinders.

breaker; minds breaking or mellowing machine, which removes hard and stiff condition imparted to cloth through over-calandering in finishing process, places roll of material in machine and feeds end between rollers and through to winding spindle; adjusts series of screws by means of hand wheel and worm gear.

breaker, fustian; minds on emsoring (grinding) machine, with emsoring-covered rollers, which break up stiffening applied to fustian before it is cut; guides cloth over tension bars to emsoring-covered rollers, and regulates, with hand wheels, amount of grinding applied to material.

brusher, cloth brusher, piece brusher, brushing machine minder; (i) (*brushette*); *see* raiser; (ii) (*velvet and fustian*) feeds and minds a travelling or brushing machine, which brushes up pile of fabric, to enhance its lustre, or in preparation for dyeing or finishing; (iii) (*other textiles*) feeds and controls rollers and revolving brushes of brushing machine, which brushes and cleans cloth and raises a nap thereon; cf. *gligger, raiser*.

calendar assistant; assists calendar man *q.v.* in passing cloth through calendar.

calendar attendant, calendarer, calendar man; calendar holder-through (*lancer*); minds calendaring machine which presses cloth between heavy, heated rollers to give it a gloss or soft finish, or at intermediate stages of finishing operations, scour the cloth; adjusts rollers, passes cloth between them, and controls levers which regulate pressure on cloth.

calendarer, sebastos, or for calendar attendant.

calendarer; a calendarer *q.v.* minding a canny calendar, having two iron rollers through which cloth is passed to break down stiffness after starching.

clamping; a stretching machine minder *q.v.* who adjusts clamps to any cloth passing through clamping machine.

cleaner, cloth, or for scourer.

cleanser (wool finishing), cleanser (woollen cloth), or for scourer.

clipper, clipper-on, cloth clipper; fixes cloth to clips of tentering (or stretching) machine; cf. *stentee* and *tenter*.

clipper, cloth (finishing); brushes up, by hand, warp or loop threads forming pile of brocade, clips by hand with a knife or feeds into clipping machine which is controlled by hand lever.

clip stenter, clip tenter; a stenterer *q.v.* who stretches or stenters, cloth in a machine in which edge of cloth is held in place by clips.

cloth worker; general term for any worker employed in any process in finishing of cloth as distinguished from yarn.

conditioner (cloth finishing), *see* dampener man.

courager; a calendar attendant *q.v.* in charge of type of calendar machine known as couraging machine.

crabber; cloth shrinker, potter, shrinker, stenter (woollen finishing), wool shrinker; tends crabbing machine, which passes cloth, at a suitable tension, through crumpled rollers in a succession of troughs of water, each at a different temperature, where it is crumpled or reduced to a specified width, and set or fixed

thereat; or runs cloth on to a perforated steaming roller, into which it admits steam for same purpose.

cresser, *see* cutter (woollen cloth).

cropsper and folder, *see* cutter (woollen cloth).

cropper, cropper man, cropper worker, nap cropper, piece cropper, cropping machine attendant; cloth

cutter, cloth shaver, cutter, dresser (*carpet*), piece cutter, shaver; minds machine with revolving cylinder knives and brushes, which crop and level surface of material, ensures that knives are correctly adjusted, so that material is not pushed, or too much of nap or pile removed; adjusts tension rollers of machine.

cutter, cloth cutter, *see* cropper.

cutter (bleaching); lengthener; trims off seven parts from ends of cloth previously sewn together; cuts cloth to required lengths, and marks length.

feather, cloth (electric calender); operates sitting machine, which slides cloth into ribbon widths for use in cable making, fits roll of cloth in machine, adjusts knives to gauge, for each business rollers.

fastens edge ribbon and to winding on spindles; controls machine by levers.

outer machine head ender; a head ender *q.v.* on a cropping machine.

outer machine tail ender; a tail ender *q.v.* on a cropping machine.

cutter, piece, *see* cropper.

cutter (warp dyeing); attends to delivery or shifting, and of a warp splitting machine, keeping yarn in position by adjusting automatic guides; assists splitter *q.v.* generally.

cutter, wet; folds cloth, velvet, etc., by hand or machine, while it is still wet from scouring or other wet process.

cutter (woollen cloth), piece cutter, cutting machine tender, cloth cutting machine minder; cloth dealer, creaser, folder (cloth finishing), cropper and folder, piece folder; passes cloth through rigging and cutting machine, which folds and trims it; sets machine to fold and trim cloth as required.

cylinderer, fustian; minds a machine used for drying fustian after it has been stiffened, feeds material over plates through rollers or duping cylinders to rolling machine; controls temperature by means of steam coils or hot air blowers.

dampener; (i) (*hoiery finishing*) damps hoiery by folding and leaving for several hours in wet cloths, or minds a machine which damps hoiery with wet steam in preparation for pressing; (ii) (*other textile trades*) *see* dampener man.

dampener man, damping machine man, damping machine minder; conditioner (cloth finishing), dampener (textile trades), depper (dyeing), piece folder (dyeing), sprayer (silk finishing), wetter; minds damping machine, which sprays cloth as it passes over rollers to moisten it in preparation for stretching, calendaring, etc., or to soften it after starching; controls water supply and watches machine for proper working.

decolor or decatising machine minder, *see* blower (wool finishing).

dagger (dialect), *see* dampener man.

dewer (wool); minds brush dewing machine, which distributes from a special revolving brush a fine mist of water on cloth as it passes over a roller; maintains supply of water so trough and adjusts arrangement by which amount of water put into cloth can be regulated; also adjusts and watches cutting or cloth folding machine if fitted to machine.

dolly, dollyer, dolly man; (i) *see* account; (ii) (*cloth dyeing*) fixes mordants, by passing cloth through various solutions, in preparation for dyeing, (iii) (*wool dyeing*) feeds

and minds stock, in which wet yarn is pounded and squeezed by large wooden hammers.

dealer, cloth, *see* cutter (woollen cloth).

drawer (woollen cloth), cloth drawer, *see* tenterer.

dresser (carpet); (i) minds a machine which cuts backs or warps, of carpets of poor quality with a glutinous material, to give them stiffness and substance; maintains supply of stiffening medium in box or trough; feeds carpet between rollers; (ii) *see* cropper.

dresser, cloth; piece dresser, singer; passes material through a singing machine and regulates its passage over a series of gas jets or over a hot copper bar or plate; regulates heat, and controls pulleys and rollers of machine.

dresser, cord, corduroy dresser, as for dresser, cloth.

dresser (not singing), *see* mangle, filling.

dresser, piece, *see* dresser, cloth.

dresser, warp (Bradford); *see* splitter, warp yarn, cf. warp dresser (Bradford) (W) and (D).

dryer, cloth; drying machine minder, cloth drying machinist; a stentering machine minder *q.v.* working on a drying machine; adjusts valves of hot air blowing apparatus.

edge minder; a centring machine minder *q.v.* who guides and watches edge of cloth to see that it is engaged by clips or pins; assists with fingers where necessary.

embosser; glister, glosser (silk, wool, etc.), lusterer (silk), schreiner, schreinerman; minds a schreiner machine, which produces a raised or grained robe which gives a lustre to face of cloth, and also, in textile printing trade, impart a pattern thereto, or for calendar attendants.

feeder (fustian finishing); attends machine which, by means of brushes revolving in size trough, stiffens fustia, i.e. pile, of fustian as it passes through machine; keeps size trough replenished, guides fustian through machine ensuring even running and tension; cf. *mangle (velvet and fustian), bucker*.

felker, felt fuller, *see* miller.

fettler (finishing); adjusts and does minor repairs to machines used in finishing.

filler, back, *see* hacher.

filler (cloth), *see* mangle, filling.

filler (flaxette); runs flaxette through soap solution to dress it in preparation for raising.

filler, starch, *see* mangle, filling.

finisher; general term for operative engaged in any finishing process, e.g. singing, reeling, sheering, brushing, steaming, starching, calendaring, impregnating, breaking down, or softening, drying, doubling, embossing, lusterizing, doubling, measuring and plaiting, marking, pressing and pecking; sometimes specifically designated, e.g., cloth or piece finisher, blanket finisher, broad cloth finisher, craps finisher, elastic hosiery finisher, fustian finisher, rug finisher, saten finisher.

finisher, fustian; general term for any operative engaged in any process of finishing fustian, including hacher, cylinderer, fuser, pecker, stiffener (fustian finishing) *q.v.*

finisher, silk; minds a calendar machine which straightens and adds lustre to silk woven fabric; as for calendar attendant.

finisher, velvet; minds a machine which straightens out velvet, and burnishes or polishes it; finishes velvet between rollers; controls power drive by levers; cf. *pegger*.

finisher, white cloth (linen), *see* starcher and blower.

folder (cloth finishing), piece folder, *see* cutter (woollen cloth).

fuller, cloth fuller, *see* miller.

gigger, *gig driver*, *gig runner*, *gig tender*; *nap raiser*, *raiser*, *raising machine tender*, *raising machine tender*; mends a gig, a machine which cleans and raises a surface of rollers covered with wire brushes, or by means of toothed; feeds cloth repeatedly between rollers until cloth face is clean.

glasser, *see* *embosser*.
glasser (silk, wool, etc.), *see* *embosser*.
grinder, *plush grinder*, *silk plush grinder*, *silk plush shaver*; a cropper *g.e.* who crops surface of plush piece goods.

guide-in; *layer-in*; *guide*; or *lays machine* in any of the finishing, calendaring or scouring machines; *cf.* *back minder* (finishing) (389).

head ender; stands at head, or delivery end of any machine, and sees that cloth issues evenly and in good condition therefrom.
holder-tender, *calendar*, (*Lower* (188)), *see* *calendar attendant*.
ironer (*hoisery*), *see* *shaper* (*hoisery*).
jersey tender; sets roll of cloth, received from loom to be shaved, on spindle and guides and through rollers and under shaving blades of cylinder to revolving cylinder; adjusts and stops machine by levers; adjusts blade cylinder to shave off "whiskers" correctly; sometimes similarly levels fustian pile.

layer-in, *see* *guide-in*.

lecker, *piece* (dialect), *see* *damper* (108).

legger (*hoisery*), *see* *shaper* (*hoisery*).
lengthener, *see* *cutter* (*bleaching*).

low side minder, *see* *perpetual machine hand*.

luster (silk), *see* *embosser*.

mangle man (linen), *see* *mangler* (linen).

mangler, *mangle man*; *mangle tender*; feeds and minds a mangling machine, of which there are many different types; processes similar to those of calendar attendant *g.e.* except that rollers are not heated; often further distinguished according to material treated or according to type of machine used, *e.g.* Betty Dodd mangler, starch mangler, white mangler.

mangler, *dye*; minds a mangling machine through which cloth is passed after it has been dyed.

mangler, *filling*; *dresser* (*not stage-mangler*), *filler* (cloth), *roller*, *starch filler*, *starch mangler*, *stiffer*, *stiffening machine minder*, *stiffening mangler*; passes cloth, or occasionally yarn, through a mangle, trough of which contains starch, or other solution for stiffening or otherwise finishing (filling or dressing) cloth or yarn.

mangler (linen); *mangle* (not linen); feeds and minds a mangle in which linen cloth, wound on a roller, is pressed between two other heavy revolving rollers, which revolve alternately, first in one direction and then in the other, to put a fine stretch on cloth; regulates pressure on rollers.

mangler, *starch*; *stiffening mangler*, *see* *mangler*, *filling*.

mangler (velvet and fustian); *mangle velvet* or *fustian* by passing it through rollers, *see* *mangle* (linen); also passes it over drying cylinders, in preparation for cutting.

mangler, *water*; *water mangleman*; *mangles* goods which have been treated with plain water, and not with starch, etc.

mangler, *white*; *mangler g.e.* who minds a mangling machine through which cloth is passed before it is dyed.

millar, *milliner*, *millman*, *cloth miller*, *fulling miller*, *piece miller*, *piece millman*, *woolen miller*; *cloth fuller*, *roller*, *felt fuller*, *fuller*; feeds and operates pilling machine, or mulling stocks, which felt or consolidate wool fibres into a dense felt fabric; sees that material passes evenly through machine, reversing machine from time to time to ensure even felting; keeps material

free from tangles; adds soap, oil, or other felting agents to cloth; regulates length and width of material, and weight per yard, by making necessary adjustments in machine; sometimes specifically designated, *e.g.* shoddy miller.

millar (Bannal), *see* *stocker*.
moister; runs muleskin and worsted cords, *e.g.*, Bedford cord, over surface of revolving coarse-grained emery roller, called a *moister roller*, to remove black specks from surface of fabric, in preparation for dyeing.

moistering worker; stands against *stentering* machine used for finishing velvet; *as for* *stenterer*; also regulates gas heating device.

Moser machine tender, *Moser machine minder*; a *gigger g.e.* who feeds and operates a raising machine known as a Moser machine.

napper, *nap setter*; passes fabric, surface of which has been raised and cropped, through rollers of nap machine, and regulates machine in such manner as to produce required setting, *e.g.*, in direction of warp or of weft, nap or pile.

neutraliser, *wool neutraliser*; minds machine in which wool, after it has been scoured, is passed through a solution containing a small quantity of acid, to neutralise alkali in scouring solution; passes wool into machine and removes after it has passed through solution.

pan man, *see* *hotter-out*.

parer; trims, by hand, ragged edges and waste pieces from cloth before it is made up; seldom full time occupation.

pegger, *pegging machine minder*, *fustian pegger*, *fustian pegging machine tender*, *velvet pegger*, *velvet pegging machine tender*; tends a pegging machine, which gives space of velvet or of fustian after it has been woven by water jet; guides velvet between rollers, controlling power drive by levers, *cf.* *velvet finisher*.

percher (*fustian finishing*), *fustian finisher*; *pace*; roughens or raises it by a back of fustian and velvet in the grey state, with flat wire brush, *i.e.*, card, in preparation for stiffening or for cutting; *cf.* *percher* (379).

perpetual machine hand; *low side minder*; a cropper *g.e.* who feeds and operates a nap cropping machine known as a perpetual machine.

Pettitwell minder; a *jersey tender g.e.* working a Pettitwell machine.

potter, *see* *crabber*.

presser (felt); (i) minds rotary press which gives smooth surface to felt; maintains required temperature of pressing roller and cast iron dishes by regulating steam cocks or gas heater apparatus; feeds felt into rollers; adjusts pressure by means of rams; (ii) presses felt to desired thickness in hydraulic press; sets gauges, places sheet of felt in press, operates press by means of valves, and removes felt when pressed.

presser, *hoisery*, *see* *shaper* (*hoisery*).

presser, *hot*; *machine presser* (cloth), *stuff presser*; *press setter*, *press worker*, *pressing machine minder*; passes cloth within sheets of special stiff press paper, and passes it into hot-pressing machine which gives finish to cloth; regulates temperature of hot plates or rollers.

pressing machine minder, *see* *presser*, *hot*.

press man (hydraulic, *hoisery* finishing); feeds and operates hydraulic press to improve appearance of *hoisery* by flattening it; applies pressure by means of weighted hand screw.

press setter, *press worker*, *see* *presser*, *hot*.

progresser; exercises general supervision over progress of goods through various operations; ensures expeditious delivery of goods urgently required; keeps records of goods in progress of finishing.
racker (cloth stretching), *see* *lenterer*.

raiser, *nap raiser*, *raising machine minder*, *raising machine tender*; *see* *gigger*; *see* also *brusher*; sometimes specifically designated, *e.g.* blanket raiser, flannelette raiser, flannelette raising machine tender.

raiser (velvet and fustian); either a *percher g.e.* or a *trouder g.e.*, according as he raises back or pile, respectively of velvet and fustian.

raitcher, *see* *lenterer*.

rigger, *rigger-up*; minds a rigging (longitudinal folding) machine, for processes, *cf.* *cutler* (woolens).

rigger and plaiter; minds a rigging and plaiting machine, which doubles cloth and folds it.

rigger and roller; minds a machine which rigs cloth, *i.e.*, folds it longitudinally, and winds it on a board.

ripper, *woollen*; a *gigger g.e.* who minds a machine which raises nap of flannel in folds or ripples.

roller, *flannelette*; a *raiser* or *gigger g.e.* who treats flannelette by passing it between rollers of raising machine.

roller, *lead*, *rolling man* (finishing); rolls material on the paper tubes as on to a *g.e.* on a power-driven machine; feeds material evenly into machine; sometimes rolls material, by hand, to boards.

schreiner, *schreinerman*, *see* *embosser*.

scourer; *dollie*, *dollyer*, *dolly man*, *washer*, *washer* (*dyeing*) (*occasional*); washes yarn or cloth by passing it through scouring (soap) solution, either by placing it on rollers which revolve on surface of ends or by passing it through suds in chain form, and thence to squeezing rollers, which partly dry it; sometimes specifically designated, *e.g.*, cloth scourer, piece scourer, shoddy scourer, wool scourer (cloth); for *W.* of England synonyms, *see* *washer* (wool finishing).

scourer, *melange*; *washer-off* (*washing*); a *scourer g.e.* who scours material (printed) (*see* *scourer*).

shaper (*hoisery*), *hoisery presser*, *ryser* (*hoisery*), *legger* (*hoisery*); places a shaped board inside *hoisery*, damps it, and presses it with a hot iron, or in a patent press.

shearer, *cloth shearer*, *see* *cropper*.

shearer, *silk plush*, *see* *grinder*.

shrinker, *cloth shrinker*, *wool shrinker*, *see* *crabber*.

singer, *see* *dresser*, *cloth*.

sourer; a *washer g.e.* who soaks, or washes in an acid or scouring solution, yarn after it has been dyed; *cf.* *sourer* (croft) (380).

splitter, *delivery room splitter*; (i) *see* *splitter*, *cloth*, (ii) *see* *splitter*, *warp yarn*.

splitter, *cloth*; *cloth trimmer*, *delivery room splitter*, *splitter*; cuts up cloth lengths at places marked by measure (193) *g.e.*, either by hand or in a cloth-cutting machine.

splitter, *warp yarn*; *delivery room splitter*, *splitter*; *warp dresser* (Bradford); (i) divides yarn into lots, by hand; (ii) (in machine work) counts off a number of threads and guides them to a dividing rail, and so to rollers, which send yarn forward in distinct groups.

sprayer (silk finishing), *see* *dampener*.

starcher, *starch filler*, *see* *mangler*, *filling*.

starcher and *bluer*; *white cloth finisher* (linen); a *mangler g.e.* who starches and blues white linen.

steamer (woolen finishing), *see* *crabber*; *cf.* *stammer* (cotton drying or cotton printing) (381 and 383).

stenter (cotton), *stenterer*, *stenterman*, *stenterer*, *stenter feeder*, *stenter minder*, *stenter driver*, *stentering machine minder*; *cloth stretcher*, *stretcher* (*Yorkshire*).

straightener, *stretcher*, *stretching machine feeder*, *stretching machine minder* (cotton); feeds cloth into *stentering* machine, which stretches cloth by means of clips and endless chains, and keeps it thus stretched while it is being dried, or while it is being dried after dyeing or while

starching; sets roll of cloth on unwinding spindle, threads end of cloth through tension rollers, over endless band of clips and pins and so to rewinding spindle; assists, by hand, engagement of edge of cloth by pins or clips; adjusts, by screws, position of pins or clips to determine width of cloth; sometimes also regulates passage of steam through drying pipes, or regulates temperature in hot-air drying chamber; cf. tenter (wool).

stenter assistant, stenter's assistant; stands at feedbox or at delivery end of stentering machine, and guides cloth on to or off machine.

sticker-in; (i) (*Lancashire*) feeds mangles and similar machines; (ii) (*Yorkshire*) see stenterer.

stiffener, see mangle, filling.

stiffener (molekin); a locker or filling mangle q.v. which stiffens back of molekin, a kind of fusian without ribs, with silk and tallow, after it has been dyed and dried, and before it is stentered.

stiffening machine minder, see mangle, filling.

stocker; miller (funnel); a miller q.v. who minds a stocks machine, principally used in milling or felting funnel, which beats fabric with a series of hammers.

stover (delivery room); (i) dries goods in a hot chamber (store) where it is exposed to fumes of sulphur; and also packs them after storing; (ii) removes material from store to "blue room," where it is put through water to remove fumes of sulphur.

straightener, see stenterer.

stretching, cloth stretcher, stretching machine feeder, stretching machine minder; (i) (cotton) see stenter; (ii) (woollen) see tenterer.

stretcher assistant; stands at feeding or at delivery end of cloth, pin or clip stretcher, and guides cloth on to or off machine.

stretcher (belt); a stretcher q.v. who stretches cloth by gripping it between revolving belts and pulleys.

striker, cloth; stretches nap of cloth on a plying machine, after cloth has been dyed.

tail ender; guides and is responsible for tail end of cloth, i.e. that which enters machine in raising pipes, crabbing or cropping machines, and other similar machines.

tenter, cloth, see tenterer.

tenterer (wool) piece tenterer, tenting machine minder, woollen tenterer; cloth driver, cloth stretcher (woollen), cloth tenter, dresser (woollen cloth), mucker (cloth stretching), mucker (woollen), stretching machine feeder, stretching machine minder (woollen); feeds and minds tenting machine, in which woollen cloth or felt is stretched while wet or steamed, by clips, by drawing chains or by wooden frames, and then dried under tension; regulates heat of steam pipes or gas jets which supply heat for drying, cf. stenterer (cotton).

tenter, mangle, see mangle.

treadle room man, see treadler.

treadler, treadle worker, velvet treadler; treadle room man; guides fabric into a treadling or breaching machine, which automatically breaks up pile of fabric (velvet, or fustian), in preparation for dyeing or finishing, adjusts or sets machine when necessary.

trimmer, cloth, see splitter, cloth.

trimmer (hosiery finishing); prepares hosiery garments for finishing proper by trimming off long ends.

trucker (blackets); a miller q.v. who treats blankets in a finishing machine.

washer (wool finishing), washerman, washing machine man, washing machine minder, washer-off, washing-off machine minder; (W. of England terms), see scourer.

washer, felt; feeds and minds a washing machine, which passes felt through water, and then between mangle rollers.

washer (wool finishing), see for progresser.

waterer; feeds and minds a calendar machine, which gives a special watered finish, or water mark, to silk cloth, by pressing two fabrics together, face to face, between heated rollers; cf. calendar attendant.

waxer, velvet waxer; rubs wax into water or fustian by hand; or feeds and minds waxing machine, which coats pile, or face side, of velvet with beeswax, in preparation for glazing in pressing machine, keeps beeswax hot supplied and heated to proper temperature.

wet boarder (hosiery); places damped hosiery goods on boards, in readiness for present press.

wetter, see damper man.

wetter-out (silk); (i) runs cloth through soap solution when it has been unevenly stretched in stentering, in preparation for re-stentering; makes-up solution and guides cloth to rollers at both ends of immersion trough; sometimes then partially dries in hydro extractor, cf. hydro extractor (385); (ii) damps, as above, pieces of goods, in preparation for dyeing; or washes off silk goods, after dyeing; cf. wetter-out (380).

winner, winchler (dyer's); (sometimes) see scourer; cf. winner (wincher) (369) for usual use of terms.

winder-on (wool finishing); dresser (wool finishing); feeds and feeds a winder-on machine, which winds cloth on to beams in preparation for crabbing or other finishing operations; guides cloth evenly through machine to beam.

winwyer; a napper q.v. who specialises in producing a particular nap, known as winny nap, on blankets; in fine weather, raises nap on-off-beam, by hand, with small comb.

385.—SCOLLOPERS, CLIPPERS, AND LACE WAREHOUSE HANDS.

brown room hand, brown room worker; ware room worker; general term for workers in warehouse where brown (unbleached) lace or net is stored, cuts, weighs, measures, and tickets goods ready for them to be dyed, bleached or dressed.

carder (lace finishing), see jennier. cheniller, chenille twister; dew drupper, spotter; affixes, by hand, spots, usually of chenille, on veillings, lace net, etc.; passes chenille with help of brass wire through veilling and back again, twists it over and clips off end.

clipper; cuts away, by hand, connecting threads lace by embroidery machine, on both sides of lace between held in clipping frame) between disconnected patterns in design.

collater, lace; feeds and controls a small machine, electrically driven, which zoologes lace curtains and makes a fast edge on them; keeps shuttles filled with thread and watches for faults work.

cord cutter-out (lace finishing); lace warehouse hand; a cord stretching worker; cuts finished lace into widths with shears or in shearing machine, dew drupper, see cheniller.

drawer (lace finishing); draws out threads which join breadths of lace together.

dresser (lace finishing); stretches lace web, after it has been starched, on frame to dry in a current of air.

finisher, lace; pins on fancy paper bands, and affixes tickets to pieces of lace, after they have been carded by jennier q.v.

fowler (lace finishing); folds finished net or curtains to size required for pressing and packing; usually first

by doubling lengthwise and then by yards between vertical pegs; removes lace web from dressing frame and folds as above; sometimes specifically designated, e.g. curtain folder, net folder, press folder.

finisher, cord; rough finisher; folds or winds finished lace on cards, as they revolve in a machine called a jenny.

lace duchess (slang), see middlewoman.

middleman, lace; measures finished lace. middlewoman; lace duchess (slang); an intermediary between proprietor of lace warehouse and home workers; collects work from home workers, and distributes orders, designs, and materials for new work to them.

order room hand; takes invoices and keeps record of goods; sometimes makes up parcels.

paperer (lace finishing); wraps lace goods or filled boxes in paper, sometimes done by cutter or lace warehouse man and o.v.

pattern girl, pattern hand; cuts small sample pieces of lace; passes them on sheets, and marks them with number and price.

presser (lace finishing); presses heavy finished lace goods, e.g., curtains, bales of net or lace, in a steam or hydraulic press to reduce bulk and improve appearance.

purler; attaches purl edging to lace, usually by sewing machine.

scollor; a strip of cuts away superfluous net or foundation of lace after patterned edge has been worked.

shifter (warehouses); carries finished lace or pushes it in trucks about warehouse, stacks it under direction of warehouseman (340) q.v.

spotter, see cheniller.

stock girl, stock room assistant; helps stock keeper in warehouse.

warehouse hand, lace; lace warehouse worker, see cutter.

ware room worker, see brown room worker.

390.—JACQUARD PUNCHERS AND CARD CUTTERS.

card cutter, jacquard card cutter, pattern cutter; (i) see puncher.

(ii) (lace) cuts sheets of cardboard specially prepared for jacquard work into strips for jacquard cards, using either hand or power-driven cutter.

card puncher, see puncher.

perforator, card perforator, jacquard perforator, see puncher.

plano puncher, see puncher.

puncher, card puncher, jacquard puncher; card cutter, jacquard card cutter, pattern cutter, perforator, card perforator, jacquard perforator, plano puncher, stamper, card stamper, jacquard stamper;

(i) places plain cards in a card casting machine, usually a pinse punching machine, i.e. a machine fitted, like a saw, with keys, which actually punch by means of levers, depress keys and so operates machine, which cuts, pierces, or stamps holes in cards, according to a set design (either a paper pattern, a string pattern or an already cut card), ready for use in "jacquard" or "dobby" looms (used for weaving carpets and figured or fancy fabrics), or in lace making; (ii) for Swiss embroidery machine, follows point by point, with a flexible metal arm, an enlarged vertical design, thereby making at each point an electric contact with machine which punches holes in jacquard card, as it is slowly unwound from revolving drum.

reader-in; reads from a design paper, and transfers pattern to jacquard cards by pulling selected cords in reader's embroidery machine, and operating foot levers, thereby punching springs which drive puncher through cards; cf. plano puncher, card cutter.

stamper, card stamper, jacquard stamper, see puncher.

397.—HEAD KNITTERS.

camb (caulm) knitter, machinist, maker; used in Dundee district (jute and linen trades) for head knitter, machinist, maker, respectively, *q.v.*
dope (doup, dupe) knitter, machinist, maker; used in Glasgow district for head knitter, machinist, maker, respectively, *q.v.*; usually applied to knitter, machinist, or maker of beads for chenille looms, or looms making gauze or leno.

gear knitter, machinist, maker; used in Yorkshire, and in carpet trade of Scotland, for head knitter, machinist, maker, respectively, *q.v.*
havel knitter, machinist, maker; dialect terms for head knitter, machinist, maker, respectively, *q.v.*
head knitter; (local or dialect synonyms: *camb, coum, dope, doup, dype, gear, havel, heddle knitter, head stoker, head man*; (i) see head machinist; (ii) knits, by hand, beads (loops through which warp threads are drawn) made of worsted or cotton.

beald machinist; (local or dialect synonyms: *camb, camb, dope, doup, dype, gear, havel, heddle machinist, head maker, head knitter*; makes and repairs beads, loops through which warp threads are drawn, working on a machine which knits beads from spools of cotton handing or worsted; sets up machine by threading from bobbins over pulleys into machine, places broken threads, removes knitted beads from machine and threads a wooden stave through top and bottom loops and metal rod through eyes, to keep them in position for brushing, sizing and varnishing.

beald maker, **beald man**; (local or dialect synonyms: *camb, camb, dope, doup, dype, gear, havel, heddle maker*; (i) see head knitter; (ii) makes wooden framework of beads, loops through which warp threads are drawn, and knits on twine which keeps beads in position; (iii) general terms for any operative engaged in any process of bead making, *i.e.*, in knitting, machining, assembling, fitting, varnishing, or storing, threads, eyes, harness, staves, or framework of beads.

beald knitter, **machinist, maker**; Scotch terms for head knitter, machinist, maker *q.v.* respectively.

jacquard barrow knitter; a head knitter *q.v.* knitting beads for jacquard looms.

398.—OTHER SKILLED WORKERS.

tager, ager man, ager minder, age minder, ageing machine minder, steamer (fainster); minds ageing machine, which drenches and dyes printed colours in acid, occasionally, on yarn, by application of mangle heat; regulates temperature, steam pressure, and ventilation of machine, and rate at which cloth or yarn is run through it; sometimes especially designated according to colour of goods or kind of material used, *e.g.* aniline, indigo, hydrosulphite ager.

alterer, carpet; changes coloured yarn bobbins on Brussels carpet loom, in preparation for weaving a fresh pattern, or part of a pattern; usually done by improver in training as carpet weaver (320) *q.v.*

alterer, loom (elastic web); changes jacquard cards on elastic web loom, or makes alterations to loom, when a change is to be made in web woven.

artificial silk worker; general term for any person employed in spinning, weaving, etc., of artificial silk, including spinner (365), winder (367), draw-in (368), trier-in (368), weaver (369), silk blosky hand (374), croft worker (380), dyer (381), printer (382/3), finisher (384); *cf.* artificial silk worker (143).

asbestos joint maker, asbestos packing maker; makes, by hand, asbestos jointing, rope packing for steam engines, pumps, pipes, etc., *q.v.*
assistant overlooker, assistant tenter (jute), **underlooker, under overlooker**; works under direction of overlooker (351/2) *q.v.* in extensive works, carrying out duties as for overlooker in charge of section, sub-section or group of machines; sometimes specially designated, *e.g.* assistant power loom overlooker.

assistant overaser (flax and hemp); keeps carding machines in running order; removes waste fibres, dust, etc., with a stripping brush.

thacker; back filler, back filling mangle, back fill mangle, back stacher, back starch filler, finisher (bleach works); (i) minds or back starching, or back filling machines, which starches cloth on one side only; guides cloth over tension rails to starch roller, keeping side which is to be left unstarched against rollers; staps and stops drive which sets machine in motion; (ii) a machine, *q.v.* in charge of a machine which puts thickening or weighting agents, starch, china clay, etc., on back of cloth.

baller, balling machine minder (finishing); cop maker, minds a machine which sets or winds yarn or twine into balls; guides yarn or twine through machine to spindle, which winds yarn or twine upon itself, the lay of yarn or twine on ball being varied according to requirements; sometimes specially designated, *e.g.* cotton baller, cotton rope baller, warp yarn baller.

band sewer-on (wool spinning); taper, tape sewer, tape sewer-on; sews, by hand, ends of driving bands for use on spinning frames, or repairs such bands similarly.

baizer (ropes, etc.); *fonner*; makes up bark twisting section in rope vat, and immerses ropes or cords, etc., therein.

baicker (flax and hemp); (i) arranges different qualities of tow in layers to facilitate mixing of tow for carder (338) *q.v.*; (ii) applies water and oil to spun out hemp to soften fibre to prevent it from "locking up" during subsequent processes of carding.

batcher (jute); *jute stricker, stricker, striker-up*; (i) tears apart opened bales of jute, and divides jute into stricks, or portions, convenient for handling; sometimes also grades jute according to colour; *cf.* jute cutter; places stricks within any reach of softer feeder (359) *q.v.*; (ii) divides-up jute into four sets; doubles and twists ends of sets, places sets in a stall, a wooden receptacle, adds prescribed quantity of oil and water and leaves to soften; method almost superseded.

beam changer (carpets); changes beam of threads forming pile of carpet in loom, and substitutes another beam, containing threads of another colour or of different fibre, when pattern is to be changed.

beamer, white piece; minds a machine which winds bleached cloth on to a beam, large bobbin, with flanged ends, in preparation for subsequent processes of printing, dyeing, or finishing.

beamer (yarn dyeing); minds a machine which winds yarn on to a perforated beam in preparation for dyeing.

baister, beater; fishing net mender, net mender, net repaire; mends fishing nets, by hand, with twine and shuttle; sometimes also a net mender *q.v.*

billet marker (jute weaving); ticket marker; keeps record of length of jute cloth woven by weaver; checks measurements with particulars on billet or ticket.

blender, colour (cotton); selects for blending, raw cotton of different colours, such that, when blended, the required type of yarn is obtained.

blender (wool); shade getter (wool); chooses raw wool as that, when blended, blend will give shade required.

blocker (silk finishing); (i) embosses designs on silk fabrics, by hand; (ii) winds batches of cloth on a roller or block, before running them through finishing machines.

bobbin presser (lace); reduces thickness of bobbin, filled with cotton or silk, for placing into carriages of twist lace machines; places bobbins in press, screws down lid, places press in steam oven and further tightens press, if necessary, on removal from oven.

bobbin thrasher (lace); brass bobbin thrasher, thrasher (lace); puts brass bobbins, received from bobbin presser (lace) *q.v.* into carriages for use in lace machines, and passes thread of cotton or silk from bobbins through eyes in carriage of lace or net machine.

boiler, boiler man (flax yarn); boiler handler, handler (flax yarn boiling); boils flax yarn in water tanks to expel gumming and resinous matter.

boiler (flax yarn); (i) dips of spun (or curled) hair in a tank.

boiler (ramie spinner's), *see* ramie spinner's boiler.

boiler, boiler-off (silk), *see* washer, silk.

braider (finishing nets); *breeder, breeder knitter, breeder weaver, net braider, net maker*, *see* breeder (finishing nets); (i) fastens a number of ends of yarn or twine to a beam and braids them, *i.e.*, pleats and knots yarns in such a way that threads intersect at regular intervals and form a mesh; (ii) (finishing district); guards, attaches edging of heavier net, four inches deep, to fishing nets woven on net loom, using setting needle and twine.

braider, band machine; *band net braider*; *band knitting net maker*, *band machine weaver, racket* (band pleat); a braider (finishing nets) *q.v.* using a kind of knitting machine or loom, worked by a treadle; fills needles with yarn and watches for faulty knitting.

braider, power machine; *braiding machine, braider, set loom, power machine weaver*; places spools of fibre in position on automatic machine, which seizes fibres and pleats and knots them into fishing nets; controls machine by hand lever.

braider, semi-power machine; *semi-power machine knitter*; a braider *q.v.* using a machine similar to a power machine (cf. power machine braider) but requiring more hand control.

braider, twine, *see* braider (finishing nets).

braiding machine minder, *see* braider, power machine.

braiding net maker, band, *see* braider, band machine.

brand tenter (silk); *see* plester.

brass bobbin thrasher, *see* bobbin thrasher (lace).

breeder, braider knitter, breeder weaver, *see* braider (finishing nets).

buzzer, *see* hydro-extractor.

card changer; removes jacquard cards which have passed through loom from jacquard card cylinder, and replaces them with new ones, to enable a different design to be woven; in Kidderminster carpet trade, also changes coloured yarn bobbins on loom, in preparation for weaving a new pattern.

card compiler (weaving); *pattern maker*; sorts up punched jacquard cards in proper order to produce correct pattern in weaving; *cf.* lacer. **card man** (carpets); is responsible for care of jacquard cards; sometimes also acts as card changer *q.v.*

card repaire; repairs broken jacquard cards, by drilling fresh holes near breaks, and lacing broken parts together.

card wire, *see* lacer.

cellarman (cotton mill); is in charge of cellars where raw cotton is stored; superintends stowing of bales, and their removal to other departments of mill as required; has charge of conditioning machines, which restore moisture to cotton.

cellarman (wool), wett cellarman; receives, and keeps in order stock of wadding; is also in charge of wett roller, to which he lifts bales in and out of cellars; has no responsibility for conditioning; cf. stock room man (1941).

chain matter; reading from design on squared paper, (cf. designer) build-up, by fastening link to link, loom chains, i.e., part of mechanism controlling interlacing of warp and weft, in production of fancy woollen cloths.

chain turner (at loom); sets up, takes down, or changes loom heads shape, which maintain equal strain on warp during weaving.

tolkater (wool winding); helps warper (367) g.v.

electric (gassing), see gasser (yarn).
electric passes cloth through rollers revolving in solution to remove faults, bleach, etc., before finishing or printing; runs or pours solution into receptacle and sets rollers; in small establishments may be done by tangle (textile printing) g.v.

colourer, colourist (carpets); colour wotcher (carpets); selects coloured yarns to go into carpets, in accordance with design received from designer g.v.

colourist (wool), as for designer.

colour matcher (carpets), see colourer (carpets).

compiler of steel pattern cards, as for loom.

conditioner, yarn conditioner, cop conditioner; cop damper, damper, kusidhar attended, wett damper, yarn damper; dries and weighs samples of yarn, and calculates regain of moisture; minds sprinkling (damping) machines containing a gauge which registers amount of water used in sprinkling; decides stage of condition, i.e., moisture, required in wool or in yarn.

cop maker, see baller.

copperman (silk), see washer, silk.

corrector (line), see reader, card.

currier, hair; puts hair into card or twist on hair rope or yarn, by hand, after first process of curling, or spinning (365) g.v.

currier, horse hair, as for currier, hair.

currier, mohair yarn; attaches a number of mohair yarns to staples of machine, which first twists yarn and then untwists it; attends to running of machine.

currier, worst (horsehair); teaser (horsehair); partly untwists rope of hair into which it has been twisted to give it a partial curl, and passes it through a teasing machine, similar to that used by hair miller g.v. to separate and open out hairs.

cutlar, baxantian, as for cutter, cord.

cutlar, chenille; a machine which cuts chenille for into strips, for use as pile in weaving, by means of knives set on a cylinder; guides chenille from its rollers to feeding roller of machine, gathers up cut lengths of fur, controls machine by levers, replaces defective knives.

cutlar, circular; oval cutter, cordway cutter; cuts cordway, on a circular machine; applies edge of cloth to rollers, with pile facing upwards; sets engine in motion, which causes cloth to travel through machine, and cuts pile with circular discs.

cutlar, cord; cordway cutlar; (i) see cutlar, hand; (ii) see cutlar, circular; (iii) applies edge of cloth to rollers, with pile facing upwards; sets engine in motion which causes cloth to travel through machine, and cuts pile with a specially formed knife, secured in machine; adjusts knife so as to cut pile at required angle.

cutlar, felt; cuts felt to required size on guillotine.

cutlar, fustian; cuts fustian, usually by hand; for processes, cf. cutlar, hand.

cutlar, hand (fustian, cordway, etc.); oval cutter, cordway cutter; passes end of cloth over frame and round roller, to which he secures it; draws it taut by strainer fixed to frame; inserts point of knife under loop of end thread, and pushes knife along warp, thus cutting pile.

cutlar, machine (fustian, etc.); feeds and winds a machine which cuts up waste or other coarse fibre for greater convenience in subsequent processes (spinning, etc.).

cutlar, molskink, cut, molskink (strong twill cloth, like fustian, but softer), by hand or machine; for processes, cf. cord cutter, or hand cutter.

cutlar, Netherwood; a cord cutter or a fustian cutter g.v. using a Netherwood or Knapley machine.

cutlar, pattern; patternman, pattern room man, sample cutlar; cuts cloth into small pieces for use as patterns or samples, by hand or in a machine.

cutlar, pile (silk); a hand cutter g.v. cutting silk pile fabrics.

cutlar, sample, see cutter, pattern.

cutlar, silk velvet, as for cutter, pile (silk).

cutlar, thickset; cuts thickset, re-sembling cordway, but with finer ribs, usually by machine; for processes, cf. cord cutter.

cutlar, velvet; select machine man; sets velvet, with hand knife or by machine, taking care that pile is set in required manner; for processes, cf. cord cutter, and hand cutter.

cutlar, velveteen, as for cutter, velvet.

cylinder man, cylinder drying machine minder, see drying cylinder man.

damper, cop damper, wett damper, yarn damper, see conditioner.

designer copder, designer's copyist; copies design made by designer g.v. and reproduces it in full and in proper colours for use of colourist g.v.

designer, cloth designer; textile designer; design sketcher; designs patterns for cloth, by new inventions of warp and of weft yarns, coloured or not, and sets out such designs on paper; sometimes specifically designated, e.g. damask designer.

designer, card; a designer g.v. who sets out designs on special paper, indicating positions where holes are to be punched in Jacquard cards by card puncher (366) g.v. using colours, measurements, etc., for guidance of design copier and of textile draughtsman (362) g.v.; cf. reader, reader-of (lace).

designer (carpets); designs new patterns for carpets, by new interlacing of pile, chain, etc., warp, and weft, and sets out and colours such designs on paper; sometimes gives directions in preparation of materials, e.g. to tuft cutter g.v.

designer, pattern (printer's); textile print designer; designs patterns for use in textile printing, having regard to special requirements of customer in each case.

designer, filler-in, damra painter; repairs torn or patchy designs to be woven, by filling in certain squares, indicating where warp is to be raised over weft on squared paper, and leaving other squares blank.

designer sketched, see designer.

developing machine minder (textile printing); is in charge of machine used for second, or developing, processes of ice or developed colours (decolorative of coal tar kept below decomposition point by ice); feeds machine with colour, prepared for him; packs ice into machine to prevent decomposition of developing agents; guides cloth end through machine, and through subsequent water bath.

dipper, colour (lace); a lace dipper g.v. who dips lace net or curtains in a vat of stain, not fast dye, and then into starch.

dipper, lace; dips lace or net in starch, and passes it through rollers.

discharger, silk, see washer, silk.

divider, valvate, as for cutter, pile (silk).

dobby; chain maker for loom; puts together chains of spindles which carry bawls (rollers) operating Jacquard motion, in dobbers and similar looms.

dobby harnesser, dobbie legger; pattern maker; a harness gater g.v. engaged in tying loom harness on a dobbie loom and otherwise setting-up the "motion."

dobbler (bleaching); winds machine which doubles cloth longitudinally; as for cutter (384).

doublet (elastic web); twists together cotton and rubber threads, for use in making elastic web; as for doubler (386).

drawar (jute), see lease lifter (jute).

dresser (bleaching), see sifter.

dresser (woolen felt); dresses wool with size, etc., in card room, in preparation for manufacture of woven felt.

drum filler (textile printer's); under instruction of foreman, puts starch and size in specific quantities into priming machine, which controls supply of hot water and steam by valves, thus keeping drum filled and at proper temperature.

drum machine minder, drummer (silk); operates a machine which causes drums to revolve and to wind opened silk waste upon itself.

drum stripper (carpet yarns); takes threads of carpet yarn also they have been printed by carpet printer (383) g.v., also loops them together in bales round drum, on which they have been printed; numbers them to show which thread each represents in carpet to be woven; with help of assistants, inserts a stick under oldish surrounding drum, and lifts it and yarn cloth of drum.

drum stripper (textile printing); removes, by hand, cloth from drum of printing machine; stops and starts drum by hand lever; highly skilled operation.

dryer, dryer man; dries raw material, yarn, cloth, or felt, either in a heated chamber, or by passing it over heated cylinders in a cylinder drying machine, or in any other form of drying apparatus; regulates temperature of drying chamber or drying cylinders, and time during which material remains in chamber, or speed at which it passes through machine; sometimes specifically designated, e.g., calico, cloth, felt, linen, silk dryer; cop, hand, warp, yarn dryer; cf. dryer (384 and 386), stover.

dryer, shado; a dryer g.v. who winds a drying machine in which cloth is dried after being dyed; adjusts admission of steam to drying cylinders to obtain correct shade according to colour pattern supplied to him, shade depending on rate of drying.

dryer, tin; tin cylinder dryer, see drying cylinder man.

dryer, white; white piece dryer; a dryer g.v. engaged in drying white (bleached) goods in bleaching department of a composite works where dyeing or printing is also done.

dryer, yarn (flax and hemp), see loft man.

dryer, yarn (ginsapping), see sifter.

drying cylinder man, drying cylinder minder; cylinder drying machine minder, cylinder man, fin cylinder dryer, fin dryer, fin man; a dryer g.v. in charge of drying tin or hot cans, i.e. revolving steam-heated cylinders round which cloth or yarn is passed; regulates heat of cylinders, and speed at which cloth or yarn passes over them. man, drying machine minder, drying mechanist; a dryer g.v. in charge of a drying machine, whether of cylinder or of any other type; sometimes specifically designated, e.g. cloth drying mechanist.

drubber, valvet (fasten cutting); shears or dubs, by hand with fine scissors any raised parts of fasten valvet used to fasten, cutting at knotted cotton; usually done by weaving overlocker (356) g.v.; (more usual) using fine scissors, corrects slips, i.e., irregularities in pile caused by faulty cutting.

examinate (fishing nets), see ransacker (fishing nets).

fancy hair bleacher, worker, or for hair bleacher or hair worker.

feeder-in (mercerizing); inserts yarn or cloth in mercerizing machine; for processes, cf. mercerizer.

fettler (cotton weaving), see jobber, loom.

fine screener (coco-nut); atomizes and feeds machine filled with screen or grid, to sift fibre and to remove dirt, by back; back starch filler, see backer.

finisher (bleach works), see backer.

finisher, drum; line finisher; stretching drum finisher, sizer (twine and cord), stocher (twine), twine finisher, twine polisher; usually a machine which polishes twine and cord in rope walk; knots ends of twine lengths, and passes them over pair of polishing drums in form of an endless band, controls power-drive which sets drum in motion.

finisher, stave, see stower (lumber).

finisher, surgical bandage; surgical bandage maker; cuts out, by hand or, more usually, by machine, bandage from roll of bleached cloth, and cuts tail (end), according to requirements.

finisher, twine, see finisher, drum.

finisher, warp; a dryer g.v. which winds a drying machine, in which warp yarn is dried, after it has been sized or treated by some other wet process.

finisher-and-reeler (twine), see twine dresser.

firer (bleacher's) see singer.

frier (fasten), see gasser (cloth, etc.).

frier (dyer's); passes fabric through a solution of acetate of soda, to prepare it for dyeing process.

fringe knitter; plait and knots, by hand, loose fibres projecting from band or foundation of fringe; also makes tassels, shavers or bows, and ties them on to fringe.

fringe twister; twists loose fibres projecting from bullion or other fringe.

gas band, see gasser (yarn).

gasser (cloth, fasten, lace), frier (fasten), gas singing man (cloth); a singer g.v. engaged in singeing cloth, fasten, lace, etc. by application of a gas flame.

gasser (yarn), dresser (gassing), gas band, gas singing man, gas winder (yarn), asseler, sweater; places bobbins of yarn or thread on a gas-sing winding frame; guides thread or yarn to tube upon which yarn is finally to be wound; lights gas burners, and stoves, which regulate gas supply to burners, taking care that yarn is not scorched or stained, and that machine is kept free from gummy substance formed by burnt fibre.

gas singing man; (i) see gasser (cloth); (ii) see gasser (yarn).

gas winder, see gasser (yarn).

gasapper, gasnapping machine minder; a gasser (yarn) g.v. specially engaged in burning off surface hairs of worsted yarns in a gas flame (gasnapping).

gasifier, gasifier, gasifier band; passes lace, frilling, or other material through gasifier rollers to produce pleated effect.

grease extractor (woollen mill); operates, by means of levers, press which expresses oil from soap cakes obtained in soap recovery plant of woollen mill; also separates lubeum adding acid to residue of soap and oil run off from scouring plant, moulding soap into cakes, etc.

grey man, grey room man (dyeing), see sorter (grey room).

grummet maker; makes grummetts (grummetts, grummetts, grummetts), i.e. washers of asbestos or of some textile material, used to make tight tubes of water-tight baskets.

guarder (Dundee district), see braider (Dundee district).

hair bleacher; prepares bleaching solution, and immerses hair in it.

hair dresser, see hair finisher; cf. hair dresser (363).

hair dryer (felt); (i) winds, and regulates heat of, drying ovens in which sheets of hair felt are placed to dry, after processes of mulling and pressing; (ii) winds a machine which dries hair fibre, after it has been washed.

hair duster; places hair, after it has been dyed, in mechanical shaker to free it from dust and dirt.

hair finisher; hair dresser; does final finishing operations to horse hair pieces goods used in tailoring, e.g., crabbing, starching; cf. crabber, mangle (384).

hair frater, see sorter, hair.

hair miller, hair millman, hair mill hand, hair millner; hair miller, miller, mill hand, millner, miller (hair); (i) hair mill on floor, and mixer together, by hand, various qualities, e.g., horse hair, cowtail hair, pig hair, etc.; (ii) places mixed hair on feed lattice of machine, called a mill, which draws hair through a cylinder, having a revolving shaft with projecting flutes which open and close hair; spins hair into a rope, by hand, to give it a curl; dumps it, and below it is an oven to make curl permanent.

hair mixer; (i) see hair miller; (ii) mixer for machine which opens out, or uncurls, horsehair after it has passed through curling room, reducing it to a loose, fringed condition, in which it is put in sacks for use in manufacture of bedding.

hair tipper; sorts earlier g.v. by further loosening hair, after it has been curled, to facilitate spinning.

hair worker; general term for any person employed in curling, spinning, weaving, etc., of hair, or in processes connected therewith; includes: hair bleacher, hair dryer, hair duster, hair finisher, hair miller, hair mixer, hair sorter, hair tipper, hair carder (323), hair dresser (363), hair dryer (328), hair boxer (369), hair opener (328), hair winder (370), hair spinner (365), hair warper (367), hair washer (369).

halter maker (rope), rope halter maker; twists strands of hemp by hand wheel to form rope of suitable length for halter rein; forms strong eye at one end by whipping with twine; weaves webbing on hand loom or frame, forming eye from warp loops by binding with twine; knots up rein and web to make halter, complete.

handier, better handier (flax yarn) bellinger, see builder (flax yarn).

hand machine weaver (fishing nets), see braider, hand machine.

harness builder, power loom harness builder; builds up, away from loom, series of cards and attachments to form Jacquard loom harness; i.e., gear which controls movement of warp threads in weaving; threads and ties lingoes, hanger cords, mail eyes, combor board and warp threads, as necessary, assisted by thread coupler (320) g.v.

harness gaiter; harness tie-up, warp loom knitter; ties heads into harness of loom; threads them through holes in wooden head or rod, speed according to fineness of cloth to be woven.

harness sewer (wool weaving); repairs harness of loom, i.e. gear which controls movement of warp threads in weaving, using special needle and wire.

harness tie-up, see harness gaiter.

head filter; separates heads from loom reeds in particular arrangement required by pattern to be woven.

head mender; a putter-up or loom jobber g.v. who repairs heads by hand; joins broken ends.

horse hair bleacher, dresser, miller, sorter, worker, as for hair bleacher, dresser, miller sorter, worker, respectively.

humidifier attendant, see conditioner.

husk crusher, husk mill hand (coco-nut fibre); winds a crushing machine, which separates fibre from husk of coco-nut by action of metal beaters, and feeds machine with husk, which has first been soaked.

hydro-extractor, hydro-extractor minder, hydro-extractor tender, hydro-extracting machine minder, hydro man, hydro tender; butter, madder, madder, singer, singer, singer, singer, singer; puts wet yarn or cloth or felt into a hydro-extracting machine, consisting of a perforated cylindrical metal cage; sets cage revolving, when moisture is thrown off by centrifugal force, removes material from cage for conveyance to dryer.

Jacquard harness builder, Jacquard harness maker, as for harness builder.

Jacquard harness mender; mounts or fixes Jacquard harness on looms.

jobber; does minor repairs to drawing frames, spinning mules, doubling frames, looms, or other textile machinery, and does other odd jobs under the direction of overlooker of his department; often further distinguished according to class of machine or of material, e.g., braid jobber, double jobber, drawing jobber, spinning jobber, twisting jobber.

jobber, mender, singer, singer, singer, singer, singer; repairs minor defect in loom, assists tamer (356) g.v. to put beads and reeds into loom; places and starts new beams for weaving, and removes beams when empty.

pute cutter, pute selector; selects and assorta puts into grades, according to colour, and cuts off roots by drawing fibre across fixed knife or sythe blade, often done by betcher (pute) g.v.

knitting band (lace); ticks, quills, and makes up lace or other material by machine; sets gauges and grades and feeds material between rollers.

knitter, machine knetter; operates a mechanical knetter, which ties ends (threads) of old warp on to those of new warp.

knitter (quills, etc.), quilt knitter; gathers up fringe of quilt or other fringed goods, and ties it into knots at intervals in row edge.

lace band, lace worker; general terms for workers tending any machine and/or carrying out any operation in lace making or finishing trade; includes: lace hand (376), and lace worker (377), lace warehouse hand (385) g.v.

lecer, card lecer, card cutter's lecer; card winder; Jacquard card lecer, Jacquard lecer; threads Jacquard cards, lace patterns, cards, etc., in proper sequence on web and by means of cloth or lace, by hand or by machine; cf. card compiler (weaving).

lecer, chain; dobby lecer; Jacquard card lecer, Jacquard lecer; (i) places Jacquard cards, chain, side by side in proper sequence; threads them together with a needle, the thread passing alternately from right to left and from left to right in such a way as to form an endless chain of cards; (ii) places Jacquard cards in proper sequence in a machine and operates mechanism which looms them automatically.

lecer, Jacquard; Jacquard card lecer; (i) see lecer; (ii) see lecer, chain, last setter (ganapping), see setter (ganapping).

lecer-tender, see sorter (grey room).

litterer, litter (gate); dresser (gate); takes end of warp with right hand on to weaver's beam, after beam has been removed from weaving frame, and which contains weaver's loom; selects individual threads, and draws them through heads with a hooked tool, or attaches them to each of warp threads in fabric already woven and in loom.

flat boy; sews, with hand sewing machine, driving lists or cotton bands, which drive spindles of spinning frames; sees that bobbins are kept in good condition, replacing old bands with new when necessary.

locker, flat; feeds a power-driven fish lock machine with knitted fabrics, which are carried along a sloping arm, are automatically trimmed to correct shape, and then are sent to stitching needles, which join them edge to edge, forming a very flat seam.

loft man, yarn loft man; runs dryer (dye and hemp); places bobbins of wet spun yarn in drying room in steam-heated drying room or kiln; straightens out and turns bobbins during drying operation, to ensure uniformity, in preparation for baling.

long side mender (silk); mends any machine having a long side, i.e. a greater number of spindles than is usual; may be either a roving frame mender (3613), a spinner (365) or a doubler (371), or a thrower (372) *q.v.*

looseener (heads); prevents varnished threads of heads from sticking together.

machina man, see tinner's assistant.

mangler, back fill; back filling mangle, see becker.

mangler, mangle man (bleacher's); mends a mangling machine, which generally has two or more rollers, one above another, or a roller above and a plate, called a dryer, below, between which cloth is passed; guides cloth through trough, containing various pastes or solutions according to particular kind of finish required, and also through rollers, and makes any adjustments required; sometimes designated according to character of solution, e.g. soda mangle, water mangle.

mangler, dry; a mangle *q.v.* in charge of a machine whose rollers are heated, or through which cloth is passed only slightly damp.

mangler, filling; a mangle *q.v.* in charge of a machine which, besides mangling, also dries cloth with a filling material, such as clay.

mangler, mangle man (textile printing); mends a mangling machine, which partially dries cloth after washing by pressing it between rollers; sets rollers to regulate pressure; guides cloth end through machine to winding-on roller; starts and stops machine by puller lever, etc.; is usually establishment, also does work of clearer, preparer, stop paddler, starcher *q.v.*

mangler, white; a mangle *q.v.* engaged in mangling white (bleached) goods only, in bleaching department of a works where dyeing or printing is also carried on.

marker-out (fasten, etc.); marks out on fabric, portions of pile to be cut and not to be cut, respectively.

mat comb; straightens out twisted strands of yarn from surface of woven mat to improve its appearance.

mat maker; makes dose mat by hand, by inserting tufts of coco-mat fibre through string yarn, suspended from a beam, in such manner that tufts form pile of mat.

mat shearer, mat trimmer; (i) trims projecting fibres from surface of mat, and remedies minor defects with needle and shears, to improve its appearance; (ii) drives a machine which shears off projecting ends with rotating spiral cutters.

merceriser; passes cotton yarn or cloth between rollers, which carry it through a trough of caustic soda solution, thence through a stretching frame, and finally through a washing trough, to extract excess of caustic soda and to give yarn or cloth a silk-like lustre.

milner, millman, mill hand, millner (hair); see hair mill.

mochar winder; twists ends of pieces of mohair cloth with fine wire.

motion minder, see hydro-extractor.

mounter, harness mounter; fits jacquard attachment, cards, and harness to loom, ready for weaver; joins or ties by hand lines threads which have been drawn through comber board to cotton cards, each of which is attached to jacquard mechanism.

muslin clipper, muslin cropper; one of a pair of workers who cut, on cutting frame, connecting threads of muslin leaving pattern comprised of short ends; places muslin in frame, guides through cutting knives, attaches to hooks of winding-on roller, sets knives and, in cutting, either guides muslin, by hand, over rollers to knives, or, taps it gently with a cane to open-out connecting threads; after cutting, releases knives and removes main; operates machine by hand lever.

muslin ripper; stretches muslin between two rollers and cuts, with hand knife, certain warp cords to form pattern; machine here unsuitable passes ripped muslin to muslin clipper *q.v.*

net braider, see braider (fishing net).

net fitter, net fixer; a net mounter *q.v.* who completely fits net, including mending, see net maker.

net loom tinner, see braider, power machine.

net maker, net weaver, see braider (fishing net); *cf.* hand machine braider, power machine braider, net mender, machine braider.

net mender, net repairer, fishing net mender, see braider.

net mounter; trimmer (fishing net); (i) fits nets with ropes as guards, cords and gables and with mending twine by hand; (ii) (Dundee district) attaches rope to top, bottom, and sides of nets, i.e., guards, by means of morsels (see net creeller) or by facing mouth at screwage with a light line, attached to guinea by a clove hitch (knot) every few inches.

net creeller, dry; attaches morsels or morsels (short lines about ten inches long) to top and bottom of fishing net at regular intervals by passing looped edge round cord at edge of net and slipping open end through loop; may also attach morsels to long line or rope for line fishing and whips or knots hooks to open side.

netwasher (flannel); feeds flannel, which has been carbonised by the action of sulphuric acid, to washing machine, regulates water supply and adds soda ash as required; with draws flannel at conclusion of operation.

opener, see drum machine minder.

orange raiser (dye's); puts cloth through solutions of bichromate of soda or of potash, or through lime water, to raise, or bring out, the orange colour in basic lead salts.

paint squarer; prepares in colour, on squared paper, designs used by card cutter (386) *q.v.* in making jacquard cards.

pattern maker (not making-up); (i) is card compiler; *cf.* pattern compiler (387); (ii) is dobbie harnesser; *cf.* pattern maker (making-up) (343).

pattern man, pattern room man; (i) attends to classification, sizing, and indexing of various patterns of cloth woven; (ii) see cutter, pattern.

pattern settler, see settler (carpets).

pegger, card pegger, lag pegger, loom pegger; runs pegs in laps, pieces of wood drilled with holes, which control warp threads to be raised in weaving to allow warp threads to pass and thus decide pattern.

pegger, dobbie; a pegger *q.v.* fixing pegs in laps for dobbie looms.

picker (hair), see sorter, hair.

piece raiser (carpets); (not Kadder-minster) passes velvet pile carpet over drums through which steam is pumped, to raise pile and improve its appearance; controls machine by hand levers and regulates steam valve.

planner (flat and hemp); (i) a polisher *q.v.* who throws hanks of bleached or dyed thread and fine twine over; hook, and with a round iron bar as a lever, or pin, pulls and twists hanks to remove stiffness, and to give it a partial polish and soft texture; (ii) bags hanks of thread, etc., or opens to hanks of a machine, which set on thread in same way as hand process described above.

plaiter, asbestos; mends a machine making tubular asbestos braiding; for processes, *cf.* plaiter (braids and tapes).

plaiter (braids and tapes); braid tester (silk); places bobbins of yarn on a circle of spindles, and draws and connects threads of yarn to a circular feed; controls power-drive of plaiting machine, which causes spools to rotate forming a plait, threads being interlaced like ribbons round a maypole.

plaiter, plait maker (coir yarn); coir plait maker; places bobbins of coir yarn on spindles and starts machine; attaches end of plait thus formed to a roller, which rolls up plait as it is made, for use as mat edging.

polisher, bank yarn; mends a machine consisting of a large revolving brush against which prepared hanks of yarn in chain form are pressed, to give them a glazed appearance; regulates distance of hank from brush.

polisher, twine; (i) as for polisher (yarn); (ii) see finisher, drum; (iii) see twine dresser.

polisher, warp yarn; places beam containing a series of sharp threads behind polishing machine; guides yarn through a trough containing a polishing mixture, through screwing rollers and in contact with cylindrical brushes to bobbins upon which yarn is wound; controls power-drive of machine.

polisher, yarn polisher; polisher minder; attends yarn polishing machine; makes-up starting preparation, guides yarn-ends from bobbins through starch troughs to drying cylinders and brushes, and attends to winding-on bobbins or beam; starts and stops machine, replaces bobbins, cleans trough, etc.; sometimes specifically designated, e.g. asbestos polisher, linen thread polisher, twine polisher; *cf.* bank yarn polisher.

polisher, yarn (mosquito netting); guides cotton yarn between heavy rollers which grease it slightly, remove fluff, and also polish it.

polisher winder, see polisher, yarn.

power machine weaver (finishing net); see braider, power machine.

preparer (cotton doubling); yarn preparer; mends a machine which gives lustre to doubled cotton yarn; places hanks of doubled yarn in position over two rollers, and causes lower causing tension to be thrown on yarn by the spacing of the two rollers; starts machine; removes yarn from rollers upon which it has been spread when operation is complete.

preparer, cotton preparer (lace); yarn preparer; passes cotton through rollers which have been treated with greasing or polishing composition, to saturate it and put a gloss on it, in preparation for lace making; guides yarn from bobbins through rollers to winding on bobbins or beam; replaces bobbins as empty or full; keeps machine clean.

preparer (textile printing); prepares cloth with mordants preparatory to printing or dyeing; as for clearer.

preparer, yarn; see preparer (cotton doubling); (ii) see preparer (lace).

print filler (carpets); causes moist colour on printed yarn to penetrate more deeply into it by pressing and rubbing it by hand with a small vulcanite tool, bevelled to a blunt edge; also scrapes away superfluous colour from yarn.

print filer (textile printing), *as for* backer.
 print winder, *as for* beamer, white piece.
 process man (print works); general term for any machine minder in a textile printing works, *e.g.*, machine printer (388), mangle, *e.g.*, mangle-out, gives out to workers, work to be done by them.
 putter-up, *see* jobber, loom.
 ramie cleaner; mangle machine which, after washing process, cleans ramie yarn by rubbing.
 ramie degummer; extracts gum from ramie fibre by chemical process; passes fibre through washing machine, and thereafter through hydro-extractor, in preparation for combing.
 ramie epian's boiler (fiber (ramie epian's)); boils ramie fibre in open vat to de-gum and bleach it, in preparation for opening and carding process.
 ransucker (fishing net), net ransucker; consumer (fishing net), examines net for holes; turns faulty net over to beater, *e.g.*, and re-examines net after it has been mended.
 ratcher (band plait), *see* braider, band machine.
 reader, card reader, reader-off (lace), corrector (lace); translates design for lace on special squared paper into columns of numbers to be used by jacquard puncher (390) *e.g.*; checks and corrects punched holes in pattern cards for lace making machines.
 reader, curtain; a card reader *e.g.*, who makes in string a pattern or copy of design for curtain lace from which pattern jacquard cards are punched on power press; checks and corrects holes punched in pattern cards.
 rigger, net rigger; (Hendee district) stitches socks to cork ropes on top side of net, and to sole ropes on bottom side, and ties or laces corks on socks on top side with twine, *cf.* rigger (Fleetwood district) (393).
 rug brooder (Yorks. term), rug maker; makes rug, by hand, on a canvas ground, by piercing canvas with an awl and inserting cloth cuttings.
 safe linter; stitches protecting fabric on any part of material that is not to be dyed, to prevent its taking colour.
 sample marker; puts together samples in books or on cards and fixes tickets with reference numbers.
 semi-power machine weaver, *see* braider, semi-power machine.
 setter (carpets), setter-off; prepares loom by threading warp yarn through reed or stay, heads, and harness, taking care that yarn, if coloured, is in correct order for weaving.
 setter, chendale; a setter *e.g.*, preparing looms for weaving chendale carpets.
 setter, dry; yarn dryer (gripping); fixes bunks or skeins of yarn on reeds in drying chamber.
 setter, yarn setter, (gripping); last setter (gripping), yarn stretcher; (i) sometimes mounts yarn (yarn) *e.g.*, to set, or stretch, worsted yarn in frame, as it passes over barrow, to prevent stretching; (ii) stretches around gripped yarn in frame to prevent coaking during drying.
 shade getter, *see* blender (wool).
 ship's fender maker; knots and coils and applies rope, by hand, to make a ship's fender; may weave a centre of special rope in form of a bag or small sack, fill this with cork shavings and bind it with rope.
 silk cord maker; a plaiter *e.g.*, minding a machine which plaits silk cord from doubled silk yarn.
 silk drier; passes silk through troughs containing oxidizing oil, and over drying rollers, to render fabric water-proof.
 silk staffer; stretches skeins of silk with wooden staff, by hand, to ensure fitness before placing in loom.
 singer, singe man, singeing man, singeing machine tender, dresser

(bleaching), singer (bleacker), singer-
 8; operates engine which drives pulleys and rollers of singeing machine; passes cloth through machine, where fluff or loose fibre is removed by passing over a system of busses gas burners, or over a heated copper bar, pipe, or plates; regulates flow of gas system or of heated copper bar, pipe, or plates, and speed of delivery of cloth through machine.
 singer (fustian), *see* gasser (fustian).
 singer (wire), *see* gasser (fustian).
 singer, *see* singer.
 sizer (twine and cord), (i) *see* finisher, drum; (ii) *see* twine dresser.
 slinger, *see* hydro-extractor.
 slop padder; runs cloth through solution to tint as base for printing; *as for* cleaner.
 softener (tow), yarn softener; mangle machine for softening yarn or tow, by passing it between rollers; yarn is then ready for treatment by yarn loader (388) *e.g.*.
 sorter (flax and hemp); classifies flax or hemp after it has been machine hatched; splits up inferior fibres by breaking them on touch pan, straightens fibres over band hatches; makes bunches (laps) of fibres, and bundles these into bales according to quality and cleanliness of fibre.
 sorter, cloth sorter, sorter-out (grey room), piece sorter, grey man, grey room man (dyeing), layer-out; sorts cloth, as received from weaving departments in grey (unbleached) goods, by grades and stamps with special marks according to quality, etc.; puts together pieces which are to receive similar treatment in bleaching, dyeing, or textile printing department.
 sorter, hair; hair frailer, picker; sorts hair into grades, according to fineness, colour, soundness, etc.
 sorter, hawk, *as for* sorter, yarn.
 sorter, piece, *see* sorter (grey room).
 sorter, fibre sorter (raw silk); separates different qualities of raw silk contained in imported bale as it comes from alignment; divides moes (sorts) into bunks or bundles of regular weight and classifies by grade.
 sorter (silk throwing); sorts weighed thrown silk thread according to size and quality, in preparation for skinning to uniform form.
 sorter, skein, *as for* sorter, yarn.
 sorter (worsted, *see* dyer), *as for* sorter (grey room).
 sorter, yarn; (i) separates various grades or types of yarn, in preparation for their treatment in weaving and other departments; (ii) sorts yarn according to count (fineness), colour, etc.
 splicer, rope; joins two rope-ends, by unravelling strands at both ends, and twisting them together to form one continuous length; sometimes also inserts eyelets, thimbles, and rings, or forms loops in rope.
 splicer, yarn splicer (silk); joins together end of yarn broken in cleaning frame; passes yarn to be spliced through two mandrels on hand machine; turns two hand wheels in same direction to take twist from yarn; splices broken ends, by hand, and twists hand wheels in reverse direction to restore twist to yarn.
 splicer, thread splicer; joins ends of thread by splicing; opens out opposing ends of thread; twists separated threads, making a join in the middle; re-twists strands, by machine; cuts off projecting ends, and smooths join; sometimes specially designated, *e.g.*, cotton yarn splicer.
 splitter (raw silk); places large skeins of silk, called moes, on a revolving frame and divides, by hand, into smaller skeins for convenience in subsequent winding; *cf.* winder (371).
 starch boiler; starch mangle, starch maker, starch preparer, stiffener; mixes a solution of starch or size, *as for* dressing yarns and for filling (stiffening) and finishing piece goods; boils it at a high temperature in boilers or pans, heat of which he regulates.
 starcher, back, *see* backer.

starcher (carpets), guides yarn ends from bobbins, placed on a stand, into sheet-like form, and guides them through a series of rollers, which he lowers into troughs of hot size; starts machine; guides yarn from size troughs to drying cylinders.
 starcher (textile printing), *as for* mangle, filling (884); in small establishments, done by mangle (textile printing) *e.g.*.
 starcher (twine), *see* finisher, drum.
 starch maker, starch mixer, starch preparer, *see* starch boiler.
 steamer, cop; a conditioner *e.g.*, in charge of machine which mangles cop of yarn by exposing them to steam.
 steamster (finishing), *see* ager; *cf.* steamer (384 and 386).
 sterilizer (stock factory); prepares a scouring solution containing sterilizing solution; soaks, steams and sterilizing of stock therein; determines temperature of solution and duration of soaking.
 stiffener, *see* starch boiler.
 stove (brimstone), *see* stoves (brimstone).
 stove (brimstone), brimstone stove man, sulphur stover; *see* finisher; attends to a stove, *i.e.*, an air-tight chamber in which yarn, cloth, or knitted goods, are exposed to sulphur fumes, to dry and bleach them; (in woolen trade) hangs goods in steaming chamber; (in other textile trades) mangle a storing machine, which passes goods continuously through chamber; also attends to burning of sulphur; sometimes specially designated, *e.g.*, bossey stover, white piece stover, woollen sulphur stover, yarn stover.
 stover, stoverman (cotton cloth); is in charge of stoves in which washed cloth is stored, in order to give it a cooked, wrinkled or puckered effect; sometimes specifically designated, *e.g.* fustian stover.
 stover, yarn stover, stoverman (cotton yarn); is in charge of a store in which cotton yarn, or bank form, or a skein of yarn, is suspended in a frame, either by drawing it through stove with endless chains, or by placing it in chambers of a differential store in sequence, beginning in coolest and ending in hottest store; the frame is mechanically from chamber to chamber mechanically; regulates store temperature by turning on and off steam, as required; *cf.* dryer.
 stover, warp; warp yarn stover; a yarn stover *e.g.*, engaged in storing warp yarns.
 stretcher, yarn stretcher; (i) *see* setter (gripping); (ii) *see* tester yarn; sometimes specially designated, *e.g.* silk stretcher.
 striker, strike-off (tulle), jute strikes, *see* backer (tulle).
 twirlinging drum finisher, *see* finisher, drum.
 stripper (bossey); removes shaped bossey from shaping boards.
 staffer (dyer's); weighs out prescribed quantity of mixed dye or colour known as stock in dyeing trough, under directions of head dyer (350) *e.g.*; puts it in a laven bag, dissolves it in boiling water, and takes stuff, so prepared, to dyers, for use in dye vessels.
 surgical bandage maker, *see* finisher, surgical handage.
 swealer, swealer, *see* gasser (yarn).
 swealer, *see* hydro-extractor.
 tanner (ropes, etc.), *see* Barker (ropes, etc.).
 taper, tape sewer, tape sewer-on, *see* band sewer-on (wool spinning).
 teasel (teazel) clipper, teasel (teazel) setter; clips tracts or stalks of teasels, prickly horse heads of a plant resembling a thistle, to be required in carding and used in raising pile, clip-rod, or metal frame, for use in raising pile of fabric; presses teasels close together with metal kicker or ram; resets teasels in zig-zag by turning them round when one side is worn in use.

teaser (horsehair); (i) see curlier, soft; (ii) in charge of machine which mends, curls or opens out horsehair, after it has passed through curling room, reducing it to a loose frizzy condition, in which condition it is put in sacks for use in manufacture of bedding.

tester (thrown silk); testor "throw," i.e. amount of twist, in thrown silk, by counting number of twists in a given length; fixes given length of thread in jaws of twist testing machine, turns hand wheel until twist is removed and reads number of revolutions on dial.

tester, yarn; stretcher, yarn stretcher; tests quality of yarns by taking a given weight and winding it on a frame to ascertain its tensile strength; maintains constant given tension on thread and records breaks in yarn, which is weighed a second time, to ascertain its actual loss, i.e. loss during test due to loss of fibre, moisture, dressing, etc.; cf. wett wreather.

threader (lace), see bobbin threader (lace).

thread spinner, gold and/or silver; gold and/or silver thread maker; twisted maker; spins in a machine, gold, silver or plated tinsel wire into thread by drawing it around a fillet or body of silk or cotton for convenience of subsequent weaving into lace or cloth, cf. gold and/or silver weaver (370), or twisting into cord, cf. gold and/or silver corder (370).

thrum weaver; inserts small pieces of rose yarn or spun yarn in canvas, preparing a rough surface, or mat, which can be wrapped round rigging to prevent chafing.

ticket marker (into weaving), see billet marker.

tin man, see drying cylinder man.

tinsel maker, see thread spinner, gold and/or silver.

tipper (pile fabric); a hand outfit (footman, velvet, etc.) employed in tipping plush, i.e. cutting surface pile of plush.

trawl mender, see for beater.

trawl net maker, see for braider, power machine.

trimmer (carpets); removes superfluous material from back of carpet with knife and clippers, and remedies defects in weave with needle and thread.

trimmer (fishing nets), see net mender.

tuft cutter, wool tuft cutter (carpets); using hand knife, cuts carpet yarn into lengths, or tufts, for hand loom weaver (carpets) (370) g.v., working under direction of designer (carpets) g.v. as to quantities, lengths, etc.; horse tufts for conveyance to weavers.

tuner's assistant; machine man; makes minor adjustments to loom, under direction of tuner (356) g.v. turner (bourgeois), turns loom inside out, in readiness for certain finishing operations; pulls sock or stocking leg downwards over a bar having projecting lip which grips sock, etc.; reverses hose along bar.

turner-off (bottery); turns down, and presses in a slight pipe edge of knitted garments, in preparation for finishing process.

twine dresser; finisher - and - restor (twine), sizer (twine and cord), twine pecker; mends a bobbin-to-bobbin polishing machine, guides twine or line through a washing trough, aqueous rollers, and sizer trough to drying cylinders, and thence to polishing roller and to winding-on-spools; controls power-drive of machine.

twist collar maker; collar maker; any operative employed in collar where twist (warp yarn) is stored, condensed, and distributed for wearing, includes conditioner, damper, collar boy (399), storeman (341), wire sorter (342).

twist spinner, gold and/or silver; gold and/or silver twist maker; mends a machine which twists two, three or more threads of gold,

silver or plated tinsel, into what is known as twist, for use in embroidery work; places bobbins of different threads on spindles, threads ends of threads through machine to winding-on bobbins, controls machine by lever.

underlooker, under - overlooker, under-looker, see assistant over-looker.

velvet machine man, see cutter, velvet.

warp loom knitter, see harness gauger.

warp tier (carpets); ties ends of new warp, by hand, on to ends of warp which is nearly finished.

washer, print (carpets), see washer, yarn (carpets).

washer, silk; silk yarn washer; boiler, boiler-off (silk), copperman (silk), silk discharger, scum-hourman (silk); washes silk water in a cistern of boiled water and soap, turns it about until all gumming matter is discharged; puts silk, after boiling, in a hydro-extractor, or through rollers of a wringer or mangle, to remove liquid.

washer, yarn (carpets); print washer (carpets); bags yarn for tapestry carpets, after it has been printed and steamed, on a rocking arm in water; removes it when washing is complete.

wash-houseman (silk), see washer, silk; cf. wash-houseman (silk) (369).

waterproof (canvas); general term for any worker engaged in waterproofing canvas, e.g., mixing waterproof solution, or operating machine which spreads solution over canvas, or calendering or drying it after it has been waterproofed.

waterproof, line; mends machine which applies waterproofing solution to line; guides line through machine to bobbins on which it is wound; controls power-drive of machine, and fills troughs with dressing solution.

wax printer (dyer's, bleacher's); hems, by hand, wax preparation on cloth; cracks set wax and immerses cloth to be dyed in dye bath; that cloth is dyed where wax is broken, i.e., in irregular lines.

weigher, wet; dries samples of wet yarn, in a small oven, and takes weight before and after drying, in order to ascertain amount of moisture lost from weight per hank.

weight puller; attends to weights on back of looms, used for regulating tension of threads in warp.

whizzer, whizzer, see hydro-extractor.

wire sharpener (carpets); sharpens, with a revolving grinding roller, blades fitted at end of wires in looms weaving Wilton and other cut-pile carpets.

wusser, see hydro-extractor.

300—OTHER WORKERS.

asbestos sifter; feeds shaking machine, which separates long fibres from short, with asbestos, after it has been opened by asbestos opener (362) g.v. (long fibres go to card feeder (363) g.v. and short fibres to beater man (312) g.v.).

asbestos wadding hand; takes asbestos after it has been carded, and passes it into rollers of a machine which applies a glutinous coating to one surface of fibre.

assistant draw frame tender, see back tender (draw frames).

back tender, back minder (flax); attends feed end of roving frames, and also delivery and feed ends of drawing and doubling frames; inserts fresh sliver; keeps up supply of sliver cans, and removes them when filled; helps to clean frames, and assist reeler (362) g.v., or takes her place if she is absent.

back tender, back minder (jute); back reeler, reeler feeder; stands at back of roving frame, which draws out, and imparts slight twist to jute fibre in form of sliver, converting it into roving, supplies machine with full cans of sliver, and removes empty cans.

back minder (moulder); takes off material at back of calender.

back minder (brushing), a helper g.v. stationed at certain brushing machines; keeps even tension on cloth running into machine, reports faulty patches in cloth to machine minder, etc.; cf. guide-in (384).

back minder, stretching machine; takes off cloth, etc., at back of stretching or slentering machine.

back minder, back tender, back draw frame tender; (draw frames); assistant to draw frame tender, or an assistant to draw frame tender (362) g.v. or a jointer tender (363), working at back of draw frame, feeding it with sliver, mending slivers broken in process of drawing, and replacing empty sliver cans.

back tender (cotton carding); feeds first of two carding machines, known as breaker machine, with laps, and attends to automatic feed of second carding machine, known as finisher or condenser.

back tender (flax carding); assists carder feeder (363) g.v. by removing from carding machine, heat or lap, i.e. wool or hair in loose masses, formed thereon.

back tender (jute frames); lifter tender (jute frames), setter-on (jute frames); a young girl assistant to frame tender (363); replaces empty bobbins; mends broken threads; helps to clean machines, etc.

back tender, intermediate box; intermediate frame back tender; (jute frames); removes empty bobbins from boxes at back of intermediate frame, sections in series of fly frame or speed frame machines, and supplies full bobbins, to be inserted in frame by creeler g.v.

back tender, roving frame; rover back tender, roving back tender; roving frame lifter tender; removes empty bobbins from back end of roving frame, and inserts full ones, brought from intermediate frame.

back tender, back tender man, machine back tender (textile printing); tender (textile printing); under direction of machine printer (384) g.v., guides cloth into back of printing machine; removes, cleans, prints, rolls, back greys, blanket washers, etc.

bagger, net; soiler (silk); fills bags with silk noils, i.e. waste or short fibres removed by comb in silk dressing frame.

bagger (silk); packs raw silk and cocoon waste in bags, in readiness for boiling process.

baker (curled hair); dryer, stover (hair); places hair, previously steeped and curled, in oven to be baked; baking sets twist or curl; reads pyrometer and regulates gas by means of valves.

baler (coco-nut fibre); packs finished coco-nut fibre into bales, which he sews up when full, ready for despatch.

ball drawer, ball tier (twine); puts by hand final winding round middle of machine wound ball of twine, and draws tight; tucks in end of twine and removes ball from winding-on table.

ball sett maker (jute); arranges sets of balls or laps of jute, after they have been weighed, to make up a specific weight for placing in flaxer carding machine.

bandler (bleaching); chainer (bleaching); makes up bales of yarn into a continuous chain, or plate yarn in warp form into a chain, and ties end of one warp to beginning of another to make up a charge for kiers or bleaching vats.

bandler (carding, spinning, doubling, weaving, silk throwing, etc.); bawl jobber; based setter-on, based setter and tier, top position; fixes and repairs bands or belts which connect individual spindles or machines to main driving shaft; cuts bands to proper length and sews them in place on the machine, with a special

portable sewing machine, sometimes specifically designated according to type of machine, e.g. ring bender, spindle bender.

bender (dyeing); puts hands round bales of yarn to facilitate handling during dyeing process; links skeins of yarn in chain.

bender, piece bender (textile finishing); *sewer, sewer-down, sewer-in, stitcher, stitcher-on*; sews together, by machine, ends of several pieces of cloth, so that they may go through machines as one piece.

bender-and-sizer (silk); combines duties of bender (sizing, spinning, etc.), and of sizer *q.v.*

barker's assistant, barker's labourer; fetches and carries for barker (308) *q.v.*

barrow boy, barrow girl, barrow man; takes material from place to place in or about works in a barrow; *cf. carrier*.

batcher, batcher-up (finishing); rolls cloth on to rollers after steaming process, in readiness for further processes.

beam carrier, see giver-in (weaving).

beamer (finishing); assists mangle man (384) *q.v.*; places cloth rolls in position before mangle, and removes cloth when finished; *cf. beamer* (307, 380 and 393).

beaming lad; assists beamer *q.v.*

beamer boy; inserts wooden brackets to support strands at intervals down rope-walk, as they are twisted and formed by rope making machine, which travels down the rope-walk on rails.

bit machine boy; assists bit winder (307) *q.v.* by sorting out bobbins and bits of yarn by colour, fibre and quality.

blower, blower-up; sends cotton, after it has been mixed in cotton chamber, to opening machine through an exhaust pipe, as distinguished from a lattice or conveyor, as old mds. feeds blowing plant with opened cotton by hand; *cf. blower* (362).

bobbins (jute); bobbins gatherer (jute); gathers in and carries empty bobbins from winding flat to spinning flat; sometimes also does work of bobbins setter *q.v.*

bobbins boy (rope and twine); mangle boy (rope and twine); cleans revolving frames or spinning machines, and arranges empty bobbins on racks, ready for drier *q.v.*

bobbins cart, or for carrier.

bobbins cleaner (worsted spinning); bobbins sizer; removes, from bobbins, unused rotings (combed wool before spinning).

bobbins liddle (flax and hemp); *see box* (flax and hemp), *garn drier*, *putter box*, i.e., basket or skip, containing full bobbins of flax, hemp, jute or yarn from spinner (305) to reeler, cop winder, spool winder, etc. (307); wheels back empty bobbins to spinning frame.

bobbins seeker, see creeker (worsted spinning).

bobbins sizer (carpets); stacks bobbins in appropriate crib or bin, according to colour, etc.

boiler, soap (wool preparing); boils soap liquor in a tank, in preparation for wool scouring.

booker, cloth; cut booker; receives in warehouse cloth woven by each weaver, whose wages he calculates at current piecework rates.

booker, skip; skip sizer; keeps account of gain in its enters and leaves warehouse.

boomer (flax and hemp); carries wet yarn in hanks, after it has been bleached and washed, to boom yard, open-air drying yard, to dry; hangs hanks on to beams (booms), and straightens them out; sometimes also does work of peaker *q.v.*

box boy (carpets, etc.); *putter-in* (carpets, etc.); places washed boxes in position at bottom of yarn colour-printing (or printing) frame.

box boy (flax and hemp), *see* hobbin liddle.

box minder, box tender (silk); keeps wet (or shuttle) box of loom supplied with full bobbins.

breaker-up, see opener, bale.

brush, comb, canvas, gear, barrel, heddle, head, *see* head brusher.

brusher (hostry); passes bessey, or garments made therefrom, through rollers of a machine, which are covered with teasels or with wire, thereby brushing them and giving them a fleecy surface.

brusher, roller; brusher (woolles spinning), roller picker; cleans rollers over which yarn passes in woollen spinning.

brusher (woolles spinning). (i) *see* brusher, roller; (ii) *see* wash boy.

buncher, yarn buncher; (i) ties several bales of yarn into bunches, in readiness for succeeding processes, bleaching, etc.; (ii) *see* crofter; *cf. yarn buncher* (343).

bundler, flax, see striker-up.

bundler, waste; makes waste from various departments of mill up into bundles.

caler, ties full bobbins from spinning frame and puts them in metal cages, i.e. on vertical rods fixed in base of a wooden or metal tray.

camb brusher, sizer, varnisher, see head brusher, sizer, varnisher, respectively.

can boy (flax and hemp); *see* transporter (flax and hemp), *can walloper, silver sander*; attends delivery end of a carding machine, and presses down silver in silver can; breaks silver when can is full; replaces full with empty can; carries flax and hemp in empty cans to one process to another in preparing room of spinning mill, removes empty cans to be re-filled with fibre.

can transporter; (i) (flax and hemp) *see* can boy; (ii) (jute) *see* filler, can (full of rope and twine) *see* runner hand, *can*.

can walloper, see can boy.

capper, see catcher.

card boy; (Dundee district) carries on trucks baskets of twine for skilting.

carding room man, card room man; a labourer in card room, who holds himself at disposal of carder or under carder (353); fetches and carries, pushes truck, etc.

carrier, carrier - in, carrier - off, carrier-out; carries material, yarn, cloth, dyestuffs, bleaching solution, etc., from one room or department to another; often also works lift or hoist; sometimes specifically designated, e.g., beam, bobbin, cloth, colour, cop, piece, wolf, wool, yarn carrier; *cf. barrow boy*.

carrier, colour, see carrier.

carrier, roving, see fetcher, roving.

carrier, set; yarn stacker; has charge of ends of cops, i.e. yarn wound on paper tubes, and sees to their distribution.

carrier, skip, see dragger, skip.

carrier sizer, see runner hand, *can carrier, wool, see* packman (wool sorting).

cart boy, or for wheeler.

cart boy, top; top carrier (rope and twine); is stationed by top cart (conveyer on rails carrying the top, a grooved wooden cone used in twisting rope or rope strands) in rope walk, places top in position before rope-making process starts, and removes top and cart when process is complete.

catcher; capper; (Dundee district) stands at delivery end of softening machine, *cf. softener band*, takes hatched yute as delivered from fixed rollers and places on barrows for conveyance to drying room.

camb brusher, sizer, varnisher, see head brusher, sizer, varnisher, respectively.

cellar boy; assists conditioner (398) and store assistants (342) in cellars where yarn is stored, carrying cops, hanks, skeins, etc.

cellarman, wool (wool sorting); wool collar packer, wool packer; has charge of wool cellars, packs wool upon its arrival, cleans collars, and distributes wool for sorting as required.

cheolier (bleaching), *see* bender (bleaching).

chain minder; mangle and loads chain transporter belt, which conveys yarn, bobbins, etc., to and from spinning room.

changer, changer-off (flax and hemp), *see* doffer.

changer (lacs); changes old for new bobbins, or old pattern for a fresh pattern, on lace-making machines.

changer, roller; putter-on (textile printer's), *shifter* (textile printer's); sets and keeps printing rollers on steel mandrels, ready for mounting in printing machine, and assists in changing patterns and rollers in machines; sometimes also fills and sets colour boxes.

checker; (i) checks number of bobbins in spinning room before they are taken away; (ii) counts or records number and quantity of material received or of goods produced, at any stage of manufacture.

china grass worker; general term for any worker engaged in preparation of china grass (ramie), including hatcher (362), drawer (363) earler (363) *q.v.*, etc.

cincher, see plaiter-down.

clark; helps warper (367) *q.v.*; puts fresh bobbins into creels, and ties yarn ends.

cleaner; cleans machines of accumulated waste, etc.; often also oils machines, or sweeps floors of rooms; sometimes specifically designated, e.g., kiosk, credit, grade, loom, roller, screw cleaner.

cleaner, box; box cleaner, washer-up (textile printing); cleans colour boxes from printing machine, by washing them with a hand brush, and assists generally in machine room.

cleaner, lace; takes stains out of finished lace, under direction of over-looker (finishing) (330), using various stain removing agents and resins.

cleaner, warp; warp picker (silk); winds warp from can beam to beams, picking off slubs, or thick places in yarn, as she does so.

cleanser, yell (dialect), *see* head cleaner.

clipper (boxery); separates seamless hose, by cutting, with hand shears, connecting the three between top of cue and top or another.

collar, asbestos; mangle machine for collaring asbestos packing; puts packing in machine and controls its running.

collar (rope and twine); line reeler, line roller, rope reeler, rope walk reeler, (i) attends to rope collaring machine; guides rope to reel and controls power-drive; (ii) (Edinburgh district) coils silver on to floor at delivery end of hatching machine.

collector; collects cops (wool yarn), cloth, waste, etc., from various machines, and takes it to hoist, warehouse, cloth locker, etc.; sometimes specifically designated, e.g., cloth collector, cop collector, waste collector, etc.

collector, box; box emptier (card room); empties carding waste from boxes or troughs, of carding machine.

cooler (fasten finishing); places angled funnels upon cooling rollers and regulates, by valves, cold air draught to rollers.

cooler, piece; passes material through a bath of cold water after dyeing, to cool it and secure uniformity in dyeing.

cop doctor; inspects cops of wet yarn as they are taken from skips or weaving shed, and, if necessary, of order, puts them in correct shape.

shearer (wool combing); takes fleeces from bales and hands to wool sorter (360) *q.v.*; *obsolescent*.

stock worker; general term for any person engaged in picking, preparing, or handling flock; includes flock picker, flock sorter, card feeder (333).

stucker; cleans stucker red, used to collect loose waste from rollers of spinning mule, with a hook or picker. *synonym*, *gryndash* man, *gryndash* minder; *gryndash* picker; operates a flywheel, which passes bleached or dyed cloth in rope form through a small tank to tone or finish surface; hand-guides, *i.e.*, folds backwards and forwards, into a wagon or stacks cloth on floor as cloth leaves tank. *fold* (finishing); *condemner* and other hosiery into slabs, etc., in preparation for tying them up.

folder (silk); folds finished cloth in pleats, alternately backwards and forwards, to facilitate work of examiner (370) *q.v.*; of plates (343).

folder-up; folds cloth, etc., into convenient size for packing; sometimes, *e.g.*, in quilt weaving, is one of a pair of workers.

folding machine minder; a folder *q.v.* who minds a folding machine; *cf.* *plaiter* (343).

follower, follower-up (rope), *rope* follower; machine boy (rope and twine), *rope* follower; stands near traveller machine where strands are twisted into rope; loosens, breaks, or otherwise polishes rope with an iron bar, as required; holds on to end of rope in ropewalk after rope has been laid and while it is being reeled and coiled; and assists rope maker (373) *q.v.* generally.

focker, *focker*; lifts wool, with a fork from skanking or sleeping vat in which it is soaked, before scouring, to remove excessive dirt.

frame changer (carpets); removes frame containing empty bobbins from sizing trough, and substitutes a frame of full bobbins for same.

gaffer, gaffer-up; follows after doffer *q.v.* has removed bobbins, and sets frame going again for spinner (365) *q.v.*

gatherer, bobbin (cotton); gathers full bobbins from spinning frames, ready to be carried or wheeled away.

gatherer, bobbin (jute); see bobbin boy (jute).

gatherer (wool), as for carrier; sometimes specifically designated, *e.g.*, bobbin gatherer, quill gatherer, spoon gatherer.

gatherer, fly; sweeps up and lays waste and fly (fine dust) in spinning room.

gatherer, rag; gathers together rags, bents, etc., from various departments of mill.

gatherer, wett; gathers baskets of empty wett bobbins from looms.

gear brusher, sizer, varnisher; local or dialect terms, see head brusher, sizer, varnisher, respectively.

giver-in, see *reacher*.

grease-in (weaving); *beans carrier*; a carrier *q.v.* who carries raw beam, when completed and ready for beam, from loom or dressing room to weaving room.

greaser; collects waste from looms, and puts it in a sack to await removal.

grease man (wool); *grease* *reacher*; superintends recovery of wool fats and oils from spent scouring liquors.

greaser; lubricator, machinery oiler, oiler and greaser, shafting tender; oils and greases shafting and mill gearing.

greaser, ring, see *lapper-on*.

greaseworks man, see *grease* man (wool).

grey room hand, grey room man; general terms for any worker, male or female, in grey room, *i.e.*, room where grey, or unbleached, cloth is received for bleaching; includes *reacher*, *taker-in*, *deliverer*, *marker*, *stamper*, *sower* (419); *cf.* *grey* man (320).

gripper, see *filler* boy (flax and hemp).

guide, cloth (textile printing); *feeder*, *feeder* (textile printing); guides cloth into various machines, either that printing machines; *cf.* *lock* tender (textile printing).

half-timer; works as *creeler* *q.v.* or in other similar light employments, for half day, and attends school rest of day.

halshar (worsted); (Yorkshire term) secures loose ends after yarn has been spun on to paper tubes, by means of halshes or loops, to prevent its unravelling.

hammerman, jute; beats pressed heads of jute, as taken from bale, with large sledge hammer, or under steam hammer.

hander (wool finishing), see *raiser*, hand.

header, hands holder, see *putter-on*.

hanger, piece (cotton dyeing); hangs goods which have been treated with mordant, *i.e.*, colour fixing agent, in room, humidity of which regulated to allow of slow oxidation of mordant.

hanger, piece (textile printing); hangs cloth in festoons over rails in lefty room for conditioning purposes.

hanger, piece (woolen dyeing); hangs piece goods, after dyeing, in open air or in stoves to dry.

hanger-on; places lead sinkers in position at intervals round bottom of fishing nets, and secures them by hammering together cloth ends.

harker (flax and hemp); opens out tangled bundles of cloth after they have been boiled, in bleaching process; lays open cloth on barrow.

hard hand (silk); general term for any worker engaged in treating silk while still hard, *i.e.*, before it is *scrimmed*.

haver, brusher, sizer, varnisher; dialect terms, see *head brusher*, *sizer*, *varnisher*, respectively.

head doffer; *doffer* major; directs and controls *doffers* *q.v.*; is often also *winder-down* *q.v.*

header, yarn header; shaker, shaker and header, yarn shaker and header; straightens out and evens hanks of yarn ready for bandler (343) *q.v.*

hanks hank on a pin or cross bar; inserts stick through loop, held in both hands, shakes and strikes hank while turning it round on pin.

head brusher; head cleaner, *gen* cleaner (dialect), (local or dialect *synonym*); comb, comb, gear head, headie, breaker; applies head to a revolving brush, to clean loose fragments of size thereof.

head cleaner; *head* cleaner (dialect); (i) see *head brusher*; (ii) cleans heads; also *comb* heads; if made of cotton, with varnish to preserve them.

head comb; comb heads with a single comb, to ensure that each thread and *eplet* is perfect.

head picker; picks or separates finished knitted head threads into single heads, and gathers ends, in preparation for bundling or packing.

head sizer, see *head* varnisher.

head varnisher; head sizer, *polisher* (local *making*); (local or dialect *synonym*); comb, comb, gear head, headie, sizer or varnisher; varnishes heads (i) with a hand brush, (ii) by applying them to a circular brush, revolving in a bath of varnish, (iii) in a machine, which carries heads on a travelling band, past brushes which are kept supplied with varnish.

headie brusher, sizer, varnisher, see *head brusher*, *sizer*, *varnisher*, respectively.

helper; assists operative in charge of any machine; sometimes cleans machine, mends broken threads, etc.; sometimes specifically designated, *e.g.*, *dryer's* helper, *twister's* helper; *cf.* *helper* (cotton weaving) (370).

hoist man, hoist tender; attends to working of hoist; is often also a *bobbin* carrier *q.v.*

in-giver, see *reacher*.

inker; paints or colours specks of cloth, or burra, not dyed to shade that as rest of cloth, using a brush and suitable coloured ink or dyes.

jacker-off (lace); takes off from bobbin, waste lengths of unused threads, and winds them on to large wooden bobbins, using a small winding machine.

jagabout (slang), see *waste* boy.

jehber; adjusts and repairs machines, under direction of *overslooker* (361-362) *q.v.*; sometimes also fixes driving bands, belts, etc.; *cf.* *card* room jehber (341), *loom* jehber, *spinning* room jehber (338); sometimes specifically designated, *e.g.*, *slasher* jehber, *ring* jehber.

jehber, dyahouse; cleans dye vats and keeps them in good condition, and does other unskilled work in dye house.

jehber lady; assists jehber *q.v.*, by holding materials, tools, etc., and by fetching and carrying.

jehbing hand (rope and twine), as for labourer.

kapok worker; general term for any operative engaged in wilking or *combing* kapok, *i.e.*, vegetable down used for filling mattresses, etc.

labourer, mill labourer; fetches and carries, and does other general unskilled work in and about factory; sometimes minds one of the simpler machines, usually under supervision of skilled worker; sometimes specifically designated according to type of factory where employed, or according to work done, *e.g.*, *flax* labourer, *rope* walk labourer, *carrier*, *carrier's* labourer, *printer's* labourer.

labourer, tape; taper's labourer, *slasher's* labourer; carries sizing materials or yarn; assists *taper* (369) *q.v.*, in running yarn through sizing machinery; sometimes operates parts of machinery, under direction of *taper*.

lapper-on (cotton doubling and thread milks); ring greaser; assists *doubler* (368) *q.v.*; pieces broken ends of yarn; starts and stops machine, and removes full bobbins from spinning frame.

laster, laster, piece.

layer, bobbin, see *creeler* (worsted spinning).

layer, drum (carpets), see *filler* (carpets).

layer-down; assists *finisher* (384) *q.v.* on starch mangle and on drying cylinder following it.

layer, basket; greases hose in Pegge type of press as distinct from hydraulic press, *cf.* *pressman* (hydraulic, basketry finishing), lays hose on boards in tray of machine and pulls down top of press.

layer-on, bobbin layer-on, see *creeler* (worsted spinning).

layer-on, ring frame; *setter-on* (ring spinning); (i) as for *creeler*; (ii) (cotton doubling) puts empty bobbins on frame, for use by *doffer* *q.v.* who removes full bobbins.

layer-on, roving; roving *layer*, roving *layer*, roving *layer*, roving *layer*, roving *layer*; (i) as for *creeler* (worsted spinning); (ii) places wool, in form of rovings, in feeding boxes of drawing machine.

layer-out, yarn; lays bundles of yarn in small stacks, ready for removal.

letterer, piece letterer, see *marker* (grey cloth).

lier, bobbin, see *creeler*.

lier, roving, see *layer-on*, roving.

lifter, cloth, as for carrier.

lifter (hair curling); fetches and carries hair; feeds and cleans cording machine, and helps *tower* (302) *q.v.* generally.

lifter (rope and twine); lifts fibre from floor on to spinning table.

ligger, bobbin; bobbin *ligger-on*, see *creeler* (worsted spinning).

ligger, roving, see *layer-on*, roving.

ligger-on, rag; a labourer who, among other duties, places rags on feed sheet of any machine for treating rags, *cf.* *rag* blender, *rag* grinder (362).

linger, see *linger* tier.

lingerer (silk), as for *linger* tier.

lingo tier, lingo burner; *finger, upright direction, the small weights (fingers) on bields or short harness used in jacquard frame, to keep them and warp threads taut, when pattern is to be introduced in cloth being woven.*

linter; feeds flax into machine by hand, where it is stepped into a soft and fluffy linter; consists machine by lever.

liquor man, liquor carrier, liquor wheeler; carries or wheels on trucks, vessels containing chemicals used in making up dyes; transfers made-up dye solutions to dyeing vats.

little tenter (ly frame); see back tenter (ly frames).

little tenter, reving frame; see back tenter, reving frame.

loader (finishing); loads trucks or baskets conveying cloth from one machine or department to another.

loom attendant; carries beams of prepared warp from warping room to looms.

looser-off; looses off cloth from drying machine; pulls out stitches which held pieces of cloth together, and folds and packs cloth.

luncheon, see greaser.

lunger (net); *lunge picker;* takes away with fingers or snips off with scissors, lamps, slubs or thickened places on yarn, and other foreign matters from nets; also unravels tangles in readiness for net examiner.

lurrier, lurryman; colour carrier; as for carrier.

machine boy (flax and hemp), (Crewkerne and Somerset terms), see flax boy.

machine boy (rope and twine); (1) see bobbin boy (rope and twine); (2) see follower (rope).

machine man, machine minder (dye house); general terms for any worker minding a dyeing machine, of whatever kind; sees that material passes steadily through dye vessels, from one roller to another; sometimes specifically designated, e.g. black dyehouse machine man, colour dye machine man, dyeing machine man; includes dye grinder (381), tank dyer (381), line dyer (381), paddler (381), dargler, fly winch minder.

machinist (rope works); assists skilled worker, e.g. line maker (378), on any rope making machine; sees that rope is colour straight, and takes operations starting and stopping levers.

maggie minder, maggie worker (damp); see dunger.

mangle bend (jute), (Dundee term); see section hand.

marker, piece marker, marker-off (grey cloth); cloth stamper, letterer, piece letterer, piece marker, stamper, tally man (yarn); *typer;* puts a distinguishing mark on cloth received for bleaching, dyeing, etc., to ensure its return to proper owner, and to facilitate calculation of workers' piece-work earnings, either in a piece goods stamping machine, or by placing cloth and a colour box between a hand-operated stamp.

marker, tape measure; mends machine through which long lengths of tape are run under inked marking cylinder engraved in inches, halves, quarters, eighths, etc.; places spool of tape in machine, starts and stops machine by engaging and disengaging pulley lever, keeps ink supply replenished, etc.

measurer, braid (finishing net); measures length of net by counting meshes, dimensions of which are known, then checking work of braidier (398) g.v.

mill braid (hair washing); fetches and carries hair for hair washer g.v. and helps him generally.

minder (house); a youth who, after gaining experience in factory, works under direction for three years in plain net department, and for two years in other departments.

mixer, clay; feeds clay mixing machine with china clay and water, and takes out paste made in this clay, for use in filling mangles; cf. backer (398).

motion minder; either feeds or takes cloth from one end of a motion belt or automatic conveyor, used for conveying cloth from one department to another; cf. motion minder (398).

nidger; pulls off ragged ends left in skeins or bunks of wool.

nipper (slang); see waste boy.

noiler (silk); see hagger, noil.

nosel (nosel) maker; oral (easel) maker; wood maker (rope and twine); makes spirals or snoods by twisting twice on bunks of noselling machine, cuts through strands separating each nosel length, and hands ends.

numberer, cloth; piece numberer; stamps or stitches reference numbers on material received from other firms for finishing, for purposes of identification.

odder, heeler's; brier's porter, odler (finishing); conveys cloth on wagons to beetling machine and assists backer (384) g.v. generally.

odler (finishing); (1) see odler, backer; (2) assists calendar man or mangle (384) g.v.

oilier, oiler and greaser, machinery oilier, see greaser; sometimes specifically designated, e.g. boom oilier, double oilier.

oilier, rag; pease oil, from a leaking can, on layers of rags during blending process, to facilitate their passage through machines.

oilier, wool; a boy who assists willer (382) g.v. by sprinkling oil over the wool from a kind of can under his instructions to prevent danger of fire from heat generated during process of willowing woolen rags.

opener, hair; breaker-up; releases metal bands which bind bales and breaks open contents, e.g. wool, silk, etc., using a pickaxe or other tool.

opener, dyed piece, as for opener, pease.

opener (felt); assists willer (384) g.v. in turning out pieces during willing operations to prevent folding and damage.

opener, piece; edger; faster, scutcher; feeds and mends scutching machine, which restores cloth, from spiral or rope form for convenience in bleaching, dyeing, or printing, to open or full-width form.

opener, sheet (wool sorting); opens sacks, or sheets, of wool.

opener, silk, as for opener, bale.

opener, white piece, as for opener, piece.

orra man; does any odd jobs in a textile factory.

oral (easel) maker, see nosel maker.

picker, cotton spool; packs spools or bobbins of yarn in cases for despatch.

picker, noil; tore son (wool), westman (wool); packs noils, i.e. short wool fibres removed in combing, in bags or bales for despatch.

picker, waste; westman (wool); collects and bags waste from various departments of mill.

picker, wool; wool collar picker, see westman, wool.

pickman (wool sorting); wool carrier; a carrier g.v. who carries bales or woolpacks, opens them, etc.

printer, engraver's (textile printing); paints copper roller with varnish to prepare it for etching.

printer, hand (copper); splits up bundles of chenille for into separate skeins for fur filler (367) g.v., taking care to keep each skein in its proper order, according to its intended use in carpet.

paste maker (dye); a labourer who mixes colours into a paste for use in dyeing.

paste maker (textile printing); see maker; makes, from grain or from mineral waste or also used as a medium for applying colour in calico printing.

paste, calico, as for paste (finishing).

paste (finishing); places end of cloth on hot plate, and applies starch paste with a brush. Lays end of another piece of cloth over pasted portion, so as to fasten them together in preparation for calendaring.

pattern (pattern cards); pattern pattern cards, which are afterwards made up into pattern books.

pattern card maker; cuts samples, and fastens them by adhesive to cards, peaker; straightens out hanks of wet yarn on spars, or beams in drying yard (beam yards, or in drying shed); shakes yarn even with a short peaking stick put through loop of hank.

pegger, bobbin; places wet bobbins on weaver's board, on which are fixed a number of pegs to be in position.

pegger, wood; pegger-on (dyeing); puts cups, after they have been skivered, on plates, in preparation for dyeing.

pestle; removes stains and faults from cloth by pestolling them over with special chemicals.

picker, bag (cotton room); carries bags or bales of cotton to mixing room in readiness for hulk breaker (362) g.v.; takes away empty bags when cotton has been emptied out for mixing.

picker, bobbin (silk spinning); as for carrier.

picker, flock; flock sorter; sorts cotton or woollen fibre or waste over gridded or perforated table in preparation for willowing; picks out therefrom dirty rags, greasy waste, bits of sticks, scraps of wood or metal, and other foreign matter.

picker, (pyrogallol) inspecter reed yarn and pick; inspects reed yarn and picks out any bad adhering notes and other impurities.

picker, lap (card room); assists combler tender (363) g.v., carries laps away from machine, and cleans off short fibres from comb.

picker, lump; see lumper (nets).

picker, oskum; untwists strands of rope, and picks out yarn therefrom.

picker, rag; sorts rags which are to be torn up for shoddy or mungo.

cf. rag picker (waste reclamation) (364).

picker, reel (silk); as for carrier.

picker, roller, see brusher, roller.

picker, silk picker (silk throwing); picks notes, lumps and foreign bodies from raw silk and takes out worst family knots in thread; sometimes specifically designated, e.g. gum silk picker, lap picker (silk).

picker, sweeping picker (cotton mixing, silk doubling); collects fallen cotton and fly, and does other odd jobs in cotton mixing or silk doubling room.

picker, tare (cotton room); packs waste cotton from mixing room in tares or bags.

picker, waste (silk); see cleaner, warp.

picker, waste; picker-up; collects waste material from various departments of factory, and puts it in bags; sometimes also does work of waste sorter g.v.

picker (wool sorting); picker scraper; picks out soundest and cleanest portions of fleeces rejected in sorting.

picker-up; see picker, waste.

picker, cloth; assists cloth carboniser (361) g.v. in attending to rats in which cloth is soaked.

piecer, flax, see striker-out.

piecer, little (cotton); mends, or pieces, yarns broken in spinning; cleans parts of spinning mule, scrapes floor, fetches water and meals, and runs creels in and out for mule spinner (365) g.v.; sometimes also acts as creeler g.v.

piecer, gum silk piecer, soft silk piecer, throwing mill piecer, throwing room piecer, throwwater's piecer; assists silk thrower (374) g.v. by joining ends of silk, broken in throwing.

piecer-out, see striker-out.

picker, bobbin, see creeler (worsted spinning).

picker (grey room); strapper; arranges fresh consignments of cloth in piles, ready for layer-out (368) g.v.

plier, reving, as for layer-on, reving, pier, yarn, see creeler (worsted spinning).

ply boy; pins together broken ends of warp in loom, till weaver is free to mend them.

- pinmer, pinmer-on** (bleaching, finishing); pins edge of cloth on to pins of a pin stretching machine, and assists stretchers (384) *q.v.* generally.
- pin boy, pin narrow boy**; carries pins or cops from twist winder (307) *q.v.* to twist store.
- pitch cutter** (wool or worsted); using shears, cuts away pitch or tarry markings from sorted fleeces, resulting from animals rubbing against fences or from identification marking of wool sorter (350).
- plait, calico**; folds calico backwards and forwards, in making a given length, for convenience in passing it through calico printing machines.
- plattar-down**; *elcher, dodger*; folds wet cloth, in rope state for bleaching, by hand into barrows, or in piles on floor; or folds cloth into tiers or *elchers*; sometimes also treats it down in tiers, etc.; cf. *plaiter-down* (343).
- plucker** (wool preparing); see *cot box mender*.
- polisher** (beak knitting); see *beak*.
- porter, beetler's**; see *odder, beetler's*.
- porter, wool**; wool store man (334-340); carries bales of wool in and about warehouse.
- posse man, see drawer, card**.
- preparer for dyeing**; feeds cloth recovered from bleaching into machine where it passes through trough of caustic solution to remove lime, keeps trough filled with solution.
- presser, oil** (sponge cloth); sponge cloth presser; operates a hand or power press which squeezes oil out of greasy waste, or out of sponge cloth, in preparation for further process of cleaning.
- presser (yarn)**; takes long length of yarn, and compresses it into a small compass in a mechanical press.
- presser's devil**; assists hot presser (384) *q.v.* by carrying cloth and hot plates to and from hot pressing machine.
- puller, mixing; puller-down** (*coffers*); pulls down mixing, i.e. stock of cotton mixed in cotton chamber in definite proportions, and sends it to opening machine, either on a lattice conveyor or through an exhaust pipe.
- puller, rag**; feeds and minds a machine which tears rags into small fragments, in readiness for manufacture into shoddy, mungo, etc.
- puller** (silk); works with bale opener *q.v.*; takes a mass of matted fibre from opened bale, slashes it on to a peg as a rail, and pulls at it to loosen its matted state, in preparation for subsequent process of degumming.
- puller, waste** (press cloth); levels-up by hand, using necessary tools, press cloth before final finishing.
- puller-down** (cotton), see *puller, mixing*.
- puller-off**; (i) pulls cloth or other goods off rollers, or takes goods off at delivery end of a machine and loads on to trucks; (ii) removes chain stitching which joins fabrics for convenience in passing through continuous running machines; (iii) (cop dyeing) pulls cops of yarn off plates after dyeing and drying, and pulls end skewers.
- puller-out** (*hovery*); under direction of pressman (384) *q.v.*, removes hovery goods from steam heated hydraulic press.
- putter-in, box**, see *filler, box* (textile printing).
- putter-in** (carpets), see *box boy* (carpets, etc.).
- putter-in, roving**, see *layer-on, roving*.
- putter-on; handler, bundle holder**; assists at spinning frames, and sometimes at preparing frames, both shorting bundle and set machine in motion, under direction of spinner (303) *q.v.*
- putter-on, hand; tape putter-on**, see *bander* (carding, etc.).
- putter-on** (textile printer's), see *changer, roller*.
- raiser, hand; hander** (wool finishing); raises nap of cloth by hand, using a teasle, i.e. prickly flowerhead of a plant resembling a thistle; generally done on short cloth lengths; for usual method, see *Moser machine* (344).
- raker-in, warp**, see *reacher*.
- reacher, reacher - in, drawer's reacher, enterer's reacher, and reacher-in, warp reacher-in; giver-in, giver, warp raker-in**; takes threads from warp, and books them singly on to book held by drawer or drawer-in (398) *q.v.* who draws them through head-eye and reed.
- reacher** (beak knitting); assists beak maker (307) *q.v.* who makes or finishes off beaks by hand, by holding end of thread or cord and passing it to head mender *q.v.* to make a knot in it.
- receiver** (grey room), see *elcher*.
- reeler, line; rope reeler, rope walk reeler**, see *coiler* (rope and twine).
- reeler, twins**; attends machine winding twine on reels; threads twine through guiding eyes to reel; stops machine when required amount reeled, or to piece broken ends; doffs reels and replaces with empty reeler-up (beads, etc.); minds a reel-up machine which feeds tape into hanks or skeins, ready for dyeing or bleaching; controls power-drive of machine, and guides and attaches tape ends to twine-on reel in frame.
- remover, waste**, see *scavenger*.
- remover, yarn**, as for carrier.
- ripper, rag; waste ripper**, see *stripper, cloth*.
- roller, piece roller** (carpets); is in charge of rolling machine, which rolls carpets into convenient lengths, and brushes them with a stiff brush as they enter rollers.
- roller, line**, see *coiler* (rope and twine).
- roller** (silk finishing); stands at back of machine and makes necessary screw adjustments to rollers to ensure that silk cloth, which may have shrunk in finishing processes, comes through of desired width.
- roller** (wedding); (i) see *sixer* (wedding manufacture); (ii) rolls finished wedding into roll and wraps it in brown paper.
- rove cart; sling** for roving carrier; see *feather, roving*.
- rove lad; a borrow boy or carrier** *q.v.* who wheels baskets containing full roving bobbins from roving to spinning frames, and returns with empty bobbins.
- rower, line; rover feeder** (*pute*), see *rower, line*.
- rower, lower-out** (tape); diamantangles and straightens lengths of tape on small hand machine in preparation for reeling and blocking it, or, more usually, after it has been bleached and dried; then also winds, by hand, on to small wooden disc and pins down end, for desmutch.
- rubber**; attends a rubbing machine, which consists of a knife blade reciprocating across travelling cloth to even up surface; guides cloth into machine, starts and stops machine by hand lever; adjusts knife blade as required.
- runner, as for carrier or wheeler**; sometimes specifically designated, e.g. *bobbin, chate, shoot* (silk twist), *skip, wool runner*.
- runner hand, sen; can trumper** (rope and twine), *silver carrier*; a carrier *q.v.* who conveys cans full of silver from carding engine to drawing frames, and empty cans to delivery end of carding engine.
- runner, skip**, see *dragger, skip*.
- runner-in** (wool weaving); *foker-off* (wool weaving); conveys woven cloth to warehouse for booking, or carries and trucks bobbins, etc., in weaving room.
- runner-up** (rope), see *fallower* (rope).
- scale band** (silk); weighs silk before and after various processes to guard against undue waste, and to ensure that silk is being made to specification.
- scavenger; waste remover; sweeps, cleaners, refuse waste, runs messages, etc.**; sometimes combines that work of little piece *q.v.* or of *traveller* *q.v.*; sometimes specifically designated, e.g. *mule scavenger*.
- scraper, picker**, see *picker* (wool sorting).
- scraper** (tape); passes tape through a scraping machine, which removes creases and straightens it before it is calendered.
- seutcher**, see *opener, piece*; cf. *scutcher* (332).
- seamar** (waste), *flag seamar*; cuts off or rips open, seams of old garments, by hand or machine.
- server** (silk); general term for unskilled assistants in spinning room, e.g. *carrier, creeler, doffer, q.v.*; cf. *server* (wool) (303).
- setter, bobbin**; (i) see *creeler* (wadding spinning); (ii) sets empty bobbins in creel of spinning or roving frame; cf. *bobbin boy* (*pute*, rope and twine).
- setter, hands; setter-on; frame starter, handle starter; sets**, on wet spinning frame, special attachment holding bobbins in readiness for wet spinners (flax or hemp) *q.v.*
- setter, tube**; spinning tube *setter*, as for *setter, bobbin*.
- setter-on** (fly frame), see *back tenter* (fly frame).
- setter-on** (ring spinning); (i) see *layer-on, ring frame*; (ii) restarts ring frame after full spools have been removed and empty spools inserted.
- setter-on, roving**, see *layer-on, roving*.
- sewer, sewer-in, sewer-down**, see *bander* (textile finishing).
- sewer, hand**, see *bander* (carding etc.).
- shafting minder**, see *grosser*.
- shaker, silk; shakas silk**, by hand, to straighten it before it goes to windows (371) *q.v.*
- shaker, shaker and header, yarn shaker and header, see header**.
- shaker attendant, dust; feeds** and attends machine which shakes dust sweepings of textile mill or shed thus separating dust and fibre, and putting them into separate bags.
- shifter, bobbin; doffer** (*pute*); removes full bobbins from roving or spinning frame, and replaces them with empties; places loose yarn ends as *temper cords* correctly, ready for starting of frames.
- shifter** (flax, hemp twine), see *doffer*.
- shifter** (hacking); assists machine hatcher (362) *q.v.* by reversing grippers or clamps which hold flax or hemp.
- shifter** (textile printing), see *changer, roller*.
- shier, skip**, see *booker, skip*.
- size maker**, see *paste maker* (textile printing).
- sizer** (silk throwing); dresser, silk dresser *q.v.*; weighs a certain length of thread of given thickness, to ascertain its weight and thickness.
- sixer** (wedding manufacture); roller (wedding); runs cotton from carding engine through rollers of another machine, which are kept supplied with gum, etc., regulates supply of size to rollers.
- skewerer, cop skewerer** (dyeing), see *filler, cop*.
- skewerer, cop** (rope and twine); *tuber*; removes empty paper tubes from metal rods (*skewers*) in creel of line spinning frame, and replaces with full tubes of yarn (*cop*).
- silver minder** (*flax* and *hemp*), see *can boy*; sometimes specifically designated, e.g. *line silver minder* (rope).
- snood maker** (rope and twine), see *snood maker*.
- soaker, bobbin; bobbins wetter**; steams or wets bobbins of wet before weaving, for conditioning purposes; places bobbins for specified time in steam chamber or sprays water on a set of bobbins with a hose.
- soaker, bucket** (*cop-out* fibre); tends an open vat containing boiling water, in which the bucket *cop-out* bobbins, to facilitate separation of fibre therefrom.

soaper, soaping machine minder, (bleaching, dyeing, printing); *grout washer*; mangle a soaping machine or mangle, in which cloth is run through a trough containing a soap solution, to remove impurities, and then either squeezed by rollers, if machine is of mangle type, or wound on to a batch or beam; guides cloth through trough and rollers; starts and stops machine, i.e. lever; sometimes makes-up soap solution; sometimes specifically designated according to form in which cloth is passed through machine, e.g. open soaper, rope soaper, soaper (cotton waste); pours soft soap dissolved in water in mixing or blending of cotton waste to soften it.

softener catcher, see *twister, jute*.
softener feeder, **softener hand**; *mangle hand (jute)* (*Dundee*); places batches into open travelling apron feeding into rollers of softening machine; regulates oil and water drip feed to complete softening process.

sorter, **bobbin** (i) separates and arranges according to size, empty bobbins collected from various machines, into baskets, etc. ready for use on their proper machines; (ii) sorts full bobbins, according to kind of material used, and fineness (counts) of yarn; (iii) *see* *creeler* (wasted spinning).
sorter, flock, see *picker, flock*.

sorter, mat; separates coir and fibre mats into lots similar as to size, quality and colour.

sorter, print; prints *sorter-out*; examines and sorts-out cloth for different processes or, after colour printing, for despatch, guided by colour, design or by merchants' marks.

sorter, spool, as for *sorter, bobbin*.

sorter (tape); *sorts tape*, after it has been folded by *lapper* (343) g.v., in readiness for boxing or burling.

sorter, tube, as for *sorter, bobbin*.

sorter, waste; examines and separates textile waste, scraps of yarn or cloth, etc., picking-out dirt, pieces of cotton from wool waste, etc.; sometimes also does work of waste *picker* g.v.

sorter, web; looks out web yarns for winders, according to their various kinds, or counts.

spooler, *twines* sorts out for twining machine, spools or bobbins from baskets containing miscellaneous bobbins returned from various machines.

splicing hand (*bossy*); draws hose over splicing cutting machine and sets in motion knives inside machine which cut away splicing threads stretching across upper half of foot; occasionally cuts away threads by hand with scissors.

spreader, yarn; straightens out banks of yarn by shaking them and pulling them over a horizontal post; places them on a rail, winding each one out; then places rails and yarn spread thereon in a stove to dry.

squeezer, squeezing machine minder (dyeing); *wrencher*; passes dyed fabrics through rollers, which squeeze out most of liquid.

stamper (felt); stamps dimensions on felt goods.

stamper (flannel mill), as for *marker (grey cloth)*.

stamper, cloth stamper (grey room), see *marker (grey cloth)*.

starter, frame; handle starter, see *rotter, handle*.

steamer (woollen and worsted), wool steamer, see *crabber*; cf. *steamer (paper)* (306).

stencil (*carpets*); (i) paints trade mark, etc., on back of carpet, with aid of stencil, brush and paint or ink; (ii) stencils name of consignee and destination on bale of carpets.

stencil (textile printing); working from patterns, cuts stencils, usually celluloid, for *aerograph* (textile) (393) g.v., using hand tools.

stitcher, *stitcher-out*, see *bander (textile finishing)*.

stocker, yarn, see *carrier, wai*.

store man, wool (Scotland), see *porter, wool*.

stover (hair), see *baker (curled hair)*.

strainer, colour strainer (textile printing); passes mixed colour through strainers to separate undissolved lumps and grit.

stripper, see piler (grey room).

striker-out (flax); *flax gatherer, piecer-out*; divides scutched flax into small lots ready for burling.

striker-up (flax); *flax handler, tippler (flax)*, arranges flax, combed by machine barker (302) g.v., in bundles of even length, either for storage or for *sprender* (363) g.v.; twists ends of flax into a knob at each end of bundle (*Dundee* distich).

stringer; (i) a *bander* (spinning) g.v. working in connection with ring spinning frames; examines and repairs by tilting or replacement, driving bands or strings connecting each spindle to driving pulleys; sometimes specifically designated according to kind of spinning frame, e.g. mule stringer, ring stringer; (ii) (*silk*) after dyeing, places silk hanks, i.e. skeins, on peg and stretcher-down, by hand, to produce tension and to add lustre.

stripper, bobbin; *yarn stripper*; removes short ends of yarn remaining on empty winding or spinning bobbin, and winds them round a large bobbin.

stripper, cloth; *rag cutter, rag ripper, waste ripper*; strips lining, buttons, etc., from old garments or other rags, and rips up seams, using knife or shears.

stripper, cop (*carpets*), as for *stripper, bobbin*.

stripper (i) empties bobbins of unused thread, which is sent for waste, after completion of pattern, or before a fresh adjustment is made, (ii) (*lace finishing*) removes lace with a small stick from dressing frame, where dressing process is complete.

stripper, tube (*carpets*); removes tin tube enclosing chenille for web finishing, after completion of woven pattern.

stripper, yarn, see *stripper, bobbin*.

swager, see *waste boy, waste girl*.

swinger, beam, as for *cleaner*.

swinger, velvet; places velvet, after it has been scoured, on to a drying machine, by means of a swinging motion.

taker-away, yarn, as for *carrier*.

taker-in, *piece taker-in*; *counterman* (wool *cardroom*), *receiver* (grey room); (i) books in cloth received for finishing; (ii) receives cloth from beam, and carries or trucks it to warehouse.

taker-off, bobbin, see *defler*.

taker-off (wool wearing), see *runner-in* (wool wearing).

tally man (yarn), see *marker* (grey cloth).

Tare man (wool), see *picker, wool*.

tarret, tarring hand; (i) tares small ropes, or rope yarns, by immersing them in solution of hot tar, which he previously prepares; (ii) tares twine, cloth, or skeels, with a hand or machine brush.

tear boy, teaser, teaser; tierer; spreads colour, with brush, over sieve, or pad, on which block printer (340) g.v. presses block; also pulls cloth along table as pattern is printed.

tenter (textile printing); (i) see *back tenter* (textile printing); (ii) see *guider, cloth* (textile printing).

tenter, top (textile printing); assists *carrier* printer (385) g.v. by guiding fabric through guides and rollers at top of main cylinder of colour printing machine.

thread coupler; assists harness builder (388) g.v. by coupling mails, metal or glass, to lingoes.

tie, *tie*, in setting-up harness for jacquard looms; by means of a wire hook, threads lingoes through mails and through comb board.

theader (*carpets*); threads ends of pile yarn from speeds through tin tubes into tufting carriage, which inserts pile yarn into body of Axminster carpet.

theader, shuttle, see *filler, shuttle*.
thrower-over (*bleachworks*); passes end of unbleached cloth through pat books, i.e. guides, and thence passes it to rollers conveying it to bleach craft.

tier, ball (twine), see *ball drawer*.
tier, band; (i) see *bander* (carding, etc.); (ii) assists *bander* (carding, etc.) g.v.; (iii) ties in knots, hands which have been passed round tin rollers of ring spinning frame.

tier, bobbin; (i) ties on bobbins yarn end round fluted bobbin, after spinning or winding, to prevent unraveling, sometimes also ties number of full bobbins in bundles, to save quantities of thread; usually done by *defler* g.v.; (ii) *creeler* (*flax*, etc., loom); a *creeler* g.v. engaged on Brussels carpet or Moquette cloth looms, is particular *poma*, i.e. ties, yarn ends from full creel bobbins to old yarn ends in looms.

tier, brush; fluffs out bundles of coco-nut fibre, for use in brush making.

tier, jute; ties up selected stricks (fibre lengths) of jute before and after burling.

tiester, see *tear boy*.

tiar-on, *weight*, see *lingo tier*.

tiar-up (*heavy finishing*); ties up bundles of hosiery with twine.

tippler (flax), see *striker-up*.

topper (heads); assists *band head knitter* (397) by making loops of cotton for top of head.

tow boy, *tow carrier*; attends at burling machines, presses down, by hand, bulky tow into boxes under machine; carries graded tow from machine room to carder (363) g.v.

trailer, see *wheler*.

trader, treader-at-craft; (i) wearing wooden clebs, treads down dampened cloth in a *rommer*, tier, or vat, in preparation for burling, first process in bleaching; (ii) treads down in a *heap*, cloth which has been scoured, cf. *runner* (380), for soaking or *cl. of runner* (380), for soaking; sometimes also does work of *plaster-down* g.v.

trolley boy, as for *wheler*.

trucker, see *wheler*.

trucker, can; carries or wheels alive cans, i.e. cylinders containing carded fibre, about card room.

tuber, *spindle tuber* (cotton), as for *crack*.

tuber (rope and twine), see *skewer*, *cop* (rope and twine).

twister, jute; *spinner catcher, softer ender*; receives oiled stricks, or portions, of jute from softening machine, cf. *softener hand*, and lays them on *herrow* or wagon to condition, at same time giving each stick a twist.

typer, see *marker* (grey cloth).

warping boy (rope and twine); assists *warper* (rope yarn) (367) g.v. in placing and removing bobbins and in removing warped yarn from warping mill.

washer, blanket (textile printing); feeds and passes a blanket washing machine which cleans printing machine blankets, and removes colour deposit from them; usually a back tenter (textile printing) g.v.

washer, box (textile printer's), see *cleaner, box*.

washer, brush (*carpet sizing*); washes, by hand, brushes used in *carpet sizing*.

washer, hair; (i) prepares solution of soap and water, and fills tanks or boilers therewith; puts handfuls of hair in tank, opens out and washes it, takes it out, and hands it to another worker to dry, (ii) places hair, usually mixture of horse hair and pig hair, in a machine, which is fitted with dewaterers and half filled with hot water; soaks out hair when cleansed, passes it through wringers, and dries it in a stove; sometimes specifically designated, e.g. *horse hair washer*.

washer, hand; washes yarn or cloth by hand, with soap solution in a bath of warm water.

washer, print, *see* soaper (bleaching, dyeing, printing).
 washer, roll; roller washer; washes copper rollers used in textile printing, either with a hand brush over a trough, or in a machine.
 wash-up (textile printing), *see* cleaner, box.
 wash-house man (silk); carries bales of silk waste to and from boiling kettles in wash house.
 waste boy; drucker (unsolen spinning), dirt boy, jacobson (darning), nipper (darning), sweeper; collects waste from various machines, sweeps it up, and puts it in bags; does other odd jobs in any department of mill.
 waste girl, or for waste boy.
 waste house hand; takes waste out of sacks and delivers it to machines for opening of fibre.
 wasteman (cotton room); divides waste from various departments of mill into kinds, e.g. cotton waste, card stripe, roving waste, hard ends, packs it into separate bags.
 wasteman (wool room); packs, mails; (ii) *see* packer; waste; (iii) (woolens making) carries rags and waste from stocks to machine.
 twister (silk); passes two silk fabrics, of similar texture, face to face between heated rollers, temperature of which he adjusts, producing a smooth surface, known as waterline, on them.
 weft boy, weft lad, weft carrier; carries cops or bobbins of weft, and does various jobs in weft warehouse.
 weft girl, or for weft boy.
 weft man; (i) *see* weft room man; (ii) as for weft boy (ii) moves boxes or skips of weft from one part of the warehouse to another.
 weft room man; weft man; is in charge of weft room, and is responsible for proper weft being given to each weaver; weighs cases of yarn from spinners (305) g.v. and keeps counts, i.e. grades of fineness, in correct places; checks delivery of goods.
 weigher, hall set (jute); weighs laps or bolls of jute, and marks weight thereon; sometimes also does work of hall set maker g.v.
 weigher, bobbin (carpet manufacturer); weighs bobbins of wound yarn to ensure that correct amount has been wound on each.
 weigher, cloth; cut weigher; piece weigher; (i) places given lengths of cloth on scales to ascertain whether it is up to specified weight, also to ascertain invisible loss, i.e. loss of material in manufacture; (ii) weighs cloth in grey room, to ascertain weights in grey state, i.e. before bleaching, dressing, finishing, etc.
 weigher, dollar; jute weigher; weighs dollars, i.e. bundles of baled jute from batcher (jute) (308) g.v., and hands required amounts to breaker feeder (303) g.v.
 weigher (flax and hemp); weighs short lengths of barked fibres and passes them to spinner (303) g.v.
 weigher, piece; *see* weigher, cloth.
 weigher, set (cotton); weighs set of finished bobbins or cops of yarn for workers engaged in winding, reeling, etc.; books weights, from which workers' wages are calculated.
 weigher, set (flax and hemp); weighs case as they are (303) g.v.; marks weight on them, and arranges them in sets ready for drawer (303) g.v.
 weigher (silk); weighs boiled silk to ascertain loss of gummy matter in discharging process, also to ascertain weight of silk before it undergoes subsequent processes.
 weigher (silk waste); weighs silk waste from drawing or from dressing frames, to ascertain loss in drawing or in dressing process.
 weigher, twist; weighs cops, bobbins, or pirns of twist (cotton warp yarn) before they are put in skips or bales.
 weigher, wool; wool weighman; wool weigher-in; wool weigher-off; wool weigher-on; wool weigher-out;

weighs wool before and after sorting, to ascertain weight of each sorted group and of collective groups.
 weigher, yarn; yarn weigher-out (for winder); weighs yarn supplied to or received from winder.
 wetter, bobbin; *see* cooler, bobbin.
 wetter (grey cloth); a plaster-down g.v. who packs cloth as received from suugging or from sewing machine in steeping cylinders, in preparation for bleaching.
 wetter-out (cap dyeing); prepares cops of yarn for dyeing by impregnating them with water; cf. wetter-out (silk) (384).
 wheel boy (rope making); (i) in old-fashioned rope walks, where strands are drawn past between a post and hub of a wheel, assists in tying up strands, and turns wheel to twist strands, under supervision of rope maker (373) g.v.; (ii) stands by traveller machine, used for forming strands and laying ropes, and assists generally in this part of rope making process, under direction of rope maker (373) g.v.
 wheeler, wheeler-out; trawler, trucker, yarn drawer; takes yarn, cloth, materials, bobbins, etc., from one machine or department to another in a truck; sometimes specifically designated according to article wheeled, e.g., beam, bobbin, cloth, cut, colour, liquor, set, wheeler (or wheeler-out).
 white room man; general term for any man employed in white room, where bleached cloth is prepared for finishing; cf. white room man (307).
 winer (wheeler), winer (winker) man (printer's dye); adjusts and repairs rollers and winches over vats, winder (yarn printing), *see* filler (carpenter).
 winds-down (reining frames); winds down bobbin-end of ring or three-fifths to allow officers to remove full bobbins or spools, and insert empty ones in their place.
 winder-on (finishing); winds a winding-on frame, which winds cloth on to beams, large bobbins with cords, fanged ends, in preparation for finishing operations; guides end of cloth over tension bars to beam, which revolves and winds cloth upon itself.
 wiper, bobbin, *see* bobbin cleaner.
 wire-down, down-tirer; fastens together tail ends of pieces of cloth with a wire rod, so that they can pass through dye bath as one piece.
 wreather, *see* squencer.
 wringman (finishing); runs cloth through a wringing machine, after wet process, to squeeze out moisture.
 yarn boy, yarn lad; carries or trucks yarn from place to place in mill or warehouse.
 yarn lad, reeling room; brings bobbins of yarn to operatives on reeling frame, and removes completed hanks.
 yarn leader (rope and twine); walks down rope walk and passes twice etc., being spun, over leaders, i.e. guides, throughout length of walk.
 yarn man; conveys baskets of yarn on bobbins to hoist, for storage or despatch.

ORDER XIII.—MAKERS OF TEXTILE GOODS AND ARTICLES OF DRESS.

401.—FOREMEN AND OVER-LOOKERS.

checker, *see* examiner.
 examiner; checker, garment inspector, pattern passer, garment viewer, inspector, looker, overlooker, overseer, passer, viewer; examines and supervises work during process and on completion; reissues defective work for correction; often books out work to operatives and does other clerical work, e.g. control of wages sheets; in some trades, may also finish garments, cf. finisher (corsets) (406), finisher (shirts) (419); sometimes done by foreman g.v.; cf. examiner (425).

foreman; looker-over (handkerchiefs), overlooker, overseer; supervises work and staff, keeps time sheets and is responsible for discipline and for quality of work turned out; passes work of machinists, finishers (419), etc., g.v. and generally overlooks workshop; in small workrooms, may also perform manual work himself; in hot trade, gives out work to out-workers and sub-contractors and is responsible for assessing prices to be paid for work.
 forewoman, foremistress, or for woman; generally in charge of women workers only.
 inspector, garment inspector, *see* examiner.
 looker, *see* examiner.
 looker-over (handkerchiefs), *see* foreman.
 overlooker, overseer; (i) *see* examiner; (ii) *see* foreman.
 passer, garment passer, *see* examiner.
 putter-through; an examiner g.v. in a clothing factory who only examines garments between different processes of manufacture and returns defective garments which do not come up to a certain standard; makes simple book record of garments passing from one operative to another (putting through).
 supervisor; visits workshops of out-workers and sub-contractors to ensure that work is finished to time, and according to requirements; cf. order clerk (392).
 viewer, garment viewer, *see* examiner.

402.—SKILLED CUTTERS (NOT GLOVES, OR BOOTS).

cutler, clothier's, *see* cutter, shear.
 cutter, hand cutter; measure cutter; measures, plans from dimensions, cuts by hand, and fits material for garments; *see* customer; often further designated by kind of work done, e.g., costume cutter, hosiery cutter, knit outfit, male cutter, tailor's cutter; cf. cutter (tailoring) (404).
 cutter, measure; (i) *see* cutter; (ii) (short making) skirt fitter; plans work for shirts, collars, etc.; cuts nine patterns in stock sizes, by use of shears for raw or special shapes, for special work, takes customers' measurements and adapts pattern, which is taken from zinc shape in brown paper.
 cutter, pattern; plans and cuts pattern in paper, by hand, from measurements taken by cutter or by fitter g.v., sometimes specifically designated, e.g., corset pattern cutter, garment pattern cutter.
 cutter, shape; *see* cutter, special.
 cutter, shear; clothier's cutter, shearmans; a cutter g.v. cutting with shears, as distinguished from a hand knife cutter (403) g.v. who cuts with a machine knife.
 cutter, special; shape cutter; a cutter or measure cutter g.v. who designs new models and cuts patterns from own measurements according to design.
 fitter (dressmaking); measures and fits customers, and cuts out materials to measurements for dresses, blouses, etc.; is in charge of women and girl workers; is often assisted by second hand (405) g.v.
 fitter, shirt, *see* cutter, measure.
 shaper; a skilled cutter g.v. who gives distinctive cut to garments by trimming fronts of coats, lapels and collars with shears before machining shearmans, *see* cutter, shear.

403.—KNIFE OR MACHINE CUTTERS (NOT GLOVES OR BOOTS).

chopper (shroud making); a hand knife cutter g.v. using a guillotine.
 cutter, cut-out; stock cutter; cuts out material to stock sizes and patterns (of paper or metal), using shears, hand (or jig) knife (power driven), press, slot knife or guillotine, and causing knife edge to travel along lines chalked on material or round

edge of metal pattern; usually cuts a number of thicknesses of material in one operation; generally specially designated, e.g., blouse cutter, cap cutter, canvas bag cutter, collar cutter, corset cutter, frock cutter, hat leather cutter, helmet cutter, hose cutter (gas handles), lingerie cutter, lining cutter, pinafore cutter, polishing cloth cutter, sack cutter, shirt cutter, smock cutter, tuck cutter, tie cutter, tip and lining cutter (hats), trimming cutter, umbrellas cutter, underclothing cutter.

cutter, cutter-out (artificial flowers), artificial flower cutter, flower cutter; artificial flower stamper, flower stamper, stamper, spread fabric under press; selects metal stamp, i.e., die, required for pattern of leaf or petal, and places it carefully on fabric under press; moves lever releasing press which cuts petal; removes pressed shape and repeats operation; cf. cutter-out (paper artificial flowers) (503).

cutter, band knife; machine cutter, machina knife cutter; *Kusfenom*; a cutter g.v. using a power-driven band or machine knife.

cutter, Pickering; cutter-out (fasten clothing); a cutter g.v. who uses a Pickering machine to cut fusian cloth to pattern.

cutter, press; a cutter g.v. who places shaped knives on a number of thicknesses of material, places them in a band or power press and so cuts out leather handbags, cardboard for cap peaks, etc., and, more rarely, cloth for various purposes.

cutter (soft toys); a band knife cutter g.v. who marks out shapes on plush, felt, cloth or other material with chalk, using cardboard patterns and cuts out shapes by machine; more rarely cuts out by hand, with knife or scissors.

knifemaker, see cutter, band knife.

stamper, artificial flower stamper, flower stamper, see cutter (artificial flowers).

404.—TAILORS; TAILORS' PRESSERS AND MACHINISTS.

alteration band; alters ready made garments by unpacking, sewing and machining where necessary; may also repair or renovate old or second-hand garments as required.

bagger, see closer (clothing).

baileter, bailester-in, bailester-under, bailester-out, bailester-on, bailester; *Kor*; press parts of garments together, by hand, with long stitches, along chalk marks made by cutter (402) g.v., to hold them in position temporarily until stitched by machinist g.v.; attaches stitching canvas to fronts of coats, to collars, shoulders, etc., with rows of stitching, the thread being sewn through the under side of cloth and not showing on face; sometimes also bailets after machining to keep in place.

breechmak maker; in highest class trade makes breeches throughout, except cutting and fitting; "making" may involve a number of processes, e.g., fitting-up, sewing all seams, seat pieces and button catch, felling leg and seat seams, straps and knee caping; all stitching is done by hand; in other branches fixes parts of breeches together, as received from cutter (402) g.v.; supervises sewing of pieces together by machinist g.v., but does not usually sew them himself; finishes and retouches breeches before they have been sewn; in small establishments may be his own cutter.

cape maker; as for coat maker.

casack maker; sews up casacks, i.e., clerical robes, by hand or machine after they have been cut out by cutter (402).

children's coat maker; a specialised worker engaged in making children's

coats; does basting, sizing, padding, lining, hand sewing and finishing, but not cutting; sewing also does machining and pressing.

charco vestment maker, clerical robe maker, as for casack maker.

closer (clothing); *Sagger*; a machinist g.v. who stitches finished linings into coats, etc.

coat and skirt maker, coat and skirt hand; (i) a worker capable of making both coats and skirts throughout (except cutting), combines duties of coat maker and skirt maker g.v.; (ii) in wholesale trade a machinist g.v. engaged in machining coats and skirts.

coat maker, coat band; jacket maker; sews together, by hand or machine, parts of coats as received from cutter (402) g.v.; attaches lining in readiness for machinist g.v.; makes pockets, etc.; sometimes makes button holes and sews on buttons, but this is usually done by button hole (419) g.v.

collar maker (tailoring); stitches collar, by hand or machine, after material has been cut by cutter (402) g.v. to fit neck of coat, and attaches to coat.

collar (clothing), see finisher.

finisher, tailor's finisher; *feller*; sews by hand, sleeve linings, vest arm holes, and lining at bottom of jacket; sews on waistband, lining and buttons of trousers; tucks up button holes, sews on tabs, etc.; sometimes specifically designated, e.g., coat finisher, mantle finisher, needle hand finisher (waterproof garments), trouser finisher.

fitter, fitter-up (fasten clothing and tailoring), prepares work for machinist g.v. by fitting and pinning together parts of garments after cutting, trimming overlapping seams and edges, and adding linings, gives dimensions to other workers, e.g., coat maker, trouser maker, skirt maker g.v. as to making up; cf. cutter (402).

fitter-up (tailoring); fits garment on customer before it is finished; marks and makes alterations necessary in bespoke tailoring trade, fitting is usually done by cutter (402) g.v.

fitter, see haister.

habit maker; a specialised worker who makes riding costume throughout, except cutting or fitting; in highest class trade, this involves a large number of operations for the coat, the skirt, and the waistcoat, e.g., sewing various body seams, putting in canvas linen and working up fronts, turning in edges, making and sewing in linings, lining seamings, skirt, making knee, pomel and seat caps, pressing, turning up, felling, lining waist, pressing off.

hunting cords maker; a breeches maker g.v. who specialises in making hunting breeches.

jacket maker, see coat maker.

kilt tailor; receives cloth, cut out by kilt cutter (402) g.v., and sews it in heavy folds or pleats to form kilt, working in accordance with waist and length measurements; sews on body lining and narrow braid round top, sometimes sews on buckles and straps for tightening purposes.

ladies' tailor; a tailor g.v. mainly engaged in making women's costumes and coats.

macblast, tailor's machinist; sews by machine (hand or power) garments put together by baileter g.v.; sometimes specifically designated, e.g., coat machinist, knicker machinist, mantle machinist, raincoat machinist, skirt machinist, trouser machinist, vest machinist.

machinist, *Sva* needle; *padding*; sews or quilts padding, prepared by fitter-up g.v., into garments, using five needle machine usually operated by power.

trouser maker, trouser; trouser hand; a machinist g.v. who specialises in sewing trousers by machine.

mantle maker; a coat maker g.v. engaged in sewing, by hand or power-driven machine, mantles or loose coats of a special pattern.

padding (clothing), see machinist, *Sva* needle.

pocket band; cuts out and stitches, by hand or sewing machine, pockets for tailor made suits and coats and makes also pockets at places marked by cutter (402) g.v.

presser, final, see presser-off.

presser, hand; finishes out and sets under pressure of hot iron (tailor's goods), seams of garments during pressing, and of whole garment after completion (see presser-off).

presser, machine; places garment in position on table of steam-heated or gas-heated press, which varies in make according to class of garment to be pressed; operates press by means of levers; regulates temperature by adjusting valves.

presser, mantle; a band presser or machine presser g.v. who presses ladies' mantles, etc., during process of making and after completion, usually done by machinist g.v.

presser, seam; a band presser or machine presser g.v. who presses seams on front side of garment; usually done under pressing" g.v. also, see presser, under.

presser, special; a band presser g.v. who presses specially delicate and complicated clothing, requiring great care in the shape of ironing, colour fading, or alteration in shape.

presser, stock; a machine presser g.v. who is engaged in pressing garments made in wholesale factory for stock.

presser, trouser; shrinks trousers; presses them with hot iron, by hand or by ironing and pressing machine, and creases them down front.

presser, under; does under pressing, i.e., pressing seams open on wrong side of garment by hand, with a hot iron, sometimes does other preliminary pressing also, after such machining operation, and prior to final pressing.

presser-off; *final* presser; a hand presser g.v. who irons completed garments to give them finished appearance, generally using a gas-heated or electrically-heated iron; interposes damp cloth between iron and cloth and sets or shapes collar, sleeve etc., by shrinking.

refinisher, renovator; tailor's translator; alters and repairs garments, by unpacking, sewing, and machining as required; cleans, fits and presses garments.

robe maker, law robe maker; makes throughout robes worn by judges, barristers, university professors and students, etc., from parts cut by cutter; sews up seams, etc., by hand or with sewing machine.

skirt maker, skirt hand; if employed in a factory, may be assisted by machinist g.v.

skirt maker, skirt band; (i) in retail trade, makes skirt throughout, except cutting and fitting, does basting and finishing; may also do trimming, if required; machining and pressing may be done by other workers; (ii) in wholesale trade, a machinist g.v. who specialises in machining skirts.

slave maker; makes sleeves by sewing up parts on sewing machine; sews up linings and sews to sleeve at wrist; turns in at wrist and presses; inserts sleeve into garment and stitches and fells down seam.

slip-on maker; cuts out lining of silk, etc., and sews it together by hand or machine, as a preliminary to first fitting; sometimes slip-on is cut by second hand cutter; sews by hand; tailor, tailoress; general terms for any man, woman, or girl, employed in making tailor-made suits, overcoats, costumes, etc.; more specifically in retail bespoke tailoring a worker who receives cuttings sent by customer from cutter (402) g.v. and makes-up garment usually throughout, i.e. fits and

tacks parts together ready for try-on, bustles, in stiffings (see *bustier*), machines seams of cloth and linings (see *machinist*), presses seams (see *under presser*), sometimes folds in linings, sews buttonholes and sews on buttons (see *finisher*), presses off or smooths, sets and shapes garment by final pressing (see *presser*), etc., in wholesale drapery tailoring usually only does fitting up, basting in and pressing off, machining and finishing being done by machinist and finisher respectively; in ready made tailoring, where work is greatly subdivided, only does fitting up, and basting in of collar, sometimes specifically designated according to material, e.g. cotton tailors, cotton finisher tailors, leather tailor.

tailor's translator, see *repairer*.

trimmer, tailor's trimmer; (1) a worker in cutting room, who takes work from cutter (402) g.v. and cuts out lining and assembles trimmings, etc., ready for making-up department; sometimes keeps a stock of trimmings; cf. *trimmer* (340); (2) sews bands on military or other uniforms, by hand or machine; sometimes specifically designated, e.g., mantle trimmer.

trouser hand; (1) *see* trouser maker; (2) *see* machinist, trouser.

trouser maker; trouser hand; a worker capable of making trousers throughout, except cutting; finishes and presses trousers; in bespoke trade, sometimes sews up seams by hand.

vest hand, vest maker, *see* waistcoat hand.

waistcoat hand, waistcoat maker; vest hand, vest maker; a specialised worker (often an outworker) who makes waistcoats, by hand or machine, throughout, except for cutting and fitting; making includes a number of processes, e.g., sewing in canyas and facing edges, round sewing, felling, buttonholing and sewing on buttons, making back and sewing on.

406.—DRESS AND BLOUSE MAKERS.

alteration hand; alters and sometimes remakes, ready-made dresses, blouses and other light clothing, by unskilled, sewing and machining, where necessary, to suit customer's requirements; may also repair and renovate.

blouse hand; general term for any woman or girl engaged in any process in blouse making; sometimes refers specially to worker who makes blouse throughout.

blouse maker; sews together, by hand or machine, material cut out by blouse cutter (403) g.v. finishing and pressing according to design; in workshops where the work is subdivided, hemstitching, buttoning, buttonholing and trimming is done by other workers.

bodice maker; makes throughout, top parts of dresses or frocks, by hand and machine sewing, of material prepared by cutter or fitter g.v.

costume hand, *see* for general hand.

costume maker, *see* for dressmaker; costumes also largely made by tailresses (404) g.v.

costume maker, theatrical; theatrical costumier; a dressmaker g.v. who alters and repairs fancy costumes and theatrical dresses.

costumier, costumiers; modiste; makes, sells or deals in costumes; usually applied to a working proprietor of a small dressmaking and costume establishment, run on French lines, or dealing in French models.

costumier, theatrical, *see* costume maker, theatrical.

couturière; a dressmaker g.v. making dresses, etc., on French models.

dressmaker; frockmaker; makes dresses, frocks, etc., throughout after material is cut to measure by cutter (402) g.v.; takes or pins up on model, sews by hand and machine, finishes, trims and presses; sometimes also fits customers.

dressmaker, stage, *see* sewing woman.

dress renovator; a dressmaker g.v. who specialises in making necessary alterations and repairs to garments received for renovation; sews in new linings, etc.; usually done by alteration hand g.v.

finisher, costume; affixes buttons, hooks and eyes to costume and sews, by hand or machine, parts of costume requiring finishing off; tells seam edges.

first hand (retail dressmaking); fitter, dressmaker; fitter; in charge of workrooms in large establishment, supervising work of second hands g.v.; fits garments requiring alterations and takes customers measurements for length of skirt, etc.

fitter, dressmaker's fitter, *see* first hand; cf. fitter (dressmaking) (402).

frockmaker, *see* dressmaker.

general hand (dressmaking); a sewer or machinist (410) g.v. capable of making all or part of any dress, blouse, etc.

jumper maker (not knitted), *see* for blouse maker.

mantle maker (not tailored); makes loose coats, by hand or machine, after material is cut by cutter (402) g.v.; does all work from taking to pressing finished mantle.

modiste, *see* costumier; cf. modiste (428).

pin hand; an apprentice or learner who receives instruction from dressmaker's fitter and assists her generally.

robe maker, robe hand; makes throughout, by hand or machine, dress, *see* robe, i.e., one-piece garment as distinct from blouse and skirt.

second hand; assists fitter or first hand g.v. generally; cuts out linings and supervises women and girl workers in her room; in absence of fitter or first hand, may fit customers for alterations, etc.

sewing woman (theatre); stage dressmaker; wardrobe woman; repairs dresses and costumes used by a theatrical company; sometimes makes simpler articles herself.

skirt maker, skirt hand; makes up dress skirts throughout, by hand or machine, from parts cut by cutter, may employ either tailoring or dressmaking methods.

sleeve maker, sleeve hand; makes sleeves for dresses, robes, blouses, etc., by hand or machine, from material cut by cutter (403) g.v., but does not insert them into garments; cf. sleeve maker (403).

tacker and turner (skirts); is indispensable factory, takes and turns up hems of skirts according to measurements given by forewoman (401) g.v.

tea gown hand, *see* for general hand.

wardrobe assistant; assists wardrobe mistress (397) g.v. in folding and packing of dresses and costumes in a theatre, etc.; cleans garments of grease paint; usually a sewing woman g.v.

wardrobe woman, *see* sewing woman.

408.—CORSET MAKERS AND MACHINISTS.

assembler, *see* corset machinist.

baluster, baster; tucker; tucks, by hand or machine, tape for waistband inside skirt; usually done by corset machinist g.v.

binder; binds shaped top and bottom edges of corsets with a strip of folded material, by hand or by machine; in *zème* districts, also inserts draw-ribbon in upper edge and hose suspenders on lower edge.

boner; inserts whale bones, or strips of flexible steel under casing of corset, by hand, using a small tool to open ends, cf. *boner*.

buster, *see* steel stitcher.

casier, bone casier; sews steel or whale-bone into cases of material (cottons, and linen) by machine, for use in manufacture of stays and corsets.

closer, *see* corset machinist.

corset, machinist, corset maker; corseter, corset maker; sews together, by hand, treadle or power-driven machine (single needle or multiple needle), pieces of material which form corset.

corset sewer; hand sewer; sews on bows, and trimming, and does plain sewing generally, by hand.

corset stitcher, corset stitcher; strapper, stripper; sews, by machine, strips or findings of material to under side of corset, ready for insertion of flexible steel; stitches an extra piece of material inside strap to prevent seams working through turns raw edge of corset under strip at back and front; in big factories, where work is sub-divided, workers are sometimes specifically designated, e.g., front stitcher, back stitcher.

coverer; covers corset steel with paper, and caps ends with brass in press or by dipping them in celluloid solution.

edger, *see* trimmer.

fanner; in *Leicester*, *see* gorer; cf. *faner* (307).

finisher; sews raw edges of binding of corset, by hand or by machine, and cuts off loose ends of thread left by corset stitcher g.v.

fitter, *see* shaper.

folder, folding machinist; turns down fold of required size at each end of material and passes piece of material into a machine, which presses it into a firm drap, thus preparing seams for corset machinist g.v.

gorer; *faner* (*Leicester*); cuts out material to shape according to given measurements; cuts opening in corset and stitches in shaped gussets, by hand or by machine, after seams of corset have been closed.

hand sewer, *see* corset sewer.

ironer, corset ironer, *see* presser.

lacer (*Paris*), *see* trimmer; cf. *lacer* (328).

looper; attaches metal parts of suspenders to webbing or cloth part of corset, by hand sewing; may bind corset under riveting machine which attaches automatic fasteners.

mender; examines corsets before they are bound, and repairs any defects in stitching; also repairs worn corsets; in small workshops, is usually done by corset machinist g.v.

puller; fastens two parts of finished corset together by hooks on fronts, and pulls them ready for boxing.

presser; corset ironer, *ironer*; presses completed corset with gas or electrically or hand-iron, or with automatic iron, heated and propelled by electricity, or with rotary pressing machines heated by gas.

seamer, *see* corset machinist.

shaper; fitter; shapes top and bottom edges of corset into a smooth curve, by use of shears or knife; passes corset through power-driven shaping machine which automatically binds and machines the edge with a narrow binding issuing from the machine.

steel setter; cuts ribs, with scissors, in a fold of cloth and places front stays or clasps of corset, with clasps projecting through slits ready for stitching.

steel stitcher; buster; sews front and side steels of corsets in position, by hand or by treadle or power machine.

stripper, stripper, *see* corset stitcher.

tacker, *see* baluster.

trimmer; edger, *lacer* (*Paris*); ornaments top of corset with lace, embroidery, etc., by hand sewing or by machine.

407.—EMBROIDERERS AND EMBROIDERY MACHINISTS.

beader, bead trimmer, bead worker, fancy bead worker; sews beads, by hand, upon a fabric foundation in accordance with a set design to make bead trimming, or upon articles of dress, shoes, lace, etc., for decorative effect.
buddar (correct); *oboliste*; *see flowerist*.

chavarrat; an embroiderer *q.v.* engaged in embroidering patterns on hose and half hose, usually by embroidery machine.

clocker; embroiders clocks on hose and half hose, by hand or pantograph machine, sometimes further designated according to thread used, *e.g.*, silk clocker.

cornally hand; *see machinist, cornely*.
crawal worker; an embroiderer *q.v.* who ornaments in cross-stitch, by hand, tapestry hangings, chair covers, screens, etc., using crewel thread, a fine worsted yarn.

crochet worker; an embroiderer who designs on cloth or garments, using a crochet hook, instead of a needle; *cf.* *crochet worker* (375).

emblem maker, emblem worker; an embroiderer *q.v.* who makes or works emblems, pictorial banners, symbols, etc., by sewing bottle threads or wire on to cloth foundation, to form a design; sometimes further designated according to kind of work done, *e.g.*, *maisonic emblem maker, temperance emblem maker*.

embroiderer, embroideres; sewer; sews over a stamped pattern or otherwise ornaments, by hand, sewing with needle and silk, wool or other kind of thread, usually of various colours, articles of dress, *e.g.*, *blouses, underclothing, hosiery, and textile fabrics of all kinds, ladies' hand bags, etc.*; *cf.* *machine embroiderer*; sometimes specifically designated, *e.g.*, *maisonic embroiderer, military embroiderer*.

embroiderer, appliqué; an embroiderer *q.v.* who makes appliqué work (embroidered designs to be sewn on to dresses, etc.), either by hand or by cornely appliqué machine, on a net, gauze or cloth base, the superfluous edges of which are afterwards cut away.

embroiderer, gold; embroiders with fine gold wire threaded through an ordinary sewing needle, by hand or cornely machine, on to cloth or other groundwork, according to patterns; *cf.* *machine embroiderer*.

embroiderer, machine; embroidery machinist; an embroiderer *q.v.* who embroiders articles of dress, etc., by cornely, singular or other machine, following outline of transfer placed on material; threads required coloured silks, etc., through needle, control movements of needle by means of lever, or manipulates article to be embroidered under needle according to type of machine.

embroiderer, silver; *see for* *embroiderer, gold*.

embroiderer, Swiss; see *pantographer*.
embroidery maker; general term for embroidery workers, but more usually denotes an appliqué embroiderer *q.v.*
epaulette maker; covers a metal shape with gold lace and braid; attaches badge, embroidered by embroiderer *q.v.*, and fringe and finishes off.

fanner; see *flowerist*.

fine art needlework hand; an embroiderer *q.v.* engaged on elaborate and highly skilled embroidery (fashions) (embroidery); finishes or trims embroidery, by cutting off or sewing in loose ends of silk or thread.

flosser (correct); *janney*; closes by hand or by hand or power-driven flossing machine, the open ends of cases of knitted or steel corded with bar or fan of silk stitching in a special embroidering stitch similar to overweaving; sometimes uses machine to do additional flossing embroidery or satin stitching.

flowerist; an embroiderer *q.v.* engaged in working floral patterns.
flowerist (correct); budder; finishes off ends of gowns with flowering, or other similar pattern by hand or machine.
machinist, bonnar, as for *machinist, cornely*.

machinist, cornely or cornally; cornelling machinist; *correctly* hand; operates cornely machine by which various types of embroidery, *e.g.*, chain stitch, moss stitch, cording, braiding, are worked; guides machine over transfer by means of handle under base of machine.
machinist, hair cording; pin cording machinist; a cornely machinist *q.v.* who uses a very fine thread for cording.
machinist, tambour; tambourer, tambourer, tambour worker; operates cornely, bonnar or other tambouring machine to sew an embroidery pattern; *cf.* *cornely machinist*.

metallic fringe maker; spine metal round a fabric foundation on spinning machine; weaves thread thus produced, according to pattern, in a hand loom or weaving machine and twists or plaits wire threads, by hand or machine, to form fringe.
needleworker, art; an embroiderer *q.v.* or *sewer* *q.v.*

needleworker, fancy needleworker; general terms for sewer who decorates textile fabrics, including leader, cereal worker, embroiderer, etc. *q.v.*
pantographer; Swiss embroiderer; embroiders pattern on fabric, using a Swiss or pantograph machine; with point on metal arm, follows point by point enlarged design, sketches correct working of machine as it reproduces design; supervises shuttle girl (429) *q.v.*

scallop; an embroiderer *q.v.* who specialises in embroidering scalloped designs, by hand; uses any suitable material at edge; *cf.* *scallopier* (419).
sewer, see *embroiderer; cf.* *sewer* (419).

sewer, bead and spangle; spangle sewer, as for *beader*.

silk worker on post cards; an embroiderer *q.v.* who works designs in silk thread on post cards by hand or by use of pantograph machine; *cf.* *pantographer*.

springer; an embroiderer *q.v.* who specialises in working designs of spring, usually in form of flowers and leaves.

stripping hand (hoiery); operates a power-driven embroidery machine, guiding hose, or other stockinette garment, under needle of machine in such a way that an even stripe is embroidered upon garment in self or contrasted coloured silk thread.

Swiss embroidery mender; mends any defects in Swiss embroidery, by treadle sewing machine; after material has been embroidered by pantographer *q.v.*, first fixing material in a tambour frame; sometimes also repairs by hand, slipping-in parts of patterns.

tambourer, tambourist, tambour worker; (i) does "tambour" work by hand, *i.e.*, fine floral design formed by loose chain stitch (produced by singular to Limerick lace); in *Louvainville* trades, embroiders plain fabrics with designs in silks, tinsels, etc.; (ii) *see machinist, tambour*.

408.—MILLINERS.

bonnet blocker; shapes bonnet crowns by placing damped squares of buckram net or elastic on wooden block, and pressing heated and shaped aluminium pan over the material, in small workrooms, shapes crown with a hot iron.

bonnet front maker; a milliner *q.v.* who makes up, by hand sewing, trimmings, rosettes, bows of ribbon, etc., for bonnets.

bonnet maker; a milliner *q.v.* who makes and trims bonnets for women and children.

bonnet shape maker, as for *hat shape maker*.

cap maker, ladies'; widow's cap maker, as for *milliner*.

copyist, milliner's copyist; a milliner *q.v.* who copies model hats and new styles.

hat shape maker; wire shape maker; makes hat or bonnet shapes, of wire (and buckram, when necessary), using wire pliers.

hood maker; makes hoods or hats of soft cloth or material, by hand or machine.

milliner; makes and trims hats for women and children; sews together different materials, *e.g.*, silk, velvet; makes bows and other fancy trimmings; attaches trimmings, *e.g.*, artificial flowers, bows, feathers, to hat according to style or fashion; work usually all done by hand; often specifically designated by kind of work done, *e.g.*, *cap milliner, straw milliner, widow's milliner; cf.* *milliner* (770).

milliner's assistant; assisté milliner *q.v.*, doing the less skilled sewing and directing work.
modiste; a milliner *q.v.* dealing in exclusive models, which are made from original designs or copied from Paris models; *cf.* *modiste* (405).

sample hand; a milliner *q.v.* who makes sample hats, *see* *hat shape maker*.

wiring hand; a worker who sews, either by hand or machine, wire to blocks or other shapes to make and keep them firm.

409.—HAT-FORMERS, PLANKERS, STIFFENERS.

blocker, covered; places velvet, silk, satin, etc. on damped foundation of buckram, etc. and lays both on shape block; presses gas heated aluminium pan over material so that buckram takes required shape and outside covering of velvet etc. adheres to foundation by reason of heating in buckram; sometimes specifically designated, *e.g.*, *velvet blocker*.

blocker, band (cloth hat); presser, slogger; (i) shapes hat or cap by drawing it over a wooden block; monies and presses it with a wet pad and hot iron, by hand, and puts it in steam hot or over a hot shape; sometimes steams hat in oven before pressing; (ii) inserts finished hat in block, and presses brim with iron.

blocker, band (straw hats); band ironer (straw hats); covers straw hat with piece of damp cloth and places it inside block; presses and shapes hat with a shell iron, *i.e.*, wedge-shaped shell of metal, into which is fitted a hot iron block to give required heat.

blocker, hat; general term covering various classes of workers engaged in blocking or shaping hats, including hand blocker, machine blocker, hydraulic blocker *q.v.*

blocker, hydraulic; hydraulic hat blocker; a machine blocker *q.v.* who attends to hydraulic blocking new cloth, in which hats, placed on moulds or dishes, are subjected to great pressure.

blocker (joh dyeing, etc.); a hand blocker *q.v.* who re-blocks or re-shapes hats, after they have been cleaned or dyed, using a wooden mould.

blocker, laghorn; a machine blocker (straw hats) *q.v.* who blocks into shape "leghorns," *i.e.*, imported plaited bows.

blocker, machine; blocking machinist; (i) (felt hats) pulls felt hood by hand on to block, places heated iron over hood and sets in position in press, usually hydraulic; controls press by means of levers; (ii) (straw hats) presses hat, after it has been stiffened, in a gas-heated machine consisting of a spelter block upon which hat is placed and then raised

by foot treadle to fit into second splinter block, pressure being applied by a hand manipulated dyehoe.

bolster, see body maker (silk hats).

bodymaker (felt hats); makes bodies of stiff uniform caps, of gossamer, by shaping them by hand, on a block.

bodymaker (felt hats); general term for various classes of workers engaged in making bodies of felt hats, including fur formers, wool formers, hardener, plucker, stumper, etc.

bodymaker (silk hats); bodier, calico former, crown maker; makes foundation of hat by joining edges of three or four ply pieces of gossamer (calico dipped in shellac and ammonia) with a narrow strip of the same material, ironed down on to the block or shape; may also do dipping, see dipper.

brim rounder, **brim cutter**; **brim presser**, **cutter**, **felt hat cutter**, **hood cutter**, **fur cutter**, **velour cutter** (silk hats), **roller**; (i) takes hood of felt or other hat, etc., after it has been blocked, sets width of brim on a hand gauge, fits a hand block into crown, and runs gauge and knife round brim, by hand, to reduce it to required width; (ii) brim rounding machinist; iron board with a small rounding machine, the knife of which is set according to size required; hat is placed to come into contact with revolving knife.

brim rounding machinist, see brim rounder.

bumper; a plucker, q.v., who operates a bumping machine; places felt forms in a sort of trough, sets machine in motion, so that forms are bumped about against arms of machine, and removes forms when operation of felting is completed.

calico cutter; **crown cutter**; cuts calico by hand, with shears, for body, crown, and brim of silk hats.

calico former, see bodymaker (silk hats).

crown cutter, see calico cutter.

crown maker, see bodymaker (silk hats).

cutter; puts curl on brim of felt hat by moulding in hydraulic press after steaming, or by using steam and curling hand iron.

cutter, **felt hat cutter**, **hood cutter**, see brim rounder.

cutter, **fur cutter**, **velour cutter** (silk hats); cuts nap of fur used for fur hats, evenly, by power-driven machine; sets hats on block in machine and adjusts knives; may cut nap by hand with specially shaped shaving knives.

dipper (felt hats); dips fur hats into water, by hand, after forming.

dipper (silk hats), **calico dipper**, **calico frame dipper**; **proofer**, **proofing roller**; dips, by hand, pieces of calico into solution of shellac and ammonia (put), stretches on an iron frame; stretches three or four layers in this way on top of one another to form gossamer, from which body is cut; presses layers together by smoothing with the hand.

duster, see veneerer.

former, **fur**; feeds and attends machine which has fur to single perforated revolving copper cone, to which it adheres by motion, to make "form" of felt hats; places weighed quantity of fur on feed frame and/or carefully removes formed fur from cone.

former, **wool**; winds carded wool, by machine, on double revolving cone, to make "form" of wool hats; guides wool on to cone, ensures that wool is wound evenly and removes from cone when formed.

hardener, **forming hardener**; a plucker (hand or machine) q.v. engaged in first process of hardening or felting wooden form as removed from cone, may harden by hand (see hand plucker) or to "pinner" or bumping machine (see machine plucker), sometimes specifically designated, e.g. pinner hardener, wool hardener.

hatter, **journeyman hatter**; general term for any skilled worker engaged in making hats, including blocker, plucker, etc. q.v.

ironer (felt hats); ironer hat brim, by hand, using various sorts of iron, to set shape after curling; cf. **curler**.

ironer, **hand** (straw hats), see blocker, hand (straw hats).

machine hand, **Belgian**, see twister.

millier (felt hats); (i) see plucker (hand); (ii) see plucker (machine).

millier (straw hats); softens hard plait, e.g., palm, cane, split, by passing plait of straw between rollers of wooden or iron mill, generally operating on a hand.

opera hat maker; sews together, in silk or merino, parts of opera hat and attaches to metal frame, by hand.

parer, **brim parer**, see brim rounder.

pastor; fixes hat in position and dips, usually by hand, edges only of hat brim into proofing solution to strengthen it.

plucker, **hand plucker**; **millier**; wraps in linen cloth and dips form of wool or fur into weak acid solution, rolls, rubs, and manipulates, by hand, reducing size and thickening material into a homogeneous cone of felt.

plucker (machine); **millier**; general term for workers who feed and operate, by means of a lever, any one of a series of plucking machines, which, in sequence, gradually shrink and consolidate hat "form" to "body" or hood; includes bumper, hardener, settler, stumper, twister, etc.

presser, **brim**; presses brims of straw hats between two heated blocks of press and operates machine with foot treadle.

presser (cloth hats), see blocker, hand (cloth hats).

presser (felt hats); places hat on block and places mould over hat; operates hydraulic press, by means of lever, to produce finer shaping.

proof (felt hats); proofs hat, by hand or machine, by coating it with an alcoholic solution of shellac or similar substance.

proofer, **proofing machine** (silk hats), see dipper (silk hats).

setter (felt hats), see shaper (felt hats).

settler; a plucker (machine) q.v. who passes several forms, wrapped in cloth, through rollers of machine to fix or consolidate felted condition of wool.

shaper, **brim** (cloth hats); puts damped cloth hat on brim-shaped block and irons it by hand.

shaper (cloth hats), see blocker, hand (cloth hats).

shaper (felt hats); **setter**; places felt hat on brim shape and arches brim by steaming and holding in position until it sets, cf. shaper (other hats) (410).

steamer (felt hats); places hat in steam chest, which fixes the proof, and removes when process is completed.

steamer (straw hats); steams straw hats over copper pans with perforated bottoms, and removes hats when they are pliable.

stiffener, **fur** (hats); dips hats into a special stiffening solution and sets on rack to dry.

stiffener (straw hats); stiffens hat with solution of gum, by hand with a sponge, and dries on a rack, in preparation for shaping.

stretching, **tip stretching**; a hand blocker q.v. who carefully stretches tip (point of felt cone) of body or hood of felt hat in first stage of blocking; obsolete.

stumper; a plucker (machine) q.v. engaged in a steaming machine, which gently bumps and batters forms in trough of steam-driven machine, to assist in felting process.

swater (straw hats); (i) softens hat to make it pliable, by holding it over steam, or receives hat from steamer q.v. and shapes form, by hand, to specified head size, ready for hat blocker q.v.; (ii) restores shape of hats, bent during steaming, by placing on an ordinary blocking machine and steaming.

turner-up, **machine turner-up**; turns up edge of brim of felt hat in a power press, operated by means of a lever, preparatory to curling.

twister, **machine twister**; **Belgian machine hat**; a plucker (machine) q.v. engaged on a twister, e.g., a steam-driven machine, operated by a lever, having special attachments which come into contact with forms and twist them to help with the felting process.

veneerer (hats), **duster**; puts layer of fur dust on to a wool body, by machine; places body on block in position in machine and controls motion by means of levers.

410.—HAT SEWERS, FINISHERS, TRIMMERS.

bolster; turns in and tacks, i.e., sews by hand with long stitches, bottom part of cloth hat or cap after it has been stitched by machinet q.v., to keep it in position before the lining is inserted.

bodier; a trimmer q.v. who sews bands and sews to hats, by hand or machine.

binder; binds brim of hat with galloon, etc., by hand or by machine stitching.

bladder maker; stitches together and tapes four shaped pieces of cardboard; covers and lines, by hand, with material cut out by cutter (403) q.v., finally sewing all together and attaching a tassel.

brusher (felt hats); brushes and polishes nap on hat crown, usually on a lathe, to the buffers of which brushes are fixed, after pressing; sets machine in motion and holds hat against buffer.

brusher (velour hats); **velour finisher**; or for brusher (felt hats).

buttoner (cap); **needle hand**; covers button mould with material and clips it to inside of cap, by hand or by button machine.

cap maker; general term for any worker engaged in any process of cap making, including bodymaker, cap finisher, cap machinet, cap presser, etc.; sometimes specifically designated, e.g. Army and Navy cap maker, military cap maker.

carder, **velour carder**; raises nap of velour hat with wire brush, moved by hand or by power-driven machine.

clipper (velour hats); cuts, by hand, nap, by hand, on velour hats to make surface even.

coverer, **helmet**; **cap** hat coverer; covers body of helmet with cloth (made up from pieces by sewer) cementing it with shellac and methylated spirit or other dope.

finisher, **bright**; a felt hat polisher q.v. who polishes plain felt hats by hand, or by machine, e.g., places hat on revolving block of hydraulic machine, bringing it into contact with wheels on which glass, emery paper, or brushes may be fixed; brushes by machine (see brusher (felt hats)) and removes hat when gloss on felt is satisfactory.

finisher (cloth hats and caps), **cap finisher**; **hand sewer** (cloth hats), **trimmer** (cloth hats); sews, by hand, bands, peaks, or buttons of caps and inserts linings; finishes off cloth hats by hand generally, and stitches in labels by hand.

finisher (felt hats); **scruffer**; removes roughness on felt hat by holding against revolving glass paper covered buffer on lathe, thus giving hat a dull finish; sometimes specifically designated according to whether working upon hard or soft hats, e.g. hard finisher, soft finisher.

finisher, **felt velour**; **velourer** (felt hats); operates a machine, the metal teeth of which scratch up wool out of soft felt body, so making a "nap" in imitation of fur (real velour).

finisher, **helmet**; inserts eyelets, by hand, trims leather binding on edge of helmet, attaches ventilator, cleans helmet and attaches labels.

finisher (silk hats); places silk or plush cover on body of hat; blocks hat and applies bands from to bring out gloss in the covering material.
finisher (straw hats); attaches brim to crown of hat, by hand, and inserts lining by hand or machine.
finisher, velour, or brusher (velour hats).

finger (felt hats); presses brim of soft hat into shape with hot irons.
gagger; sews together by hand, ready for machinist g.v., parts of cloth hats or caps in special work requiring careful machining.

half blocker, see presser, cap.
hat carder, see ruffer; also carder.
helmet underder; fixes green merino, thin leather or other material under brim of helmet, by means of rubber cushion.

lining fitter-in; stitches hat linings in felt hats, by hand.

lurer, lurer-off; velourer (silk hats); gives final polish to hat, by means of heated velvet, fustian or mokinex put held against the hat revolving on a block or wheel operated by treadle. In readiness for pecking; frequently does work of tipper-off and capper (329) g.v.

machinist, sewing machinist; machine sewer; sews together, by power-driven or treadle machine, parts of material to make hats or caps; may test shape during machining by placing over wooden block; may quilt material of cloth hats; may also sew in linings, etc.; sometimes specifically designated, e.g., box machinist, cap machinist, cloth hat machinist, convolved stitch machinist, lining machinist, outside stitch machinist.

napper, see ruffer.

needle hand, see buttoner.

plush cutter; cuts out silk plush crown, sides and brims for silk hats from stock patterns, with shears, by hand; sometimes also sews hats; cf. crown sewer.

polisher, felt hat; (i) polishes plain felt hats (not veloured or beaver), generally by bright finishing process (see bright finisher), but sometimes, e.g., for men's soft felt hats, by dull finishing, see finisher (felt hats); (ii) hood polisher; takes hood (felt velour or veloured felt) after it has been steamed, but before it has been blocked, and fixes it over a bar which draws hood up and down so that its surface comes into contact with revolving wheels of polishing machine, one of which is covered with sandpaper, and one with felt.
polisher, straw hat; (i) see polisher, felt hat; (ii) see shaver.

polisher, straw hat; varnishes straw with gum and shellac, by hand, using brush, to give it a glossy appearance.

pointer (felt hats); > finisher (felt hats) g.v. who grinds surface of felt hats to get proper shape and curl; (pounce or pamon also used).

presser, cap; seam presser; Half Blocker; presses open with a hot iron, by hand or machine, seams of cap crowns, after they have been sewn by machinist g.v.

ruffer; hat carder, napper; (i) (veloured hats) a felt velour finisher g.v. who ruffs up wool, of wool felt hood, to create a nap, by bringing hood into contact with rotating machine, and finishes off in imitation of real velour, by clipping with shears and polishing with glass paper, cf. felt hat polisher; (ii) (beaver hats) takes strip of imitation beaver, lays it round hood of plain wool felt, beats and smooths it into substance of felt by repeated blows, by hand, with bristles of scrubbing brush, which is dipped repeatedly in boiling water.

Scotch bonnet maker; stitches together material for Glengarry or Balmoral bonnet, by machine; also lines bonnet and adds ribbons where necessary.
scrutcher, see finisher (felt hats).

setter, see shaper.

sewer, crown; plush crown sewer or stitcher; silk stitcher; sews together, by hand, silk or plush cover for silk hats in preparation for binder (silk hats) g.v.; sometimes done by plush cutter g.v.
sewer, hand (cloth hats), see finisher (cloth hats).

sewer, hand (straw hats); sews straw plait, by hand, spirally, to make hats and tests shape on a block at intervals.

sewer, hat leather; hat leather stitcher; attaches hat leathers inside brims of hats by hand sewing or sometimes by machine.

sewer, machine (straw hats), see machinist.

shaper (hats, etc., not felt); setter, tipper-off; shaper; brims of hats with hot iron, by hand, in accordance with pattern; cf. shaper (felt hats) (329).

shaver, cone shaver, hood shaver; Hood polisher; a finisher (felt hats) g.v. who operates sandpapering machine, which takes off or shaves irregularities from surface of hood.
stitcher, hat leather, see sewer, hat leather.

stitcher, lining, see machinist, lining-stitcher, silk, see sewer, crown.

taper; a cap machinist g.v. who sews taper over seams of unlined caps using power-driven or treadle machine with a single or double needle.

tipper-off, see shaper; also carder.

trimmer; general term for any worker engaged in putting hands, boxes or other trimmings on hats, including binder, binder, lining fitter-in g.v. trimmer (cloth hats), see finisher (cloth hats).

trimmer (silk hats, opera hats); binds edge of brim, by hand or machine; inserts lining, and attaches hand to silk hat or to opera hat.

velourer, velurer; general terms for a worker engaged in any process of making real fur velour hats from hood stock to finished condition, including brusher, carder, finisher g.v. velourer (felt hats), see finisher, felt velour.
velourer (silk hats), see lurer.

411.—GLOVE (NOT KNITTED OR RUBBER)—MAKERS, CUTTERS, SEWERS, AND MACHINISTS.

binder (fabric gloves), see glove finisher (machine).

cutter, glove cutter, skin cutter; frunker; cuts by hand, with shears, elongated pieces of leather or "tree trunks" from which gloves are to be shaped; stretches skin carefully, by hand, after rolling it in a damp cloth to make it pliable, and applies pasteboard patterns as guides for cutting.

cutter, fur; fur glove cutter, fur lining cutter; cuts out of fur skins, by hand, gauntlets or gloves to shape by pattern; selects and matches skins.

feller; sews seams of gloves with a particular kind of felling stitch on treadle machine; may also turn wrists over, by hand and machine, and sew them down with felling stitch cf. sewer.

fur sewer, fur lining maker; sews the parts of fur gloves together by hand or stitches for lining in gloves.
glove finisher (hand); fastens buttons or sews in tape at back of bottoms, by hand; finishes buttonholes.

glove finisher (machine); binder (fabric gloves); stitches tops of gloves and wrists by treadle sewing machine.

glove maker (cloth, cotton, fur or leather); general term applying to anyone who makes gloves from warp, fabric, fur or leather, including glove sewer, glove machinist g.v., lace glove maker; makes gloves or mittens throughout of lace fabric, cutting, machining and finishing.

liner, glove liner; makes gloves' linings by sewing cut parts on machine, usually treadle; stitches lining in glove, by hand.

machinist, glove machinist, machine sewer; sews together pieces of glove leather or fabric by hand, treadle or power-driven machine; cf. sewer.

pointer, glove pointer; does ornamental sewing or pointing on backs of gloves, either by hand or machine, before parts are assembled; cf. tam-bourer.

sewer, glove sewer; a hand or machine worker who sews in fourchettes, i.e. side pieces, between glove finger, closes finger pieces, sews in thumb pieces, sews up wrist slit and top of glove; may also embroider pointing (see pointer or tambourer), attach welt (see welter), sew on buttons and make buttonholes, sometimes specifically designated, e.g., drawseam sewer, hand sewer, lapseam or piglet sewer, machine sewer, overseam or drawseam sewer, prick seam or saddleseam sewer, P.M. sewer.

stamper (gloves); cuts fabric gloves from strip of material which is laid in several thicknesses (e.g. twelve) on a thick rubber block. After each cutters descend, thus cutting out twelve blanks at once; fourchettes and thumb pieces are stamped separately; lays up fabric in required number of thicknesses in readiness for cutting.

tambourer; a pointer g.v. who embroiders, by hand, on a tambour frame, wide silk points on glove backs before gloves are made up; cf. presser (gloves) (425); also called.

trucker, see cutter; cf. puncher of trunks (425).

welter, glove welter; attaches welt, or narrow piece of leather to edge of slit and top of glove, by hand felling or by machine sewing; cf. feller.

412.—BOOT AND SHOE MAKERS AND REPAIRERS (General).

boot and shoe maker; cordwainer, shoemaker; an operative capable of making a complete boot or shoe from beginning to end, i.e. cuts soles and uppers, attaches parts by sewing, by hand or machine, or by riveting in the case of soles, makes and fixes heels and finishes boot or shoe; sometimes specifically designated, e.g., last shoe maker, cloth boot maker.

cobbler (boots), see repairer.

cordwainer, cordwinder, see boot and shoe maker.

hand-sewn maker; cuts out various parts of boot or shoe, uppers and soles from measured patterns, parts or skivers edges, stitches seams by hand or with sewing machine, or takes uppers, made by other workers (not necessarily in same establishment), and makes hand-sewn boots or shoes through-out; making includes closing of upper, tacking on last, channelling and sewing on white and soles, attaching heels and finishing.

jobbing boot maker; a boot and shoe maker g.v. who makes boots and shoes for individual customers, usually in own workshop; as a rule, also undertakes repairs.

last slipper maker; a boot and shoe maker g.v. who specializes in making last slippers.

patcher; fixes leather patches to uppers of boots or shoes (in repair work) by hand or machine, either by stitching, or by applying adhesives.

repairer (boots); cobbler; repairs boots and shoes by resoling, heel, stitching, or patching the leather; operations include ripping off old sole or heel, cutting sole or heel leather to shape, cutting, shaping and sewing in new welt, if necessary, filling in sole, attaching sole by hand or machine sewing or riveting, cutting out, skivving and attaching patch to upper with solution or by sewing machine, attaching rubber soles and heels.

snob; slang term for journeyman boot and shoe maker, or for jobbing maker or for repairer g.v.

surgical boot maker; a hand-sewn maker *g.v.* who makes through-out, by hand, boots specially designed to accommodate malformations of foot or leg.

translator (boots); a repairer *g.v.* who buys discarded boots; repairs and sells them.

412.—BOOT, SHOE, SLIPPER—CLICKERS AND CUTTERS.

clicker (boots and shoes); a cutter; cuts out parts of uppers of boots and shoes, either by hand, using a brass-bound template which he places on leather and cuts round with a knife; or by operating a power-press, which descends upon pattern placed on the leather and presses out shape required, cuts edge to best advantage, allowing for differences in stretch of leather; sometimes specifically designated, *e.g.*, press clicker, ideal press clicker.

cutter (boots), *see* clicker (boots and shoes).

cutter, fittings; a clicker *g.v.* who cuts fittings, straps, bars, findings, etc. by hand, with a sharp knife and brass-bound template or by machine-press, fitted with shaped knives.

cutter, insole; insole stamper; a pressman *g.v.* who specialises in stamping out insoles, by power press.

cutter, lift; lift chopper; a pressman *g.v.* who cuts heel lifts, *i.e.* layers of leather from which he has built up.

cutter, lining; cuts out linings for boots or shoes, by hand or machine.

cutter, middle sole; a pressman *g.v.* who specialises in cutting middle soles (light-leather sole between insole and bottom sole) of light leathers.

cutter, pattern; cuts out, by hand, from sheet zinc or cardboard, patterns of different parts of uppers of boots and shoes for use of clicker *g.v.*, following drawings made by designer; is often also a designer *g.v.*

cutter, puff; a pressman *g.v.* who specialises in stamping out toe-puffs, *i.e.*, pieces of leather used for stiffening toes.

cutter, rough stuff, *see* pressman.

cutter, slipper; a clicker *g.v.* who specialises in cutting slipper uppers.

cutter, sole; a pressman *g.v.* who specialises in cutting soles for boots and shoes.

cutter, stiffening; a pressman *g.v.* who stamps out from pattern, in a machine power-press, stiffeners, *i.e.* pieces of leather used for strengthening and shaping backs of boots and shoes.

cutter, vamp; a clicker *g.v.* engaged in cutting vamps and golasches (parts of upper forming front and side) of boots and shoes by power-press.

designer (boots); designs new styles of boots and shoes; makes drawings from detailed measurements, of various parts of upper, from which designs, patterns are made for use of clicker *g.v.*

insole stamper, *see* cutter, insole.

lift chopper, *see* cutter, lift.

presser, pressman, shoe pressman; ranger, rough stuff cutter; operates a machine press, which cuts out rough stuff, *i.e.* soles, insoles, middle soles, stiffeners and heel-lifts of boots or shoes, from leather; places a knife, having required shape, on leather and pushes it under press, which comes down and presses out article, sometimes specifically designated according to kind of machine used, *e.g.*, revolution pressman, Yankee pressman, or kind of foot-press being made, *e.g.* slipper presser, slipper pressman.

ranger, *see* pressman.

split lift machine man; a lift cutter *g.v.* operating a machine which cuts split-lifts, *i.e.*, the first piece of leather to form heel.

414.—OTHER DEFINED-SKILLED—BOOT, ETC., FACTORY OPERATIVES.

all-rounder; (1) an "all-round" heel and shoe operative, *i.e.*, one capable of performing any process in boot-making; (2) *see* laster.

bath-as' boot maker; stitches together, by hand or machine, parts of bath-as' boots or shoes, cut out by cutter (413) *g.v.*

bagger; turns lining and leather inside out and stitches lining of a boot or shoe on to upper, by hand or power machine, in such a way as to form a bagged edge.

bender; top stretcher, top iron machine operator; receives boots from channel closer (429) *g.v.*, applies wax mixture, coloured to suit boot, round edge of sole and insole, with small shoemaker's iron, to finish sole and to hide channel.

blinder; stitches binding on edges of uppers of certain kinds of boots, shoes or slippers, by hand or machine, *e.g.*, canvas shoes, carpet slippers.

blocker of fronts, boot front blocker; crusher, vamp crusher, vamp crusher; a blocker (upper closing) *g.v.* who fits together fronts of boots or shoes, *i.e.*, vamps and toecaps, on a block ready for stitching up.

blocker, sole, *see* moulder, sole.

blocker, stiffener, *see* moulder, stiffener.

blocker (upper closing); fits together by hand parts of uppers, both lining and leather, of a boot or shoe on a block or last, holding them in position by paste or other adhesive, ready for stitching up.

brower; attaches upper of a boot to inner sole with waxed thread on a last, either by hand or by holding in place on cutting machine.

brest maker (boot heels); heel breaker; cuts breast on front of heel square, either by hand with a sharp knife, or by machine.

bustaker, sole, *i.e.* chases down, lip of channel (in sole of boot) after sole is fastened to welt, by prising channel, by hand, with ornamented edge of a wheel, or by prising channel of sole against a similar wheel revolving by machine power.

carpet slipper maker; assembles parts of carpet slippers, cut out by cutter (413) *g.v.*, and stitches together by machine.

castler; takes plaster cast of foot where any special form of foot is required, as in case of malformation, *e.g.*, bunions.

closer; boot and shoe top or upper maker, gusset hand, taker-in; stitches together by hand or power-driven machine, parts of uppers of boots and shoes, after they have been skived, *priced*, skived.

crusher; stitches linings together, joins them to boots by power machine, and binds those edges of upper that are not to be attached to sole; sometimes specifically designated, *e.g.* hand crusher, repairs closer.

concol operator; a lasting machine operator *g.v.* who operates a Concol (power) lasting machine.

crimper, *see* blocker of fronts.

curler (boots), *see* moulder, stiffening.

edgester; dresser; removes surplus point (or ink) from front portions of heel with a blunt knife, by hand.

finisher; general term for any worker who is engaged on any of the finishing operations, including heel-parer (429), plougher-out (429), feet-parer (430), heel-parer (429), stitch cleaner (429), pricker-up, edge settler (429), wheeler (429), seamer (429), inker (429), stainer (429), bottom finisher (414), champer-down (429), top-trimmer (429), etc. *g.v.*

finisher, bottom; a finisher *g.v.* employed in finishing, *i.e.*, securing, binding, burnishing, etc., bottoms of boots or shoes on sand or glass-paper polishing lath.

finisher, slipper; a finisher *g.v.* who specialises in finishing slippers.

fitter, boot plate; in some small factories, affixes heel-plates and toe plates to boots, by hand, with hammer and tacks or small nails.

fitter, elastic springs; cuts and inserts elastic springs (*i.e.* pieces of elastic fabric set in side) in boots or shoes, by hand sewing or with sewing machine.

fitter, stock; (1) examines, grades and keeps records of leather intended for bottoms, *i.e.*, soles, insoles, stiffeners, heels, according to quality, *cf.* sorter; (2) *see* fitter-up (ankle).

fitter (upper closing); assembles parts of uppers of boots or shoes, and fixes them together with adhesive solution, by hand, ready for blocking; *cf.* blocker.

fitter-up; prepares materials for workers by assembling the various pieces of boots and shoes after they have been cut by cutter (413) *g.v.*

fitter-up (ankle); sole maker, piece, stock fitter; a fitter-up *g.v.* who assembles parts of bottoms of boots or shoes, *i.e.* sole, middle-sole, etc., in preparation for their being fixed together by tack or cement.

flowerer, embroiderer; an ornamental pattern in silk thread, on caps and vamps of cloth, satin, etc., boots or shoes, before they are made up, using a bender machine.

folder; feeds leather into machine which automatically turns in correct edge ready for machining of uppers of boots and shoes; sometimes specifically designated according to machine used, *e.g.* lufkin folder, rapid folder.

grader (skins), *see* sorter in skin room.

gusset hand, *see* closer.

heel attacher, *see* heeler.

heel attacher, machine, *see* heeler, machine.

heel attacher, wood; a machine heeler *g.v.* who attaches wooden heels to boots and shoes by pressure and snapping machine.

heel breaker, *see* breast maker.

heel builder, *see* heeler.

heel compressor; heel crusher, heel presser; puts shaped pieces of leather for heel building in a mould or press, nails them together, by machine, and then presses them into a solid heel in a power press under a pressure of several tons.

heel coverer, wood; assembles wooden heels of suede or velvet shoes with paste, and attaches, by hand, pieces of fabric similar to that with which shoes are made.

heel crusher, *see* heel compressor.

heeler; heel attacher, heel builder, lift maker; builds up lifts, *i.e.* layers of leather of which heel is made; attaches heel thus made to sole with nails, usually by machine; in repairing heels, or repairs heels.

heeler, machine; heel feeder, heel nailer; machine heel attacher; a heeler *g.v.* who operates, by means of a lever, a heel-attaching machine, which is fed with nails; heel is held in position by a clamp and nails are pressed through the inner sole into the heel.

heel presser, *see* heel compressor.

insole tacker-on; tacks on insoles to uppers of boots or shoes, temporarily, by hand or machine, on a last, in preparation for stitching.

instructor (boot and shoe machinery); a skilled boot making machine operative who explains and teaches use of new machines; usually employed by machinery makers.

ironer, boot, *see* tracer.

plagger, *see* digger.

seiner (boots and shoes); joins together edges of upper to last, but seam of boot, etc., with power-driven sewing machine; may also use rubber cement in lapping joint.

laster, laster-up, boot laster, shoe laster; all-rounder, laster-up, puller-on, puller-down, puller-up, puller (ankle); (1) in hand-sewn boot trade, fixes inner sole to last, and fastens inner sole, *i.e.* turns edges with a

knife to fit the last; places last in sole upper and then on pivot or lashing jack; taking edge of upper in press, strains leather over and along depressions in last to remove superfluous expanding properties of leather and so assist upper to keep its shape; places edges of upper and tacks on to inside ready for hand sewing or stitching by insole; (ii) see machine operator, lasting.

laster, second, see re-laster.

lift maker, see heeler.

lining maker; a closer g.v. who stitches together parts of linings of uppers of boots and shoes, usually on a power machine.

looker-over; examines shoes or boots after they have been finished, and rejects any defective work; usually done by passer or foreman (401) g.v. machine operator, machine feeder, boot machine operator; general term for any person engaged in any machine operation in manufacture of boots, shoes, etc., including pressman (413), skiver, folder, perforator (429), lasting machine operator, machine sewer, closer, rounder, slugger, etc. g.v.

machine operator, bagging; a bagger g.v. holding parts of sole to be stitched or closed under needle of a bagging machine.

machine operator, band saw; operates hand saw machine used for splitting skins in a boot and shoe factory.

machine operator, Blake; Blake sterner, Blake sole sewer; a sole attacker g.v. who stitches sole of boot or shoe on to insole (inner sole) with a Blake sewing machine; with heavy sewing machine worked by power, after insole has been attached to upper.

machine operator, Campbell; a sewing machinist g.v. operating a Campbell sewing machine, i.e. heavy sewing machine run by power.

machine operator, Cyclops; holds sole against rotating hub of power-driven Cyclops machine and adjusts pressure between sole and glass or sandpaper, till sole is smoothed as required; starts and stops lath by hand or treadle lever, sometimes also does work of leveler (425) g.v.

machine operator, gemming; operates a gemming power-machine, by which solutioned canvas is placed over insole and pressed into contact, a machine attachment keeping lip of channel erect.

machine operator, Keate; a sewing machinist g.v. operating, by lever, a Keate power sewing machine.

machine operator, lasting; boot laster, laster, laster-up, shoe laster; a laster g.v. operating a lasting machine; usually a team worker who operates one of a series of pulling-over, drafting, pleating and tacking machines which reproduce mechanically the operations described under laster g.v.; fits last into machine and controls operations by means of levers.

machine operator, Mackay; a sole attacker g.v. operating a Mackay sole attaching machine, a power machine of heavy type.

machine operator, M.S.; a sole attacker g.v. operating a M.S. (middle sole) sole-attaching machine, a power sewing machine of heavy type.

machine operator, pressure; general term for worker operating one of several types of machine which exert pressure, e.g. in sole moulding, heel compressing, leveling; includes moulder, heel compressor, leveler (419) g.v.

machine operator, seat nailing; feeds and operates a machine which nails seats, i.e. pieces of leather which form base for attachment of heels, to bottoms of boots or shoes.

machine operator, sewing, see machinist, sewing.

machine operator, sew-round; stitches on turn shoe power machine, through a channel, soles to

uppers after they have been attached to last by turn shoe maker g.v.

machine operator, skiver; a skiver g.v. operating a skiving machine to reduce thickness of leather; sometimes specifically designated according to machine used, e.g. Amazon skiver machine operator, Fortuna skiver operator.

machine operator, sole sewing; a sole sewer g.v. operating a sole sewing machine (usually a power machine) to attach upper to sole through channel with big stitches and strong thread.

machine operator, stitching, see machinist.

machine operator, top piece heel, see slugger.

machine operator, welt; stitches welt of a boot or shoe round the upper and attaches to bottom sole by machine sewing on a last. machinist, sewing machinist; sewing machine operator, stitching machine operator; a sewer g.v. operating a hand or power machine for sewing parts of uppers of boots and shoes together, or for stitching uppers to bottom; sometimes specifically designated, e.g. slipper machinist.

machinist, golosh; a closer g.v. who closes goloshes (as distinct from vampes) of shoes or slippers by machine; cf. vamps.

machinist, side lacing; a machinist g.v. who operates a power machine which attaches side linings to upper of a boot or shoe; usually done by closer g.v.

moulder, counter, see moulder, counter.

moulder, puff; moulds toe-puffs (stiffeners for toes) on press machine.

moulder, sole; sole blocker; (i) tacks dampened sole on to last and moulds it to shape of last by hammering, by hand. (ii) places damp and pliable sole on prep foot mould in machine and, by releasing a lever, brings pressure of several tons to bear upon sole, thus shaping it; sometimes specifically designated, e.g. moulder moulder, middle sole moulder, outside moulder, sole moulder, stiffener, counter, stiffener blocker, stiffener chaper, counter moulder; moulds stiffeners (pieces of leather used for strengthening backs of boots or shoes) by placing them in machine and operating levers, away either by hand with hand tools against a block.

preparer for pull-over; arranges upper of boot or shoe on last, with hammer and tacks, ready for laster g.v.

preparer for welt sewing; cleans or trims with a knife upper after it has been lasted, and opens inside channel in upper through which welt is to be stitched.

preparer, welt; dips welt in water, tempers it and cuts, usually by machine, or by hand with special knives, a groove or channel in preparation for sewing between sole and upper; cf. preparer for welt sewing and channeller (429).

pricker-up (boots); decorates welt edge by pricking up leather between each stitch on welt with point of a specially shaped tool called a "prick-stitch" (i). stitch separator.

puller-on, puller-over, puller-up, see laster.

pump hand, see turn shoe maker.

re-laster; second laster; fits boots and shoes on an easily-fitting iron last for operation of lasting, after removal of making last.

rough stuff man; performs all operations in rough stuff room or press room, in small factory where work is not sub-divided, including cutting, fitting-up, channelling, etc.; cf. rough stuff cutter (418).

rounder, sole rounder; pares edge of sole of boot or shoe to final shape, either by hand with knife or by means of paring machine, the knife of which travels round shoe fixed on block and cuts superfluous leather; sometimes specifically designated,

e.g. insole rounder, middlesole rounder, outsole rounder.

screw, screw operator; operates machine which attaches middle soles of certain heavier kinds of boots to insoles by means of screws, keeps and sorts in position on machine; sometimes specifically designated, e.g. standard screw operator.

sewer; general term covering all persons engaged in joining parts of upper of boot or shoe, or attaching upper to bottom by hand or machine sewing and including sewer (hand), sewing machinist, stitcher, etc. g.v.; sometimes specifically designated, e.g. Blake sewer, Blake sole sewer, welt sewer.

sewer, sole sewer (hand); a sole attacker g.v. who attaches soles, temporarily held in place with nails, to welts or to middle soles (if boots are not welts) by hand sewing; makes holes with a roundawl in a channel in sole, previously made by channel opener (425) g.v. and passes thread through each hole in turn; sometimes specifically designated, e.g. nurse sewer (children's shoes).

sew-round maker, sew-round man, sew-round hand, see turn shoe maker.

shank attacker; attaches "shank" or waist-piece of boot or shoe, i.e. piece of stiff leather stretching from heel to ball of foot, to insole, with solution or rivets.

slaker, see taper.

skiver; pares off (skives) edges of various parts of upper or bottom of boot or shoe, either by hand, with sharp knife, or (more usually) in a skiving machine, to reduce thickness of leather where joining is necessary; sometimes specifically designated according to part of shoe to be skived, e.g. middle sole skiver, puff skiver, shank skiver, split lift skiver, stiffening skiver, welt skiver, or according to type of machine used, e.g. Fortuna skiver.

stecker, stecker-up, slider; places dampened leather of bottom or welt of boot or shoe on a last, and smooths away bumps or irregularities by hand, using wooden rollers; now usually done by leveler (425) g.v. on leveling machine.

slugger, heel slugger, slugger machine operator, slugger machine operator; top piece machine operator; feeds holes in machine with nails of different sizes according to height of heel; clamps inside of shoe (heel end) in position over nails and holes and operates, by means of a lever, slugging machine, which attaches top piece of heel to sole (already attached to foot or shoe).

soaker; presses and smooths soles of thin leather or leather substitute inside bottom of boots or shoes by hand to cover up any roughness due to stitching, riveting, etc.; after last have been pasted by sock paster (429) g.v.; sometimes also pastes soles.

sole attacker; rivets bottoms of boots or shoes to uppers by holding in place in riveting machine.

sole maker, sole presser, see fitter-up (under).

sole tacker-on; attaches insoles temporarily to uppers of boots or shoes, by hand, with hammer and tacks, while uppers are on last, preparatory to parts being sewn or stitched to go skin.

sorter; (i) examines, grades and keeps records of leather according to quality; in some factories, confines his work to sorting leather for uppers, as distinguished from stock fitter g.v.; (ii) sorts different parts after they have been cut; sometimes also does work of fitter-up.

sorter in skin room; grinder (skins), sorts meat pieces of leather according to substance, thickness and quality, examines them for flaws, and allocates them to most suitable work; keeps records of stocks, etc.

stiffener shaper, *see* moulder, stiffener.

stitcher; a sewer (hand) *q.v.* using a square instead of a roundawl.

stitcher, fair; a sewer *q.v.* who specializes in "fair stitching," *i.e.* machining, on power sewing machine, a row of stitches round well of Blake-sewn boot, or shoe, giving appearance of well-sewn work.

stitcher, book (slipper); a sewing machinist *q.v.* operating a lock-stitch power machine for stitching together slippers.

stitch separator (boots); operates a power machine, with an attachment like a blunt knife, which rakes well of welted boot or shoe between stitches, *cf.* pricker-up.

table hand; examines uppers after completion, cuts off odd ends of thread; hammers off, by hand, before it is passed to working room.

taker-in, *see* closer.

taker-off; withdraws last from boot or shoe, by hand, when it has been made, in preparation for final processes of treading and boring.

taper, taping machine operator (boots); *stitcher*; stitches tapers by machine, down seams, in closing upper of a boot or shoe, to strengthen seam for lasting.

tapper (shag), *see* laster.

tapper-up; laminates out, by hand or machine, corrugations in leather of upper of a boot or shoe, formed when upper is pulled in inside, and tacked down on to it.

tee-casser; stitches toe-caps on to uppers of boots or shoes by hand or machine.

top ironer, top iron machine operator (boots), *see* header.

top or upper maker, boot and shoe, *see* closer.

turner; boot ironer; places boots or shoes on a form or tree, and irons them, with hand iron, heated by gas, to improve shape and appearance.

turner, *see* turn shoe maker.

turn shoe maker; pump hand, semi-round hand, semi-round maker, semi-round iron, turner; makes turn shoes, *e.g.*, dancing pump, by sizing upper to sole, both inside out, on a last, by means of tacks; machines by hand or power to sew round machine operator *q.v.* after machining, turns shoe right side out, thoroughly dries and re-lasts it to mould it to shape.

vamp dresser, vamp crimpier, *see* blocker of fronts.

vampier; a closer *q.v.* who stitches "quarter" or golet to vamp, or front part of a boot.

wax-threader; fixes thread in machine, which passes it through wax containing half proportion of grease, and keeps spools supplied with thread so treated.

welt heater; heats out, by hand, with hammer or stick, or with small machine hammer, welts, after they have been sewn in; *cf.* channel closer (429).

welther; a sewer *q.v.* who stitches welt to bottom sole by hand or with sewing machine.

416.—CLOG MAKERS.

clicker (clogs); *overman* (clogs); cuts out clog uppers of leather, by hand or machine; in case of hand work, cuts out uppers with sharp knife, according to social pattern laid on leather.

clogger, clog maker; *pattern worker*; makes clogs throughout by hand; cuts sole, makes upper, and nails it to sole, *i.e.* completes occupations of sole cutter (426) and of clog seatman *q.v.*; term also frequently used as synonym for either.

crimper (clogs); cuts ornamental patterns, by hand, on leather uppers of clogs.

laster (clogs); tacks uppers on to last and hammers out, while wet, to shape; usually done by seatman *q.v.*

machinist, clog machinist; clogs leather uppers of clogs by power machine; as for closer (414).

pattern maker, *see* clogger.

seatman (clogs); *see* clicker (clogs).

seatman, clog seatman; cuts out and makes upper of leather, by skiving edges and stitching seams by hand or sewing machine, or by riveting; attaches sole thereto by closely nailing a strip of leather along overlap of upper and edge of sole, and finishes clog, repairs clogs; sometimes also does work of clog closer (429) *q.v.*

skiver (clogs); thins edges of leather where it overlaps in closing uppers of clogs, by passing with a knife by hand or a machine; sometimes done by clicker *q.v.* in small works.

418.—UMBRELLA, PARASOL-MAKERS, COVERERS, REPAIRERS.

blinder; binds, by hand sewing with tape or narrow strips of same material as cover, certain umbrellas and parasol parts (runner, open cap and hinge of rib).

cap milliner; sews up rosettes of silk or other material for lining under open cap of umbrella or parasol; *stitcher*; work now usually done by tipper *q.v.*

capper; secures metal cap to stick of umbrella or parasol, by hand; hammers it against metal plate in bench through which stick protrudes; drives pin through both stick and cap and into smooth; work usually done by finisher *q.v.*

coverer; sews up seams of segments of silk or other material to make covers, usually by hand; fastens cover to tips of metal ribs and ties on or braces seams to ribs by hand stitching; *cf.* tipper.

finisher; *stitcher*; attaches ferrule and open cap (see capper) to umbrella or parasol after cover has been fitted; attaches wooden ferrule by means of glue.

stitcher; (i) *see* finisher; (ii) *see* frame maker.

frame finisher; covers joints of umbrella frame with protective leather pads; removes roughness and finishes frame in readiness for covering.

frame maker, umbrella frame maker; *stitcher*; assembles frame of umbrellas or parasol from manufactured ribs and other parts; threads out topers threading of ribs on notch with wire; gouges out slots in sticks on power-driven lathe and fixes springs, runner and notch; often also repairs broken frames.

hammer; sews seams and hems of umbrellas or parasol covers by hand or machine; *cf.* coverer, machinist.

ironer; irons covers, after their attachment to frame, by means of special iron, heated by gas or electricity, or by other means.

machinist, sewing machinist; sews seams of umbrellas or parasol covers by treadle or power-driven machine.

maker-up, marker; marks or makes up stick of umbrella or parasol with pencil, for position of spring slots, using a standard board, work usually done by frame maker *q.v.*

mender; restorer, repairer, *finisher*; (i) darts, patches and otherwise mends umbrellas or parasol covers, (ii) replaces ferrules or broken ribs, repairs springs, etc.

parasol maker, as for umbrella maker.

restorer, repairer, *see* mender.

sunshade maker, as for umbrella maker.

tipper, tier, tipper and tier; fastens covers to holes near tips of metal ribs of umbrellas or parasol, and ties on or braces seams to ribs by hand or by machine; makes rosettes, etc., for attachment under open cap; attaches hand or button pieces; *cf.* coverer.

translator, *see* mender.

trimmer, parasol trimmer, sunshade trimmer; sews trimmings, fringes, etc., of lace, silk, etc., on parasol, by hand.

umbrella maker; (general term for any worker capable of performing all the operations or engaged in any process of umbrella, etc., manufacture, including capper, coverer, frame maker, finisher, tipper *q.v.*

417.—SACK MAKERS.

bag hand, as for sack hand.

bag maker, *see* sewer; sometimes specifically designated according to kind of bag made, *e.g.*, jute bag maker, mail bag maker, mail bag maker, sand bag maker.

bag woman, *see* mender.

hinder (sacks); a palm and needle hand (419) *q.v.* who strengthens edges of coal or grain sacks, etc., by sewing hindings-need or rope thereto.

dermer, bag dermer, *see* mender.

machinist, bag machinist, sack machinist; machines sewer, stitches seams of bags or sacks, and hems round top; repairs sacks, etc., by stitching or darning, sizing sewing or darning machine.

machinist, overhead; overhead sewer; a machinist *q.v.* sewing with an overhead or overcast stitch.

mender, bag mender, sack mender; bag dermer, bag patcher, bag repairer, bag woman (sack materials), dermer, patcher, repairer, sack patcher, sack repairer; mends sacks and bags, either by darning with twine (by hand or machine) or by sewing on patches (by hand or machine); often specifically designated according to trade, *e.g.*, grain sack mender, mail bag mender.

patcher, bag patcher, sack patcher, *see* mender.

repairer, bag repairer, sack repairer, *see* mender.

sack doubler and sewer; repairs, folds, and keeps in order, sacks chiefly used as sulphate of ammonia and paraffin wax works.

sack hand; works in sack or bag house, of works where bags are used, on sorting, mending, slaking and folding, stencilling or branding sacks; includes sack mender, sack machinist, sack repairer, sack cutter (403), sorter (429) *q.v.*

sack maker, *see* sewer.

sewer, bag sewer, sack sewer; bag sewer, sack sewer, bag stitcher; sews seams of material for bags or sacks, by hand or machine; sews or hems round top; sews on tapes, rings, hooks, etc.

sewer, overhead, *see* machinist, overhead.

sewer (vegetable oils); sews up oil cakes in bags ready for delivery.

sheet woman; a mender *q.v.* who keeps in repair, sheets used as sacks for wrapping.

stitcher, bag, *see* sewer.

418.—TARPAULIN, TENT, SAIL AND OTHER CANVAS GOODS-MAKERS, DRESSERS, REPAIRERS (not elsewhere enumerated).

bentite cloth maker; a dresser *q.v.* who coats coarse pale fabric with tar, by machine, for use in lining mine-shafts and air-ways; feeds cloth through sets of rollers and a bath of tar, winds it on rollers of machine and hangs to dry in loops on poles.

canvas buoy maker; stitches, by hand, canvas covering over body of buoy and attaches guide loops and ropes.

dresser; *stitcher*; dresses cert sheets, canvas goods or duck cloth, by applying, by hand, other preservative with a brush; sometimes specifically designated according to article dressed, *e.g.*, canvas dresser, cart sheet dresser, mail sheet dresser, *cf.* spreader.

dryer; carries oiled material to drying room, hangs it on rack and removes it when dry.

hot plater, *see* plater.

lasher; sews short lengths of rope (lashings) with palm and needle on to canvas buoys for fishermen's nets, so that wooden lid of buoy may be lashed fast.

oller; see *drawser*.

polisher; hot plaster; warms garment made of material that has been dressed with oil by laying it upon a flat plate, heated by steam, to keep garment pliable; removes it, and applies polish containing a drying material, by hand with pads, to remove stickiness.

proofers; *waterproofers*: (1) feeds with material and operates proofing machine, driven by gas or electricity, which carries material through rollers, into bath of proof, and through drying rollers. (2) applies dope or proofing solution with brush by hand.

repairer; repairs tarpaulins, sheets, etc., by reproofing (see *drawser*) and by sewing, patching and darning by machine or palm and needle method; cf. palm and needle hand (419); sometimes specifically designated according to article repaired, e.g. cart sheet repairer, oil sheet repairer, sail sheet repairer, van or wagon sheet repairer.

repaizer (canvas hose); repairs canvas hose by darning fresh material into damaged portion, or by solutioning patches over worn or weak parts.

sailmaker, sail sheet-maker; designs, cuts by hand or with hand knife, sews by palm and needle method (cf. palm and needle hand (419)), and prepares ship's sails, boat covers, deck awnings, etc.

sailmaker, fire; makes chute fire escapes and canvas jumping sheets; cuts them with a sharp hand knife, sews them with palm and needle, and attaches ropes and cords wherever necessary.

sewer; sews railway covers, or sews up seams of other canvas goods, e.g. knapsacks, gun bags, web equipment, by machine or palm and needle; sews on tapes, buttons and other fittings; cf. machinist, palm and needle hand (419).

spreader; feeds roll of cloth or canvas between rollers of spreading machine which cuts fabric with rubber dough, far or other waterproofing material, cf. *drawser*.

tatave hand, hangs braided cloth over poles of lines in drying room after it has been spread.

test finisher; sews on hooks and eyes, attaches wooden cleats to guy-lines, and does other similar finishing operations with palm and needle to finish tents.

tent machinist, sew tent sewer.

tent mender; a tent sewer q.v. engaged in mending tents.

tent sewer; tent machinist; stitches seams of canvas tents by feeding edges of parts to be joined under needle of power sewing machine; sews ropes into canvas and stitches parts of tent, too thick for machining, with palm and needle, cf. palm and needle hand (419); punches and stitches small holes in canvas for ropes to pass through, by machine; sews round big holes by hand.

waterproofers, see *proofers*.

stitching machine, or with ribbon under needle of ordinary power sewing machine.

blinder, hat leather; *leatherer*; oversees binding of cord or silk cane on edge of hat leather bands by stitching machine.

blinder (hoesery); operates a power-driven machine which automatically stitches braid to the cut edges of knitted goods.

blinder, mat; strengthens and makes up the edges of mats and Axminster, Brussels and tapestry carpets by stitching in tape or similar woven fabric with sewing machine, employing plain hem stitch, forming boxed hem or blanket stitch according to quality of carpet; cf. fringe (carpets and rugs).

blinder (rubber boots and shoes); *sewer* (rubber boots and shoes); feeds and operates power sewing machine, the two bolsters of which feed thread and other bindings, to hind edge of boots and shoes.

blinder (tailoring); sews, by hand or machine, band of binding to top of trousers and edges of coats and waistcoats, to give extra strength.

body maker (shirts, etc.); operates a power machine stitching seams of shirt and vest-bodies; inserts gussets, makes and puts in sleeves and stitches in yokes; sometimes also folds, using single needle machine; cf. *seller* (shirts) and *seamer*.

broader, see *hinder*, hat leather.

broader; trims, or embroiders, garment by hand, according to transfer, by hand or machine, after other processes are complete.

breaster, cf. *for machinist*.

button holder, button hole maker, button hole worker; cuts button hole in fabric by hand with scissors or with mallet and chisel; sews round cut edges by hand with button hole stitch, usually enclosing a piece of gum or cord for stiffening purposes; fastens off at one end with a bar of stitching, see *barrier-off* (429); see also *machinist*, button hole; sometimes specifically designated, e.g., collar button holder, cuff button holder.

case maker; sews up seams by hand, or by treadle or power-driven sewing machine, three sides of featherbed, cushion, etc., covers; sometimes specifically designated, e.g., bolster case maker, cushion case maker, mattress case maker, pillow case maker.

centre maker (shirts); *front machinist*, *front maker*; machines front or centre of shirt; does front pleating, when required, by arranging tucks and stitching them by machine.

cloth pleaser (textile mill); sews together with gauding needle, pieces of cloth to form one piece, preparatory to washing, dyeing and bleaching processes in textile mill.

cockade maker; works emblems, rosettes, etc., by sewing textile or wire threads on to cloth foundation to form a design; sometimes specifically designated, e.g., military cockade maker.

collar maker, shirt; sews together, by treadle or power-driven machine, strips of linen or other material cut out for making collars or cuffs, neckbands and wristbands of shirts.

collar runner; assembles plies or folds of fabric and stitches, usually on power machine, first row of inside stitches, in preparation for collar to be "turned out," or reversed, for final sewing.

colour maker; works in colour loft of H.V. Dyeing, machining up bunting and flags for the post.

cover (upholstery); sews curds, tassels, etc., on to cushions, curtains and upholstered furniture covers by hand or machine.

cover of coat hangers; winds strip of material bandage-fashion round wooden coat-hanger, and stitches it in place; or makes two stalls by cutting out and sewing strips of material, draws one on at each end of hanger, and sews them together round base of hook, sometimes pulls hanger with cotton wool.

cravat maker, a tie maker q.v. who sews linings on to ready-folded cravats, both inside out, with a foundation of blackram between, when seven turns cravat and lining right side out.

crosser; a machinist q.v. who finishes handkerchiefs, hemming remaining two sides, left by runner-up q.v., and gives neat finish to each of four corners; sometimes also does running up.

cuff maker; sews together strips of linen or other material received from cutter for making linen cuffs, by hand or machine; cf. shirt collar maker.

daily sewing women, cf. *for sewing maid*.

danner (not in textile mill); mends torn or defective material or garments, by hand or machine; intervenes self-coloured thread both ways in damaged areas of fabric, reproducing the pattern both as to weave and colour as far as possible.

drawn thread worker; cuts and draws out warp or weft threads over certain sections of material, and with needle and thread makes a remaining weft or warp threads according to pattern supplied by designer.

dungaree maker; a sewing machinist q.v. who makes up pieces of blue cotton material, known as "dungarees," which are used in required size and shape into overalls for engineers, plumbers, etc.

edger, see *bagger*.

elderdown maker; makes elderdown bed quilts of silk, satin, or cotton material; machines sides, leaving openings through which down or feathers may be inserted, and cuffs them with down or imitation feathers; sews them with quilt stitch to keep the down in place, see *quilter*, and inserts eyelet holes for ventilation.

envelope worker; a fabric hand q.v. who stitches sections of fabric for airship gasbag together on treadle sewing machine; its stitched sections on to sectional frame of airship and stitches by hand final joining of sections; may also apply dope with brush to fabric on completed section.

fabric hand, fabric worker; *wool coverer*; *bastier*, and sews fabric (linen) used in covering aeroplanes wings and in making airship gas envelopes; cf. *canvas stitcher*.

feller (hoesery, etc.); a chain stitcher q.v. who falls, i.e. sews down edges of woven flat to material, in a telling machine seams of knitted fabrics, which have been joined and seamed in overlocking machine, guides fabric under falling needle, which is driven by treadle or power.

feller (shirts); *seamer*, *side seamer*; sews down to body of shirts, edge of fabric after seaming, cf. *body maker* (shirts, etc.), by hand or, more usually, by power-driven single or twin needle sewing machine.

fine drawer (clothes repairing); sews, by hand, garments or parts of garments with invisible stitch, i.e. fine drawing, used for very fine materials; cf. *invisible mender*.

finisher (neckties), see *tie knuder*.

finisher (shirts); *needle hand*, *needlewoman*; finishes off shirts, overalls, etc., by sewing on collar bands, cuffs, buttons, etc., on power machine, and making button holes, by hand or machine; work done subdivided and operative specifically designated, e.g., collar finisher, cuff finisher.

friller; a machinist q.v. who makes frills for ornamenting or finishing articles of clothing by machining out lengths of material.

fringer; (1) operates power-driven fringing machine, which laces yarn

419. SEWERS, STITCHERS, SEWING MACHINISTS (not elsewhere enumerated).

babies' milliner; *infants' milliner*; makes and trims babies' hats and bonnets, usually of silk and wool fabrics, by hand or machine, in small sizes, also cuts out bonnet; cf. *milliner* (408).

bagger; *edger*, *edge stitcher*; sews, by machine, round edges of garment, thus enabling under-hanging stitches to be pulled out.

blinder, *blanker*; binds edges of blankets with coloured silk or ribbon by feeding edge against guide under needle of overlocking or blanket

through material, draws it out to fringe length, and finishes it off by cutting it; (ii) makes and knots fringe to material, by hand; (iii) ornaments articles by sewing on fringe, by hand or machine.

fringer (carpets, rugs, etc.), rug fringer; sews fringes to carpets and rugs, by hand or machine; cf. fringer, rug fringer.

fringer, shirt, attaches loose threads of cotton, silk or wool to end of scarf or shawl with a crochet hook; cf. fringer.

front maker, front machinist, see centre maker.

handkerchief maker; takes piece of linen or other material which has already been cut and (if necessary) thread-drawn, and stitches it (plain, hem, or spike stitch) on a power-driven machine.

hemmer; hems, or turns raw edge of material under and sews down edge of fold or hem, by hand or machine; sometimes specifically designated, e.g., carpet hemmer, hand hemmer, handkerchief hemmer, hemming machinist, machine hemmer, waistcoat hemmer, etc.

hemmer, shirt collar, shirt collar hemmer; in shirt making, also inserts gussets or rents.

hemstitcher, ornaments articles, by hemming them by hand or machine, with an open stitch called hem-stitch, i.e., pulls out several threads of fabric adjoining inner edge of hem and draws, tearing, the threads of the cross threads by successive stitches.

hosiery milliner, fancy hosiery milliner; knits, by hand or power-driven machine, woolen hats or trimmings for hats.

infants' milliner, see babies' milliner.

joiner (hosiery), a stitcher q.v. who joins one length of hosiery to another, either by hand or by machine.

kitter (machine), see tucker.

leatherer; sews leather inside caps with special machine.

liner, liner-liner (tailoring); stitches linings, by hand or machine, into garments.

lockmaker, see overlocker.

machine binder (cork hats); attaches binding round edges of cork helmets by sewing machine.

machinist, sewing machinist; sews seams, hems, etc., by hand, treadle, or power-worked machine, guiding material under needle along a line which is usually marked by tacking stitches; sometimes also attaches trimmings, tapes, braids, lace, etc., by machine sewing, by means of specialised machines or by special machine attachments on ordinary sewing machines may perform gathering, quilting, tucking and other operations; sometimes specifically designated according to kind of work, machine, etc., e.g., blouse machinist, carpet machinist, children's costume machinist, cloth machinist, cuff machinist, d'orsley machinist, duchesse coat machinist, flag machinist, foot machinist, hand machinist, horse clothing machinist, horse rag and basket machinist, machine machinist, millinery machinist, oilskin machinist, overlock machinist, power machinist, rubber or india rubber machinist (flexible boots, etc.), silk bag machinist, surgical hosiery machinist, the machinist, upholsterer's machinist.

machinist, button-hole; a button-maker q.v. who makes button-holes with a button-hole machine; may cut hole with scissors or with mallet and chisel, or cutting may be done by punch in the machine; manipulates edges of hole under needle of machine, in buttonholing thin or loose materials, hole may be cut by hand or machine after machine sewing.

machinist, press cloth, see mender, green cloth.

machinist, spoker, see stitcher, spoke.

machinist, tuck net; machine tucks in finished net, on power or treadle sewing machine, with a multiple-needle attachment.

maker, maker-up; a sewer or sewing machinist q.v. who makes, i.e., joins together, by hand and/or machine, component parts of articles of dress and other textile goods, already cut to shape by cutter (403); may also sew on trimmings, buttons, etc.; usually specifically designated, e.g., apron maker, baby linen maker, bag maker (not leather), belt maker, bib maker, body maker q.v., boy maker; cambric maker, calico maker, case maker q.v., centre maker q.v., cockade maker q.v., shirt collar maker q.v., colour maker q.v., crevasse maker q.v., cuff maker q.v., drawing green maker, dungaree maker q.v., sundown maker q.v., elastic brace maker, felt hat maker, flag maker, flounce maker, front maker q.v., gaiter maker (not leather), garter maker, handkerchief maker q.v., infants' robe maker, ironholder maker, lining maker, mattress case maker, necktie maker, overall maker, pad maker q.v., part maker q.v., pinstripe maker, piping maker q.v., pyjama maker, rainproof garment maker, scarf maker, servant's cap maker, shirt maker, shroud maker, sleep maker, stock maker, sundress maker, tick maker, underclothing maker, valance maker.

maker-up, hosiery maker-up, see seamer (hosiery).

mandar, invisible; *séguir*, *renfermer*, *stopper*; repairs tears, by hand, sewing, stitching, finger sewing, or tearing process, according to kind of tear and material.

mender, press cloth; wrapper mender; press cloth machinist, press cloth sewer; mends, by machine, press cloths or wrappers used in expression of oil from seed by hydraulic process or filtering of slip in pottery works.

mender, sheet (wood halo); repairs rips, sews on patches, cuts away ragged edges and roughly hems them, using sewing machine where practicable.

needle hand; (i) (tarpaulin, canvas, etc., work) see palm and needle hand, (ii) (shirts, etc.) see fulcher (shirts).

needle woman; (i) (baths) keeps towels and costumes in good repair, by hand sewing, darning, patching and use of sewing machines, (ii) (domestic) see sewing maid, (iii) (laundries) see remaker; (iv) (Post Office) a sewer q.v. who is engaged on sewing duties in Stores Department; (v) (shirts) see finisher.

needle worker; general term for any worker engaged in needle trades, e.g., finisher (shirts); sometimes refers more especially to hand sewers engaged in sewing fine needle-work; sometimes specifically designated, e.g., art needle worker (407) plain needle worker.

overlocker; lockmaker, overlock stitcher; guides cut edges and seams of knitted fabrics under needles of power-driven machine, thereby joining them together in neat fashion with an overlock stitch.

pad maker; (i) a machinist q.v. who stitches three sides of pads, which are then ready to be filled with down, etc.; usually done by mattress case maker; (ii) makes felt or jute pads to cover wire mattresses; sews finishing round edge and face brass cords, using hand or power-driven sewing machines; (iii) cuts out and attaches together pads of canvas, lining, wadding, etc., for padded parts of tailored garments.

palm and needle hand; palm stitcher; sews various coarse materials, using a thick thread with a stout needle, pushed through material by means of a metal disc attached to the palm of the hand by a leather strap.

part maker (ties, etc.); makes and lines small parts of made-up ties and bows, by hand or machine, mainly using slip-stitch.

picker-up (clothing); machines together linings, after they have been cut by lining cutter (403) q.v.

piping maker (trimming); fits up, by attaching materials required and regulating tensions, and tends a machine (like a braid plaiting machine), driven by steam or electricity, used in plaiting two or more folds of cloth, yarn or silk round a core of cord, to make "piping," for use in decorating furniture, or in dressmaking and drapery trades.

piqueur, see mender, invisible.

preparer of collars and wristbands; a machinist q.v. who performs first machine sewing operations on shirt collars and wristbands, ready for sewing on to shirt.

quilter, quilting machinist; sews, by means of a special attachment on a sewing machine, or by a three-needle machine, several layers of material or two layers enclosing wadding or other padding the whole being thus firmly quilted or stitched in lines or patterns; sometimes specifically designated, e.g., canvas quilter, sail-cloth quilter.

quilter (mattresses); mattress stitcher; stitches sides of mattresses by machine, in such a way as to give them a "gathered" appearance, and to strengthen them.

remaker (laundries, etc.); needlewoman; a sewer q.v. who restitches articles which have been unpicked for cleaning or dyeing.

renfermeur, see mender, invisible.

repairer (laundries); a sewer q.v. who repairs articles torn during process of cleaning.

runner-up; a machinist q.v. who hems the two raw edges of handkerchief material cut from the length or along two opposite sides of material for better class handkerchiefs, ready for crosser q.v.

scallopier, underclothing scallopier; stitches, by hand or machine, with buttonhole stitch, following the line of a scallop design which has been impressed on the edge of the fabric; cuts away, with scissors, superfluous material close up to stitch.

seamer, French; a machinist q.v. who sews a seam that is automatically folded in to hide stitches.

seamer (hosiery); (i) seamstress; sews pairs of knitted fabric together, by hand, with needle and thread; (ii) hosiery sewer-up, maker-up; guides knitted fabric under stitching needles of a power-driven sewing machine, to join them together; keeps needles supplied with thread from shuttles; sometimes specifically designated, e.g., German seamer.

seamer, point; point machinist; seam; point stitcher; a seamer (hosiery) q.v. engaged on a point sewing power machine, which joins two selvedge edges by sewing to gather welt loop to welt loop.

seamer (shirts), side seamer, see feller (shirts).

seamstress, sempstress; used generally to cover any sewing worker or machinist, more particularly one who does sewing work in connection with any institutions such as a charity institution or a railway department; cf. sewing maid.

seamstress, masonie; a seamstress q.v. engaged on stitching work connected with masonic aprons, collars, and cuffs, by hand or machine; cf. masonic embroiderer (407).

sewer; general term for any person joining or fastening together textile materials with needle and thread (making or repairing) by hand or by machine, in a factory, shop, laundry, an institution, private home, etc.; cf. machinist, and seamstress, sometimes specifically designated, e.g., felt sewer.

sewer, button; sews on to garments, e.g. coats, trousers, etc., buttons, by hand or machine, usually by "bagging" them on, i.e. sews them through forepart and sews without catching through facing; sometimes also makes buttonholes; cf. buttoner (429).

sewer (calendering and finishing); stitcher-on (calendering); stitches by hand, after it has passed through calendering machines, loose ends of cloth which have come undone in any other process.

sewer, cloth (textile mill); sewer-down (grey cloth); see stitcher (grey cloth).

sewer, fine; a machinist g.v. who works power sewing machine with two needles for double row of stitching on rubber shoes; cf. binder (rubber boots and shoes).

sewer, hand; general hand sewer; a sewer g.v. who chiefly sews by hand, but usually also uses hand or treadle sewing machine.

sewer, lining; sews up, or seams up, linings, and stitches them into garments, etc.; cf. machinist and closer (404).

sewer, mantle; g.v. mantle sewer, in-undressed mantle sewer; sews, usually by hand, asbestos loop on top of upright g.v. mantle; or ties asbestos round ring of inverted mantle, plants bottom of mantle, ties it in, and fastens it with needle and thread.

sewer, piece (textile dyeing, etc.); piece stitcher; joins, by hand or machine sewing, pieces of cloth, and to end, in preparation for dyeing in a beck, or rope form.

sewer (professio), see mender, press-cloth.

sewer, print (textile printing); print stitcher; sews together, by machine, different lengths of cloth which are to be printed as one piece.

sewer (rubber boots and shoes), see binder (rubber boots and shoes).

sewer-on, trimming; sews buttons, trimmings, etc., on shoes or slippers, by hand or by machine.

sewer-up; sews up, usually by hand, fourth side of down quilts and mattresses, after stuffing has been inserted.

sewing maid; needle woman, seamstress; diana, renova, and converts household linen in hotels, boarding houses, institutes, clubs, private houses, etc.; in some places, also makes dresses, etc.; may also mark articles of dress going to laundry.

shirt front band, shirt front maker; makes up, by hand and machine, from pieces of material cut by cutter, fronts for dress shirts, etc.; sews or machines shirt fronts into shirts.

sliker; (i) finishes cloth piece in folded form by stitching folds together, by hand, with a silk thread to hold them in position; (ii) sews selvages of cloth pieces with different coloured threads of silk or of mercerized cotton, cf. stitcher (grey cloth).

slower (not tailor); sews together, by machine, pieces of material already cut to shape for making sleeves.

smocker; trims smock frocks, overall, etc., giving effect known as smocking (a system of gathering), by sewing with honeycomb stitch, by hand or machine.

sou'wester maker; a waterproof garment maker g.v. specialized on waterproof hats, sou'westers, etc.

stayer (hoiery); stitches, by hand, along an open seam usually in button hole stitch for strengthening purposes; cf. closer (404).

stitcher; (i) general term mainly used to indicate a sewer g.v. when the threadwork is intended to be visible in the finished article; (ii) in some trades used in sense of sewing machinist g.v.

stitcher, bag; twiner; sews up ends of bales, mouths of bags, sacks, etc., by hand, in packing and export warehouses.

stitcher, canvas; sews, by hand, with strong thread, canvas screens in fuselage and outer covering of envelope of aeroplane.

stitcher, chain (hoiery); stitches bands and trimmings to shirts, drawers, vests, etc., by power sewing machine.

stitcher, edge, see bagger.

stitcher, floss; sews by hand, simple designs on hose with floss silk thread. stitcher (grey cloth); cloth secer, sewer-down (grey cloth), sewer, whipper, whipping girl; (i) stitches together, by hand or by machine, ends of those pieces of cloth which have to be passed through the one machine in bleaching process, thereby making possible one operation on one length of material; (ii) stitch marker; sometimes also stitches distinguishing marks upon various pieces; cf. marker (grey cloth) (369).

stitcher, hand (braes); stitches on leather tabs and elastic web to metal parts of braes, by hand.

stitcher (hoiery); a seamer (hoiery) g.v. who stitches together, by hand, edges of knitted fabric to form feet of seamed hose.

stitcher, mattress, see quilter (mattresses).

stitcher, overlock, see overlocker.

stitcher, palm, see palm and needle hand.

stitcher, piece, see sewer, piece.

stitcher, point, see seamer, point.

stitcher, print, see sewer, print.

stitcher, spoke; spoke machinist; a machinist g.v. who operates spoke stitching machine which makes a wide hemstitch, larger holes being produced than those made in ordinary hemstitch; threads may be drawn, prior to use of machine to increase effect.

stitcher, white room (textile finishing); whipper, whipping girl; as for stitcher (grey cloth), stitching together lengths of material for passage through staining machines.

stitcher and stringer; stringer; a fabric worker g.v. who secures canvas by sewing and lacing into position as required, on fuselage covering and partitions of aeroplane fuselage.

stitcher-on (calendering); see sewer (calendering).

stitch marker, see stitcher (grey cloth).

steppur, see mender, invisible.

stitcher, see stitcher and stringer.

stripping hand (hoiery machinery); a stripping g.v. who sews into position on men's pants, etc., raised banding, by means of rows of stitches, striping, or who does similar work upon other hosiery goods.

suspender band, suspender maker; assembles, and stitches, by hand or machine, various parts of ladies' suspenders; in small firms, cuts elastic bands; in large, sometimes, also sews suspenders on to women's dresses of corse, by hand or machine; also makes men's sock suspenders.

tacker, bar; basts or tacks round buttonholes of tailored garments, to keep parts together before holes are cut; usually done by hand, but in cheaper work may be done by machine.

tacker (hoiery); tacks labels on to folded and paired hosiery with needles and thread; joins hose into pairs, by tacking, tops with needle and thread.

tacker (tailoring); puts in tacks, i.e. numerous fine, permanent stitches, in pockets and other parts of a garment, to prevent tearing away; cf. balser (404).

tambourer (textile mill); marks or embroiders cloth, either in grey (unbleached) or in finished state, by stitching thereon (by hand or with tambouring machine) a design, trade mark, letters, figures, or other distinguishing marks; cf. tambour worker (407).

tambour worker (lace finishing); works a design on a plain net background, by hand, with a small hook, resembling a crochet hook; cf. tambour worker (407).

taper, tapping machinist; (i) machine stitches tape round scalloped edges of lace curtains; (ii) sews tapes over seams of unlined cloth cage, by power or treadle machine.

tassel band, tassel maker; covers a shaped mould of wood, cardboard or buckram with material and fringe or with a number of threads to form a tassel; inserts silk or other material for tassel through hole in centre of mould, and stitches to mould, by hand. the knocker, tie marker; knacker (seafishing); makes ties, bows, stocks, and cravats, by sewing together, by hand or machine, material and lining after they have been cut out; knots, and sews into position, bows and cravats; is sometimes a bono waker.

the slipper; slip-stitches together, by hand, edges of long ties, after they have been turned and basted.

top sewer; closer, usually by hand sewing, corners of handkerchiefs, tea cloths, tray cloths, etc., left open by soaking, e.g. dresses, blouses, underclothing, by hand or machine, braid, lace, embroidery or other decorative trimmings; (ii) inserts neckband on shirts, by hand or power machine, and adds cuffs or wristbands.

tucker, machine tucker; (i) makes folds or tucks in shirts, trousers, etc., by hand sewing or sewing machine. (ii) folder (machine); makes decorative tucks in blouses, dresses, etc., usually by means of gathering and tucking sewing machine.

twiller (blankets and cloth), see whipper.

twinner, see stitcher, bag.

waterproof garment maker; a machinist g.v. who sews together oiled, rubberized or weather-proofed material which has previously been cut out to shape of various garments; seams may or may not be also completed with rubber solution; cf. waterproof garment maker (408).

weather hat maker; waterproof garment maker g.v. who specializes on waterproof or all weather cloth hats.

weaving hand; mends second-hand clothing, bought by a wholesale dealer for re-sale; sews in and finishes off new hangings, sews on buttons, hooks, etc.; re-makes buttonholes; cf. closer (429).

welter, wetting machinist; wets hose or other limited garments by turning down a portion at edge of garment, by hand, over an attachment adjusted to size of turning required, and joining it to remainder by stitching it in a power-driven sewing machine.

whipper, whipping girl; (i) tweller; whips, or binds, selvages of cloth on a small machine, to prevent fraying; (ii) see stitcher (grey cloth); (iii) see stitcher, white room.

wing coverer, see fabric hand.

428.—OTHER SKILLED WORKERS.

seccordion plester; (i) adjusts machine to regulate size of pleats; feeds cloth, etc., into electrically-driven seccordion pleating machine, which pleats and then presses by taking material over heated rollers; (ii) places material between two pieces of paper, which have been folded in the required manner, and presses with a hot iron, by hand.

bleacher, hair; bleaches hair for wig making, by immersing in solution of hydrogen peroxide, etc., to produce artificial white hair, or to reduce intensity of existing colour.

bleacher (straw plait); mixes chemicals for bleaching straw plait; immerses material in the preparation, and withdraws it when process is complete.

board worker; *hair-dresser's model maker*, *perruquier*, *postiche worker*, *posticheur*, *wig-maker*; general terms for all workers engaged in processes used in connection with making wigs, false beards, moustaches, chignons, toupees, transformations, switches, partings, or other similar articles made of human hair, and including hair-net or lace making, knotting, parting making and insertion, etc., may be skilled in all operations or may specialize in one or two, includes chignon maker, hair-net, or lace maker, knoter, parting maker, transformation maker *q.v.*

body slitter (shirt, vest-hosiery); slits knitted fabric, made on a tubular knitting machine, with hand shears as preparation for cutting (*see* cutter (402), and (403)) and joining up of parts of garments.

braid creaser, *elastic*; applies small heated tool, by hand or machine, to footleth parts of braids, making ornamental lines across edge.

button covering; covers a mould or disk of buttons with linen, cloth, or other material, by hand or machine press; inserts parts of mould, i.e., dome and shank with cloth between. In press and operates press by foot lever or swinging arm.

button coverer, silk shank button maker, or for button coverer, cap peak maker; operates hand or power press which punches out cardboard shapes of peaks or which cuts cap peaks to shape by placing material under knife shape and bringing knife edge into contact with the material.

chalker; *clothing's planner*, *marker*, *marker-out*, *marker-up*, *penicill*, *planner*; arranges paper patterns on material so that cloth is cut economically, at the same time economizes carefully pattern and "way" of material, chalks round edge of pattern on material to define outline for cutting of garment; usually done by cutter (402) *q.v.*

chignon maker; a hair-dresser *q.v.* makes chignons, a kind of roll of hair, worn on the back of the head to supplement women's own hair.

cigarette tape maker; measures and cuts canvas into strips of exact size required for use as endleth bands supporting paper and tobacco in cigarette making machines; joins ends of strips and seams of strips in a hand-crowded machine.

clotheser; repairs, cleans up, and presses second hand clothing, ready for re-sale; cf. *welling hand* (410).

cloth man (tailoring); in tailoring establishment, examines cloth before it is cut, to detect flaws, e.g. uneven thickness, faulty dyeing; passes cloth over a revolving rod several feet from ground placed before window facing north, and looks through cloth against light.

cloth room man (hats, caps); *ex-saver*; examines materials supplied for use in cloth hat or cap making, to discover defects.

collar turner; (i) *see* hand turner; (ii) *see* pattern turner.

covered worker (millinery); covers shapes or wire frames with silk, velvet, ribbon, etc., by hand or machine.

cutter, *ate* folder.

designer; invents new styles and models for clothing, underclothing, hats, caps, corsets, etc., adapting old styles, and often working in conjunction with skilled workers, e.g., cutters, with a view to considering prevailing fashions, costs of production, etc.; sometimes cuts out cardboard models, and supervises making of sample products; sometimes specifically designated, e.g., art needlework designer, corset designer, dress designer, designer of costumes, tie designer.

device maker, *device worker* (hair); plait, knots, or twists locks of human hair into designs or devices, such as wigs in locks, or into cords, chains, or loops.

doll's dressmaker; designs, cuts out, and sews, by hand or machine, garments for dolls.

drawer, *thread drawer*; *weiner*; takes piece of material, as cut or torn to form a handkerchief, and draws, by hand, certain warp and weft threads, working to a gauge; prepares handkerchiefs in this way for spoke stitching, and/or forms designs in corners of handkerchiefs.

dyer; mixes dyes, and either himself dips strong plait, felt or cloth hats, or caps, in dyes, which are contained in revolving vats, or supervises dyer's laborers (429) *q.v.*

examiner, *see* cloth room man; cf. *examiner* (401).

feeder, *fur feeder*, *fur feeder-up* (hats); lays rabbit or hare skins on feed table and guides between rollers into fur-cutting machine.

finisher (cock hats); receives partly finished helmets from cork helmet maker *q.v.*, and trims edges smooth with sharp knife.

fitter-up (hairs), *see* tapper.

folder; (i) folds dress and blouse materials and gets them ready for machine cutting (393) *q.v.*; (ii) *cutter*; folds cloth for tailor's cutter, by hand or in a "cutting" or "rigging" machine.

folder, *box*, *see* folder, handkerchief.

folder, handkerchief; (i) folds finished handkerchiefs into squares; (ii) *box folder*; presses handkerchiefs and folds them to size, ready to be boxed in plain or fancy boxes; (iii) *use folder*; folds in hem, after thread-drawing process, on previously cut or torn piece of material to form box of handkerchief; cf. *boxer* (389), *marker-up* (390), *ornament* (393).

folder, *vise*, *see* folder, handkerchief.

freemason's apron maker; cuts by hand, with shears, oblong piece of white lambkin of prescribed size, and another triangular piece to form flap; tacks and stitches, on power machine, pieces together along two edged lines back with coloured silk; sews ribbons along front edges of apron and flap; stitches on silk rosettes, and fastens two pendants of gold or silver filigree work so as to hang from top of apron; stitches on two pieces of elastic silk fastener as belt, and adds buckle.

fringe-maker; hair pad maker; makes pads of human hair matted with silk, fluffs hair by back combing, mounts hair on a cord and makes into shape required; *obscure*.

fur blower (hats); *fur cleaner*, *fur mixer*, feeds, and operates by means of a lever, fur blowing hydraulic machine in which fur shaves off rabbit or other skins is broken up, mixed, and freed from dirt and curd, and hairs; looks over fur carefully as it passes through various chambers in machine, and removes impurities which are held by small rollers.

fur brusher, *fur cleaner* (hats); feeds fur skin between rollers of curding machine to clear it of dust, blood, matted knots, etc.

fur cleaner, *see* fur blower.

fur mixer (hats); (i) *see* fur blower; (ii) mixes or blends different qualities of fur.

furniture fitter (cock hats); *see* helmet furniture fitter.

goffer, *gofferer*; holds and manipulates flounces or ruffles of garments on table of a machine consisting of heated fluted rollers, which give them a pleated or fluted appearance.

hair frame coverer, *hair frame maker*; makes hair pads, by covering wire frames with human hair, by hand; places hair net over hair, and binds covered frame with tape by machine.

hair mender; cuts to shape, prepares, and fixes on block, the net foundations for wig-making.

hair net, or lace, maker; a hair-dresser *q.v.*, who weaves, by hand, net or lace for use as foundation of wigs, etc., or for use in protection of women's collars.

hair opener; opens and straightens hair comings by use of combs of various sizes; separates white or grey from coloured hairs, by hand.

hair pad maker, *see* fringe-maker.

hair plume maker; makes up plumes of horse hair, etc., used for head-dresses, military helmets, etc., by selecting hairs of appropriate lengths, tying, freely at base with thread, hems glue and dips base and of plume in hot glue, which, by solidifying, consolidates the hairs.

hair preparer, *human hair preparer*; sorts, washes, bakes, huckles, turns, dries, bleaches, and trims human hair prior to its sale as prepared hair, or prior to making up into wigs, transformations, etc.

hair weaver; weaves hair, by hand, on three threads stretched tightly between two upright stakes.

hand turner (collars); collar turner, *turner*; applies a metal plate pattern (template) to piece of cloth cut for collar shape and turns projecting edge of cloth over pattern, with a damp cloth and hot iron, to form turn-in for seam, thus giving correct size and shape.

helmet furniture fitter; *furniture fitter* (cock hats); *helmet fitter*; cuts or drills necessary openings and cuts ventilators, spikes, etc., on helmets, by hand with rivets and hammer or by holding in riveting machine.

helmet maker, *cock*; military helmet maker; tacks hat lining on wooden block and covers it with rubber solution; lets on thin strips of cork, hammers them flat, and files them smooth, then draws in over; repeats process until three layers of cork are attached, then takes cloth cover, stretches it in steam, and sticks it to helmet with rubber solution.

helmet trimmer, *see* helmet furniture fitter.

horse clothier, *horse clothing maker*, *horse rag and blanket maker*; cuts out, stitches together, and finishes horse clothing of woolen, linen, hemp, jute or cotton materials, the work is usually washed-dyed, men cutting and finishing, women stitching, by hand or machine, and ironing; in the case of jute horse clothing, the garment is sometimes made throughout by women.

horse milliner; makes by sewing, plaiting, etc., corsets, ear-nets, suspenders, etc., for horses.

ironer; finishes completed articles or parts of articles by pressing them with a hot iron; sometimes specifically designated according to work, e.g., hat leather ironer, cf. *presser and smoother*.

ironer (gloves); pulls glove on to a steam-heated hand-shaped brass instrument to shape it and smooth out creases; fingers seams with a small smoothing iron, often does work of *hyper-out* *q.v.*

knife shaver; pulls off long hairs from rabbit skin with special knife, pressed against the thumb, which is protected by an India-rubber shield.

knoter; a hair-dresser *q.v.* engaged on knotting hair, by hand, into net or silk foundation of wigs, etc.

lamp shade maker (silk); binds wire lamp shade frame with thread, or other material, cuts out covering material, and sews it, by hand or machine, on to frame; stitches on bead borders, rosettes, or other decorations; cf. *lamp shade maker* (398) and (399).

lanyard maker; cuts cords into lengths, and loops, knots, and splices them, by hand, into lanyards.

layer-out; lays gloves out flat after being pressed; usually done by ironer *q.v.*

layer-up; folds by hand, or in a laying-up or lapping machine, material for tailored garments, shirts, overalls, etc., into a number of layers, determined by quantity to be cut; arranges folds as accurately as possible so as to economize cloth and to obviate misalign of folds in cutting; makes out from template, on topmost fold or layer, lines for cutting; often also does work of chalk and cutter (403) *q.v.*, *cf.* **layer-up** (429).

liner, liner-in (hats); sews soft or paper linings, previously prepared, into hats by hand.

mangler, see presser.

marker, marker-out, marker-up, see chalk.

mask-maker (fabrics); cuts out by press with shaped knives, and binds silk covered canvas or buckram for ball masks or dominoes; sews on tape, elastic or silk fringes, if required; in the case of character masks, sews a mould and dye, and colours and attaches hair, by hand.

measurer; attends customers to take their measurements; may be a cutter (403), fitter (404), a cutter-and-fitter, or a shop assistant (775) *q.v.*, or a man employed in measuring only; sometimes travels from place to place taking customer's measurements.

model maker, hairdresser's, see board maker.

mould coverer, as for button coverer; sometimes specifically designated, e.g. tassel mould coverer.

clothes dresser; using brush or trowel, rubs oil into fabric, before or after making-up of garment, adding drying agent if necessary, and drying in open air or in stoves.

opera hat fitter; fits and sews cover on spring frame; usually also cuts out and sews together parts of merino cover; *cf.* opera hat maker (408).

opera hat spring fitter; fits, by hand-sewing, springs of opera hat on to crown and brim.

ornament maker, millinery; general term for persons engaged in fashioning millinery ornaments by sewing, embroidering or wiring fabric, stamplings, beads, artificial flowers, or other decorative material.

parting maker; a board worker *q.v.* engaged in making partings for wigs; draws single hairs through foundation of net, silk, or skin so as to be in proper direction; inserts parting, when made, in foundation of wig, by hand stitching.

patent turner, collar turner, turner (collars, etc.); inserts piece of material and template on gas-heated bed of patent collar and cuff turning machine, which may be either power driven or foot-driven; applies pressure by means of lever, so that edge of material projecting over template is turned upwards and inwards ready for seaming; work generally similar to that of hand turner *q.v.*, sometimes specifically designated, e.g. collar patent turner, cuff patent turner.

pattern man; cuts patterns, by shears or hand knife, and makes up into bundles; trims edges with a serrating machine.

penstitcher, see chalk.

permaquill, see board worker.

plucker; pierces cloth or other material to work a device in small holes by use of pushing tool or punch; cuts scallops on edge of cloth in some way; planner, clothier's planner, *see* chalk.

pleater; pleats or folds material in pleats, by hand or by pleating machine, presses with hot iron, and sews by hand or machine; *cf.* accordion pleater.

poetische worker, poetischeur, *see* board worker.

pousser, *see* printer, embroidery.

presser, mangle; presses finished articles with heavy irons, or in small cylindering machine, or in hydraulic press; sometimes further designated according to articles handled, e.g. apron presser, blouse presser; *cf.* ironer and smoother.

printer, embroidery; stencil (art stencil); (1) receives perforated pattern or stencil from tracer *q.v.* and, after placing it upon fabric, washes over pattern with a coloured solution, or paint, some of which passes through perforation holes and reproduces design on fabric beneath; (2) fixes print on fabric by drying; (3) pouncer; brushes fine powder (pounce) over stencil which is pressed with hot iron to reproduce and fix design; in Manchester district, printing is done by tracer *q.v.*

prize moulder; places pounce, i.e. straight piece of material, on a leghaped mould of perforated metal, regulates force of steam which is admitted and leaves pounce on shape to dry.

rib-cutting; cuts tubular knitted ribbing into lengths, with hand knife or shears, for subsequent attachment to top of socks, bottom of pants, etc. singer (hats); sings long hairs of fur of skin over fur skin.

riiser (hats); sorts cloth hats or caps into sizes, using brass gauge, and fixes tickets showing size.

skin grader (gloves); examines incoming skins for size, weight, most suitable use, flaws or defects.

skin measure (gloves); gives out leather to cutters (111) *q.v.* and fixes number of pairs that cutter may turn out from a given quantity of leather.

smoother; smooths finished garments with hot iron, by hand or ironing machine; may be either a dry smoother, who smooths and folds articles, e.g. handkerchiefs, shirts, after they have been starched or hemmed, or a wet smoother, who smooths finished articles after they have been laundered; after wet-smoothing shirts, adds body and pans skirt or body, sleeves, and cuffs, in proper manner for selling; *cf.* ironer and presser.

sorter, glove; examines each pair of finished gloves for defects.

sorter, trunk; inspects trunks (paling pieces) of leather from which gloves are cut) after they have been punched out; rejects faulty pieces.

splice (ride pull-through); splice loop on end of cord-ride pull-through, which holds oily waste or other material used.

stenciller (art needlework), *see* printer, embroidery.

stover (hats); dries hats in stove after planking, proofing, and blocking.

topper, shirt topper; fitter-up; slopes shirt, i.e. shapes neck, and sews in front, yoke, collar, and sometimes pocket, by hand or by machine.

tracer; (1) makes perforated pattern or stencil by tracing along outline of design with needle of perforating machine, as in Manchester district, also does work of embroidery printer *q.v.*; (2) copies designs by tracing them on cloth, from original, by means of carbon paper.

transformation maker; a board worker *q.v.* engaged on making "transformations," a kind of wig worn by women to supplement their own hair.

trimming maker (slippers); makes tassels, by hand, forms braid into designs of knots, etc., and sews to pyjamas, by hand or by braid attaching machine.

trimming maker (slippers); sets out from spare pieces of leather, silk, etc., and makes bows, covers buckles, etc. for shoes or slippers, usually on a foundation of buckram or cardboard.

turner; turns tile right side out after sewing it by putting over it a thin length of wood, and at same time inserts lining (if any).

turner (collars, etc.); *see* hand turner, and patent turner, *cf.* turner-out (429).

underser (cork hats); attaches green fabric lining to under part of peak of cork helmet with rubber solution.

veiner (handkerchiefs), *see* drawer.

weigher (felt hats); (1) weighs quantity of fur needed for a single hat, and places it in forming machine; (2) weighs wool "forms" and trims them, if necessary, with shears to adjust weight.

wig maker, *see* board worker.

wig mount maker; cuts out pieces of set or gauze and tacks them together on wooden block to shape of head; sews tapes in certain places to keep foundation in shape; bands edges; passes mount to knoter *q.v.*

wire blocker, hat; millinery wire blocker; forms, in millinery wire, outline of shape of hat on a shaped wooden block.

wirer (hats); sews wire, by hand or by machine, in finished hats to strengthen parts which bear strain, e.g., brim.

429.—OTHER WORKERS.

backgirl (Swiss embroidery), *see* shuttle girl.

bag bundler, *see* for folder.

basket puller; pulls or takes out tacking stitches, after garment or part of garment has been finished.

bander (gloves); pins paper bands round each half-dozen pairs of gloves when completed.

barrier, hairing band; sews, by hand or machine, a strong seam of locked thread where rumps of boot or shoe uppers join, thereby strengthening part which bears greatest strain when uppers are pulled on to last.

batter-off (clothing); makes, by sewing, a bar, a strong seam of locked thread at one end of buttonhole to fasten off machine button holes; also stitches bars at each end of pocket slit, etc. for strengthening purposes.

baster-out (boots), *see* hammer-off.

benchman, bench-hand; (1) *see* getter-off, (2) putterer-up; prepares boot repairing outfit, for sewing machine, by disamping it, cutting to shape, skiving edges, etc., takes off worn parts of old boot and shoe leather, i.e. part of old sole and top piece of heel channels new soles ready for fitting on to machine. rivets if article is not to be stitched.

better (boots); plougher-out; levels welt of boot or shoe by hand with a welt plough, i.e. a specially shaped knife, or by machine, in preparation for edge trimming.

bitter, forepart; a bitter *q.v.* who specializes in leveling welts of foreparts of boots and shoes.

black edger (gloves); edge blocker; stains, with a blackened pad, as recovered from machine, the white edge left on black kid gloves.

blocker; blocks edges and insides of clog-soles, by hand, with a brush.

bobber, needle bobber; takes needles out of Swiss embroidery machine and hand patchwork machine, after use for a particular pattern, in readiness for re-setting.

bobber; touches up inside of hard toe hat, by painting it with dope, where proofing has not been properly done.

brander; infilder, worker (tents, tarpaulins, etc.), stamper, stenciller; (1) one of two workers who together stencil names, trade marks, etc., on sacks and bags, by hand; stretches sack etc. holds stencil in place, and paints over it with stenciled brand; (2) *see* printer.

brander, sole, *see* stamper, sole.

**brush machine operator, brusher-
(boots), *see* polisher, bottom.**

brusher, straw plait brusher (straw hats); brushes straw plait by hand after it has been bleached and dyed.

brusher, brusher-off (tailoring); **cleanser** (tailoring); brusher (tailored garments before they are packed); **brusher-up**; **cleanser**; **boot cleaner**; removes stains or marks, produced on boots during manufacture, and puts final polish thereon, either by hand, or with a machine consisting of a revolving shaft, bearing cloth pads and soft brushes.

buffer, bottom buffer (boot, shoe); **fur scourer**; holds boot or shoe against revolving drum of a buffing machine, which gives an extra smooth scouring to sole bottoms by rubbing grain of leather; may scour boots by hand with sand paper and emery cloth.

buncher, straw plait buncher; ties, by hand, with string, straw plait into bundles of certain numbers of lengths ready for despatch.

bummer (boots); **rub boots**; or **bummer**, e.g. back piece of boots and shoes with wax ball and hot iron, to give a smooth bright (or burnished) appearance; sometimes specifically designated, e.g., heel bummer, strip bummer.

buttoner; **sew buttons** by hand, or **sews or rivets them** by machine, on boots, shoes, shirts, gloves, knitted underwear, etc.; usually specifically named according to article, e.g., collar buttoner, cuff buttoner, glove buttoner, shirt buttoner, etc.; **button hole cutter**; cuts button holes in uppers of boots by hand with chisel and mallet on a block; or holds front of upper under punch of button-hole cutting machine; **calendar girl**; a presser (428) who smooths finished embroidered articles with small calendaring machine.

canvasser; prepares canvas for use in coat making, by dampening and drying, to ensure complete shrinkage before use.

copper (felt hats); places paper caps over crowns of felt hats to protect after finishing process; **cover** (velvet hats); makes nap of velvet hats with a card (a brass like holder set with teeth of steel wire) by hand, after brushing.

crammer (boots); **see scotchman**.

channel closer; relays lip of channel (see channel opener); runs it down and then hammers it flat, after stitches have been made in it, which bind sole to welt; works either by hand, with a file, or by machine; often done by lever, e.g.,

channeler, **sole channeler**; operates channeling machine which cuts a slit (or "channel") round edge of inner or outer sole of boot or shoe, in which the stitches are run, the "channel" then being closed up round the stitches to protect them from wear; sometimes specifically designated, e.g., **isole channeler**, **outside channeler**.

channel opener, **sole channel opener**, **rubber-up**; takes channelled sole and applies lip of channel to whirl attachment of machine, which opens channel and causes lip to stand almost at right angles to sole; sometimes also cuts channel; e.g., **channeler**; often further designated according to part of boot worked on, e.g., **isole channel opener**, **outside channel opener**.

chopper (boots); pieces rough or scrap leather on upper part of shape-last, (shoes) on last, and strikes leather with mallet and so cuts out a small section of leather which is used for building up chopper heels.

closer, clog; affixes clops to clogs by means of machine; sometimes done by clog settaman (415) q.v. or by parker and stocker (449) q.v.

clopper (gloves); **see domer**.

cleanser, **bag**; **duster**, **duster girl**, **whiter girl**; feeds second-hand socks (inside out) into power-driven duster machine, which (1) takes them over a roller between brushes, removes dust by suction, and returns to front of machine, or (2) revolves them in polygonal cage; stacks bags after cleaning.

cleanser, boot cleaner; **see brusher-up**, **cleanser**, **copper**; **sew**, with sand, brusher, etc.; **copper boilers** used in straw hat making processes; **cleanser, dye vat** (straw plait dyeing), as for **cleanser**, **copper**.

cleanser, hat; **see scourer** (hats). **cleanser, sprig**; **avine polisher**; removes paint (or ink) from heads of sprigs (rivets), with a blunt knife, after boot and shoe soles have been painted or inked and rule smoothed with polishing rag.

cleanser, stitch (boots); cleans stitches of welted or stitched boots and shoes with a bone tool which has a partly corrugated surface and a solution of gum-arabic and oxalic acid (for black coloured welts) or of gum only (for black welts).

cleanser, straw plait; cleans straw plait which has been soiled in transit or storehouse, by washing in tanks of water and drying in hot air chambers; **cleanser** (tailoring); **see brusher** (tailoring).

clipper; clips, with scissors, loose threads from embroidery.

clip puncher and **fastener**; **see fastener**.

collar stamper; stamps size, initials or devices, on inside of collar, by hand or machine, using indelible ink.

copper minder (straw plait); **dye vat watcher**; attends to copper boilers, or vat in which straw plait is dyed.

copier (cloths); **see tacker**. **crosser**; assists planer (408) q.v. by opening and refolding "form" of felt hat each time it passes through multiple planing machine, or which it is being planed by hand, to prevent felting of seams and to ensure uniform shape.

cutter, appliqué (embroidery); cuts away surplus material, with scissors or power-cutting machine, after preliminary work has been embroidered.

cutter, fourchaita; forget cutter; cuts side pieces for fingers of glove (called fourchaites or forgets) from odd pieces of leather, by hand with scissors and pattern; **cf. glove cutter** (414).

cutter, linen; cuts linen lengths into small round pieces for linen buttons, using hand or machine press.

cutter, lining; **puncher** (glove lining); a puncher q.v. who places punch on fabric and releases press which punches out several layers of glove lining fabric at one operation; **cf. press cutter** (408).

cutter, thumb; cuts glove thumb (fabric gloves) by hand or power press, or (leather gloves) by means of shears.

cutter-out; **see parer** (embroidery).

dampener (boots); **setter**; soaks leather heels in clean soft water; drains them, on saddles, and places them in dark, or soaked light, and mellow and ready for making into boots, etc. **dampener-down** (boots); smooths bottom of sole of boot or shoe with a pad of clean, white flannel, dampened with special solution, as a finishing touch, to bring out grain.

domer, glove domer; **clapper**, **fastener riveter**; attaches, by machine riveting, domes (clip fasteners) to gloves; places fastener on glove in position in machine, and pulls lever.

duster, duster girl; **see cleanser**, **bag**.

dyeer's labourer; stirs hats in dyeing vats with a pole, and assists dye (416) q.v. generally.

dye vat watcher; **see copper minder**.

black blacker; **see black edger**.

errand girl; **see matcher**; **cf. errand girl** (758).

eyelot hole maker; **see eyeletter** (corsets).

eyeletter; pierces, by hand with stileto, or by hand machine, small holes or eyelets in tailor's cloth, or other textile material, to be worked round with strengthening stitches by button hole (419) q.v.

eyeletter (boots); **hooker, puncher**; (1) puts eyelets, studs of hooks in boot uppers, by hand, with punch and hammer; (2) feeds top and bottom

parts of eyelet to hoppers of automatic machine; places boot or shoe upper in position in machine and releases lever.

eyeletter (braces); operates press which fastens leather tabs to metal parts of braces by means of eyelets.

eyeletter (corsets); **eyelot hole maker**; operates a hand or power-driven press, which carries corset automatically under two punches, these cut circular holes in cloth, insert metal eyelets therein, fold eyelets over, and press them down tightly.

eyeletter (feels); **see clip fastener**, **stamps**, by hand machine, vents and perforations in crown after hat is made.

eyeletter (tents, tarpaulins, etc.); **grammetter**; (1) cuts holes in canvas and sews with thread round edges by hand; (2) sews round eyelets with special machine; (3) inserts brass eyelets with a hand press machine.

fastener, fastener flaxer, **clip fastener**; **clip puncher** and **fastener**, attaches, by machine, clip fasteners to peaks and fronts of caps, using a hand punching machine.

filler, bottom (boots); fills in cavity that would otherwise be formed between sole and inside, before it is attached, with some kind of filling such as leather, leather scrap, tanned felt, sheet cork, ground cork and cement, ground leather waste or canvas; (2) sews round eyelets, may fill with cardstock.

filler (down); (1) (hand) stuffs down, feathers, or kapok into made-up pillow or quilt covers, and packs it into place with filler-pipe or stick; (2) (machine) guides funnel or filling machine and regulates amount of down or kapok put into made-up quilt covers.

fingerer (gloves); closes, i.e., sews up, finger pieces by hand or, more usually, by treadle machine.

finisher; general term for any worker engaged in any final process of making up textile goods, e.g., sewing on of buttons, eyeletting, felt finishing.

folder; folds finished articles in preparation for packing; sometimes specifically designated according to work handled, e.g., **bag folder**, **belt folder**, **scarf folder**.

folder (gloves); folds trunks, fourchettes, and thumbs in half-dozen folds, by treadle machine, and hands them ready for sewing.

front girl (Swiss embroidery); threads needles at front of Swiss embroidering machine while it is working, using a small book.

fudger, **stitch fudger**; a wheeler (boots) q.v. who works round edge of sole.

getter-out; bench hand, benchman; examines boots when completed and performs final finishing operations, e.g., fills defective channels, polishes off and pairs up finished articles, ready for stock room; also does diggering and setting; e.g., **marker** and **digger** (414).

glosser, boot; **boot polisher**, **boot shiner**; applies polishing wax, paint, or stain to a boot with a brush, rubs it over with a sponge dipped in gum-solution, and polishes it up with a revolving power brush.

grammetter, **see eyeletter** (tents, etc.).

hammerer-out (boots); **beater-out**; hammers upper of a boot all round, after it has been stitched together, to improve its appearance.

hammerer-out (boots); hammers leather, which is to be used for soles of boots and shoes, to condense fibres, make leather firm, and reduce liability to stretch.

hat leather flanger; places hat leather in position in blocking press and pulls lever so that edge of hat leather is pressed into shape, a fringe being formed for use in attaching to hat.

hat leather gas liner, **hat leather liner**; passes hat leather through gas-heated machine, which impresses a mark on edge of leather.

bat leather turner; turns up edge of leather or imitation leather bands for men's felt hats, in readiness for stitching or cementing down.

heel roll machine man; feeds and operates a machine which covers edges ("rolls") of boots with heated wax or color. Used link after they have been built up, and gives final polish by means of a brush.

bobber (boots); drives in hobnails round rims of soles of heavy boots, by hand with a hammer.

hooker, booter-up; layer-up, *pudder-up* (shirts); folds cloth to required size for multiple cutters by hooking cloth first one side then the other of a frame; cloth is then creased at folds and out; cf. layer-up (428), hooker (443).

hooker (boots), see eye-let (boots).

inflator, glove; removes creases from fingers and thumb of gloves by fitting glove on to an iron band, heated by steam or electricity.

initialiser, see brander.

inker (boots); bottom pointer, painter, stoker (cloths); applies black ink or paint, with brush, to soles, edges, or heels of boots, by hand; sometimes specifically designated, e.g., edge inker, heel inker, strip inker, waist inker.

tipper (cloths); tips; beats iron on to sole of cloth, by hand with hammer or by holding cloth side in place on nailing machine.

japaner; an inker q.v. who specialises in coating bottoms of boots and shoes with japan.

knocker-up (boots); powder; cuts or grinds down flat, by machine, edges of uppers of boots and shoes, after they have been attached to insoles by laster (414) q.v.

knottier (marks, bags); ties or knots ends of threads, after bags and sacks have been sewn by machinist or over-bed machinist (419) q.v.

knott-tie (boots), see lacer.

labeller; sees padded labels on centre of inside of unlaced bags, by hand.

ladder (boots), *knott-tie*, *tier-over*, *tier-up*; laces up boots or shoes with a lacing instrument, and ties a knot, to prevent foot gaping open while it is being laced and sewn.

laser, corset; threader; (i) threads corset lace or cord through eyeleted holes in corsets and stays in readiness for boxing and packing; (ii) is Lac-cushie, threads lace with ribbon, by hand or by machine, before it is put on corset for trimming; cf. laser (Portsmouth) (409).

leather lasses, i.e., overseers, by hand, leather lasses into felt hats; obsolete.

layer-up, see hooker.

leveler, bottom leveler, levelling machine operator; (a) levelling levels, or flattens, bottoms or well leathers, of boots or shoes; places bottoms on iron foot and releases lever causing another foot to come up with great pressure upon the first; (ii) clamps shoe or boot in machine and starts-up eccentric rollers which exert pressure on boot and so rub it smooth; in both cases above, often also does work of *knott-tie* laser q.v.

maker-up (cloths), see knitter-on.

marker (boots); (i) strip marker, tracer; marks, by hand or machine, facing of upper where a row of stitching is required to be made by sewing machinist (414) q.v.; (ii) marks a plain line round bottom of a boot or shoe, between sole and heel, part to be polished by fiddle polisher q.v.; obsolete.

marker, lining, see marker, size.

marker, size; size stamper; (i) lining marker, lining stamper; marks size, with hand stamp, on pieces of leather, linings, etc., or on finished boots and shoes; (ii) measures and stamps corsets with size and style

number; (iii) marks sizes of hats on inside, prior to insertion of special labels, etc.

marker, strip, see marker (boots).

marker (leats, tarpaulins, etc.), see brander.

matcher, matcher-up; errand girl, messenger, room girl, trotter; finds colours, linings, thread, buttons, etc., to agree with colours of garment, and runs errands generally.

matcher, colour (straw plait); a dyer's assistant, who, during dyeing process, lifts, by means of loops of string in ends of plait, small pieces of straw plait from vat, dries ends and takes plait to dyer (429) q.v. to see if dye dries correct colour.

messenger, see matcher.

mindar (embroidery); threads needles and fills chutes on power pantograph machine; puts needles in hand pantograph machine, etc.

nailer (boots), see rivater.

nailer, loose (boots); a riveter q.v. who operates an automatic "loose-nailer" riveting machine, which loosely attaches middle sole, or sometimes whole sole, to heels, with brass or iron rivets to keep heat work in place pending permanent attachment by nailing or sewing.

nail-on (cloths); maker-up, *pudder-up*; nails upper on to clog sole, either by machine or by hand; usually done by scotman (415) q.v.

maximkaiser, see accuser (boots).

nickelizer; overlocker; cuts away, by hand or machine, surplus fabric from edge of maligned design, embroidered or fabric or garment.

oak liner, oak-aligner (boots), see painter.

overlocker, see nickeler.

padder, bottom padder, heel padder, see polisher, bottom.

painter, bottom painter; stainer, bottom stainer, oxidizer, oak liner; applies paint or stain to bottom of a boot or shoe with a brush, by hand; cf. inker.

parer, edge, see trimmer, edge.

parer (embroidery); cutter-out, trimmer (embroidery); finishes off article by hand; trims edges and cuts away surplus material; removes loose threads, etc.; usually done by apprentices.

parer, fore part (boots); an edge trimmer q.v. who specialises in trimming fore-parts of boots and shoes.

parer, heel (boots); heel trimmer; shapes heels of boots and shoes by removing superfluous leather from edge, usually by holding heel against revolving cutters of paring machine; sometimes by hand with knife.

parer, piece sole; pares pieces of leather called piece-soles, or sole pieces, which are added to soles of new boots to extend their length, the heel, when affixed, hiding joint; holds sole piece in paring machine against revolving cutters.

parer, seam (boots); boot upper trimmer, edge trimmer; pares away, by hand or machine, surplus material behind line of stitching when lining is attached to upper of boot; operation usually done automatically by knife set in sewing machine and watched by machinist.

paste fitter (boots); pastes parts of uppers together to keep them in position while they are being sewn into pastar (boots); (i) joins together by applying paste with a brush, two thin pieces of leather together to form material from which insoles and stiffenings are; (ii) general term for anyone who pastes any part of boot or shoe, e.g., socks, stiffenings, half-lifts, sometimes specifically designated, e.g., heel pastar, sole pastar; may paste toes of uppers, before they are heated, to harden them, or linings to vamps, or fancy to caps on vamps, ready for machinist; or may do other pasting work.

pastar, heel; joins together with paste pieces of leather (called "heel-lifts") from which a boot or shoe heel is built up by beeler (414) q.v.; obsolescent operation, now usually done by beeler q.v.

pragger (boots); attaches soles to heavy boots intended for use under wet conditions, by driving in wooden pegs with mallet and cutting off level on both sides with knife or by holding boot in pegging machine.

pragger-up (shirts), see hooker; obsolescent.

perforator (boots); puncher; operates a machine which stamps out ornamental holes in upper edges of toe-caps, edges of vamps, or other parts of boots or shoes.

perforator (embroidery); prickier; perforates designs, in preparation for tracing, by working special perforating machine, hand or power-driven, in which needle either pricks along outline of design automatically or is made to do so by operator; or by running. Commonly machine over design, with no cotton in needle.

perforator (felt hats), see eye-let (felt hats).

perforator (gloves), see preener.

picker (wool felt hats); (i) extracts carefully, with tweezers, pieces of proof or bits of fur which have missed dressing operation; (ii) picks seeds out of bodies of wool right before they have a fine break; (iii) picks tar or paint spots from wool "form" with tweezers.

picker-up, see rodder-off.

plaiter, plaiting straw cutler; weaves or plaits by hand and machine, using a splitter fitted with radially-cut cutters, single strands of straw into various widths, if necessary splitting straws and cutting them into lengths.

plaiting straw drawer; arranges straws of similar length from straw trusses as received in factory in bundles all tapering in same direction.

plough-out (boots), see Miter.

polisher, boot, see glosser, boot.

polisher, bottom (boots); padder, bottom padder, brusher, brush machine operator. heel padder; polishes bottom of boots and shoes after they have been soaked or painted, by holding them in a machine having a revolving shaft carrying pads (cloth or leather) and brushes.

polisher (cloths); sizer; finishes leather surfaces of clog uppers with size by hand with a sponge; usually done by packer and stalker (410) q.v.

polisher, fiddle; a bottom polisher q.v. who polishes "fiddle" or "waist" of boot or shoe (middle part of bottom, between sole and heel) by smoothing it with sandpaper, rubbing it over with paste or gum, and when dry, rubbing it with a bone tool.

polisher, spring, see cleaner, spring.

pounder; (a) see knocker-up; (ii) see leveler.

preener (gloves); perforator; punctures holes in backs of gloves, by means of a preener, or stamp, and wooden mallet, ready for hand embroidering of points by tambourer (411) q.v.; obsolescent.

preparer (boots); prepares material for skilled workers in any department, but most commonly for laster (414) q.v., for whom he may perform any or all of the following operations: tacking on insoles and inserting stiffenings; skiving (trimming), by hand, uppers and bottoms to remove roughnesses or irregularities; assembling bottoms and uppers; opening shoe last, etc.

preparer (cloths); powderer and eye-letter; prepares uppers for machinist by punching holes, fixing eyelets, and skiving (trimming).

preparer (hats); sorts, and puts together, ready-cut, linings, canvases, peaks, etc., ready for machinist (419) q.v.

pricker, see perforator (embroidery)

printer, bag printer, sack printer; brander; marks bags or sacks with owner's name or other distinguishing marks, by laying them on bed of a sack printing machine; sometimes also does work of block cutter (308) *q.v.*

projector (gloves); sews small pieces of leather at tops of slits, by hand, to prevent tearing.

puffer (boots); prepares puff, i.e. a stiffening, and inserts in toe of boot under toecap, to give solidity and to ensure that toecap retains its shape. (swansdown puff) prepares by mangleing rubber solution on glove, (leather puff) first smears with gum or glue; (felt puff) beats on hot plate to soften tar or pitch filling and quickly inserts under toecap.

puffer, glove; sews a gather into gullet of glove at wrist; may also insert a piece of elastic to tighten glove round wrist.

puncher (boots); (i) see perforator. (ii) see creolator; sometimes specifically designated, e.g., fancy puncher, toecap puncher, vamp puncher.

puncher, puncher of trunks (gloves); shaper, washer; lays track (oblong strip of leather) on sole in machine, and operates press which punches out parts of gloves; variously named according to work done, e.g., fourchette puncher, thumb puncher; cf. tranker (411).

puncher and sylet (dogs), see preparer.

puncher (glove lining); see outter, lining.

putter-on (clogs), see nailer-on.

putter-up (boot repairs), see benchman.

receiving-room assistant (tailor's); removes to warehouse, finished garments which have been pressed, and generally needs power (404) *q.v.*

reeler (straw plait); winds straw plait into bunks of specified sizes, places metal spool on a spindle and winds plait thereon by turning a handle.

river, shoe riveter; heel sprigger, outter, sprigger; (i) attaches bottom to boots and shoes with rivets or screws, either by hand with hammer on last or by hand with hammer in riveting machine, which is controlled by hand and foot levers. (ii) executes repairs by riveting process, by hand or machine.

river, fastening (gloves), see detector.

rodder-off (straw plait); picker-up; by means of binding thread, ties straw plait on rods after it has been bleached or dyed; places rods in open air to dry or in drying room.

roller; passes leather intended for use in rough stuff room or press room (i.e., to be cut up for soles, insoles, stiffeners, etc.) through a rolling machine, to flatten and condense it, often does other labouring work in rough stuff room.

room girl, see machiner.

rosetter; makes rosettes or bows as trimming for ornaments.

rough rounder (boots), see runner-rounder.

rubber, seam; rubber-down (boots); rubs down seams on two pieces of "upper" material, after stitching, with blunt tool and opens out pieces.

rubber-up (boots), see channel opener.

runner, ribbon; threads, or runs, ribbons through articles of clothing, with a bekin.

runner, tip and lining (hats); gathers top of hat lining by running a thread through it, by machine, preparatory to fixing in hat.

runner-round (boots); rough rounder; shapes sole and welt ready for stitching, either by hand or machine; *cf.* for rounder (414).

sander, heel (boots); a scourer (boots) *q.v.* who specializes in scouring heels. **scourer (boots);** sawmaker; rubs surface of soles or heels of boots or shoes, by hand with sandpaper, or on emery-wheel machine, to remove "grain," and leave surface

smooth for finishing processes; sometimes specifically designated according to parts upon which he works, e.g., bottom or sawmaker scourer, heel scourer, heel-brand scourer, shank scourer, tip scourer, waist scourer.

scourer, fine, see buffer; sometimes specifically designated, e.g., bottom fine scourer.

scourer (hats); hat cleaner; dips hats, after pressing, in a solution of soda, and scrapes surface clean with a piece of wood.

scourer, welt; schoen; a scourer (boots) *q.v.* who smooths a type of welt used chiefly for children's shoes and formed by stitching together, from outside of shoe, the insole, upper and sole.

seal, a piece (boots); presses seat-pipe, a piece of leather which forms base for attachment of heels into heel part of a boot or shoe, by hand with clamp and tacks, or, by sewing machine, in preparation for attaching heel.

seal tapper (boots); mends "seal-piece" (piece of leather which forms foundation of heel) to last, by hammering it by hand and fastening with tacks.

setter, edge (boots); closes up cracks between sole, middle-sole, and welt (if any) after sewing or nailing, by hammering and burnishing edges, usually by holding in place in ironing and burnishing machine.

shaker, bag shaker, sack shaker; shakes used sacks, by hand, or in a "dusting machine" (see cleaner, bag), to remove dust and dirt.

shaker girl, see cleaner, bag.

shaper (gloves), see puncher of trunks.

shoe examiner; examines finished boots and shoes and certifies superficial damage done during handling between different processes; work sometimes done by trimmer *q.v.*

shuttle boy, shuttle girl (Swiss embroidery); back girl; fills shuttles at back of power-driven Swiss embroidery machines.

silk tie knitter; knits pieces of silk to shape for neckwear; finishes off with needle and thread; makes fringes and tassels on the ends of scarves, mufflers, and ladies' neckwear.

sluer; (i) (clogs), see polisher; (ii) (leather hats) sorts hats into sizes; (iii) see tier-up; (iv) see marker, shoe.

slitter (gloves); machines welt-binding on slit of glove.

slosher (slang), see inkler.

soaper (clothing factory); rubs, by hand, piece of soap lightly on seams and other parts of garments, to facilitate pressing; usually done by presser (404).

solutioner (boots); cementer; (i) uses a rubber solution or cement, on lining of upper, in preparation for passing it to machinist (414) *q.v.* to be "dagged over"; or applies a rubber solution to uppers, to prepare them for edge-folding machine.

(ii) fixes patches to boot uppers with solution, by hand; (iii) attaches soles or heels with solution.

sorter; general term, particularly in boot trade, for anyone who works in stock room or factory sorting out articles, materials, or tools, according to size, shape, quality, etc., often using measuring instruments in finer work; generally further designated according to kind of goods handled, e.g., plating straw sorter, insole sorter, last sorter, lift sorter, middle sole sorter, palm sorter, sole sorter (who also stamps gauge, or thickness, on sole), stiffening sorter.

spiker (clothing factory); places cloth over spikes to keep in position during cutting, absolutely.

splitter, palm leaf (straw plait); cuts palm leaf into pieces for use in straw plait making, using hand knife; usually done abroad.

sprayer (gloves); works, by hand stitching, apoor point at top of glove pointing, absolutely.

sprigger, heel sprigger (boots), see riveter.

stainer, boot, see glosser, boot.

stainer, bottom (boots), see painter.

stamper; in hat trade, may be hat stamper or label stamper, see embosser (337); in boot trade, in which he is variously known, as insole stamper, size stamper, sock stamper, size stamper, see size marker, and sorter in *ferm* and *terpina* trade, see brander.

stamper, size; lining stamper (boots, gloves, etc.); size marker, size.

stamper, sole; sole brander; a size marker *q.v.* engaged in marking boot and shoe soles with die and stamp machine.

stamper (textiles); prints patterns for embroidery upon cloth, by selecting through perforated paper with point, stenciller, see brander; cf. embroidery printer (428).

stringer, plait dyer's stringer; by means of a needle, puts thread or string through straw plait previous to dyeing or bleaching.

studder (boots); hammers nails or studs into soles and heels of boots by hand.

tailer; sews labels, indicating size, style, etc., on to corsets, by hand.

tacker (boots); (i) old-fashioned name for lester (414) *q.v.*; (ii) tacks, with small nails, various parts of boots or shoes together, e.g., tacks up last or "rands" on heel by hand-tacking machine; tacks insoles on last; tacks soles, by hand or machine, after boot is lasted, tacks piece-soles on to last by hand or machine, etc.

tacker (clogs); coupler; fastens a pair of clogs together by a strip of leather nailed to each; often done by seamstress (415), or by packer and stacker (340) *q.v.*

tacker (cloth hats); stitches peak to body of cap by hand, in caps where patent fasteners are not used.

tacker (gloves); finishes, by tacking with thread, finished gloves together in pairs ready for market.

tack puller (boots); removes tacks from boots, by hand or machine, after vamp has been pounded and shoe set on last.

tagger (leather laces); (i) pierces end of lace; threads wire through holes; lays lace ends with wire in slot of twisting machine and turns hand wheel causing wire to twist round lace ends into points; (ii) *see* for tagger (mohair, silk, etc.).

tagger, lace tagger, boot lace tagger, stay lace tagger (mohair, silk, etc.); operates, by foot lever, a machine which attaches metal tags to ends of laces; places lace end on opening and lays both end on bed of machine.

taker-off; removes tags from printing machine after they have been marked by printer *q.v.*

thread drawer; draws threads, by hand, in preparation for hem-stitching by hemstitcher (410) *q.v.*

threader; (i) threads needles for Swiss embroidery machine, using hand threading machine; (ii) *see* laster, corset.

thumber (gloves); sews thumb pieces into gloves, by hand or machine.

tier-up, tier-up (boots), see larer. **tier-up;** (i) ties up cut materials for cloth hats into bundles, ready for machinist; (ii) (furling); ster; sorts cloth cuttings and cut out trimmings into bundles according to size, and to garment for which they are intended, e.g. coats, vests, or trousers. **tier-up;** also takes up cut material with distinguishing slips under string, and passes to fitting-up department.

tipper (clogs), see ironer.

tie capper (clogs); an ironer *q.v.* who nails on metal toe-caps of clogs by hand.

milker (grain milling), a machine minder *g.v.* in charge of machine which mixes different kinds of wheat, adjusts, by means of a screw, the rollers at foot of chutes, by which flow of different kinds of wheat, delivered through each chute, is controlled; wheat is then automatically delivered, in correct proportions, on to a running belt, which conveys it to elevators serving grain-cleaning machines; takes samples from time to time to see that wheat is being mixed in correct proportions; work usually done by screenerman *g.v.*

pearl barley maker, *see* machine minder, pearl barley.
purifier man; keeps in running order, a number of purifying machines, which are fed automatically, through chutes, with semolina, middlings, and "dunst," and which separate small bran particles from remaining flour by a wind current; starts and stops each machine, as necessary, by operating a hand handle, slides or to discharge driving belt; regulates current of wind, when necessary, by means of valves; *cf.* aspirator man, silksman.

roller (rolled oats); a machine minder *g.v.* in charge of one or more machines fitted with heavy rollers for crushing oats; regulates, by a hand-moved slide or damper, supply of oats, which pass automatically from milling machines through chutes; product passes automatically into another chute, and is bagged by packer (349) *g.v.*

rollerman (flour mill); grinder, corn grinder; a machine minder *g.v.* in charge of several milling machines in which corn is ground by fluted steel rollers; turns screw to adjust rollers, starts and stops machine by moving a lever; feeds product with his fingers from time to time to ensure correct fineness of grinding; sometimes also in charge of other machines, *e.g.* separators; *cf.* separator minder.

scalper, scalpier, *see* silksman, second.

screenerman; grain cleaner, screener; a machine minder *g.v.* in charge of whole series of grain cleaning machines, *i.e.*, separators, scourers, washers, winnowers, conditioners, brush machines, and machines for extracting oats, barley and corkle seeds; distinguished from actual milling machines; grain passes automatically from one machine to another; with assistance of labourer, adjusts valves governing air current so that correct proportion of husk, etc., is separated from grain; adjusts corkle cylinders and sets grinding rollers by means of screw adjustment, lever or other device; starts and stops machines by moving levers which engage the discharge driving belts; his rollers, etc., prevent various sets of machines becoming unbalanced, by cutting out one set, or by combining two or more sets, as required, according to their relative capacities; keeps machines and all cleaning house clean and in good working condition; sometimes also does work of mixer *g.v.*

separator minder; attends machine which separates germ from starchy portion of maize in manufacture of corn flour or of maize starch, or which separates germ together with starchy portion from hard gritty portion; cleans perforations of machine sieve; bags product of machine; adjusts wind-valves so that correct proportion of husk, etc., is taken from grain; cleans machine and sometimes does sweeping, trucking, and other odd jobs; sometimes also has charge of other machines, *e.g.* grinding machines.

sheller, oatmeal; sheller man, *see* groat maker.

silksman, first silksman; flour dresser; watches several dressing machines (which are fed mechanically from grinding machines by chutes, and automatically sift flour, and sort

it according to grades of fineness) to see that they are working correctly; takes samples of flour from each machine from time to time, by hand, with a scoop, for examination by head miller; if sample shows that a silk is burnt or broken, stops machine by slipping off driving belt with a hand lever, and repairs silk by patching, with a piece of calico or other material, or replaces it with a new silk; sometimes also attends to blanching machine; *see* blancher (418) or does work of second silksman *g.v.*

silksman, second; scalper, scalpier; *see* first silksman *g.v.* but serves as finer, and made of wire instead of silk.

snouterman, *see* screenerman.

stoneman; corn grinder, grinder; *see* rollerman *g.v.* but works in a mill where stones are used for grinding instead of rollers; dresses grinding stones, as required.

waterman; a machine minder *g.v.* in charge of a series of machines for cleaning grain by wet process as distinguished from screenerman *g.v.* who cleans grain by dry process; adjusts slides of mixer to control mixture of grain; adjusts separating valves of stoming machine, which separates stones from grain; controls force of water flow in grain rinsing machine; switches on and off whizzer, watches gauges and regulates steam coils in hydraulizer, in which grain is dried.

433.—BAKERS AND PASTRY COOKS.

(Including BISCUIT MAKERS).

assistant (cake decorating, etc.); decorates cakes, pastry, or biscuits, with butter cream, icing, jam, etc., using tubes and small moulding tools, and embellishing with nuts, cherries, etc., as directed; copies samples received from designer *g.v.* or works under direction and supervision of designer.

assistant mixer, *see* mixing machine minder (biscuits).

baker; (i) in large factories, general term covering all skilled workers engaged in bread making, *i.e.* dough making, table work (moulding, etc.) and baking, including kneader (hand), mixer, machine minder (bread), moulder (bakery), moulding machine minder, ovenman *g.v.*; (ii) in small establishments, an experienced worker able to perform all operations connected with baking; is senior in bakehouse and directs operations of mixing, moulding and baking, checks temperature of oven, etc.; *cf.* second hand, third hand.

baker, biscuit, *see* ovenman.

baker, hand biscuit; in hotel establishments, mixes, kneads, cuts out, etc., by hand, pastry required for biscuits and cake making; may also bake in oven, *see* ovenman.

baker, Jewish bread; performs any set of operations involved in bread making at Jewish bakery, *i.e.* dough making, table work, etc., in case of making ordinary white bread containing yeast and salt; also participates in and superintends mixing of rye dough containing salt but no yeast; kneading of dough, and baking, and wiping over with potato water during baking of rye bread.

baker, matzo (or matzoh); using a spill, *i.e.* a metal disc mounted on a long wooden rod, expeditiously rotates circular matzo around, *i.e.* Jewish Passover bread, as it completes the circuit in a revolving open-fronted oven, the fire of which is built round the edge of the oven; stokes fire and regulates speed of revolving oven by power switch; when trays are used, places trays containing matzo bread into rotating oven and removes when matzo is baked.

baker and confectionery performs any or all of duties in a bakehouse, *see* baker, pastry cook; is usually engaged in small establishments, where he makes and bakes bread, mixes ingredients for cakes and pastry, and either himself shapes and bakes cakes or superintends shaping and baking.

baker's assistant (male); is employed in a small establishment to assist baker *g.v.* in any of the kneading operations, to attend to oven, to stoke fire, to carry loaves to and from oven, etc.; *cf.* second hand, third hand.

biscuit makings; general term for any process tending to doughing, cutting, dropping, rolling, or other machine used in biscuit making, including brake operator, dough breaker, machine minder (biscuit), mixing machine minder *g.v.*

boardman, *see* table band.

brake operator, brakeman, breakman; roller; is one of two men who operate brake which is used in pressing, with rollers, kneaded paste into sheets, preparatory to biscuit stamping; *see* biscuit machine minder, cuts, from a tub, pieces of dough, approximately 1 oz. each, according to size, which he puts into rollers of machine, raising or lowering them by means of levers; sets rollers in motion, feeds dough thereon and stops machine when dough has passed through; turns in ends and sides of flattened dough, leaves space between rollers, reverses machine and re-rolls dough; continues these operations until dough has acquired correct consistency and thickness; finally, cuts dough, by hand, into suitable sizes and lifts it on to table near biscuit machine.

bread maker; general term distinguishing skilled operatives engaged in bread making as distinct from cake making, *etc.*, *cf.* baker.

cake mixer, mixer; a man or small goods maker, small goods man; mixes ingredients, either by hand or in a mixing machine, for cakes, buns, scones, and other small goods, and sometimes also for pastry (except in establishments where a separate pastrycook *g.v.* specialising in pastry goods, is employed); kneads, rolls, shapes, and bakes cakes, etc., *cf.* cake mixer; mixes ingredients for cakes, either by hand, kneading, etc., in bowl or similar vessel, or by machine; mixes in a small goods mixer, moulder machine minder for mixing machine minder (biscuits).

confectioner (flour); a pastrycook (or baker); a pastrycook *g.v.* or a cake baker *g.v.* making and baking cakes, pastry, etc., for confectionery side of a retail baker and confectioner's business, as distinguished from bread baker who makes and bakes bread only.

cornet maker; (i) in charge of an ice-cream cone making machine, which is automatically fed with paste, paste being then forced into cornet moulds and heated by gas or otherwise; starts and stops machine by turning a lever; regulates paste as turning gas jets up and down, or otherwise; changes moulds; is sometimes also in charge of other machines, *e.g.* water machine, *cf.* water machinist; (ii) mixes a paste of flour and sugar with a little yeast in bowl, fills cornets with cream, jam, etc., though this may be done by another worker, *e.g.* a pastrycook or cake maker *g.v.*

crumpet baker, crumpet maker, *see* muffin maker.

decorator (flour confectionery), *see* ornamental baker.

designer (flour confectionery); a decorator *g.v.* who designs floral and other fancy shapes in cream, icing, and jam, sometimes embellished with

nuts, cherries, etc., directs and supervises assistants (cake decorating) g.v. who carry out these designs; sometimes does best class of decorating himself throughout.

dog biscuit maker, mixes ingredients for dog biscuits in a mixing machine, duties vary according to type of machine, but usually either empties weighed ingredients into hopper of machine, or starts or stops machine by moving a lever or is in charge of machine or machines forming part of a series, connected by automatic devices.

dough breaker; (i) a baker's assistant g.v. who puts dough, by hand, into hopper of dough breaking machine; starts and stops machine by hand lever; (ii) a baker's assistant g.v. who breaks dough after it has risen, by hand, in preparation for kneading.

dough maker, doughman, in large establishments, is exclusively engaged in dough-making processes, e.g. mixing, kneading and setting sponge; for operations, see kneader (hand), mixing machine minder.

general hand (four confectionery), see pastrycook.

icee (four confectionery), sugar icee; mixes icing sugar, white of egg and flavouring essences; applies mixture to cakes and pastry with flat knife or with icing tube; may also assist in other operations in bakeryhouse, e.g. mixing or baking; cf. ornamentier.

kneader (hand); kneads dough in a wooden trough, working it backward and forward with fists and elbows, turning it over and over until ready; in small bakeries, performs other work as well as kneading, e.g. moulding, see moulder (bakery), or works at oven, see ovenman.

kneader (machine), see mixing machine minder (bread).

machine minder (biscuit), biscuit machine minder; operates machine which rolls prepared dough to required thickness and back cuts and stamps it to size and shape required; adjusts rollers by means of handles and screwing arrangements; fixes and adjusts cutters and dies, according to biscuit required, by means of bits and bolts; regulates speed of machine according to consistency and composition of dough, which in turn is governed by weather conditions.

machine minder (dough), dough machine minder, see mixing machine minder (bread).

matzo assistant, works at small mixing machine, brake machine, etc. (see mixer, brakeman, etc.) or is stationed below in bakeryhouse; in latter case, performs one of several operations, either pie stamping.

matzo (Jewish Passover), bread shapes (from travelling band, or, placing a disc across palm of hand, throws on to stone bottom of revolving oven in such manner that the matzo lies perfectly flat and uncracked, or receives and stacks baked matzo from matzo baker g.v.; where trays are used, places matzo in trays and/or feeds oven with filled trays.

matzo (or matzoth) mixer; a mixer g.v. who mixes ritually cleansed wheaten flour (obtained from court of chief Rabbi) and water into a stiff paste to make matzo, i.e. Jewish Passover bread.

matzo (or matzoth) rollerman; a brake operator g.v. who operates machine for rolling-out, perforating and cutting into rounds the stiff paste for making matzo, i.e. Jewish Passover bread.

mixer, mixing machine minder, mixing machinist (biscuits); assistant mixer, paste maker (biscuit); empties, by hand, flour and other dry weighed ingredients into biscuits paste (cf. mixing room worker (449)) from containers into receptacle of machine; adds milk of water from measures and starts machine by means of levers; tests state of paste

by sight and touch, and, when correct consistency has been obtained, stops machine, releases paste receptacle and wheels it to brake operator g.v. and interchangeable with mixing machine minder (bread) g.v. mixer, mixing machine minder (bread); dough machine minder, kneader (machine), machine minder (dough), feeds mixing and kneading machine alternately with flour and hot water, adding salt and yeast, by filling hoppers, which, when full, contain correct amounts to be fed; pulls hoppers into position above machine and empties by means of hand wheel governing hopper slide, starts machine by means of a lever, and after about ten minutes, tests by hand, consistency of dough; during kneading, pulls adhering dough from sides of machine to ensure thorough mixing; stops machine when kneading is complete, tilts dough by releasing lever, and pulls it out by hand into an adjoining trough to be wheeled away, weighed, moulded and baked; is not interchangeable with mixing machine minder (biscuits) g.v. mixer, mixing machine minder (pudding pastry); in large factories, is sometimes engaged on making puff pastry by means of mixing machine, see mixing machine minder (biscuits) g.v. mixer, mixing machine minder (pudding pastry); (i) moulds, by hand, weighed portions of kneaded dough into loaves; in small establishments, also moulds tins and may perform other work, e.g. baking, see moulder (bakery); (ii) see moulding machine minder.

moulder (biscuits); divides biscuit mixture into portions, and moulds and shapes, by hand, with fancy cutters, into biscuits of the cake type, e.g. fairy cakes; cf. machine minder (biscuit).

moulding machine minder; **moulder** (bakery); sets bread moulding machine in motion; cuts quantity of dough from a trough, and places it on a canvas belt conveying dough to be automatically cut, weighed, shaped, and carried forward; periodically tests weight of machine-cut dough, on hand scales, to ensure that machine is working accurately.

muffin baker, muffin maker; a baker g.v. engaged on hand mixing and kneading dough, and moulding and baking it to make muffins; at large establishments, where quantities of muffins are made during winter months, receives dough ready mixed and kneaded from mixing machine minder (bread) g.v.

oat cake man, oat cake baker; mixes oatmeal, butter, salt and water together; rolls paste, by hand, with rolling pin; stamps or cuts out cake shapes with hand cutters, and bakes them on a griddle or hot plate.

ornamentier, decorator (four confectionery); at a large factory, bakes-up ornamentation on spade with icing sugar, fruit, etc. working from a design; occasionally, roughly designs cake on paper before ornamenting; cf. pastrycook.

ovenman, ovenman; (i) biscuit baker; in large factory, a baker g.v. who specialises in bread or biscuit baking; regulates temperature of tunnel-shaped oven through which trays of bread dough or paste biscuits travel slowly, baking as they go, and emerging when fully baked; controls the speed of travelling, on which he places trays, and so regulates speed and degree of baking. In particular, knows from experience, ascertaining by touch, when oven is fit to receive tins of bread dough or biscuit paste; removes trays as they emerge and stacks them for removal to sorting room; (ii) biscuit baker; in small establishments, bakes bread, biscuits, and cakes in a tunnel-shaped oven having fixed bottom (not rotating); regulates heat of oven by tests by touch; inserts bread, etc., by hand, in oven, inspects from time

to time during baking, increases or decreases heat, if necessary, and removes bread, etc., when baking is complete; if engaged on rotary oven (unusual), regulates speed of chains to put bread, biscuit, or cake making; work may be done by baker, second hand, or third hand, or a parkin baker, parkin mucker; a pastrycook g.v. who specialises in making parkin, a cake (or biscuit) of oatmeal and treacle; mixes treacle and oatmeal into paste, by hand, in bowl or similar vessel, rolls it, draughts by hand, into cakes, and bakes cakes on hot plate or griddle.

paste maker (biscuits), see mixing machine minder (biscuits).

paste maker (pudding pastry), pastry; specialises in making puff pastry, mixes ingredients by hand, or receives ready mixed paste from mixing machine minder g.v.; rolls and cuts-out shapes, adds jam, etc., decorates, and bakes, or superheats baking, cf. pastrycook.

pastrycook, **pastryman** (four), **general hand** (four confectionery), duties vary according to type of establishment, but usually mixes ingredients for pastry, and often also for cakes, buns, and other small goods, in small establishments, specialises in pastry as distinguished from cake baker g.v.; kneads, rolls, and shapes, by hand, pastry, etc., and bakes in an oven; stacks fire and regulates heat of oven by moving dampers in or out, or turning draughts through, or gives directions as to stoking of fire and regulating of heat; sometimes also shapes, raises and bakes hollow moulds to enclose pheasant, rabbit, etc., see pie raiser; in small establishments, also makes wedding cakes, and does work of decorator g.v.; is often able to make pies, buns, and cook meat.

pie maker, pie baker; in large catering establishments, specialises on pie making and baking; may be assisted by pie raiser g.v. who more generally, carries through whole operations, i.e. mixes paste and shapes pie, by hand, fills with meat and bakes; work done by baker and confectioner g.v. in small establishments.

pie raiser, shapes raised or hollow tops for pies, by pressing thin paste over a wooden mould of required shape and size, inserting mould and lifting it, leaving shape of paste on table or bench; cf. pastrycook, pie moulder.

pikulet baker, pikulet maker, as for muffin maker.

pork pie maker, as for pie maker; cf. small goods maker (448).

rollman, see brake operator.

scots maker, scots baker; a pastrycook g.v. who specialises in making scots, mixes, by hand, flour, sugar, milk, butter and baking powder into a light dough; kneads, rolls-out and moulds into circular flat cakes and bakes them on a hot stone, hot iron plate, griddle, etc., or on a Scotch forehead, a working foreman having only one or two men under him; takes part in mixing, baking, etc.; is usually engaged in small establishments.

second hand, in small establishments, does any skilled work connected with baking bread, etc., as chief assistant to baker g.v.; takes charge in absence of baker.

small goods maker, small goods man, see cake maker.

sponge mixer; breaks eggs and weighs out sugar into special mixing machine, pours mixture into bath, adds weighed quantity of flour stirring it in, by hand; greases tin for cooking; work often performed by pastrycook g.v. in small establishments.

table hand, table man (bakery); **tableman**; general terms for any working or engaged in weighing, moulding, or other work done at a table, as distinguished from ovenman g.v.

third hand; a youth, generally an apprentice or an improver, employed on one or all of baking operations (see baker) according to his ability.

water machinist; water maker; water mixer; starts and stops machines, which is automatically fed with water; works by moving levers; regulates temperature of moulds by turning up or down gas jets which heat moulds, or otherwise; removes sheets of water as they come out of machine, and places them ready for the cutter, *q.v.*; is sometimes also in charge of other machines, *e.g.* cornet making machines; *cf.* cornet maker.

water maker; (i) mixes flour and linings with a little yeast into a paste; colours the mixture and spreads it on tin plates in very thin sheets, dries it in a stove and cuts into water shapes; (ii) *see* water machinist.

water mixer; see water machinist.

434.—SUGAR AND SWEET BOILERS.

butterscotch maker; a sugar boiler *q.v.* making butterscotch, *i.e.* toffee in which sugar and butter are the main ingredients.

caramel maker; a sugar boiler *q.v.* making caramel, paste, in which sugar, butter or cream, milk and flavouring essence are the main ingredients.

gun boiler; see starch hand (male).

liqueurice boiler, liqueurice boilerman, liqueurice maker; places small pieces of block liqueurice with water into a steam-jacketed pan; adds steam mixture, while boiling, with wooden or metal ladle; skims impurities from top and adds more water, as required, during boiling, until liqueurice paste is formed.

nougat boiler; weighs out almonds or pistachio nuts, sugar, and other ingredients of nougat, in exact proportions, according to recipe; puts ingredients in a steam-jacketed pan, heat of which he regulates by means of valves, and removes from pan when properly boiled.

pan hand, pan man, pan work hand; puts a quantity (varying with size of pan) of almonds or other sweet centres into a steam-heated pan, temperature of which he controls by means of steam valves; moves lever to set pan revolving; as pan revolves, pours syrup, *i.e.* liquid sugar, over centres, which are coated and polished by revolving to prevent "gum" and removes completed sweetmeats.

starch hand (male), male starch hand; gun boiler; weighs on scales, *cf.* measure, by means of measuring glass, ingredients for gums, mainly gelatine and butter; mixes and boils, as for sugar boiler; pours the mixture, known as "gum" or "boil," when boiled, into trays or moulds, sized according to sweetmeat required, and starches to prevent "gum" sticking to sides; is responsible for steady temperature of drying room and drying of gums; is assisted by female starch hand (440) *q.v.*

sugar boiler (drinks); measures out prescribed quantities of sugar, and pours them into steam-heated pans; controls temperature of pans by means of steam valves; runs water into pans and stirs sugar and water together; adds flavourings during boiling, and stirs them in; when sugar is completely dissolved, runs solution into containers, sometimes through felt bags or through filter papers.

sugar boiler, sweet boiler; is responsible for mixing, boiling and colouring of boiled sugar sweets, including butterscotch, toffee and caramels; mixes ingredients by hand, using ladle or similar implement, and boils mixture in pan, as a boiler, or "sugar," in a steam-jacketed open copper or vacuum pan, or, in small

establishments, in pans over coke fire; turns out sugar, when ready, on to iron slabs, adds colouring matter, consisting of sandline dye and water, to sugar, by means of stick, or other suitable instrument, and kneads sugar, by hand, to distribute colour evenly; except in very small firms, is assisted in one or more operations, *e.g.* weighing ingredients, mixing, sliding pans with sugar, colouring, by confectioner's assistant (448) *q.v.*

toffee boiler, toffee boiler, toffee man, toffee maker; a sugar boiler *q.v.* who makes toffee, in which toffee and butter are main ingredients.

435.—SUGAR CONFECTIONERY MAKERS, MOULDERS AND COVERERS.

almond paste maker, almond paste worker, *cf.* for marzipan worker (machinist process); barley sugar twister; cuts strips of half-boiled barley sugar, rolls it by hand on slab until twisted into required shape, is sometimes employed part time in other work, *e.g.* as sugar boiler (drinks) (434) *q.v.*

bon-bon maker (sweets); puts fruit pulp on slab of half-boiled boiled sugar; folds sugar over fruit; puts fruit, with sugar folded over it, into machine having shaped rollers which mould and elongate it; starts and stops machine by moving a lever; cuts bon-bon lengths, by hand, into strips ready for breaking up; or cuts folded slabs into small fancy shapes with hand tools, and moulds them in moulds.

braker, lozenge machine; lozenge cutter, lozenge machine hand, lozenge pinner; a worker who attends a brake machine and performs one of the three following operations: (i) sets rollers of machine, by means of a screw device, so that they will roll lozenge paste to thickness required; puts lozenge paste into hopper of machine, whence it passes automatically between rollers, which tell it into a sheet of required thickness; guides paste as it emerges from rollers on to an endless conveyor; starts and stops machine by moving a lever; (ii) is stationed at centre of brake machine to see that paste takes "true" under lozenge rollers; guides paste as it is carried along on conveyor; screws in or unscrews cutters, as required, for cutting lozenges of different sizes; (iii) picks up lozenges from delivery conveyor and puts them on trays; carries trays to drying room.

cake maker (liqueurice); cake, Pomfret cake maker, Pomfret cake maker; tips off and hand stamps boiled liqueurice paste into cakes or buns; is sometimes employed part time in other work, *e.g.* as machine minder, lozenge cutter *q.v.* or in boxing, packing, etc.

cake presser (liqueurice); a cake maker (liqueurice) *q.v.* who works a hand or power press to stamp out liqueurice shapes.

coaker, *see* cake maker (liqueurice).

chocolate tablet maker; covers sugar tablets with chocolate; druses *cf.* for chocolate coverer.

confectioner, confectionary hand, confectionary maker (sugar), sugar confectionary maker; spice maker (Yorkshire), sweetmeat maker, sweet-stuff maker; general terms for any worker engaged in any process of making sweetmeats, including coverer, cutter, moulder, runner-out *q.v.*

coverer, chocolates; chocolate dipper, cream coverer; (i) places block chocolate on a steam-heated slab, and reduces temperature of slab by means of steam valves; when chocolate is of correct consistency (ascertained by testing with fingers) throws almonds or other sweet centres into it, takes out centres, now covered with chocolate; if necessary, adds

leaves, *i.e.* leaf-patterns in sugar, cream, nuts, etc.; (ii) *see* covering machine attendant.

coverer, cream, *see* coverer, chocolate.

coverer (sugar confectionery); immerses almonds or other sweet centres in chocolate, icing, or other paste, as for chocolate coverer or covering machine attendant.

covering machine attendant, chocolate cream, covering machines attendant; chocolate coverer, chocolate dipper, cream coverer; (i) (male worker) attends a number of chocolate machines (usually about six); pours chocolate into hoppers of machines; governs temperature of chocolate by regulating hot water or steam valves, regulates speed of revolving drums, etc., so governing feed, and, ultimately, thickness of chocolate covering; starts and stops machines by loose pulley or power switch. (ii) (female worker) places centres on travelling band conveying them through tunnel in chocolate spraying (covering) machine and removes chocolates from conveyor as they emerge from machine and places them in cooling trays.

cream hand (liqueurice), *see* roller-out.

crystalliser (sweets); crystallises (ellies, pastilles, etc.), by placing wire baskets filled with sweets in steam-jacketed pans containing melted sugar; removes basket when sweets are impregnated with crystallised sugar; allows sweets to drain, and spreads them on trays to dry.

cutter, liqueurice cake; liqueurice paste cutter; cuts bars, circular sheets, rods, or tubes of liqueurice paste, by hand roller knife.

cutter, lozenge, *see* braker, lozenge machine.

cutter, nougat; (i) places slabs of nougat on a travelling band, which carries them under mechanical cutters; takes them off at other end, and places them on another travelling band, set at right angles to first, which carries them under another set of cutters; takes off machines and stacks slabs of nougat (which are not cut quite through); starts and stops cutters and travelling bands by moving levers; (ii) passes slabs of nougat between crimping rollers which indent them, *i.e.* partially cut them through, to make it easier to break them into squares; starts and stops machine by moving a lever; (iii) cuts nougat into bars with a wire power-driven circular cutter, which is set in motion by moving a lever.

cutting machine hand; feeds sheet of "all sorts" paste, *i.e.* sweetmeat containing liqueurice, into cutting machine and operates machine by levers.

decorator, confectionery, *see* piper, confectionary.

depository hand (sweets); grepper (sweets); fills a funnel, having one or more holes with steam-heated or other sweet paste; presses a rod or band plunger, which forces enough paste through funnel to fill a starch mould or rubber mat mould.

dipper (bon-bons); toffee dipper; puts almonds or other nuts into copper pan of hot butter toffee, with a wire spoon; regulates temperature of pan by turning on or off gas or other source of heat; withdraws nuts with wire covered, and puts them on tray to set and dry in current of cold air.

dipper, chocolate, *see* coverer.

dipper, fourré; fondant dipper; beats fourré mixture (cream) in a steam-heated pan, and regulates temperature by means of valves; throws in almonds or other sweet centres and picks them out, covered with fourré, with a spoon; gathers up a quantity of cream with a fork, *i.e.* a small metal ring mounted on a handle, and forms therewith wheels or other designs; adds leaves (leaf patterns in sugar, etc.) if required.

dipper, toffee, *see* dipper, butter

dropper (sweets); (i) see depository hand; (ii) see runner-out (sweets).
 fondant maker (sweets); a runner-out (sweets) g.v. engaged in filling moulds with fondant cream.

French confectionery maker (sweets); makes marzipan fruits, coloured and flavoured marzipan squares, fondants and other French confectionery, by hand or by machine; weighs out ingredients in exact proportions, to that, when mixed, they will produce colouring and flavouring required; feeds mixing machine with these ingredients, controlling machine by means of a lever; blends creams, if required; sometimes shapes articles e.g. strawberries, in hand-moulded moulds, and decorates them with hand tools; cf. moulder, runner-out, gum maker (sweets), see moulder, gum.

jube maker, jujube maker; a runner-out (sweets) g.v. engaged in moulding jujubes.
 kneader, see paste strainer (liqueur).

liqueurice machine hand; handles liqueurice paste into feed trough of machine, where it passes under a metallic beater rollers, which roll it to desired thickness; thence it passes under cutters, which cut it automatically to required shape, e.g. cushions, or through dies, which force it into shape of rods, tubes, etc.; starts and stops machine and takes out and replaces dies, as required.

lozenge hand, see lozenge maker.

lozenge machine hand, see braker, lozenge machine.

lozenge maker; lozenge hand; general term for any worker engaged in any process of making lozenges, including lozenge cutter, lozenge runner, lozenge paste mixer g.v.

lozenge planer; (i) see braker, lozenge machine; (ii) (less usually, and only in small firms) rolls lozenge paste into a slab with metal roller; regulates space between rollers of rolling machine by means of a screw device; passes slab of paste between rollers of machine, which compress them into sheets of required thickness, stamps or prints name of lozenge in rows over entire sheets, and cuts out lozenges, with knife in centre, with a hand punch.
 marzipan maker, marzipan mixer; an almond paste maker g.v. mixing paste for marzipan.

marzipan worker, marzipan roller; (i) (moulding process) measures out ground almonds, sugar, colouring and other ingredients, in proportions determined by French confectionery maker g.v.; pours ingredients into automatic machine fitted with rollers, which reduce them to a paste for use in making marzipan cakes or other sweets; starts machine and adjusts rollers during rolling process, by a screw device, so that paste is gradually reduced in thickness; (ii) takes a number of differently coloured sheets of marzipan paste made by machine (as above), lays them one above another in layers, and rolls them lightly by hand, in preparation for cutting into fruits, squares, cushions or other shapes; sometimes also moulds them by hand, into fruits and fancy shapes, using hand moulds and small tools.

mixer, lozenge paste; attends three or four mixing pans, in which lozenge paste is mechanically mixed; weighs out ingredients, e.g. sugar, glucose, gelatine, colouring and flavouring, in exact proportions according to recipe, throws sugar, glucose, and gelatine into metal pan of machine, where they are mixed with whirling arms; lowers end of mixing process adds colouring and flavouring; when paste is properly mixed, scoops it out of pan.

mixer, nougat; nougat whaler; mixes boiled ingredients of nougat in a pan fitted with whirling arms, see lozenge paste mixer; when correct

consistency is reached, scoops nougat out of pan and leaves it to cool in trays.

moulded sweets maker, see moulder (sweets).

moulder, chocolate; temperer; (i) weighs refined chocolate paste from machine into moulds for making tablets or bars; shakes mould well to remove bubbles in paste and ensure solidness; (ii) spreads chocolate paste, intended for making Easter eggs, cakes, etc., in metal moulds, places moulds in cool place to harden chocolate, then knocks it out of mould.

moulder, confectionery, see moulder (sweets).

moulder, cream (chocolate); a runner-out g.v. who pours cream (for chocolate centres) into hopper of machine, which automatically fills starch moulds or rubber mat moulds therewith.

moulder, fondant (sweets); a runner-out g.v. engaged in moulding fondants.

moulder, gum (sweets); gum maker; a runner-out g.v. engaged in moulding gum sweets.

moulder, insert; moulds prepared marzipan paste into fancy shapes in hand moulds; cf. marzipan worker.

moulder (sweets); confectionery moulder, moulded sweets maker; general term for any person making moulded sweets, including drop-maker hand, marzipan moulder, runner-out g.v.

moulds maker (sweets); forms moulds for use in moulding fondants, gums, jujubes, etc.; by making impressions in surface of powdered starch contained in trays, uses a row of pat terms attached to a flat strip of wood; work usually done by runner-out g.v.

nougat hand; (i) general term covering workers engaged in making nougat, who are interchangeable, including nougat boiler (434), nougat cutter, nougat mixer g.v.; (ii) mixes almonds or pistachio nuts into sugar paste, by hand, and rolls mixture flat with a long, thin, flat bar.
 nougat whaler, see mixer, nougat.
 novelty maker (liqueurice), see pipier, liqueurice.

paste hand; general term for any worker engaged in making paste goods, e.g. liqueurice, nougat, etc.; includes almond paste maker, lozenge planer g.v.

paste strainer (liqueurice), kneader-fills hopper of kneading machine with liqueurice paste, lumps in which are broken up by machine; starts and stops machine by means of a lever.
 pellet maker (liqueurice); pushes and guides sheets of liqueurice paste between rollers of drop machine, which shapes paste into drops or pellets; starts and stops machine by moving a lever.

paper, confectionery; confectionery decorator; decorates larger sweetmeats, e.g. Easter eggs, with designs by squeezing over them icing (sugar paste) through a stencil, i.e. a hard sheet is fastened to a linen bag filled with icing; sometimes also does work of marzipan worker or lozenge machine hand g.v. or may be partially engaged in packing, labelling, etc.

paper, liqueurice; novelty water (liqueurice); makes paste, recovered from paste strainer g.v., into "novelty" pipes, by hand.

Pomfrot or Pontefract cake maker, see cake maker (liqueurice).

rock hand; (i) weighs out, in exact proportions, according to a formula, ingredients of rock, i.e. a hard sweet, usually sold in form of sticks; boils them in steam-jacketed pans, regulating temperature by means of steam valves; builds up a mass of rock on a bench, by tapping, i.e. plating layers of red and white boiled sugar carefully, one on top of another, so that they form words and remain in correct order and undisturbed when rock is pulled; takes one end of mass between the fingers and pulls it so that it becomes

gradually elongated and attenuated, and assumes a cylindrical form; when plastic rock has been drawn to required length (gauged by means of standard rods) passes it to less skilled rock hand, who keeps rolling it to retain its cylindrical shape until other rock hand is ready to continue pulling it to its final diameter; (ii) (less usually) pulls a certain quantity of boiled sugar from the "mass," by hand, and draws it out until it becomes attenuated into a long plastic cylinder; or feeds with boiled sugar, automatically measuring which works it up into rock on slowly revolving bars; starts and stops machine by moving a lever; removes rock, when worked to proper consistency, from bars of machine; lays lengths of differently coloured sugar, while still plastic, together to make fancy rocks, and works them into patterns, by hand or by machine.

roller, ball (hall sweets); passes prepared sticks of half-cooled boiled sugar between rollers of balling machine (operated by means of a lever) which cuts and rolls sticks into small balls; clears delivery tray of machine.

roller, caramel; a roller g.v. who rolls caramel prepared at a separate station.

roller (sweets); pours paste or other material into hopper of rolling machine; regulates space between rollers of machine, if necessary, by screw device; starts and stops machine and clears delivery tray. It is often employed by means of other work, e.g. as marzipan worker, or rock hand g.v.

roller-out (liqueurice); cream hand (liqueurice); a roller g.v. who rolls liqueurice cream into liqueurice sheets; intends to shape required for alcoria, i.e. sheets containing a layer of red of liqueurice paste.

runner-out (sweets); dropper; makes chocolate creams, gums, fondants, jellies, etc., by pouring cream, gum, etc., into hopper of machine, which automatically fills starch moulds or rubber mat moulds therewith, by allowing cream, gum, etc., to drop on to moulds moving at a regulated speed on conveyors; starts and stops machinery by moving a lever.

slab hand (sweets); general term for any worker engaged in manipulating boiled sugar on slabs or tables, or in attending moulding machines, including toffee maker, bon-bon maker, barley sugar twister g.v.

spice maker (sweets); Yorkshire term, see confectioner (sugar).

starch, starch hand (sweets); starch room worker; assists generally in starch room; fills trays with dry powdered starch before they are taken to moulding room; knocks out moulded sweets from starch trays; lifts them clear of starch, and stacks them in trays in packing room.

starch machine hand (sweets); a runner-out g.v. attending machine in which gums, etc., are moulded in starch moulds.

starch room worker, see starch (sweets).

sweetmeat maker, sweetstuff maker, see confectioner (sugar).

templer, see moulder, chocolate.

tracer (chocolate); traces patterns in chocolate or icing sugar on top of chocolate sweets by squeezing warm liquid chocolate from an icing pipe.
 Turkish delight maker; weighs out correct proportions according to recipe, of ingredients for Turkish delight; puts them in correct sequence and at specified intervals, in steam-jacketed pans, and regulates heat by means of valves; sometimes also cuts product into squares or lumps, which he rolls in powdered sugar.

worker-off; a slab hand g.v. who rolls plastic boiled sugar into a thick roll, which is afterwards drawn into long sticks by drawer-off (440) g.v.

436.—JAM BOILERS.

holler, peel syrup; runs water into steam-heated copper pans, and regulates temperature by means of steam valves; weighs out sugar, or receives it ready weighed; boils and re-boils it until sugar is completely dissolved and has become a syrup of required consistency for use in making candied peel.

candied peel maker; (i) see candier, peel; (ii) general term covering peel cooker, peel syrup boiler, and peel candier *q.v.*

candier, peel; candied peel maker; receives peel from peel cooker *q.v.*, puts it in tubs, and pours syrup, received from peel syrup boiler *q.v.*, thereon; removes peel when it has absorbed enough syrup; lays it on trays to drain; puts it to dry in hot chamber, heat of which he regulates by means of steam valves; or, rolls it on rods of iron so that added sugar on surface dries shiny and hard; where work is sub-divided, supervises labourers engaged on various processes.

cooker, peel; receives peel from briner (440) *q.v.*, puts it in steam-heated vat and regulates temperature by means of steam valves; runs water into vat; when peel is soft enough for next process, removes it from vat.

fruit holler, *see* jam boiler; *cf.* fruit boiler (four confounders) (449).

jelly maker; jelly worker; weighs fruit, and empties it into steam or gas-heated copper; runs a measured quantity of water into copper; boils them together, regulating heat by controlling steam valves, gas jets, etc.; allows liquor to flow away through bags to filter it; weighs liquor, adds sugar, and re-boils until correct consistency is obtained; sometimes done by jam boiler *q.v.*; sometimes specifically designated, e.g. apple jelly maker.

jam boiler; fruit boiler; preserve maker; weighs or measures out exact quantities of fruit, sugar, water and other ingredients (if any) according to recipe; pours ingredients, in correct sequence and at stated intervals, into steam or gas-heated coppers; usually attends from six to ten coppers and regulates heat by controlling steam valves, gas jets, etc.; stirs contents of coppers, either by hand or by switching on mechanical stirrer; runs off jam, etc. into large receptacles, when correct consistency has been reached; sometimes also does work of fruit jelly maker *q.v.*

jam maker; general term covering workers engaged in jam making, including jam boiler, pan hand, jam splitter (440) *etc. q.v.*

jelly worker; *see* fruit jelly maker.

marmalade boiler, marmalade maker; *see* jam boiler; towards end of boiling process adds shredded peel of oranges or lemons which has been soaked.

pan hand; stirs mixture of fruit and sugar, intended for jam or marmalade, continuously whilst boiling; pours boiled jam into large receptacles from which jars are filled.

preserve maker, *see* jam boiler.

437.—MEAT AND FISH CURERS AND SMOKERS.

bacon curer; (i) stoker; cures large parts of bacon by injecting brine into bacon with a hollow needle syringe; cures thin parts or slices of bacon by laying them flat, stacking and entirely covering each layer with salt; removes salt from time to time and restacks sides; (ii) (mid curing)

butcher; soaks or pickles shoulders, legs or other parts, in tubs containing brine, removing after two or three days, to tables for draining; in some districts, also bones, skins, rolls and lies up sections of meat.

bacon dryer; (i) washes bacon in warm running water to remove borax from American bacon and stands or hangs it to drain and dry; is responsible for proper drying; (ii) dusts inside of carcasses with pea meal shaken by hand from a sieve, to absorb moisture left from curing; hooks and hangs carcasses into position in smoke chamber; removes carcasses when smoking process is complete.

bacon smoker, bacon stover; stoverman; has charge of a number of smoking chambers in which bacon is smoked in fumes of wood fire; superintends drying and basting of bacon or ham into chambers, *see* bacon dryer; spreads sawdust on floor of chambers and ignites; inspects chambers from time to time and regulates smoking by opening doors to direct fumes, burning sawdust, etc.; stokes fire; decides when process is complete and directs unloading of chambers, sweeps out or directs cleaning of chambers.

baithman, *see* bacon curer.

robberer; (i) *see* fish briner; (ii) cures herrings by covering the stacks (cobs) of prepared fish with salt; obsolescent method.

firer, firer-out, *see* smoker.

fish briner; robberer, fish splitter, rouser, rouser; carries split fish, docks, herrings, etc., from splitting tables to brine tubs; sometimes fish and occasionally turns about until thoroughly salted.

fish curer; general term applied to workers, e.g. fish briner, river curer *q.v.*, engaged in curing fish, e.g. herring, haddock.

fish house worker; general term applied to fish curers engaged in fish-house, especially in small houses where the work is not sectionalised, including smoker, prickner (446), river *q.v.*

fish splitter, *see* fish briner.

haddock curer, *see* fish curer.

haddock smoker, haddock woman; a smoker *q.v.* engaged in curing haddock.

ham curer, *see* for bacon curer.

ham dryer, *see* for bacon dryer.

ham smoker, ham stover, *see* for bacon smoker.

herring curer; a smoker or fish briner *q.v.*, curing herrings.

herring worker; general term applied to all workers in herring-curing yards, including fish gutter, fish splitter (445) *q.v.*

kipper curer; splits herrings with hand knife, salts in brine for an hour or two and hangs on rods in high kilns; keeps wood fires in kilns at level required; removes cured herrings, usually also cures red herrings similarly, leaving longer in kilns and not splitting; attends one to four (or more) kilns, number varying according to amount of work in hand; *cf.* fish smoker.

kipperer, kipper woman; a smoker *q.v.* engaged in curing herrings.

night smoker; a smoker *q.v.* who attends to smoke houses by night, retort hand; loads, unloads, and stokes fire or regulates, by steam pressure, heat of retorts or stoves on which cases of fish are cooked in smoking factory; unloads retort at end of specific interval.

river; redder, splitter, speeter; riever, i.e. "spares" prepared herrings by their gills on iron or wooden rods, in readiness for hanging in smoke houses by smoker *q.v.*; in some establishments may also hang rods in smoke house and remove them after curing, *see* striking hand.

rouser, rouser, *see* fish briner.

redder, *see* river.

smoker, fish smoker; firer, firer-out; places rows of prepared herrings or haddocks, etc., in closed smoke boxes filled with smoke from oak chip and sawdust; lights, replenishes and attends to smoke house fire, keeps fire at required level, and determines end of smoking process; duties vary according to type of fish being smoked, e.g. in smoking herrings for production of "book-line" (similar to red herring) or in smoking sprats, after a certain period of smoking, damps down fire to colour the fish in the fumes thus produced.

speeter, splitter, *see* river.

stacker, *see* bacon curer.

stoverman, *see* bacon smoker.

striking hand; in some establishments, removes herrings from smoke house after curing; work generally done by river *q.v.* or tenterer (449) *q.v.*

tankman; in export curing houses, empties herrings into salting tanks and monitors them with scoop, required, engaged on coast line when there is a glut of fish.

trimmer; cuts fish with hand knife and bones, and trims away superfluous parts, precise method depending upon type of fish upon which engaged.

443.—OTHER SKILLED WORKERS.

baking powder maker, baking powder operative; receives ingredients of baking powder, i.e. powdered tartaric acid and sodium bicarbonate, with ground rice or cornstarch as a diluent, from chemist or foreman, who decides proportions of each; sometimes weighs out quantities of minor ingredients according to instructions received from chemist or foreman; sometimes is himself responsible for quantities of each ingredient; places ingredients by hand, with a scoop, in mixing machine, or tips them from sacks into hopper of mixing machine and sets machine in motion; sometimes, when bag or barrel is not filled mechanically under attention of packers (446) *q.v.*, turns top or shutter, allowing mixture to flow into bags, barrels, or other receptacles, which he places under tap or shutter; places lid on barrel (if that is used) and secures it with a hoop, which he hammers into position; removes barrel, and puts another in position.

black pudding maker; blood pudding maker; mixes pigs' blood, cooked pearl rice, barley or groats, "fear" (pigs' back fat), minced veal or dripping, and seasoning according to recipe, using mixing and chopping machines, *cf.* machine-man, lads; sawage skin with mixture (*see* pudding filter); divides filled skins into convenient lengths by tying skin tightly; boils sausages, so formed, until cooked; *cf.* small goods man (sausages).

bleacher (dour mill); regulates, by means of valves, passage of electrically ionised air through bleaching machines, which are fed with dour mechanically; sees that transformers are not working according to recipe; sometimes also does work of dour blender *q.v.*

blender, butter; places butters of different origins in a worker or in a blending or kneading machine, *cf.* kneading table attendant (448), operates and controls machine so as to mix them thoroughly; removes blended butters ready for moulding.

blender, flour; adjusts valves or slides to direct streams of different kinds or grades of flour running through chutes from bins to mixer; cuts off or starts flow of flour from various bins, and regulates machines so that specified proportions are admitted to make blend required.

blender, mustard; mustard flour mixer; weights and empties by hand, down a chute, into hopper of mixing machine, prescribed quantities of different qualities of mustard flour; is responsible for correct proportions of each kind (determined by a recipe or formula), and sees that hopper is kept full; regulates hopper slide, by hand wheel, thus controlling rate of feeding (through chute) the mixing machine on floor below; folds and stacks empty sacks.

blender, tea; tea mixer; blends teas, according to directions of tea taster (756) g.v., to produce desired quality or flavour; opens packages and empties specified quantities of each sort into mixing machine, which mixes them, and delivers mixture through hopper to packing machine; when blending plant is not linked automatically to packing machine, may also empty machine into bags or cases.

blester parts maker, as for mixer (potted meats, etc.).

blood pudding maker, see black pudding maker.

blower, cut gut; gut blower; discharges to full size, by inflation from mouth, or with compressed air from special taps, undisturbed (which have first been cleaned and trimmed) removed from carcasses of oxen, sheep, or hogs; cuts lengths of gut suitable for sausage casings, etc., process now almost superseded by work of cutting velvet for g.v.

blow-up man, water blow-up man (sugar refining); opens valve allowing washed raw sugar to flow into blow-ups, i.e. large iron tanks in which raw sugar is melted in water; regulates valves controlling inlet of steam to heat water, adds water, as required, thus regulating density; brings liquor to definite gravity at a prescribed temperature; tests density with gauge; regulates temperature; adds purifying chemicals as directed by chemist; opens valve allowing liquor to run off; is sometimes in charge of all processes in raw sugar department.

boiler, jelly; weights or measures out prescribed quantity; opens and puts it into a steam-jacketed pan, regulating temperature by means of valves, runs or pours water into pan, in which sugar is dissolved and heated to required temperature; runs off solution into large shallow pans; weighs or measures out correct quantities of gelatine and flavouring essences, adds them to sugar solution, and stirs all together until gelatine is dissolved, attends a number of steam pans and stirring pans.

boiler, ox head; a kitchen hand (preparation factory) g.v. who boils ox heads in steam-jacketed coppers and cuts flesh therefrom for making brawn and tinned meat.

boiler, shrimp; boils shrimps and other shell fish in large steam-jacketed coppers in potted meat factory; removes beiled fish into trays to drain ready for shrimp shell g.v.

boiler, sugar (sugar refining); vacuum pan sugar boiler; pan Aond, pan mase (sugar refining); vacuum pan mase (sugar); opens liquor valve, to fill vacuum pan with liquor, operates vacuum valve, and admits steam by opening steam valve; observes temperature and vacuum gauges, and progress of boiling and grain formation through windows in pan walls; draws samples to test granulation and crystallisation, when process is complete, breaks vacuum by opening valve; draws pans by opening a valve which allows crystallised sugar to pass down chute to coolers (or "boilers"); books time of changing, and records progress of process and draws samples.

boiler, tongue; ox tongue boiler, as for boiler, ox head.

bondon maker, see cheese maker, bondon.
